Glossary of Judicial Claim Constructions in the Mechanical, Electro-Mechanical and Medical Devices Arts

Compiled and Edited by:

David Garrod, Ph.D., Esq.
Senior Litigation Counsel
PUBLIC PATENT FOUNDATION, INC.
Benjamin N. Cardozo School of Law
55 Fifth Avenue
New York, New York 10003
garrod@PUBPAT.org
"a body" — "each patented lure has only a single body, which may consist of one or more elements." Nichols, et al. v. Strike King Lure Co., et al., 2000 U.S. Dist. LEXIS 15781 (N.D. Tex., Oct. 25, 2000).

"a cable linking" — "the patent contemplates a single cable that links the arms and resistance assembly." Free Motion Fitness, Inc. v. Cybex International, Inc., et al., 311 F. Supp. 2d 1297 (D. Utah 2003).

"a ... continuous ... chamber" — "one or more continuous chambers." KCJ Corp. v. Kinetic Concepts, Inc., et al., 223 F.3d 1351, 1356 (Fed. Cir. 2000).

"a cup"; "the cup" — "claim 1 refers to 'a cup' and 'the cup' repeatedly, suggesting that only one cup is involved. ... [T]he only correct and indeed the reasonable interpretation of claim 1 limits the scope of that claim to a process using only one vacuum cup." Insituform Technologies, Inc., et al. v. Cat Contracting, Inc., et al., 99 F.3d 1098 (Fed. Cir. 1996).

"a ... currency evaluation device"; "a transport path" — "do not limit the claims to a device that contains only one output pocket and one transport path." Cummins-Allison Corp. v. Glory, Ltd., et al., 2005 U.S. Dist. LEXIS 6150 (N.D. Ill., Mar. 28, 2005).

"[b] discharging material from said common hopper to said processing machine at a discharge rate, ... [d] determining the material processing rate of the processing machine from the sum of the material discharge rates of the ingredients to the common hopper and the discharge rate of the material from the common hopper to the processing machine" — "Our conclusion that the occurrences of ‘discharge rate’ in clauses [b] and [d] of claim 1 are to be interpreted as referring to the same rate has the following implication for clause [d]. It cannot be disputed that the ‘material processing rate of the processing machine’ is identical to the ‘discharge rate of the material from the common hopper to the processing machine.’ ... As a result of our claim construction, clause [d] does not make 'sense' as HydReclaim itself realizes and concedes." Process Control Corp. v. HydReclaim Corp., 190 F.3d 1350 (Fed. Cir. 1999).

"a line" — "a single straight line that is the intersection of two planes." Synvasive Corp. v. Stryker Corp., 425 F. Supp. 2d 1105 (E.D. Cal. 2006).

[the step of selecting or limiting] "a depth of cut," "a maximum depth of cut," [or] "a cutter exposure" [for the plurality of cutters] — "the selecting or limiting a depth of cut, a maximum depth of cut, or a cutter exposure for the plurality of cutters terms do not require a single depth of cut, maximum depth of cut, or cutter exposure for all cutters in the plurality." Reehycatalog UK, Ltd. et al. v. Baker Hughes Oilfield Operations, Inc., et al., 2007 U.S. Dist. LEXIS 76125 (E.D. Tex., Oct. 12, 2007).

- 2 -
"a pair of linear actuators mounted on [the] frame and connected to [the] levers for swinging said levers and thus tilting [the] cradle about its pivots from the said first position through a second position, wherein the pot is raised from the ground but held substantially level and to a third position where in the pot is tipped by abutting an abutment on the cradle and is at least partially inverted into a dumping position" — "is limited to carriers that use only a pair of linear actuators which produce three different positions of the cradle." Kress Corp. v. Alexander Services, Inc., et al., 991 F. Supp. 740 (W.D. Pa. 1997).

"a solid film ream wrapper [with a coating having a] recurring pattern" — "is not limited to describing a single wrapper with a recurring pattern; it describes, instead, a continuous sheet of film ream wrapper." Coating Excellence International, LLC v. Thilmany LLC, 500 F. Supp. 2d 1123 (E.D. Wis. 2007).

"a tip" — "refers to one or more tips at the distal end of a tooth." Synvasive Corp. v. Stryker, Corp., 425 F. Supp. 2d 1105 (E.D. Cal. 2006).

"being ablated only partially" — "a portion, but not all, of the third layer decomposes into gases and volatile fragments." Presstek, Inc. v. Creo, Inc., et al., 2007 U.S. Dist. LEXIS 24126 (D.N.H., Mar. 30, 2007).

"about" — "the 'about' terms should be construed to include all values less than a full increment and greater than a full decrement of the least significant digit claimed." Sta-Rite Industries, et al. v. ITT Corp., et al., 2010 U.S. Dist. LEXIS 10790 (E.D. Tex., Jan. 19, 2010).

"about" — "means plus or minus five seconds (15 to 25 seconds) in claim 8 and plus or minus five minutes (15 to 25 minutes) in claim 11." Fisher-Barton Blades, Inc. v. Blount, Inc., et al., 2006 U.S. Dist. LEXIS 76965 (E.D. Wis., Oct. 19, 2006).

"the sidewalls flanking the lumen has [sic] a combined thickness of about 0.025 inch" — "the sidewalls opposing each other across the lumen have a combined thickness of about 0.025 inch, encompassing a range of thicknesses no greater than 0.0245 to 0.0255 inches." Ideal Instruments, Inc. v. Rivard Instruments, Inc., et al., 498 F. Supp. 2d 1131 (N.D. Iowa 2007).

"the needle has an inside diameter of about 0.046 inch and an outside diameter of 0.018 inch" — "the needle has a lumen diameter of about 0.046 inch, encompassing a range of diameters no greater than 0.0445 to 0.0475 inch, and an outside diameter of 0.018 inch." Ideal Instruments, Inc. v. Rivard Instruments, Inc., et al., 498 F. Supp. 2d 1131 (N.D. Iowa 2007).
"no more than about 0.6 square inches" — "at best, the 'no more than about 0.6 square inches' limitation does not cover any diaper with a CSB that, when rounded off to a single digit, exceeds 0.6 square inches." Procter & Gamble Co. v. Paragon Trade Brands, Inc., 989 F. Supp. 547 (D. Del. 1997).

"a density below about 0.91 g/cm³" — "a number between 0.905 and 0.914." Viskase Corp. v. American National Can Co., 947 F. Supp. 1200 (N.D. Ill., Oct. 10, 1996).

"about 5:1 to about 7:1" — "did not include the ratio of 4:1." Pall Corp. v. Micron Separations, Inc., 66 F.3d 1211 (Fed. Cir. 1995).

"about a 75 degree arc" — "cannot mean something that includes a 360 degree arc." Clinical Innovations, LLC v. Utah Medical Products, Inc., 2007 U.S. Dist. LEXIS 67624 (D. Utah., Sept. 11, 2007).

"about a center line" — "means that the stent elements must be uniformly distributed about a center line on each periodic cycle. This is consistent with the plain meaning of 'center line.'" Medinol Ltd. v. Guidant Corp., et al., 417 F. Supp. 2d 280 (S.D.N.Y. 2006).

"about the perimeter" — "the term 'about' in this context is not limited to 'completely around.'" Real v. Bunn-O-Matic Corp., 100 F. Supp. 2d 844 (N.D. Ill. 2000).

"about three millimeters" — "could be more definite, but ... the Court finds that one skilled in the art would know where to make the second incision." Young v. Lumenis, Inc., 2005 U.S. Dist. LEXIS 27792 (S.D. Ohio, Nov. 1, 2005).

"above" — "means neither 'directly above' nor simply 'at a higher place than.' Instead it means 'at a place higher than the high side wall such that a sufficient space is formed laterally inward from that side wall and vertically between that wall and the stepped portion of the upper rack to enable the washing of oversized articles.'" Maytag Corp. v. Whirlpool Corp., 88 F. Supp. 2d 894 (N.D. Ill. 2000).

"abrasion resistant transparent coating layer" — "any transparent coating material designed to provide abrasion resistance." *Avery Dennison Corp. v. Whitlam Label Co., Inc.*, 2003 U.S. Dist. LEXIS 27836 (N.D. Ohio, Sept. 24, 2003).[^39]

"heating ... in the absence of pressure or shear sufficient to convert the binder particles" — "any pressure and shear applied to the mixture must not be sufficient to convert the mixture to a continuous web matrix or forced point-bonds until the mixture has been heated to a temperature substantially above the softening temperature of the binder." *KX Industries, L.P., et al. v. Culligan Water Technologies, Inc., et al.*, 90 F. Supp. 2d 461 (D. Del. 1999).[^40]

"absorbable plug" — "an object or material used to fill or seal an opening that is capable of being assimilated or broken down by the human body." *Lamoureux, et al. v. Anazao Health Corp., et al.*, 2009 U.S. Dist. LEXIS 103846 (D. Conn., Nov. 5, 2009).[^41]

"an absorbent core" — "a portion of the absorbent article containing a liquid permeable cover, a liquid permeable baffle, and an absorbent layer therebetween." *Kimberly-Clark Worldwide, Inc. v. First Quality Baby Products, LLC, et al.*, 2010 U.S. Dist. LEXIS 104762 (M.D. Pa., Sep. 30, 2010).[^42]

"absorbent panel" — "include[s] a wicking layer, if one is present, regardless of whether this layer is separate from or attached to the diaper's storage core." *Procter & Gamble Co. v. Paragon Trade Brands, Inc.*, 989 F. Supp. 547 (D. Del. 1997).[^43]

"abutment" — "a dimple that protrudes into the path of the arm a sufficient amount so as to restrict motion, but not necessarily so much so as to extend over the entire arm like a bar or even to protrude out like tabs." *Penn Fabrication (U.S.A.) Inc. v. El-Com Hardware, Inc., et al.*, 1999 U.S. Dist. LEXIS 21955 (C.D. Cal., Dec. 27, 1999).[^44]

"abuts" — "to be adjacent to, or to touch or join one another." *MacLean-Fogg Co. v. Eaton Corp.*, 2009 U.S. Dist. LEXIS 72435 (E.D. Tex., Aug. 14, 2009).[^45]

"abuts" — "touching (i.e., having direct contact)." *Taltech Ltd. v. Esquel Enterprises Ltd.*, 410 F. Supp. 2d 977 (W.D. Wash. 2006).[^46]

"an access cover, mounted on the top of said riser extension over said upper opening and including an aperture therein, for enabling access to the interior of said sump apparatus" — "a gasket does not satisfy the access cover limitation, either literally or under the doctrine of equivalents." *Total Containment, Inc. v. Environ Products, Inc., et al.*, 921 F. Supp. 1355 (E.D. Pa. 1995).[^47]

"accessory" — "a device which is not necessary to the operation of a video game but which can be used by a player in conjunction with a video game controller." *JVW Enterprises, Inc. v. Interact Accessories, Inc., et al.*, 2002 U.S. Dist. LEXIS 27885 (D. Md., Feb. 1, 2002).[^48]

"predetermined accurate work position" — "the fixed placement of the tool in the tool holder. This placement is achieved by precisely measuring the distance from the surface of the cutting tool's center axis to the appropriate surfaces of the tool holder in advance, such that the flat mounting surfaces of the cutting tool directly contact the corresponding surfaces of the tool holder, thereby maintaining the cutting tool's original placement until the tool is removed." Utica Enterprises, Inc. v. Federal Broach and Machine Co., 109 Fed. Appx. 403 (Fed. Cir., Aug. 19, 2004) (unpublished). 50

"transferring said bag and its integral pocket across said common header from said first station to said second station at which the free edge is sealed" — "mean[s] that the individual bag is transferred across and over the header of the wicket." MHB Industries v. Dennis Garberg & Associates, Inc., et al., 1996 U.S. Dist. LEXIS 11638 (D. Mass., July 26, 1996). 53 "The district court ... state[d] that the claim required that a bag be transferred 'across and over' the header, apparently distinguishing the situation in which the bags are transferred under the header. We agree ... that the claim does not require a distinction between over, as in above, and under the header. Simply, the claim requires that the bag be transferred across or, in other words, from one side of the header to the other." Id., 1997 U.S. App. LEXIS 19508 (Fed. Cir., Jul. 29, 1997) (unpublished). 54

"cover means associated with said receptacle across said openings of said cavities" — "In this context, the pertinent definition of 'across' is 'over,' requiring the cover to lay over the two openings." Contempo Tobacco Products, Inc., et al. v. McKinnie, 1997 U.S. Dist. LEXIS 22576 (N.D. Ill., Apr. 8, 1997). 55

"across said tongue" — "mean[s] that the ridge must reach from one side of the tongue to the other." Pehr v. Rubbermaid, Inc., 87 F. Supp. 2d 1222 (D. Kan. 2000). 56

"across substantially the entire crotch area" — "a triangular area, similar in size and shape to the connecting sections 30 and 48 in Figs. 1 and 2." Orr v. Patagonia, Inc., et al., 2006 U.S. Dist. LEXIS 73739 (N.D. Tex., Sept. 26, 2006). 57

"shape memory activation temperature" — "the crystallization point of a given thermoplastic, calculated according to the following formula: $T_c \approx (T_m + T_g)/2$ where $T_c$ is the crystallization temperature, $T_m$ is the melting temperature and $T_g$ is the glass transition temperature." Pipe Liners, Inc., et al. v. Pipelining Products, Inc., 1999 U.S. Dist. LEXIS 17271 (D. Del., Oct. 22, 1999). 58
"a conductive wire assembly passing through the elongate internal passageway and having left
and right lengths of wire exiting through the left and right apertures, respectively, wherein
at least a portion of the conductive wire assembly is slideable within the passageway, and
acts as a drawstring for the hood" — "The wire must be used to tighten or close the hood
opening. Moveable wiring within the drawstring passageway is not necessarily wiring that acts as
Dist. LEXIS 108173 (D. Utah, Oct. 8, 2010).†
"actuating means" — "is a means-plus-function claim limitation which is to be construed to
include an actuating handle." Atlantic Research Marketing Systems, Inc. v. Austin Precision
"actuating mechanism for setting and releasing the wheel braking device, the actuating
mechanism being capable of operating in a first mode to set the brake and in a second mode
to release the brake" — "a component of the brake system that may operate in a first mode to
set the brake and in a second mode to release the brake." Graham-White Manufacturing Co. v.
"actuating member" and "plurality of projections" — "need not refer to two separate
elements, ... but are properly interpreted to allude to the two functions of the projections." Minuteman International, Inc. v. Critical-Vac Filtration Corp., et al., 1997 U.S. Dist. LEXIS
4674 (N.D. Ill., Apr. 4, 1997).
"actuation means" — "is not a means-plus-function limitation." Searfoss v. Pioneer Consolidated
Corp., 374 F.3d 1142 (Fed. Cir. 2004).
"actuator" — "a device that activates the memory storage means." General Creation LLC, et al. v.
"adapted ... for" and "adapted ... to" [clauses of the preamble] — "are not means-plus-function
"adapted for" — "is [] construed as 'physical modification of a structure specifically for the use as
further set forth in the claim.'" TouchTunes Music Corp. v. Rowe International Corp., et al., 2010
"the leading edge of the channeling structure being adapted for positioning immediately below
the shrimp eggs at the water surface" — "The examples and discussion of constantly and
immediately positioning the leading edge of the skimmer are examples of embodiments of the
invention found in the specification, not fundamental principles to the invention, and therefore
will not be read into the claims. ... This court declines to read a constant or immediate
adjustability limitation from the specification." Sanders Brine Shrimp Co.. v. Bonneville Artemia
"said separate switches are adapted for simultaneously operating said camera for capturing
continuing images and operating said microphone for capturing sounds with the continuing
images" — "the independent switch for operating the camera and the independent switch for
operating the microphone configured such that they allow the camera and microphone to operate
at the same time." Minerva Industries, Inc. v. Motorola, Inc. et al., 2010 U.S. Dist. LEXIS 9329

"each of said different sets of elements being adapted to at least assist in holding one of a plurality of differently configured pumps to the housing" — "each different set of elements is designed or configured to assist in holding one of the differently configured pumps to the housing." Sta-Rite Industries, et al. v. ITT Corp., et al., 2010 U.S. Dist. LEXIS 10790 (E.D. Tex., Jan. 19, 2010).  

"graft [structure] which is adapted to be anchored within one of the flow lumens" — "an intraluminal graft that includes malleable wires located proximal to at least one end of the graft [structure], which enable the intraluminal graft to be secured or attached to one of the flow lumens of the bifurcated base [graft] structure in an overlapping relationship." Edwards Lifesciences, LLC, et al. v. Cook Inc., et al., 2007 U.S. Dist. LEXIS 55634 (N.D. Cal., July 23, 2007).  

"adapted to be deformed during said seaming operation" — "adapted to have its shape altered during the seaming operation." Crown Packaging Technology, Inc., et al. v. Rexam Beverage Can Co., 486 F. Supp. 2d 366 (D. Del. 2007).  

"a third periphery surface adapted to be disposed adjacent and spaced from the back of the knee of the person" — "The Court construes the claim language to allow, but not require, the third periphery surface to be perpendicular to the major longitudinal axis. The claim language precludes a pad enclosure in the shape of a true triangle with an apex facing the back of the knee, but allows for a pad enclosure with two substantially quadrilaterally shaped sides and four periphery surfaces, where the third periphery surface is very narrow. Finally, the pad enclosure need not touch the knee, as the parties agree." Farrago v. Rawlings Sporting Goods Co., Inc., 2007 U.S. Dist. LEXIS 38036 (E.D. Mo., May 24, 2007).  

"adapted to be formed into a portion of said double seam during said seaming operation" — "adapted to be formed into a portion of the double seaming during the seaming operation." Crown Packaging Technology, Inc., et al. v. Rexam Beverage Can Co., 486 F. Supp. 2d 366 (D. Del. 2007).  

"adapted to be in pressure contact with a portion of the skin surface" — "the phrase 'adapted to be' requires that the applicator be designed to be in pressure contact with the skin." Palomar Medical Technologies, Inc., et al. v. Candela Corp., 2007 U.S. Dist. LEXIS 83159 (D. Mass., Nov. 8, 2007).  

"wing section adapted to be out of a strain path" — "wing section is a portion of the substrate contiguous with the center section but does not flex in response to a force transmitted to the center section by the step section." TK Holdings, Inc. v. CTS Corp., et al., 2010 U.S. Dist. LEXIS 95487 (E.D. Mich., Sep. 14, 2010).
"wing section adapted to be out of the path of the weight and not to flex" — "a portion of the substrate contiguous with the center section, but does not flex in response to stress transmitted to the center section by the step section." TK Holdings, Inc. v. CTS Corp., et al., 2010 U.S. Dist. LEXIS 95487 (E.D. Mich., Sep. 14, 2010).  

"a conductive electrode comprising a surface adapted to be placed in a fixed position in proximity to a surface of said pin" — "The term 'in proximity' denotes nearness or, as applied to the location of a conductive electrode, almost touching. ... The claimed language therefore suggests an arrangement whereby two surfaces lie near each other (i.e., 'in proximity') albeit not in direct contact." Hewlett-Packard Co. v. GenRad, Inc., 897 F. Supp. 1479 (D. Mass. 1995).  

"heel brace adapted to be positioned behind and bear against the rear surface of the heels" — "defines a structure fit to be positioned 'behind and bearing against the rear surface of the heels' and fit for performing the function of 'restraining upward movement of the heels.'" Mattox v. Infotopia, Inc., et al., 136 Fed. Appx. 366 (Fed. Cir., May 23, 2005) (unpublished).  

"step section adapted to concentrate the weight applied thereon onto the center section" — "the step section causes a stress concentration in the mid-portion of the substrate contiguous with the step section and capable of flexing in response to a force transmitted by the step section when the substrate experiences stress." TK Holdings, Inc. v. CTS Corp., et al., 2010 U.S. Dist. LEXIS 95487 (E.D. Mich., Sep. 14, 2010).  

"adapted to contact" — "designed or configured to functionally engage." Sta-Rite Industries, et al. v. ITT Corp., et al., 2010 U.S. Dist. LEXIS 10790 (E.D. Tex., Jan. 19, 2010).  

"adapted to contact tissue ... and adapted to conform the tissue" — "the expandable surface element is capable of contacting the tissue and capable of conforming the tissue. This does not require that the expandable outer surface actually contact or conform the tissue." Hologic, Inc., et al. v. SenoRx, Inc., 2009 U.S. Dist. LEXIS 12274 (N.D. Cal., Feb. 18, 2009).  

"said arms and said pair of magnetic members adapted to extend across respective side portions of a primary spectacle frame so that said pair of magnetic members can engage corresponding magnetic members on a primary spectacle frame" — "the arms and the pair of auxiliary frame magnetic members are capable or suitable for reaching from one side to the other of the respective side portions of the primary spectacle frame so that said pair of magnetic members can either contact the corresponding surfaces of the primary spectacle frame magnetic members or magnetically attract those corresponding surfaces of the primary spectacle frame magnetic members without actual contact to attach the auxiliary spectacle frame to the primary spectacle frame." Aspex Eyewear, Inc., et al. v. Miracle Optics, Inc., 2003 U.S. Dist. LEXIS 26355 (C.D. Cal., Feb. 14, 2003).
"adapted to guide the electrolyte" — "means that the tapered shape of the second electrode guides or positions the electrolyte as it is inserted into the electrode during the assembly of the probe." *Blumenthal, et al. v. Barber-Colman Holdings Corp., et al.*, 1995 U.S. App. LEXIS 25671 (Fed. Cir., July 31, 1995) (unpublished).87

"a central portion adapted to nest within and below the rim of a container" — "[does not] require that all of the structures on the central portion to nest 'below the rim of a container.'" *Bailey v. Dart Container Corp., et al.*, 157 F. Supp. 2d 110 (D. Mass. 2001).91

"graft which is adapted to overlap and be attached to one of the flow lumens" — "an intraluminal graft that includes malleable wires located proximal to at least one end of the graft structure, which enable the intraluminal graft to be secured or attached to one of the flow lumens of the bifurcated base graft structure in an overlapping relationship." *Edwards Lifesciences, LLC, et al. v. Cook Inc., et al.*, 2007 U.S. Dist. LEXIS 55634 (N.D. Cal., July 23, 2007).92

"adapted to receive at least one femoral surface modifying instrument in proper alignment with respect to said handle" — "The handle's being 'adapted to receive' an instrument 'in proper alignment with respect to said handle' implies what the preferred embodiment makes clearer—that any rotation alignment is fixed by the handle." *Dow Corning Wright Corp. v. Osteonics Corp.*, 939 F. Supp. 65 (D. Mass. 1996).93

"adapting the expandable surface to contact tissue surrounding the resection cavity to conform the tissue" — "no construction necessary." *Xoft, Inc. v. Cytyc Corp., et al.*, 2007 U.S. Dist. LEXIS 34468 (N.D. Cal., April 27, 2007).95
"adaptor" — "an interconnector between the catheter and another fluid line, wherein the adaptor is not integral with the catheter." Venetec International, Inc. v. Medical Device Group, Inc., 2007 U.S. Dist. LEXIS 56770 (S.D. Cal., Aug. 3, 2007).

"added"; "adding" — "to join or unite so as to bring about an increase or improvement." Green Edge Enterprises, LLC v. Rubber Mulch Etc., LLC, et al., 2007 U.S. Dist. LEXIS 38799 (E.D. Mo., May 29, 2007).

"adding increasing amounts of liquid water ... to the working fluid acquired by the compressor" — "adding water in stepped increments or in a smooth ramping fashion, or by a combination of the two." Dow Chemical Co. v. Mee Industries, et al., 2001 U.S. Dist. LEXIS 26229 (M.D. Fla., Aug. 17, 2001).

"adhere" — "items are adhered if they are held together." Winn, Inc., et al. v. Compgrip USA Corp., et al., 2007 U.S. Dist. LEXIS 38051 (C.D. Cal., April 23, 2007).

"adhered to" — "should not be limited in the ways Defendants suggest. A reading of the Patent's specification makes clear that 'adhered to' should be construed to include the use of an adhesive that contains air gaps, and should not, as a matter of law, be limited solely to the type of adhesive disclosed in the '971 Patent's embodiment." Winn, Inc., et al. v. Compgrip USA Corp., et al., 2007 U.S. Dist. LEXIS 38051 (C.D. Cal., April 23, 2007).

"adhered to and abutting" — "Adhered to means to 'hold fast.' Abutting is commonly defined as touching, lying adjacent to or bordering upon." Winn Inc., et al. v. Eaton Corp., et al., 272 F. Supp. 2d 968 (C.D. Cal. 2003).

"adhering material" — "the district court unduly restricted the limitation of 'adhering material' to 'a layer of adhesive, such as a glue or epoxy, which bonds the plate to the tie.'" Pandrol USA, LP, et al. v. Airboss Railway Products, Inc., et al., 10 Fed. Appx. 837 (Fed. Cir., Mar. 27, 2001) (unpublished). "The defendants essentially argue that our earlier claim construction was incorrect. Even if that claim construction were not binding as the law of the case, it was clearly correct." Id., 320 F.3d 1354 (Fed. Cir. 2003).

"adhesive" — "a substance used to bond two or more solids so that they act or can be used as a single piece." Advanced Fiber Technologies Trust v. J&L Fiber Services, Inc., 2010 U.S. Dist. LEXIS 95032 (N.D.N.Y., Sep. 13, 2010).

"adhesive" — "Since 'adhesive' in Claim 1 is not limited by any other language, and to be useful, only requires that the material stick to the metal strip, at a minimum, throughout the process of shaping the strip into spacer stock and fixing glass to the spacer, the Court will not limit it further." Lockformer Co. v. PPG Industries, Inc., et al., 2001 U.S. Dist. LEXIS 12580 (N.D. Ill., Aug. 15, 2001).

"adhesive coating" — "a substance such as a glue or gum, which is capable of holding materials together by surface attachment. It does not include magnetic materials that affix a label to a metal surface." MPT, Inc. v. Marathon Labels, Inc., et al., 2006 U.S. Dist. LEXIS 4612 (N.D. Ohio, Feb. 7, 2006).\textsuperscript{111}

"adjacent" — "next to or adjoining with no intervening structure between the elongate members and the fluid receptacle." Millipore Corp. v. W.L. Gore & Associates, Inc., 2010 U.S. Dist. LEXIS 99704 (D. Mass., Sep. 20, 2010).\textsuperscript{113}

"adjacent" — "close to or nearby, but not separated by another item of the same type." Great Dane Limited Partnership v. Stoughton Trailers, LLC, et al., 2009 U.S. Dist. LEXIS 119573 (M.D. Ga., Dec. 23, 2009).\textsuperscript{115}

"adjacent" — "does not require that no other structure be between the two structures described as 'adjacent.'" Aero Industries, Inc. v. Quick Draw Tarpaulin Systems, Inc., 2009 U.S. Dist. LEXIS 25978 (S.D. Ind., Mar. 27, 2009).\textsuperscript{116}

"adjacent" — "close to." Flo Healthcare Solutions, LLC v. Rioux Vision, Inc., 2007 U.S. Dist. LEXIS 85234 (N.D. Ga., Nov. 16, 2007).\textsuperscript{117}

"adjacent" — "in close proximity to' or 'not distant.'" Herman Miller, Inc. v. Teknion Corp., et al., 504 F. Supp. 2d 360 (N.D. Ill. 2007).\textsuperscript{118}

"adjacent" — "next to." MBO Laboratories, Inc. v. Becton, Dickinson & Co., 474 F.3d 1323 (Fed. Cir. 2007).\textsuperscript{119}

"adjacent" — "relatively near, or nearby." Ricoh Co., Ltd., et al. v. Katun Corp., et al., 380 F. Supp. 2d 418 (D.N.J. 2005).\textsuperscript{120}

"adjacent" — "objects may or may not be in contact, but are not adjacent to each other where there is another object between them." Free Motion Fitness, Inc. v. Cybex International, Inc., et al., 311 F. Supp. 2d 1297 (D. Utah 2003).\textsuperscript{122}

"adjacent" — "close to, lying near, next to, or adjoining." Smith & Nephew, Inc. v. Arthrocare Corp., 2004 U.S. Dist. LEXIS 31057 (W.D. Tenn. 2004).\textsuperscript{123}

"adjacent" — "not far off." General American Transportation Corp. v. Cryo-Trans, Inc., 893 F. Supp. 774 (N.D. Ill. 1995).\textsuperscript{125}

"adjacent" — "contiguous or connected with the front surface of the body." MBO Laboratories, Inc. v. Becton, Dickson & Co., 385 F. Supp. 2d 88 (D. Mass. 2005).\textsuperscript{126}
"adjacent" — "close to; lying near; near or close to but not necessarily touching."  

"The Court declines to revise its prior construction of the term 'adjacent.'"  

"adjacent" — "mean[s] that the mating connector is located nearby but not touching the side edge (as defined below) of the motherboard."  

"adjacent" — "'near' or 'close.' Hence an intervening design element does not prevent two other elements from being 'adjacent' to one another."  

"passing from the frangible panel into said adjacent area of the central panel" — "portion of the central panel near the hinge segment."  

"openings ... adjacent each of said side walls and end walls" — "we construe the phrase 'openings ,, adjacent each of said side walls and end walls' as referring to structurally distinct openings that are provided adjacent to each of the railcar's four walls. Each opening is 'adjacent' to only one wall, the nearest one to which it directs the downward flow of CO2 gas. Thus, an opening 'adjacent' to a side wall cannot also be an opening 'adjacent' to an end wall. The patent does not contemplate the openings performing double duty in this manner."  

"adjacent insert track" — "does not require construction."  

"adjacent longitudinal co-extensive lateral recesses" — "recesses that are directly across from each other and not offset."  

"an opening adjacent one end to the exterior of the bag through which contents are discharged" — "an opening to the exterior of the bag through which contents are dischargeable that is near one end of the bag."  

"adjacent portions" — "The plain meaning of the term 'adjacent portions' cannot seriously be disputed. 'Adjacent' means 'next to' and 'portion' means 'a part of a whole.'"  

"adjacent relationship"; "juxtaposed relationship" — "next to but not necessarily touching."  

"adjacent said detent plate structure" — "positioned near the detent plate structure."  

"adjacent the handle assembly" — "nothing in the intrinsic evidence of the '286 Patent requires the adoption defendant's more restrictive definition, 'directly next to,' and thus the Court adopts plaintiff's construction, 'near,' as guided by the [Federal Circuit's] decision in Free Motion."

"adjacent the plug receiving opening" — "means that the light emitting device is situated close to the plug receiving opening such that (1) both the plug receiving opening and the light emitting device are in close proximity and are easily visible to the observer simultaneously; and (2) the observer could discern a relation between the plug receiving opening and the nearby lights. 'Adjacent' was intended to signify not remote." Amphenol, Corp., et al. v. Maxconn, Inc., et al., 2000 U.S. Dist. LEXIS 20221 (N.D. Cal., Mar. 7, 2000).140

"adjacent to and above" — "adjacent to and above." Vita-Mix Corp. v. Basic Holdings, Inc., et al., 514 F. Supp. 2d 990 (N.D. Ohio 2007).141

"located adjacent to said battery" — "located adjacent to' is properly construed as 'close to,' as in 'located close to the battery so that it may sense the temperature of the battery.'" Cardiac Science, Inc. v. Koninklijke Philips Electronics N.V., et al., 2006 U.S. Dist. LEXIS 22267 (D. Minn., April 20, 2006).142

"[an open space] adjacent to the distal end of the cannula" — "an open space next to, but not occupied by, the expanded portion of the cannula." General Surgical Innovations, Inc. v. Origin Medsystems, Inc., 1998 U.S. Dist. LEXIS 22958 (N.D. Cal., May 15, 1998).144

"adjoining" — "There is nothing in the language of the claims or in the ordinary and customary meaning of the word 'adjoining' to require that adjoining regions touch over any particular expanse, only that they are 'touching or bounding at a point or line.' The broad definition of the term 'adjoining' is entirely consistent with the written description and does not exclude the preferred embodiment." International Rectifier Corp. v. IXYS Corp., 361 F.3d 1363 (Fed. Cir. 2004).145

"adjustable" — "mean[s] the protected device is capable of changing the bias force exerted on the sliding gate by the dynamic, live loaded seat. This term is not limited by any time, place, manner, or means of adjustment and does not necessitate any external adjustment mechanism." Curtiss-Wright Flow Control Corp. v. Velan, Inc., 2005 U.S. Dist. LEXIS 46413 (W.D. Tex., Apr. 15, 2005).147 "[T]he district court ... went too far in completely eliminating any constraints on the 'adjustable' limitation. ... if 'adjustable' means adjustable at any time and in any way, it is hard to imagine any meaning for the term because without limitations on time or manner of adjustment, all structures are 'adjustable.'" Id., 438 F.3d 1374 (Fed. Cir. 2006).148

"adjustable straps" — "narrow strips of leather or other suitable flexible material that are capable of being changed so that the chest protector fits." Everything Baseball Limited, LLC v. Team Athletic Goods, Inc., 2007 U.S. Dist. LEXIS 66191 (N.D. Ill., Sept. 4, 2007).149

[i] "adjusting the pressure in the control volume in accordance with the measured pressure"; [ii] "adjusting the pressure in accordance with the measured pressure"; [iii] "adjusting the fluid pump pressure in accordance with the relative elevation to obtain a desired pressure at the distal end" — [i] "adjusting the pressure in the control volume in accordance with the measured pressure"; [ii] "adjusting the pressure in accordance with the measured pressure"; [iii] "adjusting the fluid pump pressure in accordance with the relative elevation to obtain a desired pressure at the distal end." Baxter Healthcare Corp. v. Fresenius Medical Care Holdings, Inc., et al., 2009 U.S. Dist. LEXIS 14842 (N.D. Cal., Feb. 10, 2009).151

"an auxiliary body support adjustably coupled to the user support and extending from the second end of the user support adjacent the second end of the body pad" — "does not require construction." Fitness Quest Inc. v. J. Monti, 2007 U.S. Dist. LEXIS 60195 (N.D. Ohio, Aug. 16, 2007).153

"sufficient aeration ... to enhance sensitivity" — "is understood by those of ordinary skill in the art to include both interstitial and porous air." Atlas Powder Co., et al. v. Ireco Inc., et al., 190 F.3d 1342 (Fed. Cir. 1999).155

"a quantity of stannous chloride affixed to at least a portion of said tin between said tin and the skin of a patient"; "a chloride of said electrically conductive metal being affixed to said outer surface of said metal to provide enhanced monitoring capability through the same electrode used for stimulation" — "'affixed' as used in the asserted claims describes stannous chloride that attached or bonded with the tin plate, and does not describe only stannous chloride separably applied onto the tin surface." R2 Medical Systems, Inc., et al. v. Katecho, Inc., et al., 931 F. Supp. 1397 (N.D. Ill. 1996).158

"a bond affixing the retention structure to the resilient body" — "a bond affixing the retention structure to the resilient body, where without the bond, the retention structure and resilient body would be unaffixed components." Conceptus, Inc. v. Hologic, Inc., 2010 U.S. Dist. LEXIS 24247 (N.D. Cal., Mar. 16, 2010).159

"pacing means for pacing the ventricles of the heart at a controlled decreasing rate from a base rate to a final rate lower than said base rate after said cardioverting means applies said cardioverting electrical energy to the atria of the heart" — "the Court concludes that 'after' means that the pacing occurs when the microprocessor determines that the shock was successful in stopping atrial fibrillation." Medtronic, Inc., et al. v. Guidant Corp., et al., 2004 U.S. Dist. LEXIS 10020 (D. Minn., May 25, 2004).160

"said load is agitated" — "moving the wash load to and fro." Whirlpool Corp., et al. v LG Electronics, Inc., et al., 2005 U.S. Dist. LEXIS 44479 (W.D. Mich., Nov. 8, 2005).162

[i] "air boost device"; [ii] "turbocharger" — [i] "an apparatus, such as a turbocharger, used to increase air throughput and density"; [ii] "an air boost device driven by a turbine which is powered by exhaust gases." Borg Warner Inc., et al. v. Honeywell International, Inc., 2009 U.S. Dist. LEXIS 13391 (W.D.N.C., Feb. 20, 2009).163

"air circulating means associated with said dryer housing for circulating air through said reel, the air circulating means including means for drawing air from the interior of the reel into said housing in order to provide positive air flow through the apparatus" — "we agree with Wenger that the district court erred in interpreting the 'air circulation means' limitation as requiring structure capable of recirculating air." Wenger Manufacturing, Inc. v. Coating Machinery Systems, Inc., et al., 239 F.3d 1225 (Fed. Cir. 2001).165

"air inlet path" — "an unoccupied space receiving air flow from the opening in the cover plate to the second surface of the top plate." ICHL, LLC v. NEC Corp. of America, et al., 2010 U.S. Dist. LEXIS 38942 (E.D. Tex., Apr. 20, 2010).166

"a set of air springs extending between said axle seats and said primary frame members" — "a number of air cushions reaching across the distance between the axle seats and primary frame members." Watson & Chalin Manufacturing, Inc. v. Boler Co., 227 F. Supp. 2d 633 (E.D. Tex. 2002).169

"an air supply for supplying compressed air" — "either one or more storage vessels of compressed air or an oil-free air compressor. The limitation is further narrowed by specifying a function for the element, namely to supply compressed air." Undersea Breathing Systems, Inc. v. Nitrox Technologies, Inc., 985 F. Supp. 752 (N.D. Ill. 1997).170

"at least one pressurizable air/water storage tank" — "The plain language of the 987 patent indicates that the tank must store water and air. Otherwise, it would read an 'air and/or water storage tank.'" Larami Ltd. v. Ohio Art Co., 270 F. Supp. 2d 555 (D.N.J. 2003).171
"the longitudinal portions are aligned in a spaced relationship parallel to a stent longitudinal axis" — "the longitudinal portions are spaced from each other along a line parallel to an imaginary straight line running lengthwise in the center of the stent." Medtronic Vascular, Inc., et al. v. Abbott Cardiovascular Systems, Inc., et al., 2007 U.S. Dist. LEXIS 95430 (N.D. Cal., Dec. 21, 2007).172

"aligning ... in registration" — "moving the robotic assembly in the machine into a position vertically aligned with a customer selected one of said beverage container queues." Crane Co., et al. v. Sandenvendo America, Inc., et al., 2009 U.S. Dist. LEXIS 47509 (E.D. Tex., Jun. 5, 2009).174

"alignment mark" — "a pattern used for accurate positioning and connection of flexible printed circuit boards." LG Display Co., Ltd. v. AU Optronics Corp., et al., 2010 U.S. Dist. LEXIS 12969 (D. Del., Feb. 16, 2010).175

"said retaining member allowing said female fastener to move along said first axis" — "there is no need to construe this phrase." American Seating Co. v. Freedman Seating Co., 450 F. Supp. 2d 765 (W.D. Mich. 2006).176

"allowing said napkin edges to fold upward"; "adapted to be activated by the thighs of the wearer to allow the absorbent edges to fold upward" — "allowing said napkin edges to fold upward"; "adapted to be activated by the thighs of the wearer to allow the absorbent edges to fold upward." Kimberly-Clark Corp., et al. v. Tyco Healthcare Retail Group, 456 F. Supp. 2d 998 (E.D. Wis. 2006).177

"allowing the bar or pin to be placed in said passage by pressure in a direction perpendicular" — "the bar, pin or rod may be inserted into the passageway by at least some pressure applied in a perpendicular direction with respect to both the axis of the shaft and the transverse direction." Stryker Trauma S.A., et al. v. Synthes (USA), 2004 U.S. Dist. LEXIS 30810 (D.N.J., Apr. 12, 2004).178

"the first and second legs allowing the hangers to accommodate various sizes" — "[is] clear on its face and not in need of construction." Andrew Corp. v. Beverly Manufacturing Co., 479 F. Supp. 2d 766 (N.D. Ill. 2006).179

"allowing the microorganisms within the fluid to biodegrade the hydrocarbons"; "retaining the hydrocarbons within the fluid in the tank while the microorganisms biodegrade the hydrocarbons" — "let or permit the microorganisms within the cleaning fluid to biodegrade the hydrocarbons"; "the hydrocarbons remain in the cleaning fluid while the microorganisms biodegrade them." ChemFree Corp. v. J. Walter, Inc., et al., 2007 U.S. Dist. LEXIS 51677 (N.D. Ga., July 17, 2007).180

"along" — "does not require that a first item abut a second item, but rather can be 'near' the second item." Moore U.S.A., Inc. v. Standard Register Co., 229 F.3d 1091 (Fed. Cir. 2000).181

"along" — "on a line or course parallel and close to; continuously beside; for example: rowed along the shore; the trees along the avenue." Smith & Nephew, Inc. v. Arthrocare Corp., 2004 U.S. Dist. LEXIS 31057 (W.D. Tenn. 2004).182
"along a line" — "contacting the aorta inner wall with a portion of the tube body such that when the end of the catheter lodges within the opening in the coronary artery, an about 1.5 cm or greater length of the tube body bears upon the wall of the aorta opposite the opening." Voda v. Cordis Corp., 506 F. Supp. 2d 868 (W.D. Okla. 2007).

"along one of the side edges"; "along one vertical corner of said structure" — "over the length of or on a line or course parallel and close to one of the side edges of a wall of the blind"; "over the length of or on a line or course parallel and close to the vertical line formed where two side walls of the blind meet at an angle." Stumbo v. Eastman Outdoors, Inc., 2007 U.S. Dist. LEXIS 5444 (D. Colo., Jan. 25, 2007).

"altering" — "one or more techniques selected from the group consisting of adding, removing, isolating and shielding a known fraction of said initial amount." Travanti Pharma, Inc. v. Iomed, Inc., 2006 U.S. Dist. LEXIS 2646 (D. Minn., Jan. 11, 2006).

"an upstanding feed tube ... to provide a hygienic flow path for delivering liquid from ... and admitting air ... into said container" — "is properly interpreted to refer to a single feed tube with a single flow path for both liquid and air." Elkay Manufacturing Co. v. Ebco Manufacturing Co., et al., 192 F.3d 973 (Fed. Cir. 1999).

"an anatomic space" — "an open working space for the performance of a surgical procedure, which is not occupied by a bladder or other device, or by tissue." General Surgical Innovations, Inc. v. Origin Medsystems, Inc., 1998 U.S. Dist. LEXIS 22958 (N.D. Cal., May 15, 1998).

"an illumination apparatus"; "illuminating" — "encompass one or more illumination sources." Scanner Technologies Corp. v. ICOS Vision Systems Corp., N.V., 365 F.3d 1299, 1304 (Fed. Cir. 2004).

"an opening" [and] "the opening" — "the court finds that Jones' invention comprises a dual compartment bag that is separated by a single throat." Jones v. Argee Corp., 1998 U.S. Dist. LEXIS 21765 (N.D. Ill. 1998).

- 18 -
"an opening formed therein" — "this opening must be a permanent part of the sleeve structure. ... when the patent claims 'an' opening in the sleeve, the Court reads this to disclose a single opening in the sleeve and no more." Brita Wasser-Filter-Systeme GmbH, et al. v. Recovery Engineering, Inc., 1998 U.S. Dist. LEXIS 12491 (N.D. Ill., Aug. 6, 1998). 197

"lowering said body into the well bore and imparting rotation to said tool body, thereby creating a magnetic field" — "both steps are required, that is lowering the tool into the well bore, and subsequently rotating the tool, to create the magnetic field described in the language of the claim. In each case, the language of the claim calls for lowering and rotating; the use of the conjunctive 'and' does not provide the option of not rotating the tool." Rattler Tools, Inc. v. Bilco Tools, Inc., et al., 2007 U.S. Dist. LEXIS 49124 (E.D. La., July 6, 2007). 198

"detaching said distal tip from said guidewire to leave said distal tip within said vascular cavity and said occlusion being formed within said vascular cavity" — "detaching the distal tip after the formation of an occlusion has started under circumstances where continuation of formation of the occlusion can take place after detachment." Regents of the University of California v. Micro Therapeutics, Inc., et al., 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007). 199

"anesthetizing the portion of the eye lid" — "The district court, following what it perceived as the 'ordinary meaning' of the term, held that ... the limitation 'anesthetizing the portion of the eye lid ...' does not encompass 'freezing' or application of 'cold water.' ... the district court correctly construed the claims." Giora George Angres, Ltd. v. Tinny Beauty and Figure, Inc., et al., 1997 U.S. App. LEXIS 15342 (Fed. Cir., Jun. 26, 1997) (unpublished). 201

"balloon angioplasty catheter" — "the entire record in this case reveals that 'angioplasty' is, in fact, a structural limitation of Rowe's claims." Rowe v. Dror; et al., 112 F.3d 473 (Fed. Cir. 1997). 202

"angle" — "a geometric figure or arithmetic quantity defined by two rays emanating from a common point or by two planes emanating from a common line." Floe International, Inc. v. Newmans' Manufacturing Inc., 2006 U.S. Dist. LEXIS 42114 (D. Minn., June 21, 2006). 203

"angle less than ninety degrees" — "the Court construes this phrase as 'a geometric figure or arithmetic quantity defined by two rays emanating from a common point or by two planes emanating from a common line, where the measured angle between the two rays or two planes is less than ninety degrees.' The Court recognizes, however, that the prosecution history does not foreclose the possibility that a zero degrees angle could fall within the confines of the claim language." Floe International, Inc. v. Newmans' Manufacturing Inc., 2006 U.S. Dist. LEXIS 42114 (D. Minn., June 21, 2006). 204

"angle of the common plane of the coupled panels" — "refers to the angle of the common plane of the coupled panels with the common plane of tangency which is other than 90°"; OR "refers to the angle of the coupled panels that, with respect to the lower lip, is inclined at the angle of 30° to 70° relative to the coupled panels." Alloc, Inc. v. Unilin Decor N.V., et al., 2007 U.S. Dist. LEXIS 16743 (E.D. Wis., Mar. 6, 2007). 205
"angled cutter" — "[a]n angled structure that cuts, in which 'angled' means that at least one edge of the angled structure is oriented other than perpendicularly to the material to be cut." *Kothmann Enterprises, Inc. v. Trinity Industries, Inc.*, 394 F. Supp. 2d 923 (S.D. Tex. 2005).206

"driving surfaces having an upper edge and a lower edge and being angled from said upper edge downward toward said lower edge and in said selected direction of travel"; "[driving surfaces] having an upper edge and a lower edge and extending downward from said upper edge toward said lower edge and in said selected direction of travel"; "at least a portion of the driving surfaces extend downwardly toward the bottom surface and in the direction of intended travel" — "are limited to modules having angled, planar driving surfaces." *Laitram Corp., et al. v. Morehouse Industries, Inc., et al.*, 1997 U.S. Dist. LEXIS 23026 (E.D. Cal., Apr. 23, 1997).207 "The district court's interpretation of the 'driving surface' limitation was not erroneous." *Id.*, 143 F.3d 1456 (Fed. Cir. 1998).208

"angularly offset" — "the axes of the three holes are spaced apart from each other, an angle is formed by the axes of any two such holes when viewed in two dimensions from the butt end or from the side, and the axes are not aligned in a parallel orientation." *Acumed LLC v. Stryker Corp., et al.*, 483 F.3d 800 (Fed. Cir. 2007).209

"the collection elements and conduit being angularly spaced from each other" — "requir[es] two angles--an angle between the conduit and collection elements and an angle between each of the collection elements." *Knopik v. Amoco Corp., et al.*, 96 F. Supp. 2d 892 (D. Minn. 2000).212

"annular" — "of or relating to an area formed by two concentric circular or curved regions." *Wilson Sporting Goods Co. v. Hillerich & Bradby Co.*, 442 F.3d 1322 (Fed. Cir. 2006).213

"annular channel"; "annular lip" — "a ring-like gutter, groove or furrow which is large enough to receive displaced septum material"; "a septum-supporting ridge which also serves as one wall of the annular channel." *Baxter International Inc., et al. v. McGaw, Inc.*, 1996 U.S. Dist. LEXIS 1527 (N.D. Ill., Feb. 8, 1996).216

"an angular medial surface for supporting the three remaining ulnar fingers in a wrapped configuration with flexion of the distal, middle, and proximal phalanges of said ulnar fingers" — "merely requires an angled surface that supports the middle, ring, and small fingers in a folded position such that the distal, middle and proximal bones of the fingers are partially bent over that angled surface." *Gart v. Logitech, Inc.*, 254 F.3d 1334 (Fed. Cir. 2001).217
"annular extension" — "the district court interpreted the claims of the '657 patent to require that the annular extensions inhibit radial expansion of the sealing ring. That interpretation, however, is not supported by the language of the claim. Claim 1 defines the 'annular extensions' in purely structural terms. ... We find nothing in the claim language itself that requires the annular extensions to perform the function of inhibiting radial expansion of the sealing ring." Schwing GmbH v. Putzmeister Aktiengesellschaft, et al., 305 F.3d 1318 (Fed. Cir. 2002). 218

"annular inner surface" — "so long as an inner surface, when viewed from above, surrounds an interior space or cavity, that surface will be considered 'annular.'" CCPI Inc. v. American Premier, Inc., 966 F. Supp. 276 (D. Del. 1997). 219

"annular member" — "a member with expanded dimensions in the direction perpendicular to the major axis of the paddle support arm, which member may be, but need not necessarily be, circular or oval in shape." Agere Systems Inc. v. Atmel Corp., 2003 U.S. Dist. LEXIS 9823 (E.D. Pa., May 23, 2003). 221

"annular peripheral zone" — "may include circular or round configurations, but are not necessarily limited to such." Produits Berger S.A., et al. v. Schemenauer, et al., 2007 U.S. Dist. LEXIS 10294 (E.D. Tex., Feb. 14, 2007). 222

"annular reinforcing bead" — "an outwardly concave generally 'U' shaped groove (also called a countersink or anti peaking bead) that is located inwards from the bottom of the wall (chuck wall) when looking at a cross section of the can end, which encircles and supports the center panel of the can end." Crown Packaging Technology, Inc., et al. v. Rexam Beverage Can Co., 486 F. Supp. 2d 366 (D. Del. 2007). 223

"annular sidewall ... diverging radially outwardly to an upper terminal edge" — "a sidewall shaped like a ring ... continuously increasing in radius from the central axis moving from the base wall to the edge of the sidewall at the open end of the washing machine basket." Maytag Corp. v. Electrolux Home Products, Inc., 411 F. Supp. 2d 1008 (N.D. Iowa 2006). 225

"spaced annularly around a periphery of the hub at known intervals" — "positioned on an annular path around the hub's end face." Fargo Electronics, Inc. v. Iris Ltd, Inc., 2005 U.S. Dist. LEXIS 34493 (D. Minn., Nov. 30, 2005). 226

"another movement" — "is a broad term and cannot be interpreted to exclude a reciprocating movement without varying the claim limitations. A reciprocating movement is another movement." Haney v. Timesavers, Inc., et al., 900 F. Supp. 1375 (D. Or. 1995). 227

"any standard meter"; "any standard electric meter" — "the court construes 'any' to mean 'every' or 'all.'" Cellnet Data Systems, Inc. v. Itron, Inc., 17 F. Supp. 2d 1100 (N.D. Cal. 1998). 228

"aperture" — "a two-dimensional, rectangular space." Display Technologies, Inc. v. Paul Flum Ideas, Inc., 282 F.3d 1340 (Fed. Cir. 2002). 229
"aperture" — "an opening, such as a hole, gap, or slit." *Fargo Electronics, Inc. v. Iris Ltd, Inc.*, 2005 U.S. Dist. LEXIS 34493 (D. Minn., Nov. 30, 2005).230

"aperture" — "there is no reason in evidence intrinsic to the patent to require ... that the 'aperture' be 'fully enclosed.' The patent fairly contemplates and covers any shape with the requisite 'spatial relationship[s]' ... between the cam member, cavity, and aperture, and is not limited to the embodiment shown in Figs. 5 and 7, so long as the cam is contained within the device as a result of the spatial configuration of the aperture." *Quickie, LLC v. Medtronic, Inc.*, 226 F. Supp. 2d 481 (S.D.N.Y. 2002).233

"aperture" — "Plaintiff asserts that the 'aperture' ... includes a recess. ... A review of the claim language and specification leads to the inescapable conclusion that the aperture does not include the recess." *Intermatic Inc. v. Lamson & Sessions Co.*, 1999 U.S. Dist. LEXIS 1997 (N.D. Ill., Feb. 9, 1999).235

"apertures" — "discrete, arrangeable, openings through a solid material that allow a gas to flow from one side to the other." *ASM America, Inc., et al. v. Genus, Inc.*, 260 F. Supp. 2d 827 (N.D. Cal. 2002).237

"the appearance of smoothed edges" — "means avoiding roughened edges and improving character formation so that the generated shapes have less of an uneven appearance or less 'jaggies' than under prior printing methods." *Pitney Bowes, Inc. v. Hewlett-Packard Co.*, 141 F. Supp. 2d 288 (D. Conn. 2001).241

"application unit" — "a mechanical mechanism that multiplies an input force using a lever to provide a greater output force that presses the brake shoes against the brake disk." *Knorr-Bremse Systeme Fuer Nutzfahrzeuge GmbH v. Dana Corp., et al.*, 133 F. Supp. 2d 833 (E.D. Va. 2001).242

"applying a compressive force against said terminal by said electrodes" — "using the electrodes to apply additional pressure against the terminal after the insulation has been removed from the armature wire." Joyal Products, Inc. v. Johnson Electric North America, et al., 2007 U.S. Dist. LEXIS 79522 (D.N.J., Oct. 25, 2007).244

"applying an external physical pressure" — "the application of force to the label(s) and container by holding and pressing apparatus that arises or acts from the outside; i.e., separate and independent from the labels and container." Stephen Key Design, LLC, et al. v. Lego Systems, Inc., et al., 261 F. Supp. 2d 1196 (N.D. Cal. 2003).246

"applying an overprinting layer over at least the scratch-off layer" — "printing an overprinting layer over the scratch-off layer and optionally printing the overprinting layer over a portion of the non-scratch-off layer." Scientific Games International, Inc. v. Oberthur Gaming Technologies, 2005 U.S. Dist. LEXIS 34772 (N.D. Ga., Dec. 5, 2005).247

"applying axially directed forces to the septum to form an outwardly, easily wipable exterior peripheral surface"; "applying axially directed forces to the septum to form an outwardly curved, easily wipable exterior peripheral surface"; "applying axially directed forces to the septum to form a curved, easily wipable exterior peripheral surface" — "each of these phrases has the same meaning, regardless of the discrepancies in language. Furthermore, the court concludes that the 'axially directed forces' have as their sole purpose the forming of the surface of the septum. That surface is formed by these forces as outwardly curved or domed. The court also concludes that the 'exterior peripheral surface' is that part of the septum not covered by the housing, and thus easily wipable because it is exposed." Baxter International Inc., et al. v. McGaw, Inc., 1996 U.S. Dist. LEXIS 1527 (N.D. Ill., Feb. 8, 1996).249

"applying fluid pressure to the diaphragm to operate the pump chamber" — "applying pressure through a gas or liquid to the diaphragm to operate the pump chamber." Baxter Healthcare Corp. v. Fresenius Medical Care Holdings, Inc., et al., 2009 U.S. Dist. LEXIS 14842 (N.D. Cal., Feb. 10, 2009).251

"thereafter applying pressure and shear to the heated mixture sufficient immediately to convert at least a portion of the binder material" — "mean[s] applying pressure greater than 40 psi and shear sufficient to convert at least a portion of the binder materials after the entire mixture has been heated to a temperature above the softening temperature of the binder." KX Industries, L.P., et al. v. Culligan Water Technologies, Inc., et al., 90 F. Supp. 2d 461 (D. Del. 1999).253

"applying radial loads to said inner and outer sealing lips" — "To apply a radial load, the wedge must contact the lip. Claim 1, by its own language, calls for a seal assembly in which the wedge contacts both lips." Hydraflo v. Enidine Inc., 907 F. Supp. 639 (W.D.N.Y. 1995).254

"applying radially directed forces to the septum to reseal the slit therein"; "applying sufficient radially directed forces to the septum to reseal the slit therein preventing fluid flow therethrough" — "because the purpose of the radially directed forces in all three claims is to reseal, the radially directed forces must be strong enough to affect the center of the septum, thus causing the slit to reseal and not leak." Baxter International Inc., et al. v. Mcgaw, Inc., 1996 U.S. Dist. LEXIS 1527 (N.D. Ill., Feb. 8, 1996).255

"less than approximately"; "greater than approximately" — "Hamilton has succeeded in carrying its burden to establish by clear and convincing evidence that the '621 patent is indefinite." Hamilton Products, Inc. v. O'Neil, et al., 492 F. Supp. 2d 1328 (M.D. Fla. 2007).258

"approximately coplanar" — "[i] limited to the roller axes of rotation being in the same plane as the face of the driven member plate within a relatively small tolerance corresponding to the machine tolerances of a few thousandths or ten thousandths of an inch." Lencco Racing Co., Inc. v. James Jolliffe and Micro Belmont Engineering, Artco, Inc., et al., 2000 U.S. Dist. LEXIS 121 (S.D. Mich., Jan. 5, 2000).259

[i] "approximately one and one half inches"; [ii] "approximately nine and one half inches"; [iii] "approximately one fourth inch"; [iv] "approximately eleven and one fourth inches" — [i] "no less than one and three-eighths inches and no greater than one and five-eighths inches"; [ii] "no less than nine and three-eighths inches and no greater than nine and five-eighths inches"; [iii] "no less than one eighth of an inch and no greater than three eighths of an inch"; [iv] "no less than eleven and one-eighth inches and no greater than eleven and three-eighths inches." Messer v. Ho Sports Co., Inc., et al., 2007 U.S. Dist. LEXIS 50081 (D. Or., July 9, 2007).262
[i] "approximately one fourth to one fifth"; [ii] "approximately three fourths to four fifths" — "[i] "no less than fifteen and no more than thirty percent"; [ii] "no less than seventy and no more than eighty-five percent." Messer v. Ho Sports Co., Inc., et al., 2007 U.S. Dist. LEXIS 50081 (D. Or., July 9, 2007).363

"wherein said film is stretched approximately 200%" — "the plastic film is stretched 200 percent, plus or minus standard manufacturing tolerances." Pliant Corp. v. MSC Marketing and Technology, Inc., 416 F. Supp. 2d 632 (N.D. Ill. 2006).364

"arc chamber" — "a pair of spaced-apart electrodes ... in which electric arcs are to be formed." Thermal Dynamics Corp. v. TATRAS, Inc., 2004 U.S. Dist. LEXIS 24954 (D.N.H., Dec. 9, 2004).

"arcuate" — "the term 'arcuate' includes, but is not limited to, elliptical cross-sections." C.M.L. s.r.l. v. Ineco Industrial Navarra de Equipos y Comercio, S.A., et al., 177 F. Supp. 2d 442 (D. Md. 2001).

"wherein the lining has an arcuate opening through which the spring operates on the blade" — "wherein the lining has a curved opening through which the spring operates on the blade." Kai U.S.A., Ltd. v. Buck Knives, Inc., 2006 U.S. Dist. LEXIS 24924 (D. Or., Feb. 9, 2006).

"arcuate path" — "a circular oval or other such closed, curved path of travel." Precor Inc., et al. v. Fitness Quest, Inc., et al., 2006 U.S. Dist. LEXIS 63244 (W.D. Wash., Aug. 23, 2006).

"an arm extended therefrom for extending beyond said rear side" — "an arm which extends back from the auxiliary spectacle frame over the rear side of the side portion extension of the primary frame but not past the rear edge of the projection containing the magnetic members of the primary frame." *Aspex Eyewear, Inc., et al. v. Miracle Optics, Inc.*, 2003 U.S. Dist. LEXIS 26355 (C.D. Cal., Feb. 14, 2003).277

"an arm extended therefrom for extending toward and beyond said rear side" — "an arm which extends back from the auxiliary spectacle frame over the rear side of the side portion extension of the primary frame but not past the rear edge of the projection containing the magnetic members of the primary frame." *Aspex Eyewear, Inc., et al. v. Miracle Optics, Inc.*, 2003 U.S. Dist. LEXIS 26355 (C.D. Cal., Feb. 14, 2003).278

"arm means supporting one of said sealing and stripping means" — "is written in means-plus-function format. The element recites the function of supporting the sealing/stripping means but does not describe any particular structure which performs this function." *Ishida Co., Ltd., et al. v. Taylor, et al.*, 1998 U.S. Dist. LEXIS 22957 (N.D. Cal., Nov. 23, 1998).279

"an arm pivotally connected to each of said hangers" — "an arm-like structure pivotally attached to each of said structures or things." *Watson & Chalin Manufacturing, Inc. v. Boler Co.*, 227 F. Supp. 2d 633 (E.D. Tex. 2002).280

"an armrest guard encircling the second cushion position when unfolded substantially parallel therewith and substantially vertical when folded" — "an armrest guard which folds down from a vertical position and encircles the child, once such child is placed in the pulled down seat." *Hassell, et al. v. Chrysler Corp., et al.*, 982 F. Supp. 515 (S.D. Ohio 1997).282

"arms" — "structures that are generally parallel, form a channel between them for receiving the upper extremity of a boat windshield, and have means along the channel for gripping the windshield." *Nelson A. Taylor Co., Inc., et al. v. Ameritex Technologies, Inc., et al.*, 2006 U.S. Dist. LEXIS 68004 (D.S.C., Sept. 20, 2006).283

"arms having a rearwardly directed end for securing a magnetic member" — "arms which extend backward from the side portions of the auxiliary spectacle frame but not past the rear edge of the projection of the primary frame and which include an end for securing a permanent magnet or a ferromagnetic member." *Aspex Eyewear, Inc., et al. v. Miracle Optics, Inc.*, 2003 U.S. Dist. LEXIS 26355 (C.D. Cal., Feb. 14, 2003).284

"around" — "on all four sides or on less than all four sides." *PODS, Inc. v. Porta Stor Inc., et al.*, 2006 U.S. Dist. LEXIS 36486 (M.D. Fla., June 5, 2006).285 "Thus, since we construe the term 'carrier frame' in claim 29 to require a four-sided structure, we necessarily construe the term 'around' to require the frame to be on all sides of the container." *Id.*, 484 F.3d 1359 (Fed. Cir. 2007).286

"cords are arranged in spaced relation to each other" — "cords are positioned at predetermined positions relative to each other." Schindler Elevator Corp. v. Otis Elevator Co., 2010 U.S. Dist. LEXIS 2463 (D.N.J., Jan. 13, 2010).288 "[T]he Court will reconsider its construction of the term 'arranged in spaced relation' in Claim 18. The phrase 'cords are arranged in spaced relation to each other' in Claim 18 will be defined as 'cords are positioned at predetermined positions spaced relative to each other.'" Id., 2010 U.S. Dist. LEXIS 78002 (D.N.J., Aug. 3, 2010).289

"a first set of elements arranged on the first side of said printed circuit board" — "a well defined collection of memory elements arranged in a logical fashion on one side of the printed circuit board." Sun Microsystems, Inc. v. Dataram Corp., 1997 U.S. Dist. LEXIS 18363 (N.D. Cal., Aug. 29, 1997).290

"arranging a weight sensor in connection with the seat such that the at least one morphological characteristic is the weight of the occupant" — "sensing the weight of the occupant by placing a weight sensor in the seat." Automotive Technologies International, Inc. v. Delphi Corp., 2009 U.S. Dist. LEXIS 83187 (E.D. Mich., Sep. 11, 2009).294

"arrayed on a line" — "positioned on a single line." Synvasive Corp. v. Stryker; Corp., 425 F. Supp. 2d 1105 (E.D. Cal. 2006).299

"article" — "is intended to refer to something other than a human being." Worldwide Innovations & Technologies, Inc., et al. v. Microtek Medical, Inc., et al., 2007 U.S. Dist. LEXIS 69076 (E.D. Miss., Sept. 17, 2007).300

"article feeder means" — "is not governed by Section 112, paragraph 6." Gross International Americas, Inc. v. K&M Newspaper Services, Inc., 469 F. Supp. 2d 547 (N.D. Ill. 2006).301
"as the engineer adjusts design parameters" — "the word 'as' is incapable of simplification or more precise definition." Haliburton Services v. Smith International Inc., 2004 U.S. Dist. LEXIS 2320 (E.D. Tex., Feb. 18, 2004).  

"end cap assembly" — "a collection of components including or comprising at least a flat annular end cap and separate annular end piece." Parker-Hannifin Corp., et al. v. Baldwin Filters, Inc., et al., 2010 U.S. Dist. LEXIS 68906 (N.D. Ohio, Jul. 9, 2010).  

"retaining assembly" — "a structure that consists of more than one part." Lifetime Products, Inc. v. GSC Technology Corp., et al., 321 F. Supp. 2d 938 (N.D. Ill. 2004).  

"blade assembly comprising at least two blades" — "a set of parts, put together to make a completed product, in which said set of parts includes among its members either (1) at least two parts that each are the flat cutting part of a sharpened weapon; or (2) one part that has at least two flat cutting parts of a sharpened weapon." Muzzy Products, Corp. v. Sullivan Industries, Inc., et al., 194 F. Supp. 2d 1360 (N.D. Ga. 2002).  

"assembly means" — "Defendant argues that 'assembly means' ... is a mean-plus-function [limitation] ... I will disregard this proposed construction." Sunbeam Products, Inc., et al. v. HoMedics, Inc., 2009 U.S. Dist. LEXIS 56883 (W.D. Wis., Jul. 6, 2009).  

[i] "a first food preparation assembly operable to prepare raw food product using steam and at least one of radiating heat and forced air convection"; [ii] "a smoking assembly configured to deliver heat to an aromatic smoke producing media that emits smoke into the heating cavity in response to the delivered heat"; [iii] "a steam assembly selectively providing steam into the interior to prepare food . . . the steam assembly comprising a steam producing assembly capable of delivering liquid across the heating element that transforms the liquid into steam that is delivered to the interior of the heating cavity"; [iv] "a smoking assembly selectively delivering smoke into the interior independently of the first food preparation assembly" — [i] "a number of component pieces fitted together to form a whole capable of cooking food using one cooking process -- in this case convection heat, steam, and/or radiant heat -- before a second food preparation process, such as smoke, is engaged to continue the cooking process"; [ii] "a number of component pieces fitted together to form a whole capable of delivering heat to an aromatic smoke producing media"; [iii] "a. 'a steam assembly' -- 'a number of component pieces fitted together to form a whole capable of providing steam into the interior to prepare food;' and b. 'steam producing assembly' -- 'a number of component pieces fitted together to form a whole capable of delivering liquid across the heating element which transforms the liquid into steam.'"; [iv] "a number of component pieces fitted together to form a whole capable of selectively delivering smoke into the interior independently of the first food preparation assembly." Alto-Shaam, Inc. v. Cleveland Range, LLC, et al., 2010 U.S. Dist. LEXIS 56857 (N.D. Tex., Jun. 7, 2010).  

"an associated value representing a desired quality of result" — "One value from a range of values representing the quality of a cut. This value is inputted into an equation containing other values that reflect characteristics of the task that will impact the quality of the cut, such as material type." Omax Corp. v. Flow International Corp., 2006 U.S. Dist. LEXIS 81914 (W.D. Wash., Nov. 7, 2006).309

"a gantry at each treatment station" — "a gantry at every treatment center in a system where there is a plurality or more than one treatment station." Optivus Technology, Inc., et al. v. Ion Beam Applications S.A., 2004 U.S. Dist. LEXIS 30314 (C.D. Cal., Aug. 31, 2004).314

"at 50 °C for 144 hours as defined by ... Arrhenius' equation (14)" — "construction of this phrase is not required at this time, because it clearly refers to Arrhenius' equation as it is defined by equation 14 in the '934, '814, and '308 Patent specifications." Howmedica Osteonics Corp. v. Zimmer, Inc., et al., 2007 U.S. Dist. LEXIS 29991 (D.N.J., April 23, 2007).315

"at least a portion of a breathing cycle" — "anywhere from a part of either the inspiratory or expiratory phase of the breathing cycle to an entire two-phase breathing cycle, and anything in between." Respironics, Inc., et al. v. Invacare Corp., 2006 U.S. Dist. LEXIS 62233 (W.D. Pa., Aug. 30, 2006).316

"at least about 16º"; "at least a portion of said portion of said can end wall bent upwardly during said seaming operation is bent upward through an angle of at least about 16º" — "at least part of the first portion of the can end wall is turned upwardly through an angle of at least about 16º." Crown Packaging Technology, Inc., et al. v. Rexam Beverage Can Co., 486 F. Supp. 2d 366 (D. Del. 2007).318

"at least 0.1 mm" — "is not limited to a minimum of 0.1 mm." Reehydcalog UK. Ltd., et al. v. United Diamond Drilling Services, Inc., et al., 2009 U.S. Dist. LEXIS 32959 (E.D. Tex., Apr. 15, 2009).319

"at least approximately 600 tpi" — "defines an open-ended range starting slightly below 600." Quantum Corp. v. Rodime, PLC, 65 F.3d 1577 (Fed. Cir. 1995).320
"at least long enough to receive most of said external threads from said similar adjacent PVC pipe therein" — "said second enlarged interior diameter is long enough to receive most of the external threads from said similar adjacent PVC pipe which mate with the internal threads of a similar adjacent PVC pipe, before any of the external threads at the male end are interlocked with the interior threads in the first enlarged interior diameter of the female end." CertainTeed Corp. v. Modern Products Industries, Inc. et al., 2005 U.S. Dist. LEXIS 7638 (E.D. Pa., May 2, 2005).321

"at least one contact" — "one or more electrically conductive elongated contact arms." Invisible Fence, Inc. v. Perimeter Technologies, Inc., 2006 U.S. Dist. LEXIS 33792 (N.D. Ind., May 25, 2006).322

"at least one light source" — "cover[s] a device that has only one light source or a device that has more than one light source." Rhine v. Casio, Inc., et al., 183 F.3d 1342 (Fed. Cir. 1999).324

"further comprising a step of setting at least one of a magnitude and a duration of said pressure profile" — "further comprising the step of setting a magnitude, a duration, or both, of said pressure profile." Respironics, Inc., et al. v. Invacare Corp., 2006 U.S. Dist. LEXIS 62233 (W.D. Pa., Aug. 30, 2006).325

"at least one of the side edge of both pairs of the side edges" — "[requires] that only one of the two grooves previously identified in the claim needs to have an upper lip above the groove." Alloc, Inc. v. Unilin Decor N.V., et al., 2007 U.S. Dist. LEXIS 16743 (E.D. Wis., Mar. 6, 2007).326

"a cellular pleated shade member having a plurality of cells, at least one of the cells comprising ..."; "a cellular pleated shade member having a plurality of interconnected cells, at least one of the cells comprising ..." — "only require a 'member' of a cellular pleated shade, not a complete cellular pleated shade. The claims also only require one cell within this member to have the described physical characteristics." Newell Window Furnishings, Inc., et al. v. Springs Window Fashions Division, Inc., 15 Fed. Appx. 836 (Fed. Cir., Jul. 2, 2001) (unpublished).327

"at least partially compacting the particulate articles in the temperature maintenance zone" — "the partial compacting or compressing of the particulate articles to any degree while they are in the area where the disinfecting or sterilizing temperature is maintained." Sanitec Industries v. Micro-Waste Corp., 2006 U.S. Dist. LEXIS 86803 (S.D. Tex., Nov. 28, 2006).328

"said cutting head assembly being structured and disposed to be at least partially received in said guide means" — "a portion of the cutting head assembly that goes inside the guide means." Bausch & Lomb Inc. v. Moria S.A., et al., 222 F. Supp. 2d 616 (E.D. Pa. 2002).329

"at one corner of said enclosure" — "in, on, or near the point where three areas or surfaces of the enclosure meet or intersect." Inpro II Licensing, S.A.R.L. v. T-Mobile USA, Inc., et al., 2004 U.S. Dist. LEXIS 29773 (D. Del., Nov. 29, 2004).

"a nozzle ... at one end of the housing and a mouthpiece at the other end of the housing" — "the Court construes 'at one end' as 'the portion of the housing where the nozzle is located or attached' and 'at the other end of the housing' as 'that portion of the housing where the mouthpiece is located or attached.' P & M Products, Ltd., et al. v. Rose Art Industries, 2002 U.S. Dist. LEXIS 5008 (E.D. Pa., Mar. 25, 2002).

"a chimney damper attachable to a chimney flue" — "the chimney damper ... must be separate from the chimney flue." Bernard Dalsin Manufacturing v. RMR Products, Inc., 1999 U.S. Dist. LEXIS 22648 (D. Minn., Sept. 14, 1999).

"attachable to the skin by a self adhesive plaster" — "the 'attachable' limitation requires the magnetic sheet itself to be 'attachable to the skin by a self adhesive plaster' without the addition of other means for attaching and therefore requires the magnetic sheet to include a self-adhesive plaster." Nikken USA, Inc. v. Robinsons-May, Inc., et al., 51 Fed. Appx. 874 (Fed. Cir., Nov. 20, 2002) (unpublished).

"attached" — "the ordinary meaning of the word 'attached' includes components attached to a fixed structure via another component." M-B-W, Inc., et al. v. Multiquip, Inc., et al., 2009 U.S. Dist. LEXIS 90418 (E.D. Wis., Sep. 29, 2009).

"attached" — "a connection or joining of two components, whether or not the connection involves an intermediate component." SRAM Corp. v. Formula S.R.L., et al., 2009 U.S. Dist. LEXIS 29100 (N.D. Ill., Apr. 3, 2009).

"each adjustable strap attached at one end to the abdomen portion of the main pad and at the other end to the back portion of the shoulder guard" — "each strap is attached to the abdomen portion of the main pad and back portion of the shoulder guard either directly, or indirectly through another strap." Everything Baseball Limited, LLC v. Team Athletic Goods, Inc., 2007 U.S. Dist. LEXIS 66191 (N.D. Ill., Sept. 4, 2007).345

"a single weight member formed on and attached solely to said rear wall within said cavity" — "the claim language at issue is interpreted to mean what it says. The weight member must be attached solely (i.e. only) to the rear wall (backside of the striking surface) and not attached also to the peripheral mass within the cavity." Antonious v. Spalding & Evenflo Cos., Inc., et al., 1998 U.S. Dist. LEXIS 10740 (D. Md., Apr. 27, 1998).346 "[W]e construe the phrase 'a single weight member formed on and attached solely to said rear wall' to mean that the weight member cannot be fastened to any portion of the golf club except the rear wall; we further conclude that the peripheral mass is not part of the rear wall." Id., 1999 U.S. App. LEXIS 22984 (Fed. Cir., Aug. 31, 1999) (unpublished).347

"attached thereto and in sliding engagement therewith" — "loosely attached to the ligature material in a manner that allows the ligature material to slide through the grommet." Callicrate v. New Age Industrial Corp., Inc., 2005 U.S. Dist. LEXIS 8934 (D. Kan., Apr. 27, 2005).348

"wherein said elastomeric ear further comprises a non-elastomeric extension member attached to said distal edge" — "wherein the elastomeric ear further comprises a non-elastomeric extension member attached to the distal edge along a seam." Kimberly-Clark Worldwide, Inc. v. First Quality Baby Products, LLC, et al., 2010 U.S. Dist. LEXIS 77063 (M.D. Pa., Jul. 29, 2010).349

"a vertical support portion constructed of a length of copper pipe and attached to said torch portion by a copper pipe reducer element" — "The best interpretation is that the element does not have to be a separate piece; the element can be one with another part of the torch, or it may be a separate element." Gardendance, Inc. v. Woodstock Copperworks, Ltd., et al., 392 F. Supp. 2d 717 (M.D.N.C. 2005).351

"two frames are attached together" — "two eyeglass devices, which include, at least, a bridge and rims, are fastened or connected by magnetic attraction." Aspex Eyewear, Inc., et al. v. Altair Eyewear, Inc., 386 F. Supp. 2d 526 (S.D.N.Y. 2005).352

"attaching portion attachable to a portion of said frame of said pair of eyeglasses" — "the trial court erred by applying § 112, P 6 to this claim element." Al-Site Corp., et al. v. VSI International, Inc., et al., 174 F.3d 1308 (Fed. Cir. 1999).353

"attenuating effect of said plates is immediately called into play when said closure member is first opened"; "attenuating effect thereof is great during initial opening" — "1) 'immediately' means that there is no time lapse between the opening of the valve and the attenuation or lessening of noise, 2) 'first' in the phrase 'first opened' merely emphasizes the absence of temporal delay in attenuation and 3) 'great during initial opening' is used for contrast with the diminished attenuation as the valve opens farther." Neles-Jamesbury, Inc. v. Fisher Controls International, Inc., et al., 989 F. Supp. 393 (D. Mass. 1998).354

"austempering" — "heated to a temperature within the austenizing range, usually 790 to 915 °C (1450 ° to 1675 °F); quenched in a bath maintained at a constant temperature, usually in the range of 260 ° to 400 °C (500 ° to 750 °F); allowed to transform isothermally to bainite in this bath; and, cooled to room temperature." *Fisher-Barton Blades, Inc. v. Blount, Inc., et al.*, 2006 U.S. Dist. LEXIS 76965 (E.D. Wis., Oct. 19, 2006).356

"automatically" — "the district court did not err in construing the term 'automatically' to mean that the claimed apparatus is 'capable of performing multiple, autonomous east-west changes in position over a substantial period of time without ground transmissions concerning the parameters of such movements.'" *Space Systems/Loral, Inc. v. Lockheed Martin Corp.*, 2000 U.S. App. LEXIS 21414 (Fed. Cir., Aug. 23, 2000).357

"automatically denominating" — "includes any method for automatic denomination known to those skilled in the art at the time the '806 Patent was filed." *Cummins-Allison Corp. v. Glory, Ltd., et al.*, 457 F. Supp. 2d 843 (N.D. Ill. 2006).360

"automatically ... positioning" — "a jury will understand this without the need for any construction by the Court." *Regents of the University of Minnesota v. AGA Medical Corp.*, 2009 U.S. Dist. LEXIS 90289 (D. Minn., Sep. 29, 2009).362

"the auxiliary body support including a pivotally mounted pad assembly adapted for engaging different body parts in various orientations" — "does not require construction." *Fitness Quest Inc. v. J. Monti*, 2007 U.S. Dist. LEXIS 60195 (N.D. Ohio, Aug. 16, 2007).364

"auxiliary spectacle frame" — "the entirety of the auxiliary frame with the exception of the lenses and including the lens rims (if provided), the auxiliary frame magnetic members, the nose bridge, and the arms which secure the auxiliary frame magnetic members." *Aspex Eyewear, Inc., et al. v. Miracle Optics, Inc.*, 2003 U.S. Dist. LEXIS 26355 (C.D. Cal., Feb. 14, 2003).366
"auxiliary strap means [which includes] first and second separate end sections made of a relatively non-stretchable material [and] a separate center section made of material which is longitudinally stretchable" — "require[s] three separate pieces of material that are attached to one another: a stretchable center section and two relatively non-stretchable end sections on either end of the center section. The center section must be made of a stretchable material that is different from the relatively non-stretchable material that comprises the end sections." Wleklnski v. Targus, Inc., 2007 U.S. App. LEXIS 29409 (Fed. Cir., Dec. 19, 2007) (unpublished).

"average consumer" — "an individual that purchases supplies for a home improvement task from a retail outlet and performs the home improvement task himself or herself, regardless of whether the individual has any training in that task." Romala Stone, Inc. v. Home Depot U.S.A., Inc., 2007 U.S. Dist. LEXIS 73098 (N.D. Ga., Sept. 28, 2007).

"axial peripheral lip" — "that uncovered surface of the composite wheel that starts at the edge of the cladding, goes up and over the top of the projecting rim lip, and ends where the outer side of the rim lip merges with the tire mounting surface of the wheel rim." Lacks Industries, Inc. v. McKechnie Vehicle Components USA, Inc., et al., 55 F. Supp. 2d 702 (E.D. Mich. 1999).

"[T]he weight of the intrinsic evidence supports the district court's construction and we therefore uphold the district court's construction of 'axial peripheral lip.'" Id., 322 F.3d 1335 (Fed. Cir. 2003). "I would reverse the district court's claim construction as to 'axial peripheral lip,' interpreting it instead as either the outer terminal edge or, alternatively, the highest point on the wheel rim." Id. (Clevenger, J., dissenting-in-part).

"axial symmetry" — "A geometric figure possesses axial symmetry if it is unchanged when rotated about a given line, such as a circle rotated around its axis." ASM America, Inc., et al. v. Genus, Inc., 260 F. Supp. 2d 827 (N.D. Cal. 2002).

"annular surfaces axially confronting each other" — "mean[s] that the surfaces are fully engaged, i.e., abutting, so that a precise axial rest position is achieved." Renishaw plc v. Marposs Societa' per Azioni, et al., 974 F. Supp. 1056 (E.D. Mich. 1997).

"axially spaced" — "the term 'axially spaced' does not require that the strap attachment points remain fixed on the axis line. Instead, as it is used in the patent, the term allows for the straps to move circumferentially off the axis, and around the circumference of the bag, during use." Izzo Golf, Inc. v. King Par Golf, Inc., 2006 U.S. Dist. LEXIS 51199 (W.D.N.Y., July 26, 2006).

"a first axially symmetric region" — "a region that is symmetric about the central axis of the wafer." MEMC Electronic Materials, Inc. v. Mitsubishi Materials Silicon Corp., et al., 2006 U.S. Dist. LEXIS 9353 (N.D. Cal., Feb. 24, 2006).

"axial direction" — "a direction related to, characterized, or forming an axis." Hydro-Thermal Corp. v. Pro-Sonix, LLC, et al., 2009 U.S. Dist. LEXIS 90148 (E.D. Wis., Sep. 9, 2009). "[T]he court rejects the defendants' contention that the '712 patent requires entirely axial flow." Id., 2010 U.S. Dist. LEXIS 10040 (E.D. Wis., Feb. 5, 2010).

"the inserting step comprises axially centering said support member on said catalyst such that axial extensions of the support member are axially inward from each axial end face of the catalyst" — "during the inserting step, the support member is wrapped around the substrate such that it covers the middle point of the substrate and does not extend to the substrate ends." Tenneco Automotive Operating Co. Inc. v. Visteon Corp., 2005 U.S. Dist. LEXIS 12738 (D. Del., Jun. 28, 2005).380

"axle seat" — "is unambiguous and may be defined by the ordinary meaning of the words that make up the term." Watson & Chalin Manufacturing, Inc. v. Boler Co., 227 F. Supp. 2d 633 (E.D. Tex. 2002); "the portion of the device in contact with the outer surface of the axle." Id., 229 F. Supp. 2d 630 (E.D. Tex. 2002).382

- B -

"BNC connector" — "a type of bayonet connector with a slot or slots conforming to military specification." Synergetics, Inc. v. Peregrine Surgical, Ltd., et al., 427 F. Supp. 2d 537 (E.D. Pa. 2006).384

"back portion" — "the part of the shoulder guard that extends from the top portion and covers at least a portion of the back of the shoulder." Everything Baseball Limited, LLC v. Team Athletic Goods, Inc., 2007 U.S. Dist. LEXIS 66191 (N.D. Ill., Sept. 4, 2007).385

"back pressure mode" — "a mode of operation wherein fluid flow is permitted in a direction away from the starting position of the wellbore but obstructed from flowing toward the starting position of the wellbore by flapper valves." Davis-Lynch, Inc. v. Weatherford International, Inc., 2009 U.S. Dist. LEXIS 33414 (E.D. Tex., Apr. 20, 2009).386

"back surface" — "include[s] the characteristic of 'spanning the full width of the block.'" Anchor Wall Systems, Inc. v. Rockwood Retaining Walls, Inc., et al., 252 F. Supp. 2d 838 (D. Minn. 2002).387 "[W]e hold that the proper construction of 'back surface' is a surface at the back of the block." Id., 340 F.3d 1298 (Fed. Cir. 2003).388

"back surface tool including a first surface portion in the general shape of a posterior face of a contact lens and a convexly curved second surface portion circumscribing the first surface portion"; "the surface of the tool including a first surface portion in the general shape of a posterior face of a contact lens and a second surface portion defining a convex curved outer peripheral edge surface of the insert" — "Back surface tool including a first surface portion in the general shape of a posterior face of a contact lens and a second surface portion defined by an the outer peripheral edge surface of the insert. The second surface portion is an outward facing curved surface created from a continuous curve, a series of small flats (i.e., straight segments) that approximate a continuous curve, or a combination of curves and small flats that approximate a continuous curve." Coopervision, Inc. v. Ciba Vision Corp., 2007 U.S. Dist. LEXIS 51432 (E.D. Tex., July 16, 2007).389

"backlight unit" — "[t]he layers of the flat-panel display device which illuminate the flat-panel (or liquid crystal) display from behind." LG Philips Co., Ltd. v. Tatung Co., et al., 2007 U.S. Dist. LEXIS 43557 (D. Del., June 15, 2007).

"backswept aerodynamic blades" — "blades that have an end portion angled backward (i.e., opposite the direction of rotation) from the radial direction and which are designed to reduce or minimize the drag caused by air that strikes and flows around the blades." BorgWarner Inc., et al. v. Honeywell International, Inc., 2009 U.S. Dist. LEXIS 13391 (W.D.N.C., Feb. 20, 2009).

"backward titled position"; "defined by the rear end of the keyboard being disposed below the front of the keyboard" — "mean[s] that the support device permits the bottom of a keyboard to be tilted backward (i.e., at any angle of less than 0 degrees)." Ambrose, et al. v. Steelcase, Inc., et al., 2003 U.S. Dist. LEXIS 26035 (W.D. Mich., Nov. 10, 2003).

"baffle" — "we conclude that a person of skill in the art would not interpret the disclosure and claims of the '798 patent to mean that a structure extending inward from one of the wall faces is a 'baffle' if it is at an acute or obtuse angle, but is not a 'baffle' if it is disposed at a right angle." Phillips v. AWH Corp., et al., 415 F.3d 1303 (Fed. Cir. 2005) (en banc); "while I wholeheartedly join the majority opinion in its discussion and resolution of the 'specification v. dictionaries' issue, I would affirm the decision below." Id. (Lourie, J., dissenting).

"baffle having heat absorbing and insulating means thereon" — "an object placed in an appliance to change the direction or retard the flow of air, air fuel mixtures, or fuel gases, with the heat absorbing and insulating means on top of the aforesaid object." Travis Industries, Inc. v. Hearth & Home Technologies, Inc., et al., 2004 U.S. Dist. LEXIS 31059 (W.D. Wash., Oct. 18, 2004).
"second baffle means having at least one air deflecting surface for directing the air passing radially outwardly from said centrifugal fan inwardly of the plenum chamber and toward said filter means" — "The 'means' term in a means-plus-function limitation essentially is a generic reference to the corresponding structure disclosed in the specification, so a determination of corresponding structure is a determination of the meaning of the 'means' term in the claim and is also a matter of claim construction." Envirco Corp. v. Clestra Cleanroom Inc., 1998 U.S. Dist. LEXIS 18386 (N.D.N.Y., Nov. 3, 1998). "Because the 'second baffle means' element does not qualify for § 112, P 6 treatment, it is not limited to the structure corresponding to the claimed function as 'described in the specification and equivalents thereof.' 35 U.S.C. § 112, P 6." Id., 209 F.3d 1360 (Fed. Cir. 2000).

"bag" — "a flexible container sealed on all sides but one." MHB Industries v. Dennis Garberg & Associates, Inc., et al., 1996 U.S. Dist. LEXIS 11638 (D. Mass., July 26, 1996). "Claim I ... uses the specific term 'bag,' which is used in the specification in its ordinary sense, i.e., to mean 'a container ... closed on all sides except for an opening that may be closed.'" Id., 1997 U.S. App. LEXIS 19508 (Fed. Cir., Jul. 29, 1997) (unpublished).

"bag-like device" — "an item similar to, or characteristic of, an inflatable container composed of flexible material having the capability to stretch that is made, or adapted, to perform a function." Fitzgerald v. Eico, Inc., et al., 2006 U.S. Dist. LEXIS 57424 (S.D. W.Va., Aug. 10, 2006).

"a bail" — "a hinged band that secures the grounding clip to the electrical conductor." Andrew Corp. v. Beverly Manufacturing Co., 479 F. Supp. 2d 766 (N.D. Ill. 2006).

"ballast portion" — "the portion of the lens with ballast. Ballast is a surface contour of the lens that has elevated surfaces that interact with the blinking action of the eyelids to re-orient the lens." Coopervision, Inc. v. Ciba Vision Corp., 2007 U.S. Dist. LEXIS 51432 (E.D. Tex., July 16, 2007).

"bar" — "a piece of solid material with one or two ends and with sufficient rigidity to bias in response to force." Insight Technology Inc. v. SureFire, LLC, 2006 U.S. Dist. LEXIS 11762 (D.N.H., Feb. 28, 2006).

"transparent bar" — "a transparent and straight, cylindrical, rod-like piece that is considerably longer than it is wide." Irwin Industrial Tool Co. v. Orosz, et al., 2004 U.S. Dist. LEXIS 14325 (N.D. Ill., Jul. 26, 2004).416

"back bar mass" — "The Defendants seek a broader definition of the word 'bar' so as to exclude the requirement that the bar mass has a length greater than its width. Defendants say, for example, that a 'bar' could be shaped as a square. ... The Court does not find it appropriate to take the shape limitation inherent in the word 'bar' out of the claim." Antonious v. Spalding & Evenflo Cos., Inc., et al., 1998 U.S. Dist. LEXIS 10740 (D. Md., Apr. 27, 1998).417

"barb means integrally connected to said shaft portion to aid in insertion of said shaft portion into said tissue and to lock said shaft portion into said tissue" — "the barb means comprises not only the projection from the shaft which locks the shaft in place, but also the pointed tip of the shaft." Bionx Implants, Inc., et al. v. Innovative Devices, Inc., 45 F. Supp. 2d 75 (D. Mass. 1999).418

"base" — "because its ordinary and customary meaning is clear to one skilled in the art, the Court declines to construe the phrase." Joyal Products, Inc. v. Johnson Electric North America, et al., 2007 U.S. Dist. LEXIS 79522 (D.N.J., Oct. 25, 2007).423

"base" — "the structure which supports all of the other claimed structures of the snowmobile ski, and upon which all of the other claimed structures of the snowmobile ski stand or are mounted." Simmons, Inc. v. Bombardier Inc., et al., 328 F. Supp. 2d 1188 (D. Utah 2004).424

"base" — "the bottom support of the operator; the piece (or multiple pieces) that support the remainder of the operator and/or permit the operator to be mounted to a window frame." Ashland Products, Inc. v. Truth Hardware Corp., 2002 U.S. Dist. LEXIS 9822 (N.D. Ill., May 29, 2002).426

"base" — "does include the components listed above, but does not require that these components be 'floor-supported' as plaintiff suggests." Nautilus Group, Inc. v. Icon Health & Fitness, Inc., 2005 U.S. Dist. LEXIS 46877 (W.D. Wash., Feb. 16, 2005).427
"base"; [ii] "base end" — [i] "the general area that lies beneath the face member of each wing or side where the flexing occurs, rather than a structurally distinguishable finite section of each wing"; [ii] "a general area of each side, rather than a structurally distinguishable finite section of each side." Arlington Industries, Inc. v. Bridgeport Fittings, Inc., 345 F.3d 1318 (Fed. Cir. 2003).

"a base member having a lower edge for seating freely on the ground, the lower edge lying in a substantially flat plane and having no protrusions projecting downward from said plane" — "a supporting structural unit having a flat lower edge for sitting on, unsecured to, the ground in a mostly horizontal position. This unit shall have no parts extending downward from its lower edge." Robinson v. Advanced Decoy Research, Inc., et al., 519 F. Supp. 2d 1087 (S.D. Cal. 2007).

"[a] modular prosthesis system comprising a prosthetic base portion ... and a stem extension" — "requir[es] a standardized prosthesis system including a prosthetic base portion ... and a stem extension, that are located on the same side of a joint." Zimmer Technology, Inc., et al. v. Howmedica Osteonics Corp., 397 F. Supp. 2d 974 (N.D. Ind. 2005).

"[determining or measuring] an elapsed time period based on a time at which the characteristic appeared in the signal" — "using the point at which the characteristic appears to determine or measure an interval of time." Nike, Inc. v. Adidas America, Inc., et al., 2006 U.S. Dist. LEXIS 91011 (E.D. Tex., Dec. 18, 2006).

"bat frame" — "we conclude that 'frame' as modified by the term 'bat' and used in claims 1 and 18 means a tubular structure having a large-diameter impact portion, a tapered portion and a small-diameter handle, all of which are connected when the bat is fully constructed for its intended use." DeMarini Sports, Inc. v. Worth, Inc., 239 F.3d 1314 (Fed. Cir. 2001).

"beads" — "small frozen droplets ... which have a smooth, spherical (round or ball shaped) appearance." Dippin' Dot's, Inc., et al. v. Mosey, et al., 476 F.3d 1337 (Fed. Cir. 2007).
"beam" — "In claim 16 ..., ... mean[s] an integral elongated structural member in a suspension system and attached at the other end by a rigid connection to an axle and equivalents thereto."; "In claim 17 ..., ... mean[s] an integral elongated structural member in a suspension system without any distinct means, structure, or component to attach the suspension system's axle to the beam, such as U-bolts, brackets, sleeves or welds and equivalents thereto."  Boler Co. v. Neway Anchorlok, International, Inc., 92 F. Supp. 2d 671 (N.D. Ohio 2000).446

"beam transport configuration system" — "the arrangement of all the interacting elements and components used to convey the beam."  Optivus Technology, Inc., et al. v. Ion Beam Applications S.A., 2004 U.S. Dist. LEXIS 30314 (C.D. Cal., Aug. 31, 2004).441

"bearing against said wall structure near said opening to seal said opening" — "the seal is situated in contact with the wall structure [of the housing] near the opening of the proximal end of the housing to make the opening fluid tight."  ICU Medical, Inc. v. Alaris Medical Systems, Inc., 2006 U.S. Dist. LEXIS 96077 (C.D. Cal., July 17, 2006).443

"a spring bearing directly against the memory card when in place in the memory card socket for urging the replaceable memory card out of the socket" — "a spring that is compressed and directly contacted by the memory card when the memory card is inserted in the socket, and which pushes the memory card out of the socket."  Minerva Industries, Inc. v. Motorola, Inc. et al., 2010 U.S. Dist. LEXIS 9329 (E.D. Tex., Feb. 3, 2010).444

"bearing plate" — "a plate designed to be used with a single mine roof bolt to provide mine roof support."  Jennmar Corp. v. Excel Mining Systems, LLC, 2009 U.S. Dist. LEXIS 60836 (W.D. Pa., Jul. 16, 2009).445

[i] "the polymeric material ... becomes flowable, tacky and adherent upon the application of heat"; [ii] "the heat bondable material ... becomes flowable, tacky and adherent upon the application of heat" — [i] "the polymeric material is bonded to the implant by the application of heat sufficient to cause the polymeric material to become flowable, tacky and adherent"; [ii] "the heat bondable material is bonded to the tubular member by the application of heat sufficient to cause the heat bondable material to become flowable, tacky and adherent."  MarcTec, LLC v. Johnson & Johnson, et al., 2009 U.S. Dist. LEXIS 27011 (N.D. Ill., Mar. 31, 2009).447

"said second graft body inlet end being attachable in an overlapping relationship with said first graft body outlet end while inside of a vessel" — "the inlet end of the second graft body includes a malleable wire structure that permits it to be intravascularly docked to or coupled with the outlet end of the first graft body in an overlapping relationship."  Edwards Lifesciences, LLC, et al. v. Cook Inc., et al., 2007 U.S. Dist. LEXIS 55634 (N.D. Cal., July 23, 2007).448

"the device being capable of substantially restricting the through passage of at least one type of macromolecule therethrough" — "needs no construction."  Saffran v. Johnson & Johnson, et al., 2010 U.S. Dist. LEXIS 98537 (E.D. Tex., Sep. 20, 2010).449
"said back region of said shoulder strap being coupled to said back section of said elastic chest band" — "there can be a direct or indirect connection within the nursing bra of the nursing garment between the back region of the shoulder strap to the back section of the elastic chest band." Line Rothman v. Target Corp., et al., 2007 U.S. Dist. LEXIS 15615 (D.N.J., Mar. 5, 2007). 450

"the free end being defined as the portion of the cap most remote from the end section of the cap" — "the free end is the portion most remote from the end section of the cap, and said free end may extend slightly beyond the circumferential edge." MVS Royal Oak, LLC v. HTG-Tiffin, LLC, et al., 2006 U.S. Dist. LEXIS 84691 (E.D. Mich., Nov. 9, 2006). 451

"the free end being defined as the portion of the cap most remote from the end section of the cap" — "the free end is the portion of the cap most remote from the end section of the cap, and said free end may extend slightly beyond the circumferential edge." MVS Royal Oak, LLC v. HTG-Tiffin, LLC, et al., 2006 U.S. Dist. LEXIS 76159 (E.D. Mich., Oct. 11, 2006). 452

"said stylet means being detachable from said cannula" — "the stylet is capable of being separated or withdrawn from the cannula without loss or damage." Baran v. Medical Device Technologies, Inc., et al., 519 F. Supp. 2d 698 (N.D. Ohio 2007). 453 "The patentee used the term 'detachably' in the specification to draw a direct contrast between the removable components of the reusable embodiment and the adhesively bonded components of the single-use embodiment. That usage effectively concedes that adhesively bonded components--including the single-use embodiment--are not 'detachable' components within the meaning of the patent. We agree with the district court that '[t]his distinction suggests that the patentee intended "detachable" to mean capable of removal or separation without breaking or causing damage through the necessary use of undue force.'" Id., 2010 U.S. App. LEXIS 16678 (Fed. Cir., Aug. 12, 2010). 454

"said first end of said supplemental graft body being dockable to said second portion of said primary graft body while inside of a vessel" — "the first end of the supplemental graft body includes a malleable wire structure that permits it to be intravascularly docked to or coupled with the second portion of the primary graft body." Edwards Lifesciences, LLC, et al. v. Cook Inc., et al., 2007 U.S. Dist. LEXIS 55634 (N.D. Cal., July 23, 2007). 455

"the combination of the hook, the hole and the pin being effective to hold the pump received by the hook to the housing" — "The claim language is clear and understandable to the fact finder and does not require construction beyond its plain and ordinary meaning." Sta-Rite Industries, et al. v. ITT Corp., et al., 2010 U.S. Dist. LEXIS 10790 (E.D. Tex., Jan. 19, 2010). 456

"said gussets along each of said edges being fitted together" — "said gussets along each of said edges having an arrangement that conforms to the arrangement of gussets on the opposite edge, such as an arrangement in which the gussets on one edge can occupy the spaces between the gussets on the opposing edge." Laboratories Perouse S.A.S. v. W.L. Gore & Associates, Inc., 528 F. Supp. 2d 362 (S.D.N.Y. 2007). 457

"being selected" — "the Court declines to construe the phrase." Medtronic AVE, Inc. v. Cordis Corp., 516 F. Supp. 2d 741 (E.D. Tex. 2007). 458
"said second cavity **being shallower than said first cavity**" — "simply means that the first cavity which holds the pipe must be deeper than the second cavity which holds the tobacco." Contempo Tobacco Products, Inc., et al. v. McKinnie, 1997 U.S. Dist. LEXIS 22576 (N.D. Ill., Apr. 8, 1997).459

"said latch being ring-shaped and **being slidably received in said channel of said barrel for slidably receiving said tube therein**" — "the components making up the latch cannot include the barrel, which is a 'separate and distinct' element." Windbrella Products Corp. v. Taylor Made Golf Co., 2006 U.S. Dist. LEXIS 19687 (S.D.N.Y., April 10, 2006).460

"distal ends ... of the arms **being structured to be urged toward each other and to lock into a common opening**" — "does not overcome the strong presumption of the inapplicability of § 112, P 6 to the disputed phrase." Andrew Corp. v. Beverly Manufacturing Co., 479 F. Supp. 2d 766 (N.D. Ill. 2006).461

"the two opposite outermost side edges **being thicker than the remainder of said stretched film for strengthening the outermost edges of the film**" — "is construed to exclude thickening that results from 'neck down.'" Pliant Corp. v. MSC Marketing and Technology, Inc., 416 F. Supp. 2d 632 (N.D. Ill. 2006).462

"below limits for imparting smoke flavoring to food" — "The Court here agrees with HISI that the numerical ranges described in the background art may not be read into this particular limitation." Tuna Processors, Inc. v. Hawai‘i International Seafood, Inc., et al., 2007 U.S. Dist. LEXIS 77396 (D. Haw., Oct. 17, 2007).463

"below the disc"; "beneath the disc" — "the disclosed housing of the claimed device must be located completely or entirely below the horizontal plane of the meter disc." Cellnet Data Systems, Inc. v. Itron, Inc., 17 F. Supp. 2d 1100 (N.D. Cal. 1998).465

"below the open top and above the drain opening to form a drain" — "below the open top of the erosion-control housing and above the drain opening to form a drain." WIMCO, LLC v. Lange Industries, Inc., 2007 U.S. Dist. LEXIS 92502 (D. Minn., Dec. 14, 2007).466

"belt" — "radius conveyer belt without any limitation as to the size of the pitch." Habasit Belting Inc. v. Rexnord Industries, Inc., et al., 340 F. Supp. 2d 518 (D. Del. 2004).467

"bending a wire in a zig-zag pattern; and winding the wire around a form in a coil"; "wherein the step of bending includes forming the zig-zag pattern in the wire generally in a plane and the step of winding the wire includes winding with the zig-zag pattern flat against the form"; "forming a wire into a sinusoidal shape; forming the wire into a coil having a first diameter and a first longitudinal length, so that later radial outward deformation of the cylinder to a second larger diameter does not significantly alter the longitudinal length" — "the steps of the method claims in dispute need not be performed separately or in a particular order." Medtronic, Inc., et al. v. W.L. Gore & Associates, Inc., 2007 U.S. Dist. LEXIS 80038 (N.D. Cal., Oct. 19, 2007).468
"bent back toward the distal end of said catheter" — "means that the tubes must be bent toward (i.e., in the direction of) the distal end of the catheter." Mahurkar, et al. v. Arrow International, Inc., 160 F. Supp. 2d 927 (N.D. Ill. 2001).469

"between" — "I will not limit the term 'between' to meaning that the objects at issue must be co-planar." Semiconductor Energy Laboratory Co., Ltd. v. Samsung Electronics Co., Ltd., et al., 2010 U.S. Dist. LEXIS 45107 (W.D. Wis., May 7, 2010).470

"between" — "is clear, has an ordinary meaning, and requires no construction." Jennmar Corp. v. Excel Mining Systems, LLC, 2009 U.S. Dist. LEXIS 60836 (W.D. Pa., Jul. 16, 2009).471

"between" — "refers to the movement from the retracted position to the deployed position and from the deployed position back to the retracted position." Ellison Co., Inc., et al. v. Transpec, Inc., 445 F. Supp. 2d 566 (M.D. N.C. 2006).472

"between said frame and said deck member" — "the meaning of the disputed claim element is apparent on its face. 'Frame' and 'deck member' are clearly defined within the patent. 'Between' has an ordinary meaning, and requires no further construction." Precor Inc. v. Brunswick Corp., et al., 2001 U.S. Dist. LEXIS 26341 (W.D. Wash., Jul. 31, 2001).478

"disposed between said lower covering and said main panel at said rim" — "located within the space above the lower covering and below the main panel at the rim." totes Isotoner Corp. v. Panther Vision, LLC, 2010 U.S. Dist. LEXIS 14 (N.D. Ill., Jan. 4, 2010).479

"an elongated cuttable member horizontally mounted between two parallel guardrails" — "mean[s] that the elongated cuttable member must be horizontally mounted in the space that separates two parallel guardrails." Kothmann Enterprises, Inc. v. Trinity Industries, Inc., 394 F. Supp. 2d 923 (S.D. Tex. 2005).480

"beveled tip portion ... formed at an acute angle ... to facilitate entry" — "does not warrant importation of a numerical limitation. To the contrary, it implies that, so long as the tip 'facilitate[s] entry,' the angle is acute enough." Grayzel v. St. Jude Medical, Inc., 345 F. Supp. 2d 466 (D.N.J. 2004).482

"bias exerting mechanism" — "a portion of the device which exerts a force against the filter cover." Aqua-Lung America, Inc. v. American Underwater Products, Inc., et al., 2009 U.S. Dist. LEXIS 18172 (N.D. Cal., Feb. 26, 2009).

"biased in a direction normal to the top surface of the housing"; "biased to move in a direction normal to the top surface of the housing" — "forced by a biasing spring or biased in a direction that is perpendicular to the top surface of the housing and forced to move, by a biasing spring, in a direction that is perpendicular to the top surface of the housing, although no specific angle of perpendicularity is required." Insight Technology Inc. v. SureFire, LLC, 2006 U.S. Dist. LEXIS 11762 (D.N.H., Feb. 28, 2006).

"biased to tension said membrane" — "the flexible member is pushed in a direction to impart or store spring tension in that member before the attachment of the membrane to the flexible member." Polyvision Corp. v. Smart Technologies, Inc., et al., 501 F. Supp. 2d 1042 (W.D. Mich. 2007). PolyVision contends that reconsideration of the Court's construction of the claim terms 'pretensioned' and 'biased to tension' is required under the Federal Circuit's decision in Andersen ... The Court has read Andersen and, for the reasons set forth below, disagrees with PolyVision that Andersen compels a different result." Id., 2007 U.S. Dist. LEXIS 66492 (W.D. Mich., Sept. 7, 2007).

"biasing mechanism"; "biasing means" — "The Court also agrees with Deere that the force being generated by the biasing mechanism or means is not limited to compressive force." Deere & Co. v. Toro Co., 2001 U.S. Dist. LEXIS 25305 (N.D. Ill., Jul. 11, 2001).

"bifurcated base structure"; "bifurcated base graft structure" — "an intraluminal graft that has one opening at its upstream end and two openings at its downstream end and which includes at least one malleable wire." Edwards Lifesciences, LLC, et al. v. Cook Inc., et al., 2007 U.S. Dist. LEXIS 55634 (N.D. Cal., July 23, 2007).

"bingo cards" — "The court finds that even if the term 'bingo cards' does encompass cards in formats other than the traditional printed paper, cardboard, etc., the 151 Patent does not contemplate managing them. In light of the consistency with which the specifications refer to the sub-group of bingo cards the device is designed to manage, the court would improperly expand the scope of the claims if it were to read virtual bingo cards into the claims." Bingo Brain, Inc. v. California Concepts, Inc., et al., 2002 U.S. Dist. LEXIS 1209 (N.D. Ill., Jan. 24, 2002).

"biopsy actuator" — "a mechanism for putting the biopsy instrument in operating motion, other than by hand." Baran v. Medical Device Technologies, Inc., et al., 519 F. Supp. 2d 698 (N.D. Ohio 2007).

"blade" — "a broad, flat structure, specifically a shape limitation. The structure could come in a variety of widths and still meet this requirement." Suncast Corp. v. Avon Plastics Inc., 1999 U.S. Dist. LEXIS 15222 (N.D. Ill., Sept. 21, 1999).

"a blade extending perpendicular to a side surface" — "mean[s] that the blade was directly connected, at a right angle to one of the barrier's side surfaces." Suncast Corp. v. Avon Plastics Inc., 1999 U.S. Dist. LEXIS 15222 (N.D. Ill., Sept. 21, 1999).

"blank paper" — "paper which may have background color or printing or distinctive watermarks or other overall indicia for security purposes but which otherwise contains no pre-existing information." Southwest Efuel Network, L.L.C. v. Transaction Tracking Technologies, Inc., 2009 U.S. Dist. LEXIS 103395 (E.D. Tex., Oct. 23, 2009).

"blends smoothly" — "free from irregularities such that it would not show if worn under sheer or thin clothing." Black v. Ce Soir Lingerie Co., Inc, et al., 2007 U.S. Dist. LEXIS 90962 (E.D. Tex., Dec. 10, 2007).

"blind socket" — "a hole that does not pass completely through a workpiece and into which an inserted part is designed to fit, and ... [is] blind at the time one calls it a blind socket." Nibco, Inc. v. Tyco International (USA), Inc., et al., 2005 U.S. Dist. LEXIS 28556 (N.D. Ind., Sept. 30, 2005).
"blocking element" — "is a cantilever arm formed as an integral part of the lever which blocks movement of the lever." *Mas-Hamilton Group v. LaGard, Inc.*, 21 F. Supp. 2d 700 (E.D. Ky. 1997).  

"blocks [the] passage of liquids and solids"; "resists passage of liquids and solids" — "mean that the shield material 'substantially blocks' or 'substantially resists' the passage of liquids and solids. ... The material is not required to 'block' or 'resist' absolutely the passage of liquids and solids." *Protective Optics, Inc. v. Panoptx, Inc.*, 458 F. Supp. 2d 1053 (N.D. Cal. 2006).

"blunt distal end" — "blunt is a general term and in this context indicates simply that the distal end is not sharp." *Mahurkar v. C.R. Bard, Inc., et al.*, 2003 U.S. Dist. LEXIS 25924 (N.D. Ill., May 13, 2003).

"locking body for engaging said locking recess" — "the portion of the locking shutter or clip that is capable of coming together with or fitting into the locking recess." *OrthoArm, Inc., et al. v. Forestadent USA, Inc., et al.*, 502 F. Supp. 2d 968 (E.D. Mo. 2007).

"body portion" — "of the claimed tray insert consists of the lower surface or floor of the tray insert's cavity, the outer wall(s) of the insert's cavity rising no further than the level of the support's rim, and any interior ridges or walls forming pockets within the insert's cavity. Furthermore, to the extent that an insert tray includes areas extending outward from its outer cavity wall(s), such areas are not part of the body portion." *Fisher-Price, Inc., et al. v. Evenflo Co., Inc.*, 2006 U.S. Dist. LEXIS 42982 (W.D.N.Y., June 26, 2006).
"a boiling liquid reservoir defined by the base" — "a reservoir inside which the liquid is brought to boil." "HP Intellectual Corp., et al. v. Sunbeam Products, Inc., 1999 U.S. Dist. LEXIS 9569 (N.D. Ill., May 12, 1999)." 519

"thermostat means ... for switching off the heater when all the liquid in the boiling water reservoir has evaporated therefrom" — "The word 'therefrom' makes it clear that the expression 'boiling water reservoir' means that the water boils in the reservoir." "Rival Co. v. Sunbeam Corp., et al., 1999 U.S. App. LEXIS 2768 (Fed. Cir., Feb. 23, 1999) (unpublished)." 520

"a boiling water reservoir defined by the base" — "a receptacle that holds boiling water. The water may be at one time fresh, non-boiling water, but the water must actually come to a boil in the reservoir. To be defined by the base, the base must create or form the outline of the shape of the boiling water reservoir." "Rival Co. v. Sunbeam Corp., et al., 987 F. Supp. 1167 (W.D. Mo. 1997)." 521 "[T]he court correctly construed the expression 'defined by the base' to mean that the base 'creates or forms the outline of the shape of' both the condensate trough and the boiling water reservoir." "Id., 1999 U.S. App. LEXIS 2768 (Fed. Cir., Feb. 23, 1999) (unpublished)." 522

"said bonded diamonds exhibit a thermal characteristic such that a 950 degree C. temperature at the working surface results in a temperature of less than 750 degrees C. at the depth" — "The Court construes 'bonded diamonds' in the '662 patent as 'a plurality of diamond or diamond-like crystals.' The rest of the phrase needs no construction." "ReedHycalog UK, Ltd., et al. v. Baker Hughes Oilfield Operations, Inc., et al., 2007 U.S. Dist. LEXIS 67109 (E.D. Tex., Sept. 10, 2007)." 523

"bonded to" — "must be construed broader than adhesive, yet not inclusive of affixing agents that require a process by which material used to fabricate the window covering melts at the point of connection, are difficult to apply in straight lines, or cannot be used in a commercial setting. Simply stated, given the extant facts presented here, the 'bonded to' limitation does not incorporate 'welded to.'" "Hunter Douglas, Inc. v. Comfortex Corp., 1998 U.S. Dist. LEXIS 22220 (N.D.N.Y., Dec. 23, 1998)." 524

"bonded to said second surface" — "affixed to the second surface using a thermally-conductive bondant." "ICHLL, LLC v. NEC Corp. of America, et al., 2010 U.S. Dist. LEXIS 38942 (E.D. Tex., Apr. 20, 2010)." 525

[i] "a polymeric material bonded to the implant"; [iii] "a first component bonded to at least a portion of the tubular member" — [i] "a polymeric material is bonded to the implant by the application of heat"; [ii] "a material is bonded to the tubular member by the application of heat." "MarcTec, LLC v. Johnson & Johnson, et al., 2009 U.S. Dist. LEXIS 27011 (N.D. Ill., Mar. 31, 2009)." 526 "We affirm the district court's construction that 'bonded' means bonded by the application of heat." "Id., 2010 U.S. App. LEXIS 16608 (Fed. Cir., Aug. 4, 2010)." 527

"bonded wood particles" — "does not include fibers or fiberboard." "Alloc, Inc., et al. v. Pergo, Inc., et al., 2007 U.S. Dist. LEXIS 5183 (E.D. Wis., Jan. 24, 2007)." 528

"a bonding element" — "one or more substances or constituents of a whole that bind, fasten, fuse, confine, or hold together." Taltech Ltd. v. Esquel Enterprises Ltd., 410 F. Supp. 2d 977 (W.D. Wash. 2006).530

"bonding said braid and thin foil" — "means that the braid and foil are attached together by an outside agent resulting in the braid and foil being permanently affixed or attached to one another." Belden Wire & Cable v. Cable Design, 2001 U.S. Dist. LEXIS 25800 (N.D. Ill., Mar. 23, 2001).531

"border" — "nothing in the prosecution history, or elsewhere in the prior art of record, renders proper a construction that limits the claimed 'border' to a single, horizontal layer." Tate Access Floors, Inc., et al. v. Interface Architectural Resources, Inc., 279 F.3d 1357 (Fed. Cir. 2002).535

"bore"; "head" — "[a structure that is] formed by a cylindrical wall extending from one side of the neck around to the other side of the neck"; "the 'head' was the entire enlarged area completely surrounding the bore at the end of the neck." Young Dental Manufacturing Co., Inc. v. Q3 Special Products, Inc., et al., 112 F.3d 1137 (Fed. Cir. 1997).539

"axial bore for receiving said curvate head" — "this Court does not perceive why the curvate head cannot be received from the bottom hole as well as the top one." Fastenetix, LLC v. Medtronic Sofamor Danek, Inc., et al., 2007 U.S. Dist. LEXIS 53665 (D.N.J., July 25, 2007).540

"boss" — "a three dimensional body or structure extending from the planar body." Sta-Rite Industries, et al. v. ITT Corp., et al., 2010 U.S. Dist. LEXIS 10790 (E.D. Tex., Jan. 19, 2010).543
"wherein both cover portions extend across the cover" — "wherein both the limited expansion portion and the differential expansion portion of the cover reach from one side of the device adjoining the base to the other side of the device adjoining the base." Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006).544

"bottom" — "the lower or lowest part." TI Group Automotive Systems (North America), Inc. v. VDO North America, L.L.C., et al., 375 F.3d 1126 (Fed. Cir. 2004).546

"being disposed at a bottom of said walls and within said body and extending between said first and second ends thereof" — "being disposed at the lowest part and inside the dump body and extending from the front wall to the back wall." Highway Equip. Co., Inc. v. Cives Corp., et al., 476 F. Supp. 2d 1079 (N.D. Iowa 2007).547

"bottom plane" — "does require a physical surface." CAE Screenplates Inc. v. Heinrich Fiedler GMBH & Co. KG, 224 F.3d 1308 (Fed. Cir. 2000).548

"bottom sole" — "the outsole of a shoe, which is the part of the shoe that contacts the ground and is also the lowest part of the sole." Lawlor v. Nike, Inc., et al., 2005 U.S. Dist. LEXIS 12001 (D. Mass., Jun. 20, 2005).549

"bow"; "bow-shaped"; "bowed section" — "the bowed section of the backrest frame side members is the curved portion of the frame created by the connection of an upper section and a lower section." Herman Miller, Inc. v. Teknion Corp., et al., 504 F. Supp. 2d 360 (N.D. Ill. 2007).550

"bows" — "members that are either curved or straight and have any cross-sectional shape." Sundance, Inc. v. De Monte Fabricating, Ltd., 485 F. Supp. 2d 805 (E.D. Mich. 2007).551

"bracket"; "bracket means"; "bracket member" — "a rigid fixture, which can be mounted in a stationary position at a fixed point on the wheelchair frame in order to establish a fixed angular relationship between the occupant lap and rear wheelchair restraint belts." Queen's University at Kingston, et al. v. Kinedyne Corp., 910 F. Supp. 527 (D. Kan. 1995).553

"braid" — "three or more wire strands woven together in a way that no two wire strands are twisted around one another." Bird Barrier America, Inc. v. Bird-B-Gone, Inc., 2009 U.S. Dist. LEXIS 117441 (C.D. Cal., Dec. 16, 2009).554

"braking means" — "This Court concludes that unlike Cole and Envirco, the claims of the patent at issue do not disclose sufficient structure to overcome the presumption of a means plus function patent." Air Turbine Technology, Inc. v. Atlas Copco AB, et al., 295 F. Supp. 2d 1327 (S.D. Fla. 2003).555

- 49 -

"a second breather chamber placed in the vicinity of the intake system on the side approximately opposite to the first breather chamber relative to the axis of the cylinder bore" — "a second enclosed space for breather gas situated near the intake system on the side of the engine body approximately across the axis of the cylinder bore from the first enclosed space for breather gas." American Honda Motor Co., Inc. v. Coast Distribution System, Inc., 609 F. Supp. 2d 1032 (N.D. Cal. 2009).559

"bringing, respectively" — "mean[s] that force is applied to both the removable article and the device's electrically conductive elements such that the removable article is moved first followed by motion of the device's conductive elements until they are brought into a contacting relationship." Thomson Consumer Electronics, Inc. v. Innovatron, S.A., 43 F. Supp. 2d 26 (D.D.C. 1999).561

"said depression defining an essentially vertical depending straight wall bridging the interior ends of said tear impressions" — "one skilled in the art would understand the term 'bridging' to require the tear impressions to intersect or touch the essentially vertical depending straight wall." Bailey v. Dart Container Corp., et al., 157 F. Supp. 2d 110 (D. Mass. 2001).562

"brush track" — "the area of the commutator bar which is slidingly engaged by the brushes of the dynamoelectric device." Joyal Products, Inc. v. Johnson Electric North America, et al., 2007 U.S. Dist. LEXIS 79522 (D.N.J., Oct. 25, 2007).565

"buckling" — "the planned failure or collapse of a column wall resulting in redistribution or lessening of the load carried by the column." Edizone, LC v. Cloud Nine, LLC, et al.,2006 U.S. Dist. LEXIS 68069 (D. Utah, Sept. 21, 2006).566

"bulbous" — "In order to infringe, the accused device thus must have an element mounted on the distal end region of the laser energy transmitting conduit that is enlarged vis-a-vis the conduit and has a generally rounded distal end." Trimedyne, Inc., et al. v. Surgical Laser Technologies, Inc., 1998 U.S. App. LEXIS 16303 (Fed. Cir., Jul. 10, 1998) (unpublished).568

"bulge" — "is not simply a 'curve' but is a curve-like protuberance." STX, Inc. v. Brine, Inc., et al., 37 F. Supp. 2d 740 (D. Md. 1999).569
"bulk volume" — "is amenable to construction and is not indefinite. The court construes 'bulk volume' as the mathematical inverse of bulk density, and 'bulk density' as the mass of a unit volume of a powder including its pore volume and inter-particle voids, measured in its loose state using a Scott volumeter." Superior Graphite Co. v. Timcal SA, et al., 2006 U.S. Dist. LEXIS 29935 (N.D. Ill., May 8, 2006).570

"bulkhead" — "a vertical partition generally extending the full width of a car and usually used to restrain lading." National Steel Car, Ltd. v. Canadian Pacific Railway, Ltd., et al., 254 F. Supp. 2d 527 (E.D. Pa. 2003).573

"burner pan" — "a substantially flat metal plate having a gas inlet aperture, and which may or may not have perpendicular perimeter sides." Travis Industries, Inc. v. Hearth & Home Technologies, Inc., et al., 2004 U.S. Dist. LEXIS 31059 (W.D. Wash., Oct. 18, 2004).575

"burning a smoking material at 250 ° to 400 ° C" — "burning a smoking material in a chamber or other medium heated to a temperature between 250 ° and 400 ° C." Tuna Processors, Inc. v. Hawaii International Seafood, Inc., et al., 2007 U.S. Dist. LEXIS 77396 (D. Haw., Oct. 17, 2007).576

"burrs at the apertures" — "rough areas at the apertures remaining after material is shaped, cut, cast, or drilled." Maytag Corp. v. Electrolux Home Products, Inc., 411 F. Supp. 2d 1008 (N.D. Iowa 2006).577

"butterflying"; "bisecting" — "are to be understood as having the meaning stated above, namely, cutting the tongue in half, parallel to the flat surfaces, and either leaving the 'mirror image' portions connected at one edge or separating them. Although the latter option might not ordinarily be understood as the result of butterflying (because the pieces are not connected), I conclude that the specification and the claims themselves plainly include this as part of the claim limitations." Rome v. Galilean Seafoods, Inc., 974 F. Supp. 97 (D. Mass. 1997).580 "We agree and adopt the court's claim construction and attendant reasoning." Id., 1998 U.S. App. LEXIS 20860 (Fed. Cir., Aug. 24, 1998) (per curiam).581

"adapted such that liquid may be drawn from or through said article by sole application of suction" — "it is possible for the user to draw the drink from the vessel using only suction." Haberman v. Gerber Products Co., 2007 U.S. Dist. LEXIS 78937 (W.D. Wis., Oct. 18, 2007). 584

- C -

"calculating"; "determining" — "to determine by mathematical equation." Transonic Systems Inc. v. Non-Invasive Medical Technologies Corp., 1999 U.S. Dist. LEXIS 22687 (D. Utah, Dec. 13, 1999). 586 "[A]s far as the 'calculating' and 'determining' limitations are concerned, we believe that the district court's construction was too broad. ... [T]he claim terms 'calculating' and 'determining' must be construed as requiring the use of at least one of the equations set forth in the specification of the '989 patent." Id., 10 Fed. Appx. 928 (Fed. Cir., May 29, 2001) (unpublished). 587

"caliper" — "a structure composed of those housing portions that engage about the brake disk and contain a brake application unit." Knorr-Bremse Systeme Fuier Nutzfahrzeuge GmbH v. Dana Corp., et al., 133 F. Supp. 2d 833 (E.D. Va. 2001). 588

"cam" — "a cylinder or eccentric wheel having an irregular form such that its motion, usually rotary, gives to a part or parts in contact with it a specific rocking or reciprocating motion." Rutherford Controls Int'l Corp., et al. v. Alarm Controls Corp., et al., 2009 U.S. Dist. LEXIS 69115 (E.D. Va., Aug. 6, 2009). 589

"cam members" — "the follower parts of the cam mechanism that are imparted motion by the cam slots and whose motion is guided by the cam slots." Tyco Healthcare Group LP v. Ethicon Endo-Surgery, Inc., 411 F. Supp. 2d 93 (D. Conn. 2006). 591

"cam slot" — "opening or groove that imparts motion to and guides the camming member." Tyco Healthcare Group LP v. Ethicon Endo-Surgery, Inc., 411 F. Supp. 2d 93 (D. Conn. 2006). 592 "[T]he Court amends its construction of the term 'cam slot' ... to: 'opening or groove that imparts motion to and guides the motion of the camming member.'" Id., 440 F. Supp. 2d 120 (D. Conn. 2006). 593

"camera" — "a self-contained, portable electronic camera, with the capability to take still pictures, the components of which are contained in a single housing." St. Clair Intellectual Property Consultants, Inc. v. Canon Inc., et al., 2004 U.S. Dist. LEXIS 17489 (D. Del., Aug. 31, 2004). 594

"camming members" — "the follower parts of the cam mechanism that are imparted motion by the cam slots and whose motion is guided by the cam slots." Tyco Healthcare Group LP v. Ethicon Endo-Surgery, Inc., 411 F. Supp. 2d 93 (D. Conn. 2006). 597

"wherein the memory alloy element can be extruded from the hollow placement device by the guide wire" — "the device or memory alloy element is forced out of the hollow placement device by the guide wire, which is a device that assists in positioning another device." Medtronic, Inc., et al. v. W.L. Gore & Associates, Inc., 2007 U.S. Dist. LEXIS 80038 (N.D. Cal., Oct. 19, 2007). 599

"electrothrombosis can be performed" — "electrothrombosis is able to be performed." Regents of the University of California v. Micro Therapeutics, Inc., et al., 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007). 600

"position ... relative to the housing can be varied" — "the locations of the mouthpiece [or nozzle] and housing can differ with respect to one another." P & M Products, Ltd., et al. v. Rose Art Industries, 2002 U.S. Dist. LEXIS 5008 (E.D. Pa., Mar. 25, 2002). 601

"a cannula mount affixing the cannula to the guide" — "a structure or support which attaches or connects the cannula to the guide." Baran v. Medical Device Technologies, Inc., et al., 519 F. Supp. 2d 698 (N.D. Ohio 2007). 602

"cantilevered fashion" — "It is clear to the Court that the claim language and intrinsic evidence describe rods mounted on a base with one fixed end and one free end, and not rods balanced or attached to a base in their center." Nautilus Group, Inc. v. Icon Health and Fitness, Inc., 308 F. Supp. 2d 1198 (W.D. Wash. 2003). 603 "This court [] construes the limitation 'in cantilevered fashion with one end of each of the rods being free' to mean that the rods are mounted with one or both ends free such that the rods have the structure of a single or double cantilever." Id., 82 Fed. Appx. 691 (Fed. Cir., Nov. 18, 2003) (unpublished). 604

"cantilevered leg"; "cantilevered |] arm" — "a leg or arm that is supported by the main body of the insert and has a free end." RFR Industries, Inc. v. Century Steps, Inc., et al., 1999 U.S. Dist. LEXIS 15212 (N.D. Tex., Sept. 23, 1999). 605

"the interior portion of the plate is capable of being deflected relative to the peripheral portions in a direction substantially perpendicular to the major axis of the shoe" — "the portions of the flexible plate close to the center are able to be curved, as compared to the peripheral portions of the flexible plate, in any direction that is substantially at a right angle to a heel-to-toe axis of the shoe, including the medial-to-lateral and vertical directions." Akeva L.L.C. v. Adidas America, Inc., 2005 U.S. Dist. LEXIS 11213 (M.D.N.C., May 17, 2005).

"capable of being ... forcibly expanded" — "capable of increasing from one diameter to another by application of force to overcome the resistance to expand." Medtronic Vascular, Inc., et al. v. Advanced Cardiovascular Systems, Inc., et al., 2005 U.S. Dist. LEXIS 822 (D. Del., Jan. 5, 2005).

"capable of deflection" — "the central plate is capable of deviation from a starting position between the conductive surfaces of the drive plates." Hysitron Inc. v. MTS Systems Corp., 2009 U.S. Dist. LEXIS 36108 (D. Minn., Apr. 28, 2009).

"wherein the actuating mechanism is capable of electronically switching between the first mode and the second mode to set and release the brake without manual readjustment of the gearing means" — "whereby the actuating mechanism can electrically set the wheel brake device and then electrically release the brake device, or vice versa, without having to manually reset the gearing means." Graham-White Manufacturing Co. v. Ellcon-National, Inc., 2007 U.S. Dist. LEXIS 89126 (D.S.C., Dec. 4, 2007).

"capturing bracket" — "a bracket (1) into which the lower end of the leg support fits and (2) that prevents significant downward or lateral movement of the lower end of the leg support." Warner Manufacturing Co. v. Armstrong, et al., 504 F. Supp. 2d 589 (D. Minn. 2007).

"said mounting including a capturing bracket for engaging the lower end of said leg support" — "the mounting includes a bracket into which the lower end of the leg support may be positionally fixed to prevent movement downward below the bracket or laterally in any direction." Forest Group, Inc. v. Bon Tool Co., et al., 2007 U.S. Dist. LEXIS 10487 (S.D. Tex., Feb. 15, 2007).

"electronic multi-function card" — "the ordinary meaning of the word 'card' . . ., as used in the phrase 'electronic multi-function card,' is the proper construction ... -- namely, a 'flat rectangular piece of stiff material.'" E-Pass Technologies, Inc. v. 3COM Corp., et al., 473 F.3d 1213 (Fed. Cir. 2007).

"cardioverting device" — "a device capable of correcting high-rate arrhythmic heart conditions by applying non-pacing electrical shocks to the heart. Such heart conditions include atrial arrhythmias and/or ventricular arrhythmias." Cardiac Pacemakers, Inc., et al. v. St. Jude Medical, Inc., et al., 2000 U.S. Dist. LEXIS 17352 (S.D. Ind., Nov. 29, 2000).621

"carriage" — "a moveable part of a seat belt tension sensor that has an enclosed hole in it for receiving a portion of seat belt webbing and moves a distance that corresponds to the amount of tension applied to the seat belt webbing." TK Holdings, Inc. v. CTS Corp., et al., 2010 U.S. Dist. LEXIS 51667 (E.D. Mich., May 26, 2010).622

"carried on" — "mean[s] that the weight of the adaptor is supported in some manner by the intermediate portion of the connector." Arlington Industries, Inc. v. Bridgeport Fittings, Inc., 290 F. Supp. 2d 508 (M.D. Pa. 2003).623

"a support band carried on the upper rim of the midsole and secured about the sidewalls of the heel cup" — "we agree with the district court's claim construction that 'the support band and the midsole may be unitary or in two separate parts.'" Hockerson-Halberstadt, Inc. v. Propet USA, Inc., et al., 62 Fed. Appx. 322 (Fed. Cir., Apr. 1, 2003) (unpublished).624

"carrier frame" — "a four-sided or rectangular shape." PODS, Inc. v. Porta Stor Inc., et al., 484 F.3d 1359 (Fed. Cir. 2007).625

"carrier portion interconnecting the plurality of user interface key caps" — "material connecting at least two user interface key caps." Motorola, Inc. v. VTech Communications, Inc., et al., 2009 U.S. Dist. LEXIS 59226 (E.D. Tex., Jul. 6, 2009).626

"carrier sheet" — "a paper, polymer film, or combination thereof upon which a number of additional layers of a laminate are at least temporarily disposed." Avery Dennison Corp. v. Whitlam Label Co., Inc., 2003 U.S. Dist. LEXIS 27836 (N.D. Ohio, Sept. 24, 2003).627

"carrier web" — "a material with at least one surface that carries, can carry, or has carried another material." 3M Innovative Properties Co., et al. v. Avery-Dennison Corp., 2005 U.S. Dist. LEXIS 12149 (D. Minn., Jun. 20, 2005).628

"catheter" — "a tubular device for withdrawing fluids from, or introducing fluids into, a cavity of the body, such as a blood vessel."  Mahurkar v. C.R. Bard, Inc., et al., 2003 U.S. Dist. LEXIS 25924 (N.D. Ill., May 13, 2003). 634

"a catheter for detecting changes in pressure within a body comprising ... a structure for detecting changes in fluid pressure"; "an interuterine pressure catheter comprising ... a pressure detection device"; "a pressure catheter for detecting changes in pressure within a body comprising ... a pressure detection device" — "The Court agrees ... that the claims do not require an integral connection between the elongated tube and the structure for detecting changes in fluid pressure' and do 'not require an integral connection between the elongated tube and the housing."  Clinical Innovations, LLC v. Utah Medical Products, Inc., 2007 U.S. Dist. LEXIS 67624 (D. Utah., Sept. 11, 2007). 636

"a catheter having a working end" — "a tubular, flexible, surgical instrument, including, but not limited to, a sheath, having an end directed toward the treatment site in the patient."  Vnus Medical Technologies, Inc. v. Diomed Holdings, Inc., 2006 U.S. Dist. LEXIS 88580 (N.D. Cal., Nov. 22, 2006). 637

"a catheter having a working end with an energy application device at the working end" — "a tubular, flexible, surgical instrument, including, but not limited to, a sheath, having an end directed toward the treatment site in the patient, with a device at that end for delivering energy, such energy including, but not limited to, RF energy, microwaves, ultrasound, direct current, circulating heated fluid, radiant light, laser, and thermal energy."  Vnus Medical Technologies, Inc. v. Diomed Holdings, Inc., 2006 U.S. Dist. LEXIS 88580 (N.D. Cal., Nov. 22, 2006). 638

"whereby liquid in said tank will be caused by gravity to flow into said bend and along said bend to said discharge opening" — "Hoover argues that liquid can flow by gravity 'into' an upwardly extending bend if the meaning of the word 'into' is taken to include 'in the direction of' or 'so as to strike.' ... We conclude that claim 1 of the '958 patent requires the bend in the bottom of the tank to extend in the downward direction, to form a trough whereby gravity will cause liquid to flow into and along the bend to the discharge opening."  Hoover Group, Inc. v. Custom Metalcraft, Inc., 66 F.3d 299 (Fed. Cir. 1995). 639

"causing contact with the work platform two or more times"; "causing contact with the work platform two or more times in a particular sequence" — "causing contact with the work platform two or more times"; "causing contact with the work platform two or more times in a particular sequence."  Tinkers & Chance v. Leapfrog Enterprises, Inc., 2007 U.S. Dist. LEXIS 43871 (E.D. Tex., June 18, 2007). 640

"wherein the expandable outer surface is sufficiently rigid to deform the target tissue into the shape of the expandable outer surface, causing the predetermined asymmetric isodose curves to penetrate the target tissue to a prescribed depth" — "the plain meaning of'causing' would be easily understood by the jury."  Hologic, Inc. v. SenoRx, Inc., et al., 2009 U.S. Dist. LEXIS 109841 (N.D. Cal., Nov. 24, 2009). 641
"cavity" — "a hollow space in the raised periphery surrounding the playing surface that holds batteries and wires." Innoverion Toys, LLC v. MGA Entertainment, Inc., et al., 2009 U.S. Dist. LEXIS 48386 (E.D. La., May 21, 2009). 642

"cavity" — "an opening in the aperture -- regardless of whether the aperture is fully enclosed -- which houses the cam member and whose width is larger than the opening of aperture to prevent the cam member from falling out." Quickie, LLC v. Medtronic, Inc., 226 F. Supp. 2d 481 (S.D.N.Y. 2002). 644

"cavity"; "phosphor layer" — "the court declines to impose any additional limitations on 'cavity' or 'phosphor layer.'" Hitachi Plasma Patent Licensing Co., Ltd. v. LG Electronics, Inc., et al., 2009 U.S. Dist. LEXIS 38738 (E.D. Tex., May 7, 2009). 646

"cavity cover member" — "a part of the molding apparatus that is spaced about an end of the mold core and abutting the cavity sidewall members so as to define a cavity between the mold core and both the cavity cover member and the cavity sidewall members." Maytag Corp. v. Electrolux Home Products, Inc., 411 F. Supp. 2d 1008 (N.D. Iowa 2006). 647

"cavity situated internally to the boundaries of the parting surface" — "a hollow space that is surrounded by a parting surface." In re: Turn-Key-Tech Matters, 2002 U.S. Dist. LEXIS 25583 (C.D. Cal., Jan. 8, 2002). 648

"cell analysis instrument" — "a device, not including a microscope station, that performs measurement or analysis of at least one cell feature on a specimen preparation, such as a specimen slide." Cytyc Corp. v. Tripath Imaging, Inc., et al., 2005 U.S. Dist. LEXIS 29850 (D. Mass, Nov. 28, 2005). 651

"center beam" — "a structure that runs lengthwise in a rail car and serves two functions. First, it strengthens the bed of the car allowing for the use of a lighter underframe. Second, it provides a structure to secure the load to the car." National Steel Car, Ltd. v. Canadian Pacific Railway, Ltd., et al., 254 F. Supp. 2d 527 (E.D. Pa. 2003). 652

"center of gravity" — "The Court construes the claim language 'center of gravity' in the claim to have the ordinary, in context, meaning of that particular term. That is, the point on the striking face of the club head at which the club head would be in static balance on a pivot point and not the literal three dimensional center of gravity." Antonious v. Spalding & Evenflo Cos., Inc., et al., 1998 U.S. Dist. LEXIS 10740 (D. Md., Apr. 27, 1998). 653

"central longitudinal groove" — "require[s] that the width of the groove must be less than the combined width of the fins." Hockerson-Halberstadt, Inc., et al. v. Avia Group International, Inc., et al., 222 F.3d 951 (Fed. Cir. 2000).

"upwardly open central play area" — "the area where one or more users can ... enter the play area and jump, bounce, or crawl on the bottom wall." Intex Recreation Corp. v. Hasbro, Inc., 1998 U.S. Dist. LEXIS 17262 (C.D. Cal., Jan. 13, 1998).

"central portion" — "at or near the geometric center of the bill." Cummins-Allison Corp. v. Glory, Ltd., et al., 457 F. Supp. 2d 843 (N.D. Ill. 2006).

"centrifugal unit" — "with the exception of its use in the first line of Claim 16 in which 'centrifugal unit' is defined as comprising various components, the phrase 'centrifugal unit', as used in Claim 16 and its dependent claims, will be construed as referring exclusively to the vessel itself." Haemonetics Corp. v. Baxter Healthcare Corp., et al., 517 F. Supp. 2d 514 (D. Mass. 2007). "We [] reverse the district court's claim construction and hold that 'centrifugal unit' in claim 16 consistently means a vessel and a plurality of tubes, irrespective of its meaning in claim 1." Id., 2010 U.S. App. LEXIS 11122 (Fed. Cir., Jun. 2, 2010).

"chamfer backrake angle" — "the angle between a line oriented perpendicular to the subterranean formation to be engaged by a cutter and the portion(s) of the chamfer that engages the formation during drilling, measured in the direction of intended bit rotation, labeled β in Fig. 11 of the '715 Patent." Reedhycalog UK, Ltd, et al. v. Baker Hughes Oilfield Operations, Inc., et al., 2007 U.S. Dist. LEXIS 76125 (E.D. Tex., Oct. 12, 2007).

"changeable or adjustable shoulder supporting members for securing said structure on the shoulders of a user" — "the adjustable or changeable pieces of the device that rest on the user's shoulders and perform the function of supporting the balance of the device and which connect the back member, situated against the user's back, with the upper portion of the device that rests on the user's chest." Randall May International, Inc., et al. v. DÉG Music Products, Inc., et al., 2010 U.S. App. LEXIS 9586 (Fed. Cir., May 11, 2010) (unpublished).

"channel" — "an individual u-shaped bar or structural element, not simply any u-shape that can be imagined to exist within a unitary structure." ABC Industries, Inc. v. Kason Industries, Inc., et al., 30 F. Supp. 2d 331 (E.D.N.Y. 1998). 668

"channel" — "an interior sleeve where the fluorescent tube or electrical components are contained." Lampi Corp. v. American Power Products, Inc., 1997 U.S. Dist. LEXIS 9942 (N.D. Ill., Jul. 7, 1997). 669 "We conclude that the district court did not err in deciding that the translucent cover cannot be a part of the first interior channel, although our reasoning differs from that of the district court." Id., 228 F.3d 1365 (Fed. Cir. 2000). 670

"a channel" — "is not limited to one channel ... need not have particular fluid-impeding or pooling properties ... [and] is not a groove." Kimberly-Clark Corp., et al. v. Tyco Healthcare Retail Group, 456 F. Supp. 2d 998 (E.D. Wis. 2006). 671

"channel for injecting fluids" — "lengthwise running conduit or passageway (including the central lumen of the guide tube) through which liquids or gases can be forced." Laboratories Perouse S.A.S. v. W.L. Gore & Associates, Inc., 528 F. Supp. 2d 362 (S.D.N.Y. 2007). 672

"channel member" — "a groove formed along at least one side of positioning ring into which a portion of the cutting head assembly fits." Bausch & Lomb Inc. v. Moria S.A., et al., 222 F. Supp. 2d 616 (E.D. Pa. 2002). 673

"channeling structure being adapted to channel the entrained eggs toward the feeding end" — "This court declines to read language such as 'controlled manner' and slurry 'falling by gravity' in the specification as limitations on the claims." Sanders Brine Shrimp Co. v. Bonneville Artemia International, Inc., 970 F. Supp. 892 (D. Utah 1997). 674

"a plurality of chocks mounted to and extending downward from said primary frame members for contacting each of said cantilever sections of said arms and for transferring load from said primary frame members to said arms during dumping operations" — "more than one block or wedge placed under a vehicular frame to keep it from moving, mounted on or attached to and extending below the primary vehicular framework members, adapted for touching the cantilever section of the arms, for stabilizing a vehicle by shifting or transferring the weight that a vehicle bears from the vehicular framework members to the arms." Watson & Chalin Manufacturing, Inc. v. Boler Co., 227 F. Supp. 2d 633 (E.D. Tex. 2002).

"circuit boards" — "a single workpiece could embrace multiple circuit boards. Or, in other words, the 'circuit boards' need not be separate during processing." Electro Scientific Industries, Inc. v. Dynamic Details, Inc., et al., 307 F.3d 1343 (Fed. Cir. 2002).

"circular" — "refer[s] to a shape perceivable to the ordinary eye as a circle, and not merely any shape which proceeds around an empty center." Mezzalingua Associates Inc. v. Cabel-Con, Inc., 1997 U.S. Dist. LEXIS 4595 (N.D.N.Y., Apr. 7, 1997).

"at least one radially inwardly extending inward-groove circularly surrounding said central-axis" — "Although the parties have concentrated on the meaning of 'circularly,' each finding support in dictionary definitions for its interpretation, they have not apparently considered the effect of 'circularly surrounding,' which makes plain that the groove, in the form of a circle, is 'to enclose on all sides' the inner tube." Dethmers Manufacturing Co., Inc. v. Automatic Equipment Mfg. Co., 23 F. Supp. 2d 974 (N.D. Iowa 1998).

"circumferential array of vanes" — "a number of flat or curved surfaces arranged around the outer part of the impeller, which is generally circular in shape." Performance Aftermarket Parts Group, Inc., et al. v. TI Group Automotive Systems, Inc., 2006 U.S. Dist. LEXIS 92686 (S.D. Tex., Dec. 22, 2006).

"circumferentially extending wall extending from said seaming panel to said reinforcing bead" — "can end wall encircling the center of the can end and extending from the seaming panel." Crown Packaging Technology, Inc., et al. v. Rexam Beverage Can Co., 486 F. Supp. 2d 366 (D. Del. 2007).

"circumferentially reinforced at locations along its length by a plurality of separately spaced apart wires" — "the graft body or bifurcated base structure is strengthened by at least two malleable wires that do not contact or touch one another and that are placed circumferentially along the length of the material forming the graft body or bifurcated base structure." Edwards Lifesciences, LLC, et al. v. Cook Inc., et al., 2007 U.S. Dist. LEXIS 55634 (N.D. Cal., July 23, 2007).
"each having at least two circumferentially spaced teeth"; "each disk having at least two circumferentially spaced teeth" — "each cutting disk has at least two teeth for cutting that are spaced apart in the direction of rotation." Fellowes, Inc. v. Michelin Prosperity Co., Ltd., et al., 2006 U.S. Dist. LEXIS 90648 (E.D. Va., Dec. 15, 2006).91

"clamp" — "a device that can grip or bind a keyboard by at least two opposing points to stop it from falling off when the keyboard is tilted backwards." Ambrose, et al. v. Steelcase, Inc., et al., 2003 U.S. Dist. LEXIS 26035 (W.D. Mich., Nov. 10, 2003).94

"clamp means for automatically clamping an attachment end when in said predetermined alignment" — "fails to recite sufficient structure, material, or acts for performing the function of clamping. ... The presumption that § 112, P 6 applies is not rebutted." ADC Telecommunications, Inc. v. Panduit Corp., 200 F. Supp. 2d 1022 (D. Minn. 2002).95

"clamp member" — "a part configured to hold, grasp, or apply pressure to tissue, that is movable, that works with a component of the instrument (e.g. the cutting jaw), and which is separate and distinct from the tissue contact surface." Tyco Healthcare Group LP v. Ethicon Endo-Surgery, Inc., 411 F. Supp. 2d 93 (D. Conn. 2006).96 "[T]he Court amends its construction of 'clamp member' ... to: 'A part configured to hold, grasp, or apply pressure to tissue, that is movable and that works with a component of the instrument (e.g. the cutting jaw).'" Id., 440 F. Supp. 2d 120 (D. Conn. 2006).97

"clamping device" — "as an elongated C-shaped clamp wherein the base is longer than one of the sides of the hollow metal box enclosure and having a pair of opposed arms so that the arms are connectable to the box on opposite sides of the box. The base of the clamp is substantially longer than the arms." Senior Industries, Inc. v. Thomas & Betts Corp., et al., 2001 U.S. Dist. LEXIS 16901 (N.D. Ill., Sept. 27, 2001).99

"clamping engagement" — "tight, high-pressure electrical contact maintained indefinitely." Andrew Corp. v. Beverly Manufacturing Co., 479 F. Supp. 2d 766 (N.D. Ill. 2006).100

"clamping force being sufficient to prevent sheet material from being drawn laterally inwards towards the rivet" — "significantly restrict the inward, lateral flow of sheet material that is subject to the clamping force." Henrob Ltd. v. Bollhoff Systemtechnick GmbH & Co., 2007 U.S. Dist. LEXIS 88014 (E.D. Mich., Nov. 30, 2007).101

"cleaning" — "the separation or removal of foreign matter from the coins in a manner that helps to prevent damage to the machine." Coinstar, Inc. v. CoinBank Automated Systems, Inc., 998 F. Supp. 1109 (N.D. Cal. 1998). [703]

"cleaning section" — "a thickened integral compressible section attached to the gun barrel cleaning device sized and shaped to contact evenly when cleaning the inner surface of the gun barrel, and which is ready to use and does not require changing of cloths or patches to use. It has no length limit, but cannot encompass the entire device, and can include, but is not limited to, a fabric sheath folded in on itself." Michaels of Oregon Co. v. Clean Gun, LLC, 2002 U.S. Dist. LEXIS 20371 (D. Or., Jul. 9, 2002). [705]

"clear" — "transparent or ‘having the property of transmitting light without appreciable scattering so that bodies lying beyond are seen clearly.’" Terlep v. Brinkmann Corp., 2004 U.S. Dist. LEXIS 28453 (W.D. Ark., Mar. 23, 2004). [707] "We conclude that the district court correctly construed the term ‘clear’ to mean ‘transparent or having the property of transmitting light without appreciable scattering so that bodies lying beyond are seen clearly,’ and that nothing in the claims or the written description warranted giving the term ‘clear’ an expansive meaning that would cover ‘translucent’ holders." Id., 418 F.3d 1379 (Fed. Cir. 2005). [708]

"clip" — "a structure that provides the dual functions of disposing the clip around and holding the female member through the slots in the female member and extending through the slots into the groove in the male member to lock the members together." Teleflex, Inc. v. Ficosa North America Corp., et al., 299 F.3d 1313 (Fed. Cir. 2002). [709]

[i] "clips"; [ii] "cavity clip" — [i] "devices that assist in holding something by gripping it or pushing against it"; [ii] "a device within a cavity that assists in holding something by gripping it or pushing against it." Sta-Rite Industries, et al. v. ITT Corp., et al., 2010 U.S. Dist. LEXIS 10790 (E.D. Tex., Jan. 19, 2010). [710]

"a closable vertical opening" — "a slit-like opening that runs straight up and down or perpendicular to the plane of the horizon." Stumbo v. Eastman Outdoors, Inc., 2007 U.S. Dist. LEXIS 5444 (D. Colo., Jan. 25, 2007). [711] "We agree with the district court that the term ‘a closable vertical opening’ is properly construed as ‘a slit-like opening that runs straight up and down or perpendicular to the plane of the horizon.’" Id., 508 F.3d 1358 (Fed. Cir. 2007). [712]

"close said throat portions" — "means that the removable mulcher baffles close the space between the first and second flow control baffles so that grass clippings are generally confined to the defined area of the cutting chamber for each cutting blade of the mower." Toro Co., et al. v. Scag Power Equipment, Inc., et al., 2002 U.S. Dist. LEXIS 14428 (D. Neb., Aug. 5, 2002).

"closed by pressing the bottom of the elements together first and then rolling the elements to a closed position toward the top thereof" — "not only require[s] the presence of rolling, but also that the profile be 'closed . . . by rolling.' The non- incidental rolling requirement gives meaning to this claim limitation; the district court properly construed the claim in accordance with its plain language." Pactiv Corp. v. S.J. Johnson & Son, Inc., et al., 26 Fed. Appx. 943 (Fed. Cir., Jan. 4, 2002).

"closed chamber ... adapted to retain a quantity of fluid" — "an enclosed cavity defined by the inner surfaces of the first and second substrates, from which there is no egress of fluid." Agilent Technologies, Inc. v. Affymetrix, Inc., 567 F.3d 1366 (Fed. Cir. 2009).

"in a closed circulation process stream" — "refers to the flow of process fluids in a closed manner into a vessel from a source, or inlet, and out of a vessel through a drain, or outlet, but the phrase does not require that fluids travel in a complete loop or circle, or that they re-circulate." CFMT, Inc., et al. v. YieldUP International Corp., 92 F. Supp. 2d 359 (D. Del. 2000).

"closed on one end and open on its other end" — "describes the housing element before it is assembled with the other elements of the inflator, such that a housing with an opening through which another element of the inflator is inserted during assembly is 'open' on the end with the opening." HBB Limited Partnership v. Ford Motor Company, et al., 1996 U.S. Dist. LEXIS 4047 (N.D. Ill., March 29, 1996).

"closely disposed about said outer periphery exhaust region" — "placed near to the outside perimeter of the area of the fan where the working air is let out of the fan." Johnson Electric Industrial Manufacturing, Ltd., et al. v. Ametek, Inc., 2005 U.S. Dist. LEXIS 19300 (D. Conn., Aug. 24, 2005).

"closely fit in and extend through" — "the district court did not err in construing the words 'closely fit' to require a tight or snug fit between the rod and the isthmus of the femur or in construing the words 'extend through' to require that the rod pass through the entire length of the isthmus." Wright Medical Technology, Inc., et al. v. Osteonics Corp., 122 F.3d 1440 (Fed. Cir. 1997).

"an electrical connector closing said connector end of said tube" — "we construe 'closing' to mean 'spanning the diameter of the tube, regardless of whether there are or are not openings in the connector into the internal cavity of the conductive tube.'" Heraeus Electro-Nite Co. v. Midwest Instrument Co., 2007 U.S. Dist. LEXIS 81685 (E.D. Pa., Nov. 1, 2007).

"closure device" — "The '689 patent does not use the term 'closure means' but instead uses the term 'closure device.' However, the '689 patent's prosecution history establishes that the two terms must be understood to be synonymous." Kensey Nash Corp., et al. v. Perclose, Inc., 2000 U.S. Dist. LEXIS 18393 (E.D. Pa., Dec. 21, 2000).

"closure means pivotably associated with said plate means and being movable with respect to said slot means for controlling access thereto"; "movable closure means pivotably associating with said cap means at pivot means thereof, said movable closure means being selectively movable between an open access and closed access position with respect to said slot means" — "invoke the interpretation regimens of section 112, paragraph 6." Sage Products, Inc. v. Devon Industries, Inc., 126 F.3d 1420 (Fed. Cir. 1997). 725

"a closure means fastenable at the surface of the backrest" — "a closure device fastenable at the surface which, through use of a zipper, buttons, hooks, or similar device, physically connects the surface of the backrest to the surface of the second cushion used as the foldable child's seat." Hassell, et al. v. Chrysler Corp., et al., 982 F. Supp. 515 (S.D. Ohio 1997). 726

"closure member for selectively closing said drinking hole" — "a structure adapted to cover the drinking hole to an extent that the user may select, including fully open and fully closed, and which may allow the user to select a degree of opening somewhere between fully open and fully closed." Sunbeam Products, Inc. v. Hamilton Beach Brands, Inc., et al., 2010 U.S. Dist. LEXIS 85281 (E.D. Va., Aug. 19, 2010). 727

"closure member releasably secured" — "something whose purpose is to cause other parts either to fit tightly together, or to fit together such that the parts have little or no space between them; and whose configuration is such that the parts can be freed from being fit together." Muzzy Products, Corp. v. Sullivan Industries, Inc., et al., 194 F. Supp. 2d 1360 (N.D. Ga. 2002). 728

"modulating clutch means" — "while 'modulating clutch' may have a well understood meaning in the art, it is not a sufficient structure to perform the recited function. Accordingly, we find that § 112, P 6 is applicable." BorgWarner, Inc., et al. v. New Venture Gear, Inc., 237 F. Supp. 2d 919 (N.D. Ill. 2002). 731

"a pair of actuators that ... co-act with the wings" — "a pair of actuators that interact with the wings." WesternGeco LLC v. ION Geophysical Corp., 2010 U.S. Dist. LEXIS 71875 (S.D. Tex., Jul. 16, 2010). 732

"co-extrusion ... within"; "co-extruding ... within" — "a technique where two dissimilar materials are combined by means of two extruders or an extruder and a pump to form a product wherein one material is contained within the other." Kal Kan Foods, Inc. v. H.J. Heinz Company, L.P., et al., 2004 U.S. Dist. LEXIS 16808 (C.D. Cal., Feb. 5, 2004). 733

"coalescence"; "completion of coalescence" — "'coalescence' is the process of forming a uniform, homogeneous body, or combining into one body or growing together, through the merger of smaller particles of the same material. 'Coalescence' is 'complete' when it has all necessary parts, elements or steps, or is fully carried out." Old Town Canoe Co. v. Azjs, Inc., et al., 2004 U.S. Dist. LEXIS 29735 (D. Or., Mar. 2, 2004). 734

"at least one coating" — "a coating of one or more layers." Tailored Lighting, Inc. v. Osram Sylvania Products, Inc., 514 F. Supp. 2d 417 (W.D.N.Y. 2007).736

"coating at least one of said outer surfaces of said core with a layer of ink" — "covering at least one of said outer surfaces of said core with a finishing layer of ink." Leighton Technologies LLC v. Oberthur Card Systems, S.A., 358 F. Supp. 2d 361 (S.D.N.Y. 2005).737

"coating layer" — "a layer of material that substantially surrounds, encases or encapsulates the cords, and defines an engagement surface for engaging a sheave." Schindler Elevator Corp. v. Otis Elevator Co., 2010 U.S. Dist. LEXIS 2463 (D.N.J., Jan. 13, 2010).738

"coating of one or more inks forming a design on the lower surface and adapted to show through the plastic sheet to be seen through the top surface" — "coating of one or more inks forming a design on the lower surface and adapted to show through the plastic sheet to be seen through the top surface." Microthin.com, Inc. v. SiliconeZone USA, LLC, 615 F. Supp. 2d 754 (N.D. Ill. 2009).739

"cockpit" — "the depression toward the center of the watercraft in or on which the paddler or paddlers sit." Old Town Canoe Co. v. Glenwa, Inc., 229 F. Supp. 2d 1151 (D. Or. 2001).741

"reduced coefficients of friction" — "a ratio of the force that maintains contact between an object and a surface, and the frictional force that resists the motion of the object in the static state and in the dynamic state." Greene, Tweed of Delaware, Inc. v. Dupont Dow Elastomers, L.L.C., et al., 2002 U.S. Dist. LEXIS 23554 (E.D. Pa., Nov. 18, 2002).742

"coextrudate of cojoined layers" — "cover[s] a coextrudate which is a facestock, or plastic film, formed solely by simultaneous, or joint, extrusion of several materials through a die. The immediate result of this simultaneous extrusion, or coextrusion, is a multilayer film wherein the layers are firmly adhered to one another in a permanently combined state, i.e., the patented coextrudate. A facestock formed by adhering preformed layers is not within the scope of claims." Avery Dennison Corp. v. UCB Films PLC., 1997 U.S. Dist. LEXIS 13594 (N.D. Ill., Sept. 3, 1997).743 "We have carefully considered all of the arguments and authorities presented by Avery, and conclude that the district court's judgment is correct." Id., 15 Fed. Appx. 882 (Fed. Cir., Jul. 18, 2001) (unpublished).744

"coil segment" — "a connecting segment that is a coil, at least a portion of which can be corroded electrolytically." Regents of the University of California v. Micro Therapeutics, Inc., et al., 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007).745

"leading surface being planar and coincident with a plane, the plane intersecting the handle portion" — "the leading surface is flat and occupies part of the same place or plane, the plane intersecting the handle portion." FURminator, Inc. v. Munchkin, Inc., et al., 2009 U.S. Dist. LEXIS 104429 (E.D. Mo., Nov. 9, 2009).747

"cold purge process" — "The district court correctly placed the term 'cold purge process' in the context of the state of the art when the '389 invention was made. This context requires construing the literal meaning of the claims as limited to the process wherein electrostatic contamination is formed and removed." Applied Materials, Inc. v. Advanced Semiconductor Materials America, Inc., et al., 98 F.3d 1563 (Fed. Cir. 1996).

"cold UV" — "a UV light source which: (i) employs selected wavelengths to limit; or (ii) has been adapted to selectively reduce the amount of; radiation (and thus heat) that impinges upon a substrate." Leggett & Platt, Inc., et al. v. Vutek, Inc., 2006 U.S. Dist. LEXIS 33383 (E.D. Mo., May 25, 2006).

"wherein the liner collapses when fluid is withdrawn from within the liner during operation of the gun" — "wherein the liner distorts without being ruptured when fluid is withdrawn from within the liner during operation of the gun." 3M Innovative Properties Co. v. Illinois Tool Works, Inc., et al., 2007 U.S. Dist. LEXIS 78695 (D. Minn., Oct. 23, 2007).

"collecting light scattered along said path for detecting anomalies" — "[does not] requir[e] collection of light and detection of anomalies to occur within the same instrument or device such that the two operations are inseparable." ADE Corp. v. KLA-Tencor Corp., 220 F. Supp. 2d 303 (D. Del. 2002).

"collection elements" — "two or more perforated structures with a wall that defines a closed-end tube that has one end open to a chamber. The perforations in the structure should be large enough to permit vapor entry but not so large as to permit substantial soil entry." Knopik v. Amoco Corp., et al., 96 F. Supp. 2d 892 (D. Minn. 2000).

"colored textured material" — "rubber particles with a specific combination of hue, saturation, and lightness or brightness that has the visual or tactile surface characteristics and appearance of pea gravel, tree bark, wood chips, and other natural mulches." Green Edge Enterprises, LLC v. Rubber Mulch Etc., LLC, et al., 2007 U.S. Dist. LEXIS 38799 (E.D. Mo., May 29, 2007).

"combination" — "an ordered sequence of letters or numbers which must be entered to open the lock. This term cannot be construed merely to cover a single switch closure." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997).

"combining region" — "the area within the heater body, which may or may not be a structure separate from the heater body, where the fluid to be heated mixes with the high pressure steam." Hydro-Thermal Corp. v. Pro-Sonix, LLC, et al., 2009 U.S. Dist. LEXIS 90148 (E.D. Wis., Sep. 9, 2009).
"combining the associated value and the additional parameter to determine motion control commands" — "a computerized, mathematical combination of the associated value and the additional parameter to determine motion control commands provided to the machine tool to automatically adjust velocity or acceleration to achieve the desired quality of result."  Omax Corp. v. Flow International Corp., 2006 U.S. Dist. LEXIS 81914 (W.D. Wash., Nov. 7, 2006).

"commensurate" — "mean[s] that the diameter of the first internal bore of the compression ring is 'large enough to extend over the cylindrical sleeve while compressing the deformable rear end portion of the cylindrical sleeve.'"  John Mezzalingua Associates, Inc. v. Arris International, Inc., 2003 U.S. Dist. LEXIS 24730 (W.D. Wis., Nov. 14, 2003).

"common front planar surface portion"; "common rear planar surface portion" — "the corner piece corner section has a front surface in the same plane as the plane of the front surfaces of the legs which contact the inside front wall of the flange. The Court finds that surfaces displaced out of that common front planar surface, except surface displacements that result from normal manufacturing tolerances, are not surfaces in that plane."; "the corner piece corner section has a rear surface in the same plane as the plane of the rear surfaces of the legs. The Court finds that surfaces displaced out of that common rear planar surface, except surface displacements that result from normal manufacturing tolerances, are not surfaces in that plane."  Ductmate Industries, Inc. v. Famous Supply Corp., et al., 55 F. Supp. 2d 777 (N.D. Ohio 1999).

"common plane of tangency" — "a plane that is tangent to a contact surface of the lower lip at a point of contact with a contact surface of the tongue."  Alloc, Inc. v. Unilin Decor N.V., et al., 2007 U.S. Dist. LEXIS 16743 (E.D. Wis., Mar. 6, 2007).

"common surface" — "the same surface, which surface may be either continuous or divided."  Celerity, Inc. v. Ultra Clean Technology Systems & Service, Inc., et al., 2007 U.S. Dist. LEXIS 44490 (N.D. Cal., June 1, 2007).

"an aperture communicating between ..."; "second opening communicating between ..." — "an opening through the housing where the housing drive surface is aligned with the recess"; "an opening through the housing where the housing drive surface is axially aligned with the recess."  National Products, Inc. v. Palmetto West Trading Co., LLC, 2006 U.S. Dist. LEXIS 28682 (W.D. Wash., May 4, 2006).

"a fuel return line communicating with said return line opening and said fuel tank for delivery of air and fuel to said fuel tank" — "a fuel return line provides communication or transfer between the return line opening and the fuel tank for delivering air and fuel from the opening to the fuel tank."  Ekstam v. Ekstam, 2006 U.S. Dist. LEXIS 12937 (E.D. Mo., March 7, 2006).

"compacting" — "extrusion under pressure, pressure rolling, prilling or other techniques which compact the agglomerated material into a form which has some degree of structural integrity, and which, following drying, can maintain its shape or be comminuted appropriately." Profile Products LLC v. Encap, LLC, 2009 U.S. Dist. LEXIS 60282 (W.D. Wis., Jul. 15, 2009). 771

"comparing a reference value with a difference between a slow spinning speed and a fast spinning speed of the drum" — "subtracting a slow spinning speed from a fast spinning speed of the drum and comparing the result with a reference value." LG Electronics U.S.A., Inc., et al. v. Whirlpool Corp., 2007 U.S. Dist. LEXIS 24056 (D.N.J., April 2, 2007). 772

"comparing the fluorescence polarization in the second mixture relative to the first mixture" — "comparing the fluorescence polarization of emitted light from the second mixture with the fluorescence polarization of the emitted light from the first mixture, which may be either measured or may be a known value." Caliper Technologies Corp. v. Molecular Devices Corp., 2003 U.S. Dist. LEXIS 27842 (N.D. Cal., Sept. 3, 2003). 773

"battery compartment" — "a section within the defibrillator case that contains the battery or batteries." Cardiac Science, Inc. v. Koninklijke Philips Electronics N.V., et al., 2006 U.S. Dist. LEXIS 22267 (D. Minn., April 20, 2006). 774

"so as to compensate for thermal expansion of said chip"; "to compensate for differential thermal expansion of the chip and substrate" — "to appreciably accommodate the thermally induced stresses (strains) caused by the difference in thermal expansion of the chip and the substrate." Samsung Electronics Co., Ltd. v. Tessera Technologies, Inc., 2004 U.S. Dist. LEXIS 31074 (N.D. Cal., Jan. 8, 2004). 776

"complementary coupling part" — "a completing component that cooperates with another completing component to connect two panels together in the vertical and horizontal directions." Alloc, Inc. v. Unilin Decor N.V., et al., 2007 U.S. Dist. LEXIS 16743 (E.D. Wis., Mar. 6, 2007). 777

"said clipholder having an external face complementary in shape with said locking element to provide a wedge-like interfitting, the complementary shape being in the form of a U wherein the corners of the U have a radius of curvature sufficient to provide a wedging action" — "we hold that the district court did not err when it construed claim 1 so as to require both the locking element and the clip holder to possess 'the shape of a U with curved corners.'" Pandrol USA, LP, et al. v. Airboss Railway Products, Inc., et al., 10 Fed. Appx. 837 (Fed. Cir., Mar. 27, 2001) (unpublished). 778

"complete hermetic seal" — "a seal that does not require any additional parts to retain nearly or largely all of the air in the bed." Aero Products International, Inc., et al. v. Intex Recreation Corp., et al., 466 F.3d 1000 (Fed. Cir. 2006).781

"said skirt being completely free with respect to the pan with the exception of a ring which joins only the top edge of the top edge of the pan and to which the latter is attached" — "means that the outer plastic skirt is thermally insulated from the hot oil frying pan. In other words, claim 1 means there are no thermal bridges between the skirt and the pan." SEB S.A. v. Montgomery Ward & Co., Inc., et al., 77 F. Supp. 2d 399 (S.D.N.Y. 1999).782 "this court detects no reversible error in the district court's claim construction." Id., 2010 U.S. App. LEXIS 2454 (Fed. Cir., Feb. 5, 2010) (unpublished).783

"completion of coalescence" — "we affirm the district court's construction that 'coalescence' is 'complete' when the process of forming a uniform, homogeneous body has all necessary parts, elements or steps, or is fully carried out, i.e., the layer formed from the particulate reaches its optimum state." Old Town Canoe Co. v. Confluence Holdings Corp., 448 F.3d 1309 (Fed. Cir. 2006).784

"a compliant layer"; "compliant material" — "a layer/material that is appreciably compressible in a direction perpendicular to its surface." Tessera, Inc. v. Micron Technology, Inc., 423 F. Supp. 2d 624 (E.D. Tex. 2006).787

"male and female elements having complimentary cross sectional shapes such that they are closed by pressing the bottom of the elements together first and then rolling the elements to a closed position toward the top thereof" — "Tenneco argues that the patent would cover any shape, as long as the shapes allow the elements to close most easily 'by first pressing the bottoms of the elements together and then rolling the tops of the elements together.' The Court agrees with Tenneco." Tenneco Packaging Specialty and Consumer Products, Inc. v. S.C. Johnson & Son, Inc., et al., 1999 U.S. Dist. LEXIS 17937 (N.D. Ill., Nov. 12, 1999).788

"component" — "a single- or multiple-part structure having a cross-section in the shape of a triangle or wedge." Robert Bosch, LLC. v. Pylon Manufacturing Corp., 2010 U.S. Dist. LEXIS 30451 (D. Del., Mar. 30, 2010).789

"composite compositions" — "must be in the form of either pellets or the linear extrudate from which pellets may be cut." Andersen Corp. v. Fiber Composites, LLC, 474 F.3d 1361 (Fed. Cir. 2007).791

"composite structural member" — "a polymer and wood article having load bearing capability, which can be obtained through a direct extrusion process or made from a composite material without a particular form." Andersen Corp. v. Fiber Composites, LLC, 2002 U.S. Dist. LEXIS 6233 (D. Minn., Apr. 9, 2002).792
"compressed position" — "the position of the flexible element when it is under axial compression from a medical implement and opens the valve."  

[i] "compressed state"; [ii] "decompressed state" — [i] "the state of the seal when a medical implement causes axial compression"; [ii] "the state of the seal when a medical implement is not causing axial compression."  

"mold comprises two parts" — "The Court agrees with Defendants that though the mold halves can possess component parts, the 'mold comprises two parts' language should be interpreted as 'referring to the two mating halves of the mold as wholes, and not to their individual components.'"  

"comprising" — "including but not limited to."  

"comprising" — "including, but not limited to."  

"a multiple-ply material comprising: a first layer ...; a second layer ...; a third layer ..." — "We therefore concur with the district court's construction that the claims are not limited to three layers and can include an additional layer or layers."  

"concave" — "hollowed or rounded inward like the inside of a bowl."  

"conductive elastomeric seal" — "a seal consisting of a rubberlike silicone (or plastic) material which is conductive."  

"a conductive member leading to said electrical plane" — "any electrically conductive part or component--whether or not part of the fuel injection system--that forms at least part of the electrically conductive path that leads directly or indirectly to the electrical plane, which is any electrically conductive mass that can be maintained at a common electrical potential, including, without limitation, the body of an automotive vehicle."  

"discharge conduit" — "discharge passageway or channel."  

"configurable" — "flexible enough to be formed or arranged."  

"configured to fit" — "designed to fit."  
"front end configured to operate the retraction mechanism" — "the portion of the plunger closer to the injection end of the syringe that operates the retraction mechanism." Retractable Technologies v. New Medical Technologies, 2004 U.S. Dist. LEXIS 3855 (E.D. Tex., Mar. 1, 2004).805

"confined space" — "Sevenson contends that the district court erroneously construed 'confined space' as only confining the reaction product of calcium oxide and sludge. Sevenson argues that the claims themselves, the written description, and the prosecution history establish that the 'confined space' must confine steam. ... We agree." Manchak, Jr. v. Chemical Waste Management, Inc., et al., 1999 U.S. App. LEXIS 32001 (Fed. Cir., Dec. 6, 1999) (unpublished).807

"surface of said hollow plug being conformable" — "requires pre-formed pleats which render the plug 'extremely pliable, allowing localized portions of the hollow plug to adapt to irregularities in the tissue or muscle wall defect.'" C.R. Bard, Inc., et al. v. United States Surgical Corp., 102 F. Supp. 2d 199 (D. Del. 2000).808 "[W]e affirm the district court's claim construction requiring 'pre-formed pleats.'" Id., 388 F.3d 858 (Fed. Cir. 2004).809

"conformable part" — "a material that can be reconfigured into a plurality of different shapes and maintains itself in the plurality of different shapes independent of the article to which it is attached." Se-Kure Controls, Inc. v. Hinnom Productions, Inc., et al., 2002 U.S. Dist. LEXIS 4048 (N.D. Ill., Mar. 12, 2002).810

"connectable" — "capable of being connected together; it does not require that the hanging means be removable." Bed-Check Corp. v. Ultimate Safety, Inc., 2003 U.S. Dist. LEXIS 27845 (N.D. Okla., Nov. 24, 2003).813

"a body connectable to the underwater cable" — "a body attached externally to the underwater cable." *WesternGeco LLC v. ION Geophysical Corp.*, 2010 U.S. Dist. LEXIS 71875 (S.D. Tex., Jul. 16, 2010). 819

"connecting" — "the district court was correct in interpreting 'connecting' as used in this patent to include only direct, rigid, pivotal connections." *Searfoss v. Pioneer Consolidated Corp.*, 374 F.3d 1142 (Fed. Cir. 2004). 820

"connection segment" — "members of the face guard made of wire or other material that engage the connector on the helmet." *Riddell, Inc. v. Schutt Sports, Inc.*, 2009 U.S. Dist. LEXIS 58961 (W.D. Wis., Jul. 10, 2009) 821

"connector" — "a structure that electrically links the electrode terminal to the high frequency power supply." *Arthrocare Corp. v. Smith & Nephew, Inc.*, 2003 U.S. Dist. LEXIS 5976 (D. Del., Apr. 9, 2003). 823

"a first connector ... being removable and interchangeable ... defining a parallel flow configuration" — "a one-piece or multi-piece structure that can: (a) physically, releasably, and fluidly couple a pair of fluid ports on the first fluid treatment module to a corresponding pair of fluid ports on the second fluid treatment module, (b) be installed in the same connection location as the second connector without changing the spatial relationship of the fluid ports on the first head relative to the fluid ports on the second head, and (c) by itself (notwithstanding any plugs necessary to close the system) physically and fluidly connect the first and second fluid treatment modules such that the stream of fluid entering the system is split into two distinct streams with one of the streams passing through only one of the fluid treatment modules, the other stream passing through only the other fluid treatment module, and the two streams recombining into one output stream after exiting the treatment modules." *Everpure, LLC v. Selecto, Inc.*, 2010 U.S. Dist. LEXIS 61072 (C.D. Cal., Jun. 3, 2010). 824

"a second connector ... being removable and interchangeable ... defining a series flow configuration" — "a one-piece or multi-piece structure that can: (a) physically, releasably, and fluidly couple a pair of fluid ports on the first fluid treatment module to a corresponding pair of fluid ports on the second fluid treatment module or plug one or more of these ports, (b) be installed in the same connection location as the first connector without changing the spatial relationship of the fluid ports on the first head relative to the fluid ports on the second head, and (c) by itself (notwithstanding any plugs necessary to close the system) physically and fluidly connect the first and second fluid treatment modules such that the stream of fluid entering the system passes first through one of the fluid treatment modules and upon exiting this treatment module the stream passes through the other fluid treatment module." *Everpure, LLC v. Selecto, Inc.*, 2010 U.S. Dist. LEXIS 61072 (C.D. Cal., Jun. 3, 2010). 825

"consisting essentially of" — "having only the following material elements, but may also include additional nonmaterial items." *Callicrate v. New Age Industrial Corp., Inc.*, 2005 U.S. Dist. LEXIS 8934 (D. Kan., Apr. 27, 2005). 826
"consists of a mixture containing a major portion of silica together with a minor portion of titanium dioxide" — "does not require that the ingredients of the mixture be limited only to those ingredients listed in the claim." *ITP, Inc., et al. v. BP Corp. North America, Inc.*, 2005 U.S. Dist. LEXIS 39078 (S.D. Tex., May 2, 2005). 827

"in constant fluid communication with substantially the entire contained chlorine supply"; "in continuous communication with substantially the entire amount of chlorine supply" — "allowing liquid or gas access at all times to substantially the entire contained chlorine supply." *Cecil's On-Site Products, Inc. v. Chaffin*, 2009 U.S. Dist. LEXIS 10095 (S.D. Tex., Feb. 11, 2009). 828

"contact" — "The district court properly construed the term, according to its ordinary meaning, to mean 'touching.' Whether so-called 'indirect contact' could give rise to infringement is an issue of equivalency." *TurboCare Division of Demag Delaval TurboMachinery Corp. v. General Electric Co.*, 264 F.3d 1111 (Fed. Cir. 2001). 831

"does not contact" — "should be construed ... according to its plain meaning without the additional temperature and thermal contraction and expansion limitations." *LG Display Co., Ltd. v. AU Optronics Corp., et al.*, 2010 U.S. Dist. LEXIS 12969 (D. Del., Feb. 16, 2010). 833

"contact surfaces" — "a surface on a locking element that comes into contact with a corresponding surface on an opposing locking element that prevents a significantly large separation." *Alloc, Inc. v. Unilin Decor N.V., et al.*, 2007 U.S. Dist. LEXIS 16743 (E.D. Wis., Mar. 6, 2007). 834

"contain" — "to have within." *Ecolab Inc. v. Paraclipse, Inc.*, 285 F.3d 1362 (Fed. Cir. 2002). 837

"an ion conductive electrolyte contained within an electrolyte chamber formed in said third frame member" — "the ion conductive electrolyte is within the fixed limits of an electrolyte chamber formed in the third frame member and not beyond." *Dicon Global Inc. v. Senco Sensors, Inc., et al.*, 2004 U.S. Dist. LEXIS 23758 (N.D. Ill., Nov. 18, 2004). 838
"beverage container capture system ..."; "container holder ..." — "the court concludes that the terms are not subject to § 112, P 6." Crane Co., et al. v. Sandenvendo America, Inc., et al., 2009 U.S. Dist. LEXIS 47509 (E.D. Tex., Jun. 5, 2009). 839

"contiguous" — "the district court's claim construction was unduly restrictive. There are several possible structures that permit the transparent member to be contiguous to the chip and the mask to be contiguous to the transparent member even though the mask is not located on top of the transparent member." Honeywell Inc. v. Victor Co. of Japan, Ltd., 298 F.3d 1317 (Fed. Cir. 2002). 840

"continuous air flow generator" — "a mechanism that is used to supply and maintain a user-selected air pressure in the air chamber, thus compensating for leaks in the system and for repeated inhalation and exhalation of the user. Together with the pressure compensation feedback system, the continuous air flow generator provides dynamic adjustments in order to maintain such a user-selected air pressure." Advanced Respiratory, Inc. v. Electromed, Inc., 2003 U.S. Dist. LEXIS 823 (D. Minn., Jan. 10, 2003). 842

"said array of light emitting diodes focused/configured to form a contiguous beam" — "the array of light emitting diodes is arranged to project what appears to be a single, unbroken beam of light." totes Isotoner Corp. v. Panther Vision, LLC, 2010 U.S. Dist. LEXIS 14 (N.D. Ill., Jan. 4, 2010). 843

"continuous retainer member surrounding the inner head" — "a non-retractable part of the retraction mechanism that encircles the inner head of the needle holder and uses some clamping or frictional force to keep the needle in the projecting position until released." Retractable Technologies, Inc., et al. v. Becton Dickinson & Co., 2009 U.S. Dist. LEXIS 73301 (E.D. Tex., Jan. 20, 2009). 844

"continuous slice" — "The accepted meaning of 'continuous' is: 'marked by uninterrupted extension in space, time, or sequence.' ... The specification does not preclude any creases in a 'continuous slice.' Accordingly, this court reverses the district court's construction of the term 'continuous.'" Schreiber Foods, Inc. v. Beatrice Cheese, Inc., et al., 31 Fed. Appx. 727 (Fed. Cir., Feb. 27, 2002) (unpublished). 845

"continuous webbing structure" — "a thin, substantially continuous film or 'web' which may have a large volume of pores or voids, and which has the purpose to create a self-supporting structure for the primary materials, and which is convertible into fibers." KX Industries, L.P., et al. v. Culligan Water Technologies, Inc., et al., 90 F. Supp. 2d 461 (D. Del. 1999). 846

"a control for activating said global positioning system for transmitting the position of said cellphone to the remotely located telephone or the Internet" — "a button or switch for activating said global positioning system for transmitting the position of said cellphone to the remotely located telephone or the Internet." Minerva Industries, Inc. v. Motorola, Inc. et al., 2010 U.S. Dist. LEXIS 9329 (E.D. Tex., Feb. 3, 2010).849

"control structure" — "the Court does not construe the claim term 'control structure' as a means-plus-function limitation ... the Court finds that term 'control structure' in the '946 patent means 'control structure including a single lever at one end of the mechanism, a travel bar, and two connecting links' ... the Court finds that 'control structure' in the '685 patent means 'the control structure including a hinge pin, a spring, and a travel bar.'" World Wide Stationery Manufacturing Co., Ltd. v. U.S. Ring Binder; L.P., 2009 U.S. Dist. LEXIS 27873 (E.D. Mo., Mar. 31, 2009).850 "'[C]ontrol structure' in the '946 patent means 'control structure including a travel bar, hinge plates, and a spring.' ... 'control structure' in the '685 patent means 'the control structure including a hinge pin, a spring, and a travel bar.'" Id., 2009 U.S. Dist. LEXIS 83999 (E.D. Mo., Sep. 14, 2009).851

"control volume" — "a volume of gas or liquid used in regulating and guiding the fluid flow control system." Baxter Healthcare Corp. v. Fresenius Medical Care Holdings, Inc., et al., 2009 U.S. Dist. LEXIS 14842 (N.D. Cal., Feb. 10, 2009).852

"controlling the operation of said heater in response to information received from said tag" — "the Court rejects defendants' proposed construction of this term and concludes that no further construction of the term is warranted." Thermal Solutions, Inc. v. Imura International U.S.A., Inc., et al., 2009 U.S. Dist. LEXIS 90513 (D. Kan., Sep. 29, 2009).855

"said arms and said first and second magnetic members cooperating to stably support said auxiliary spectacle frame on said primary spectacle frame" — "said arms and said first and second magnetic members working together to maintain in position said auxiliary spectacle frame on said primary spectacle frame by resisting sudden change of position." Aspex Eyewear, Inc., et al. v. Miracle Optics, Inc., 2003 U.S. Dist. LEXIS 26355 (C.D. Cal., Feb. 14, 2003).857

"core member" — "a fairly rigid core member with an annular band or ring at its base that can fit into the band or ring of the outer housing." Hemphill v. McNeil-PPC, Inc., 25 Fed. Appx. 915 (Fed. Cir., Nov. 27, 2001) (unpublished).858

"correct combination" — "the proper ordered sequence of letters or numbers which must be entered to open the lock." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997).860
"compressed state"; "compressed position"; "decompressed state"; "decompressed position" — "a state (i.e. condition) of axial compression"; "a state (i.e. condition) of no axial compression." ICU Medical, Inc. v. Alaris Medical Systems, Inc., 2006 U.S. Dist. LEXIS 96077 (C.D. Cal., July 17, 2006).861

"compression locked" — "the ordinary meaning of 'compression locking’ is the locking of two elements through the application of pressure." Fastenetix, LLC v. Medtronic Sofamor Danek, Inc., et al., 2007 U.S. Dist. LEXIS 53665 (D.N.J., July 25, 2007).863

"compression mechanism" — "a mechanism that provides the same action as a spring; i.e., the mechanism itself is sufficiently compressible to easily allow users to adjust the placement of the curtain mount, and when compressed generates an outward force." Zipwall, LLC v. Fastcap, LLC, 482 F. Supp. 2d 141 (D. Mass. 2007).864

"compression member" — "we reject Medtronic's argument that the district court erred in not construing 'compression member' as a means-plus-function limitation." Depuy Spine, Inc., et al. v. Medtronic Sofamor Danek, Inc., et al., 469 F.3d 1005 (Fed. Cir. 2006).865

"compressive strength [of the formation]"; "failure of the formation" — "the confined (in situ) compressive strength"; "crush or indent any portion of (i.e. exceed the in situ compressive strength of) the particular subterranean formation." Reedhycalog UK, Ltd, et al. v. Baker Hughes Oilfield Operations, Inc., et al., 2007 U.S. Dist. LEXIS 76125 (E.D. Tex., Oct. 12, 2007).866

"a compressor" — "a compressor, either oil-free or oil-lubricated, capable of compressing and delivering air at least at 3000 p.s.i.g." Undersea Breathing Systems, Inc. v. Nitrox Technologies, Inc., 985 F. Supp. 752 (N.D. Ill. 1997).867

"comprised of" — "Correctly construed, 'comprised of' does not of itself exclude the possible presence of additional elements or steps." CIAS, Inc. v. Alliance Gaming Corp., et al., 504 F.3d 1356 (Fed. Cir. 2007).868

"comprising" — "raises a presumption that the list of elements is nonexclusive. ... [However,] the presumption raised by the term 'comprising' does not reach into each of the six steps to render every word and phrase therein open-ended." Dippin’ Dots, Inc., et al. v. Mosey, et al., 476 F.3d 1337 (Fed. Cir. 2007).869

"comprising"; "group of" — "the terms 'comprising' and 'group of' [are] 'presumptively open-ended' and thus ... the addition of elements not recited in the claim cannot defeat infringement." Gillette Co. v. Energizer Holdings, Inc., et al., 2005 U.S. Dist. LEXIS 34122 (D. Mass., Dec. 19, 2005).870

"comprising an elongated body including one or more longitudinal slots for slidably receiving one or more longitudinal pusher bars comprising a firing mechanism of said surgical stapler" — "indicate[s] that the pusher bars are outside the staple cartridge. When elements are specifically described in a claim as separate and distinct, it would be inconsistent to assume that the author intended the one to be included in the other." Ethicon Endo-Surgery v. United States Surgical Corp., 900 F. Supp. 172 (S.D. Ohio, Aug. 30, 1995).871
"comprising the step[s] of" — "one could envision a situation where the surgeon may sever the edges of the expended layer in order to facilitate the removal process. Therefore, the court interprets this claim as not requiring steps (e) and (f) to be performed in the stated order." Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006).

"comprising the steps of" — "does not convert the elements of this method claim into steps-for-function. Thus, the steps of the method (seating, suspending, and driving) are construed the same as any other claim element." Robinson v. Advanced Decoy Research, Inc., et al., 519 F. Supp. 2d 1087 (S.D. Cal. 2007).

"a method ... comprising the steps" — "Claim 1 of the 779 Patent recites a method requiring that step (c) be performed after steps (a) and (b), that steps (d) and (e) be performed after step (b), that step (f) be performed after step (c), and that step (g) be performed after step (e). Claim 1 of the 615 Patent recites a method requiring that step (d) be performed after steps (a), (b) and (c), that step (e) be performed after step (d), and that steps (f) and (g) be performed after step (e)." Taltech Ltd. v. Esquel Enterprises Ltd., 410 F. Supp. 2d 977 (W.D. Wash. 2006).

"apparatus for control of a dangerous prisoner to prevent unpredictable dangerous actions by said dangerous prisoner while in social context situations while nevertheless concealing such apparatus from public view, comprising: ... said mounting means being adapted for concealment beneath garments ordinarily worn by ordinary persons in said social context to prevent said prisoner from being marked by observers in said social context as a person under restraint"; "nonobvious prisoner control apparatus for operation by a controlling authority located remotely from a prisoner, while said prisoner is in clothing both appropriate to a public situation, and permitting normal functions of movement by said prisoner comprising: ... means concealable beneath said appropriate clothing of said prisoner to be controlled" — "The district court correctly determined that these claims require only that an ordinary observer would not identify the apparatus as a prisoner control device when worn under ordinary clothing." R.A.C.C. Industries, Inc., et al. v. Stun-Tech, Inc., 1998 U.S. App. LEXIS 30769 (Fed. Cir., Dec. 2, 1998) (unpublished).

"concurrently" — "The use of 'concurrently' in the preamble cannot be read as meaning that all steps in the process occur at the same time or in no particular order." United States Gypsum Co., et al. v. LaFarge North America, Inc., et al., 508 F. Supp. 2d 601 (N.D. Ill. 2007).

"a condensate trough, defined by the base" — "a receptacle for collecting condensate. To be defined by the base, the base must create or form the outline of the shape of the condensate trough." Rival Co. v. Sunbeam Corp., et al., 987 F. Supp. 1167 (W.D. Mo. 1997).

"conductive liquid-like medium" — "a medium sufficiently conductive to perform its function as a variable capacitor plate." Ekchian v. Home Depot, Inc., et al., 104 F.3d 1299 (Fed. Cir. 1997).

"conduit" — "a channel through which the contaminant vapors are conveyed; the conduit may be a pipe in the shaft or the shaft itself." Knopik v. Amoco Corp., et al., 96 F. Supp. 2d 892 (D. Minn. 2000).

"conduit" — "a connecting passage which connects the area containing the tube (first interior channel) with the area containing the electrical components (second interior channel) and allows the wiring to pass from the first channel to the second channel." Lampi Corp. v. American Power Products, Inc., 1997 U.S. Dist. LEXIS 9942 (N.D. Ill., Jul. 7, 1997).

"cone", "cone region" — "radially innermost region, defined by the blades of the bit, located radially between the nose and the center longitudinal axis of the bit, labeled 230 in Fig. 10 of the '249 and '715 Patents." Reedhycalog UK, Ltd, et al. v. Baker Hughes Oilfield Operations, Inc., et al., 2007 U.S. Dist. LEXIS 76125 (E.D. Tex., Oct. 12, 2007).

"cone"; "smooth conical tapered tip" — "both ... mean a shape with a circular base tapering to a point as in either a centered (right circular) cone or an off-center (oblique circular) cone." Mahurkar, et al. v. Arrow International, Inc., 160 F. Supp. 2d 927 (N.D. Ill. 2001).

"an analyte sensor configured and arranged to determine the concentration of the analyte from 500 nL or less of body fluid" — "a device designed to measure the concentration of an analyte given a sample of 500 nL or less of body fluid." Therasense, Inc. v. Becton, Dickinson and Co., 2006 U.S. Dist. LEXIS 66437 (N.D. Cal., Aug. 31, 2006).

"configured for being manipulated into an erected position for containing a product placed therein during shipment and for subsequently being manipulated into a collapsed position for reducing the size of the container for return" — "having a structure, design, arrangement, or shape that can be manipulated into an erected position for containing a product placed therein during shipment and for subsequently being manipulated into a collapsed position for reducing the size of the container so the container can be sent back while in the collapsed position." Bradford Co. v. Afco Manufacturing, et al., 2006 U.S. Dist. LEXIS 88547 (S.D. Ohio, Dec. 5, 2006).

"configured for being moveable between an erected position for containing a product placed in the container and a collapsed position for reducing the size of the container for return" — "having a structure, design, arrangement, or shape that can be moved between an erected position for containing a product placed in the container and a collapsed position for reducing the size of the container so the container can be sent back while in the collapsed position." Bradford Co. v. Afco Manufacturing, et al., 2006 U.S. Dist. LEXIS 88547 (S.D. Ohio, Dec. 5, 2006).

"an outer surface configured for receiving and supporting the dental prosthesis" — "the phrase 'configured for' has not been treated as a means-plus-function element by the Federal Circuit. For example, in National Presto Industries, Inc. v. The West Bend Company, 76 F.3d 1185, 1189 (Fed. Cir. 1996), the Court did not treat the phrase 'retention chamber which is configured for reception within the retention compartment' as a means-plus-function element. In this case, the angulated portion is defined in terms of its structural features." Implant Innovations, Inc. v. Nobelpharma AB, 1998 U.S. Dist. LEXIS 15794 (N.D. Ill., Sept. 30, 1998).

"a bridge configured to connect two retaining mechanisms and hold them together" — "the middle part of the eyeglasses spanning the nose designed to connect the rims." Aspex Eyewear, Inc., et al. v. Altair Eyewear, Inc., 386 F. Supp. 2d 526 (S.D.N.Y. 2005).

"locking cap including a first portion configured to engage an interior surface of [a] head portion" — "requires a camming engagement between the first portion of the locking cap and the interior surface of the head portion." Pioneer Laboratories, Inc., et al. v. Stryker Corp., et al., 395 F. Supp. 2d 612 (W.D. Mich. 2005).
"tang portions configured to nest between the sprocket teeth" — "the tangs are sized to be closely received such that they fit between the sprocket teeth." Blount Inc., et al. v. Trilink Saw Chain, LLC, et al., 2007 U.S. Dist. LEXIS 42617 (D. Or., June 8, 2007).

"the inner and outer spatial volumes are configured to provide a minimum prescribed absorbed dose"; "the inner and outer spatial volumes are configured to provide a minimum prescribed absorbed dose" — "no construction necessary." Xaft, Inc. v. Cytyc Corp., et al., 2007 U.S. Dist. LEXIS 34468 (N.D. Cal., April 27, 2007).

"conforming generally to the shape of said food item" — "generally enveloping the food item to take the shape of the food item's exterior, conforming to almost the entire surface of the food item." General Mills, Inc. v. Hunt-Wesson, Inc., 103 F.3d 978 (Fed. Cir. 1997).

"flexible wrapping material [which] conforms generally [to the shape of the food item]" — "At a minimum, these limitations require that the shape of the putative 'wrapping material' be dictated by the shape of the item." General Mills v. Hunt-Wesson, Inc., 917 F. Supp. 663 (D. Minn. 1996).

"a movable member to which a stylus is connectable" — "mean[s] a rigid connection between the stylus and a movable member." Renishaw plc v. Marposs Societa’ per Azioni, et al., 974 F. Supp. 1056 (E.D. Mich. 1997).

"connected to" — "mean[s] that the lockout is directly and functionally connected to the longitudinal slots." Ethicon Endo-Surgery v. United States Surgical Corp., 900 F. Supp. 172 (S.D. Ohio, Aug. 30, 1995).

"connected to a source of water" — "the term 'connected to,' as used in Claims 1 and 7, does not require the source of the water to be proximate, or in direct contact with, the first inlet port. Instead, the water source can be located elsewhere, with the source and the inlet port being connected by an intermediate means of transmission." Sulfur-Tech Water Systems, Inc. v Kohlenberg, et al., 162 F. Supp. 2d 743 (N.D. Ohio 2001).

"connected to and aligned with the length of the gun barrel cleaning device" — "the cleaning section is coupled to the pull cord and extends longitudinally in alignment with the rest of the gun barrel cleaning device." Michaels of Oregon Co. v. Clean Gun, LLC, 2002 U.S. Dist. LEXIS 20371 (D. Or., Jul. 9, 2002).
"supporting members connected to and projecting from the hanger bar that slidably guide the retainer bar" — "It is clear from this language that Plaintiff's Patent describes a device wherein the pins or supporting members are affixed -- like blocks of wood with glue rather than links of chain -- to the hanger bar, as opposed to the retainer bar." Interstore Transfer Systems, Ltd. v. Hanger Management Inc., et al., 1996 U.S. Dist. LEXIS 16801 (N.D. Ill., Nov. 7, 1996). "[T]his Court, as a matter of law, construes the patented claim that the supporting members are connected to and project from the hanger bar to mean that the supporting members must be affixed to the hanger bar." Id., 1997 U.S. Dist. LEXIS 1497 (N.D. Ill., Feb. 7, 1997). 903

"connected to form a generally cylindrical drum shell" — "'connected' ... means linked together with the use of pins embedded in the rings." Lovelett v. Peavey Electronics Corp., et al., 1996 U.S. Dist. LEXIS 15210 (S.D.N.Y., Oct. 15, 1996). 904

"connecting a detachable tip to the handpiece ... the tip comprising an irrigation tube ... and a suction tube for aspirating irrigation fluid from the irrigation site ... aspirating spent irrigation fluid from the irrigation site through the suction tube of the tip and directing the aspirated irrigation fluid along a path that is disposed exteriorly of the handpiece ..." — "must be read in a manner consistent with the language in claims 9 and 30 and [] a person of ordinary skill in the art would conclude that the language of claim 10 requires that the tip include a bypass path." C.R. Bard, et al. v. Stryker Corp., 2006 U.S. Dist. LEXIS 16659 (D.R.I., April 4, 2006). 905

"connecting a plurality of intraluminal grafts" — "To 'connect' means to join or fasten together. ... A 'plurality' means at least two. ... 'Intraluminal' means within the inner open space of a tubular organ such as a blood vessel or other body passageway. ... A 'graft' is a structure that is 'implanted ... surgically ... to compensate for a defect' in a body organ or tissue. ... Therefore, an 'intraluminal graft' is a structure designed for use within the lumen of a body passageway to compensate for a defect in said passageway. ... each such 'graft' must be functional, as would be expected in a method claim" Cordis Corp., et al. v. Advanced Cardiovascular Systems, Inc., et al., 1998 U.S. Dist. LEXIS 11342 (D. Del., Jul. 17, 1998). "The court continues to hold that each such 'graft' must be functional; i.e., once it has 'expanded and deformed,' it must be capable of 'serving to prevent a body passageway from collapsing.'" Id., 1999 U.S. Dist. LEXIS 387 (D. Del., Jan. 15, 1999).

"connecting device" — "a device, such as a rivet, screw, or resilient tabs, that connects the balance shoe to the U-shaped channel of the inverted window balance." Amesbury Group, Inc., et al. v. Caldwell Manufacturing Co., 2006 U.S. Dist. LEXIS 2175 (D. Mass., Jan. 20, 2006). 908

"connecting elements"; "interconnected"; "connecting members"; "struts for connecting" — "The district court erred in construing the claim terms 'connecting elements,' 'interconnected,' 'connecting members,' and 'struts for connecting' as requiring connecting members to run parallel both to each other and to the longitudinal axis of the stent." Advanced Cardiovascular Systems, Inc., et al. v. SciMed Life Systems, Inc., et al., 261 F.3d 1329 (Fed. Cir. 2001).

"a connecting loop at the free end of said elongate member" — "will not be construed with the limitation Defendants suggest." Robinson v. Advanced Decoy Research, Inc., et al., 519 F. Supp. 2d 1087 (S.D. Cal. 2007). 912

"connecting said adjacent panels at a first pivot axis, and at least one center hinge assembly connecting said adjacent panels at a second pivot axis offset from said first pivot axis" — "will be accorded its ordinary and customary meaning to one skilled in the art and the proposed limitation on the language will not be added." Wayne-Dalton Corp. v. Amarr Co., 2007 U.S. Dist. LEXIS 65382 (N.D. Ohio, Sept. 5, 2007). 913

"connecting segment" — "a segment of the guidewire that is attached at one of its ends to the core wire and is attached at its other end to the distal tip. The connecting segment is capable of being operated on to detach the distal tip from the remainder of the guidewire." Regents of the University of California v. Micro Therapeutics, Inc., et al., 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007). 914

"connecting the outer ends of said spokes to said rim" — "Because Claim 6(c) can be construed to contain an act, it is not a step-plus function claim subject to the requirements of § 112, paragraph 6." Hayes Lemmerz International, Inc. v. Kuhl Wheels, LLC, et al., 2007 U.S. Dist. LEXIS 30298 (S.D. Mich., April 25, 2007). 915

"connector" — "This Court sees no need as part of the threshold Markman procedure to provide a construction other than the normal reading of the term 'connector.'" Zip Dee, Inc. v. Dometic Corp., 63 F. Supp. 2d 868 (N.D. Ill. 1998). 917

"connector assembly" — "any device which can be used to connect two elements together." Pandora Jewelry, LLC v. Chamilia, LLC, 2007 U.S. Dist. LEXIS 74092 (D. Md., Sept. 27, 2007). 919

"a connector assembly for connecting each pair of adjacent support members" — "is not in means-plus-function form." Lighting World, Inc. v. Birchwood Lighting, Inc., 382 F.3d 1354 (Fed. Cir. 2004). 920
"said biopsy actuator comprising a second connector means for releasably and fixedly engaging the first connector means" — "the Court first concludes that 'second connector means' recites sufficient structure to perform the stated functions, thereby rebutting the means-plus-function presumption." Baran v. Medical Device Technologies, Inc., et al., 519 F. Supp. 2d 698 (N.D. Ohio 2007).921 "We also agree with the district court that the terms 'releasably' and 'detachable' have the same meaning in the '798 patent." Id., 2010 U.S. App. LEXIS 16678 (Fed. Cir., Aug. 12, 2010).922

"said proximal end having a first connector means secured thereto" — "said proximal end having a first connector, which is anything that can connect and be released without loss or damage, secured thereto." Baran v. Medical Device Technologies, Inc., et al., 519 F. Supp. 2d 698 (N.D. Ohio 2007).923

"connects" — "means that the base part and the vertical portion join or associate together." Gardendance, Inc. v. Woodstock Copperworks, Ltd., et al., 392 F. Supp. 2d 717 (M.D.N.C. 2005).924

"considerable fuel saving" — "does not reasonably apprise those skilled in the art as to the scope of Semmler's claim, nor is it as precise as the subject matter permits. Semmler could have measured the fuel savings obtained by his device and expressed the limitation in terms of a percentage or range of percentages. The Court finds that this limitation of the Semmler patent does not satisfy the definiteness requirement of 35 U.S.C. § 112." Semmler v. American Honda Motor Co., Inc., et al., 990 F. Supp. 967 (S.D. Ohio 1997).925

"consisting essentially of" — "exclud[es] any element, if added to the device would constitute more than 10 percent club head weight, because such an element would materially alter the novel property of the invention." Momentus Golf, Inc. v. Swingrite Golf Corp., et al., 312 F. Supp. 2d 1134 (S.D. Iowa 2004).926

"console" — "The prosecution history indicates that the term 'console' is not met by a sofa section having a seat back that folds down to serve as a table top." Gentry Gallery, Inc. v. Berkline Corp., 134 F.3d 1473 (Fed. Cir. 1998).927

"the heater is constructed and arranged to add heat to the fluid while the fluid is disposed within the tank" — "the heater warms the cleaning fluid while the cleaning fluid is in the tank." ChemFree Corp. v. J. Walter, Inc., et al., 2007 U.S. Dist. LEXIS 51677 (N.D. Ga., July 17, 2007).928

"consumer service station beverage tapping mechanism" — "a mechanism located in the customer service station through which refrigerated source liquids are dispensed." Foodie Partners v. Jamba Juice Co., 2007 U.S. Dist. LEXIS 80345 (E.D. Tex., Oct. 30, 2007).929

"said wall means including an expandable cover in contact with the layer of skin and subcutaneous tissue when the device is implanted" — "a portion of the wall means that can be increased in size which would face the layer of skin and subcutaneous tissue when implanted." Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006).930

"contacting" — "the coming together or touching of two objects or surfaces."  Becton, Dickinson and Co. v. Inverness Medical Technology, Inc., 176 F. Supp. 2d 258 (D. Del. 2001).932

"a contactor" — "To form 'a contactor,' the spring and contact arm(s) are not required to be connected." Invisible Fence, Inc. v. Perimeter Technologies, Inc., 2006 U.S. Dist. LEXIS 33792 (N.D. Ind., May 25, 2006).933

"to contain a combustible liquid" — "the Court finds that the 'liquid' referenced in claim 7 is itself part of the claimed invention and is, therefore, a required limitation of the claim."  Produits Berger S.A., et al. v. Schemenauer, et al., 2007 U.S. Dist. LEXIS 10294 (E.D. Tex., Feb. 14, 2007).934

"container"; "canister" — "because the patentee used language that did not limit the term 'container' to a specific 'unitary structure,' a container ... shall include any suitable design that allows dispensing of countable oral solid drugs."  AutoMed Technologies, Inc. v. Microfil, LLC, et al., 2005 U.S. Dist. LEXIS 26032 (N.D. Ill., Oct. 26, 2005).935 "We accordingly affirm the district court's construction of these terms."  Id., 2007 U.S. App. LEXIS 16956 (Fed. Cir., July 16, 2007) (unpublished).936

"contains" — "describes a product in which the FM transmitter and the power supply/charging assembly are 'enclosed,' 'bound,' or 'kept within' the same housing unit."  Netalog, Inc. v. Griffin Technology, Inc., 2006 U.S. Dist. LEXIS 39089 (M.D.N.C., June 12, 2006).938

"contaminated underground area" — "the plain language of the claim leads to the Court to conclude that the underground areas are not limited to soil, and that such areas must be contaminated."  Knopik v. Amoco Corp., et al., 96 F. Supp. 2d 892 (D. Minn. 2000).939

"said visor being adjustably rotated into contiguous relation with said sheet rear surface" — "means that the vehicle visor is rotated so that it contacts the rear surface of the sunshade. When in operation, the visor is 'contiguous' in that it lies flat against the rear surface of the sunshade, touching the sunshade."  Huang, et al. v. Autoshade, et al., 950 F. Supp. 1016 (C.D. Cal. 1997).940

"contoured" — "a surface shaped to fit the outline or form of something." *Old Town Canoe Co. v. Glenwa, Inc.*, 229 F. Supp. 2d 1151 (D. Or. 2001).\(^947\)

"contoured to complement" — "shaped to guide engagement of the tension member with the sheave." *Schindler Elevator Corp. v. Otis Elevator Co.*, 2010 U.S. Dist. LEXIS 2463 (D.N.J., Jan. 13, 2010).\(^948\)

"control apparatus" — "The phrase 'control apparatus' in the preamble merely gives a descriptive name to the set of limitations in the body of the claim that completely set forth the invention. Its use does not limit the claims, as Haas contends, to a control apparatus that is separate from the machine tool." *IMS Technology, Inc. v. Haas Automation, Inc., et al.*, 206 F.3d 1422 (Fed. Cir. 2000).\(^949\)

"control button" — "a structure that activates a beam emitting device." *Innovention Toys, LLC v. MGA Entertainment, Inc., et al.*, 2009 U.S. Dist. LEXIS 48386 (E.D. La., May 21, 2009).\(^950\)

"control head" — "a control panel that is located within the vehicle and is accessible to the vehicle operator, and that provides a means for remotely operating the video recorder." *P.A.T., Co., et al. v. Ultrak, Inc.*, 948 F. Supp. 1506 (D. Kan. 1996).\(^951\)

"speed control means including a control panel" — "The Court recognizes that the use of the word 'means' in this disputed claim element creates a presumption of means-plus-function format. However, the Court finds that the phrase 'control panel' discloses sufficient structure to overcome this presumption." *Precor Inc. v. Brunswick Corp., et al.*, 2001 U.S. Dist. LEXIS 26341 (W.D. Wash., Jul. 31, 2001).\(^953\)

"control mechanism for controlling the operation of said valve and the movement of said frame over the turn to be treated such that ..." — "there is no means-plus-function language invoked by this clause." *Toro Co. v. John Deere & Co.*, 143 F. Supp. 2d 1122 (D. Minn. 2001).\(^954\)

"fluid circulation control unit"; "controlling fluid flow between" — "Fox has failed to overcome the presumption that § 112, P 6 does not apply." *SRAM Corp. v. Fox Factory, Inc.*, 2005 U.S. Dist. LEXIS 29164 (N.D. Ill., Nov. 18, 2005).\(^955\)

"controlled" — "we decline to restrict the claimed function of 'controlled' to either static or dynamic control." *Generation II Orthotics Inc., et al. v. Medical Technology Inc.*, 263 F.3d 1356 (Fed. Cir. 2001).\(^956\)
[i] "controlled dose"; [ii] "to reduce or prevent necrosis in healthy tissue proximate to the expandable surface"; [iii] "providing a controlled dose at the outer spatial volume expandable surface to reduce or prevent necrosis in healthy tissue" — [i] "no separate construction necessary"; [ii] "no separate construction necessary"; [iii] "controlling the ratio of the dose at the expandable surface of the outer spatial volume to the prescribed dose at the depth of interest in the target issue so that the dose at the expandable surface is not so high that it lethally damages cells in healthy tissue in contact with the expandable surface." Xoft, Inc. v. Cytec Corp., et al., 2007 U.S. Dist. LEXIS 34468 (N.D. Cal., April 27, 2007).957

"controller" — "while the patentee did not modify the term controller with the word single, the specification indicates that a single control system regulates the entire process." AutoMed Technologies, Inc. v. Microfil, LLC, et al., 2005 U.S. Dist. LEXIS 26032 (N.D. Ill., Oct. 26, 2005).958 "[W]hile we affirm the district court's initial construction of 'controller' to mean a 'single control system that regulates the entire process,' we clarify that the controller need not be limited to a single device, nor to any particular hardware or software." Id., 2007 U.S. App. LEXIS 16956 (Fed. Cir., July 16, 2007) (unpublished).959

"controlling" — "is well understood as 'exercising restraining or directing influence over.' This meaning is unambiguous and clear from the claim." Applera Corp., MDS Inc., et al. v. Micromass UK Ltd., et al., 186 F. Supp. 2d 487 (D. Del. 2002).960

"controlling a parameter of the light beams" — "includes controlling the length of time that the beam of light remains in contact with the photoreceptor." Pitney Bowes, Inc. v. Hewlett-Packard Co., 141 F. Supp. 2d 288 (D. Conn. 2001).961

"controlling a pressure of the flow of breathing gas delivered to a patient based on a product of the expiratory gain and the fluid characteristic during at least a portion of an expiratory phase of such a patient's breathing cycle, so that a pressure of the flow of breathing gas delivered to the patient during at least a portion of the expiratory phase varies with fluctuations of the fluid characteristic" — "controlling the pressure of breathing gas delivered to a patient during at least part of the expiratory phase so that it fluctuates in relation to the patient's flow rate, by multiplying the constant expiratory gain value by the flow rate." Respironics, Inc., et al. v. Invacare Corp., 2006 U.S. Dist. LEXIS 62233 (W.D. Pa., Aug. 30, 2006).962

"controlling said supply of gas ... based on said fluid characteristic signal and said first gain" — "The supply of gas is controlled based on the flow rate signal and a constant value that is applied to either boost or reduce the delivered pressure." Respironics, Inc., et al. v. Invacare Corp., 2006 U.S. Dist. LEXIS 62233 (W.D. Pa., Aug. 30, 2006).963

"controlling the temperature of the substrate" — "no construction is necessary." ASM America, Inc. v. Genus, Inc., 2002 U.S. Dist. LEXIS 15348 (N.D. Cal., Aug. 15, 2002).965

"conveyor" — "refers to an operative device or structure which would ordinarily be considered a conveyor. A conveyor necessarily includes components such as belts, slider plates, and drives, in addition to a moving surface."  *Lantech, Inc. v. Keip Machine Co.*, 32 F.3d 542 (Fed. Cir. 1994). 98

"convex top surface" — "an upper surface that curves or bulges outward, as the exterior of a sphere."  *Nystrom v. Trex Co., Inc., et al.*, 424 F.3d 1136 (Fed. Cir. 2005). 971

"cooperating to provide a desired three dimensional and/or topographic structure" — "has a meaning that is readily understandable and no construction is necessary."  *Synovis Life Technologies, Inc. v. W.L. Gore & Associates, Inc.*, 2009 U.S. Dist. LEXIS 4870 (D. Minn., Jan. 23, 2009). 973

"hub legs collapsible by pivoting from coplanar spread configuration to non-coplanar configuration" — "the terms 'coplanar' and 'noncoplanar' refer to whether or not all of the hub legs lie in the same plane. In other words, all of the hub legs lie within the same plane, or are coplanar, when the lower frame assembly is in the spread configuration, and all of the hub legs do not lie within the same plane, or are non-coplanar, when in the collapsed position."  *Graco Children's Products, Inc. v. Regalo International LLC*, 2000 U.S. Dist. LEXIS 11133 (E.D. Pa., Aug. 8, 2000). 975

"coplanar with each tubular member" — "The specification nevertheless describes three embodiments which presumably fall within the scope of the disputed claim language: (1) the connector member is as thick as the tubular member and so is aligned with both its inner and outer walls; (2) the connector member is thinner than the tubular member and lies within (i.e., is aligned with neither) its inner and outer walls; and (3) the connector member is thinner than the tubular member and is aligned with its outer wall. The court agrees ... that the word 'coplanar' should be given the broader scope provided for in the specification."  *Cordis Corp., et al. v. Advanced Cardiovascular Systems, Inc., et al.*, 1999 U.S. Dist. LEXIS 387 (D. Del., Jan. 15, 1999). 976

"core" — "the singular component of the golf ball that occupies the geometric center of the sphere of the golf ball." Callaway Golf Co. v. Acushnet Co., 2007 U.S. Dist. LEXIS 85597 (D. Del., Nov. 20, 2007).978

"core"; "cover" — "The claim construction dispute centers around the classification of wrapped strands as either part of the 'core' or part of the 'cover' within the meaning of the claims of the patent. ... Taken as a whole, the intrinsic evidence requires a claim construction that would designate a strand wrapped around a central fiberglass strand as part of the cover and not the core of the yarn. While the claims and the specification do not state this explicitly, the patent when read as a whole can only lead to this construction of the claims." Kolmes, et al. v. World Elastic Corp., et al., 1998 U.S. App. LEXIS 9407 (Fed. Cir., May 6, 1998) (unpublished).980

"core pins forcing the plastic washing machine basket to shift relative to the mold core" — "is unambiguous, so that no further construction is required." Maytag Corp. v. Electrolux Home Products, Inc., 411 F. Supp. 2d 1008 (N.D. Iowa 2006).981

"core wire" — "the guidewire of the invention, except for the elongate distal tip." Regents of the University of California v. Micro Therapeutics, Inc., et al., 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007).982

"corners connecting said side edges of said sides which are adjacent one another with said sides furthermore capable of having their corners removed to increase the degree of flexing about said base toward said axis through said face member to increase the amount of flexibility" — "The word corners in Claim 15 refers to the meeting place of two lines or surfaces. They are capable of being removed to increase flexing. The corners can be removed but need not be removed. The corners are removable, but there is no requirement that the corners contain cut lines, score lines, or other physical features indicating that the corners are intended to be removed." Arlington Industries, Inc. v. Bridgeport Fittings, Inc., 345 F.3d 1318 (Fed. Cir. 2003).983

"corners of the first frame" — "the places at the rear surface of the first frame near the intersection of any two side edges of the first frame." LG Philips LCD Co., Ltd. v. Tatung Co., et al., 2007 U.S. Dist. LEXIS 43557 (D. Del., June 15, 2007).984

"corona means" — "is in means plus function form, and thus is subject to the requirements of 35 U.S.C. § 112, paragraph six." BBA Nonwovens Simpsonville, Inc., et al. v. Superior Nonwovens, LLC, et al., 303 F.3d 1332 (Fed. Cir. 2002).985

"corona treatment" — "the discharge of a high voltage field onto a surface to raise the surface energy of the surface treated." Avery Dennison Corp. v. Whitlam Label Co., Inc., 2003 U.S. Dist. LEXIS 27836 (N.D. Ohio, Sept. 24, 2003).986

"correlated set of iron-type golf clubs" — "a 'correlated set' comprises two or more clubs which contain the same design characteristics. While a single club can not constitute a correlated set, a short set, a set of wedges, or even a set comprised of a 1 and 2 iron may constitute a correlated set if all of clubs possess the same design characteristics and they are sold together as a set." Karsten Manufacturing Corp. v. Cleveland Golf Co., 1998 U.S. Dist. LEXIS 23148 (D. Ariz., Dec. 4, 1998).988 "The district court correctly defined the term 'correlated set' in the context of the specification and the evidence of customary usage." Id., 242 F.3d 1376 (Fed. Cir. 2001).989

"corresponding contact surfaces" — "more than one contact surface, but not necessarily all contact surfaces." Thomson Consumer Electronics, Inc. v. Innovatron, S.A., 43 F. Supp. 2d 26 (D.D.C. 1999).990

"corresponding to" — "requires no definition and is unambiguous and readily comprehensible." U.S. Ring Binder; LP v. Staples the Office Superstore LLC, et al., 2009 U.S. Dist. LEXIS 21783 (E.D. Mo., Mar. 18, 2009).991

"a second bowed section corresponding to said first bowed section" — "contemplate[s] the bowed shape portion of the membrane to maintain general agreement with the shape of the first bowed shaped section." Herman Miller, Inc. v. Teknion Corp., et al., 504 F. Supp. 2d 360 (N.D. Ill. 2007).992

"corrugated" — "formed into or having a series of either straight or rounded ridges and valleys." Habasit Belting Inc. v. Rexnord Industries, Inc., et al., 340 F. Supp. 2d 518 (D. Del. 2004).993

"counterbalance weight" — "a mass that provides significant dynamic balance by countering forces associated with the movement of a piston." Briggs & Stratton Corp. v. Kohler Co., 398 F. Supp. 2d 925 (W.D. Wis. 2005).994

"counterbalanced" — "mean[s] that the weights oppose or act against each other. The Court does not infer from this term that the weights ... must be equal or must balance on a fulcrum between the weights." Momentus Golf, Inc. v. Concept Sports, Inc., 2002 U.S. Dist. LEXIS 10901 (S.D. Iowa, Jun. 5, 2002).995

"a counterbore formed in each end of the roller and substantially concentric with the axial bore" — "a counterbore formed in each end of the roller and substantially concentric with the axial bore." Caputo v. Sealed Air Corp., 60 Fed. Appx. 822 (Fed. Cir., Apr. 8, 2003) (unpublished).996

"coupled" — "is not limited to a mechanical or physical coupling." Johnson Worldwide Associates, Inc. v. Zebco Corp., et al., 175 F.3d 985 (Fed. Cir. 1999).997

"coupled" — "connected without an intervening valve that may impede flow to the first condenser during normal operation." Desert Aire Corp. v. AAON, Inc., 461 F. Supp. 2d 369 (D. Md. 2006).998

"coupled to" — "should be construed broadly so as to allow an indirect attachment." Bradford Co. v. ConTeyor North America, Inc., et al., 2010 U.S. App. LEXIS 8869 (Fed. Cir., Apr. 29, 2010).

"a drive shaft coupled to"; "a drive shaft coupled at one end to a suction cup" — "a drive shaft linked with"; "a drive shaft with an end portion linked to a suction cup." National Products, Inc. v. Palmetto West Trading Co., LLC, 2006 U.S. Dist. LEXIS 28682 (W.D. Wash., May 4, 2006).

"electrocardiograph module coupled to a handheld module by a cable" — "electrocardiograph (ECG) module that is external to and attached to the handheld module by a cable." General Electric Co., et al. v. Sonosite, Inc., 2008 U.S. Dist. LEXIS 33223 (W.D. Wis., Jan. 8, 2008).

"a side cover is coupled to an outer side surface of said engine block" — "a cover that is removably attached to a generally exterior side surface of the engine block." American Honda Motor Co., Inc. v. Coast Distribution System, Inc., 609 F. Supp. 2d 1032 (N.D. Cal. 2009).

"coupled to said crown" — "attached to the crown, as distinct from the brim or the sweatband, of the headgear." totes Isotoner Corp. v. Panther Vision, LLC, 2010 U.S. Dist. LEXIS 14 (N.D. Ill., Jan. 4, 2010).

[i] "the handle coupled to the contraceptive device by an elongate body"; [ii] "a deployment shaft having a proximal end and a distal end releasably coupled to the contraceptive device" — [i] "the handle mechanically and/or electronically connected to the contraceptive device by the elongate body"; [ii] "a deployment shaft having a proximal end and a distal end that is mechanically and/or electronically configured to attach to and detach from the contraceptive device." Conceptus, Inc. v. Hologic, Inc., 2010 U.S. Dist. LEXIS 24247 (N.D. Cal., Mar. 16, 2010).

"wherein the wings are coupled to the first and second actuators" — "wherein the wings are linked to the first and second actuators." WesternGeco LLC v. ION Geophysical Corp., 2010 U.S. Dist. LEXIS 71875 (S.D. Tex., Jul. 16, 2010).

"coupled to the independent poles and rebounding mat" — "connected to the independent poles and to the rebounding mat, either directly or through a discrete coupling device that is not an element of the trampoline or enclosure." Jumpsport, Inc. v. Jumpking, Inc., et al., 2003 U.S. Dist. LEXIS 27261 (N.D. Cal., Jun. 2, 2003).

"a printer ... coupled to the money order dispenser" — "cover[s] a printer that is mechanically or physically connected to the dispenser, rather than merely electrically connected." Travelers Express Company, Inc. v. Transaction Tracking Technologies, Inc., 2005 U.S. Dist. LEXIS 46009 (D. Minn., May 2, 2005).

"coupling member" — "None of these definitions indicate that the term would call to mind for those skilled in the art a range of structures sufficient to escape a means-plus-function analysis. To hold otherwise, would be to include every conceivable device."  Bausch & Lomb Inc. v. Moria S.A., et al., 222 F. Supp. 2d 616 (E.D. Pa. 2002).  

"coupling in a common plane" — "describes the position of the panels in relation to each other after they are coupled."  Alloc, Inc. v. Unilin Decor N.V., et al., 2007 U.S. Dist. LEXIS 16743 (E.D. Wis., Mar. 6, 2007).  

"coupling" — "a connecting device that connects the implant to the pusher and that can be selectively operated by the user."  Boston Scientific Corp. v. Cordis Corp., 422 F. Supp. 2d 1102 (N.D. Cal. 2006).  

"coupling assembly" — "given that 'coupling assembly' is followed by a fairly lengthy description of the two parts which comprise it, this Court does not see at this point why any construction of the phrase is needed."  Fastenex, LLC v. Medtronic Sofamor Danek, Inc., et al., 2007 U.S. Dist. LEXIS 53665 (D.N.J., July 25, 2007).  

"detaching a coupling between said distal tip and said wire" — "detaching the distal tip from the wire."  Regents of the University of California v. Micro Therapeutics, Inc., et al., 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007).  

"a first and second coupling member, each associated with a respective one of said foot links for pivotally coupling said foot link to said pivot axis at a predetermined distance therefrom" — "a first and a second structural unit which couples, each associated with a foot link, that attaches its associated foot link to the pivot axis at a distance from the axis that is not necessarily unvarying while the machine is in use, but is determined beforehand."  Precor Inc., et al. v. Fitness Quest, Inc., et al., 2006 U.S. Dist. LEXIS 63244 (W.D. Wash., Aug. 23, 2006).  

"cover" — "includes the entire cover assembly and not only the air inlet lid."  The Toro Co. v. White Consolidated Industries, Inc., et al., 920 F. Supp. 1008 (D. Minn. 1996).  

"second removable cover for selectively covering said open top portion" — "a cap that either allows the user to cover the drinking hole, through a mechanism such as a closure member to an extent that the user may select, including fully open and fully closed, and which may allow the user to select a degree of opening somewhere between fully open and fully closed; or a cap that may be screwed onto the beverage container by the user and which covers some or all of the open top portion."  Sunbeam Products, Inc. v. Hamilton Beach Brands, Inc., et al., 2010 U.S. Dist. LEXIS 85281 (E.D. Va., Aug. 19, 2010).
"cover layer having a Shore D hardness" — "This limitation requires that Shore D hardness be measured 'on the ball.'" Callaway Golf Co. v. Acushnet Co., 2007 U.S. Dist. LEXIS 85597 (D. Del., Nov. 20, 2007). 1023 "The district court did not err in holding that the phrase 'cover layer having a Shore D hardness' refers to an on-the-ball hardness measurement." Id., 576 F.3d 1331 (Fed. Cir. 2009). 1024

"said cover means movable to alternatively close or expose one or both of said cavities" — "While the position of the cover means is described, its meaning truly lies in the function assigned to it. Thus, it must be considered a means-plus-function element under section 112, paragraph 6." Contempo Tobacco Products, Inc., et al. v. McKinnie, 1997 U.S. Dist. LEXIS 22576 (N.D. Ill., Apr. 8, 1997). 1025

"said cover member being removably integratable into said storage structure to improve the structural integrity of the storage structure" — "does not need construction." GSI Group, Inc. v. Sukup Manufacturing Co., 2006 U.S. Dist. LEXIS 70100 (C.D. Ill., Sept. 27, 2006). 1026

"cover plate partially enclosing said fin structures" — "a flat member positioned to partially enclose the fin structures." ICHL, LLC v. NEC Corp. of America, et al., 2010 U.S. Dist. LEXIS 38942 (E.D. Tex., Apr. 20, 2010). 1027

"said magnetic member is covered with a non-ferromagnetic material" — "the magnet is covered with a film layer of non-ferromagnetic material." Advanced Magnetic Closure, Inc. v. Rome Fastener Corp., et al., 2005 U.S. Dist. LEXIS 10016 (S.D.N.Y., May 11, 2005). 1028

"cable covering" — "a means to insulate and protect the cable that is exterior to the interior support and insulated conductors disposed in the open spaces of the interior support." Belden Technologies Inc., et al. v. Superior Essex Communications LP, et al., 2010 U.S. Dist. LEXIS 86833 (D. Del., Aug. 24, 2010). 1030

"covering a majority surface area of said tool body" — "means the actual, physical magnet (or assembly) takes up more than half of the exterior of the tool body. To put it another way, at least half of the outer surface area of the tool body contains the physical magnetic material itself rather than the undefined magnetic field created by the magnets." Rattler Tools, Inc. v. Bilco Tools, Inc., et al., 2007 U.S. Dist. LEXIS 49124 (E.D. La., July 6, 2007). 1031

"covering each food portion with an unbaked dough section of sufficient dimensions to cover said food portion thereby forming a separate closed pocket about each food portion" — "the 'forming' step is an affirmative step separate from 'covering,' and requires pinching dough areas to the dough base, including in between food portions. Merely draping the dough over the filling is insufficient to perform the claim." Angelo Mongiello's Children, LLC v. Pizza Hut, Inc., 70 F. Supp. 2d 196 (E.D.N.Y. 1999). 1032

"covers" — "the Court [] construes the term 'covers' to mean 'overlays' and declines to read the word 'completely' into the term." Great Dane Limited Partnership v. Stoughton Trailers, LLC, et al., 2009 U.S. Dist. LEXIS 119573 (M.D. Ga., Dec. 23, 2009). 1034

"crease" — "a line, a groove, or a ridge made by folding a pliable substance and not a hinge." *Craig v. Foldfast, Inc., et al.*, 487 F. Supp. 2d 1364 (S.D. Fla. 2007).1038

"crimp" — "a portion of the needle which is sufficiently small to allow the needle to move axially along the catheter but which is greater in width than the opening." *B. Braun Melsungen AG, et al. v. Terumo Medical Corporation, et al.*, 2010 U.S. Dist. LEXIS 54480 (D. Del., Jun. 3, 2010).1040

"cross brace member" — "a long thin device that: (1) is longer than it is wide; (2) is used as part of the structure that connects the table legs to the table top; (3) imparts strength to the table; (4) lies transverse to, and some distance across, the underside of the table top; and (5) cannot be the bracket and pin arrangement of the '576 Patent to Cobos." *Lifetime Products, Inc. v. Correll, Inc.*, 323 F. Supp. 2d 1129 (D. Utah 2004).1041

"a cross-cutting cylinder" — "a device for cutting paper that has a generally cylindrical overall shape and cuts materials into a number of small pieces both lengthwise and widthwise." *Fellowes, Inc. v. Michelin Prosperity Co., Ltd., et al.*, 2006 U.S. Dist. LEXIS 90648 (E.D. Va., Dec. 15, 2006).1042

"cross-laminated section" — "a section of the injection molded plastic product that contains both a first and a second plastic layer, where the first and second plastic layers have positively different flow records--meaning that the flow records of the two layers are definitely not alike." *Koito Manufacturing Co., Ltd, et al. v. Turn-Key-Tech, L.L.C., et al.*, 234 F. Supp. 2d 1139 (S.D. Cal. 2002).1043

"cross support structured for support of the person's leg" — "a support that supports the leg by contacting the foot, ankle or leg, but does not necessarily require contact with the leg." *Brike International, Ltd. v. Invacare Corp.*, 2007 U.S. Dist. LEXIS 44003 (D. Or., June 14, 2007).1044

"cup shaped" — "mean[s] a hollow structure that is 'generally round' or 'generally rectangular, star shaped or another preferred shape.'" *U.S. Can. Co., Inc. v. Limited Brands, Inc., et al.*, 2006 U.S. Dist. LEXIS 21010 (N.D. Ill., April 19, 2006).1046
"curved along the longitudinal axis" — "deviating from a straight line along the lengthwise dimension." Tyco Healthcare Group LP v. Ethicon Endo-Surgery, Inc., 411 F. Supp. 2d 93 (D. Conn. 2006). 1047 "[T]he Court withdraws its comments regarding whether the blade surface could curve 'side to side' as impermissible importing a limitation from the specification into the claim language. The language of the claim provides a curve 'along the longitudinal axis,' and the Court's construction - 'deviating from a straight line along the lengthwise dimension' - should not be read to limit that curvature to surfaces curving only up or down." Id., 440 F. Supp. 2d 120 (D. Conn. 2006). 1048

"curved blade surface" — "blade surface that has a deviation from a straight line." Tyco Healthcare Group LP v. Ethicon Endo-Surgery, Inc., 411 F. Supp. 2d 93 (D. Conn. 2006). 1049

"curved in a non-radial direction of the stent"; "curving in a non-radial direction of the stent" — "curved or curving such that the [arcuate U-shape or flexure member curved portion] does not extend substantially outside the outer surface or inside the inner surface of the tubular wall." Medtronic Vascular, Inc., et al. v. Abbott Cardiovascular Systems, Inc., et al., 2007 U.S. Dist. LEXIS 95430 (N.D. Cal., Dec. 21, 2007). 1050

"curved shank" — "has a bend or deviation from a straight line without sharp corners or sharp angles." Acumed LLC v. Stryker Corp., et al., 483 F.3d 800 (Fed. Cir. 2007). 1052

"said arm curves forwardly slightly towards said base unit as it proceeds upwardly away from said longitudinal axis of said handle" — "simply permit[s] the graspable arm to have a small curvature along its length in the direction of the base unit." Oreck Holdings, LLC, et al. v. Dyson, Inc., 434 F. Supp. 2d 385 (E.D. La. 2006). 1053

"buttons curving from the front of the top surface to the top of the front surface" — "The Court finds the claim language to be sufficiently clear and self-explanatory, especially considering the detailed drawings contained in the specification, so that no further definition is necessary." Goldtouch Technologies, Inc. v. Microsoft Corp., 2000 U.S. Dist. LEXIS 3370 (W.D. Tex., Jan. 14, 2000). 1054

"cushion" — "a structure that provides basic support and comfort." Hill-Rom Co., Inc. v. Kinetic Concepts, Inc., et al., 209 F.3d 1337 (Fed. Cir. 2000). 1055

"a second cushioning means defined in said body member to be located between said flanges" — "Infanti's definition of the function performed by the second cushioning means improperly reads in a function not recited by the disputed claims. Claims 1-4 call for merely a structure that performs a cushioning function." Gasser Chair Co., Inc., et al. v. Infanti Chair Manufacturing Corp., et al., 1998 U.S. App. LEXIS 6308 (Fed. Cir., Mar. 27, 1998) (unpublished). 1058
"customer service station" — "a station from which a customer can be served, and includes a cold pan, a drip pan, a breath guard, at least one refrigerated source liquid conduit line, and the refrigerated source liquid conduct line connecting said refrigerated source liquid and said consumer service station beverage tapping mechanism." Foodie Partners v. Jamba Juice Co., 2007 U.S. Dist. LEXIS 80345 (E.D. Tex., Oct. 30, 2007).1059

"cut-on filter" — "an optical filter that substantially blocks all wavelengths shorter than the cut-on wavelength and substantially transmits all wavelengths that are longer than the cut-on wavelength. The cut-on wavelength is that wavelength in the transition zone at which the transmission is 1%." Suntiger, Inc. v. Sunglass Products of California, 2006 U.S. Dist. LEXIS 1076 (C.D. Cal., Jan. 10, 2006).1060

"cutting disks" — "generally round or ring-shaped elements that are designed for cutting paper." Fellowes, Inc. v. Michilin Prosperity Co., Ltd., et al., 2006 U.S. Dist. LEXIS 90648 (E.D. Va., Dec. 15, 2006).1063

"cutting section" — "the structure(s) or part(s) of a structure in which cutting occurs, including the cutting means." Kothmann & Kothmann, Inc. v. Trinity Industries, Inc., 287 F. Supp. 2d 699 (S.D. Tex. 2002).1065

"cylinder" — "'a surface bounded by parallel planes and generated by a straight line moving parallel to the given planes and tracing a curve bounded by the planes and lying in a plane perpendicular or oblique to them.' There is nothing in the definition or the common understanding of the term which mandates the 'curve traced' must be perfectly circular." Robinson v. Cannondale Corp., et al., 2002 U.S. Dist. LEXIS 6797 (C.D. Cal., Jan. 29, 2002).1066

"cylindrical housing" — "a housing that is generally cylindrical in shape." MHL TEK, LLC v. Nissan Motor Co., et al., 2009 U.S. Dist. LEXIS 77578 (E.D. Tex., Aug. 28, 2009).1067

"an inner contour of said scroll plate means having a cylindrical configuration in a vicinity of an axial median plane of the fan and extending towards an inlet side of the fan" — "the inner contour of the fan housing must form a surface that is parallel to the axis of rotation of the fan at the mid-point between the inlet and outlet sides of the fan. Additionally, the cylindrical configuration must extend from the mid-point towards the inlet side of the fan." Papst Licensing GmbH and Co. KG v. Sunonwealth Electric Machine Industrial Co., Ltd., et al., 2004 U.S. Dist. LEXIS 4402 (N.D. Ill., Mar. 18, 2004).1068

"cylindrical element"; "cylindrically shaped element"; "cylindrical ring" — "a radially expandable segment of a stent having a longitudinal length less than its diameter with a circumferential undulating pattern. Furthermore, cylindrical rings are not in and of themselves, stents." Medtronic Vascular, Inc., et al. v. Advanced Cardiovascular Systems, Inc., et al., 2005 U.S. Dist. LEXIS 824 (D. Del., Jan. 5, 2005). 1070

"cylindrical outer surface constantly in surface-to-surface contact with a cylindrical inner surface of the drum" — "a cylindrical outer surface in physical contact at all times but in a varying number of points with a cylindrical inner surface of the drum." Warn Industries, Inc. v. Ramsey Winch Co., 2006 U.S. Dist. LEXIS 61639 (D. Or., Aug. 11, 2006). 1071

"cylindrical portion" — "a portion that has the substantial shape of a cylinder including slight variations in diameter along the length of the cylinder." Nobel Biocare USA, LLC, et al. v. Blue Sky Bio, LLC, et al., 2009 U.S. Dist. LEXIS 100408 (C.D. Cal., Oct. 14, 2009). 1073

-said handle comprising a D-shaped portion" — "a portion of the handle is formed in the shape of the letter 'D.'" One World Technologies, Ltd., et al. v. Rexon Industrial Corp., Ltd., et al., 2006 U.S. Dist. LEXIS 25324 (N.D. Ill., May 2, 2006). 1074

"damaged tissue" — "tissue that has been injured by trauma as well as tissue that is abnormal because of disease, infection, or other soft tissue metastases." Saffran v. Boston Scientific Corp., 2007 U.S. Dist. LEXIS 76135 (E.D. Tex., Sept. 28, 2007). 1075

"dark color" — "a color that is absorptive of the sun's heat rays to one of ordinary skill in the art." Midwest Canvas Corp. v. Cantar/Polyair Corp., et al., 2003 U.S. Dist. LEXIS 15294 (N.D. Ill., Sept. 2, 2003). 1076

"data surface" — "a writing surface such as paper or other material upon which the stylus can be used to form marks or to write a message and from which an instant original hard copy can be obtained without first requiring data processing and printing." Anoto AB v. Sekendur, 2004 U.S. Dist. LEXIS 7950 (N.D. Ill., May 4, 2004). 1077

"dead band" — "the space within the cylinder before the leading edge of the seal engages and then passes the timing port, thus pressurizing the hydraulic fluid and engaging the brake." SRAM Corp. v. Formula S.R.L., et al., 2009 U.S. Dist. LEXIS 29100 (N.D. Ill., Apr. 3, 2009). 1078

"deck support structure" — "will be given its ordinary meaning. The Court declines to read any additional or limiting meaning into this language." Precor Inc. v. Brunswick Corp., et al., 2001 U.S. Dist. LEXIS 26341 (W.D. Wash., Jul. 31, 2001). 1080
"wherein the thickness of the differential expansion portion decreases in a direction away from the limited expansion portion" — "wherein the differential expansion portion has a lesser thickness at a point further from the limited expansion portion than it does at a point closer to the limited expansion portion." Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006). \[1081\]

"an air channel of a cross-sectional size defined by a member associated with the blades" — "an air channel of a cross-sectional size defined by a member associated with the blades." Vita-Mix Corp. v. Basic Holdings, Inc., et al., 514 F. Supp. 2d 990 (N.D. Ohio 2007). \[1083\]

"drain opening defined by the erosion control housing" — "A drain opening is 'defined by the erosion control housing' if it is an opening whose boundaries are formed by, and found within, the erosion-control housing." WIMCO, LLC v. Lange Industries, Inc., 2007 U.S. Dist. LEXIS 92502 (D. Minn., Dec. 14, 2007). \[1084\]

"wherein, when in use, said second connecting edge defines at least a portion of a leg opening" — "wherein, when in use, the second connecting edge defines at least a portion of a leg opening." Kimberly-Clark Worldwide, Inc. v. First Quality Baby Products, LLC, et al., 2010 U.S. Dist. LEXIS 77063 (M.D. Pa., Jul. 29, 2010). \[1085\]

"said frontal surface defining a lower vertical portion normal to said bottom" — "the frontal surface has a lower vertical portion which is normal to (i.e., abuts to form a right angle with) the bottom surface." Allan Block Corp. v. County Materials Corp., et al., 502 F. Supp. 2d 845 (D. Minn. 2007). \[1087\]

"said first end cap defining an air inlet aperture" — "the Court declines to construe this phrase." Donaldson Co., Inc. v. Baldwin Filters, Inc., 481 F. Supp. 2d 974 (D. Minn. 2007). \[1088\]

"a second, larger wall thickness defining the head" — "the wall thickness of the head is thicker than the wall thickness of the stem; the thicker wall defines the head as distinct from the stem." Smith & Nephew, Inc. v. Synthes (U.S.A.), et al., 2005 U.S. Dist. LEXIS 34896 (W.D. Tenn., Aug. 26, 2005). \[1089\]

"deform" — "is used broadly to include both in-plane and out-of-plane changes to the substrate." Leggett & Platt, Inc., et al. v. Vutek, Inc., 2006 U.S. Dist. LEXIS 33383 (E.D. Mo., May 25, 2006). \[1090\] "I conclude that the ordinary meaning of 'deform' to one of ordinary skill in the art only includes those changes in a substrate which degrade print quality such that the print is unacceptable for its intended purpose." Id. \[1091\] "Vutek contends that an additional limitation should be included in the construction of 'deform' which would provide that 'deformation must be determined without use of a vacuum or other mechanical restraint to control deformation.' ... I conclude that a person of ordinary skill the art would not interpret the '518 Patent to preclude the use of a vacuum when determining whether a deformation has occurred." Id. \[1092\]
"deformable base" — "a portion of a syringe that is made of a material that can move down around a needle head when pressure is applied against it, that substantially houses, matingly engages or locks a portion of a syringe needle head, and that forms a liquid-tight seal between the needle and the syringe barrel." Syringe Development Partners L.L.C., et al. v. New Medical Technology, Inc., et al., 2001 U.S. Dist. LEXIS 2843 (S.D. Ind., Feb. 9, 2001).

"degrade"; "degradability" — "are most synonymous with 'partially disintegrate' or 'partially dissolve,' and their adjective forms, but also encompass, e.g., dissolve and disintegrate. They cannot be taken to mean what was demonstrated to this Court to be the bursting of a closed envelope via the eruption of inner forces." Multiform Desiccants, Inc. v. Medzam, Ltd., 1995 U.S. Dist. LEXIS 18548 (W.D.N.Y., Dec. 7, 1995). "We conclude that the meaning of 'degradable' ... is limited to the dissolution/degradation of the envelope as described in the specification. The [district] court correctly excluded the meaning whereby the envelope 'degrades' by bursting instead of dissolving, and correctly held that 'degradable' means that there must be at least partial dissolution of the envelope." Id., 133 F.3d 1473 (Fed. Cir. 1998).

"at least one controlled degree of freedom" — "the robotic manipulator has at least one, but may have more than one, controlled degree of freedom. Usually the number of degrees of freedom the robot manipulator has corresponds to the number of independent motorized joints the robot manipulator has." Intuitive Surgical, Inc., et al. v. Computer Motion, Inc., 2002 U.S. Dist. LEXIS 14752 (D. Del., Jul. 12, 2002).

"delivering fluid pressure through the pusher such that the implant detaches from the pusher by the fluid pressure" — "plain and ordinary meaning applies, no specific construction by the Court." Boston Scientific Corp. v. Cordis Corp., 422 F. Supp. 2d 1102 (N.D. Cal. 2006).

"density" — "a value that represents the quantity of something per unit of measure, especially per unit of length, area, or volume." Rosen's, Inc., et al. v. Van Diest Supply Co., et al., 2004 U.S. Dist. LEXIS 5435 (D. Minn., Mar. 30, 2004).1106

"barrier means depending vertically downwardly from the top of said tank" — "the barrier means hangs vertically downward from, and is attached to, the top of the tank." Highland Tank & Mfg. Co. v. PS International, Inc., 2010 U.S. Dist. LEXIS 99423 (W.D. Pa., Sep. 21, 2010).1107

"deploying the filter"; "filter ... deployment capabilities" — "expanding the filter from a smaller collapsed size to a larger open size"; "the ability to have the filter expand from a smaller collapsed size to a larger open size." Boston Scientific SciMed, Inc., et al. v. ev3 Inc., 502 F. Supp. 2d 931 (D. Minn. 2007).1108

"depression means"; "depression"; "indentation" — "although claims 25, 41 and 45 omit reference as to how the depression is formed, a review of both the specification and the figures depicting the panty make clear that the depression is formed by creating a trough within the absorbent layer itself." Solomon v. Kimberly-Clark Corp., 1997 U.S. Dist. LEXIS 23312 (D. Ariz., Jul. 17, 1997).1109 "[W]e agree with the district court that the term 'depression' as used in the specification is formed by surrounding a region of substantially thinner material with a region of thicker material." Id., 1998 U.S. App. LEXIS 10416 (Fed. Cir., May 26, 1998) (unpublished).1110

"said load locks having a depth sufficient to anchor a structure positioned and supported in the cargo bed" — "contains no height limitation referenced to the height of the sidewall. Instead, claim 32 keys the load lock to the depth 'sufficient to anchor the structure.' Therefore, the district court erred by reading the height limitation from claim 1 into claim 32." York Products, Inc. v. Central Tractor Farm & Family Center, et al., 99 F.3d 1568 (Fed. Cir. 1996).1113

"dermis" — "the sensitive connective tissue layer of the skin located below the epidermis, containing nerve endings, sweat and sebaceous glands, and blood and lymph vessels." Naturopathic Labs. International, Inc. v. Dermal Research Laboratories, Inc., 415 F. Supp. 2d 1007 (W.D. Mo. 2006).1114

"outer surface designed and dimensioned to look like natural mulch selected from the group consisting of pea gravel, wood chips, and tree bark" — "having the size and outer surface texture of pea gravel (a smooth surface with a few rough edges, as in figure 2), wood chips (a surface with only a few ridges), or tree bark (a rough surface with numerous ridges and valleys of differing heights and depths, as in figure 1), but not a combination of any of the three." Green Edge Enterprises, LLC v. Rubber Mulch Etc., LLC, et al., 2007 U.S. Dist. LEXIS 38799 (E.D. Mo., May 29, 2007).1115

"a plurality of radioactive solid particles placed at predetermined locations within the inner spatial volume to provide a desired composite radiation profile" — "no construction needed." Xoft, Inc. v. Cytex Corp., et al., 2007 U.S. Dist. LEXIS 34468 (N.D. Cal., April 27, 2007) 1116
"desired prescriptive correction" — "should be interpreted according to its ordinary meaning to describe that the 'correction' that is 'desired' relates to a doctor's prescription for improving a patient's visual acuity." Koepnick Medical & Education Research Foundation, L.L.C. v. Alcon Laboratories, Inc., et al., 347 F. Supp. 2d 731 (D. Ariz. 2004).\textsuperscript{1117}

"desired shape of the expandable surface element" — "no construction necessary." Xoft, Inc. v. Cytyc Corp., et al., 2007 U.S. Dist. LEXIS 34468 (N.D. Cal., April 27, 2007).\textsuperscript{1116}

"the soft padding member including a material formed from a soft substance presenting a soft surface along at least a portion of said inside of the diaper waistband portion despite said plastic layer edge" — "we interpret 'despite said plastic layer edge' to mean that the plastic layer edge would be otherwise more exposed to the wearer's skin but for the padding member there between." Arquest, Inc. v. Tracy, 2002 U.S. Dist. LEXIS 23412 (N.D. Ill., Dec. 4, 2002).\textsuperscript{1119}

"no destructive lesion" — "no ruinous change to the structure of tissue on a disc." Smith & Nephew, Inc. v. Arthrocare Corp., 2004 U.S. Dist. LEXIS 31057 (W.D. Tenn. 2004).\textsuperscript{1120}

"destructive thermal stresses" — "forces, induced by heat, which have a tendency to destroy, or ruin the structure of, a body." Dow Chemical Co. v. Mee Industries, et al., 264 F. Supp. 2d 1018 (M.D. Fla. 2002).\textsuperscript{1121}

"said retainer being detachably cooperative with the tabs to rotate the disc and a tie rod engaged therewith" — "rotation of the retainer and the tabs can result in separation or disengagement or it can result in rotation of the disc and a tie rod that is interlocked with the disc." Lisle Corp. v. A.J. Manufacturing Co., 2003 U.S. Dist. LEXIS 10744 (N.D. Ill., Jun. 19, 2003).\textsuperscript{1123} "The Court, sua sponte, reconsidered its claim construction and enters the following amended construction of the term 'said retainer being detachably cooperative with the tabs to rotate the disc and a tie rod engaged therewith' to mean: Rotation of the retainer can result in separation or disengagement or it can result in rotation of the disc and a tie rod that is interlocked with the disc." Id., 289 F. Supp. 2d 1048 (N.D. Ill. 2003).\textsuperscript{1124} "Given this disclosure, the meaning of the disputed claim limitation becomes apparent: the wrench disc is detachable from the body of the tool, but when not detached, the tabs of the wrench disc and the retainer work together to rotate the wrench disc and the tie rod that is interlocked with the wrench disc." Id., 398 F.3d 1306 (Fed. Cir. 2005).\textsuperscript{1124}

"detachably non-rotatable securing each of said magnet members on said tool body" — "each magnet is secured to the tool body in a fashion that prevents it from being able to rotate except with the tool as the tool rotates, but that allows the individual magnet to be removed and replaced, if damaged." Rattler Tools, Inc. v. Bilco Tools, Inc., et al., 2007 U.S. Dist. LEXIS 49124 (E.D. La., July 6, 2007).\textsuperscript{1125}

"detector" — "refers to a device for detecting the presence of electromagnetic waves and is not confined to the detection component of a laser interferometer." Applied Material, Inc. v. Tokyo Seimitsu, Co., 446 F. Supp. 2d 525 (E.D. Va. 2006).\textsuperscript{1126}

"detector operable to detect a fluorescence optical signal" — "is perfectly clear on its face." Applera Corp. v. Stratagene Corp., 2007 U.S. Dist. LEXIS 17154 (D. Conn., Mar. 9, 2007).\textsuperscript{1127}

"detent" — "a mechanical stop or catch." A&E Products Group, L.P. v. Mainetti USA Inc., et al., 2002 U.S. Dist. LEXIS 24280 (S.D.N.Y., Dec. 28, 2002).\textsuperscript{1128}
"detent" — "a separate spring-biased element such as a ball, which is movable from one position to another and that goes into a mating hole, slot or ridge in the blocking element and is capable of being driven by the solenoid into a position where it can contact the detent engaging member on the cam." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997).

"detent engaging member" — "a member located on the cam wherein rotation of the dial drives the member against a detent which has been moved to the detented position." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997).

"a cooperating detent mechanism defining the conjoint rotation of said shafts in predetermined intervals" — "is functional and therefore governed by 35 U.S.C. § 112, P6." Greenberg v. Ethicon Endo-Surgery, Inc., 1995 U.S. Dist. LEXIS 22411 (E.D.N.Y., Sept. 25, 1995). "Because we conclude that the district court erred by holding that the 'detent mechanism' element of claim 1 of the '501 patent is governed by the rule of construction set forth in section 112(6), we vacate the district court's order granting summary judgment to Ethicon and remand the case for further proceedings." Id., 91 F.3d 1580 (Fed. Cir. 1996).

"detent plate structure defining a plurality of gear positions" — "a structure of irregular notches positioned on a lower edge of the center flange for engagement by the shift lever that correspond to the PRNDL shift positions of an automatic transmission. The structure can be molded as part of the rear section of the center flange or a separate plate attached to the center flange." Grand Haven Stamped Products Co. v. Dura Automotive System, Inc., 2004 U.S. Dist. LEXIS 31087 (W.D. Mich., Jun. 28, 2004).

"detented position" — "the location that the detent extends, projects or protrudes to by the solenoid by entry of the combination so that the detent can be contacted by the detent engaging member on the cam." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997).

"detent tooth that protrudes from the long side of the support element" — "a protrusion, one surface of which defines a detent shoulder." Robert Bosch, LLC. v. Pylon Manufacturing Corp., 2010 U.S. Dist. LEXIS 30451 (D. Del., Mar. 30, 2010).

"determining and generating motion instructions that are adjusted to compensate for lead or taper errors" — "Creating movement directives that compensate for lead and taper errors. Adjusting does not require readjusting after the motion control commands have been determined and generated (e.g. after the program is built and sent for execution)." Omax Corp. v. Flow International Corp., 2006 U.S. Dist. LEXIS 81914 (W.D. Wash., Nov. 7, 2006).
"determining the glucose concentration in the sample" — "The claim requires determining the glucose concentration of the blood sample; the blood sample can have only one glucose concentration. The intermediate measurements that Lifescan seeks to encompass within 'glucose concentration' are not measurements of the glucose in the sample; they are measurements of the rate of reaction of the glucose in the sample with the chemicals found on the testing strip." Home Diagnostics Inc. v. Lifescan, Inc., 37 Fed. Appx. 516 (Fed. Cir., May 29, 2002) (unpublished).1139

"device" — "a device having the limitations called out by the body of the claim." Saffran v. Johnson & Johnson, et al., 2010 U.S. Dist. LEXIS 98537 (E.D. Tex., Sep. 20, 2010).1140

"device" — "as used in the preamble of claim 23, does not limit the scope of claim 23." Swimways Corp. v. Overbreak, LLC, 354 F. Supp. 2d 637 (E.D. Va. 2005).1142

"device acting between said stylus holder and said housing for constraining said stylus holder ... the device including a seating and at least one constraining spring distinct from the biasing ... means ... and providing lateral constraint from the axial biasing" — "mean[s] (1) a separate mechanical device ('a device acting between') located between the stylus holder and housing, (2) the device having a 'seating,' and (3) the device having at least one constraining 'spring' distinct from the bias spring to constrain the stylus holder against lateral movement." Renishaw plc v. Marposs Societa' per Azioni, et al., 974 F. Supp. 1056 (E.D. Mich. 1997).1143

"a device for the amusement of pet animals free and untethered to the device" — "a device for the amusement of an animal kept for pleasure or companionship, rather than solely for utility, in which the animal is free and untethered to the device." Robinson v. Advanced Decoy Research, Inc., et al., 519 F. Supp. 2d 1087 (S.D. Cal. 2007).1144

"low and high liquid level responsive switching devices" — "is not limited to two physically separate liquid level responsive switching devices." Real v. Bunn-O-Matic Corp., 100 F. Supp. 2d 844 (N.D. Ill. 2000).1145

"dial" — "cannot be construed to cover knobs lacking divisions, and we affirm the court's construction of this limitation." Masco Corp. v. United States, et al., 303 F.3d 1316 (Fed. Cir. 2002).1147

"diameter" — "a straight line passing through the center of a circle and meeting the circumference or surface at each end." ICU Medical, Inc. v. B. Braun Medical, Inc., 344 F. Supp. 2d 663 (N.D. Cal. 2004).1148

"diaphragm disposed in the body" — "We agree with Cannon that the district court improperly added the limitation 'entirely' in its interpretation of the claim limitation 'diaphragm disposed in the body.'" Cannon Rubber Ltd., et al. v. First Years Inc., 163 Fed. Appx. 870 (Fed. Cir., Dec. 28, 2005) (unpublished).1149

"a second plastic material having different characteristics than the first plastic material" — "the prosecution history does not disavow the broad scope of the claim language and specification that permit any difference in characteristics, including color. ... The claim thus excludes no specific differences in characteristics, and in particular differences in color, in the molded materials." Sorensen, et al. v. U.S. International Trade Commission, et al., 427 F.3d 1375 (Fed. Cir. 2005). \[1151\]

"different from"; "different than" — "not equal to." Dayco Products, Inc. v. Total Containment, Inc., 258 F.3d 1317 (Fed. Cir. 2001). \[1152\]

"performing a second step of cleaning said coins, different from said first step of cleaning, while said coins are in said second location" — "the only limitations upon the construction of this claim is that (1) separation of liquid or debris must take place while the coins are in the second location of the apparatus but before the coins reach the sorter; (2) separation must occur in a manner that will prevent damage to the machine; and (3) the method of cleaning must be different from the first step of cleaning." Coinstar, Inc. v. CoinBank Automated Systems, Inc., 998 F. Supp. 1109 (N.D. Cal. 1998). \[1153\]

"arms of different lengths"; "arms have dissimilar lengths"; "the at least one and the second arm have dissimilar lengths" — "arms which have different ending points on the axial dimension." B. Braun Melsungen AG, et al. v. Terumo Medical Corporation, et al., 2010 U.S. Dist. LEXIS 54480 (D. Del., Jun. 3, 2010). \[1154\]

"a plurality of different sets of elements" — "two or more sets of elements where no two sets are the same." Sta-Rite Industries, et al. v. ITT Corp., et al., 2010 U.S. Dist. LEXIS 10790 (E.D. Tex., Jan. 19, 2010). \[1155\]

"different size and shape" — "not the same size and shape." Depuy, Inc. v. Zimmer Holdings, Inc., 276 F. Supp. 2d 910 (N.D. Ill. 2003). \[1156\]

"a second differential expansion portion adjacent said limited expansion portion expandable by said initial injected fluid with the limited expansion portion above the collapsed implantation position" — "another portion of the cover, joined to the limited expansion portion either directly or through a tapered portion, capable of expanding differently from but expandable with the limited expansion portion by the initial injected fluid above the collapsed position." Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006). \[1157\]

"diluting and tumbling again after the first period of time" — "does not require the tumbling to stop between steps. The claim includes a scenario where clothes continuously tumble without interruption." Whirlpool Corp., et al. v. LG Electronics, Inc., et al., 423 F. Supp. 2d 730 (W.D. Mich. 2004). \[1159\]

"dimensionally stable" — "A flexible polymeric substrate whose dimensional stability has been controlled through a special annealing process, namely an annealing process that: (1) is in addition and subsequent to the heat treating steps associated with manufacturing the polymeric film, (2) is not the process of bonding the photosensitive elastomer layer to the polymeric substrate, and (3) comprises: (i) heating the substrate to a temperature above its glass transition temperature but below its melting temperature and at or greater than the temperature to which the substrate is later subjected during thermal development, (ii) at tensions of less than 200 psi, and (iii) for a time greater than the time required to bring the film to the annealing temperature, such that a specially annealed substrate has less thermally induced distortion than a non-specially annealed substrate."  

"a dimensionally stable base" — "a lower or bottom part that is resistant to sudden change in width or length."  

"each said opening being dimensioned for the passage therethrough of a main body portion of a second identical tie down strap for the redirection of the second identical tie down strap when the elastic main body portion defining said opening is elongated" — "mean[s] that upon elongation of the first tie down strap, the plurality of openings in the strap become dimensioned for the passage therethrough of a main body portion of a second identical tie down strap, thus permitting redirection of the second identical tie down strap."  
Precision Links, Inc. v. USA Products Group, et al., 2009 U.S. Dist. LEXIS 86760 (W.D.N.C., Sep. 22, 2009).

"a second end formed with tapered external threads dimensioned such that one such joint may be sealingly connected directly with another such joint" — "is not a means-plus-function limitation."  

"dipping" — "association by immersion until saturated."  

"direct" — "is not a technical term, and its meaning in the context of the patent claim is 'without engaging any intervening gears.'"  

"direct fracture of metal of said hinge segment in a direction away from said second end of the score" — "the second score is near the second end of the primary score and near the hinge segment to provide a path for a fracture of the hinge segment along the second score."  

"directional flow" — "the orientation and guidance in a particular direction."  

"directly" — "in a direct line or straight' above and 'in immediate proximity."  

"directly attaching" — "directly' requires that the brake chamber and the S-cam bearing be attached 'without any intervening space.'"  
"directly behind" — "nothing in the claims or the specification of the '057 patent requires that the second plate be in a contacting or an abutting relationship with the rear end of the front plate." Sandt Technology, Ltd. v. Resco Metal and Plastics Corp., et al., 264 F.3d 1344 (Fed. Cir. 2001).\textsuperscript{1171}

"directly between said first and second plastic core sheets" — "'directly' [] mean[s] 'in immediate physical contact." Leighton Technologies LLC v. Oberthur Card Systems, S.A., 358 F. Supp. 2d 361 (S.D.N.Y. 2005).\textsuperscript{1172}

"directly conducts cooling air" — "transmits cooling air without substantial contamination by internal sources of heat." Seiko Epson Corp., et al. v. Coretronic Corp., et al., 2010 U.S. App. LEXIS 10270 (Fed. Cir., May 20, 2010) (nonprecedential).\textsuperscript{1173}

"a toy object secured to the opposite end of said connecting line for suspension directly downwardly from the free end of said elongate member" — "is readily understood. Thus, the term shall not be construed." Robinson v. Advanced Decoy Research, Inc., et al., 519 F. Supp. 2d 1087 (S.D. Cal. 2007).\textsuperscript{1174}

"discharge conduit" — "the conduit through which water is discharged from the cleaner." Aqua Products, Inc. v. Intex Recreation Corp., 2007 U.S. Dist. LEXIS 41496 (S.D.N.Y., June 5, 2007).\textsuperscript{1176}

"discrete region(s)" — "finite areas that do not overlap." Eppendorf AG, et al. v. Nanosphere Inc., 2010 U.S. Dist. LEXIS 69072 (D. Del., Jul. 12, 2010).\textsuperscript{1177}

"discrete sites" — "sites that do not touch another site." Illumina, Inc. v. Affymetrix, Inc., 2010 U.S. Dist. LEXIS 70549 (W.D. Wis., Jul. 14, 2010).\textsuperscript{1178}

"discrete support elements" — "support elements that are individually distinct, and which are separated from each other, though they may be connected at the top, the bottom, or both." Nike, Inc. v. Adidas America, Inc., et al., 2006 U.S. Dist. LEXIS 91011 (E.D. Tex., Dec. 18, 2006).\textsuperscript{1179}

"plurality of discrete switches" — "two or more distinct and separate manual or mechanically actuated devices for making, breaking, or changing the connections in an electric circuit." NCR Corp. v. Palm, Inc., et al., 217 F. Supp. 2d 491 (D. Del. 2002).\textsuperscript{1180}

"dislodge" — "to be moved from a settled position." Retractable Technologies v. New Medical Technologies, 2004 U.S. Dist. LEXIS 3855 (E.D. Tex., Mar. 1, 2004).\textsuperscript{1181}

"dispensing" — "there is nothing in the record to suggest that a person of ordinary skill in the art would interpret the disclosure and claims of the '861 patent to mean that the term 'dispensing' is limited to 'direct dispensing.'" Ventana Medical Systems, Inc. v. Biogenex Laboratories, Inc., 473 F.3d 1173 (Fed. Cir. 2006).\textsuperscript{1182} "I would affirm the district court's claim construction." Id. (Lourie, J., dissenting).\textsuperscript{1183}

"dispensing protocol" — "a plan or regimen for the delivery of medication." Medtronic MiniMed Inc. v. Smiths Medical MD Inc., 2005 U.S. Dist. LEXIS 10583 (D. Del., Jun. 1, 2005).\textsuperscript{1184}

"dispersed in all directions" — "light is reflected from the coating at 'as many different angles ... as there are [glitter] particles.'" Nichols, et al. v. Strike King Lure Co., et al., 2000 U.S. Dist. LEXIS 15781 (N.D. Tex., Oct. 25, 2000).\textsuperscript{1185}
"displaceable" — "mean[s] 'that can be displaced,' i.e. 'that can be put out of place.'" Millipore Corp. v. W.L. Gore & Associates, Inc., 2010 U.S. Dist. LEXIS 99704 (D. Mass., Sep. 20, 2010). \[1186\]

"displacement"; "displacing"; "displaceable" — "the act of sliding movably; sliding movably; having the capability of sliding movably." Alloc, Inc., et al. v. Pergo, LLC, 2009 U.S. Dist. LEXIS 62881 (E.D. Wis., Jul. 2, 2009). \[1187\]

"displacing said corresponding contact surfaces relatively, in a direction tangential to said corresponding contact surfaces if said testing determines non-alignment and non-existence of correct electrical contact, and stopping the relative displacement of corresponding contact surfaces when said testing determines said alignment and existence of correct electrical contact" — "We agree with the Commission that 'displacing ... in a direction tangential' includes only relative movement of the corresponding contact surfaces when those surfaces are in contact. ... We also agree with the Commission that 'stopping the relative displacement' requires two things: the stopping must (1) result from a positive test for correct alignment and electrical contact and (2) occur nearly instantaneously after a successful test." Innovatron S.A. v. International Trade Commission, et al., 194 F.3d 1332 (Fed. Cir. 1999). \[1188\]

"display case"; "case" — "the portion of the housing onto which the flat-panel display device is arranged and attached." LG Philips LCD Co., Ltd. v. Tatung Co., et al., 2007 U.S. Dist. LEXIS 43557 (D. Del., June 15, 2007). \[1189\]

"said first and said second ends disposed a variable longitudinal distance from each other" — "the flexible compensating member or flexible link is positioned so that, upon expansion of the stent, the distance between its two ends changes along the stent's longitudinal axis." Scimed Life Systems, Inc., et al. v. Johnson & Johnson, 225 F. Supp. 2d 422 (D. Del. 2002). \[1191\]

"window disposed adjacent to the hole formed through the platen" — "encompasses windows that are both in and near the hole of the platen." Applied Material, Inc. v. Tokyo Seimitsu, Co., 446 F. Supp. 2d 525 (E.D. Va. 2006). \[1193\]

"disposed along the housing longitudinal axis" — "to be placed through, on, over, or continuously beside or on a line or course parallel and close to the lengthwise centerline of the housing." Advanced Medical Optics, Inc. v. Alcon Inc., et al., 361 F. Supp. 2d 370 (D. Del. 2005). \[1194\]

"disposed and adapted to cooperate so that upon expansion of said stent said first loops and said second loops change shape to compensate for the tendency of said stent to foreshorten when said stent is expanded" — "the two sets of loops must be oriented in different directions, one a generally vertical direction and one a generally horizontal or longitudinal direction. This limitation encompasses growth of one of the sets of loops in the longitudinal direction that is caused by expansion of the stent by a balloon or other mechanical means." Scimed Life Systems, Inc., et al. v. Johnson & Johnson, 225 F. Supp. 2d 422 (D. Del. 2002). \[1195\]
"disposed between" — "arranged or placed in the space that separates two structures or points."  

"disposed between" — "positioned in the space that separates structural elements."  

"inserting the preassembly into the tube such that the preassembly is disposed centrally relative to the longitudinal axis of the tube" — "introducing or placing the preassembly into the tubular body such that the preassembly includes the lengthwise middle point of the tube."  

"disposed circumferentially" — "does not describe an object that entirely fills the interior of a defined area even if it also occupies the perimeter portion."  
_Swimways Corp. v. Overbreak, LLC_, 354 F. Supp. 2d 637 (E.D. Va. 2005).\[1199\]

"disposed exteriorly about at least a portion of the perimeter of the bottom portion" — "These are non-technical words whose meanings to one skilled in the art are readily apparent: 'disposed' means 'to put in place,' and 'exteriorly' means external or situated at the outer surface. See Webster's Third New International Dictionary (1986). Thus, the term 'disposed exteriorly' explains that the bolster is positioned alongside the surface of the outer edge of the bottom cushion. 'Disposed exteriorly' is not a specific function; rather, it is a description of the location of a structure -- the bolster -- relative to other structures."  

"disposed generally opposite" — "the first and second loops, defined as horizontally-facing structural elements, are positioned across from each other and approximately aligned with each other along the longitudinal axis of the stent."  

"a thumb-associable cluster of input keys disposed generally over three mutually intersecting surfaces" — "the thumb key clusters must be spread over three distinct and separate surfaces, with each surface sharing an intersection with the other two surfaces."  

"smoking pipe means removably disposed in said first cavity" — "some part of the smoking pipe must be disposed within the first cavity so as to hold it in place there."  

"disposed in a known geometric orientation" — "arranged with respect to the frame of reference of the linear accelerator."  

"generating at least one two-dimensional ultrasound image of the lesion in the patient's body, with the ultrasound image generating means being disposed in a known geometric orientation for each ultrasound image generated" — "placing a conventional, commercially available ultrasound probe that generates a two-dimensional ultrasound image in a known geometric orientation when each ultrasound image is generated of the lesion in the patient's body."  
"filter means disposed in said third wall for filtering soil particles from said soil-laden portion of said wash liquid" — "this Court cannot punish Whirlpool's patent writer for poor drafting by disregarding what is actually disclosed. Instead it reads the language (strained though this may seem) as calling for the filter means 'disposed' (that is, positioned) in the third wall only in the sense that the cover is 'disposed over and secured to' the third wall." Maytag Corp. v. Whirlpool Corp., 95 F. Supp. 2d 888 (N.D. Ill. 2000).

"the lower side of the vibrating disc disposed in uniformly spaced relation to the inner surface to create a gap" — "the lower side of the vibrating disc disposed in uniformly spaced relation to the surface of the bottom wall to create a gap." LG Electronics U.S.A., Inc., et al. v. Whirlpool Corp., 2007 U.S. Dist. LEXIS 24056 (D.N.J., April 2, 2007).

"disposed on opposite sides of said chamber" — "placed across the chamber from one another on the outer portion of the chamber." Advanced Medical Optics, Inc. v. Alcon Inc., et al., 361 F. Supp. 2d 370 (D. Del. 2005).

"disposed over a portion" — "disposed over at least one portion." Crystal Semiconductor Corp. v. Tritech Microelectronics International, Inc., et al., 246 F.3d 1336 (Fed. Cir. 2001).

"a second opening disposed remote from said first opening" — "a second open space in the surface portion of the second container, bounded on all sides, that is located a sufficient distance away from the first opening to ensure that evaporation and the accumulation of salt and minerals do not occur adjacent to the growing plant." Laminations, Inc. v. Roma Direct Marketing LLC, et al., 516 F. Supp. 2d 404 (M.D. Pa. 2007).

"disposed within a void of a main panel of said brim" — "located within a cut-out, groove, or other opening of the main panel of the brim." totes Isotoner Corp. v. Panther Vision, LLC, 2010 U.S. Dist. LEXIS 14 (N.D. Ill., Jan. 4, 2010).
"disposing a light influencing material in said at least one opening" — "placing a light influencing material in at least one opening." Advanced Technology Incubator, Inc. v. Sharp Corp., et al., 2009 U.S. Dist. LEXIS 28456 (E.D. Tex., Mar. 11, 2009).

"disposing on the treatment table a means for generating an ultrasound image" — "arranging the means for generating an ultrasound image in physical contact with and supported by the treatment table." NOMOS Corp. v. BrainLAB, Inc., et al., 195 F. Supp. 2d 606 (D. Del. 2002).

[i] "distal end"; [ii] "proximal end" — [i] "the end situated away from the point of origin or attachment"; [ii] "the end situated toward the point of origin or attachment." Arthrocare Corp. v. Smith & Nephew, Inc., 2003 U.S. Dist. LEXIS 5976 (D. Del., Apr. 9, 2003).

"distal end portion" — "the farthest point from the proximal end portion, and may include a bladder inflatable from a contracted condition to an expandable condition." General Surgical Innovations, Inc. v. Origin Medsystems, Inc., 1998 U.S. Dist. LEXIS 22958 (N.D. Cal., May 15, 1998).

"said arm links having a first portion coupled to a corresponding foot link and a second distal portion coupled to said frame" — "said guide comprises arm links, said arm links having a first portion coupled to a corresponding foot link and a second portion, which is further away from said foot links, coupled to said frame." Precor Inc., et al. v. Fitness Quest, Inc., et al., 2006 U.S. Dist. LEXIS 63244 (W.D. Wash., Aug. 23, 2006).

"distal section" — "[is] sufficiently definite that those skilled in the art would understand what is claimed when the claim is read in light of the specification." Advanced Cardiovascular Systems, Inc. v. SciMed Life Systems, 96 F. Supp. 2d 1006 (N.D. Cal. 2000).

"the distance between the two adjacent disks"; "the distance between each adjacent disk" — "the linear distance of the space between the two cutting disks measured parallel to the shaft." Fellowes, Inc. v. Michilin Prosperity Co., Ltd., et al., 2006 U.S. Dist. LEXIS 90648 (E.D. Va., Dec. 15, 2006).

"distance sufficient" — "is not limited to the particular specifications of the IBM 3800 printer. We first note that the plain language of claim 1 recites a 'printer' generally, and nowhere mentions the IBM 3800 printer." Moore U.S.A., Inc. v. Standard Register Co., 229 F.3d 1091 (Fed. Cir. 2000).
"a distance sufficient to insure that the adhesive does not interfere with rollers" — "a distance sufficient so that the adhesive does not interfere with the rollers of the printer during processing. This distance must be, at minimum, greater than the impression area caused by the rollers of the particular printer used." Moore North America, Inc. v. Poser Business Forms, Inc., 2001 U.S. Dist. LEXIS 9037 (D. Del., Feb. 14, 2001).1230

"distensibility" — "a value calculated according to the equation [shown in the ’364 patent at 4:15] where measurements are taken at or about normal human body temperature." Medtronic Vascular Inc., et al. v. Boston Scientific Corp., et al., 526 F. Supp. 2d 613 (E.D. Tex. 2007).1231

"distributed manufacturing plant" — "a factory that makes a variety of products using machines in workstations throughout the plant." Information Technology Innovation, LLC v. Motorola, Inc., et al., 391 F. Supp. 2d 719 (N.D. Ill. 2005).1232

"whereby an air flow into said inlet between said two fin structures is divided, with a respective portion of said air flow being directed through each of said two fin structures" — "whereby an air flow into said inlet is divided, such that respective portions of the air flow are directed through separate fin structures." ICHL, LLC v. NEC Corp. of America, et al., 2010 U.S. Dist. LEXIS 38942 (E.D. Tex., Apr. 20, 2010).1233

"a filter element dividing said chamber into an inlet side and an outlet side, and providing means for preventing substantially all undesired gas in said fuel from passing through said outlet, said preventing means including said filter element separating said inlet side from said outlet side and having substantially no openings having a greater dimension than about 25 microns passing from said inlet side to said outlet side, said return line opening communicating with said chamber on said inlet side to receive air and fuel therefrom" — "A filter element divides the chamber into an inlet side and an outlet side, and provides a means for preventing substantially all undesired gas in the fuel from passing through the outlet. The filter element which separates the inlet side from the outlet side has substantially no openings greater than 25 microns. A return line opening is in communication with the chamber in the inlet side to receive air and fuel therefrom. 'Communication' means that the air and fuel can transfer from the inlet side to the return line opening." Ekstam v. Ekstam, 2006 U.S. Dist. LEXIS 12937 (E.D. Mo., March 7, 2006).1234

"dome-shaped region" — "The direction of the dome, either in reference to the interior of the cup or the direction of flow, is an additional limitation which would typically be described separately and is not inherent in the phrase dome-shaped region in any ordinary sense." Haberman v. Playtex Products, Inc., 403 F. Supp. 2d 708 (W.D. Wis. 2005).1235

"the control bars are supported such that the confined shape does not change as the control bars are moved and stopped closer to or farther from each other in their respective planes to vary the area of the confined shape at each of the plurality of different positions, whereby the movement of the control bars toward and away from each other changes the opening in the bag evenly from all sides and minimizes tearing stresses" — "Reading the patent as a whole ... leaves no doubt that the predetermined shape of the apparatus' opening should not change at all." Spiroflow Systems, Inc. v. Flexicon Corp., 2007 U.S. Dist. LEXIS 62715 (W.D.N.C., Aug. 24, 2007).1236
"a double-drive mechanism interposed between and connecting the platen and frame, where the double-drive mechanism imparts at least one translational orbital movement superimposed on another movement to the platen relative to the frame"; "a first drive mechanism interconnecting the platen and the subframe for moving the platen in a first motion"; "a second drive mechanism interconnecting the subframe and the frame for moving the subframe and the platen in a second motion, where the first and second drive mechanisms superimpose the first and second motions on the platen while they move the platen" — "none of the claims at issue in this case is subject to 35 U.S.C. § 112, paragraph 6." Haney v. Timesavers, Inc., et al., 1995 U.S. App. LEXIS 2535 (Fed. Cir., Feb. 10, 1995) (unpublished).

"disposed at a downward angle with respect to [another object]"; "formed at a downward angle with respect to [another object]" — "disposed in location below and to the left or right of the other object and having a greater angle of incline than the other object." TBC Consoles, Inc. v. Forecast Consoles, Inc., 2009 U.S. Dist. LEXIS 91653 (S.D.N.Y., Sep. 28, 2009).

"a drainage device including a mechanism for removing said plug from said opening to provide communication with said chamber and thereby drain the contents of said chamber" — "is written in means-plus-function format subject to 35 U.S.C. § 112, P 6, as the limitation describes a function to be performed rather than a definite structure." Bemis Manufacturing Co., et al. v. Dornoch Medical Systems, Inc., 2000 U.S. Dist. LEXIS 21768 (E.D. Wis., Aug. 30, 2000).

"drawing out at least a portion of the ambient atmosphere" — "removing at least some of the ambient atmosphere, such as air, from said area involved in fire after it has been sealed." US Foam, Inc, et al. v. On Site Gas Systems, Inc., 2010 U.S. Dist. LEXIS 79286 (E.D. Tex., Aug. 3, 2010).

"drill list data corresponding to positions on workpieces where holes should be drilled" — "data relating to the formation of holes in desired positions on a workpiece." Precision Automation, Inc., et al. v. Technical Services, Inc., et al., 2009 U.S. Dist. LEXIS 8187 (D. Or., Feb. 2, 2009).

"drilling a stepped endosseous orifice" — "creating a hole in the bone with at least two sudden, marked changes in the slope of the wall along its length, thus forming at least one step." Nobel Biocare USA, LLC, et al. v. Blue Sky Bio, LLC, et al., 2009 U.S. Dist. LEXIS 100408 (C.D. Cal., Oct. 14, 2009). 1248

"drinking cap" — "a cap which, when screwed onto the beverage container, allows a person to drink the contents of the beverage container." Sunbeam Products, Inc. v. Hamilton Beach Brands, Inc., et al., 2010 U.S. Dist. LEXIS 85281 (E.D. Va., Aug. 19, 2010). 1250

"drinking cap having a drinking hole" — "a cap which, when screwed onto the beverage container, allows a person to drink the contents of the beverage container through a hole in the cap." Sunbeam Products, Inc. v. Hamilton Beach Brands, Inc., et al., 2010 U.S. Dist. LEXIS 85281 (E.D. Va., Aug. 19, 2010). 1251

"to drive" — "to push." Masco Corp. v. United States, et al., 303 F.3d 1316 (Fed. Cir. 2002). 1253

"drive assembly" — "an assemblage of two or more parts that act together to impart motion to the flexible cover sections and substantially parallel supporting bows from an unspecified source." Sundance, Inc. v. De Monte Fabricating, Ltd., 485 F. Supp. 2d 805 (E.D. Mich. 2007). 1254

"a drive circuit for the motor" — "portion of a machine tool that receives motor commands and electronically controls motor functions. It may or may not include one or more controllers that interpret and adjust motor commands." Omax Corp. v. Flow International Corp., 2006 U.S. Dist. LEXIS 81914 (W.D. Wash., Nov. 7, 2006). 1257

"a drive mechanism connected to [the machine's] frame for moving [the machine] in a given direction, and at a controlled speed, over the turf to be treated" — "is not a means-plus-function clause. ... An ordinary interpretation and construction of this claim therefore must include two components: (1) a drive mechanism, i.e., some form of mechanized propulsion; that is (2) connected to the machine's frame for providing this propulsion." Toro Co. v. John Deere & Co., 143 F. Supp. 2d 1122 (D. Minn. 2001). 1258

"drive motor means" — "any type of electric motor that is used to drive a fan." Papst Licensing GmbH and Co. KG v. Sunonwealth Electric Machine Industrial Co., Ltd., et al., 2004 U.S. Dist. LEXIS 4402 (N.D. Ill., Mar. 18, 2004). 1259
"drive system assembly means" mounted on said plate in order to sum reciprocating motion into continuous and fluid rotary motion, said drive system assembly means having a right pedal sprocket, a left pedal sprocket and a drive sprocket, wherein said drive sprocket is driven by either said right sprocket or said left sprocket in one direction only and said right and left sprocket are free to overrun in the opposite direction; "drive system assembly means for summing motion into continuous and fluid rotary motion, said drive system assembly means having a right pedal sprocket, a left pedal sprocket and a drive means, wherein said drive means is driven by either said right sprocket or said left sprocket in one direction only and said right and left sprocket are free to overrun in the opposite direction" — "Because the Court finds the 'right pedal sprocket,' 'the left pedal sprocket,' and the 'drive sprocket' or 'drive means' is a clause reciting predominantly structure and capable of performing entirely the recited function of summing reciprocating motion into continuous and fluid rotary motion, application of the means-plus-function analysis is inappropriate for the 'drive system assembly means.'" Stairmaster Sports/Medical Products, Inc. v. Groupe Procycle, Inc., et al., 1998 U.S. Dist. LEXIS 8228 (D. Del., May 20, 1998).

"a drive to move the mask stage and the object stage" — "components used to move the mask stage and to move the object stage." Nikon Corp., et al. v. ASM Lithography B.V., 308 F. Supp. 2d 1039 (N.D. Cal. 2004).

"first drive units"; "second drive units" — "the assemblage of components responsible for rotating the tubes around the designating axis at an angular speed \( \omega \). The assemblage does not include the tubes or vessel"; "the assemblage of components responsible for rotating the centrifugal vessel (or centrifugal unit) around the designated axis at an angular speed \( 2\omega \)." Haemonetics Corp. v. Baxter Healthcare Corp., et al., 517 F. Supp. 2d 514 (D. Mass. 2007).

"driving the elongate member to rotate and move the toy object in a path around the base member" — "the Court declines to construe this element as requiring the object to be dragged on the ground." Robinson v. Advanced Decoy Research, Inc., et al., 519 F. Supp. 2d 1087 (S.D. Cal. 2007).

"drivingly engages" — "of Claim 1, Col. 8, lines 10 and 14 refers to a chain and sprocket mechanical engagement"; "of claim 7, Col. 9, lines 32 and 37, and claim 11, Col. 11, lines 30 and 35, refers to any type of mechanical engagement between a pedal means and a pedal sprocket or one way clutch that is capable of coming into contact, interlocking, or meshing with driving force or energy." Stairmaster Sports/Medical Products, Inc. v. Groupe Procycle, Inc., et al., 1998 U.S. Dist. LEXIS 8228 (D. Del., May 20, 1998).

"drum" — "the cylindrical part on which a cable is mounted." Warn Industries, Inc. v. Ramsey Winch Co., 463 F. Supp. 2d 1181 (D. Or. 2006).

"drum assembly" — "a collection of parts, including a drum and a stator, that rotate together with respect to the housing." Warn Industries, Inc. v. Ramsey Winch Co., 463 F. Supp. 2d 1181 (D. Or. 2006).
"plurality of annular shell rings ... connected to form a generally cylindrical drum shell" — "the term 'drum shell' ... includes both the stacking and the sounding rings." Lovelett v. Peavey Electronics Corp., et al., 1996 U.S. Dist. LEXIS 15210 (S.D.N.Y., Oct. 15, 1996).1269

dry physical dimension" — "linear dimension." Hoechst Celanese Corp. v. BP Chemicals Ltd., et al., 78 F.3d 1575 (Fed. Cir. 1996).1270

"replacing said rinsing fluid with said drying vapor" — "the district court construed the claim term 'drying vapor' as 'a vapor that facilitates the removal of liquid from a surface,' wherein a 'vapor' is 'the gaseous state of a substance that, under ordinary circumstances, is usually a liquid or solid.' Additionally, the court construed the claim term 'replacing' as 'taking the place of.' ... [W]e agree with these aspects of the district court's claim construction." CFMT, Inc., et al. v. Steag Microtech, Inc., 1999 U.S. App. LEXIS 9189 (Fed. Cir., May 13, 1999) (unpublished).1271

duct" — "a conduit formed in the housing that allows gas to pass through it." Aqua-Lung America, Inc. v. American Underwater Products, Inc., et al., 2009 U.S. Dist. LEXIS 18172 (N.D. Cal., Feb. 26, 2009).1272

dunnage structure" — "a number of flexible parts held or put together in a particular way for separating and protecting the products shipped in the container." Bradford Co. v. Afco Manufacturing, et al., 2006 U.S. Dist. LEXIS 88547 (S.D. Ohio, Dec. 5, 2006).1275

durably assume a diameter at least as small as the reduced diameter achieved in the step of pre-shaping" — "assumes and retains a compressed diameter after treatment smaller than pre-treatment." Vnus Medical Technologies, Inc. v. Diomed Holdings, Inc., 2006 U.S. Dist. LEXIS 88580 (N.D. Cal., Nov. 22, 2006).1276

durably assumes a smaller size"; "durably assumes a reduced size" — "assumes and retains a compressed diameter after treatment smaller than pre-treatment." Vnus Medical Technologies, Inc. v. Diomed Holdings, Inc., 2006 U.S. Dist. LEXIS 88580 (N.D. Cal., Nov. 22, 2006).1277

the gripping member having a different durometer characteristic than the resilient grip body" — "the gripping member has a different hardness than the resilient grip body." Colgate-Palmolive Co. v. Ranir, L.L.C., 2007 U.S. Dist. LEXIS 55258 (D. Del., July 31, 2007).1279

"dynamically" — "potentially changing activity or item, such as changing under variable process conditions, as contrasted with static." Omax Corp. v. Flow International Corp., 2006 U.S. Dist. LEXIS 81914 (W.D. Wash., Nov. 7, 2006).1280

"dynamically isolated" — "the two frames are sufficiently free of transferred vibrations and reaction forces that the photolithographic machine can perform accurately." Nikon Corp., et al. v. ASM Lithography B.V., 308 F. Supp. 2d 1039 (N.D. Cal. 2004).1281

- E -

"each" — "'each' is 'every' when the word is used as an adjective, and 'each' is 'every one' when the word is used as a pronoun." Genlyte Thomas Group LLC v. Lutron Electronics Co., Inc., 2004 U.S. Dist. LEXIS 5311 (N.D. Tex., Mar. 31, 2004).  

"each" — "The ordinary meaning of the word 'each' is 'every one of two or more considered individually or one by one.'" Medtronic, Inc., et al. v. Guidant Corp., et al., 2004 U.S. Dist. LEXIS 10020 (D. Minn., May 25, 2004).  

"each cowl for shielding one of the holes" — "for a device to literally infringe on this patent, it must have one separate cowl for each hole." Bickerstaff v. Dr. Shrink, Inc., 1998 U.S. Dist. LEXIS 14722 (W.D. Mich., Aug. 13, 1998).  "The claim language here is clear; Mr. Bickerstaff claimed a one-to-one correspondence between cowls and holes. He cannot now discard that limitation. ... The district court concluded that not only must there be a one-to-one ratio of cowls to holes, but each cowl must be 'separate.' The record does not bear out this interpretation. Nothing in the claim language or prosecution history requires that the cowls cannot be adjacent or abutting." Id., 1999 U.S. App. LEXIS 21601 (Fed. Cir., Sept. 3, 1999) (unpublished).  

"wherein each crosspiece disposed at the end sections of the two spring strips is provided with a covering cap" — "crosspieces must be located at the terminal portions of the spring strips." Robert Bosch, LLC. v. Pylon Manufacturing Corp., 2010 U.S. Dist. LEXIS 30451 (D. Del., Mar. 30, 2010).  

"each extension including a rear end having a first flange extended downward" — "each extension includes a rear end, a portion of which reaches in a downward direction relative to the remaining portions of the extension and facilitates attachment of the auxiliary frame to the primary frame." Chic Optic, Inc., et al. v. E'Lite Optik, Inc., 524 F. Supp. 2d 794 (N.D. Tex. 2007).  

"each finger-associable cluster is elongate, and said keys therewithin are distributed along the length of the cluster with respective key-actuation axes that intersect normal to different angularly disposed planes, one plane for each key, which planes intersect one another along the length of the cluster in a mixed pattern of obtuse and reflex angles" — "mean[s] that for each cluster of finger keys, the angles between the adjacent keys must alternate between an obtuse angle (between 90 and 180 degrees) and a reflex angle (greater than 180 degrees), and that for each finger there must be at least two alternating angles between three keys." Motionless Keyboard Co. v. Microsoft Corp., et al., 2007 U.S. Dist. LEXIS 43215 (D. Or., May 6, 2007).
"each key in which is arranged facially to confront, in close proximity and in parallel planar relationship, one of various different, underside, finger-expanse portions of an associated, adjacent finger" — "each key of each finger cluster must be positioned parallel and in close proximity to the tip and the underside of the adjacent finger, and that the clusters be disposed along a concave surface." Motionless Keyboard Co. v. Microsoft Corp., et al., 2007 U.S. Dist. LEXIS 43215 (D. Or., May 6, 2007). 1290

"each of said flexible links including a plurality of portions with neighboring portions having an area of inflection there between" — "the flexible links are loops." Scimed Life Systems, Inc., et al. v. Johnson & Johnson, 225 F. Supp. 2d 422 (D. Del. 2002). 1291

"each side having an extension and each extension including a rear end having a first flange extended downward" — "each side having an extension and each extension including a rear end having a portion of the extension which protrudes from the rear end thereof and facilitates attachment of the auxiliary frame to the primary frame and where such portion of the extension reaches in a downward direction relative to the remaining portions of the extension." Aspex Eyewear, Inc., et al. v. Miracle Optics, Inc., 2003 U.S. Dist. LEXIS 26355 (C.D. Cal., Feb. 14, 2003). 1292

"each stud is extended over by one of the extensions, and can support that extension to prevent the auxiliary frame from moving downward relative to the primary frame" — "at least some portion of each of the extensions reaches above and across the corresponding stud, and is capable, with or without direct contact, of maintaining the corresponding extension in position so as to keep it from falling, sinking or slipping and thus prevent the auxiliary frame from moving downward relative to the primary frame." Chic Optic, Inc., et al. v. E'Lite Optik, Inc., 524 F. Supp. 2d 794 (N.D. Tex. 2007). 1293

"each tapered side diagonally approaching one of said second parallel sides" — "nothing in the claim, or in the patent as a whole, that supports a construction other than that the tapered sides of the resultant pocket are generally straight." Ethicon Endo-Surgery v. Tyco Healthcare Group LP, 2006 U.S. Dist. LEXIS 51187 (S.D. Ohio, July 26, 2006). 1294

"each within one compartment" — "mean[s] that each heating element must lie within a compartment, but if there is more than one compartment, not every compartment must contain a heating element. The claim requires two or more heating elements and one or more compartments, and each heating element must be within a compartment. If the heater's housing contains only one chamber, all of the heating elements lie within that chamber. If the heater's housing contains more than one chamber, all the heating elements must lie within a chamber, but not within every chamber." Seitz, et al. v. Envirotech Systems Worldwide Inc., et al., 2006 U.S. Dist. LEXIS 53084 (S.D. Tex., July 31, 2006). 1295

"eccentric weight portion" — "that portion of the counterweight that contributes to the eccentric moment of the counterweight. The portion is part of the whole counterweight, but need not be a separate component piece or part." American Piledriving Equipment, Inc. v. J & G Sales, Inc., et al., 2010 U.S. Dist. LEXIS 21326 (S.D. Tex., Mar. 9, 2010). 1296

"eccentric weight portion" — "that portion of the counterweight that extends either forward or rearward from the front or back face of the gear portion such that it shifts the center of gravity radially outward from the gear's rotational axis." American Piledriving Equipment, Inc. v. Geoquip, Inc., 2009 U.S. Dist. LEXIS 115486 (E.D. Va., Dec. 11, 2009). 1297
"eccentric weight portion" — "that portion of the counterweight that creates the eccentric moment of the counterweight by having unbalanced weight offset from the axis of rotation. The eccentric weight portion has one or more inset receiving areas." American Piledriving Equipment, Inc. v. Hydraulic Power Systems, Inc., et al., 2009 U.S. Dist. LEXIS 99009 (W.D. Wash., Oct. 13, 2009).

"eccentric weight portion" — "the portion of the counterweight, being made of a first metal, that provides unbalanced weight to the counterweight with respect to the counterweight's axis of rotation, and with at least one insert-receiving area." American Piledriving Equipment, Inc. v. Equipment Corp. of America, 2009 U.S. Dist. LEXIS 96910 (W.D. Pa., Aug. 3, 2009).

"eccentric weight portion" — "the bottom portion of the counterweight, which extends forward from the front face of the gear portion, containing more weight than the top portion due to its larger mass, including at least one insert-receiving area formed therein to receive at least one solid tungsten rod." American Piledriving Equipment, Inc. v. Bay Machinery Corp., 632 F. Supp. 2d 956 (N.D. Cal. 2009).

"top substantially slanted edge" — "The term 'edge' must mean the beginning or end of the shape itself and not some invisible line that may be imagined descending from one part of the shape to the other." Rhudy, et al. v. Dish Mount Products, LLC, 2004 U.S. Dist. LEXIS 29358 (W.D. Tex., Aug. 3, 2004).

"effective cutting face backrake angle(s)"; "negative effective cutting face backrake angle"; "effective backrake angle" — "angle(s) between a line oriented perpendicular to the subterranean formation to be engaged by a cutter and the portion(s) of the cutting face of the cutter that engages the formation during drilling, measured in the direction of intended bit rotation." Reedhycalog UK, Ltd, et al. v. Baker Hughes Oilfield Operations, Inc., et al., 2007 U.S. Dist. LEXIS 76125 (E.D. Tex., Oct. 12, 2007).

"effectively occlude" — "significantly reduce the flow of blood through the treated hollow anatomical structure, including, but not limited to, full-lumen closure." Vnus Medical Technologies, Inc. v. Diomed Holdings, Inc., 2006 U.S. Dist. LEXIS 88580 (N.D. Cal., Nov. 22, 2006).

"a vent means for venting either of said chambers to atmosphere" — "the Court finds that 'either' means that either the sample chamber or the expansion chamber is capable of being vented to atmosphere depending on the embodiment." Quantachrome Corp. v. Micromeritics Instrument Corp., 37 F. Supp. 2d 1354 (S.D. Fla. 1999).

"ejecting the plastic product into said guide conduit" — "require[s] that the plastic product be expelled or otherwise driven into the substantially enclosed conduit." *In re: Turn-Key-Tech Matters*, 2002 U.S. Dist. LEXIS 25583 (C.D. Cal., Jan. 8, 2002).

"ejecting the washing machine basket from the apparatus by separating the mold core and cavity cover member and shifting the cavity sidewall members away from the mold core" — "forcing the washing machine basket from the apparatus by separating the mold core and cavity cover member and shifting the cavity sidewall members away from the mold core." *Maytag Corp. v. Electrolux Home Products, Inc.*, 411 F. Supp. 2d 1008 (N.D. Iowa 2006).

"elastic" — "describe[s] any material, other than nylon, 'capable of returning to an initial state or form after deformation.'" *Salazar v. Procter & Gamble Co.*, 2003 U.S. Dist. LEXIS 26574 (N.D. Okla., Sept. 8, 2003). "[T]his court vacates the portion of the district court's claim construction excluding nylon from falling within the scope of the 'elastic' element. This court affirms the remaining portion of the district court's claim construction that 'elastic' means 'capable of returning to an initial state or form after deformation.'" *Id.*, 414 F.3d 1342 (Fed. Cir. 2005).

"elastic means" — "those lengths of rubber-like material, sewn into the lining cloths of the warmth-retaining means, which, when the sleeping bag is in use, compress the warmth-retaining means into closer contact with the user's body, reducing the cross-sectional area of the inner cavity so that the gap between the body and the inner cloth lining sheet is reduced, but also allowing less restricted movement within the bag." *Mont-Bell Co., Ltd. v. Mountain Hardware, Inc.*, 1997 U.S. Dist. LEXIS 22424 (N.D. Cal., Jul. 9, 1997).

"elastic stress response" — "a value calculated using the equation [shown in the '364 patent at 5:8] determined by inflating a balloon to about 5 bars at or about normal human body temperature and measuring the balloon's diameter. The balloon is then inflated to a pressure of about 10 bars in about 20 seconds and held for about an additional 20 seconds at or about normal human body temperature. The balloon's diameter is then measured. The internal pressure of the balloon is then decreased to about 5 bars and the 'new' 5 bar diameter of the balloons is determined." *Medtronic Vascular Inc., et al. v. Boston Scientific Corp., et al.*, 526 F. Supp. 2d 613 (E.D. Tex. 2007).

"elastically return to a predetermined shape" — "requires a membrane that elastically returns to a predetermined shape either through its own force or through some external force." *Regents of the University of Minnesota v. AGA Medical Corp.*, 2009 U.S. Dist. LEXIS 90289 (D. Minn., Sep. 29, 2009) (emphasis in original).
"3% elasticity" — "refer[s] to the behavior exhibited by a component which, when strained by a deforming force to a length in excess of 3% of its original length, springs back by at least 3% of its original length when the force is released." CVI/Beta Ventures, Inc. v. Tura LP, et al., 905 F. Supp. 1171 (E.D.N.Y. 1995). [1319] "[T]he district court erred in its claim construction. We conclude that ... the word 'elasticity' refers to the ability of an eyeglass frame component to return completely and spontaneously to its original shape after it is subjected to stress and the stress is removed, provided that the stress to which the component is subjected does not cause the component to exceed its elastic limit. We also conclude that the percentages appearing before the word 'elasticity' ... refer to the amount of strain to which the eyeglass frame component is subjected. Thus, 'greater than 3% elasticity' ... means that a 100 centimeter rod must fully return to its original shape when stretched to some length over 103 centimeters. By the same token, 'at least 3% elasticity' ... means that the same rod must fully return to its original shape when stretched to any length under 103 centimeters." Id., 112 F.3d 1146 (Fed. Cir. 1997). [1320]

"wherein the cover is formed of an elastomer material" — "wherein the cover is formed from a substance having the elastic properties of rubber." Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006). [1323]

"elastomeric material" — "a material that is able to stretch or expand without breaking, and to return to its original dimensions." Boston Scientific SciMed, Inc., et al. v. Cordis Corp., et al., 2005 U.S. Dist. LEXIS 10735 (D. Del., Jun. 3, 2005). [1325]

"elastomeric material" — "a material that behaves like an elastomer, such as synthetic rubber, which can be stretched or deformed under stress, and after release of the stress, will return to its approximate original shape." Samsung Electronics Co., Ltd. v. Tessera Technologies, Inc., 2004 U.S. Dist. LEXIS 31074 (N.D. Cal., Jan. 8, 2004). [1326]

"processing ... to form an elastomeric seal" — "the elastomeric composition is formed into a seal and the seal is cured sufficiently to develop elastomeric properties." Greene, Tweed of Delaware, Inc. v. Dupont Dow Elastomers, L.L.C., et al., 2002 U.S. Dist. LEXIS 23554 (E.D. Pa., Nov. 18, 2002). [1327]

"electrical wallbox" — "a box of a size and design generally used by the electrical industry to contain electrical switches for residential and office application." Lutron Electronics Co., Inc. v. Control4 Corp., 2009 U.S. Dist. LEXIS 3562 (D. Utah, Jan. 20, 2009). [1328]

"electrically conductive fibers" — "We are not here modifying the district court's claim construction to limit its scope to stainless steel fibers. We only modify it to exclude carbon fibers from the scope of the '879 patent claims." Honeywell International, Inc., et al. v. ITT Industries, Inc., et al., 452 F.3d 1312 (Fed. Cir. 2006). 1330

"electrically conductive layer of a polymeric, film-forming, particulate binder material" — "The construction issue concerning this limitation therefore simplifies to this: in a claim which uses 'open' language (i.e., 'comprises'), is the 'electrically conductive layer of a polymeric, film-forming, particulate binder material' limitation met where paper is present in addition to a film-forming polymer that acts as a particulate binder? The answer must be affirmative, because an 'open' claim is infringed by a material that embodies all of the claim limitations even if the material includes additional elements." Charleswater Products, Inc. v. Nevamar Corp., 1998 U.S. App. LEXIS 31011 (Fed. Cir., Dec. 10, 1998) (unpublished). 1332

"electrically coupled to the motor of the shredder mechanism" — "the on/off switch transmits an electrical signal to the shredder mechanism's motor." Fellowes, Inc. v. Michelin Prosperity Co., Ltd., et al., 2006 U.S. Dist. LEXIS 90648 (E.D. Va., Dec. 15, 2006). 1333

"electromagnetic clutch" — "must be interpreted only as a disk-type clutch that can transfer different amounts of torque from the primary output shaft to the secondary output shaft and is actuated by the magnetic attraction between a current carrying coil and an armature." BorgWarner, Inc., et al. v. New Venture Gear, Inc., 237 F. Supp. 2d 919 (N.D. Ill. 2002). 1334

"electromechanical device" — "a device which imparts mechanical movement upon application of an electrical signal, such as a solenoid, to move the link element after entry of the combination." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997). 1335

"electronic chip" — "The district court provided the jury with the following construction ...: 'Chip' is not used in whatever technical sense it may have; here, it means the same thing as an electrical component, whether it is a complex integrated circuit of several subparts or a single resistor. A resistor itself is made of two leads, case, and resistant core, at a minimum, making it a packaged electronic component.' Although we do not agree with the district court's construction, for it appears from the definition given to the jury that the district court was confusing a 'packaged electronic component' (i.e., the claimed invention as a whole) with an 'electronic chip' (i.e., an element of the claimed invention), this aspect does not appear to have been material to the result, and any error appears to have been harmless." Strattec Security Corp. v. General Automotive Specialty Co., Inc., et al., 126 F.3d 1411 (Fed. Cir. 1997). 1336

"electronic combination lock" — "must be interpreted to form a limitation of each of the claims." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997). 1337

"electronically activated"; [ii] "electronically actuated" — [i] "is used to define how the lever moving element is activated to cooperate with the moving means"; [ii] "[t]he term 'electronically' has the same meaning ... [because] claim terms must be consistent throughout the patent." *Mash-Hamilton Group v. LaGard, Inc.*, 21 F. Supp. 2d 700 (E.D. Ky. 1997).

"electronically operated lock" — "should also be interpreted as a limitation to the claim." *Mash-Hamilton Group v. LaGard, Inc.*, 21 F. Supp. 2d 700 (E.D. Ky. 1997).

"electronics means for at least reading the signals of said electricity manipulating devices"; "electronics means further for reading said at least one of said electricity manipulating devices including means for creating an On/Off signal exclusively as an On/Off switch"; "electronics means is further for reading at least one of said electricity manipulating devices exclusively as an On/Off switch"; "electronics means also is for outputting to a game console information representing the signals"; "active electronic means for interpreting the analog output of said pressure-sensitive variable-conductance sensor"; "active electronic means for at least interpreting the outputs of said pressure-sensitive variable-conductance sensor"; "active electronic means for interpreting the electrical conductivity of said sensor" — "Because the four terms that begin with 'electronics means . . .' do not recite limited and definable structure, the court concludes that they are means-plus-function limitations. ... [However,] as with 'baffle' in *Envirco*, 'active electronic' imparts structure. The three claims that include 'active electronic means' are not means-plus-function clauses." *Anascape, Ltd. v. Microsoft Corp., et al.*, 2007 U.S. Dist. LEXIS 88248 (E.D. Tex., Nov. 30, 2007).

"elevator control" — "an existing device that controls the operation of the elevator - the identical elevator control that was in place before modernization." *Inventio AG v. ThyssenKrupp Elevator Americas Corp., et al.*, 2010 U.S. Dist. LEXIS 59020 (D. Del., Jun. 14, 2010).

- 120 -
"ellipse having a major diameter" — "unambiguously connotes the geometric definition of 'ellipse', a shape defined by the formula: \( x^2/a^2 + y^2/b^2 = 1. \) Bose Corp. v. JBL, Inc., 98 F. Supp. 2d 80 (D. Mass. 2000).\(^{1349}\)

"elliptical cross-sectional shape" — "mean[s] a rounded oval shape, symmetrical about both the X and Y axes." Fenton Golf Trust v. Cobra Golf, Inc., 1999 U.S. Dist. LEXIS 10627 (N.D. Ill., Jun. 29, 1999).\(^{1350}\)

"elongate" [without a modifier] — "can mean both permanent and temporary elongation." Herr-Voss Corp. v. Delta Brands, Inc., et al., 900 F. Supp. 34 (N.D. Tex. 1995).\(^{1351}\)

"an elongate handle extending generally along a handle axis" — "a grooming tool having a handle portion of greater length than width that is stretched or spread out to greater or fullest length generally along a handle axis." Furminator, Inc. v. Ontel Products Corp., et al., 429 F. Supp. 2d 1153 (E.D. Mo. 2006).\(^{1352}\)

"at least one retractable elongate member" — "The court finds no support for Ken's proposition that the claimed elongate member connotes function without structure. Means-plus-function treatment of this element is inappropriate and denied." SDS USA, Inc. v. Ken Specialities, Inc., 107 F. Supp. 2D 574 (D.N.J. 2000).\(^{1353}\)

"working the multiple strands selectively by reverse bending between the same rolls, so as to reduce and elongate the thicker strands more than the thinner strands" — "the district court erred in its claim interpretation. We hold that the term 'elongate' in the claim refers to plastic, rather than elastic, deformation." Herr-Voss Corp. v. Delta Brands, Inc., et al., 1996 U.S. App. LEXIS 29585 (Fed. Cir., Nov. 8, 1996) (unpublished).\(^{1355}\)

"an elongate, rod-like member" — "a long, slender rod-like structure." Robinson v. Advanced Decoy Research, Inc., et al., 519 F. Supp. 2d 1087 (S.D. Cal. 2007).\(^{1356}\)

"elongated magnet member" — "the actual, physical magnets themselves are elongated, rather than that they may be arranged in an elongated fashion." Rattler Tools, Inc. v. Bilco Tools, Inc., et al., 2007 U.S. Dist. LEXIS 49124 (E.D. La., July 6, 2007).\(^{1359}\)

"elongated resilient member" — "long and thin component which returns to its original shape following a deformation in shape." McHugh v. Hillerich & Bradshy Co., 2009 U.S. Dist. LEXIS 33197 (N.D. Cal., Mar. 31, 2009).\(^{1360}\)

"elongated sheet" — "does not require the presence of material that covers the entire floor but instead can encompass material that covers less than the entire floor; nor does this claim element exclude a 'panel' of material otherwise meeting the limitations of the claims." Middleton, Inc. v. Minnesota Mining and Manufacturing Co., 1998 U.S. Dist. LEXIS 19428 (N.D. Ill., Nov. 24, 1998).\(^{1361}\)
"an elongated user support" — "a central support and stabilizing member that is longer than it is wide." Fitness Quest Inc. v. J. Monti, 2007 U.S. Dist. LEXIS 60195 (N.D. Ohio, Aug. 16, 2007).1362

"embedded" — "we adopt the dictionary definition advanced by the parties and hold that 'embed' means 'to fix securely in a surrounding mass.' ... We further hold that an object is 'embedded' in a material if the object is sufficiently surrounded by the material to be bonded to it." Heidelberg Harris, Inc. v. Mitsubishi Heavy Industries, Ltd., et al., 1998 U.S. Dist. LEXIS 964 (N.D. Ill., Jan. 27, 1998).1363

"embodied in a housing" — "This phrase does not involve technical terms and can be understood through its plain and ordinary meaning. It does not require construction." SmartDisk Corp. v. Archos S.A., et al., 2006 U.S. Dist. LEXIS 85999 (E.D. Tex., Nov. 28, 2006).1364

"at least one user interface key embodied in said housing" — "at least one user interface key permanently attached to the housing." SmartDisk Corp. v. Archos S.A., et al., 2006 U.S. Dist. LEXIS 85999 (E.D. Tex., Nov. 28, 2006).1365

"at least one of which is not embodied in the housing" — "this phrase requires no construction." SmartDisk Corp. v. Archos S.A., et al., 2006 U.S. Dist. LEXIS 85999 (E.D. Tex., Nov. 28, 2006).1366

"embossed" — "a topography created on material by impressing a corresponding inverse topography on its surface." 3M Innovative Properties Co., et al. v. Avery Dennison Corp., 185 F. Supp. 2d 1031 (D. Minn. 2002).1367 "The district court also erred when it defined the term 'embossed' by imposing a limitation related to the process by which the embossed surface is made." Id., 350 F.3d 1365 (Fed. Cir. 2003).1368

"outer surface that is embossed" — "the outside surface with ridges and valleys which will give the materials a rough feel." Green Edge Enterprises, LLC v. Rubber Mulch Etc., LLC, et al., 2007 U.S. Dist. LEXIS 38799 (E.D. Mo., May 29, 2007).1369

"embossments" — "depressions or bumps that separate and form a gap between at least some of the foil layers by point contact of the embossments with adjacent layers." ATD Corp. v. Lydall, Inc., 159 F.3d 534 (Fed. Cir. 1998).1371

"emitting ... laser energy into the blood vessel through said laser emitting section of said emitting means, thereby decreasing the diameter of the blood vessel" — "require[s] the maintaining of the tip-interior surface in physical contact with the vessel wall while laser energy is emitted to decrease the diameter of the blood vessel." Diomed, Inc. v. AngioDynamics, Inc., 2005 U.S. Dist. LEXIS 6189 (D. Mass., Apr. 12, 2005).1372

"emptying the blood vessel prior to emitting said laser energy" — "emptying most, but not necessarily all of the blood from the blood vessel." Diomed, Inc. v. AngioDynamics, Inc., 2005 U.S. Dist. LEXIS 6189 (D. Mass., Apr. 12, 2005).1373
"enabling flexing" — "allowing the stem shaft of the prosthesis to flex and move axially upwards, by the use of a distal tip secured to the distal end of the stem which (i) is of a larger diameter than the stem shaft, and (ii) is not affixed to the bone." Stryker Corp., et al. v. Intermedics Orthopedics, Inc., 891 F. Supp. 751 (E.D.N.Y. 1995). 1374

"encapsulant" — "a material used to seal up or cover and element or circuit for mechanical and environmental protection." Samsung Electronics Co., Ltd. v. Tessera Technologies, Inc., 2004 U.S. Dist. LEXIS 31074 (N.D. Cal., Jan. 8, 2004). 1376

"a release sleeve encircling said second cylindrical surface" — "The term 'encircling' shall be given its ordinary dictionary meaning 'to form a circle around or surround.'" Eaton Corp. v. Parker-Hannifin Corp., 2003 U.S. Dist. LEXIS 401 (D. Del., Jan. 10, 2003). 1380

"encircling the balloon on its end" — "requires that the sleeve encircle the balloon on a part at, toward or near an extremity of the catheter." Arlaine & Gina Rockey, Inc. v. Cordis Corp., 2004 U.S. Dist. LEXIS 30763 (S.D. Fla., Jan. 5, 2004). 1381

"enclosed spaces" — "the area enclosed by the structural elements of a cell." Medinol Ltd. v. Guidant Corp., et al., 2004 U.S. Dist. LEXIS 19705 (S.D.N.Y., Sept. 30, 2004). 1384

"enclosing said bed surface" — "mean[s] that the side rails surround the surface sufficiently to prevent the patient from falling off the bed surface." Pedicraft, Inc. v. Stryker Corp. of Michigan, et al., 2003 U.S. Dist. LEXIS 27837 (M.D. Fla., May 5, 2003). 1385

"enclosure" — "a structure which generally encloses at least the fin structures and the gap between said fin structures." ICHL, LLC v. NEC Corp. of America, et al., 2010 U.S. Dist. LEXIS 38942 (E.D. Tex., Apr. 20, 2010). 1386

"so that the heel portion of said user's foot travels in a path which does not encompass said pivot axis" — "so that the heel portion of said user's foot travels in a path which does not encompass or encircle said pivot axis." Precor Inc., et al. v. Fitness Quest, Inc., et al., 2006 U.S. Dist. LEXIS 63244 (W.D. Wash., Aug. 23, 2006). 1387
"end"; "high front end"; "low back end" — "one of the two opposite extremities either of an object having length or of a sloped surface"; "an end that has a height greater than the height of its opposite end"; "an end that has a height less than the height of its opposite end." Messer v. Ho Sports Co., Inc., et al., 2007 U.S. Dist. LEXIS 50081 (D. Or., July 9, 2007). 1388

"end"; "strap end" — "The Court finds that the term 'end' is used different ways at different times within the patent." Izzo Golf, Inc. v. King Par Golf, Inc., 2006 U.S. Dist. LEXIS 51199 (W.D.N.Y., July 26, 2006). 1389

"a first end, a second end" — "the limit or boundary of an object, or in other words, at the edge of the round table." Lifetime Products, Inc. v. Correll, Inc., 323 F. Supp. 2d 1129 (D. Utah 2004). 1390

"end" — "the portion having length, not limited to the terminus." Free Motion Fitness, Inc. v. Cybex International, Inc., et al., 311 F. Supp. 2d 1297 (D. Utah 2003). 1392

"end cap" — "a component at the back of the plunger, which may be contacted by the thumb during depression." Retractable Technologies, Inc., et al. v. Becton Dickinson & Co., 2009 U.S. Dist. LEXIS 73301 (E.D. Tex., Jan. 20, 2009). 1393

"a connection securing the first end of the length of hair strands to a portion of the elastic loop" — "I construe 'end' in claim one to mean either extremity of the entire length of hair. The claim refers to the end that is proximal to the elastic loop as the 'first end' and the extremity of the length of hair that is distal to the elastic loop is described as the 'second end'." Pony Pal, LLC v. Claire's Boutiques, Inc., 2006 U.S. Dist. LEXIS 72427 (S.D.N.Y., Oct. 2, 2006). 1395

"said first rod set being located end to end with said second rod set so that said first and second spaces are aligned" — "do[es] not prohibit the use of other intervening structures. ... the court will therefore adopt AB/Sciex's proposed construction of 'end to end' -- that the rod set (Claim 1) or space (claim 14) must be arranged in a manner that ions may be successfully transmitted from the end of the first rod set or space to the end of the second rod set or space." Applera Corp., MDS Inc., et al. v. Micromass UK Ltd., et al., 186 F. Supp. 2d 487 (D. Del. 2002). 1396

"end tract" — "The Court agrees with Defendants that the patent claims define the 'end tract' only as the tapered area marked by cross-hatched lines. The Court finds, however, that the 'end tract' as defined is entirely non-circular, but not purely elliptical." C.M.L. s.r.l. v. Ineco Industrial Navarra de Equipos y Comercio, S.A., et al., 177 F. Supp. 2d 442 (D. Md. 2001). 1397

"endless loop" — "restricts this term to loops without an end." Callicrate v. Wadsworth Manufacturing, Inc., 427 F.3d 1361 (Fed. Cir. 2005). 1398

"endless, moveable surface" — "can include a belt and/or a series of slats attached to a band." Precor Inc. v. Brunswick Corp., et al., 2001 U.S. Dist. LEXIS 26341 (W.D. Wash., Jul. 31, 2001). 1399

"endoscopic" — "would mean any device capable of being used with an endoscope, an instrument for visualizing the interior of a hollow organ or body cavity[,] ... [and] would not connote any size limitation, except perhaps the general limitation of a size sufficiently small to be able to be inserted into an orifice or incision in the human body." *Ethicon Endo-Surgery v. Richard-Allan Medical Industries, Inc.*, 885 F. Supp. 1073 (S.D. Ohio 1995). 1401

"energy absorbing suspension system" — "arrangement of suspension parts that absorbs energy." *SRAM Corp. v. Fox Factory, Inc.*, 2005 U.S. Dist. LEXIS 29164 (N.D. Ill., Nov. 18, 2005). 1403

"engage" — "to make contact with another part such that the resulting interaction can provide support." *Atlantic Research Marketing Systems, Inc. v. Troy, et al.*, 616 F. Supp. 2d 157 (D. Mass. 2009). 1404

"to engage said ridge, said cavity and said chamfer" — "The term 'engage' shall be given its ordinary dictionary meaning 'to interlock or cause to interlock.'" *Eaton Corp. v. Parker-Hannifin Corp.*, 2003 U.S. Dist. LEXIS 401 (D. Del., Jan. 10, 2003). 1408

"engage to form a positive stop to" — "contact each other and prevent." *Phoenix Closures, Inc. v. Silgan Plastics Corp.*, 2005 U.S. Dist. LEXIS 28825 (N.D. Ill., Nov. 15, 2005). 1409

"determining when the cruise control is engaged" — "one of ordinary skill in the art would know that a cruise control feature on a manual transmission vehicle could have six operational states: (1) activation switch off; (2) activation switch on; no vehicle speed set; (3) activation switch on and speed set, but the set speed is below a pre-programmed minimum set speed; (4) activation switch on and speed set above minimum, but operator pressed the clutch or the brake; (5) activation switch and speed set above minimum, but operator used throttle to exceed set speed; and (6) activation switch on, speed set above minimum, and operator neither presses brake or clutch, nor exceeds set speed through use of throttle. ... The cruise control is 'engaged,' i.e. controlling the vehicle speed, only in the final state." Caterpillar Inc. v. Detroit Diesel Corp., 961 F. Supp. 1249 (N.D. Ind. 1996).1415

"said lower end and said capturing bracket engaged by a fastener so as to remain engaged despite failure of said fastener" — "the lower end of the leg support and the capturing bracket are engaged by the fastener so that if the fastener fails to perform its function, the lower end of the leg support and the capturing bracket remain in place and the capturing bracket continues to hold the leg support." Forest Group, Inc. v. Bon Tool Co., et al., 2007 U.S. Dist. LEXIS 10487 (S.D. Tex., Feb. 15, 2007).1416 "The lower end of the leg support is inserted within the capturing bracket; a fastener connects the lower end and the capturing bracket to each other; and the lower end will remain within the capturing bracket even if the fastener breaks or fails." Warner Manufacturing Co. v. Armstrong, et al., 504 F. Supp. 2d 589 (D. Minn. 2007).1417

"engaged with" — "mean[s] any type of mechanical engagement capable of coming into contact, interlocking or meshing a drive means and transmission input or a transmission output and a brake." Stairmaster Sports/Medical Products, Inc. v. Groupe Procyle, Inc., et al., 1998 U.S. Dist. LEXIS 8228 (D. Del., May 20, 1998).1418

"engagement assembly" — "the structure that securely attaches to a curb side container." Heil Co. v. Curotto Can Co., 2004 U.S. Dist. LEXIS 23618 (N.D. Cal., Nov. 16, 2004).1419

"engagement position" — "the location that the detent extends, projects or protrudes to by the solenoid by entry of the combination so that the detent can be contacted by the detent engaging member on the cam." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997).1420

"the engagement surface of the tension member" — "the portion of the tension member that comes into contact with the corresponding surface of the sheave." Schindler Elevator Corp. v. Otis Elevator Co., 2010 U.S. Dist. LEXIS 2463 (D.N.J., Jan. 13, 2010).1421

"engagement tab" — "a locking tab or structure on the inside surface of the side walls that assists in the coupling of a hook arm to the connector." Robert Bosch, LLC. v. Pylon Manufacturing Corp., 2010 U.S. Dist. LEXIS 30451 (D. Del., Mar. 30, 2010).1422

"an upper portion of the height of the band extends above the upper edge of the pants or skirt and engages against the torso" — "an upper portion of the height of the band extends above the upper edge of the pants or skirt and engages against the torso; but the band need not be in direct contact with the woman's skin." Ingrid & Isabel, Inc. v. Baby be Mine, LLC, 2009 U.S. Dist. LEXIS 33649 (N.D. Cal., Apr. 3, 2009).1425

"the second end of the partition mount engages the floor" — "encompass a method where a sheet of paper or curtain is tucked between the partition mount and the floor." Zipwall, LLC v. Fastcap, LLC, 482 F. Supp. 2d 141 (D. Mass. 2007).1426

"engaging" — "coming together to form a seal." Felix v. American Honda Motor Co., et al., 562 F.3d 1167 (Fed. Cir. 2009).1427

"engaging" — "to come into contact with." Primos, Inc. v. Hunter's Specialties, Inc., et al., 451 F.3d 841 (Fed. Cir. 2006).1428

"engaging" — "fitting together." AcroMed Corp. v. Sofamor Danek Group, Inc., et al., 253 F.3d 1371 (Fed. Cir. 2001).1429

"a pusher member having ... a pair of flanges engaging said rails" — "a pusher member having two similar or corresponding projecting rims or edges that interlock or connect with the rails for the purpose of constraining and guiding the pusher member along the rails." RTC Industries, Inc. v. William Merit & Associates, Inc., 2004 U.S. Dist. LEXIS 13288 (N.D. Ill., Jul. 15, 2004).1432

"capable of engaging the support surface" — "while the word 'engaging' includes penetration, it does not require penetration." Bidco, Inc. v. Plastic Lumber Co., 2004 U.S. Dist. LEXIS 31066 (N.D. Cal., Nov. 10, 2004).1434

"to enhance traction"; "enhanced lateral stability and traction" — "for the outward angulation of the tooth traction surface to provide more lateral stability and traction than prior art teeth that are not outwardly angled." Greenkeepers of Delaware, LLC, et al. v. Softspikes, LLC, et al., 2010 U.S. Dist. LEXIS 10670 (E.D. Pa., Feb. 5, 2010).1435

"an elongated cylindrical body having a pair of enlarged diameter cylindrical end portions" — "a portion of each end of the elongated body has a larger diameter than the portion of the body containing the middle point of the body." Tenneco Automotive Operating Co. Inc. v. Visteon Corp., 2005 U.S. Dist. LEXIS 12738 (D. Del., Jun. 28, 2005).1436
"enlarged display portion" — "requires some kind of protrusion, bump, or protuberance on the hanger hook." Carlisle Plastics, Inc. v. Spotless Enterprises, Inc., et al., 984 F. Supp. 646 (E.D.N.Y. 1997). The district court construed the term 'enlarged display portion,' in accordance with the dictionary definition of the term 'enlarged,' to mean a display portion that is 'larger or greater than that formerly, usually, or normally present.' ... The district court's claim construction was correct." Id., 1999 U.S. App. LEXIS 937 (Fed. Cir., Jan. 26, 1999) (unpublished).  

"enlarged head" — "a head with a diameter larger than the diameter of the shank." Cross Medical Products, Inc. v. Medtronic Sofamor Danek, Inc., et. al., 2005 U.S. Dist. LEXIS 6545 (C.D. Cal., Apr. 8, 2005).  

"first enlarged interior diameter" — "a portion of the interior surface of the female end of the pipe which has an interior diameter greater than the predetermined interior diameter." CertainTeed Corp. v. Modern Products Industries, Inc. et al., 2005 U.S. Dist. LEXIS 7638 (E.D. Pa., May 2, 2005).  

"entire outer surface" — "mean[s] that the outer surface of the body of the lure must be completely covered by the coating. In other words, no part of the external surface may be left uncovered by the resin coating." Nichols, et al. v. Strike King Lure Co., et al., 2000 U.S. Dist. LEXIS 15781 (N.D. Tex., Oct. 25, 2000).  

"the envelope defined by the underwater cable" — "this Court is unable to assign any meaning or construction to this particular phrase as it is used in the claim in question. While Ion may be correct that this phrase was intended to refer to the physical boundary of the underwater cable, nothing in the claim language, the specification, or the prosecution history makes this meaning clear or even readily apparent. Moreover, even taking into account the many ways in which the term 'envelope' may ordinarily be understood, the Court is unable to point to any extrinsic evidence that would make the meaning of this term more clear. The Court therefore agrees with WG's expert that the meaning of this phrase cannot be determined with any degree of specificity or definiteness." WesternGeco LLC v. ION Geophysical Corp., 2010 U.S. Dist. LEXIS 71875 (S.D. Tex., Jul. 16, 2010).  

"epidermis" — "epidermis, as used throughout Claim 6, simply means 'skin,' and does not refer only to the skin's top layer." Young v. Lumenis, Inc., 2005 U.S. Dist. LEXIS 27792 (S.D. Ohio, Nov. 1, 2005).
"equal flexion and extension gaps" — "merely describes a purpose of the invention claimed in the '885 patent and does not act as structural limitation on the claimed invention." Depuy Orthopaedics, Inc. v. Androphy, et al., 2000 U.S. Dist. LEXIS 661 (N.D. Ill. 2000). 1448

"discrete facets being identically shaped and having equal surface areas"; "extension member facets being equal in surface area" — "discrete facets being identically shaped and having equal surface areas, without regard to negligible variances in surface area caused by indented indicia"; "extension member facets being equal in surface area, without regard to negligible variances in surface area caused by indented indicia." Bowling v. Hasbro, Inc., 490 F. Supp. 2d 262 (D.R.I., May 29, 2007). 1449

"fills essentially completely" — "fills all of or almost all of the cavity adjacent to the opening to prevent fluid from leaking between the seal and the wall structure." ICU Medical, Inc. v. RyMed Technologies, Inc., 2009 U.S. Dist. LEXIS 112546 (D. Del., Dec. 3, 2009). 1452

"positioned essentially in said air duct constructed portion" — "the Court finds that 'essentially' means: In or partially in." Dow Chemical Co. v. Mee Industries, et al., 2001 U.S. Dist. LEXIS 26229 (M.D. Fla., Aug. 17, 2001). 1454

"a structure that is essentially one piece" — "a structure that is basically, fundamentally, substantially, or virtually a single piece after being constructed or assembled with (1) screws and a waterproof glue type compound, (2) plastic, or (3) their equivalents." Rhino Associates, L.P. v. Berg Manufacturing and Sales Corp., et al., 482 F. Supp. 2d 537 (M.D. Pa. 2007). 1455

"essentially triangular cross-section" — "having a triangular or arrowhead shape in which a corner of the triangle or arrowhead has been cut off." A&E Products Group, L.P. v. Mainetti USA Inc., et al., 2002 U.S. Dist. LEXIS 24280 (S.D.N.Y., Dec. 28, 2002). 1456

"establishing continuous fluid communication between the interior drainage space of the basket and a treated water outlet conduit" — "to bring into existence or cause a stream of fluid without any interruptions breaking the stream into unconnected segments." Contech Stormwater Solutions, Inc. v. BaySaver Technologies, Inc., et al., 2007 U.S. Dist. LEXIS 71659 (D. Md., Sept. 25, 2007). 1457

"[T]he district court was on firm ground in ruling that the term evacuate refers to the removal of gases with a vacuum pump and does not encompass the use of an inert gas to push gases out of the chamber." Id., 401 F.3d 1340 (Fed. Cir. 2005). 1459
"evacuation" — "means removal by a vacuum pump, and does not include the use of inert gas to push the reactant gases out of the reaction space." ASM America, Inc. v. Genus, Inc., 2002 U.S. Dist. LEXIS 15348 (N.D. Cal., Aug. 15, 2002). We therefore agree with the district court's definition of evacuation. Id., 401 F.3d 1340 (Fed. Cir. 2005).

"evaluating" — "encompasses determining for each bill whether that bill's value can be determined." Cummins-Allison Corp. v. Glory, Ltd., et al., 457 F. Supp. 2d 843 (N.D. Ill. 2006).

"excessive manual force" — "the ordinary meaning of the word 'excessive' is sufficiently clear and definite for one skilled in the art." Sienna, LLC v. CVS Corp., et al., 2007 U.S. Dist. LEXIS 2 (S.D.N.Y., Jan. 3, 2007).

"exerting force on said layers with said inflated balloon" — "requires exerting force with the inflated balloon, other than by balloon inflation, to cause dissection beyond that caused by the step of balloon inflation to create the open working space, such as by the act of moving the inflated balloon." General Surgical Innovations, Inc. v. Origin Medsystems, Inc., 1998 U.S. Dist. LEXIS 22958 (N.D. Cal., May 15, 1998).

"exit station" — "a portion of the processing machine where wafers are moved after processing and from which said wafers exit the processing machine." Nova Measuring Instruments, Ltd. v. Nanometrics, Inc., 2006 U.S. Dist. LEXIS 90736 (N.D. Cal., Dec. 1, 2006).

"expands to conform to the shape and diameter of the inner lumen" — "the fragmentation member in the 191 and 551 patents and the distal end in the 704 patent expands and adjusts to remain in contact with the inner lumen in three dimensions along its length and width." Johns Hopkins University, et al. v. Datascope Corp., 2007 U.S. Dist. LEXIS 38408 (D. Md., May 25, 2007).

"expelling the anchor member" — "mean[s] that the anchor member is forced out, ejected, driven out or dislodged from the 'hollow member.'" Smith & Nephew, Inc., et al. v. Biomet, Inc., et al., 2005 U.S. Dist. LEXIS 31723 (D. Or., Nov. 21, 2005).1475

"at least a portion of said data-encoded strip is exposed and displaced externally remote from a portion of said outer perimeter of said first panel in a direction substantially parallel to the plane of said first card" — "the second subparagraph of Claim 12 requires, at a minimum, that a portion of the magnetic strip on the card be open to view, and that this magnetic strip be parallel to one of the edges of the package." Barry Fiala, Inc. v. Card USA, Inc., 292 F. Supp. 2d 1009 (W.D. Tenn. 2003).1476

"exposing said food product to infrared energy" — "cannot mean 'exposing all of the food product to infrared energy.' The Court further finds that the term 'infrared energy' does not require construction." Unitherm Food Systems, Inc. v. V.H. Cooper & Co., Inc., 2010 U.S. Dist. LEXIS 55911 (N.D. Okla., Jun. 4, 2010).1477

"exposure" — "Based on the intrinsic evidence, the Court finds that the term 'exposure' is ambiguous." Gillette Co. v. Energizer Holdings, Inc., et al., 2005 U.S. Dist. LEXIS 34122 (D. Mass., Dec. 19, 2005).1478

"smoking the tuna meat at extra-low temperatures by exposure to the smoke cooled to between 0 ° and 5 ° C" — "means that the smoke has already been cooled to a specific temperature, namely, to between 0 ° and 5 ° C." Tuna Processors, Inc. v. Hawaii International Seafood, Inc., et al., 2007 U.S. Dist. LEXIS 77396 (D. Haw., Oct. 17, 2007).1479 "We agree with HISI that to infringe the '619 patent, a method must cool the smoke before the smoke contacts the tuna." Id., 327 Fed. Appx. 204 (Fed. Cir., Apr. 23, 2009) (unpublished).1480

"conductive rail being adapted to extend the length of the fixed device part" — "the context and word choice of the claim language itself establishes that 'extend the length' means the length of the fixed device part." Intamin, Ltd. v. Magnetar Technologies, Corp., 483 F.3d 1328 (Fed. Cir. 2007).1481

"extend[] transversely between said opposing surfaces of said side members" — "The plate members are arranged in a transverse direction to the side members such that the plate members extend from a point of contact with the surface of each of the two members that faces or looks toward the corresponding surface of the other side member." IKN, Inc. v. CemProTec GmbH, 2005 U.S. Dist. LEXIS 29134 (E.D. Pa., Nov. 22, 2005).1482

"each stud is extended over by one of the extensions, and can support that extension to prevent the auxiliary frame from moving downward relative to the primary frame" — "at least some portion of each of the extensions reaches above and across the corresponding stud, and each stud is capable, with direct contact, of maintaining the corresponding extension in position so as to keep it from falling, sinking or slipping and thus prevent the auxiliary frame from moving downward relative to the primary frame." Aspex Eyewear, Inc., et al. v. Miracle Optics, Inc., 2003 U.S. Dist. LEXIS 26355 (C.D. Cal., Feb. 14, 2003).1484

"a plurality of legs extending about at least one side surface" — "two or more legs extending about one or more side surfaces." Zipwall, LLC v. Fastcap, LLC, 482 F. Supp. 2d 141 (D. Mass. 2007).\footnote{1487}

"extending above a top surface of one of said side walls" — "mean[s] that the column or recess must extend beyond above the topmost surface of one of the said side walls as opposed to simply extending beyond any top surface." Rehrig Pacific Co. v. Norseman Plastics Ltd. Inc., 2003 U.S. Dist. LEXIS 27566 (C.D. Cal., Sept. 29, 2003).\footnote{1488}

"extending across and along"; "extends/extend along at least a portion of a length of the ... side of the housing" — "With respect to the use of 'extending along' and 'extends along' to describe the structural members of the housing, the terms provide the location of those structures with reference to the housing. That is, the two structures are located on either side of the housing, opposite each other and substantially parallel to each other, and span at least part of the length of the side of the housing. Similarly with respect to the spring-biased mechanism, 'extending across and along a top surface of the housing' means that the mechanism both traverses the housing and is located on the top of the housing, although not necessarily in direct contact with the surface of the housing." Insight Technology Inc. v. SureFire, LLC, 2006 U.S. Dist. LEXIS 11762 (D.N.H., Feb. 28, 2006).\footnote{1489}

"extending along said electrode so as to provide a path for arcing" — "I decline to adopt either of defendant's proposed interpretations of 'along.'" Thermal Dynamics Corp. v. TATRAS, Inc., 2004 U.S. Dist. LEXIS 24954 (D.N.H., Dec. 9, 2004).\footnote{1490}

"relatively stiff members extending along said pair of sides and said bottom of said case"; "a relatively stiff member extending along all said sides and said bottom"; "a relatively stiff member extending along said side edges of said briefcase and said bottom edge of said briefcase" — "requires that the stiff plastic member extend along the bottom and both sides of the case." SAB Technology, LLC v. Port Inc., 2006 U.S. Dist. LEXIS 46886 (D. Conn., July 12, 2006).\footnote{1491}

"extending alongside said flow diversion means" — "means that the extension tubes can extend on either opposite sides or the same side of the Y-connector." Mahurkar, et al. v. Arrow International, Inc., 160 F. Supp. 2d 927 (N.D. Ill. 2001).\footnote{1492}

"extending axially from the second opening to the distal end of said cylindrical tube" — "material to run continuously from the inlet opening through the tip." Mahurkar, et al. v. Arrow International, Inc., 160 F. Supp. 2d 927 (N.D. Ill. 2001).\footnote{1493}

"extending between" — "stretching from one object to another object." Tyco Healthcare Group LP v. Ethicon Endo-Surgery, Inc., 411 F. Supp. 2d 93 (D. Conn. 2006).\footnote{1494}

"extending between said guidewire and said distal tip" — "mean[s] that the connecting segment is not only 'between' the guidewire and the distal tip but that it also 'extends' from the guidewire to the distal tip." Regents of the University of California v. Micro Therapeutics, Inc., et al., 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007).\footnote{1495}
"extending distally of"; "extend distally of" — "extending [or extend] in a distal direction away from the proximal wall, without the necessity of being attached to the proximal wall."  B. Braun Melsungen AG, et al. v. Terumo Medical Corporation, et al., 2010 U.S. Dist. LEXIS 54480 (D. Del., Jun. 3, 2010).1496

"side portion extending in the longitudinal direction and extending downward from the first edge" — "a structure forming at least part of a lateral side of the ski which extends from a higher to a lower position from the second lateral edge of the snowmobile ski base."  Simmons, Inc. v. Bombardier Inc., et al., 328 F. Supp. 2d 1188 (D. Utah 2004).1497

"extending from" — "means to 'protrude' from a 'starting point.' However, the definitions of 'extending' or 'from,' separately or in combination do not require that whatever is 'protruding' from the 'starting point' be 'integral' or 'mechanically connected' to the 'starting point.'"  Duhn Oil Tool, Inc. v. Cooper Cameron Corp., 474 F. Supp. 2d 1148 (E.D. Cal., 2007).1498

"a first and second opposing faceplate, each said faceplate return extending from said central faceplate at approximately ninety degree angles from said faceplate" — "two faceplate returns extending from opposite ends of the faceplate, each of the faceplate returns forming an angle of approximately 90 degrees with the faceplate."  JVI, Inc. v. Universal Holdings, Inc., et al., 464 F. Supp. 2d 758 (N.D. Ill. 2006).1499

"a first and second flattening bend, said first flattening bend extending from said first opposing faceplate return and said second flattening bend extending from said second faceplate return" — "first and second flattening bends that extend from the opposing faceplate returns."  JVI, Inc. v. Universal Holdings, Inc., et al., 464 F. Supp. 2d 758 (N.D. Ill. 2006).1500

"base also extending in a lateral direction between a first edge and a second edge thereof" — "the structure which supports all of the other claimed structures of the snowmobile ski (base) extends the width of the snowmobile ski in a direction approximately perpendicular to the longitudinal direction between first and second edges of the base. The term 'edge' means the end or outermost lateral boundary of the snowmobile ski base."  Simmons, Inc. v. Bombardier Inc., et al., 328 F. Supp. 2d 1188 (D. Utah 2004).1502

"said lever extending in a semicircle around said gear" — "For the word 'semicircle' to have any meaning (i.e., to avoid reading this term entirely out of the patent), the lever must contain at least part of a circle."  Robert Bosch GMBH, et al. v. Japan Storage Battery Co., 223 F. Supp. 2d 1159 (C.D. Cal. 2002).1503

"extending laterally" — "means that bristles extend perpendicularly from the wire twig."  American Permahedge, Inc. v. Barcana, Inc., et al., 901 F. Supp. 155 (S.D.N.Y. 1995).1504 "We [] conclude that the 'extending laterally' limitation simply means extending from the side, with no limitations on the angle."  Id., 105 F.3d 1441 (Fed. Cir. 1997).1505

"a projection extending laterally from a top wall of the offset power box" — "the claimed 'projection' is formed integrally with a top surface of the offset power box. The projection extends laterally toward the trunking duct."  Panduit Corp. v. HellermannTyton Corp., 2004 U.S. Dist. LEXIS 15879 (N.D. Ill., Aug. 10, 2004).1506
"a fixed attachment extending laterally from the attachment plate at the top of the knife body in the implement plane" — "no claim construction is necessary." Kai U.S.A., Ltd. v. Buck Knives, Inc., 2006 U.S. Dist. LEXIS 24924 (D. Or., Feb. 9, 2006).  

"receivers extending outwardly" — "members of the face guard made of wire or other material that extend rearwardly from the main body of the face guard." Riddell, Inc. v. Schutt Sports, Inc., 2009 U.S. Dist. LEXIS 58961 (W.D. Wis., Jul. 10, 2009).

"extending outwardly" — "mean[s] that the lower ridge must project from the tongue." Pehr v. Rubbermaid, Inc., 87 F. Supp. 2d 1222 (D. Kan. 2000).

"extending over said slot" — "require[s] that the first constriction be 'above' the elongated slot." Sage Products, Inc. v. Devon Industries, Inc., 126 F.3d 1420 (Fed. Cir. 1997).

"the cavity extending parallel to and spaced outwardly from the plane of travel of the blade" — "this term is clear on its face, requiring no construction." Kai U.S.A., Ltd. v. Buck Knives, Inc., 2006 U.S. Dist. LEXIS 24924 (D. Or., Feb. 9, 2006).

"wires, including conductor wires from said light emitting source, extending through one of said housing walls" — "mean[s] that a continuous wire extends from the light source out through the housing wall." Helifix Limited v. Blok-Lok, Ltd., et al., 26 F. Supp. 2d 294 (D. Mass. 1998).

"wherein there is a push rod extending through the cavity and connecting the blade to the spring" — "a push rod that has a portion of its length in the cavity and another portion outside the cavity so as to transmit the force of the spring to the blade. The push rod connects the spring to the blade." Kai U.S.A., Ltd. v. Buck Knives, Inc., 2006 U.S. Dist. LEXIS 24924 (D. Or., Feb. 9, 2006).

"said groove extends along the outer circumference of the base end of said chuck sleeve" — "the ordinary meaning of the word 'along' does not require the groove to touch the outer surface of the chuck sleeve." Lyndex Corp. v. Heartech Precision, Inc., et al., 2004 U.S. Dist. LEXIS 24 (N.D. Ill., Jan. 5, 2004).
"wherein said pin extends into said security slot" — "the term 'extends' is an intransitive verb as it is used in the '794 patent. [] Nothing in the claim term 'wherein said pin extends into said security slot' suggests that the verb 'extends' is active or contains a temporal scope." ACCO Brands, Inc., et al. v. PC Guardian Anti-Theft Products, Inc., et al., 2007 U.S. Dist. LEXIS 92052 (N.D. Cal., Dec. 5, 2007).1520

"a magnet protector that extends outwardly from an exterior of said tool body." — "each magnet protector extends beyond the outer circumference of the tool body in such a manner as to create an uneven surface on the exterior of the tool." Rattler Tools, Inc. v. Bilco Tools, Inc., et al., 2007 U.S. Dist. LEXIS 49124 (E.D. La., July 6, 2007).1521

"extension arm" — "include both the extension device and the casting which locks the extension arm in various positions." Free Motion Fitness, Inc. v. Cybex International, Inc., et al., 311 F. Supp. 2d 1297 (D. Utah 2003).1525

"two side portion extensions" — "those portions of the primary spectacle frame which extend outwardly and rearwardly of the lenses or lens rims (if provided) to pivotally connect to the legs." Aspex Eyewear, Inc., et al. v. Miracle Optics, Inc., 2003 U.S. Dist. LEXIS 26355 (C.D. Cal., Feb. 14, 2003).1526

"external threads" — "helical or spiral ribs or grooves on the outer surface of the male end of the PVC pipe which mate with corresponding helical or spiral ribs or grooves disposed within the interior surface of the female end of a similar adjacent pipe." CertainTeed Corp. v. Modern Products Industries, Inc. et al., 2005 U.S. Dist. LEXIS 7638 (E.D. Pa., May 2, 2005).1529

"externally mounted intercooler" — "a heat exchanger located outside the casing containing the low and high pressure compressors." Rice v. Honeywell International, Inc., et al., 2006 U.S. Dist. LEXIS 89235 (E.D. Tex., Nov. 21, 2006).1530
"extinguishing a fire" — "This is a rare case where the same claim term in two related patents does not share the same meaning. ... The Court construes 'extinguishing a fire,' as used in the '336 patent, to mean 'ceasing the burning of combustible material, as shown by mine surface temperatures of 90 degrees Fahrenheit or less.' The Court construes 'extinguishing a fire,' as used in the '965 patent, to mean 'ceasing the burning of combustible material.'" US Foam, Inc, et al. v. On Site Gas Systems, Inc., 2010 U.S. Dist. LEXIS 79286 (E.D. Tex., Aug. 3, 2010).

"detachable coil is extremely soft" — "The material composition, dimension and other configuration of the coil make it exceedingly deformable to the interior shape of the cavity with substantially no influence from any inherent shape." Regents of the University of California v. Micro Therapeutics, Inc., et al., 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007).

"eyeglass contacting member having an encircling portion adapted to encircle a part of said frame of said pair of eyeglasses to enable the temples of the frame to be selectively [opened and closed]"; "eyeglass contacting member having an attaching portion attachable to a portion of said frame of said eyeglasses" — "the district court erred by applying § 112, P 6 to these claim elements." Al-Site Corp., et al. v. VSI International, Inc., et al., 174 F.3d 1308 (Fed. Cir. 1999).

"eyeglass hanger member" — "the 'eyeglass hanger member' elements in the claims of both the '345 and the '726 patents do not invoke § 112, P 6." Al-Site Corp., et al. v. VSI International, Inc., et al., 174 F.3d 1308 (Fed. Cir. 1999).

"eyelet strip" — "a part of each flap that is comparatively long and narrow and has two or more eyelets." Mueller Sports Medicine, Inc. v. Core Products International, Inc., 2003 U.S. Dist. LEXIS 24617 (W.D. Wis., Mar. 3, 2003).

"facial features" — "pertaining to the face, including, but not limited to, a mouth feature and a nose feature, as shown in Figures 5 through 9 of the '972 patent." Hoodlums Welding Hoods, LLC v. Redtail International, LLC, 2009 U.S. Dist. LEXIS 100356 (E.D. Mo., Oct. 28, 2009).

"facilitate positioning" — "means only that the opening be large enough to 'allow' a spill collector to be positioned in the hole," Franklin Electric Co., Inc. v. Dover Corp., 2007 U.S. App. LEXIS 5083 (Fed. Cir., Mar. 1, 2007).

"facing": "facing one another" — "with the face oriented toward"; "with the faces oriented towards one another." ADC Telecommunications, Inc. v. Switchcraft, Inc., 2005 U.S. Dist. LEXIS 19593 (D. Minn., Sept. 9, 2005). 1542

"fastening element", "fastening part" — "an element that provides the capability for attaching firmly or fixing securely so as to be supported, one component to another component." LG Philips Co., Ltd. v. Tatung Co., et al., 2007 U.S. Dist. LEXIS 43557 (D. Del., June 15, 2007). 1544

"fastening hole" — "an opening, together with the material defining the opening, that provides the capability for attaching firmly or fixing securely so as to be supported, one component to another." LG Philips Co., Ltd. v. Tatung Co., et al., 2007 U.S. Dist. LEXIS 43557 (D. Del., June 15, 2007). 1545

"fastening tab" — "other parts of the shoe -- including the counter pocket, the shoe upper, the upper lining and the sock lining -- cannot be considered part of the 'fastening tab.'" Maxwell v. J. Baker, Inc., et al., 875 F. Supp. 1371 (D. Minn. 1995). 1546 "[T]he court properly construed the claims to require the fastening tab to be a separate piece from the counter pocket lining or other inside shoe lining." Id., 86 F.3d 1098 (Fed. Cir. 1996). 1547

"feather angle mode" — "a control mode that attempts to set and maintain each streamer in a straight line offset from the towing direction by a certain feather angle." WesternGeco LLC v. ION Geophysical Corp., 2010 U.S. Dist. LEXIS 71875 (S.D. Tex., Jul. 16, 2010). 1549

"feed assembly" — "a structure at the free end of the screen that helps to guide the screen in the screen tracks." Larson Manufacturing Co. of S.D., Inc. v. AluminArt Products, Ltd., et al., 504 F. Supp. 2d 759 (D.S.D. 2007). 1550

"feeding" — "'feeding' and 'increasing' are not limited temporally and do not require the performance of acts on an ongoing or habitual basis. ... the Court interprets the term 'feeding' in claim 1 as not limited to using MSM for nutritional purposes." MSM Investments Co., LLC v. Carolwood Corp., et al., 70 F. Supp. 2d 1044 (N.D. Cal. 1999). 1552

"a female fastener" — "a structure, female in form, that receives a stud, male in form, which together along with other elements, secures the insert to the seat." American Seating Co. v. Freedman Seating Co., 450 F. Supp. 2d 765 (W.D. Mich. 2006). 1554
"ferromagnetic" — "a material that exhibits ferromagnetism, but, in the absence of an applied external magnetic field, is not magnetized." Fargo Electronics, Inc. v. Iris Ltd, Inc., 2005 U.S. Dist. LEXIS 34493 (D. Minn., Nov. 30, 2005).

"fiberfill" — "synthetic or man-made fiber, most commonly polyester, that has a specified linear density, cut length, and crimp making it ideal for use as a filling material in various products." AquaTex Industries, Inc. v. Techniche Solutions, 387 F. Supp. 2d 755 (M.D. Tenn. 2004). "[B]ased upon the teachings of the specification, one of ordinary skill in the textile manufacturing industry would understand that commercial 'fiberfill batting material' is made of synthetic or polyester fibers." Id., 419 F.3d 1374 (Fed. Cir. 2005).

"fibrous absorbent layer" — "no construction of the term 'fibrous absorbent layer' is necessary or appropriate." Fort James Corp. v. J.H. McNairn, Ltd., 2006 U.S. Dist. LEXIS 36528 (N.D. Ga., April 4, 2006).

"field and commutation portions" — "The terms field and commutation portion mean axially displaced portions of an integral rotor magnet. The commutation portion takes the place of separate commutation magnets, and provides a magnetic field to effect commutation. The field portion takes the place of separate field magnets, and provides a magnetic field to effect rotation of the magnet. The field magnet is comprised in part of substantially unmagnetized sectors of substantial angular length." Comair Rotron, Inc. v. Nippon Densan Corp., et al., 154 F. Supp. 2d 326 (D. Conn. 2001).

"fills essentially completely" — "fills all of or almost entirely a portion of the cavity adjacent to the opening to prevent fluid from leaking between the seal and the wall structure." ICU Medical, Inc. v. Alaris Medical Systems, Inc., 2006 U.S. Dist. LEXIS 96077 (C.D. Cal., July 17, 2006).

"film" — "a thin layer of material. A film may have voids, cracks, or other discontinuities." OKI Electric Industry Co., Ltd. v. LG Semicon Co., Ltd., et al., 1999 U.S. Dist. LEXIS 22625 (N.D. Cal., Jul. 19, 1999).

"filter"; "porous material" — "the claims, specification, and the prosecution history all consistently use 'an' or 'a' or refer to 'the filter.' Such references are not enough to limit the claims to a unitary structure." Atlantic Construction Fabrics, Inc., et al. v. Dandy Products, Inc., 64 Fed. Appx. 757 (Fed. Cir., Apr. 23, 2003) (unpublished).

"filter" — "a porous material through which the cleaning fluid is passed in order to trap particulate matter while allowing the cleaning fluid, hydrocarbons, and microorganisms to pass through." ChemFree Corp. v. J. Walter, Inc., et al., 2007 U.S. Dist. LEXIS 51677 (N.D. Ga., July 17, 2007).
"filter" — "because 'filter' is readily understood, the Court declines to construe the term as it."

"filter"; "filter element" — "Because the claim language is not limited by the specification and creates no ambiguity as to the meaning of 'filter' or 'filter element,' the Court declines to construe the terms." *Boston Scientific SciMed, Inc., et al. v. ev3 Inc.*, 502 F. Supp. 2d 931 (D. Minn. 2007). 1568

"filter assembly" — "a device consisting of parts through which a gas or fluid can flow, but which prevents passage of particles or impurities." *Aqua-Lung America, Inc. v. American Underwater Products, Inc., et al.*, 2009 U.S. Dist. LEXIS 18172 (N.D. Cal., Feb. 26, 2009). 1569

"filter bed"; "first particulate filter media" — "the trial court improperly construed the claim terms 'filter bed' and 'first particulate filter media' as requiring multiple layers." *RF Delaware, Inc. v. Pacific Keystone Technologies, Inc., et al.*, 326 F.3d 1255 (Fed. Cir. 2003). 1570

"filter element support" — "include[s] the upper and lower potting material, but not support from the top by a structure descending from the housing cap." *C. R. Bard, Inc. v. Medtronic, Inc.*, 1998 U.S. Dist. LEXIS 23197 (D. Del., May 7, 1998). 1571 "[W]e construe the 'filter element support' limitation as requiring a structural support for the filter element (not just potting material) that is centrally disposed with respect to the toroidal flow path, at the top of the filter element." *Id.*, 2000 U.S. App. LEXIS 15316 (Fed. Cir., Jun. 29, 2000). 1572

"filter support to support a filter to filter water entering the open top and exiting the drain opening" — "does not need to be construed." *WIMCO, LLC v. Lange Industries, Inc.*, 2007 U.S. Dist. LEXIS 92502 (D. Minn., Dec. 14, 2007). 1574

"a filter supported in the basin below a top opening of the open top receptacle" — "a filter supported in the basin below the open top of the receptacle." *WIMCO, LLC v. Lange Industries, Inc.*, 2007 U.S. Dist. LEXIS 92502 (D. Minn., Dec. 14, 2007). 1575

"filtering" — "is a broadly-defined process including not only passing a gas or liquid through a porous material, but also the cooling and settling of the smoke." *Tuna Processors, Inc. v. Hawaii International Seafood, Inc., et al.*, 2007 U.S. Dist. LEXIS 77396 (D. Haw., Oct. 17, 2007). 1577

"finger" — "a member that projects from a first object to effect, direct, or restrain motion when brought into contact with a second object. A finger may be formed integrally with the first object or may be fitted thereto or therethrough." *TBC Consoles, Inc. v. Forecast Consoles, Inc.*, 2009 U.S. Dist. LEXIS 91653 (S.D.N.Y., Sep. 28, 2009). 1580
"finger placement indicia" — "Nothing in the claim limits its scope to both right and left handed indicia."  

"finger plate" — "the Court declines to define this unambiguous term."  

"plurality of fins extending inwardly from the casing interior" — "two or more long, narrow longitudinally-extending locating surfaces."  

"first"; "second" — "define the position, in the path of ion travel, of the elements in the invention relative to the similar elements also mentioned in the claims. Thus, 'first' is construed to mean 'an element.' 'Second' is construed to mean 'an element coming after, in the path of ion travel, the first such element.'"  

"a first and a second foot link, each having a foot engaging portion" — "a first and a second foot link, each having a foot engaging portion."  

"first and second impervious fluoropolymeric end caps" — "means that each end cap is a unitary structure that is applied to respective unsealed ends of a filter arrangement."  

"first and second longitudinal directions" — "mean simply opposing directions, and not anything more specific, such as 180-degree angles."  

"first and second position relative to the primary display" — "two different positions relative to the primary display."  

"first cylindrical stage" — "the horizontal connecting wall referred to in Claim 3 is part of the first cylindrical stage of the two-stage recess. This limited construction of 'first cylindrical stage' as including the horizontal connecting wall is also consistent with the claims of the '884 Patent. For the purpose of Defendants' Motion for Summary Judgment, it is unnecessary to further define the term 'first cylindrical stage.'"  

"first frame"; "second frame" — "the structure at the back of the flat-panel display device that together with the second frame structure sandwiches at least the flat display panel"; "the structure at the front of the flat-panel display device that together with the first frame structure sandwiches at least the flat display panel."  

[i] "first layer"; [iii] "second layer" — [i] "a first operative layer"; [ii] "second layer."  
"first location on said wall" — "the point on the wall of the can end that becomes the lowermost extent of the double seam." Crown Packaging Technology, Inc., et al. v. Rexam Beverage Can Co., 486 F. Supp. 2d 366 (D. Del. 2007).  

"first pivot point" — "the first chronological point about which the arm turns." Free Motion Fitness, Inc. v. Cybex International, Inc., et al., 311 F. Supp. 2d 1297 (D. Utah 2003).  

[i] "first portion"; [ii] "second portion" — [i] "a part of the whole, which is less than the whole, and is distinguishable from the 'second portion.'"; [ii] "a part of the whole, which is less than the whole, and is distinguishable from the 'first portion.'" Burns, Morris & Stewart L.P. v. Endura Products, Inc., 2005 U.S. Dist. LEXIS 46839 (E.D. Tex., May 11, 2005).  

"annular inner surface having at least a first portion extending inwardly and upwardly" — "the 'first portion extending inwardly and upwardly' ... must itself be annular." CCPI Inc. v. American Premier, Inc., 966 F. Supp. 276 (D. Del. 1997).  

"first position"; "second position" — "a first position means 'an initial position of a liquid crystal display unit' and a 'second position' means 'the position determined by reference to the angle of rotation between the first and second position.'" LG Display Co., Ltd. v. AU Optronics Corp., et al., 2010 U.S. Dist. LEXIS 12969 (D. Del., Feb. 16, 2010).  

"first pressure"; "first ram pressure"; "second pressure"; "third pressure" — "the terms are used to denote the relative order of the steps -- that is, their order vis-a-vis each other." Leighton Technologies LLC v. Oberthur Card Systems, S.A., 358 F. Supp. 2d 361 (S.D.N.Y. 2005).  

[i] "first region"; [ii] "second region"; [iii] "third region" — [i] "area or region defined by the blades of the bit, located generally on the center of the bit face or on the leading end of the bit radially closest to the centerline or longitudinal axis of the drill bit body, labeled 226 in Fig. 10 of the '249 Patent and Figs. 10, 12, and 13 of the '715 Patent'; [ii] "area or region defined by the blades of the bit, located generally radially distant or remote from the centerline or longitudinal axis of the drill bit body between the first region and the outer region at the maximum or outermost diameter of the face or leading end of the bit, labeled 228 in Fig. 10 of the '249 Patent and Figs. 10, 12, and 13 of the '715 Patent'; [iii] "area or region, if any, defined by the blades of the bit, located generally radially in between the first and second regions, labeled 226' in Figs. 12 and 13 of the '715 Patent." Reedhycalog UK, Ltd, et al. v. Baker Hughes Oilfield Operations, Inc., et al., 2007 U.S. Dist. LEXIS 76125 (E.D. Tex., Oct. 12, 2007).  

"a first rigid frame positioned at one end of said container" [and] "a second rigid frame positioned at the other end of said container" — "a separate skeletal structure designed to shape or support that is made up of parts fitted or joined together. The front frame must help support the weight of the container body." Heil Co. v. McNeilus Truck, et al., 1999 U.S. Dist. LEXIS 23371 (N.D. Ala., Aug. 5, 1999).
"first stitch"; "second stitch" — "the Court ... construes the term 'first stitch' to mean 'one stitch' and the term 'second stitch' to mean 'another stitch after the first stitch, but not necessarily the next stitch after the first stitch.' " Taltech Ltd. v. Esquel Enterprises Ltd., 410 F. Supp. 2d 977 (W.D. Wash. 2006). 1602

"fixation-resistant surface finish" — "the external peripheral surface finish must (i) be a smooth finish that comprises a polished finish, and (ii) be for the purpose of maintaining the distal tip unaffixed to the femur. The claim limitation language does not require that the surface actually be polished or 'very' smooth; only that it constitutes ('comprises') a polished surface." Stryker Corp., et al. v. Intermedics Orthopedics, Inc., 891 F. Supp. 751 (E.D.N.Y. 1995). 1606

"a first fixation system for fastening the plate and a first portion of the spinal column in a fixed position"; "a second fixation system for fastening the plate and a second portion of the spinal column in a translatable position" — "The[se] two claim limitations are means-plus-function limitations." Cross Medical Products, Inc. v. Medtronic Sofamor Danek, Inc. et. al., 2005 U.S. Dist. LEXIS 6566 (C.D. Cal., Apr. 8, 2005). 1607

"fixed" — "the term 'fixed' requires only that the console be rigidly secured to its two adjacent recliners." Gentry Gallery, Inc. v. Berkline Corp., 134 F.3d 1473 (Fed. Cir. 1998). 1608

"fixed" — "While it may be possible that the invention may allow for a base element that is securely fastened into the neck of the flask, if it is crimped around the neck as described above, it is not a requirement of the invention, and is certainly not required in the recitation of claim 12." Produits Berger S.A., et al. v. Schemenauer, et al., 2007 U.S. Dist. LEXIS 10294 (E.D. Tex., Feb. 14, 2007). 1609

"fixed handgrip on the end of the handlebar" — "a separate handgrip situated over a handlebar, and not a part of the handgrip space on the handlebar itself." SRAM Corp. v. AD-II Engineering, Inc., 465 F.3d 1351 (Fed. Cir. 2006). 1611

"a ... conical extension fixed to one end thereof" — "The court finds that terms 'fixed', 'fastened', and 'securely fastened' are synonyms for purposes of claim construction in regard to this limitation." Minco, Inc. v. Combustion Engineering, Inc., 903 F. Supp. 1204 (E.D. Tenn. 1995). 1613

"snowplow blade fixed to the A-frame" — "does not need construction because its plain and ordinary meaning is easily discernible from the claim language." Douglas Dynamics, LLC v. Buyers Products Co., 2010 U.S. Dist. LEXIS 18592 (W.D. Wis., Mar. 2, 2010). 1614

"fixed upon a solid support according to an array comprising discrete regions" — "attached or linked to a surface of a solid support." Eppendorf AG, et al. v. Nanosphere Inc., 2010 U.S. Dist. LEXIS 69072 (D. Del., Jul. 12, 2010). 1615

"fixedly attached" — "bands are connected to the strand by the manufacturer, at predetermined points selected by the manufacturer, with an intended degree of permanence that precludes a necklace wearer from (a) adding bands to a strand, (b) removing bands from a strand, or (c) in any way adjusting the bands' location along the strand, which in turn restricts the location of keepers." Pandora Jewelry, LLC v. Chamilia, LLC, 2007 U.S. Dist. LEXIS 74092 (D. Md., Sept. 27, 2007). 1617

"flange" — "a projecting rib or rim for attachment to another object." Great Dane Limited Partnership v. Stoughton Trailers, LLC, et al., 2009 U.S. Dist. LEXIS 119573 (M.D. Ga., Dec. 23, 2009). 1620

"flange" — "a raised or projecting edge." Waner v. Ford Motor Co., 331 F.3d 851 (Fed. Cir. 2003). 1621

"flange" — "a projecting rim, ring, collar, or edge attached to a structure to provide additional strength, stiffness, or supporting area or to provide a place for attachment of other objects." Stant Manufacturing, Inc. v. Gerdes, GmbH, 2004 U.S. Dist. LEXIS 27704 (S.D. Ind., Sept. 27, 2004). 1622

"the flanges are located behind the studs to further secure the auxiliary frame to the primary frame" — "the flanges are located behind the studs to further secure the auxiliary frame to the primary frame, either through contact or magnetic attraction between the magnetic materials within the flanges and studs." Chic Optic, Inc., et al. v. E'Lite Optik, Inc., 524 F. Supp. 2d 794 (N.D. Tex. 2007). 1624
"flank"; "flank region" — "region defined by the blades of the bit, located radially between the nose and the gage regions, labeled 234 in Fig. 10 of the '249 and '715 Patents." Reedhycalog UK, Ltd, et al. v. Baker Hughes Oilfield Operations, Inc., et al., 2007 U.S. Dist. LEXIS 76125 (E.D. Tex., Oct. 12, 2007).1625

"flat" — "having a surface which is 'horizontal or nearly so without significant curvature or inclination and without noteworthy elevations or depression,' level, smooth, or even." Craig v. Foldfast, Inc., et al., 487 F. Supp. 2d 1364 (S.D. Fla. 2007).1628

"flat" — "having a smooth or even surface, whether horizontal or not." Abraskin v. Entrecap Corp., 55 F. Supp. 2d 224 (S.D.N.Y. 1999).1629

"flat apex" — "an apex that is not curved or rounded." Medtronic Vascular, Inc., et al. v. Abbott Cardiovascular Systems, Inc., et al., 2007 U.S. Dist. LEXIS 95430 (N.D. Cal., Dec. 21, 2007).1631

"flat car" — "a freight car having a flat floor or deck laid on the underframe, with no sides, ends or roof, designed for handling commodities not requiring protection from the weather." National Steel Car, Ltd. v. Canadian Pacific Railway, Ltd., et al., 254 F. Supp. 2d 527 (E.D. Pa. 2003).1632

"a base plate with a flat leading edge at forward end of the channeling structure" — "This court ... interprets a 'flat' surface to mean 'relatively smooth or even.'" Sanders Brine Shrimp Co. v. Bonneville Artemia International, Inc., 970 F. Supp. 892 (D. Utah 1997).1635

"flat panel display device" — "[a] display device having at least a flat display panel sandwiched by the first and second frames." LG Philips Co., Ltd. v. Tatung Co., et al., 2007 U.S. Dist. LEXIS 43557 (D. Del., June 15, 2007).1636

"flat side walls" — "means that the tube structure is flat, as the specification states, and does not prohibit the presence of fins, webs, or other attachments to either the interior or exterior surfaces." Modine Manufacturing Co. v. United States International Trade Commission, et al., 75 F.3d 1545 (Fed. Cir. 1996).1637
"the compound in the region of reduced thickness has a substantially uniform, flattened configuration" — "a straightforward interpretation of this claim requires the slope or inclination of the tube to be noticeably reduced in this particular region, so that the surface of the tube (and the compound within it) becomes more horizontal and even." Dap Products, Inc. v. Sasheco, Inc., 1996 U.S. Dist. LEXIS 22529 (S.D. Ohio, July 17, 1996). 1638

"flattening and applying the tissue flap to a recipient area larger than the area of the separated layer" — "smoothing and applying the differentially expanded tissue flap to a recipient area larger than the area of separated tissue." Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006). 1639

"flexible" — "Webster's Dictionary defines 'flexible' as 'pliant.' 'Pliant' is synonymous with 'pliable,' meaning 'supple enough to bend freely or repeatedly without breaking.' This definition is consistent with the term's usage in the patent." Innovative Design Enterprises, Inc. v. Circulair, Inc., 1997 U.S. Dist. LEXIS 12799 (N.D. Ill., Aug. 20, 1997). 1643

"flexible and resilient strip" — "one made out of a material that at the time of the invention was known to be capable of bending and then returning to its original shape and position." Alloc, Inc., et al. v. Pergo, LLC, 2009 U.S. Dist. LEXIS 62881 (E.D. Wis., Jul. 2, 2009). 1644

"flexible cell" — "an arrangement of structural elements that defines an enclosed space. The cells must be substantially flexible prior to expansion of the stent and substantially rigid after expansion of the stent. ... 'rigid' as used in my construction of 'flexible cell' means 'able to hold open the blood vessel at the desired inner diameter.'" Medinol Ltd. v. Guidant Corp., et al., 417 F. Supp. 2d 280 (S.D.N.Y. 2006). 1645

"flexible compensating member or flexible link" — "a structural element that is flexible with respect to the stent's longitudinal axis and must be aligned along the longitudinal axis of the stent. A 'flexible compensating member or flexible link' must connect adjacent cells, but the physical connection need not be made at points directly opposite each other." Scimed Life Systems, Inc., et al. v. Johnson & Johnson, 225 F. Supp. 2d 422 (D. Del. 2002). 1646

"a single flexible connecting device secured to the free end of said elongate member" — "As the Court has determined that § 112 P 6 does not apply, and the words of the phrase are commonly understood, the Court does not believe that 'flexible connecting device' requires any additional construction." Robinson v. Advanced Decoy Research, Inc., et al., 519 F. Supp. 2d 1087 (S.D. Cal. 2007). 1647
"by at least one flexible connector member disposed between adjacent grafts" — "Flexible' means capable of being bent or flexed. ... A 'connector member' is a structure disposed or particularly arranged between adjacent grafts in order to join them together. ... there is no requirement in the claim language that each individual graft be flexible, only that the connector member be flexible." Cordis Corp., et al. v. Advanced Cardiovascular Systems, Inc., et al., 1998 U.S. Dist. LEXIS 11342 (D. Del., Jul. 17, 1998). [A]gain, it is the connector member and not the adjacent structures which must provide flexibility." Id., 1999 U.S. Dist. LEXIS 387 (D. Del., Jan. 15, 1999).

"flexible diaphragm" — "we conclude that the patentee limited the term 'flexible' to encompass a physical property of the diaphragm to flex or give when the hovercraft encounters obstacles." McCreary, et al. v. United States, 1997 U.S. App. LEXIS 12063 (Fed. Cir., May 27, 1997) (unpublished).

"flexible element" — "a portion of the valve that is capable of being bent, usually without breaking." ICU Medical, Inc. v. B. Braun Medical, Inc., 344 F. Supp. 2d 663 (N.D. Cal. 2004).

"plate ..., which is flexible enough to be wound around the inner tube" — "a broad, thin piece of material that is sufficiently capable of bending that it can be wound around the inner tube without cracking or breaking." ITP, Inc., et al. v. BP Corp. North America, Inc., 2005 U.S. Dist. LEXIS 39078 (S.D. Tex., May 2, 2005).

"flexible joints between the units" — "a point or position in the interval or position separating the floatation units of the dock, which point or position is capable of bending or flexing." Ocean Innovations, Inc., et al. v. Archer, et al., 145 Fed. Appx. 366 (Fed. Cir., Aug. 19, 2005) (unpublished).

"flexible joint between the units" — "a point or position in the interval or position separating the floatation units of the dock, which point or position is capable of bending or flexing." Ocean Innovations, Inc. v. Archer, et al., 483 F. Supp. 2d 570 (N.D. Ohio 2007).

"flexible link" — "a structural element connecting adjacent cells that is flexible and aligned with respect to the stent's longitudinal axis." Medinol Ltd. v. Guidant Corp., et al., 2004 U.S. Dist. LEXIS 19705 (S.D.N.Y., Sept. 30, 2004).

"flexible pad" — "an object or base, where such object or base is capable of being noticeably flexed with ease, including, among other things, hand-held game pad controllers that are capable of being noticeably flexed with ease." Thorner, et al. v. Sony Computer Entertainment America LLC, et al., 2010 U.S. Dist. LEXIS 100410 (D.N.J., Sep. 22, 2010).

"flexible plate" — "a smooth, usually nearly flat, and relatively thin piece of metal or other material that is bendable." Akeva L.L.C. v. Adidas America, Inc., 2005 U.S. Dist. LEXIS 11213 (M.D.N.C., May 17, 2005).
"flexible wall means defining a fluid impervious chamber" — "a pliable barrier that demarcates an enclosed space and does not allow fluids to pass through." Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006). 1660

"flexible web" — "a flat layer of elastic material." Motorola, Inc. v. VTech Communications, Inc., et al., 2009 U.S. Dist. LEXIS 59226 (E.D. Tex., Jul. 6, 2009). 1661

"flexibly coupled to the carrier portion" — "the key caps are coupled to the carrier portion so that the key caps flex in relation to the carrier portion when pressed." Motorola, Inc. v. V Tech Communications, Inc., et al., 2009 U.S. Dist. LEXIS 59226 (E.D. Tex., Jul. 6, 2009). 1662

"flexing" — "The district court's construction of 'flexing' as 'a generalized combination of cantilever bending and bowing about the general area of the base or base end' is consistent with the ordinary and customary meaning of 'flexing,' which is 'bending.' Because Bridgeport has not established that the district court's construction is in error based on the claim language, the written description, the prosecution history, or the prior art, we decline to disturb that construction on appeal." Arlington Industries, Inc. v. Bridgeport Fittings, Inc., 345 F.3d 1318 (Fed. Cir. 2003). 1663 "While confusing, the instruction appears to permit the jury to find that the 'capable of flexing' limitation is satisfied by mere bowing. To that extent the instruction was erroneous." Id. (Dyk, J., concurring-in-part, dissenting-in-part). 1664

"flight bars" — "The district court ... instructed the jury not to limit the term to the unitary structure found in the specification. We agree with that conclusion." Riverwood International Corp. v. R. A. Jones & Co., Inc., 324 F.3d 1346 (Fed. Cir. 2003). 1666

"flight shape" — "the shape of the projectile after it is propelled out of the weapon shell and during the course of its flight." Combined Tactical Systems, Inc. v. Defense Technology Corp. of America, et al., 426 F. Supp. 2d 140 (S.D.N.Y., April 4, 2006). 1667

"float equipment tubular" — "tube-shaped equipment typically positioned near or adjacent to the bottom of the tubular string (as defined herein), which contains valves." Davis-Lynch, Inc. v. Weatherford International, Inc., 2009 U.S. Dist. LEXIS 33414 (E.D. Tex., Apr. 20, 2009). 1668

"floatation unit" — "an airtight, individual structural constituent of a whole which is buoyed on water." Ocean Innovations, Inc. v. Archer, et al., 483 F. Supp. 2d 570 (N.D. Ohio 2007). 1670

"flooding said area of said mine shaft involved in the fire with water" — "covering the surfaces of the mine shaft that are on fire with water." US Foam, Inc., et al. v. On Site Gas Systems, Inc., 2010 U.S. Dist. LEXIS 79286 (E.D. Tex., Aug. 3, 2010). 1671

"floor" — "the layer of material which is placed on top of the underframe of a car and provides the direct support for the car contents." National Steel Car, Ltd. v. Canadian Pacific Railway, Ltd., et al., 254 F. Supp. 2d 527 (E.D. Pa. 2003). 1672

"floral holding material having an upper end, a lower end and an outer peripheral surface, the floral holding material being constructed of a material capable of receiving a portion of the floral grouping and supporting the floral grouping without any pot means" — "the terms of the phrase ... must be given their ordinary meaning." *Prima Tek II, L.L.C., et al. v. Polypap, S.A.R.L.*, 318 F.3d 1143 (Fed. Cir. 2003).  

"flowpath"; "flowpath ... between" — "the path taken by the cleaning fluid from the basin to the tank." *ChemFree Corp. v. J. Walter, Inc., et al.*, 2007 U.S. Dist. LEXIS 51677 (N.D. Ga., July 17, 2007).  

"flow channel" — "a portion of a mold cavity that is significantly thicker and wider than the adjacent mold cavity thickness for the purpose of directing the flow of injected plastic, and the claim further requires that the flow channel direct flow so that the plastic flows in the flow channel in at least one direction that is positively different from the predetermined general direction. Finally, 'significantly thicker and wider' means thick and wide enough relative to the adjacent cavity thickness to direct the flow of injected plastic as required by the claim." *Koito Manufacturing Co., Ltd, et al. v. Turn-Key-Tech, L.L.C., et al.*, 234 F. Supp. 2d 1139 (S.D. Cal. 2002).  

"soil/water flow channel" — "even though the word 'means' is absent from this claim element, it is nonetheless in means-plus-function form." *Maytag Corp. v. Whirlpool Corp.*, 95 F. Supp. 2d 888 (N.D. Ill. 2000).  

"flowing process fluids sequentially and continuously" — "means that process fluids flow past the wafers one after another and that the term 'continuously' requires an uninterrupted flow of the process fluids." *CFMT, Inc., et al. v. YieldUP International Corp.*, 92 F. Supp. 2d 359 (D. Del. 2000).  

"fluid communication" — "The term 'fluid' is an adjective describing the ability for the liquid and air to move within the catheter, and, depending on the pressure exerted by the amniotic fluid, communicate that pressure to the transducer. Thus, all this element requires is that the amniotic pressure has the means to communicate with the air pressure so that pressures are able to be transmitted from one end of the catheter to the other end." *Utah Medical Products, Inc. v. Clinical Innovations Associates, Inc., et al.*, 79 F. Supp. 2d 1290 (D. Utah 1999).

"secondary fuel filter means including an outlet in fluidic communication with said engine and an inlet in fluidic communication with said initial fuel filter means and located downstream therefrom for receiving fuel containing an undesired gas from said initial fuel filter means and separating substantially all of said undesired gas from fuel received therein prior to passage of said fuel through the outlet" — "The secondary fuel filter, which is located downstream from the initial fuel filter, includes an outlet in fluidic communication with the engine and an inlet in fluidic communication with the initial fuel filter. The secondary fuel filter receives fuel containing an undesired gas from the initial fuel filter and separates substantially all of said undesired gas prior to passage of the fuel through the outlet. Fluidic communication means that fluid can transfer from one element to another. Undesired gas is any undesired bubbles of entrained air or other vapors and gasses entrained or entrapped in the fuel." *Ekstam v. Ekstam*, 2006 U.S. Dist. LEXIS 12937 (E.D. Mo., March 7, 2006).  

"folded in half" — "is a clear and unambiguous description, and therefore requires no construction." *Craig v. Foldfast, Inc., et al.*, 487 F. Supp. 2d 1364 (S.D. Fla. 2007).
"a strip of shade material folded lengthwise to form an upper cell wall and a lower cell wall extending from a fold, each upper and lower cell wall having a free edge and a folded edge" — "Springs' interpretation would read 'folded' as a past participle, requiring that at some stage of manufacture a strip of shade material be folded to create one free edge and one folded edge. Plaintiffs would read 'folded' as an adjective, requiring merely that the final product contain a strip of material with a fold in it. ... The court concludes that neither claim contain[s] a process limitation. The court construes the claims-in-suit to extend to any cellular structure exhibiting the physical characteristics claimed therein." Newell Window Furnishings, Inc., et al. v. Springs Window Fashions Division, Inc., 1999 U.S. Dist. LEXIS 17273 (N.D. Ill., Oct. 7, 1999).1693

"foot and leg support at each side of the front wheel" — "a support that supports the leg by contacting the foot, ankle or leg, but does not necessarily require contact with the leg and overlapping at least a portion of the front wheel and on opposite sides of the plane defined by the front wheel." Brike International, Ltd. v. Invacare Corp., 2007 U.S. Dist. LEXIS 44003 (D. Or., June 14, 2007).1696

"foot portion" — "the lower part of a support pedestal." Lifetime Products, Inc. v. GSC Technology Corp., et al., 321 F. Supp. 2d 938 (N.D. Ill. 2004).1697

"footwell" — "within the patents, the term comprises a 'plurality of upwardly and forwardly slanted bracing surfaces' for a paddler's feet." Old Town Canoe Co. v. Glenwa, Inc., 229 F. Supp. 2d 1151 (D. Or. 2001).1699

"said arms respectively containing second magnetic members for cooperation with said first magnetic members" — "the arms include second magnetic members with horizontal orientation that cooperate together with the first magnetic members, such that the second magnetic members and first magnetic members magnetically engage either by direct contact of corresponding surfaces or by magnetically attracting corresponding surfaces without physical contact." Aspex Eyewear, Inc., et al. v. E'Lite Optik, Inc., 2007 U.S. Dist. LEXIS 76024 (N.D. Tex., Oct. 12, 2007).1700

"for connection to a floating vessel via an anchor line or chain" — "the Court declines to impose the limitation of a 'direct connection' on the claim phrase 'for connection to a floating vessel via an anchor line or chain.'" Advanced Production and Loading, Inc. v. Single Buoy Moorings, Inc., et al., 2004 U.S. Dist. LEXIS 31081 (S.D. Tex., Apr. 26, 2004).1701

"for deflecting the striking force of said metal particles" — "the magnet protector prevents debris from hitting the surface of the magnet member when the tool is rotated." Rattler Tools, Inc. v. Bilco Tools, Inc., et al., 2007 U.S. Dist. LEXIS 49124 (E.D. La., July 6, 2007).1702
"for each finger, a finger-associable cluster of input keys" — "for each of the four fingers, the device must include a separate group of multiple input keys that correspond to the associated finger." Motionless Keyboard Co. v. Microsoft Corp., et al., 2007 U.S. Dist. LEXIS 43215 (D. Or., May 6, 2007).  

"providing a magnet protector for each of said magnet members" — "each magnet has its own protector, that is, a one-to-one correspondence exists between magnets and their protectors." Rattler Tools, Inc. v. Bilco Tools, Inc., et al., 2007 U.S. Dist. LEXIS 49124 (E.D. La., July 6, 2007).  

"the orientation parameter for each of the two successive entities are the same" — "the orientation parameter is the same from one entity to the next." Omax Corp. v. Flow International Corp., 2006 U.S. Dist. LEXIS 81914 (W.D. Wash., Nov. 7, 2006).  

"for electrical connection" — "any combination of contact arm(s) and/or the spring makes the electrical connection with the first terminal of the battery." Invisible Fence, Inc. v. Perimeter Technologies, Inc., 2006 U.S. Dist. LEXIS 33792 (N.D. Ind., May 25, 2006).  

"having a lower surface for freely seating on a substantially flat surface" — "having a lower surface that sits on, but is not secured to, a mostly flat surface." Robinson v. Advanced Decoy Research, Inc., et al., 519 F. Supp. 2d 1087 (S.D. Cal. 2007).  

"downwardly extended end portions for hooking said auxiliary spectacle frame to said primary spectacle frame" — "each arm includes an end portion that extends downwardly relative to the remainder of the arm, and which is bent in a manner to connect or catch with the primary spectacle frame as if with a hook." Aspex Eyewear, Inc., et al. v. E’Lite Optik, Inc., 2007 U.S. Dist. LEXIS 76024 (N.D. Tex., Oct. 12, 2007).  

"first portion for increasing wettability" — "is not limited to the acrylic structure set out in Formula I or the '943 patent specification. It covers structures that are hydrophilic and include carbamate or amide sidechain functionality. This includes both vinyls and acrylics." Wesley Jessen Corp. v. Bausch & Lomb, Inc., 209 F. Supp. 2d 348 (D. Del. 2002).  

"a crane support mounted upon each said housing and removable conical extension for lifting and tilting the housing to remove the contents thereof" — "simply requires that there be a crane support mounted on the removable, detachably secured, conical extension ('dumping' end) and a crane support mounted on the remainder of the housing, with both such crane supports being involved in facilitating the lifting and tilting of the housing 'so that' the contents of the furnace (e.g., a fused silica ingot) can be removed out the detachably secured end." Minco, Inc. v. Combustion Engineering, Inc., 903 F. Supp. 1204 (E.D. Tenn. 1995).  

"spokes attached to the rings for supporting the rings" — "contemplat[es] different configurations of rings and spokes sharing the following common feature: in each configuration, whether the rings are bearing the weight of the spokes or the spokes are bearing the weight of the rings, the two sets of parts 'support' each other insofar as they hold each other in a fixed position necessary for the structural integrity of the overall chandelier frame." Schonbek Worldwide Lighting, Inc. v. American Lighting Fixture Corp., 2002 U.S. Dist. LEXIS 4761 (D. Mass., Mar. 19, 2002).\footnote{1713}

"for the continuous electric heating and/or fusion ..." — "the court finds that term 'continuous' modifies 'heating' and not 'fusion' for purposes of claim construction in regard to this limitation." Minco, Inc. v. Combustion Engineering, Inc., 903 F. Supp. 1204 (E.D. Tenn. 1995).\footnote{1714}

"a catheter wire for use in electrothrombosis" — "a catheter wire used with an electrical current to form a thrombus in a vascular cavity." Regents of the University of California v. Micro Therapeutics, Inc., et al., 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007).\footnote{1715}

"for use in sports and casual activities" — "does not limit the invention." Panoptx Inc. v. Protective Optics Inc., 2007 U.S. Dist. LEXIS 83462 (N.D. Cal., Nov. 9, 2007).\footnote{1716}

"foraminous hydrophobic water-vapor-permeable pellicle" — "a very thin and not necessarily continuous residue on fibers. This residue may be in, but is not limited to, the following forms: a distinct sublayer, a film, a coating, a crust, a deposit and a precipitate. This residue has holes or pores, repels water and permits water vapor to pass through it." Fort James Corp. v. J.H. McNairn, Ltd., 2006 U.S. Dist. LEXIS 36528 (N.D. Ga., April 4, 2006).\footnote{1717}

"force conversion" — "Nowhere in the specification is a set amount of horizontal force required to be converted into vertical force. The Court finds that there is no mandate that all horizontal force, or even most of it, be transferred via the force converting means into vertical forces." Pave Tech, Inc., et al. v. Snap Edge Corp., et al., 952 F. Supp. 1284 (N.D. Ill. 1996).\footnote{1718}

"force for centering" — "no construction is required." Saint Gobain Autover USA, Inc., et al. v. Xinyi Glass North America, Inc., et al., 2009 U.S. Dist. LEXIS 21288 (N.D. Ohio, Feb. 24, 2009).\footnote{1719}

"force producing assembly" — "Fitness Quest has not carried its burden of establishing that 'force producing assembly' is not a structure." Fitness Quest Inc. v. J. Monti, 2007 U.S. Dist. LEXIS 60195 (N.D. Ohio, Aug. 16, 2007).\footnote{1720}

"force sensor" — "a stacked configuration of five substrates consisting of a pair of drive plates found in the first and fifth substrate, a pair of insulating substrates found in the second and fourth substrate, and a third substrate sandwiched between the second and fourth substrate that includes a planar central plate which is suspended by spring-like members operatively located to measure the force between the sample and the probe tip." Hysitron Inc. v. MTS Systems Corp., 2009 U.S. Dist. LEXIS 36108 (D. Minn., Apr. 28, 2009).\footnote{1721}
"a spring operatively connected between the blade and the handle to force the blade to pivot toward an open position when the oversized tang portion of the blade is pushed into the handle until the blade reaches an equilibrium point" — "The spring, handle, and blade are arranged such that the spring operates to force the blade to an open position. The spring is activated when the oversized tang portion of the blade is pushed until the blade reaches an equilibrium point." Kai U.S.A., Ltd. v. Buck Knives, Inc., 2006 U.S. Dist. LEXIS 24924 (D. Or., Feb. 9, 2006).\footnote{1722}

"forces said metallic grounding clip into clamping engagement" — "The bail in its closed position, contacts the grounding clip and retains or forces the clip into tight engagement with the exposed portion of the conductor." Andrew Corp. v. Beverly Manufacturing Co., 479 F. Supp. 2d 766 (N.D. Ill. 2006).\footnote{1724}

"forcing said electrical conductor of said transmission cable through said axial opening" — "The electrical conductor must be forced or pressed into the axial opening defined by the clip." Andrew Corp. v. Beverly Manufacturing Co., 479 F. Supp. 2d 766 (N.D. Ill. 2006).\footnote{1725}

"forcing said grounding clip into clamping engagement" — "The bail, once in its closed position, forces or retains the clip in tight engagement with the exposed portion of the conductor." Andrew Corp. v. Beverly Manufacturing Co., 479 F. Supp. 2d 766 (N.D. Ill. 2006).\footnote{1726}

"forcing the cover against the separated tissue to expand the tissue layer substantially uniformly away from the underlying tissue" — "pushing the cover against the separated tissue to expand the tissue layer consistently, but with acceptable minor variations, from the underlying tissue." Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006).\footnote{1727}

"foremost edge" — "the edge of a tab side farthest away from the face of the tab." A&E Products Group, L.P. v. Mainetti USA Inc., et al., 2002 U.S. Dist. LEXIS 24280 (S.D.N.Y., Dec. 28, 2002).\footnote{1728}

"first chamber means for defining a first volume which is in fluid communication with said liquid such that said liquid will enter said first chamber means and form a liquid column therein" — "In order to form a liquid column, the first chamber must be completely enclosed without any holes that would prevent a liquid column from functioning properly." Utah Medical Products, Inc. v. Clinical Innovations Associates, Inc., et al., 79 F. Supp. 2d 1290 (D. Utah 1999).\footnote{1729} "[W]e agree with Judge Benson, who construed the 'liquid column' limitation to require a continuum of liquid constrained by the first chamber." \textit{Id.}, 2000 U.S. App. LEXIS 31756 (Fed. Cir., Dec. 13, 2000) (unpublished).\footnote{1730}

"form an occlusive volume" — "form a space, or container, for the accumulation of fluids." Kimberly-Clark Corp., et al. v. Tyco Healthcare Retail Group, 456 F. Supp. 2d 998 (E.D. Wis. 2006).\footnote{1731}
"form set" — "a 'form set' is simply a set of forms, i.e., more than one form." Paymaster Technologies, Inc. v. United States, 180 Fed. Appx. 942 (Fed. Cir., May 4, 2006) (unpublished).1732 "[I]n my view, the 'present invention' language in the specification limits the term 'form set' in claim 10 to a group of multi-ply sheets." Id. (Dyk, J., dissenting).1733

"forward end formation" — "The district court correctly decided that the 'forward end formation' of the '679 patent is the same as the 'head.'" Young Dental Manufacturing Co., Inc. v. Q3 Special Products, Inc., et al., 112 F.3d 1137 (Fed. Cir. 1997).1734

"the formation of ligation material in a loop forwardly of a crimpable grommet" — "forming a loop of ligation material during the process of placing a linear length of bulk ligation material into the tool forward of a grommet." Callicrate v. Wadsworth Manufacturing, Inc., et al., 217 F. Supp. 2d 1101 (D. Mont. 2002).1735

"protrusions formed" — "means protrusions actually formed from the same piece of sheet metal as the holder, and does not mean protrusions that are attached to the holder." U.S. Can. Co., Inc. v. Limited Brands, Inc., et al., 2006 U.S. Dist. LEXIS 21010 (N.D. Ill., April 19, 2006).1736

"a cylindrical tube formed along an interior wall [of the catheter]" — "formed along' only requires that a circular tube run within the catheter parallel to the interior walls of the catheter." Utah Medical Products, Inc. v. Clinical Innovations Associates, Inc., et al., 79 F. Supp. 2d 1290 (D. Utah 1999).1737

"said trough formed between the actuating section of one louver member and closing section of an adjacent louver member" — "clearly contemplates the formation of a trough, defined on one side by the closing section of one louver and on the other side by the actuating section of the adjacent lower louver member." Industrias Metalicas Marva, Inc. v. Empresas Lausell, 1997 U.S. Dist. LEXIS 13773 (D.P.R., Aug. 27, 1997).1738

"the lens body formed by a process including cast molding using a first polymeric mold section having a surface in a general shape of a negative of the posterior face and a concave outer peripheral surface" — "the lens body formed by a process including cast molding using a polymeric mold section having a surface in a general shape of a negative of the posterior face of the lens and a concave curved peripheral surface. A concave curve is the negative image of a convex curve." Coopervision, Inc. v. Ciba Vision Corp., 2007 U.S. Dist. LEXIS 51432 (E.D. Tex., July 16, 2007).1739

"an opening formed in the abutment portion of the projection is in communication with an aperture formed in a side wall of the offset powerbox adjacent the duct" — "to be 'formed in' an abutment portion, the opening must be formed in an area that hangs down -- i.e., extends downward -- from a top portion of the projection. Second, the claim language requires that the opening be 'in communication' with an aperture formed in the side wall. We agree with the district court -- and the parties do not dispute -- that 'in communication' simply requires a passage through which wires may be routed." Panduit Corp. v. HellermanTyton Corp., 451 F.3d 819 (Fed. Cir. 2006).1745

"formed inside the central bridge" — "mean[s] that the duct is entirely within, and given form or shape by, the central bridge." Freni Brembo, S.p.A. v. Alcon Components, Ltd., 2005 U.S. Dist. LEXIS 11714 (N.D. Ill., May 31, 2005).1746

"is formed integrally with" — "describe[s] a nozzle that is constructed such that the housing and the nozzle are one piece." P & M Products, Ltd., et al. v. Rose Art Industries, 2002 U.S. Dist. LEXIS 5008 (E.D. Pa., Mar. 25, 2002).1747

"formed integrally within"; "integrally formed within" — "created or constructed within or as a part of the frame." Cedarapids, Inc. v. Johnson Crushers International, Inc., et al., 2005 U.S. Dist. LEXIS 37439 (M.D. Tenn., Aug. 26, 2005).1748

"a multiplicity of fluid-conducting passageways formed longitudinally and substantially parallel to the axis of said roll, each of these passageways open at each end to a counterbore" — "within the roller is another set of longitudinally formed water-conducting passageways that run substantially parallel to [the] axis of the roller." Caputo v. Sealed Air Corp., 60 Fed. Appx. 822 (Fed. Cir., Apr. 8, 2003) (unpublished).1749

"a plurality of integral spaced apart length indicators formed on the exterior surface of said body shaft portion" — "the exterior surface of the body shaft must be 'given a particular shape' for a particular purpose, i.e., to indicate length. By this construction, therefore, the mere presence of a physical feature on the exterior surface of the body shaft does not necessarily mean that the feature was 'formed' or 'given a particular shape' in order to indicate length." Dentsply International Inc., et al. v. Soft-Core Systems, Inc., 1999 U.S. Dist. LEXIS 13873 (D. Del., Aug. 18, 1999).1750

"the opposite face of the [toothbrush's] head have at least one groove formed therein" — "necessarily requires that such a groove must be 'in' the specified face. So, a 'groove' that is ... 'formed' during the manufacturing process but that is distinctly absent in the final product is not a 'groove formed therein' under the unambiguous language of the '158 patent." Smithkline Beecham Consumer Healthcare, L.P. v. Colgate-Palmolive Co., 1999 U.S. Dist. LEXIS 19422 (E.D. Pa., Dec. 22, 1999).1751
"a plurality of slots formed therein" — "although the phrase 'a plurality of slots formed therein' modifies the phrase 'wall surface' (arguably implying a manufacturing limitation), the court concludes that ... the structure of the product claimed is adequately described and does not implicate a manufacturing requirement." Cordis Corp., et al. v. Advanced Cardiovascular Systems, Inc., et al., 1999 U.S. Dist. LEXIS 387 (D. Del., Jan. 15, 1999). [1752] "[W]e conclude that the district court erred in construing the 'slots formed therein' limitation in the two patents to require that the slots be formed by removing material from a pre-existing wall surface." Cordis Corp. v. Medtronic AVE, Inc., et al., 339 F.3d 1352 (Fed. Cir. 2003). [1753]

"said stud having at least one hole formed therein proximal to said top end" — "means that a hole must be formed in the stud prior to insertion of the stud between the flanges so that the hole can be used to align the stud with the vertical slot before passing the attachment means through the vertical slot and into the stud." Slip Track Systems, Inc. v. Metal Lite, Inc., 113 Fed. Appx. 930 (Fed. Cir., Dec. 1, 2004) (unpublished). [1754]

"forming a contact lens member in the lens shaped cavity of the assembled mold sections"; "a tool useful in making a mold section for cast molding a contact lens" — "The court ... will not construe these phrases." Coopervision, Inc. v. Ciba Vision Corp., 2007 U.S. Dist. LEXIS 51432 (E.D. Tex., July 16, 2007). [1757]

"(a) forming a generally flat dough base; (b) forming a plurality of closed pockets each pocket enclosing a portion of food; (c) placing the closed pockets on portions of the dough base" — "requires that the dough pockets be formed separately from the dough base, and then placed upon that base." Angelo Mongiello's Children, LLC v. Pizza Hut, Inc., 70 F. Supp. 2d 196 (E.D.N.Y. 1999). [1758]

"a second portion of said wall extending from said first point to a second point forming a lowermost end of said wall" — "the specific place on the wall nearest the central panel (toward the bottom of the can)." Crown Packaging Technology, Inc., et al. v. Rexam Beverage Can Co., 486 F. Supp. 2d 366 (D. Del. 2007). [1759]

"forming a rigid connection between the lever and the knob with at least one substantially rigid member while maintaining the lever in a position where the protrusion cannot contact the surface of the cam wheel, in response to a receipt of an unlock signal" — "[requires] a rigid connection between all parts in the chain of parts between the lever and the knob during the unlocking procedure." Masco Corp. v. United States, et al., 303 F.3d 1316 (Fed. Cir. 2002). [1760]

"said wall and said reinforcing bead forming a transition therebetween" — "forming a place between two things at which one changes to the other." Crown Packaging Technology, Inc., et al. v. Rexam Beverage Can Co., 486 F. Supp. 2d 366 (D. Del. 2007). [1761]

"forming appendages extending from either side of said auxiliary eyeglasses" — "forming at least one appendage extending from each side of the auxiliary eyeglasses." Revolution Eyewear, Inc. v. Aspex Eyewear, Inc., et al., 2004 U.S. Dist. LEXIS 31065 (C.D. Cal., Aug. 12, 2004).\(^{1763}\)

"forming folds in said tubular sock-like projectile body" — "requires the deliberate and systematic creation of folds." Combined Systems, Inc. v. Defense Technology Corp. of America, et al., 350 F.3d 1207 (Fed. Cir. 2003).

"having four periphery surfaces" — "the pad structure has four periphery surfaces which meet, but not necessarily at corners; if the surfaces do meet at corners, the corners need not have any particular angle." Farrago v. Rawlings Sporting Goods Co., Inc., 2007 U.S. Dist. LEXIS 38036 (E.D. Mo., May 24, 2007).

"four-side-seal type bag body" — "requires the bag to have four side seals." Shield Pack, LLC v. CDF Corp., 2010 U.S. Dist. LEXIS 95044 (W.D. La., Sep. 13, 2010).

"fracture toughness" — "resistance to extension of a crack, often measured in terms of the stress-intensity factor (K) at which applying progressively greater stress to a structure that contains a pre-existing crack causes the onset of rapid catastrophic propagation of that crack." Pechiney Rhenalu v. Alcoa Inc., 224 F. Supp. 2d 773 (D. Del. 2002).

"fragile gel drilling fluid"; "fragile gel" — "The Court is unable to construe 'fragile gel drilling fluid' or 'fragile gel' such that those terms would have a meaning that is not purely subjective. Accordingly, the Court GRANTS M-I's Motion for Summary Judgment of Invalidity based on indefiniteness." Halliburton Energy Services, Inc. v. MI, L.L.C., 456 F. Supp. 2d 811 (E.D. Tex. 2006).

"frame" — "a basic structure, but excluding a substantially continuous surface (i.e., walls), that gives shape or support to the rack container." Bradford Co. v. Afco Manufacturing, et al., 2006 U.S. Dist. LEXIS 88547 (S.D. Ohio, Dec. 5, 2006).

"frame" — "the underlying structure of the cone crusher to which other constituent parts may be fitted, attached or integrated." Cedarapids, Inc. v. Johnson Crushers International, Inc., et al., 2005 U.S. Dist. LEXIS 37439 (M.D. Tenn., Aug. 26, 2005).

"frame" — "include[s] structures consisting only of side rails." Lifetime Products, Inc. v. GSC Technology Corp., et al., 321 F. Supp. 2d 938 (N.D. Ill. 2004).

"frame" — "Because 'frame' is commonly understood to refer to some structures that surround an object and other structures that connect parts but do not surround anything, the Court construes the patent to refer to both kinds of structures." Aspex Eyewear, Inc., et al. v. E'Lite Optik, Inc., 2004 U.S. Dist. LEXIS 27493 (D. Nev., May 28, 2004).

"frame" — "following a review of the patent's claim, specification, and prosecution history, the ordinary meaning of the word "frame" does not require the frame to have base supports and rocker arms." PMG, Inc. v. Stinger Spike Systems, Inc., 2002 U.S. Dist. LEXIS 17162 (N.D. W. Va., Mar. 28, 2002).\(^{1774}\)

"ear warmer frame" — "a structure that supports a device worn on or over the ears whose primary function is to keep ears warm." 180s, Inc., et al. v. Gordini U.S.A., Inc., 2010 U.S. Dist. LEXIS 30766 (D. Md., Mar. 30, 2010). 1776

"frame including a pair of generally disposed side rails" — "a structure formed of relatively slender pieces or parts, fitted or joined to the table, that may be side rails alone or end rails alone, and other components may also be added, but are not required." Lifetime Products, Inc. v. Correll, Inc., 323 F. Supp. 2d 1129 (D. Utah 2004). 1777

"a frame mountable to the open periphery of a chimney flue and having a superior portion oriented to extend above said flue opening" — "a frame (an inverted 'V' or otherwise) that is mountable to the periphery of a chimney flue having a superior (or upper) portion that extends above the flue opening." Bernard Dalsin Manufacturing v. RMR Products, Inc., 1999 U.S. Dist. LEXIS 22648 (D. Minn., Sept. 14, 1999). 1778

"frangible portion" — "a part of a whole that is capable of being broken." Stant Manufacturing, Inc. v. Gerdes, GmbH, 2004 U.S. Dist. LEXIS 27704 (S.D. Ind., Sept. 27, 2004). 1779

"free" — "the unsupported portion of the rod that is free to move about relative to the fixed mounting point so that the rod is able to bend in a bow-like fashion." Nautilus Group, Inc. v. Icon Health & Fitness, Inc., 2005 U.S. Dist. LEXIS 46877 (W.D. Wash., Feb. 16, 2005). 1780

"free along substantially their entire length" — "mean[s] that the edges are not connected to the garment along their length except in the waist area of the garment in the front and in the rear at or near the sides of the garment." Orr v. Patagonia, Inc., et al., 2006 U.S. Dist. LEXIS 73739 (N.D. Tex., Sept. 26, 2006). 1781

"a free distal end forming a handle spaced outwardly therefrom" — "a handle at the end of the arm assembly opposite the fixed end, and spaced away from the distal end." One World Technologies, Ltd., et al. v. Rexon Industrial Corp., Ltd., et al., 2006 U.S. Dist. LEXIS 25324 (N.D. Ill., May 2, 2006). 1782

"free edge" — "an edge which is not connected to the hanger body or hook." A&E Products Group, L.P. v. Mainetti USA Inc., et al., 2002 U.S. Dist. LEXIS 24280 (S.D.N.Y., Dec. 28, 2002). 1783

"free edge of material" — "mean[s] that the material that has a free edge is not connected to anything." Orr v. Patagonia, Inc., et al., 2006 U.S. Dist. LEXIS 73739 (N.D. Tex., Sept. 26, 2006). 1784

"a rearwardly directed free end for securing a magnetic member" — "a rearwardly directed end portion for connecting a magnetic member in a manner such that the connection is not likely to fail or give way." Aspex Eyewear, Inc., et al. v. E'Lite Optik, Inc., 2007 U.S. Dist. LEXIS 76024 (N.D. Tex., Oct. 12, 2007). 1785

"free from play" — "there are no spaces between the contact surfaces so that the panels are locked in the horizontal and vertical directions." Alloc, Inc. v. Unilin Decor N.V., et al., 2007 U.S. Dist. LEXIS 16743 (E.D. Wis., Mar. 6, 2007). 1786

- 158 -
"free of dependent arms" — "the complete absence of any distinct structures that extend away from the ends of the earring's ornamental components and which serve to support fastening device." Friedrich Zettl GmbH v. Bloomingdales, Inc., et al., 2000 U.S. Dist. LEXIS 6747 (N.D. Ill., Feb. 24, 2000).1787

"free passageway" — "the open space that extends along the entire pipe section outside the microporous material and inside the outer tube." ITP, Inc., et al. v. BP Corp. North America, Inc., 2005 U.S. Dist. LEXIS 39078 (S.D. Tex., May 2, 2005).1788

"a free passageway to allow longitudinal gas flow, whereby low pressure is maintained throughout said annular space" — "the open space that extends along the entire pipe section outside the microporous material and inside the outer tube to allow the movement of air in the annular space lengthwise along an entire pipe section, preserving a low pressure within the annular space." ITP Interpipe, Inc., et al. v. Technip Offshore, Inc., 2007 U.S. Dist. LEXIS 7551 (S.D. Ala., Jan. 31, 2007).1789

"freeze the dots" — "sufficiently cure the dots of ink such that they will not spread, wick, or otherwise move on the substrate." Leggett & Platt, Inc., et al. v. Vutek, Inc., 2006 U.S. Dist. LEXIS 33383 (E.D. Mo., May 25, 2006).1791

"a releasable needle holder and needle frictionally held by the wall of the syringe body" — "a releasable needle holder and needle kept in the nose portion by friction with the syringe body." Retractable Technologies v. New Medical Technologies, 2004 U.S. Dist. LEXIS 3855 (E.D. Tex., Mar. 1, 2004).1793

"from different directions" — "at distinct and unshared angles of incidence." Nikon Corp., et al. v. ASM Lithography B.V., 308 F. Supp. 2d 1039 (N.D. Cal. 2004).1794

"front panel" — "a graphical user interface that is separate and apart from the associated data flow diagram and that displays inputs and output controls, where there is at least one input control and at least one output control in the front panel." National Instruments Corp. v. Mathworks, Inc., 2002 U.S. Dist. LEXIS 27577 (E.D. Tex., May 24, 2002).1795

"front plate" — "the plate situated in advance of the flow of ice from the receptacle." Maytag Corp. v. Whirlpool Corp., 2004 U.S. Dist. LEXIS 31091 (S.D. Iowa, Nov. 23, 2004).1796

"front side" — "The front side is the horizontal plane on the portion of the circumference of the reflector body that faces in the direction that the emitted light is traveling. Put another way, it is the surface of the edge of the rim of the reflector which faces in the same direction the light is traveling." U.S. Philips Corp. v. Iwasaki Electric Co., et al., 2006 U.S. Dist. LEXIS 106 (S.D.N.Y., Jan. 3, 2006).1797

"frustoconically tapered portion" — "a portion of an implant whose exterior is conically shaped over a region, but does not come all the way to a point in that region." Nobel Biocare USA, LLC, et al. v. Blue Sky Bio, LLC, et al., 2009 U.S. Dist. LEXIS 100408 (C.D. Cal., Oct. 14, 2009).

"fuel injection system component" — "is limited to a fuel filter." Honeywell International, Inc., et al. v. ITT Industries, Inc., et al., 452 F.3d 1312 (Fed. Cir. 2006).

"fusion-bonded"; "fusion-bonding" — "require the foam to melt and thereby form a bond with the sheath." Trilogy Communications, Inc. v. Times Fiber Communications, Inc., et al., 109 F.3d 739 (Fed. Cir. 1997).
"gage": "gage region" — "the outermost radius of the bit, labeled 207 in Fig. 7 of the '249 and '715 Patents"; "region at the outermost radius of the bit, labeled 322 in Fig. 14A of the '631 Patent." Reedhycalog UK, Ltd, et al. v. Baker Hughes Oilfield Operations, Inc., et al., 2007 U.S. Dist. LEXIS 76125 (E.D. Tex., Oct. 12, 2007).

"game board" — "a structure having a playing surface that can support game pieces and electronic components." Innovention Toys, LLC v. MGA Entertainment, Inc., et al., 2009 U.S. Dist. LEXIS 48386 (E.D. La., May 21, 2009).

"game piece" — "a mirrored or non-mirrored structure that can be placed on the game board and moved by the players during the course of game playing." Innovention Toys, LLC v. MGA Entertainment, Inc., et al., 2009 U.S. Dist. LEXIS 48386 (E.D. La., May 21, 2009).

"gap" — "a space along a concentric line where there is no bonding." Tyco Healthcare Retail Servs. AG v. Kimberly-Clark Corp., et al., 2007 U.S. Dist. LEXIS 53645 (E.D. Pa., July 24, 2007).

"a gap ... configured for receiving air flowing toward said second surface, dividing said air into two portions and directing each such portion through a separate fin structure" — "no construction is necessary, and the term shall be given its plain and ordinary meaning." ICHL, LLC v. NEC Corp. of America, et al., 2010 U.S. Dist. LEXIS 38942 (E.D. Tex., Apr. 20, 2010).

"garment component" — "a structural part of a garment, such as a front panel, yoke, rear panel, and sleeve. A bonding element, an interlining, and thread are not garment components." Taltech Ltd. v. Esquel Enterprises Ltd., 410 F. Supp. 2d 977 (W.D. Wash. 2006).

"gas flow orifice member" — "a device or obstruction placed in a gas-flow orifice that is positioned between two chamber portions, that effects the volume and rate of gas flow through the orifice." Travis Industries, Inc. v. Hearth & Home Technologies, Inc., et al., 2004 U.S. Dist. LEXIS 31059 (W.D. Wash., Oct. 18, 2004).

"gas outlet comprising a porous medium" — "the correct interpretation ... requires that the gas outlet porous medium be placed so as to serve [the] purpose [of] remov[ing] gas at the outlet of the system while retaining the blood and barring reentry of air." *Pall Corp. v. Hemasure Inc.*, 181 F.3d 1305 (Fed. Cir. 1999).1826

"gate" — "must be construed to be limited to gates whose additional horizontal members, if any, are positioned well below the upper edge of the mesh screen tensioned on the gate frame." *Guardian Pool Fence Systems, Inc. v. Baby Guard, Inc., et al.*, 228 F. Supp. 2d 1347 (S.D. Fla. 2002).1828

"gathering chamber" — "the space or cavity formed between the trailing ends of the vanes and the shroud wherein the trailing ends of the vanes are not positioned directly against the surface of the shroud." *Johnson Electric Industrial Manufacturing, Ltd., et al. v. Ametek, Inc.*, 2005 U.S. Dist. LEXIS 19300 (D. Conn., Aug. 24, 2005).1829

"gauge" — "a size measurement of needles determined by the outer diameter and the inner or lumen diameter." *Ideal Instruments, Inc. v. Rivard Instruments, Inc., et al.*, 498 F. Supp. 2d 1131 (N.D. Iowa 2007).1830

"gear" — "a toothed machine part, such as a wheel or cylinder, that meshes with another toothed part, to transmit motion or to change speed or direction, and which excludes a chain." *Bayer Healthcare LLC v. Abbott Laboratories*, 2005 U.S. Dist. LEXIS 21042 (D. Del., Sept. 26, 2005).1831

"gel"; "liquid" — "the term 'gel' is not subsumed within the term 'liquid.' ... nonflowing gels are not within the scope of the Sereboff patent claims." *Minnesota Mining & Manufacturing Co. v. Fellowes Manufacturing Co.*, 76 F. Supp. 2d 972 (D. Minn. 1999).1833

"geometry" — "configuration or shape." *Ormco Corp., et al. v. Align Technology, Inc.*, 463 F.3d 1299 (Fed. Cir. 2006).1834

"generally adjacent" — "means that the pedestals are located or situated close to, near, bordering, or in contact with the underside of the table." *Lifetime Products, Inc. v. Correll, Inc.*, 323 F. Supp. 2d 1129 (D. Utah 2004).1835

"generally arcuate segments" — "naturally separated divisions, portions or sections of the walls that are bent, curved like a bow or arc-shaped." *ICU Medical, Inc. v. RyMed Technologies, Inc.*, 2009 U.S. Dist. LEXIS 112546 (D. Del., Dec. 3, 2009).1836

"generally circular" — "there is no better way to define 'generally circular' than to simply say 'generally circular.' Accordingly, the Court declines to construe the term." *ASM America, Inc., et al. v. Genus, Inc.*, 260 F. Supp. 2d 827 (N.D. Cal. 2002).1837

"longitudinally disposed bands, wherein each band defines a generally continuous wave having a spatial frequency along a line segment parallel to the longitudinal axis" — "the stent has multiple elongated surfaces that run parallel to the stent's long axis, each of these surfaces having the undulating appearance of a continuous wave." Cordis Corp. v. Boston Scientific Corp., 2005 U.S. Dist. LEXIS 10750 (D. Del., Jun. 3, 2005).

"generally convex" — "We agree with the district court's conclusion that the applicant, through argument during the prosecution, disclaimed inner walls of the base portion having any concavity." North American Container, Inc. v. Plastipak Packaging, Inc., et al., 415 F.3d 1335 (Fed. Cir. 2005).

"generally corresponding to" — "is unambiguous and is readily comprehensible to the finder of fact." U.S. Ring Binder; LP v. Staples the Office Superstore LLC, et al., 2009 U.S. Dist. LEXIS 21783 (E.D. Mo., Mar. 18, 2009).

"a generally cylindrical end plug" — "an object or material generally having the form or shape of a cylinder used to fill or seal an opening." Lamoureux, et al. v. AnazaoHealth Corp., et al., 2009 U.S. Dist. LEXIS 103846 (D. Conn., Nov. 5, 2009).

"a thickness generally equal to circumferentially adjacent areas" — "a 25% variation between the pleats and the adjacent areas will be considered generally equal." James River Corp. of Virginia v. Hallmark Cards, Inc., 915 F. Supp. 968 (E.D. Wis. 1996).

"generally flat" — "a housing that is flat on the whole, but not necessarily exactly or perfectly flat." Sun Coast Merchandise Corp. v. CCL Products Enterprises, Inc., 2003 U.S. Dist. LEXIS 27316 (N.D. Cal., Apr. 30, 2003).

"generally flat aft keel" — "an aft keel that is mostly horizontal." Schoell v. Emerald City Harbor, Inc., et al., 1999 U.S. Dist. LEXIS 5459 (M.D. Fla., Mar. 11, 1999). "[W]e find the phrase 'mostly horizontal' to provide little more guidance than 'generally flat' in determining whether a twelve degree V-shaped keel is within the scope of the claims." Schoell v. Regal Marine Industries, Inc., et al., 247 F.3d 1202 (Fed. Cir. 2001).

"generally flush" — "flush within normal tolerances in the field and is flush as a rule, in conformity with regular practice." Donnelly Corp. v. Reitter & Schefenacker USA Limited Partnership, et al., 2002 U.S. Dist. LEXIS 23156 (W.D. Mich., Nov. 21, 2002).

"generally frustoconically shaped pylon" — "a structure that, for the most part, is in the shape of the frustrum of a solid having (1) a closed plane base and (2) a surface formed by line segments joining every point of the boundary of the base to a common vertex." EZ Dock, Inc. v. Schafer Systems, Inc., et al., 2003 U.S. Dist. LEXIS 1810 (D. Minn., Jan. 22, 2003).
"said end portion is formed into a generally hemispherical shape" — "the tubular body ends are formed, for the most part, by spherical segments."  

"a generally hexagonal shape" — "mean[s] that the staple pocket is perceived by a viewer to have six major sides that can have varying lengths."  

"spatially aligned so as to be generally in phase with one another" — "the bands generally undulate at the same rate, so as to run parallel to each other."  

"generally oblong cross section ... having a major axis within said common plane greater than a minor axis" — "the cross-section taught by Claim 19 is elliptical."  
*Alltrade Tools, LLC v. Olympia Group, Inc*, 2003 U.S. Dist. LEXIS 26248 (C.D. Cal., Oct. 8, 2003). "'Oblong' is understood to mean 'deviating from a square or circular form through elongation.' 'Generally oblong' is therefore a shape that is longer in one direction than the other, but not necessarily true to a specific geometrical shape, i.e., not a perfect oval or rectangle."  

"generally parallel" — "envisons some amount of deviation from exactly parallel."  

"generally parallel" — "encompass[es] a deviation from exactly parallel that is commonly provided in order to assist in removing the plastic from the mold."  

"generally parallel" — "the court accords 'generally parallel' its plain meaning; in the context of gathers, there is no requirement that they be 'mathematically' parallel, nor does the omission of 'generally' from the notation that they are oriented perpendicularly to the longitudinal direction require the fold lines of the gathers to be precisely straight or mathematical."  

"generally parallel connecting elements" — "the district court erred in construing claims 12-15, 17, 18, and 20 of the '154 patent as requiring connecting elements that run parallel to the longitudinal axis of the stent. These claims simply recite 'generally parallel connecting elements.' The claims contain no language explicitly requiring the connecting elements to be parallel to the longitudinal axis of the stent."  

"generally parallel connecting elements" — "two or more connecting elements that are generally parallel to each other."  

"generally parallel to the longitudinal axis" — "does not need construction because its plain and ordinary meaning is easily discernible from the claim language."  

"generally planar surface" — "a two-dimensional surface that is not narrow but has a width less than the feed increment of the trimmer head and is itself generally planar."  
"generally polyhedron shaped enclosure" — "the overall shape of the enclosure, when in a substantially filled state, must be that of a polyhedron, and the faces of the polyhedron need not be strictly or perfectly flat or planar, but must be generally flat or planar."  *Farrago v. Rawlings Sporting Goods Co., Inc.*, 2007 U.S. Dist. LEXIS 38036 (E.D. Mo., May 24, 2007).

"generally predetermined acceptable limit that prevents damage to the compressor" — "a boundary, generally recognized or appreciated by the manufacturer or operator in advance of operating the gas turbine."  *Dow Chemical Co. v. Mee Industries, et al.*, 2001 U.S. Dist. LEXIS 26229 (M.D. Fla., Aug. 17, 2001).

[i] "generally smooth"; [ii] "generally planar" — [i] having a surface which is for the most part free from roughness, irregularities, or projections"; [ii] "is construed to include irregular deviations from a mostly flat surface."  *Clipps, Inc. v. Cleaner's Supply Co.*, 2002 U.S. Dist. LEXIS 28231 (E.D. Mo., Aug. 13, 2002).

"generally U-shaped portion" — "include[s] those rounded fulcrums that have the characteristic that the initial curvature of the transition is in the direction opposite to the subsequent curvature."  *Alltrade Tools, LLC v. Olympia Group, Inc*, 2003 U.S. Dist. LEXIS 26248 (C.D. Cal., Oct. 8, 2003).

"first, generally uniform smaller wall thickness defining the stem" — "the wall thickness of the stem is thinner than the wall thickness of the head and that thickness does not vary significantly; the thinner wall and the uniformity define the stem as distinct from the head."  *Smith & Nephew, Inc. v. Synthes (U.S.A.), et al.*, 2005 U.S. Dist. LEXIS 34896 (W.D. Tenn., Aug. 26, 2005).

"generally V-shaped ribs" — "means two diagonal lines that extend at an angle but in opposite directions like the 'over-all' features of the letter 'V,' and does not require that the lines come to a point like the letter 'V.'"  *Von Holdt, et al. v. A-1 Tool Corp., et al.*, 636 F. Supp. 2d 726 (N.D. Ill. 2009).

"generated shapes" — "letters, numbers, or other characters formed with fewer jaggies than under the prior art methods." Pitney Bowes, Inc. v. Hewlett-Packard Co., 141 F. Supp. 2d 288 (D. Conn. 2001). 1874

"geographically dispersed" — "in separate geographic locations, either within a building or in different buildings." VISICU, Inc. v. iMDsoft, Ltd. et al., 2009 U.S. Dist. LEXIS 40033 (E.D. Pa., May 7, 2009). 1875

"said contributions management device being optionally geographically remote from a plurality of said electronic contributions accepting devices" — "Each contributions accepting device may be, but need not be, located in a geographically remote location from the contributions management device. In this context, 'geographically remote' means in a different area, separated significantly in space." Ziarno v. American National Red Cross, et al., 2000 U.S. Dist. LEXIS 22508 (N.D. Ill., Aug. 16, 2000). 1876

"the annular surface having an axial length extending for a given distance along the length of the hub" — "the axial length (in a direction parallel to the axis of rotation) of the 'annular surface' of the impeller hub defined by the reduced diameter portion corresponds to at least one-third of the total hub length." Papst Licensing GmbH & Co. KG v. Sunonwealth Electric Machine Industrial Co., Ltd., et al., 2004 U.S. Dist. LEXIS 4402 (N.D. Ill., Mar. 18, 2004). 1878

"a tubular cannula having a given internal diameter" — "a tubular cannula having an assumed or hypothetical internal diameter, i.e. one of no fixed or specific diameter." Ethicon Endo-Surgery v. Richard-Allan Medical Industries, Inc., 885 F. Supp. 1073 (S.D. Ohio 1995). 1879 "The patentee now argues that one skilled in the art would understand the phrase 'given internal diameter' to be limited to 10/11 millimeters; he asks us to accept that construction in order to avoid undisclosed prior art. We cannot do that." Id., 1996 U.S. App. LEXIS 5803 (Fed. Cir., March 4, 1996) (unpublished). 1880

"a glass mat-faced gypsum support surface" — "the term 'glass mat-faced' means 'glass mat surface reinforcing material.' Because USG's board is reinforced with fiberglass mats the court upheld the jury's finding that the 'faced' claims were infringed." Georgia-Pacific Corp. v. United States Gypsum Co., et al., 195 F.3d 1322 (Fed. Cir. 1999). 1882

"glide surface" — "a diverter shoe's inner surface that has some contact, but not necessarily complete contact, with the outer surface of the slat, and that need not contact all sides of the slat. We note that our construction of 'glide surface' is different from the ITC's construction, which did not require any contact at all. We believe the ITC's definition was overly broad. Indeed, the ITC's definition could conceivably embrace 'no-contact' technologies far beyond the patent's disclosure, such as a glide surface that rides above the slat on air currents, or a glide surface that is magnetized to repel the outer surface of the slat." Vanderlande Industries Nederland BV, et al. v. International Trade Commission, et al., 366 F.3d 1311 (Fed. Cir. 2004). 1883

- 166 -

[i] "global alignment"; [ii] "globally aligning"; [iii] "globally positioned" — [i] "the initial positioning of the entire substrate according to substrate alignment marks"; [ii] "the process or act of positioning of the entire substrate according to substrate alignment marks"; [iii] "situated or located by reference to the entire substrate."  *Nikon Corp., et al. v. ASM Lithography B.V.*, 308 F. Supp. 2d 1039 (N.D. Cal. 2004).  

"glue layer" — "a layer, composed of one or more materials, which is deposited prior to the tungsten and which has good adhesion both to the underlying dielectric layer and to the tungsten."  *Agere Systems Inc. v. Atmel Corp.*, 2003 U.S. Dist. LEXIS 9823 (E.D. Pa., May 23, 2003).  

"graft"; "prosthesis" — "an intraluminal device that is used in unitary fashion to substitute, repair or replace a missing or defective part of a vessel."  *Edwards Lifesciences, LLC, et al. v. Cook Inc., et al.*, 2007 U.S. Dist. LEXIS 55634 (N.D. Cal., July 23, 2007).  

"the granules comprising a thermoplastic component and a thermoset plastic component" — "mean[s] that each individual granule must contain a combination of a thermoplastic component and a thermoset plastic component."  *Safas Corp. v. Etura Premier, L.L.C.*, 293 F. Supp. 2d 436 (D. Del. 2003).  

"granules of a coarse, permeable material" — "even a large 'granule' would be suitable so long as there would be enough fabric or bleach to create the random faded effect on the fabric. The size of a granule would be limited by practicalities such as the size of the tumbling machine and the machine's opening, as well as by the size of the fabric being processed. (If the granules were larger than the fabric being processed, the granules would not randomly contact the fabric to create the random faded effect, and uniform fading would occur.) ... The nature of the granules would be limited to material which was coarse and permeable and would include pumice, paper, foam and sponge as well as PVC pipe, diamonds, synthetics and selica gel, clay, salt and crushed powder pellets, dolomite, diatomaceous earth according to the claim prosecution history and plaintiff's prior testimony."  *Levi Strauss & Co. v. Golden Trade, S.r.L., et al.*, 1995 U.S. Dist. LEXIS 22145 (S.D.N.Y., Nov. 30, 1995).
"graphic print" — "a print of a graphic created by conventional photographic processes rather than by ink printing."  
Cles Bisker, LLC v. 3M Co., et al., 2009 U.S. Dist. LEXIS 110055 (E.D. Tex., Nov. 25, 2009).  

"graspable object" — "a physical thing (or item) that is capable of being grasped in a human hand."  

"grate" — "a framework of parallel or crossed bars or wires such as to allow for spillage to fall therethrough."  

"gravel" — "this Court adopts the ASTM definitions and construes the term 'gravel' as having a minimum particle size of 4.75 mm."  

"grazing angle" — "[that] angle [] necessary to generate varying magnitudes for the 'spot's' or ellipse's long axis and, thus, use that angle to change the dimensions of the ellipse as needed to effectuate a scan."  

"said chemically embossed portion has an emboss depth greater than the emboss depth of any portion of said mechanically embossed portion" — "mean[s] that mechanical embossing does not occur in the chemically embossed areas and that the mechanically emboss depth of those areas mechanically embossed does not exceed the depth of those areas that are chemically embossed when this depth is measured from the unembossed surface plane."  

"a weight on bit greater than the selected weight"; "a weight on bit in excess of that required"; "a weight on bit greater than the selected weight"; "greater weight on bit [than that required to cause the cutter to cut the formation]" — "the Court construes the excess weight on bit terms to require the weight to be neither abnormal nor unusual."  

"greatest elevation" — "is a comparative term referring only to the forefoot portion of the sole as designated by Figure 7 on Sheet 4 of the 882 patent, which cuts diagonally into and does not include, for example, the portion of the sole designated in the 663 patent as the midfoot portion."  

"grip means for gripping the wall of said element within said coupling" — "fails to recite sufficient structure to overcome the presumption that § 112, P 6 applies."  

"groove" — "a narrow depression, channel or trough in a surface."  

"groove-like constrictions"— "a longitudinal groove wherein the lateral defining surface opposite the lower band surface of the spring strips is circular."  **Robert Bosch, LLC v. Pylon Manufacturing Corp.**, 2010 U.S. Dist. LEXIS 30451 (D. Del., Mar. 30, 2010).1908

"grooves"; "channels" — "regions within the cable that are substantially physically separated from other regions within the cable by a pair separator; i.e., they are formed by, but need not be part of, the separator."  **Belden Technologies Inc., et al. v. Superior Essex Communications LP, et al.**, 2010 U.S. Dist. LEXIS 86833 (D. Del., Aug. 24, 2010).1909

"a ground mechanism" — "a ground mechanism which makes an electrical connection with earth' and is not limited to a sunken ground rod."  **Senior Industries, Inc. v. Thomas & Betts Corp., et al.**, 2001 U.S. Dist. LEXIS 16901 (N.D. Ill., Sept. 27, 2001).1910

"the needle holding portion is grounded on the annular shoulder" — "the needle holder is prevented from moving forward by a structure of reduced diameter within the syringe body prior to or during retraction."  **Retractable Technologies, Inc. v. Occupational & Medical Innovations, Ltd.**, 2009 U.S. Dist. LEXIS 69738 (E.D. Tex., Aug. 10, 2009).1911

"comprising ... a group of first, second, and third blades" — "excludes from its literal scope the possibility that the accused razor unit contain[s] four blades."  **Gillette Co. v. Energizer Holdings, Inc.**, 2004 U.S. Dist. LEXIS 28656 (D. Mass., Jan. 15, 2004).1912. "Based on the preliminary record before this court, the district court erred in limiting the claims of the '777 patent to encompass safety razors with solely three blades."  **Id., 405 F.3d 1367 (Fed. Cir. 2005).** 1913 "I would affirm the district court's claim construction and its denial of Gillette's motion for a preliminary injunction."  **Id. (Archer, J., dissenting).** 1914

"guide ions through" — "means simply that ions must be guided through the first space by the AC-only voltage between the rod means. The court will not adopt a more narrow construction of the phrase to require either that all ions be transmitted through the ion guide or that the ion guide not trap or hold any ions for any length of time."  **Applera Corp., MDS Inc., et al. v. Micromass UK Ltd., et al.**, 186 F. Supp. 2d 487 (D. Del. 2002).1916

"guide means for conducting a portion of wash liquid containing said concentrated soil particles from said pump chamber to said soil container" — "the term 'guide' cannot be viewed as sufficient structure (if it is indeed structure at all) to remove that language from the ambit of Paragraph 6."  **Maytag Corp. v. Whirlpool Corp.**, 95 F. Supp. 2d 888 (N.D. Ill. 2000).1918
"guide member" — "a structure that guides the directional movement of the user as the user performs the exercise." *Fitness Quest Inc. v. J. Monti*, 2007 U.S. Dist. LEXIS 60195 (N.D. Ohio, Aug. 16, 2007). 1919

"guiding and transporting the ejected product from between the mold parts through the guide conduit" — "require[s] the directing and carrying of the ejected plastic product from the space separating the mold parts to the end or to an exit of the guide conduit." *In re: Turn-Key-Tech Matters*, 2002 U.S. Dist. LEXIS 25583 (C.D. Cal., Jan. 8, 2002). 1924

[i] "guiding said eggs from said weighing stations first to a plurality of egg holding stations located downstream of said guide means"; [ii] "and then to a plurality of locations longitudinally spaced-apart from and substantially horizontally co-planar with said holding stations"; [iii] "guiding further eggs to said plurality of holding stations" — [i]"carrying eggs to holding stations"; [ii] "carrying eggs from the holding stations to the spaced-apart locations"; [iii] "carrying more eggs to the holding stations." *Moba, B.V., et al. v. Diamond Automaton, Inc.*, 1999 U.S. Dist. LEXIS 2847 (E.D. Pa., Mar. 4, 1999). 1925 [i] [ii] [iii] "Nowhere does the plain language of claim 24 require separate and consecutive performance of the various guiding steps. ... Hence, this court, like the district court as well, construes the guiding steps to include simultaneous performance." *Id.*, 325 F.3d 1306 (Fed. Cir. 2003). 1926

"gun barrel cleaning device" — "must be capable of cleaning the gun barrel as a single unit. It does not require any additional steps of taking sections apart and replacing various cleaning sections during the cleaning process." *Michaels of Oregon Co. v. Clean Gun, LLC*, 2002 U.S. Dist. LEXIS 20371 (D. Or., Jul. 9, 2002). 1927

- H -

"hair brush" — "does not specify the kind of hair to be groomed by the claimed invention. Thus, the term may reasonably encompass not only scalp hair brushes but also facial hair brushes." *In re Bigio*, 381 F.3d 1320 (Fed. Cir. 2004). 1928
"half maximum fan speed" — "roughly fifty percent of the highest rated speed of the fan having in mind that fans supplied by different manufacturers may differ as to their highest rated fan speed."  Control Resources, Inc. v. Delta Electronics, Inc., et al., 133 F. Supp. 2d 121 (D. Mass. 2001).\(^{1929}\)

"half-shells" — "two equal or corresponding parts forming a hard or firm outer covering into which the housing of the fluorescent lamp is divided."  Lami Corp. v. American Power Products, Inc., 1997 U.S. Dist. LEXIS 9942 (N.D. Ill., Jul. 7, 1997).\(^{1930}\) "[W]e conclude that the district court erred in ruling that half-shells must be the only two elements that form the housing in claim 11. The proper interpretation of the 'housing having two half-shells' limitation is a 'housing having at least two equal or corresponding parts forming a hard or firm outer covering into which the housing of the fluorescent lamp is divided.'"  Id., 228 F.3d 1365 (Fed. Cir. 2000).\(^{1931}\)

"wireless handheld computing device" — "a wireless computing device that is sized to be held in one's hand."  Ameranth, Inc. v. Menusoft Systems Corp., et al., 2010 U.S. Dist. LEXIS 39338 (E.D. Tex., Apr. 21, 2010).\(^{1933}\)

"handheld module including a display, manual controls, and system circuitry for processing signals for display" — "a compact assembly designed to be carried in one hand that includes a display, manual controls, and system circuitry for processing signals for display."  General Electric Co., et al. v. Sonosite, Inc., 2008 U.S. Dist. LEXIS 33223 (W.D. Wis., Jan. 8, 2008).\(^{1934}\)

"handheld unit dimensioned for handheld grasping" — "the unit is designed to be of a size permitting it to be easily grasped and held in the hand of a human operator."  Khyber Technologies Corp. v. Casio, Inc., et al., 2004 U.S. Dist. LEXIS 15714 (D. Mass. 2004).\(^{1935}\)

"handle" — "the part of the instrument designed to be grasped by the hand."  Tyco Healthcare Group LP v. Ethicon Endo-Surgery, Inc., 411 F. Supp. 2d 93 (D. Conn. 2006).\(^{1936}\)

"a handle attached to said tube adjacent the proximal end of the tube for maneuvering said tube within said endoscope while said handle is outside said endoscope" — "the claimed 'handle' of the '675 patent is limited by its recited function of 'maneuvering' a tube within an endoscope."  Canady Technology, LLC, et al. v., Erbe Elektromedizin Gmbh, et al., 20 F. Supp. 2d 54 (D.D.C. 1998).\(^{1937}\)

"handle component" — "a grip."  Pedicraft, Inc. v. Stryker Corp. of Michigan, et al., 2003 U.S. Dist. LEXIS 27837 (M.D. Fla., May 5, 2003).\(^{1938}\)

"handle portion" — "portion of the grooming tool that the user holds and that secures the pet engageable portion."  FURminator, Inc. v. Munchkin, Inc., et al., 2009 U.S. Dist. LEXIS 104429 (E.D. Mo., Nov. 9, 2009).\(^{1939}\)

"a hanger extending downward from each side of said primary frame members" — "a structure or a thing, attached to the frame members, that extends toward a lower place."  Watson & Chalin Manufacturing, Inc. v. Boler Co., 227 F. Supp. 2d 633 (E.D. Tex. 2002).\(^{1940}\)

"hard facing"; "hard facing material" — "wear-resistant material that is harder than the material onto which it is applied."  Reedhycalog UK, Ltd, et al. v. Baker Hughes Oilfield Operations, Inc., et al., 2007 U.S. Dist. LEXIS 76125 (E.D. Tex., Oct. 12, 2007).\(^{1941}\)
"having ...") — "does not preclude the possibility that the apparatus may have gas flow apertures other than those described in the claims. As the gas flow apertures described in the claims are associated with the performance of particular processes, however, any additional gas flow apertures must not be necessary to perform the processes described in the claims, and also must not interfere with those processes." ASM America, Inc., et al. v. Genus, Inc., 260 F. Supp. 2d 827 (N.D. Cal. 2002).1942

"having" — "means to hold, include, or contain as a part or whole." Pehr v. Rubbermaid, Inc., 87 F. Supp. 2d 1222 (D. Kan. 2000).1943

"having a" — "having at least one." STI Holdings, Inc. v. Great Dane Limited Partnership, 2010 U.S. Dist. LEXIS 57789 (W.D. Wis., Jun. 11, 2010).1944

"the first and second legs having a compliant area, thus allowing the hanger to accommodate various size of transmission lines" — "requires no construction and can be given its ordinary meaning." Andrew Corp. v. Beverly Manufacturing Co., 479 F. Supp. 2d 766 (N.D. Ill. 2006).1945

"fastening means having a recessed protrusion protruding from the base" — "the words 'recessed protrusion' carry their plain meaning, with the caveat that the recessed protrusion must protrude toward the support surface. ... both the words of the claim and the prosecution history support the conclusion that the recessed protrusion is preexistent to application of the fastening means." Bidco, Inc. v. Plastic Lumber Co., 2004 U.S. Dist. LEXIS 31066 (N.D. Cal., Nov. 10, 2004).1946

"the high pressure compressor having an inlet flow area directly proportional to the outlet flow area of the low pressure compressor, and inversely proportional to the absolute temperature ratio between the high temperature air flow discharged from the low pressure compressor compared to the low temperature air flow from the intercooler passing to the inlet area of the high pressure compressor" — "a design rule applied to optimize the cross-sectional area of the air flow inlet of the high pressure compressor in relation to the cross-sectional area of the air flow outlet of the low pressure compressor for a predetermined operating condition of the intercooler (1) by having the areas increase or decrease together on a constant ratio basis between them and (2) by having the cross-sectional area of the air flow inlet of the high pressure compressor also increase or decrease in opposite to the ratio of the absolute temperature of the air flow at the cross-sectional area of the air flow outlet of the low pressure divided by the absolute temperature of the air flow at the cross-sectional area of the air flow inlet of the high pressure compressor (i.e., the area increases as the ratio gets smaller and decreases as the ratio gets larger), which can be expressed mathematically as: AHPC [proportional] ALPC / (TLPC/THPC)." Rice v. Honeywell International, Inc., et al., 2006 U.S. Dist. LEXIS 89235 (E.D. Tex., Nov. 21, 2006).1947

"said portion having been subject to work-hardening" — "require[s] only that frames have been subjected to minimal work-hardening." CVI/Beta Ventures, Inc., et al. v. Custom Optical Frames, Inc., et al., 893 F. Supp. 508 (D. Md. 1995).1948
"said portion having greater than 3% elasticity over a temperature range from -20 °C. to +40 °C." — "means that at every temperature within the indicated range, the frame portion will recover at least 3% of its original shape after being subjected to stress and then released. Thus, if a frame portion were stretched 4% beyond its original shape and upon release recovered more than 3% of its original shape, the '3% elasticity' element would be met despite the 1% residual strain." CVI/Beta Ventures, Inc., et al. v. Custom Optical Frames, Inc., et al., 893 F. Supp. 508 (D. Md. 1995).

"said faceplate having a longitudinal axis and having returns extending from the sides of each face plate that are angled to allow the faceplate to expand under extreme heat" — "two face plate returns extending from opposing ends of the face plate at an angle that allows the faceplate to expand when exposed to extreme heat (such as welding) without causing significant distress to the concrete in which the flange connector is embedded." JVI, Inc. v. Universal Holdings, Inc., et al., 464 F. Supp. 2d 758 (N.D. Ill. 2006).

"head opening" — "an opening which allows the user to enter and exit the inner cavity." Mont-Bell Co., Ltd. v. Mountain Hardware, Inc., 1997 U.S. Dist. LEXIS 22424 (N.D. Cal., Jul. 9, 1997).

"a head portion" — "the upper part of the female fastener fashioned in a manner to prevent it from passing through the seat shell." American Seating Co. v. Freedman Seating Co., 450 F. Supp. 2d 765 (W.D. Mich. 2006).

"heading signal" — "the ordinary and accustomed meaning of 'heading' connotes only direction, rather than being limited to the direction of the trolling motor. ... We therefore agree with the district court that the ordinary and accustomed meaning of 'heading signal' controls." Johnson Worldwide Associates, Inc. v. Zebco Corp., et al., 175 F.3d 985 (Fed. Cir. 1999).

"heat said terminal sufficient to remove said electrical insulation from said armature wire in contact with said terminal and to fuse said armature wire thereto" — "heat the terminal sufficiently to remove the insulation on the armature wire, such as by vaporizing it, and soften the terminal enough to permit the formation through pressure of a mechanical surface adhesion bond between the terminal and wire." Joyal Products, Inc. v. Johnson Electric North America, et al., 2007 U.S. Dist. LEXIS 79522 (D.N.J., Oct. 25, 2007).

"heating" — "HISI requests that 'heating' not be limited to any particular temperature range in Claims 1 and 67. ... TPI argues that HISI's claim is limited by what the Kowalski Patent has defined as the operable range of the invention. ... The specifications do not support the broad claim language of 'heating'; accordingly these claims are deemed invalid on this ground." *Tuna Processors, Inc. v. Hawaii International Seafood, Inc., et al.*, 2007 U.S. Dist. LEXIS 77396 (D. Haw., Oct. 17, 2007). 1958 "The Court's Claims Construction Order ... is hereby reconsidered and amended such that (1) the portion of the order invalidating the Kowalski Patent's Claims 1 and 67 is VACATED; and, (2) the Court clarifies that 'heating,' as used in Claims 1 and 67 is not limited to any specific numerical temperature range." *Id.*, 2007 U.S. Dist. LEXIS 84605 (D. Haw., Nov. 15, 2007). 1959

"heating said substantially uniform mixture within said die to a temperature substantially above the softening temperature of said binder material" — "mean[s] that the substantially uniform mixture is heated to a temperature substantially above the softening temperature of the binder while the mixture is in the die." *KX Industries, L.P., et al. v. Culligan Water Technologies, Inc., et al.*, 90 F. Supp. 2d 461 (D. Del. 1999). 1961

"heating station" — "a slide support and heating element capable of directly heating at least one microscope slide by conductive heating, e.g., direct contact of a heating surface to a portion of the microscope slide to be heated." *Cytologix Corp. v. Ventana Medical Systems, Inc.*, 424 F.3d 1168 (Fed. Cir. 2005). 1962

"hemispherical" — "a 'sphere' is defined as 'a body or space bounded by one surface all points of which are equally distant from a point within that constitutes its center.' ... A 'hemisphere,' in the geometrical sense, is 'either of two half spheres formed by a plane through a sphere's center.'" *Bai v. L & L Wings, Inc., et al.*, 1997 U.S. Dist. LEXIS 12649 (S.D.N.Y., Aug. 22, 1997). 1965

"high intensity mixing" — "the process employed to distribute solid and liquid components with the express purpose of dispensing them in a polymer resin." *Marley Mouldings Ltd. v. Mikron Industries, Inc.*, 282 F. Supp. 2d 847 (N.D. Ill. 2003). 1968
"high strength adhesive"; "bond strength sufficient to resist peeling of the fabric from the substrate" — [i] "an adhesive providing a bond strength sufficient to prevent a person from being able to manually peel the fabric from the substrate"; [ii] "the bond strength of the high strength adhesive is sufficient to prevent a person from being able to manually peel the fabric from the substrate." American Seating Co. v. Kustom Seating Unlimited, Inc., 2010 U.S. Dist. LEXIS 9377 (S.D. Mich., Feb. 4, 2010).1969

"high pressure power injector" — "the 'high pressure power injector' described in Claim 10 of the 669 patent is capable of performing angiographic as well as CT applications. As such, it operates at pressures ranging from 25 psi to in excess of 1200 psi." Liebel-Flarsheim Co. v. Medrad Inc., 2001 U.S. Dist. LEXIS 23096 (S.D. Ohio, Oct. 18, 2001).1971

"hinge segment" — "the segment of metal between the first end and the second end of the primary score that stays attached to the central panel of the can end under normal opening conditions." Crown Packaging Technology, Inc., et al. v. Rexam Beverage Can Co., 486 F. Supp. 2d 366 (D. Del. 2007).1973

"hinged joint" — "may encompass the 'universal' or 'swivel' 'joint 56,' depicted in Figures 3A and 5A." Zipwall, LLC v. Fastcap, LLC, 482 F. Supp. 2d 141 (D. Mass. 2007).1974

"holding a helical array of regularly disposed bristles" — "'holding a helical array' [] mean[s] that the bristles held by the core must be disposed in the form of a helix."; "regularly disposed' [] mean[s] evenly or harmoniously distributed along the length of the brush." L'Oreal S.A, et al. v. Revlon Consumer Products Corp., et al., 2000 U.S. Dist. LEXIS 3130 (D. Del., Feb. 24, 2000).1975

"holding station"; "spaced-apart location" — "'holding station' mean[s] a first location in space to which an egg is moved and at which the egg may maintain position until it is lifted simultaneously with an egg at a 'spaced-apart location.' The Court interprets the term 'spaced-apart locations' to mean a second location downstream from and substantially horizontally co-planar with the 'holding station.'" Moba, B.V., et al. v. Diamond Automaton, Inc., 1999 U.S. Dist. LEXIS 2847 (E.D. Pa., Mar. 4, 1999).1976 "In sum, the district court correctly construed the term 'holding.' The term 'holding station' also does not require lack of motion." Id., 325 F.3d 1306 (Fed. Cir. 2003).1977

"holding the sample in a non-flowing manner within the sample chamber" — "the sample is not moving in the sample chamber during the measurement." Therasense, Inc. v. Becton, Dickinson and Co., 2006 U.S. Dist. LEXIS 66437 (N.D. Cal., Aug. 31, 2006).1978

"holding the two retaining mechanisms together" — "supporting, or keeping from falling, the rims together." Aspex Eyewear, Inc., et al. v. Altair Eyewear; Inc., 386 F. Supp. 2d 526 (S.D.N.Y. 2005).1979

"homogenization" — "the formation of an alloy between substances, and in the case of the homogenization of metals and ceramics requiring the intimate mixing of at least two components to form an alloy between the components, but excluding polymerization techniques when the substances to be homogenized consist of polymers." Imagecube LLC v. Boeing Co., et al., 2006 U.S. Dist. LEXIS 19911 (N.D. Ill., April 17, 2006). 1987

"each of said ends further including a downwardly extended end portion for hooking onto a primary spectacle" — "each of said ends further including a portion that extends downward relative to the remainder of the arm and where that downward extending portion is bent in a manner to connect or catch with the primary spectacle frame as if with a hook." Aspex Eyewear, Inc., et al. v. Miracle Optics, Inc., 2003 U.S. Dist. LEXIS 26355 (C.D. Cal., Feb. 14, 2003). 1989

"a wash chamber rotatable about a horizontal axis ... such that said fabric will tumble in said wash chamber" — "These claim elements mean that the washer has a wash chamber that is rotated about an axis that is oriented primarily or predominantly parallel to the horizon such that the fabric will tumble when the wash chamber is rotated at a speed effecting less than one gravity of centrifugal force on the fabric. This limitation encompasses a wash chamber whose axis may be angled slightly (e.g., at 10 degrees), provided that the fabric will tumble when the wash chamber is rotated at a speed effecting less than one gravity of centrifugal force on the fabric." Whirlpool Corp., et al. v. LG Electronics, Inc., et al., 423 F. Supp. 2d 730 (W.D. Mich. 2004). 1990
"horizontal exhaust pipe" — "the exhaust pipe which is horizontal both at the point at which it exits the building and the point at which it is connected to the fireplace." *Fireplace Manufacturers, Inc. v. Hearth Technologies, Inc.*, 1997 U.S. Dist. LEXIS 21966 (D. Minn., Dec. 10, 1997).1991

"horizontal groove" — "at least one groove which is perpendicular to an axis defined by the proximal and distal ends." *ICU Medical, Inc. v. Alaris Medical Systems, Inc.*, 2006 U.S. Dist. LEXIS 96077 (C.D. Cal., July 17, 2006).1992

"housing" — "could include a front wall with a protrusion or extension above the point where the wall meets the top or bottom walls. The broadly written claim does not require that the LED lie wholly within the volume created by four walls of housing. The housing must be a supporting structure made of a single molded unit, with a front, top, bottom, and rear wall." *Amphenol Corp., et al. v. Maxconn, Inc., et al.*, 2000 U.S. Dist. LEXIS 20221 (N.D. Cal., Mar. 7, 2000).2003

"a housing configured to receive the anterior surface of the hand" — "a hand controller (which may be hollow or solid) that contains a part or mechanism while receiving the palm-side of the user's hand."  *Gart v. Logitech, Inc., et al.*, 254 F. Supp. 2d 1119 (C.D. Cal. 2003).

"a housing part for housing a self-expanding stent, said housing part provided at said distal end of said guide lube" — "an enclosure or covering that fits a self-expanding stent, regardless of whether the housing part actually covers the entirety of the stent or is even capable of doing so, said housing part located at the extremity of a guide tube away from the operator."  *Laboratories Perouse S.A.S. v. W.L. Gore & Associates, Inc.*, 528 F. Supp. 2d 362 (S.D.N.Y. 2007).

"a housing part opener for opening said housing part independent of the self-expanding stent" — "The Court concludes based on the intrinsic and extrinsic evidence that 'housing part opener' was not drafted as a means-plus-function element, and construes this language according to its ordinary meaning, 'a device that opens.' ... Accordingly, the Court construes the phrase, 'a housing part opener for opening said housing part independent of the self-expanding stent,' to mean 'a device that creates an opening or separation in the housing part, the device not using the self-expanding stent to create an opening or separation in the housing part.'"  *Laboratories Perouse S.A.S. v. W.L. Gore & Associates, Inc.*, 528 F. Supp. 2d 362 (S.D.N.Y. 2007).

"hull" — "the bottom portion of a sit-on-top kayak, with a bow and stern, generally V-shaped to create a deeper draft than a surfboard to obtain better tracking."  *Old Town Canoe Co. v. Glenwa, Inc.*, 229 F. Supp. 2d 1151 (D. Or. 2001). "We agree with the plaintiff that 'hull' refers to a structure that forms 'the bottom of the kayak' because it is consistent with the usage of the term in the patent itself."  *Id.*, 55 Fed. Appx. 918 (Fed. Cir., Jan. 14, 2003) (unpublished).

"a length no less than that of a human thigh" — "can reasonably be read as stating that the length of the pillow is not less than the length of the thickness of a typical human thigh."  *Banyan Licensing, L.C. v. Allied Foam & Packaging, Products, Inc., et al.*, 134 F. Supp. 2d 907 (N.D. Ohio 2001). "The district court held that the length of the longitudinal axis of the patented pillow corresponds to the length of a human thigh as measured from the front of a human (belly button side) to the back. The district court called this dimension the 'thickness' of the thigh. We conclude that this definition is consistent with the intrinsic record."  *Banyan Licensing, L.C. v. Orthosupport International, Inc.*, 34 Fed. Appx. 696 (Fed. Cir., Mar. 21, 2002).

"hydraulically full" — "completely filled with process fluid such that there are no blind spots, dead-ends, interior surface irregularities or the like where a process fluid or ambient atmosphere could be trapped."  *CFMT, Inc., et al. v. YieldUP International Corp.*, 92 F. Supp. 2d 359 (D. Del. 2000).

"hydrophobe precursor" — "a precursor is a material from which another material can be formed. A hydrophobe precursor may be, but is not limited to, any organic material combining a site reactive toward starch or cellulose with a long hydrophobic tail, as well as the specific hydrophobic precursors identified in the specification of the '693 patent and materials having the structure of the hydrophobe precursors disclosed in the specification of the '693 patent." Fort James Corp. v. J.H. McNairn, Ltd., 2006 U.S. Dist. LEXIS 36528 (N.D. Ga., April 4, 2006).

"hypotenuse" — "the edge of a triangular cutting surface tooth opposite the interior angle of the triangle that is closest to ninety degrees." Synvasive Corp. v. Stryker, Corp., 425 F. Supp. 2d 1105 (E.D. Cal. 2006).

- I -

"identical" — "the same,' noting that such definition does not rule out minor machining variations." Alloc, Inc. v. Unilin Decor N.V., et al., 2007 U.S. Dist. LEXIS 16743 (E.D. Wis., Mar. 6, 2007).

"identical half shells": "half-shells identically shaped" — "the term 'identical,' when used in the context of 'identical half shells' or 'half-shells identically shaped,' means the same or exactly alike," Lampi Corp. v. American Power Products, Inc., 1997 U.S. Dist. LEXIS 9942 (N.D. Ill., Jul. 7, 1997).

"identification structure" — "indicia associated with a lock that signals to a luggage or baggage screener that the lock is subject to a special screening procedure." Travel Sentry, Inc. v. Tropp, 2009 U.S. Dist. LEXIS 87923 (E.D.N.Y., Sep. 24, 2009).

"a reserve vacuum assembly coupled to said positioning ring to sustain the vacuum within said cavity if operation of said vacuum pump is interrupted as the head moves across the aperture" — "the trigger for using the reserve vacuum assembly is interruption of the operation of the vacuum pump." Bausch & Lomb Inc. v. Moria S.A., et al., 222 F. Supp. 2d 616 (E.D. Pa. 2002).

"illuminating a subject's pupil and focusing an image of the subject's pupil on an image plane" — "causing light to reach the pupil portion of the eye of a person being tested and using equipment such as a lens to provide an image of the pupil to an image plane such as the image plane of a camera, for use in later steps of Claim 9." Pulse Medical Instruments, Inc. v. Drug Impairment Detection Services, Inc., 2009 U.S. Dist. LEXIS 55571 (D. Md., Mar. 20, 2009).

"illumination optical system" — "an optical component, or combination of optical components, that directs light from a light source onto and through a mask pattern." Nikon Corp., et al. v. ASM Lithography B.V., 308 F. Supp. 2d 1039 (N.D. Cal. 2004).

"image sensing module" — "a module that is controlled by electronic components located outside of the scanner, and that includes a one-dimensional image sensor, an optical system, and a first illumination source." *Plustek, Inc. v. Syscan, Inc., et al.*, 2009 U.S. Dist. LEXIS 122777 (N.D. Cal., Dec. 21, 2009).2028

"immediate proximity"; "proximity" — "requires that the needle tip be flush with the forward surface of the body. The same limitation applies with regard to the term 'proximity' found in reissue claims 27 and 28." *MBO Laboratories, Inc. v. Becton, Dickson & Co.*, 385 F. Supp. 2d 88 (D. Mass. 2005).2029

"immersing" — "to plunge into or place under a fluid." *Arthrocare Corp. v. Smith & Nephew, Inc.*, 2003 U.S. Dist. LEXIS 5976 (D. Del., Apr. 9, 2003).2031

"an elongated hollow electrically conductive tube, said tube having an immersion end and a connector end" — "We construe 'immersion end' to mean 'the region of the tube which is first inserted into molten metal' and 'connector end' to mean 'the region of the tube opposite the immersion end of the tube.'" *Heraeus Electro-Nite Co. v. Midwest Instrument Co.*, 2007 U.S. Dist. LEXIS 81685 (E.D. Pa., Nov. 1, 2007).2032

"impact head" — "a component of the terminal designed to receive the impact of an errant vehicle and spread the load of the impact over an impacting vehicle such that the safety device does not penetrate the body."

"impact resistant" — "is defined by the Specification as resisting the impact of bullets, exploding projectiles or bomb fragments." *Phillips v. AWH Corp., et al.*, 2002 U.S. Dist. LEXIS 27298 (D. Colo., Nov. 20, 2002).2035

"have substantially the same impact strength"; "the body with a substantially uniform impact strength" — "The Court ... construes 'impact strength' to mean 'resistance to impact.' The remainder of the phrase needs no construction." *ReedHycalog UK, Ltd., et al. v. Baker Hughes Oilfield Operations, Inc., et al.*, 2007 U.S. Dist. LEXIS 67109 (E.D. Tex., Sept. 10, 2007).2036

"impeller means" — "while the term 'means' is used in the 'impeller means' limitation, adequate structure is revealed by the term 'impeller,' such that section 112, paragraph 6 is not invoked." *Toro Co. v. Ariens Co.*, 2000 U.S. App. LEXIS 8253 (Fed. Cir., Apr. 27, 2000) (unpublished).2037

"steam and/or gas impermeable" — "having a low enough permeability or transmission rate to steam and/or gas to prevent a measurable loss of weight, flavor, and taste during customary production, cooking, and storage." Viskase Cos., Inc. v. World Pac International AG, et al., 2010 U.S. Dist. LEXIS 49720 (N.D. Ill., May 18, 2010).

"to an impermeable surface of a support" — "to a solid having a non-porous surface that does not permit diffusion through its substance." Oxford Gene Technology Ltd. v. Mergen Ltd., et al., 2004 U.S. Dist. LEXIS 19818 (D. Del., Sept. 29, 2004).

"implant"; "plug" — "The entirety of the intrinsic evidence reveals a consistent usage of the terms 'implant' and 'plug' and treats them as separate and distinct devices. Whatever meaning the terms may have in common usage, within the '270 and '959 patents, an 'implant' is a device that can pass through the punctum and into the canaliculus, and can be moved about within the canaliculus; a 'plug' is a device a portion of which is inserted through the punctum and into the canaliculus, but which cannot pass through the canaliculus. It is quite clear to the court, from the evidence presented regarding Herrick's prosecution of its '959 patent that it was tailored to exclude punctum plugs." Herrick Family Limited Partnership v. Odyssey Medical, Inc., 1999 U.S. Dist. LEXIS 23563 (C.D. Cal., Nov. 9, 1999).

"implant delivery assembly" — "an apparatus for delivery of occlusive devices, such as embolic coils that comprises three distinct components: a pusher, a coupling, and an implant." Boston Scientific Corp. v. Cordis Corp., 422 F. Supp. 2d 1102 (N.D. Cal. 2006).

"stent impregnated [with rapamycin]" — "a person of ordinary skill in the art would understand the term 'impregnated' ... to mean 'filled, imbued, saturated, diffused or permeated with another substance,' and the Court shall construe it as such." Wyeth, et al. v. Abbott Laboratories, et al., 2010 U.S. Dist. LEXIS 75893 (D.N.J., Jul. 27, 2010).

"an impressed textured surface to trap air so as to facilitate unwinding of said roll of stretched film" — "the plastic film has an embossed pattern that helps trap air and ease unwinding." Pliant Corp. v. MSC Marketing and Technology, Inc., 416 F. Supp. 2d 632 (N.D. Ill. 2006).

"an impression preform" — "a thermoplastic resin which serves as an impression material." Medtech Products Inc. v. Ranir, LLC, et al., 2009 U.S. Dist. LEXIS 103211 (S.D.N.Y., Nov. 5, 2009).

"improved eschar" — "an eschar (as defined above) that, when compared to electrosurgical fulguration made prior to this invention, is characterized by a shallower arc hole reticulum layer that has more uniform and smaller diameter holes evenly distributed over the surface of the tissue that is substantially free of charring and carbonization with thicker walls of tissue between adjacent arc holes and is shallower, and with a thermal desiccation layer that is relatively thin and more uniform in depth." Erbe Elektromedizin GmbH, et al. v. Canady Technology, LLC, et al., 512 F. Supp. 2d 297 (W.D. Pa. 2007).
"an improvement in a vehicle" — "a module that becomes part of a vehicle and is intended to remain part of the vehicle during use." Adrain v. Superchips, Inc., 2006 U.S. Dist. LEXIS 25212 (S.D. Tex., March 14, 2006). 2048

"in" — "The word 'in,' however, is not synonymous with the word 'on.' The two words denote different spacial relationships. The vial cap of Biomed's device is not at any time encompassed by the base unit." Biomedical Polymers, Inc. v. Evergreen Industries, Inc., 976 F. Supp. 98 (D. Mass. 1997). 2050

"in a chain saw" — "is not a Jepson-type limitation, but only describes an intended use for the invention." Blount Inc., et al. v. Trilink Saw Chain, LLC, et al., 2007 U.S. Dist. LEXIS 42617 (D. Or., June 8, 2007). 2051

"residing in a close proximal relation to ... said food item" — "refers to a positional relationship between the susceptor and food item in which the susceptor remains closely adjacent to the food item throughout the cooking process." General Mills, Inc. v. Hunt-Wesson, Inc., 103 F.3d 978 (Fed. Cir. 1997). 2052

"in a plane including the axis" — "in a plane including the axis." Eazypower Corp. v. Alden Corp., 509 F. Supp. 2d 737 (N.D. Ill. 2007). 2053

"elastic material attached to inelastic material in a plurality of spaced apart parallel lines of attachment" — "use of the term 'in' rather than 'by' or 'with' in the phrase 'elastic material attached to inelastic material in a plurality of spaced apart parallel lines of attachment' requires an elastic sewn into, not onto, an inelastic material; thus, it is clear that the elastic material must itself be the attaching mechanism." Louisville Bedding Co. v. Perfect Fit Industries, Inc., 151 F. Supp. 2d 818 (W.D. Ky. 2001). 2054

[i] "an airstream outlet opening in an upper portion"; [ii] "mounted in an upper portion" — [i] "the airstream outlet opening is located in the top half of the dirt separation housing and closer to the center than to the edge of the housing"; [ii] "attached in the upper half of the dirt separator housing." Bissell Homecare, Inc. v. Dyson, Inc., 2010 U.S. Dist. LEXIS 57603 (W.D. Mich., Jun. 10, 2010). 2057

"in communication with" — "the Court construes the term 'in communication with' ... according to its ordinary meaning. Whether this construction covers the disclosed embodiments is beside the point, because no other construction is reasonable in light of the evidence." Regents of the University of Minnesota v. AGA Medical Corp., 2009 U.S. Dist. LEXIS 90289 (D. Minn., Sep. 29, 2009).

"a hollow valve liner ... defining a first bore in communication with a source of relatively hotter liquid" — "The Court finds that Bradley's definition of in communication that limits the connection of the parts such that they must be adjacent to or directly connected to one another is not supported by the plain meaning of the claim language or the specification. In common usage, communication can occur directly or indirectly, for example, by face-to-face conversation or by tape-recorded-voice-to-person." Lawler Manufacturing Co., Inc. v. Bradley Corp., et al., 2000 U.S. Dist. LEXIS 20511 (S.D. Ind., Nov. 30, 2000).

"cooling said core in conjunction with the concurrent application of a third pressure" — "cooling said core while at the same time applying a third pressure." Leighton Technologies LLC v. Oberthur Card Systems, S.A., 358 F. Supp. 2d 361 (S.D.N.Y. 2005).

"airflow to and from said intercooler in counterflow with coolant" — "The parties do not dispute that 'counterflow' means flowing in an opposite direction. The essence of the dispute is whether the frame of reference for determining the counterflow is outside the intercooler (Rice) or within the intercooler where there is heat transfer between the air flow and the coolant (i.e., thermal contact). ... the Court adopts the construction proposed by Rolls-Royce." Rice v. Honeywell International, Inc., et al., 2006 U.S. Dist. LEXIS 89235 (E.D. Tex., Nov. 21, 2006).

"in dependence on an expected trajectory of said tooth through formation material" — "based on the expected path the drill tooth being adjusted takes through the formation." Haliburton Services v. Smith International Inc., 2004 U.S. Dist. LEXIS 2320 (E.D. Tex., Feb. 18, 2004).

"at least two electrodes in direct contact with the cell" — "the Court finds it unnecessary to provide certain examples of indirect contact because 'direct physical contact' provides sufficient guidance." Lifescan, Inc. v. Roche Diagnostics Corp., 2007 U.S. Dist. LEXIS 70283 (N.D. Cal., Sept. 11, 2007).

"in fixed relation adjacent a surface of said vehicle window" — "means that relative to one another, the sunshade and the window do not move when the sunshade is placed in use." Huang, et al. v. Autoshade, et al., 950 F. Supp. 1016 (C.D. Cal. 1997).

"in fluid communication" — "means that fluid makes the connection between the parts and areas specified, or that the parts so delineated are connected by fluid." Lawler Manufacturing Co., Inc. v. Bradley Corp., et al., 2000 U.S. Dist. LEXIS 20511 (S.D. Ind., Nov. 30, 2000).

"wherein the notch is in fluid communication with the cell" — "the notch is connected to the sample receiving cell in a way that the fluid flows through the notch and to or from the cell." Lifescan, Inc. v. Roche Diagnostics Corp., 2007 U.S. Dist. LEXIS 70283 (N.D. Cal., Sept. 11, 2007).

"a weathertight gasket mounted on said flange and engaging said lid in its closed position" — "does not require that it be construed as though the lid is closed and will remain closed." Felix v. American Honda Motor Co., 2007 U.S. Dist. LEXIS 78564 (D. Kan., Oct. 19, 2007).
"performs several functions in one pass" — "performing several cleaning functions completed in one pull through the gun barrel with mid-bore directional changes permitted. Nothing in the specification requires the use of only a single pass." Michaels of Oregon Co. v. Clean Gun, LLC, 2002 U.S. Dist. LEXIS 20371 (D. Or., Jul. 9, 2002).

"a holder for holding an end of said capillary tube in operative relation with one of the said cups" — "neither the written description nor the prosecution history provides any support for Beckman's assertion that the phrase 'in operative relation' in the holder limitation must be limited to vertical movement of the holder. Thus, the district court erred in its claim construction. The proper interpretation of the holder limitation is that 'in operative relation' encompasses both vertical movement of the holder as well as vertical movement of the sample cups and the table." Princeton Biochemicals, Inc. v. Beckman Instruments, Inc., 1999 U.S. App. LEXIS 19743 (Fed. Cir., Aug. 19, 1999) (unpublished).

"in parts (volume) ..." — "the proportional volumetric quantity of one material component to all other components." Marley Mouldings Ltd. v. Mikron Industries, Inc., 282 F. Supp. 2d 847 (N.D. Ill. 2003).

"in series" — "requires an orientation of thermostat portions that are connected in a chain such that one portion comes in contact with fluid in the mixing chamber at a different time than the other." Lawler Manufacturing Co., Inc. v. Bradley Corp., 2000 U.S. Dist. LEXIS 14197 (S.D. Ind., Apr. 26, 2000).

"in series" — "requires that the thermostat portions be arranged in a chain or sequentially such that one portion comes in contact with fluid in the mixing chamber at a different time than the other." Lawler Manufacturing Co., Inc. v. Bradley Corp., et al., 2000 U.S. Dist. LEXIS 20511 (S.D. Ind., Nov. 30, 2000).

"in the form of a briquette" — "the claim is only concerned with the shape of the additive and not how it is formed." Harsco Corp. v. North Star Bluescope Steel, LLC, 2007 U.S. Dist. LEXIS 55335 (N.D. Ohio, July 31, 2007).

"in the presence of optically visible hemoglobin" — "does not limit claim 1 to a strip in which the only hemoglobin optically visible is that which is in red blood cells filtered out and held at the surface of the test strip." LifeScan, Inc. v. Polymer Technology International Corp., 1995 U.S. Dist. LEXIS 4916 (W.D. Wash., Jan. 3, 1995).
"in the web" — "is capable of definition and, therefore, that it does not render invalid claim 1."  

"incidental heat loss" — "atmospheric or other ambient heat loss."  

"an inclination mechanism secured to said frame structure effective to permit selective inclination of said deck member by the user" — "is written in means-plus-function format."  

"the bin walls having an inclination that is sufficient to cause material which is to be spread when positioned thereon to slide spontaneously to the conveyor, under the agitation arising from vehicular motion" — "The inclination of the bin walls above the horizontal must be sufficient to meet this requirement. Thus, the bin wall cannot have a flat horizontal portion adjacent the conveyor, or any curve that is not downwardly inclined toward the conveyor (i.e., as one travels inward along the bin wall, each point along the bin wall toward the conveyor must be lower than the points farther from the conveyor)."  

"a rear segment and a front segment inclined relative to the rear segment wherein the front segment is inclined relative to the rear segment at about 20 40 degrees thereby defining the inclined portion" — "the front segment of the gripping region is inclined at an angle of about 20 to about 40 degrees relative to the rear segment of the gripping region."  

"includes a plurality of sub-members" — "is composed of two or more sub-members."  

"includes the intensity level setting of the control device controlling the intensity level of the lamp" — "includes, but is not limited to, the intensity level setting of the control device that is directing the lamp's intensity level."  

"including" — "permanently affixed to and included as part of."  
"The term 'including,' in the context of the '528 patent, does not imply 'attachment,' and the claims of this patent should not be limited to the preferred embodiment with its attached restricting ring."  
*Id.* (Rader, J., dissenting).  

"including" — "to take in or comprise as a part of a whole."  

"a resilient and elongate latch tongue including pawl means forming a recess thereacross" — "the court construes the term 'including' as requiring both the upper and lower portions of the pawl means to be contained by, and therefore to comprise, as a part of the whole, the tongue structure in this case."  

"incompressible" — "refers to a material that does not change volume when subjected to pressure or force."  
"increased strength characteristic" — "an increase in the ultimate strength of the film." *Pliant Corp. v. MSC Marketing and Technology, Inc.*, 416 F. Supp. 2d 632 (N.D. Ill. 2006). 2093

"the thickness of the generally annular region increases as the region approaches the pumping member" — "the claim language is clear and understandable to the fact finder, and any substitute for the claim language is likely to cause confusion rather than aid. Thus, the Court declines to define this term." *Sta-Rite Industries, et al. v. ITT Corp., et al.*, 2010 U.S. Dist. LEXIS 10790 (E.D. Tex., Jan. 19, 2010). 2094

"increases in rigidity after expansion of the balloon" — "requires that the material contained in the sleeve or added to the sleeve during the procedure increase in rigidity after the balloon begins to expand." *Arlaine & Gina Rockey, Inc. v. Cordis Corp.*, 2004 U.S. Dist. LEXIS 30763 (S.D. Fla., Jan. 5, 2004). 2095

"said magnetic member creates a magnetic circuit which passes at least through a periphery of said first rivet of said female member, which said small hole in said one of said first and second rivets increasing the magnetic attraction of said magnetic member by modifying a resistance to said magnetic circuit at said first and second rivets" — "in which the magnet causes lines of magnetic flux to pass through at least the outer sides of the rivet in the female half; and the small hole(s) in one or both rivets modifies their resistance to the flux and thereby increases the magnetic attraction." *Advanced Magnetic Closure, Inc. v. Rome Fastener Corp., et al.*, 2005 U.S. Dist. LEXIS 10016 (S.D.N.Y., May 11, 2005). 2096

"indentation"; "hole" — "The term 'indentation' is not interchangeable with the term 'hole' in the '932 Patent. As summarized above, the term 'indentation' is consistently used to indicate a recess, while the term 'opening' is consistently used to refer to an area through which something can, and does, pass." *Joy MM Delaware Inc., et al. v. Cincinnati Mine Machinery Co.*, 2010 U.S. Dist. LEXIS 107871 (W.D. Pa., Oct. 8, 2010). 2100

"independent" — "any one cover section can be removed from the cover system without removing any other cover section." *Sundance, Inc. v. De Monte Fabricating, Ltd.*, 485 F. Supp. 2d 805 (E.D. Mich. 2007). 2101

"plural independent poles" — "more than one structurally supportive member that is elongated and often cylindrical (or pieces of the same that connect together to form one pole) wherein each pole is not connected to another pole above the surface of the mat in a substantively inflexible manner." *Jumpsport, Inc. v. Jumpking, Inc.*, 2003 U.S. Dist. LEXIS 27262 (N.D. Cal., Jul. 18, 2003). 2102

"at least some of the appliances are marked to indicate their order of use" — "the word 'indicate' in the claim language conveys there may be an inferential step between the markings and the order of use." Ormco Corp. v. Align Technology, Inc., 2004 U.S. Dist. LEXIS 29994 (C.D. Cal., Jun. 29, 2004). 2104

"indication device" — "a device providing at least one of a visual indication, an audible indication or a tactile indication." Medtronic MiniMed Inc. v. Smiths Medical MD Inc., 2005 U.S. Dist. LEXIS 10583 (D. Del., Jun. 1, 2005). 2105

"status indicator" — "a display element, such as an LED or screen, for indicating the status of the electrical device." Lutron Electronics Co., Inc. v. Control4 Corp., 2009 U.S. Dist. LEXIS 3562 (D. Utah, Jan. 20, 2009). 2106

"individual buttons"; "individual button" — "one or more buttons on a pressure-sensitive variable conductance analog sensor." Anascape, Ltd. v. Microsoft Corp., et al., 2007 U.S. Dist. LEXIS 88248 (E.D. Tex., Nov. 30, 2007). 2107

"individual hydraulic drive motors operatively engaged to each of the ground engaging wheels" — "a single hydraulic drive motor operatively engaged to each of the ground engaging wheels." Toro Co. v. Textron, Inc., et al., 502 F. Supp. 2d 904 (D. Minn. 2007). 2108

"said plate members each being constructed as individual structural parts" — "Every one of the plate members is an independent structural part, constructed separate and apart from every other plate member." IKN, Inc. v. CemProTec GmbH, 2005 U.S. Dist. LEXIS 29134 (E.D. Pa., Nov. 22, 2005). 2110

"infinitely adjustable" — "means that the tracking adjustment can be made at any location along the threaded portion of the control rods of the invention with full movement in clockwise and counterclockwise directions of an adjustment member." Toro Co., et al. v. Scag Power Equipment, Inc., et al., 2002 U.S. Dist. LEXIS 14428 (D. Neb., Aug. 5, 2002). 2113

"inflation input" — "the point at which air enters the passageway." Aero Products International, Inc., et al. v. Intex Recreation Corp., et al., 466 F.3d 1000 (Fed. Cir. 2006). 2115
"inhibiting compression"; "such that compression of said fork is inhibited" — "To the extent 'inhibit' requires construction, these phrases should be read as 'restraining compression' and 'such that compression of said fork is restrained.'" SRAM Corp. v. Fox Factory, Inc., 2005 U.S. Dist. LEXIS 29164 (N.D. Ill., Nov. 18, 2005). 2116

"an injection port communicating with the interior of the chamber for admitting fluid into the chamber to expand the chamber" — "a sealable opening, located either remote from or in the flexible wall means, connecting to the interior of the chamber allowing the entrance of fluid into the chamber to expand the chamber." Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006). 2117

"an injector for transporting protons from the source to the accelerator" — "an apparatus that introduces protons from the proton source to the accelerator." Optivus Technology, Inc., et al. v. Ion Beam Applications S.A., 2004 U.S. Dist. LEXIS 30314 (C.D. Cal., Aug. 31, 2004). 2118

"ink delivery means positioned on opposite sides of said substrate, said ink delivery means fluidly communicating with an ink source" — "The magistrate [] correctly applied § 112, P 6 to the interpretation of this claim element." Signtech USA, Ltd. v. Vutek, Inc., 174 F.3d 1352 (Fed. Cir. 1999). 2119

"ink permeates through the sheet from said printed front surface to said back surface to provide the indicia in mirror image form on said back surface" — "We agree with the trial court's construction that ink must reside on or at the back surface of the sheet - but does not have to permeate through the back surface of the sheet." Paymaster Technologies, Inc. v. United States, 180 Fed. Appx. 942 (Fed. Cir., May 4, 2006) (unpublished). 2120

"inlet orifice" — "an orifice that provides an inlet into the claimed first vacuum chamber for the passage of ions and neutral gas molecules." Applera Corp., MDS Inc., et al. v. Micromass UK Ltd., et al., 186 F. Supp. 2d 487 (D. Del. 2002). 2121

"inner body portion" — "the term 'inner' merely denotes that the 'inner body portion' is located inside or within the decorative surface layer." Tate Access Floors, Inc., et al. v. Maxcess Technologies, Inc., 222 F.3d 958 (Fed. Cir. 2000). 2122

"inner chamber" — "that which is formed by the inner lining of the warmth-retaining means, whether in a relaxed, compressed, or expanded state. The Court declines to read the words 'normal cross-sectional area' into the patent claims." Mont-Bell Co., Ltd. v. Mountain Hardware, Inc., 1997 U.S. Dist. LEXIS 22424 (N.D. Cal., Jul. 9, 1997). 2123

"inner portion" — "a portion inward and toward the center of the product, discrete from any channel or channel portion." Kimberly-Clark Corp., et al. v. Tyco Healthcare Retail Group, 456 F. Supp. 2d 998 (E.D. Wis. 2006). 2124

"inner spatial volume" — "a region of space surrounded by an outer spatial volume and either enclosed by a polymeric film wall or defined by the outside surface of a solid radionuclide." Hologic, Inc., et al. v. SenoRx, Inc., 2009 U.S. Dist. LEXIS 12274 (N.D. Cal., Feb. 18, 2009). 2126
"inner spatial volume" — "a region of space surrounded by an outer spatial volume and either enclosed by a polymeric film wall or defined by the outside surface of a solid radionuclide sphere."  Xoft, Inc. v. Cytyc Corp., et al., 2007 U.S. Dist. LEXIS 34468 (N.D. Cal., April 27, 2007).  

"inner surface of said base" — "because its ordinary and customary meaning is clear to one skilled in the art, the Court declines to construe the phrase."  Joyal Products, Inc. v. Johnson Electric North America, et al., 2007 U.S. Dist. LEXIS 79522 (D.N.J., Oct. 25, 2007).  

"inner wall of the annulus" — "the young wall comprised primarily of fibrous material as well as the transition zone which includes both fibrous material and amorphous colloidal gels."  Smith & Nephew, Inc. v. Arthrocare Corp., 2004 U.S. Dist. LEXIS 31057 (W.D. Tenn. 2004).  

"an inner zone on the anterior face circumscribed by the peripheral zone and surrounding the optic zone"; "an inner zone circumscribed by the peripheral zone"; "the anterior face including an inner zone circumscribed by the peripheral zone, and an optic zone in the inner zone"; "a second zone circumscribing the optical zone" — "a zone or region on the anterior face of the lens located adjacent to the peripheral zone, and that circumscribes and is separated from the optic zone by either a curved or rounded transition or by a discrete boundary, discontinuity or corner."  CooperVision, Inc. v. Ciba Vision Corp., 2007 U.S. Dist. LEXIS 51432 (E.D. Tex., July 16, 2007).  

"insert-receiving area" — "a region of the eccentric weight portion that is capable of receiving an insert, as opposed to receiving material being poured into the region."  American Piledriving Equipment, Inc. v. J & G Sales, Inc., et al., 2010 U.S. Dist. LEXIS 21326 (S.D. Tex., Mar. 9, 2010).  

"insert-receiving area" — "a bore located, at least in part, within the eccentric weight portion that is shaped to hold securely a solid insert member."  American Piledriving Equipment, Inc. v. Geoquip, Inc., 2009 U.S. Dist. LEXIS 115486 (E.D. Va., Dec. 11, 2009).  

"insert-receiving area" — "a bore, formed in the eccentric weight portion of the counterweight, which is designed to receive and securely hold one solid insert member made of a second metal having a specific gravity higher than that of the first metal and a melting point temperature of 328º C or greater."  American Piledriving Equipment, Inc. v. Equipment Corp. of America, 2009 U.S. Dist. LEXIS 96910 (W.D. Pa., Aug. 3, 2009).
"insert-receiving area" — "a bore formed in the eccentric weight portion of the counterweight, which extends fully through the gear portion and fully through the eccentric weight portion of the counterweight, capable of receiving a solid tungsten rod."  *American Piledriving Equipment, Inc. v. Bay Machinery Corp.*, 632 F. Supp. 2d 956 (N.D. Cal. 2009).  

"insert within the aperture" — "the district court properly construed the 'insert within the aperture' limitation to exclude the flange and the raised ledge."  *Intermatic Inc. v. Lamson & Sessions Co.*, 273 F.3d 1355 (Fed. Cir. 2001).  

"insertable into and through the tissue" — "simply requires that the elongated anchor member go into and through tissue, and that the language of the claim is silent as to the means with which the anchor member does so."  *Smith & Nephew, Inc., et al. v. Biomet, Inc., et al.*, 2005 U.S. Dist. LEXIS 31723 (D. Or., Nov. 21, 2005).  

"said nail being insertable into the medullary canal of a femur" — "the nail is insertable into the canal of the femur called the medullary canal."  *Smith & Nephew, Inc. v. Zimmer, Inc.*, 2009 U.S. Dist. LEXIS 16691 (W.D. Tenn., Mar. 2, 2009).  

"insertable storage medium having information stored therein" — "require[s] that the storage medium is a physical device which itself stores information; and that the storage medium is itself inserted into the machine (rather than being connected in some other manner) in order to operate it."  *Rackman v. Microsoft Corp.*, 102 F. Supp. 2d 113 (S.D.N.Y. 2000).  

"inserting the preassembly into a tubular body of metal so as to be in centered, spaced, relation to the interior wall of said body" — "introducing or placing the preassembly into the tubular body so that the preassembly is not in contact with the interior wall of the body."  *Tenneco Automotive Operating Co. Inc. v. Visteon Corp.*, 2005 U.S. Dist. LEXIS 12738 (D. Del., Jun. 28, 2005).  

- 190 -

"integral" — "we disagree with Warminster's interpretation of the term 'integral.' Warminster would like us to interpret the term 'integral' as meaning functionally as opposed to physically integral. Such a reading would be directly contrary to our earlier interpretation of the term 'integral' as defining a 'structural relationship.'" Warminster Fiberglass Co., Inc. v. Delta Fiberglass Structures, Inc., 1996 U.S. App. LEXIS 29577 (Fed. Cir., Nov. 14, 1996) (unpublished).

"said base and flexible sections are integral" — "the base and flexible sections are formed as a single piece." Polyvision Corp. v. Smart Technologies, Inc., et al., 501 F. Supp. 2d 1042 (W.D. Mich. 2007).

"integral contrasting border" — "an edge or trim formed by removing the edges of the decorative surface layer to uncover or reveal the inner body portion." Tate Access Floors, Inc., et al. v. Maxcess Technologies, Inc., 222 F.3d 958 (Fed. Cir. 2000).

"an integral perimeter wall extending rearwardly from and surrounding the face wall defining a cavity in the rear of the head" — "requires a wall extending back from and surrounding the perimeter of the club face." Vardon Golf Company, Inc. v. Golfsmith International, Inc., et al., 2000 U.S. Dist. LEXIS 14259 (N.D. Ill., Jun. 6, 2000).

"integral therewith" — "The dispositive issue of claim construction is whether the term 'integral therewith' requires that the product be made by co-extrusion. ... The district court ruled, on review of the '854 specification, the prosecution history, and a dictionary definition of 'integral,' that the claimed gasket shield is not limited to manufacture by co-extrusion. ... We conclude that the district court correctly construed claim 1." Vanguard Products Corp. v. Parker Hannifin Corp., 234 F.3d 1370 (Fed. Cir. 2000). "I would reverse. ... the term 'integral therewith' is properly construed to mean an inner and outer layer 'formed as a unit through a single step process.'" Id. (Mayer, C.J., dissenting).

"the interior surfaces of said pylons are integral with said interior lower wall portion" — "mean[s] that the interior portion of the pylons must form a unit with, or physically connect to, the lower wall portion." Rehrig Pacific Co. v. Norseman Plastics Ltd. Inc., 2003 U.S. Dist. LEXIS 27566 (C.D. Cal., Sept. 29, 2003).

"distal tip integral with the distal end of the stem" — "means that there is a tip secured to the distal end of the stem, such that the tip and stem act as one unitary piece." Stryker Corp., et al. v. Intermedics Orthopedics, Inc., 891 F. Supp. 751 (E.D.N.Y. 1995).

"integrially bonded ... free of adhesive" — "mean[s] that the ribs bond to the panels without the use of a separate adhesive layer between the ribs and the panels." Bell & Howell Document Management Products Co. v. Altek Systems, et al., 132 F.3d 701 (Fed. Cir. 1997).

"integrially connected" — "mean[s] that the pieces are joined to function as a single article, including, but not limited to, a molded unit." Paczonay v. American Recreation Products, Inc., et al., 2007 U.S. Dist. LEXIS 9773 (N.D. Cal., Jan. 30, 2007).

"integrially connecting" — "joined together so as to make up a single, complete, and substantially permanent piece or unit, such that the connected components become an essential part of the complete unit, and such that the complete unit is incapable of being easily dismantled without destroying the unit." Safety Rail Source, LLC v. Bilco Co., 2009 U.S. Dist. LEXIS 30969 (D.N.J., Apr. 8, 2009).

"integrially formed" — "connected together so as to make up a single complete piece or unit, or so as to work together as a single complete piece or unit, and so as to be incapable of being easily dismantled without destroying the integrity of the piece or unit." Burns, Morris & Stewart L.P. v. Endura Products, Inc., 2005 U.S. Dist. LEXIS 46839 (E.D. Tex., May 11, 2005).

"[C]onnected together so as to make up a single complete piece or unit, in such a way that the connection becomes part of, or is interconnected with, the piece or unit, as by gluing, an interconnecting joint, or internal screws. The connector is not merely attached to, or wrapped around, the outside surface of the piece or unit." Burns, Morris & Stewart L.P. v. Masonite International Corp., 401 F. Supp. 2d 692 (E.D. Tex. 2005).

"integrially formed"; "formed integrally" — "formed with material common to the rest of the unit, and the connection having no mechanical joints." Storus Corp. v. Restoration Hardware, Inc., et al., 2007 U.S. Dist. LEXIS 25953 (N.D. Cal., Mar. 22, 2007).
"integrally formed as a portion of" — "the examiner clearly ... interpreted the phrase 'integrally formed' to encompass devices that had a compliance area fixedly attached to a support member, as in Brown. The examiner reiterated this interpretation in the final rejection. 'It is the Examiner's position that the language "integrally formed as a portion of" (e.g. a selected area, the housing assembly or the support member) still reads on the acoustic compliance area 100 of Brown et al.' The Board also adopted this interpretation citing numerous cases in which the word 'integral' had been interpreted broadly to encompass multi-piece structures. We conclude that the PTO's interpretation is reasonable in light of all the evidence before the Board." In re Morris, et al., 127 F.3d 1048 (Fed. Cir. 1997).\textsuperscript{2177}

"integrally formed with" — "created or constructed within or in combination with the frame." Cedarapids, Inc. v. Johnson Crushers International, Inc., et al., 2005 U.S. Dist. LEXIS 37439 (M.D. Tenn., Aug. 26, 2005).\textsuperscript{2178}

"not integrally formed with the unit" — "that the reservoir is not required to be of a specific size or shape to be used with the unit." Innovative Design Enterprises, Inc. v. Circulair, Inc., 1997 U.S. Dist. LEXIS 12799 (N.D. Ill., Aug. 20, 1997).\textsuperscript{2179}

"integrally joined" — "connected together so as to make up a single complete piece or unit, or so as to work together as a single complete piece or unit, and so as to be incapable of being easily dismantled without destroying the integrity of the piece or unit." Burns, Morris & Stewart L.P. v. Endura Products, Inc., 2005 U.S. Dist. LEXIS 46839 (E.D. Tex., May 11, 2005).\textsuperscript{2180}

"at least one light emitting source integrally secured within said housing adjacent the plug receiving opening thereof to provide visual verification of the status of the electrical connection" — "The light emitting source is held in place in the housing of the connector near the opening in the front wall which receives the plug so that the light emitting source is a part of the connector unit." Helifix Limited v. Blok-Lok, Ltd., et al., 26 F. Supp. 2d 294 (D. Mass. 1998).\textsuperscript{2182}

"intelligent safe" — "a safe that can supervise and account for user transactions at another safe." Tidel Engineering L.P. v. Fire King International, Inc., et al., 613 F. Supp. 2d 823 (E.D. Tex. 2009).\textsuperscript{2183}

"pair of receptacle support strap straps [that] are interconnected" — "the straps may be connected at any position on the receptacle as long as when the straps are connected, the first end of the support surface is at an angle with respect to the second end of the support surface. The first end of the support surface is not required to rest against the straps at an angle with respect to the second end of the support surface." Fisher-Price, Inc. v. Safety 1st, Inc., et al., 109 Fed. Appx. 387 (Fed. Cir., Aug. 16, 2004) (unpublished).\textsuperscript{2184}

"said regions of high and low vision correction powers being interconnected in an optical sense by transition regions" — "the regions of high and low vision correction powers are connected by a transition region in a fashion to provide vision correction." Vision Advancement, LLC v. Johnson & Johnson Vision Care, Inc., 2007 U.S. Dist. LEXIS 5742 (E.D. Tex., Jan. 26, 2007).

"a liquid delivery system interconnected to [the] granular delivery system for supplying liquid material" — "the term 'interconnected' includes a liquid delivery system that is connected 'electronically, hydraulically, or mechanically' to the granular system." Bristol Co. L.P. v. Bosch Rexroth Inc., et al., 2010 U.S. Dist. LEXIS 12875 (D. Colo., Feb. 1, 2010).

"interconnected with" — "mean[s] a connection between two components, without regard to the form of the connection." Briggs & Stratton Corp. v. Kohler Co., 398 F. Supp. 2d 925 (W.D. Wis. 2005).

"interconnected with"; "securing" — "attaching ..., either directly or through another device or assembly." Caught Fish Enterprises, LLC, et al. v. Contek, Inc., 509 F. Supp. 2d 954 (D. Colo. 2007).

"interengagable notches" — "complementary concave or V-shaped cuts or indentations on the locking member and tubular member which are capable of engaging or interlocking with one another." Engineered Products Co. v. Donaldson Co., Inc., 165 F. Supp. 2d 836 (N.D. Iowa 2001).

"area of interference fit"; "band[s] of interference fit" — "An area of interference fit is the place where the outer surface of the sleeve and the inner surface of the bit holder meet. A band of interference fit is a specific type of structure used to create an area of interference it. A band of interference fit must be shorter than the entire length of the sleeve. One band creates one area of interference it. Two discrete bands create two different areas of interference fit." Joy MM Delaware, Inc., et al. v. Sandvik Mining and Construction USA LLC, 2007 U.S. Dist. LEXIS 40868 (W.D. Pa., June 4, 2007).

"interior surface" — "Medtronic has provided no basis for this Court to conclude that 'interior surface' should be construed as being inwardly tapered at the bottom." Fastenetix, LLC v. Medtronic Sofamor Danek, Inc., et al., 2007 U.S. Dist. LEXIS 53665 (D.N.J., July 25, 2007).

"wherein the insert body is interlocked to the inner sleeve to form a single fixed structure" — "a portion of the insert body is physically connected to a portion of the inner sleeve such that the insert body is incapable of any substantial movement relative to the inner sleeve." Fiber Systems International, Inc. v. Applied Optical Systems, Inc., 2009 U.S. Dist. LEXIS 62491 (E.D. Tex., Jul. 21, 2009).

"interlocking features" — "one or more portions of the lid and the rim of the main body that create an obstruction between each other as the lid and main body are engaged, resulting in a constraint that helps maintain the engagement of the lid and the main body." Learning Curve Brands, Inc. v. Munchkin, Inc., 2010 U.S. Dist. LEXIS 27277 (W.D. Wis., Mar. 22, 2010).

"interlocking ... members" — "distinct parts of a whole, not necessarily separate individual parts, which engage or interlace, one with another." Rhino Associates, L.P. v. Berg Manufacturing and Sales Corp., et al., 482 F. Supp. 2d 537 (M.D. Pa. 2007).
"intermediary" — "standing alone means a 'member between others.'"  *Intamin, Ltd. v. Magnetar Technologies, Corp.*, 483 F.3d 1328 (Fed. Cir. 2007).2197

"intermediate" — "the parties dispute whether the claim term 'intermediate' means 'midway' or 'somewhere between.' ... Although the specifications ... state that the sprocket recesses are 'located midway between the pivot axes,' such a statement does not operate to limit the scope of the asserted claims."  *Lairam Corp., et al. v. Morehouse Industries, Inc., et al.*, 1997 U.S. Dist. LEXIS 23026 (E.D. Cal., Apr. 23, 1997).2198

"said means for pivoting being positioned on the device and intermediate the first end and second end of the shaft" — "a pivoting means is intermediate the ends of the device's shaft, if, at least some point during the operation of the device, a length of shaft protrudes on either side of the pivoting means."  *Bidco, Inc. v. Plastic Lumber Co.*, 2004 U.S. Dist. LEXIS 31066 (N.D. Cal., Nov. 10, 2004).2199

"intermediate vision correction power"; "high vision correction power"; "low vision correction power"; "near vision correction power"; "far vision correction power"; "predetermined vision correction power" — "the Court concludes no further construction is necessary."  *Vision Advancement, LLC v. Johnson & Johnson Vision Care, Inc.*, 2007 U.S. Dist. LEXIS 5742 (E.D. Tex., Jan. 26, 2007).2200

"intermediate width" — "the width of the intermediate section at either the web portion or the corrugated portion."  *Habasit Belting Inc. v. Rexnord Industries, Inc., et al.*, 340 F. Supp. 2d 518 (D. Del. 2004).2201

[i] "non-tapered internal bore"; [ii] "constant diameter internal bore" — [i] "a bore that does not gradually diminish in one direction, subject to the inherent limitations of the materials and processes used in the manufacture of the compression ring."; [ii] "a bore with a diameter that does not vary, subject to the inherent limitations of the materials and processes used in the manufacture of the compression ring."  *John Mezzalingua Associates, Inc. v. Arris International, Inc.*, 2003 U.S. Dist. LEXIS 24730 (W.D. Wis., Nov. 14, 2003).2207

"internal threads" — "helical or spiral ribs or grooves disposed on the interior surface of the female end of the PVC pipe which mate with corresponding helical or spiral ribs or grooves on the outer surface of the male end of a similar adjacent PVC pipe." CertainTeed Corp. v. Modern Products Industries, Inc. et al., 2005 U.S. Dist. LEXIS 7638 (E.D. Pa., May 2, 2005).2009

"interrupting"; "disconnected" — "require a physical disconnection as this meaning is more consistent with the context of the specification." Inventio AG v. ThyssenKrupp Elevator Americas Corp., et al., 2010 U.S. Dist. LEXIS 59020 (D. Del., Jun. 14, 2010)2211

"movement interruption" — "any unscheduled occurrence which causes the spraying device and the conveying device to halt in non-specific terminal positions, i.e., the relative positions of the spraying device and conveying device may no longer be synchronized." Durr Systems, Inc. v. Fanuc, Ltd., et al., 463 F. Supp. 2d 663 (E.D. Mich. 2006).2212

"intersect" — "to have one or more points in common from at least one perspective." B. Braun Melsungen AG, et al. v. Terumo Medical Corporation, et al., 2010 U.S. Dist. LEXIS 54480 (D. Del., Jun. 3, 2010).2214

"interstitial"; "brachytherapy"; "interstitial brachytherapy" — "involving a surgically-created cavity in a body"; "radiation therapy delivered by a spatially-confined radioactive material inserted into the body at or near a tumor or other proliferative tissue disease site"; "no construction necessary." Xoft, Inc. v. Cytyc Corp., et al., 2007 U.S. Dist. LEXIS 34468 (N.D. Cal., April 27, 2007).2216

"intervening cooling procedure" — "cooling of the product between step (a) and step (b) or between step (b) and step (c) that is not 'incidental heat loss.'" Unitherm Food Systems, Inc. v. Foster Poultry Farms, Inc., 2010 U.S. Dist. LEXIS 34566 (N.D. Okla., Apr. 7, 2010).2217

"first intervening member"; "second intervening member" — "Medtronic has provided no basis for this Court to conclude that 'first intervening member' should be construed as 'the cap portion of the two-piece interlocking coupling element'"; "Medtronic has provided no basis for this Court to conclude that 'second intervening member' should be construed as 'the tapered and slotted socket portion of the two-piece interlocking coupling element, which completely encircles the curvate head.'" Fastenetix, LLC v. Medtronic Sofamor Danek, Inc., et al., 2007 U.S. Dist. LEXIS 53665 (D.N.J., July 25, 2007).2218

"intimate contact" — "The term is construed as requiring that there be intimate contact over 'substantially' the entire pleat height rather than imposing a limitation that there be no gaps within the pleats, in which case the claimed filter would not work and would be rendered useless." Pall Corp. v. Cuno Inc., 2001 U.S. Dist. LEXIS 16778 (E.D.N.Y., Sept. 7, 2001).2219
"in intimate contact with said second surface" — "in contact with, but distinct from the second surface." *ICHL, LLC v. NEC Corp. of America, et al.*, 2010 U.S. Dist. LEXIS 38942 (E.D. Tex., Apr. 20, 2010). 2220

"inventory" — "We agree with the trial court that the term 'inventory' refers, at least in part, to articles of clothing, contrary to Markman's contention that 'inventory' may be limited to just cash or inventory receipts." *Markman v. Westview Instruments, Inc., et al.*, 52 F.3d 967 (Fed. Cir. 1995) (en banc). 2224

"transporting multiple containers in an inverted stack to said collection site and lifting said first container from said inverted stack with said rotating fork lift truck" — "the court construes 'stack' to be a vertical arrangement of more than one container. ... the court construes 'inverted' as open end down, the reverse position from that in which a container functions as a container." *Caponey v. ADA Enterprises, Inc.*, 511 F. Supp. 2d 618 (D.S.C. 2007). 2226

"inverted trunnion" — "inward directed pins or pivots on which something can be rotated or mounted." *Molon Motor & Coil Corp. v. Merkle-Korff Industries, Inc.*, 2006 U.S. Dist. LEXIS 27575 (N.D. Ill., April 26, 2006). 2227

"inverting said first container such that said refuse enters a collection bin of a collection truck" — "reversing the position of first container from an open side up position to an open side down position to such a degree that refuse enters a collection bin." *Caponey v. ADA Enterprises, Inc.*, 511 F. Supp. 2d 618 (D.S.C. 2007). 2228

"a medical implant comprising an ultra-high molecular weight polyethylene ... irradiated and annealed" — "[is] not limited to the irradiation and annealing of finished implants." Howmedica Osteonics Corp. v. Zimmer, Inc., et al., 2007 U.S. Dist. LEXIS 29991 (D.N.J., April 23, 2007). 2232

"said stream is directed outwardly toward said annular inner surface and then redirected upwardly and inwardly toward the incoming ladle stream" — "is plain, and it means what it says." CCPI Inc. v. American Premier, Inc., 966 F. Supp. 276 (D. Del. 1997). 2233

"isolated from any exposure to said atmosphere" — "separated so that there is no exposure at all to the air being monitored to any degree or extent." Dicon Global Inc. v. Senco Sensors, Inc., et al., 2004 U.S. Dist. LEXIS 23758 (N.D. Ill., Nov. 18, 2004). 2234

"issue"; "issued"; "issuing" — "remove or decouple the tangible medium from the means that stores the information therein, so the tangible medium provides an independent record of a voting session." Avante International Technology Corp. v. Diebold Election Systems, et al., 2007 U.S. Dist. LEXIS 61011 (E.D. Mo., Aug. 20, 2007). 2235

"item"; "movie" — "As these are commonly-understood English words, they need no clarification." Netflix, Inc. v. Blockbuster, Inc., 2007 U.S. Dist. LEXIS 15047 (N.D. Cal., Feb. 20, 2007). 2236

"items containing information" — "physical items, such as video tapes, film, or computer disks, which contain audio information, video information or both." Acacia Media Technologies Corp. v. New Destiny Internet Group, et al., 2006 U.S. Dist. LEXIS 93710 (N.D. Cal., Dec. 14, 2006). 2237

- J -

"a jagged border separates said first and second portions" — "requires that the jagged border be uninterrupted. However, as stated supra, the patent merely requires that there take place a 'noticeable change of shade' at the border. It does not limit the 477 patent to one where elements of the first shade cannot appear throughout the iris." Wesley Jessen Corp. v. Coopervision, Inc., 2002 U.S. Dist. LEXIS 5172 (C.D. Cal., Mar. 14, 2002). 2238

"jarring" — "striking the beverage container with sufficient force to cause immediate effervescence and overflowing of carbonated beverages upon opening, or damage to a container/product such that the container or product is no longer suitable for consumption or sale." Crane Co., et al. v. Sandenvendo America, Inc., et al., 2009 U.S. Dist. LEXIS 47509 (E.D. Tex., Jun. 5, 2009). 2239

"a jaw mechanically interengaged with and carried by said bracket for movement between said first and second flanges" — "(1) either of two mechanical parts that open and close to grip or crush something, as in a monkey wrench or vise, (2) mechanically interengaged with and carried by said bracket (3) for movement in or through the space that separates the first and second flanges." Inner-Tite Corp. v. Dewalch Technologies, Inc., 2007 U.S. Dist. LEXIS 64586 (D. Mass., Aug. 31, 2007).

"jig" — "a device or tool that is different from the material on which the manufacturing work is performed that holds the elements created by the patented manufacturing process in the correct position during the manufacturing process." McDavid Knee Guard, Inc., et al. v. Nike USA, Inc., 2009 U.S. Dist. LEXIS 84921 (N.D. Ill., Sep. 17, 2009).

"joined"; "affixed"; "attached"; "connected" — "a person of ordinary skill in the art (or, for that matter, anyone of ordinary skill in the English language) would read the '291 patent as covering only a device made up of two physically separate disks that are attached to one another." Regents of the University of Minnesota v. AGA Medical Corp., 2009 U.S. Dist. LEXIS 90289 (D. Minn., Sep. 29, 2009).

"first and second printed circuit boards are joined by hot bar soldering" — "first and second printed circuit boards are joined by solder material." LG Display Co., Ltd. v. AU Optronics Corp., et al., 2010 U.S. Dist. LEXIS 12969 (D. Del., Feb. 16, 2010).

"first and second circumferentially extending walls, said second chuck wall depending from said first chuck wall so as to form a juncture therebetween" — "first and second walls encircling the chuck forming a place between them at which they meet." Crown Packaging Technology, Inc., et al. v. Rexam Beverage Can Co., 486 F. Supp. 2d 366 (D. Del. 2007).

"terminating the introduction of concentrated detergent solution into said wash chamber just after said fabric has reached a full saturation level at said spin speed" — "This claim step means that the introduction of concentrated detergent solution into the wash chamber is stopped shortly after the fabric reaches a full saturation level at the spin speed. Full saturation at the spin speed means that the fabric has absorbed an amount of detergent solution to come to equilibrium with respect to detergent solution retention at the particular spin speed. There is no requirement that the introduction is terminated for any particular reason." Whirlpool Corp., et al. v. LG Electronics, Inc., et al., 423 F. Supp. 2d 730 (W.D. Mich. 2004).

"first and second juxtaposed drain ports" — "two separate identifiable physical elements that are adjacent or near each other." Oatey Co. v. IPS Corp., 2006 U.S. Dist. LEXIS 9060 (N.D. Ohio, March 8, 2006).

- K -

"Kaufman-type ion beam source" — "any ion beam gun with the four stated components: a hot-wire cathode, an anode, grids, and magnets." Litton Systems, Inc. v. Honeywell, Inc., 140 F.3d 1449 (Fed. Cir. 1998). 2251

"keys" — "protrusions that unlock or release a latch device and also engage or actuate valve device." Parker-Hannifin Corp., et al. v. Baldwin Filters, Inc., et al., 2010 U.S. Dist. LEXIS 68906 (N.D. Ohio, Jul. 9, 2010). 2252

"knit lines" — "lines formed when two flow fronts of molten plastic meet during the molding operation." Maytag Corp. v. Electrolux Home Products, Inc., 411 F. Supp. 2d 1008 (N.D. Iowa 2006). 2254

- L -

"a flange portion ... with an L-shaped edge portion being offset at an angle less than 90 degrees from the corner section front surface so that said L-shaped edge extends rearwardly in a direction from said corner section front surface to said corner section rear surface" — "require[s] the L-shaped portion to extend rearwardly at an angle less than 90 degrees. Further, the L-shaped portion is to extend from the front surface of the corner section to the rear surface of the corner section." Ductmate Industries, Inc. v. Famous Supply Corp., et al., 55 F. Supp. 2d 777 (N.D. Ohio 1999). 2258

"L-shaped guide rod" — "an integral rod having two straight portions joined at approximately 90 degrees with respect to each other. One portion of the rod is elongated and used for insertion into the femur or the tibia and the other portion is used for receipt of a guide member." Depuy Orthopaedics, Inc. v. Androphy, et al., 2000 U.S. Dist. LEXIS 661 (N.D. Ill. 2000). 2259

"L-shaped magnet liner" — "the liner itself is in the actual shape of the letter 'L.'" Rattler Tools, Inc. v. Bilco Tools, Inc., et al., 2007 U.S. Dist. LEXIS 49124 (E.D. La., July 6, 2007). 2260

"laid-over state" — "a condition in which the pleats have leg surfaces in intimate contact and pleat heights that are greater than the distance between the outer and inner peripheries of the filter element." Pall Corp. v. Cuno Inc., 2007 U.S. Dist. LEXIS 59917 (E.D.N.Y., Aug. 14, 2007). 2261
"laminator apparatus" — "equipment that is used to unite two or more layers of material, such as the core, by the application of heat and pressure." Leighton Technologies LLC v. Oberthur Card Systems, S.A., 358 F. Supp. 2d 361 (S.D.N.Y. 2005).2262

"lamp support means" — "a structural support for a lamp located inside the reflector near the base end which performs the function of supporting two or more compact fluorescent lamps at an elevation between the base end of the reflector and the light emitting end of the reflector." Sportlite, Inc. v. Genlyte Thomas Group, LLC, et al., 2006 U.S. Dist. LEXIS 96638 (D. Ariz., Sept. 13, 2006).2263 "Because the Special Master properly applied and rejected the presumption of 112/6 raised by 'lamp support means,' the Court will overrule Defendants' objections to the Report and Recommendation in this respect." Id., 518 F. Supp. 2d 1122 (D. Ariz. 2007).2264

"lanced" — "a process in which one or more cuts are made in the metal of the adaptor to form a spring locking member, with or without the removal of additional material." Arlington Industries, Inc. v. Bridgeport Fittings, Inc., 290 F. Supp. 2d 508 (M.D. Pa. 2003).2265

"a large plurality" — "mean[s] that the coating must contain a sufficient number of glitter particles to reflect substantially all light incident on the portions of the body that are covered by the coating." Nichols, et al. v. Strike King Lure Co., et al., 2000 U.S. Dist. LEXIS 15781 (N.D. Tex., Oct. 25, 2000).2268

"largely closed"; "substantially closed" — "for the most part, to a large degree, or in the main closed." Knorr-Bremse Systeme Fuer Nutzfahrzeuge GmbH v. Dana Corp., et al., 133 F. Supp. 2d 833 (E.D. Va. 2001).2269

"larger than said simple geometric figure" — "having a greater area than the area of the simple geometric figure of the first planarizing pattern." Matsushita Electric Industrial Co., Ltd. v. Mediatek, Inc., et al., 2006 U.S. Dist. LEXIS 84399 (N.D. Cal., Nov. 9, 2006).2270

"latching structure" — "a number of parts put together in a particular way for fastening, the combination of parts linked, connected, or joined to the body for fastening at least one of the side structures in an erected position." Bradford Co. v. Afco Manufacturing, et al., 2006 U.S. Dist. LEXIS 88547 (S.D. Ohio, Dec. 5, 2006).2273
"lateral": "side" — "refer more narrowly to angles that are 'transverse to the longitudinal axis of the surfboard between the front and the rear."

"lateral constraining device [which includes a] support element and inclined surface ... distinct from said skirt and second annular surface" — "mean[s] that the lateral constraint is distinct and independent from the axial constraint provided by the confronting annular surfaces of the patented probes." Renishaw plc v. Marposs Societa' per Azioni, et al., 974 F. Supp. 1056 (E.D. Mich. 1997).

"in at least one of the lateral edges thereof" — "in at least one of the edges on a side of the strip." Lifescan, Inc. v. Roche Diagnostics Corp., 2007 U.S. Dist. LEXIS 70283 (N.D. Cal., Sept. 11, 2007).

"lateral strength" — "the strength of connected PVC pipe which will resist forces exerted on the pipe in a direction perpendicular to the length of the pipe." CertainTeed Corp. v. Modern Products Industries, Inc. et al., 2005 U.S. Dist. LEXIS 7638 (E.D. Pa., May 2, 2005).

"latterly linked strands" — "strands that are connected at the sides." FieldTurf USA, Inc., et al. v. Sports Construction Group LLC, 499 F. Supp. 2d 907 (N.D. Ohio 2007).

"latterly sliding and snapping the cooperative coupling parts together" — "the panels are joined by moving them towards each other in substantially a common plane and coupled via a snap action." Alloc, Inc. v. Unilin Decor N.V., et al., 2007 U.S. Dist. LEXIS 16743 (E.D. Wis., Mar. 6, 2007).

"layer" — "The Southwall and AFG patents use 'layer' in different contexts. For example, the '532 patent appears to distinguish between 'layer,' a claim term, and 'interlayer,' which appears only in the written description. That distinction could be critical in this case. Therefore a precise and correct definition of 'layer' is needed." AFG Industries, Inc., et al. v. Cardinal IG Co., Inc., et al., 1999 U.S. App. LEXIS 653 (Fed. Cir., Jan. 5, 1999) (unpublished).

"layer" — "a region of material having a thickness and the composition of which is chosen to provide desired properties." Guardian Industries Corp., et al. v. AFG Industries, Inc., 2006 U.S. Dist. LEXIS 40589 (E.D. Mich., June 2, 2006). 2288

"colored sheet comprising a color layer and a flexible thermoplastic layer" — "the 'color layer' is not necessarily a second thermoplastic layer but rather can be the printed ink itself, which has thermoplastic properties." Baratto, et al. v. Brushstrokes Fine Art, Inc., 2010 U.S. Dist. LEXIS 28046 (W.D. Wis., Mar. 24, 2010). 2291

"the inner layer comprising fibers selected from the group consisting of woven fibers, fabrics, knits and fleece" — "a sheet-like material produced from woven fibers, knitted fibers, or non-woven matted fibers." Viskase Cos., Inc. v. World Pac International AG, et al., 2010 U.S. Dist. LEXIS 49720 (N.D. Ill., May 18, 2010). 2292

"a layer of flexible material that is minimally porous to macromolecules" — "The Court construes the term 'layer' as 'a single layer.' ... the phrase 'minimally porous to macromolecules' ... modifies the term 'material.'" Saffran v. Johnson & Johnson, et al., 2010 U.S. Dist. LEXIS 98537 (E.D. Tex., Sep. 20, 2010). 2294

"a first layer of foam" — "a layer of foam that is breathable as defined in this claim construction, and that includes, but is not limited to, reticulated foam and open-cell hydrophilic foam. Foams known by the trade names 'Aquazone' and 'Comfortemp' are specifically included." Baychar, Inc., et al. v. Frisby Technologies, Inc., et al., 230 F. Supp. 2d 75 (D. Me. 2002). 2295

"layer of material" — "The Court interprets 'layer of material' to mean exactly what it says and no more. The phrase does not restrict claim 12 to sterilization and heating 'an airtight package.'" Howmedica Osteonics Corp. v. Zimmer, Inc., et al., 2007 U.S. Dist. LEXIS 29991 (D.N.J., April 23, 2007). 2296

"lead shot-filled closed front end" — "the closed front end portion of the projectile body forward of the constriction/delineation that is filled with lead shot, some portion of which has a diameter that is less than the interior diameter of the 12 gauge shotgun shell at the time that the portion is inserted into the shotgun shell." Combined Tactical Systems, Inc. v. Defense Technology Corp. of America, et al., 426 F. Supp. 2d 140 (S.D.N.Y., April 4, 2006). 2300

"lead wire extending from the package" — "the insulated wires or leads start inside the envelope and extend from the inside to the outside of the envelope." Cardiac Science, Inc. v. Koninklijke Philips Electronics N.V., et al., 2006 U.S. Dist. LEXIS 22267 (D. Minn., April 20, 2006). 2301

"leaving said housing and said second flange intact to seal said neck" — "means that after the impact the 'case covering, protecting, or enclosing other parts of the fuel cap' and the second flange must remain complete enough to perform their function of sealing the filler neck to prevent fuel spillage." Stant Manufacturing, Inc. v. Gerdes, GmbH, 2004 U.S. Dist. LEXIS 27704 (S.D. Ind., Sept. 27, 2004). 2304

"leg" — "an appendage to the body of the flexure which extends downward, supporting the structure above it." Shum v. Intel Corp., et al., 2005 U.S. Dist. LEXIS 46461 (N.D. Cal., Jun. 21, 2005). 2306

"lens" — "a body that has two opposite regular surfaces, at least one of which is curved, that is structured and positioned to form an image by focusing a beam of electromagnetic radiation." International Automated Systems, Inc. v. Digital Persona, Inc., et al., 2008 U.S. Dist. LEXIS 445 (D. Utah, Jan. 2, 2008). 2311
"a lens body comprising a hydrogel material and having an anterior face, a posterior face, and a rounded outer peripheral edge surface..."; "a lens body comprising a hydrophilic silicone-containing material having an anterior face, a posterior face having a rounded outer peripheral edge surface..." — "a lens body comprising a hydrogel material and having an anterior face, a posterior face, and a substantially smooth, curved outer peripheral edge..."; "a lens body comprising a hydrophilic silicone-containing material having an anterior face and a posterior face having a substantially smooth, curved outer peripheral edge...". CooperVision, Inc. v. Ciba Vision Corp., 2007 U.S. Dist. LEXIS 51432 (E.D. Tex., July 16, 2007).

"less than a complete circle" — "mean[s] a rounded figure in which the circumferential line is divided or broken by any means." Arlington Industries, Inc. v. Bridgeport Fittings, Inc., 290 F. Supp. 2d 508 (M.D. Pa. 2003).

"a less viscous anticoagulant is allowed to coat the surface of the guide wire within the distal portion of the guide wire lumen" — "an anticoagulant composition, having less resistance to flow than blood, in the proximal portion of the guide wire tube is allowed to coat the surface of the guide wire in the distal portion of the guide wire tube." Medtronic AVE, Inc. v. Cordis Corp., 516 F. Supp. 2d 741 (E.D. Tex. 2007). "After carefully considering the arguments raised by the parties in this case, the court will not alter its construction from the Cordis case." Medtronic Vascular Inc., et al. v. Boston Scientific Corp., et al., 526 F. Supp. 2d 613 (E.D. Tex. 2007).

"a lever" — "a rigid member that pivots about one point and that is used to move an object at a second point by a force applied at a third." World Wide Stationery Manufacturing Co., Ltd. v. U.S. Ring Binder, L.P., 2009 U.S. Dist. LEXIS 27873 (E.D. Mo., Mar. 31, 2009).

"lever movement blocking element" — "has the same meaning as 'blocking element' defined above." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997).

"lever moving element" — "the term 'element' is synonymous with 'means'. Consequently, 'lever moving element' should be treated as the equivalent of 'lever operating means' and subject to § 112 P 6." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997). "[W]e hold that the district court was correct in applying section 112, P 6 to limit the 'lever moving element' to structures disclosed in the specification and equivalents thereof that perform the identical function." Id., 156 F.3d 1206 (Fed. Cir. 1998).

"a lever pivotally mounted on said tool body for deforming a grommet" — "a bar like structure (i.e. a lever) that is mounted on the tool body so that, when pivoted during operation, it is capable of deforming a grommet." Callicrate v. Wadsworth Manufacturing, Inc., 427 F.3d 1361 (Fed. Cir. 2005).

"library" — "The district court defined 'library' as a 'collection ... of places that store information, and you can have a single control or common handling system.' ... we conclude that the district court erred." Odetics, Inc. v. Storage Technology Corp., et al., 1997 U.S. App. LEXIS 15254 (Fed. Cir., Jun. 25, 1997) (unpublished).

"lid" — "an object which is movable so as to selectively open and close the toner cartridge." Ricoh Co., Ltd., et al. v. Katun Corp., et al., 486 F. Supp. 2d 395 (D.N.J. 2007).

"lid seal contactable with a throat flange" — "top or lid that forms a roughly air tight closure when it interacts with a protruding rim or edge of the container." Sunbeam Products, Inc. v. Delonghi America, Inc., et al., 2007 U.S. Dist. LEXIS 123 (D.N.J., Jan. 3, 2007).

"light" — "the spectrum of electromagnetic radiation which can be seen by the human eye and is not limited to lasers." Applied Material, Inc. v. Tokyo Seimitsu, Co., 446 F. Supp. 2d 525 (E.D. Va. 2006).

"light housing" — "the patentee clearly did not intend to limit the definition of 'light housing' in claim 1 in the manner suggested by the district court." Transmatic, Inc. v. Gulton Industries, Inc., 53 F.3d 1270 (Fed. Cir. 1995).

"the cover including a first limited expansion portion expandable by initial fluid injected through the port and into the chamber from a collapsed implantation position to a taut position above the collapsed position" — "the cover including a portion that is capable of increasing in size by the initial fluid injected through the port and into the chamber from collapsed implantation position to a taut position over the collapsed position' where 'collapsed,' at this time and without the knowledge of the 'conventional manner,' means the device is empty of fluid." Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006).

"limiting structure" — "a structure that limits diaphragm excursion to allow the voice coil to reside at least partially in a gap mounted on the baffle without interfering with the normal range of motion of the diaphragm." Bose Corp. v. Lightspeed Aviation, Inc., 2010 U.S. Dist. LEXIS 40500 (D. Mass., Apr. 26, 2010).

"line segment" — "a space along a concentric line where the pad's layers are bonded together." Tyco Healthcare Retail Servs. AG v. Kimberly-Clark Corp., et al., 2007 U.S. Dist. LEXIS 53645 (E.D. Pa., July 24, 2007).
"linear magnetron-enhanced sputter device"; "linear magnetron-enhanced ion source" — "the court does not construe linear as interchangeable with the term planar. To the extent a device is planar, it must also be linear to infringe." Optical Coating Laboratory, Inc. v. Applied Vision, Ltd., 1996 U.S. Dist. LEXIS 1476 (N.D. Cal., Jan. 29, 1996).

"linear velocity" — "the rate of change of a body's position in a particular direction over time. ... a body can have linear velocity even if it does not continue moving in the same direction over time." Pace International, LLC, et al. v. Industrial Ventilation, Inc., et al., 2009 U.S. Dist. LEXIS 120554 (W.D. Wash., Dec. 7, 2009).

"liner" — "a material which has a layer that allows for the release of the liner from the adhesive on the back of the placard and is in contact with a pressure sensitive adhesive." MPT, Inc. v. Marathon Labels, Inc., et al., 2006 U.S. Dist. LEXIS 4612 (N.D. Ohio, Feb. 7, 2006).

"liner" — "a composite material that is permeable to water vapor and that conducts moisture via any one of number of water-transferring processes, including but not limited to wicking, absorbing, adsorbing, siphoning, capillary action and the like." Baychar, Inc., et al. v. Frisby Technologies, Inc., et al., 230 F. Supp. 2d 75 (D. Me. 2002).

"a second end cap sealing portion lining the outer annular surface of said second end cap" — "the Court declines to adopt Baldwin's proposed construction and does not construe the phrase." Donaldson Co., Inc. v. Baldwin Filters, Inc., 481 F. Supp. 2d 974 (D. Minn. 2007).

"link arms" — "components that couple the counterbalance weight to the crankshaft." Briggs & Stratton Corp. v. Kohler Co., 398 F. Supp. 2d 925 (W.D. Wis. 2005).

"a linking means, the linking means operably connecting the wheel braking device with the actuating mechanism to facilitate setting and releasing the wheel braking device" — "a chain or shaft that connects the wheel braking device with the actuating mechanism." Graham-White Manufacturing Co. v. Ellcon-National, Inc., 2007 U.S. Dist. LEXIS 89126 (D.S.C., Dec. 4, 2007).

"lip" — "must be near the periphery, but is not required to be exactly at the periphery, nor is it required to form the table edge." Lifetime Products, Inc. v. Correll, Inc., 323 F. Supp. 2d 1129 (D. Utah 2004).
"lip" — "an extension to the striking surface adjacent to the striking surface, reaching or spanning between the striking surface and mass region, with a vertical distance between the top edge of the striking surface and the top side of the mass region of about 1/8 inch and about 1/2 inch." Despoir, Inc. v. Nike USA, Inc., 2005 U.S. Dist. LEXIS 10845 (N.D. Ill., Feb. 9, 2005).

"liquid impermeable" — "a material which is designed to prevent the strikethrough of body exudates by retarding the movement of liquid body exudates through the BLC to the outer portion of the diaper." Procter & Gamble Co. v. Paragon Trade Brands, Inc., 989 F. Supp. 547 (D. Del. 1997).

"localize" — "to locate within a definite area, or to fix in a particular place." Medical Instrumentation and Diagnostics Corp. v. Elekta AB, et al., 2001 U.S. Dist. LEXIS 25448 (S.D. Cal., Apr. 4, 2001).

"localizing deformation" — "collecting, accumulating, or restricting to a limited area, namely the vicinity of the deformation absorbing member, the deformation (or alternation in form or shape) that occurs during paddle downsetting." Agere Systems Inc. v. Atmel Corp., 2003 U.S. Dist. LEXIS 9823 (E.D. Pa., May 23, 2003).

"located between the center of the spherical mass and the first elongate section" — "requires the second elongate section to be entirely located between the center of the spherical mass and the first elongate section." Zelinski, et al. v. Brunswick Corp., 996 F. Supp. 757 (N.D. Ill. 1997). "[C]laim 1 is satisfied if the bulk of the second elongate section is between the first elongate section and the center of the spherical mass, and the entire weight block is in the top half of the ball. Nevertheless, we conclude that at most the district court's narrower interpretation is harmless error because, as we explain below, even with a somewhat broader interpretation of 'located between,' Brunswick's StealthCore I and II balls do not literally infringe claim 1 of the '731 patent." Id., 185 F.3d 1311 (Fed. Cir. 1999).

"located between two adjacent disks" — "the spacer is positioned between two adjacent cutting disks." Fellowes, Inc. v. Michilin Prosperity Co., Ltd., et al., 2006 U.S. Dist. LEXIS 90648 (E.D. Va., Dec. 15, 2006).

"the flanges are located behind the studs to further secure the auxiliary frame to the primary frame" — "the flanges are located behind, but not necessarily in contact with, the rear surfaces of the studs to further fasten the auxiliary frame to the primary frame." Aspex Eyewear, Inc., et al. v. Miracle Optics, Inc., 2003 U.S. Dist. LEXIS 26355 (C.D. Cal., Feb. 14, 2003).

"said first portion is located generally on the outside of said iris section and said second portion is located generally on the inside of said iris section" — "As to the term 'located generally,' the term merely requires that the elements of the first shade are generally positioned on the outside of the iris. The term does not limit the elements of the first shade from appearing anywhere in the iris, so long as those elements are more prevalent near the outside." Wesley Jessen Corp. v. CooperVision, Inc., 2002 U.S. Dist. LEXIS 5172 (C.D. Cal., Mar. 14, 2002).
"located inside" — "the spring must be positioned completely within the battery holder and is not exposed outside of the battery holder." Invisible Fence, Inc. v. Perimeter Technologies, Inc., 2006 U.S. Dist. LEXIS 33792 (N.D. Ind., May 25, 2006).

"located sufficiently clear of said trough pooling space, so that if a transfer of feed material from the reservoir to the pooling space be effected to pool feed material in the trough, an animal has feeding access to pooled feed material in the trough" — "We agree with Mr. Wechsler and hold that claim 1 does not require a feed transfer-effecting mechanism." Wechsler v. Macke International Trade, Inc., et al., 56 Fed. Appx. 935 (Fed. Cir., Jan. 29, 2003) (unpublished).

"[a housing] having a barrel, a nozzle, a handle and a trigger located thereon" — "This implies that these components are not part of the housing, but are in some way attached to the housing." Larami Ltd. v. Ohio Art Co., 270 F. Supp. 2d 555 (D.N.J. 2003).

"first location" — "a point on the first conveyor just past the shingling nip where the sheets actually first shingle." Marquip, Inc. v. Fosber America, Inc., et al., 1997 U.S. Dist. LEXIS 22678 (W.D. Wis., May 21, 1997).

"location indicator" — "a device that indicates a proper or corresponding location of an identified compartment or component before placement of the compartment or component in that location." Aguayo, et al. v. Universal Instruments Corp., 2003 U.S. Dist. LEXIS 27846 (S.D. Tex., Jun. 9, 2003).

"predetermined locations"; "point-of-sale locations" — "a business establishment or kiosk which may be automated or staffed by one or more persons." TGIP, Inc. v. AT&T Corp., et al., 2007 U.S. Dist. LEXIS 17381 (E.D. Tex., March 12, 2007).

"locking barb" — "a locking device or detent that contacts an attachment surface at at least one point." Andrew Corp. v. Beverly Manufacturing Co., 479 F. Supp. 2d 766 (N.D. Ill. 2006).

"locking contact" — "the dispute concerns the question of whether such locking is limited to application of an inward radial force to squeeze and crush the retaining portion around the screw head. ... this Court ... finds no basis to limit construction of this phrase as Medtronic proposes." Fastenetix, LLC v. Medtronic Sofamor Danek, Inc., et al., 2007 U.S. Dist. LEXIS 53665 (D.N.J., July 25, 2007).
"locking component slidably receiving said vertical lock spindle" — "include[s] a lock fixed to the frame, a mounting arm, and a pair of grooves which slidably receives the vertical lock spindle discussed above." Pedicraft, Inc. v. Stryker Corp. of Michigan, et al., 2003 U.S. Dist. LEXIS 27837 (M.D. Fla., May 5, 2003). 2372

"locking device" — "a mechanism consisting of a locking element alone (as recited in the claim) or a locking element and a locking groove that together hold together two panels against separation such that play exists." Alloc, Inc., et al. v. Pergo, LLC, 2009 U.S. Dist. LEXIS 62881 (E.D. Wis., Jul. 2, 2009). 2373

"locking element" — "a portion of a coupling part having the structure as recited in the claim that allows for engagement and fastening." Alloc, Inc. v. Unilin Decor N.V., et al., 2007 U.S. Dist. LEXIS 16743 (E.D. Wis., Mar. 6, 2007). 2374

"locking element" — "a projection at the edge of the panel as recited in the claim that engages a locking groove on another panel such that a play exists between the locking element and the locking groove." Alloc, Inc., et al. v. Pergo, LLC, 2009 U.S. Dist. LEXIS 62881 (E.D. Wis., Jul. 2, 2009). 2375

"said rotatable joint comprising a locking mechanism cooperating with the central region for permitting selective rotation about said pivot axis and for maintaining a selected orientation of said handle portion relative to said central region during a cutting operation of the miter saw" — "a lock that allows the handle to be rotated to a position around the pivot axis and maintains, or fixes, the handle portion at a selected position relative to the central region during cutting operation of the miter saw." One World Technologies, Ltd., et al. v. Rexon Industrial Corp., Ltd., et al., 2006 U.S. Dist. LEXIS 25324 (N.D. Ill., May 2, 2006). 2378

"a locking mechanism for maintaining rotation of said shaft of said spindle fixed in said cavity relative to said housing" — "recites sufficient structure and that the defendant has failed to overcome the presumption that results from the failure to use the word 'means.' Therefore, the patentee is entitled to the full breadth of the definition of the term 'locking mechanism.'" Acco Brands, Inc. v. American Power Conversion Corp., 2003 U.S. Dist. LEXIS 27829 (E.D. Tex., Jul. 16, 2003). 2379

"lockout mechanism" — "a mechanical device that locks and unlocks." SRAM Corp. v. Fox Factory, Inc., 2005 U.S. Dist. LEXIS 29164 (N.D. Ill., Nov. 18, 2005). 2380

"locking said broach cutting tool member in said predetermined accurate work position, by imposing a locking force on said at least a portion of said third planar abutment surface of said broach cutting tool member, said locking force having a force component directed towards said two planar abutment surfaces of said broach cutting tool member and a force component directed downward from said top surface towards said intermediate surface of said broach tool holder to securely hold said broach cutting tool member in said broach tool holder" — "Since Claim 1 does not recite definite structures that will generate the locking force, the presumption that § 112, P6, applies is unrebutted. Therefore, the Court will construe the claim to cover the corresponding structures described in the specifications and their equivalents." 

"lodging the member within the hole by pressing the member with attached suture into the hole" — "does not bar the surgeon's tug and any ensuing small movement of the anchor after insertion." Smith & Nephew, Inc., et al. v. Ethicon, Inc., 276 F.3d 1304 (Fed. Cir. 2001). 2385 "To summarize, the specification (other than the claims themselves) does disclose the need to have 'tension' applied to the claimed suture in order to make the claimed anchor member ready for the attachment of tissue to the bone. But nowhere do any of these claims actually recite this step, meaning the patentee has dedicated it to the public. Ethicon, therefore, could reasonably conclude as such and could lawfully use that step in its accused method." Id. (Michel, J., dissenting). 2386

"long enough to provide said lateral strength" — "the second enlarged interior diameter section must be long enough so that, when connected to a similar adjacent pipe, the strength of the connected PVC pipe will resist forces exerted on the pipe in a direction perpendicular to the length of the pipe." CertainTeed Corp. v. Modern Products Industries, Inc. et al., 2005 U.S. Dist. LEXIS 7638 (E.D. Pa., May 2, 2005). 2387

"long transverse yield strength" — "the stress, applied across the width of a product, that a product can sustain before yielding or breaking." Pechiney Rhenalu v. Alcoa Inc., 224 F. Supp. 2d 773 (D. Del. 2002). 2388

"a longitudinal groove adapted to cooperatively receive a respective pair of said header rails" — "a recess formed along the exterior side of each of the side walls which receives a respective one of the opposed header rails along the length of the housing, wherein each of the recesses is defined by two spaced recess walls which cooperate to receive one of the header rails, and each of the recess walls is defined by one or more projections which extend substantially along the length of the side wall."  *Ashland Products, Inc. v. MEC Technologies, Inc.*, 1999 U.S. Dist. LEXIS 4087 (N.D. Ill., Mar. 22, 1999). 2394  
[U]pon consideration of the relevant intrinsic and extrinsic evidence, we adopt Ashland's proposed construction that requires -- as Judge Coar also has held -- that the projections 'extend substantially along the length of the side wall.' However, ... we emphasize that it is the projections themselves (and not the gaps between them) that literally create the groove, and that must extend substantially along the length of the side wall."  *Ashland Products, Inc. v Ro-Mai Industries, Inc.*, 1999 U.S. Dist. LEXIS 12944 (N.D. Ohio, Aug. 16, 1999). 2395

"longitudinal slot" — "a slot or channel formed within an extrusion or rail and extending along a length of the extrusion or rail."  *TBC Consoles, Inc. v. Forecast Consoles, Inc.*, 2009 U.S. Dist. LEXIS 91653 (S.D.N.Y., Sep. 28, 2009). 2396

"longitudinally adjustable along said longitudinal axis from a first position wherein the bone fastener can be fixed to said bone to a second position in which the bone fastener is locked into position by the locking plate" — "does not exclude the ability of the locking plate to be fixed in an intermediate position between the position where the bone fastener is fixed to the bone and the position where the bone fastener is locked into place."  *Cross Medical Products, Inc. v. Medtronic Sofamor Danek, Inc. et al.*, 2005 U.S. Dist. LEXIS 6564 (C.D. Cal., Apr. 8, 2005). 2398

"a longitudinally extending center flange" — "a single, vertically planar projecting rim or rib located along the middle part or the centerline of the support and extending along the longitudinal length of the vehicle on which the detent plate structure is formed or attached. This structure is not attached to the inside of a supporting sidewall or a walled arrangement."  *Grand Haven Stamped Products Co. v. Dura Automotive System, Inc.*, 2004 U.S. Dist. LEXIS 31087 (W.D. Mich., Jun. 28, 2004). 2399

"longitudinally extending cutting edge" — "the edge of the blade surface designed for cutting that extends along the lengthwise dimension."  *Tyco Healthcare Group LP v. Ethicon Endo-Surgery, Inc.*, 411 F. Supp. 2d 93 (D. Conn. 2006). 2400

"longitudinally spaced" — "requiring a spacing surface providing at least enough separation between seating surfaces to enable a paddler seated on one seating surface to paddle without interfering with another paddler or passenger."  
Old Town Canoe Co. v. Glenwa, Inc., 229 F. Supp. 2d 1151 (D. Or. 2001).\textsuperscript{2403}

"longitudinally spaced" — "disposed above or below in reference to the first and second opposite, parallel longitudinal edges."  

"loop" — "a C- or U-shaped structure."  
Medinol Ltd. v. Guidant Corp., et al., 417 F. Supp. 2d 280 (S.D.N.Y. 2006).\textsuperscript{2404}

"loop" — "a structural element that turns back on itself."  

"first loop"; "second loop" — "horizontally-facing (or C-shaped) loops at the cell's two longitudinal ends."  

[i] "loose hair"; [ii] "non-loose hair" — [i] "hair that is inactive and not growing"; [ii] "hair that is active and growing."  
FURminator, Inc. v. Munchkin, Inc., et al., 2009 U.S. Dist. LEXIS 104429 (E.D. Mo., Nov. 9, 2009).\textsuperscript{2407}

"low modulus material" — "a material with low elastic modulus, which is a material property defined as the amount of stress needed to produce a given amount of strain (deformation)."  
Samsung Electronics Co., Ltd. v. Tessera Technologies, Inc., 2004 U.S. Dist. LEXIS 31074 (N.D. Cal., Jan. 8, 2004).\textsuperscript{2408}

"low flow rate" — "a rate of flow of less than about 1 liter/minute and producing flow velocities less than 19 km/hour such that the gas exiting through the distal end opening forms a non laminar inert gas atmosphere."  

"low pressure" — "any pressure below atmospheric pressure."  

"low pressure chemical vapor deposition" — "chemical vapor deposition that is carried out at pressures well below atmospheric pressure (760 torr), typically at pressures below approximately 2 or 3 torr."  

"low profile traction teeth"; "teeth that are low in profile" — "traction teeth that are shorter than conventional spikes as of 1996."  

"said return duct being configured for low radial flow return velocity to said high pressure compressor" — "the conduit conveying air back from the externally mounted intercooler being shaped and positioned to result in a velocity of air flowing toward the axis of the shafting that is lower than the velocity of that air when it enters the high pressure compressor."  
Rice v. Honeywell International, Inc., et al., 2006 U.S. Dist. LEXIS 89235 (E.D. Tex., Nov. 21, 2006).\textsuperscript{2413}

"lower end" — "the extreme or last part of the conduit located underground."  
Knopik v. Amoco Corp., et al., 96 F. Supp. 2d 892 (D. Minn. 2000).\textsuperscript{2414}

"lower substrate"; "conductive layer formed over said ... substrate" — "lower substrate' refers to the base or foundation on which the rest of the structure is built, and 'conductive layer formed over' the substrate means that the conductive layer covers the surface of the substrate." Laser Diode Array, Inc. v. Paradigm Lasers, Inc., et al., 114 F. Supp. 2d 167 (W.D.N.Y. 2000).

"lower surface" — "surface of the plastic sheet that faces or contacts the surface on which the mat or pad rests, the underside or bottom." Microthin.com, Inc. v. SiliconeZone USA, LLC, 615 F. Supp. 2d 754 (N.D. Ill. 2009).

"lower temperature"; "higher temperature" — "The temperature differential between the two measurements must be large enough to deduce the effects due to humidity and ambient temperature through a mathematical calculation, but this differential is not limited to the differential stated in the preferred embodiment." Quantum Group, Inc. v. American Sensor, Inc., et al., 1997 U.S. Dist. LEXIS 6314 (N.D. Ill., Apr. 29, 1997).

"lug" — "a projection or handle by which something may be grasped." Ricoh Co., Ltd., et al. v. Katun Corp., et al., 486 F. Supp. 2d 395 (D.N.J. 2007).

"the lumen having a first diameter for the distal portion of the guide wire tube and a second diameter larger than the first diameter for the proximal portion of the guide wire tube" — "no construction is needed." Medtronic Vascular Inc., et al. v. Boston Scientific Corp., et al., 526 F. Supp. 2d 613 (E.D. Tex. 2007).

"lumen-traversing region of the resilient structure" — "the region of the resilient structure that interacts with the wall of the fallopian tube lumen to permanently affix the resilient structure within the fallopian tube lumen." Conceptus, Inc. v. Hologic, Inc., 2010 U.S. Dist. LEXIS 24247 (N.D. Cal., Mar. 16, 2010).

"the luminal portion of the tunica mucosa" — "the lamina epithelialis mucosa (or transitional epithelium layer), the basement membrane, and the lamina propria." Cook Biotech, Inc., et al. v. Acell, Inc., et al., 460 F.3d 1365 (Fed. Cir. 2006).
"an attachment plate lying between the two implement-support plates" — "this language is clear on its face and requires no construction." Kai U.S.A., Ltd. v. Buck Knives, Inc., 2006 U.S. Dist. LEXIS 24924 (D. Or., Feb. 9, 2006).

"net supporters made of PFA, FEP or EPE" — "means that the net supporters must be made wholly of PFA, FEP or EPE, and cannot include any other fluorocarbon resin (e.g., PTFE) therein." Pall Corp. v. PTI Technologies Inc., et al., 1999 U.S. Dist. LEXIS 22893 (E.D.N.Y., Dec. 22, 1999).

"whereby said cutting edge surface is made thinner than a thickness of said cutter blade" — "the horizontal thickness of the cutting edge surface after formation of the recess is thinner than the original horizontal thickness of the cutter blade." Izumi Products Co. v. Koninklijke Philips Electronics N.V., et al., 2004 U.S. Dist. LEXIS 7992 (D. Del., Apr. 27, 2004).

"magnet liner" — "an individual separating device, distinct from the protector, which is inserted into a tool body recess, and then has a magnet placed into it." Rattler Tools, Inc. v. Bilco Tools, Inc., et al., 2007 U.S. Dist. LEXIS 49124 (E.D. La., July 6, 2007).

"magnetic member" — "a permanent magnet or a ferromagnetic member, but at least either the first or second magnetic members must be a permanent magnet." Aspex Eyewear, Inc., et al. v. Miracle Optics, Inc., 2003 U.S. Dist. LEXIS 26355 (C.D. Cal., Feb. 14, 2003).

"magnetic or magnetizable" — "is or is capable of becoming a permanent magnet or a residual magnet, that is, a magnet that retains its magnetic field for a period of time." Ideal Instruments, Inc. v. Rivard Instruments, Inc., et al., 498 F. Supp. 2d 1131 (N.D. Iowa 2007).

"[the needle] is rendered magnetic at [or to] a level that enables detection of the magnetism of the needle"; "the needle is magnetized to a level which enables detection of the magnetism of the needle" — "either prior to injecting the living animal or while in the flesh of the animal after slaughter, the needle is magnetized to become a permanent magnet or a residual magnet, that is, a magnet that retains its magnetic field for a period of time, to a level that makes it possible for the magnetism of the needle to be detected by a metal detector or magnetic detector." Ideal Instruments, Inc. v. Rivard Instruments, Inc., et al., 498 F. Supp. 2d 1131 (N.D. Iowa 2007).2439

"a core wire having a main body" — "the Court construes 'main body' to mean: the core wire not including the distal portion of the core wire." Regents of the University of California v. Micro Therapeutics, Inc., et al., 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007).2442

"main case" — "a compact case that houses the image sensing module and the motion mechanism." Syscan, Inc. v. Portable Peripheral Co., Ltd., et al., 2006 U.S. Dist. LEXIS 47824 (N.D. Cal., July 5, 2006), "a compact case that can be made of light but rigid plastic material and that houses only an image sensing module and a motion mechanism." Plustek, Inc. v. Syscan, Inc., et al., 2009 U.S. Dist. LEXIS 122777 (N.D. Cal., Dec. 21, 2009).2443

"main plateau" — "a portion of a panel." STI Holdings, Inc. v. Great Dane Limited Partnership, 2010 U.S. Dist. LEXIS 57789 (W.D. Wis., Jun. 11, 2010).2444

"main sealant" — "sealant material that encloses the display region' with the understanding that 'encloses' means 'to surround on all sides; to enclose or contain completely.'" LG Display Co., Ltd. v. AU Optronics Corp., et al., 2010 U.S. Dist. LEXIS 42546 (D. Del., Apr. 30, 2010).2445

"said protective barrier provides reduction of wind force sufficient to maintain the integrity of said structure" — "this claim term should be given its plain and ordinary meaning." Armor Screen Corp. v. Storm Catcher, Inc., et al., 2009 U.S. Dist. LEXIS 33407 (S.D. Fla., Mar. 10, 2009).2447

"such that said blunt-ended cylindrical shape is maintained during flight and prior to impact" — "maintained at least up to the point immediately before impact." Combined Tactical Systems, Inc. v. Defense Technology Corp. of America, et al., 426 F. Supp. 2d 140 (S.D.N.Y., April 4, 2006).2449
"wherein the handle is rotatable to the same extent that the arm is adjustable about the horizontal axis so as to enable the handle to be maintained in a horizontal orientation during a compound miter cut" — "the language is clear on its face and does not require any further construction. Whether a handle that deviates slightly from the horizontal falls within the scope of the claim - an argument alluded to by both parties - is a matter for the finder of fact to determine at a later stage of the litigation." One World Technologies, Ltd., et al. v. Rexon Industrial Corp., Ltd., et al., 2006 U.S. Dist. LEXIS 25324 (N.D. Ill., May 2, 2006). 2451

"maintaining"; "maintain" — "are used in their ordinary sense and require no further construction except to note that the use of these terms in claims 1(k) and 14(h) requires neither that (1) the kinetic energies of the ions never vary, nor (2) all ions satisfy this claim limitation." Applera Corp., MDS Inc., et al. v. Micromass UK Ltd., et al., 186 F. Supp. 2d 487 (D. Del. 2002). 2452

"maintaining desired physical characteristics" — "preserving the physical integrity of the paddle support arm." Agere Systems Inc. v. Atmel Corp., 2003 U.S. Dist. LEXIS 9823 (E.D. Pa., May 23, 2003). 2454

"maintaining said flow of gas perpendicular to said substrate" — "the gas flow apertures always direct the flow of gas in an initial direction that is perpendicular to the substrate." ASM America, Inc., et al. v. Genus, Inc., 260 F. Supp. 2d 827 (N.D. Cal. 2002). 2456

"maintaining said locked configuration by use of a pin" — "The dispute centers around the construction of the term 'maintaining' as 'keeping' or 'preventing.' ... the Court adopts plaintiff's construction as the claim term's plain and ordinary meaning and finds a heavy presumption in favor of defining 'maintaining' as 'keeping' or 'keeping in existing state.'" ACCO Brands, Inc., et al. v. PC Guardian Anti-Theft Products, Inc., et al., 2007 U.S. Dist. LEXIS 92052 (N.D. Cal., Dec. 5, 2007). 2457

"majority of abutting wooden surfaces in a building having a frame constructed from wooden components comprising said wooden surfaces" — "more than 50% of the total abutting length of all of the touching wooden surfaces in a building frame that are susceptible to outside air infiltration." Staples v. Johns Manville, Inc., et al., 2010 U.S. Dist. LEXIS 24040 (E.D. Mo., Mar. 16, 2010). 2459

"make selections by causing contact across a planar surface of the work platform" — "making selections by causing a maintained contact across the planar surface of the work platform." Tinkers & Chance v. Leapfrog Enterprises, Inc., 2007 U.S. Dist. LEXIS 43871 (E.D. Tex., June 18, 2007). 2460
"making available to consumers a special lock" — "causing the special lock to be available to consumers." *Travel Sentry, Inc. v. Tropp*, 2009 U.S. Dist. LEXIS 87923 (E.D.N.Y., Sep. 24, 2009). 2461

"a mandrel that carries said blades" — "a shaft on which a blade is mounted, held, or supported." *Muzzy Products, Corp. v. Sullivan Industries, Inc., et al.*, 194 F. Supp. 2d 1360 (N.D. Ga. 2002). 2463

"a manual actuator for adjusting the status of the electrical device" — "a mechanism, such as a button, knob, or touch screen sensor, for altering the condition of the electrical device." *Lutron Electronics Co., Inc. v. Control4 Corp.*, 2009 U.S. Dist. LEXIS 3562 (D. Utah, Jan. 20, 2009). 2468

"to allow the [axial] removal of said [cylindrical] sleeve from said aperture of said body portion by the manual application of force" — "to allow the removal of the sleeve from the bit holder using a tool which may be hand-powered by a worker in field conditions to generate forces of approximately 5,000-20,000 pounds." *Joy MM Delaware, Inc., et al. v. Sandvik Mining and Construction USA LLC*, 2007 U.S. Dist. LEXIS 40868 (W.D. Pa., June 4, 2007). 2469

"a manual valve operatively associated with said cap, in fluid communication with said tube of filtering material and manually movable between a position defining means for allowing liquid flow through said tube and a position defining means not allowing liquid flow through said tube" — "The district court ultimately construed that limitation to require the following: a valve mechanism that controls the flow of water through the valve by moving to an open position allowing flow of water through the valve and moving to a closed position that restricts the flow of water from the bottle, but which encompasses neither valve 156 nor the valve of Figure 7 of the Magnusson '649 patent. The district court's construction of the manual valve element is incorrect, because it impermissibly limits the literal scope of the claims to exclude bottles employing the valve depicted in Figure 7 of U.S. Patent No. 5,273,649 to Magnusson." *Innova/Pure Water, Inc. v. Aladdin Sales & Marketing, Inc., et al.*, 1999 U.S. App. LEXIS 10045 (Fed. Cir., May 24, 1999) (unpublished). 2470
"a manually operable charging member for moving the guide to the charged position against the urging of the coil spring" — "a manually operable charging member that is used to create a charge or stored energy, the charging member configured to move the guide to the charged position against the urging of the coil spring." *Baran v. Medical Device Technologies, Inc., et al.*, 519 F. Supp. 2d 698 (N.D. Ohio 2007).2471

"marketing" — "selling or promoting the sale' of the special lock to consumers in a manner that conveys to them that the lock is subject to a special screening procedure." *Travel Sentry, Inc. v. Tropp*, 2009 U.S. Dist. LEXIS 87923 (E.D.N.Y., Sep. 24, 2009).2473

"marking"; "marked" — "placing an external visual symbol or identification code on the object (carrier or container)." *Board of Regents of the University of Nebraska, et al. v. Siemens Healthcare Diagnostics, Inc.*, 2010 U.S. Dist. LEXIS 97353 (D. Neb., Sep. 16, 2010).2474

"marquenching" — "Quenching from the austenizing temperature into a hot fluid medium (hot oil, molten salt, molten metal or a fluidized particle bed) at a temperature usually above the martensite range (M[s] range); holding in the quenching medium until the temperature throughout the steel is substantially uniform; cooling (usually in the air) at a moderate rate to prevent large differences in temperature between the outside and the center of the section. After the parts have been cooled to room temperature, they are tempered in the same manner as though they had been conventionally quenched." *Fisher-Barton Blades, Inc. v. Blount, Inc., et al.*, 2006 U.S. Dist. LEXIS 76965 (E.D. Wis., Oct. 19, 2006).2475

"mass region" — "the body of a wood-type club head delimited by a sole plate, including the sole; a striking surface, though no higher than its top edge; a top side; a rear edge; a heel region; and a toe region." *Despoir, Inc. v. Nike USA, Inc.*, 2005 U.S. Dist. LEXIS 10845 (N.D. Ill., Feb. 9, 2005).2476

"master cylinder housing" — "refer[s] to the housing that contains the master cylinder, regardless of what other components may be included within or connected to that housing." *SRAM Corp. v. Formula S.R.L., et al.*, 2009 U.S. Dist. LEXIS 29100 (N.D. Ill., Apr. 3, 2009).2477

"master key" — "a key, including electronic or other sensor mechanisms, that can open the master key lock portion or locking mechanisms of the special locks described in the patent." *Travel Sentry, Inc. v. Tropp*, 2009 U.S. Dist. LEXIS 87923 (E.D.N.Y., Sep. 24, 2009).2478

"wherein a surface of said housing is prepared with a matching art which is substantially the same as that area of said poster art which appears on said portion of said poster that said housing covers when said housing is attached to said poster, such that said housing artistically blends in with the surrounding poster art that is not covered by said housing"; "applying matching art to said housing which is substantially the same as that area of said poster art which appears on said portion of said poster that said housing covers when said housing is attached to said poster, such that said housing artistically blends in with the surrounding poster art that is not covered by said housing" — "The practical effect of this limitation is that the housing unit is camouflaged. Only under these circumstances can it be said that the housing is prepared with 'matching art' such that it 'artistically blends in with the surrounding poster art that is not covered by said housing.'" *Clark, et al. v. Walt Disney Co., et al.*, 2009 U.S. Dist. LEXIS 94506 (S.D. Ohio, Oct. 9, 2009).2479
"mate" — "the proper construction of the claim term 'mate' must include the following limitations: (1) a close confinement of the protrusion within the inset(s) of one or more blocks; (2) an ability to secure the blocks in place; and (3) an interlocking of the protrusion with the insets." Anchor Wall Systems, Inc. v. Rockwood Retaining Walls, Inc., et al., 252 F. Supp. 2d 838 (D. Minn. 2002). 2480. "We ... hold that the proper construction of 'mate' is to join or fit together." Id., 340 F.3d 1298 (Fed. Cir. 2003). 2481.

"bottom tang portion mated for engagement with the rounded bottoms in said gullets" — "the tang portion is adapted to contact the gullet formation substantially along the rounded bottom region of the gullet to transmit operational forces to the bottom of the gullet." Blount Inc., et al. v. Trilink Saw Chain, LLC, et al., 2007 U.S. Dist. LEXIS 42617 (D. Or., June 8, 2007). 2482

"material for finishing the top surface of the floor" — "refers to a clear, uniform layer on the top surface of a floor that is the final treatment or coating of a surface. It is not any intermediate, temporary, or transitional layer." In re Suitco Surface, Inc., 2010 U.S. App. LEXIS 7620 (Fed. Cir., Apr. 14, 2010). 2484

"material having characteristics equivalent to glass" — "material that is non-porous, corrosion-resistant, and amenable to sterilization." Digital Angel Corp. v. Datamars, Inc., et al., 2006 U.S. Dist. LEXIS 32260 (D. Minn., May 22, 2006). 2485

"material object" — "a tangible medium or device in which information can be embodied, fixed, or stored, other than temporarily, and from which the information embodied therein can be perceived, reproduced, used or otherwise communicated, either directly or with the aid of another machine or device. A material object must be offered for sale, and be purchasable, at point of sale locations where at least one IMM [information manufacturing machine] is located. Further, a material object must be separate and distinct from the IMM, removed from the IMM after purchase, and intended for use on a device separate from the IMM either at the point of sale location or elsewhere. 'Material object' does not encompass the hard disk component of a home personal computer. Finally, a material object need not be offered for sale independently from the information that may be reproduced onto the material object, that is, as a blank." Interactive Gift Express, Inc. v. CompuServe, Inc., et al., 256 F.3d 1323 (Fed. Cir. 2001). 2486

"layer having material release means for release of an at least one treating material in a directional manner" — "the court construes the recited function as 'releasing a treating material toward the damaged tissue.' ... The court identifies the corresponding structure in the specification that is clearly linked to the claimed function to be chemical bonds and linkages." Saffran v. Boston Scientific Corp., 2007 U.S. Dist. LEXIS 76135 (E.D. Tex., Sept. 28, 2007). 2487

"means defining a plurality of separate product coating zones longitudinally spaced along said reel" — "CMS asserts that the function of 'defining' is the function that corresponds to the word 'means.' Even assuming that is correct, we agree with Wenger that § 112, P 6 does not apply because the claim recites sufficiently definite structure for performing the function of 'defining.' ... We therefore conclude that the district court did not err in concluding that the 'product coating zones' limitation was not subject to § 112, P 6." Wenger Manufacturing, Inc. v. Coating Machinery Systems, Inc., et al., 239 F.3d 1225 (Fed. Cir. 2001).

"means extending generally perpendicular to said bottom support means for defining front, rear and a first and a second side wall, said first side wall extending substantially higher than said front, rear and second side walls to define a protective barrier between a side panel of said washing chamber and various oversize articles placed adjacent said first side wall for washing" — "because lots of structure and little or no function is recited, the element does not come within the scope of Section 112 P6." Maytag Corp. v. Whirlpool Corp., 88 F. Supp. 2d 894 (N.D. Ill. 2000).

"means for containing the bulk substance to be analyzed" — "is not subject to § 112 P 6's limitations." Gamma-Metrics, Inc. v. Scantech Ltd., et al., 1998 U.S. Dist. LEXIS 22187 (Fed. Cir., May 19, 1998).

"means for driving said clinching element through a programmably determined path of travel substantially within a plane adjacent said lower surface in response to control signals to contact and bend one or more leads of said component adjacent said lower surface of said board" — "[means] that the pin has to stay in the same plane while it bends a lead, but ... does not exclude operations where the pin goes down and back up between leads. ... it can be read to mean that the path is in one plane only while the pin bends one lead." Chad Industries, Inc. v. Automation Tooling Systems, Inc., et al., 938 F. Supp. 601 (C.D. Cal. 1996).

"means for retaining said test pins in parallel alignment in said apparatus with said test pins extending through respective said through-bores in said mask plate, said means comprising an elastic plate formed of elastic material and mounted at a position spaced from said mask plate and extending parallel thereto, said test pins extending through said elastic plate in a manner such that said elastic material elastically contacts and grasps said test pins, whereby said test pins are maintained in said alignment due to the elasticity of said material" — "we conclude that the "means for retaining" element of claim 1 of the '908 patent is properly construed to cover elastic devices that are sufficiently rigid to independently maintain test pins in parallel alignment, and that the element does not cover flexible elastic devices that rely on guide plates to maintain the parallel alignment of the test pins. Thus, the district court's construction of claim 1 was both too broad and too narrow." Star Technology Group, Inc. v. Testerion, Inc., 1999 U.S. App. LEXIS 21389 (Fed. Cir., Sept. 7, 1999) (unpublished).

"means for securing a suture to said anchor to extend therefrom after said anchor is seated in the bone mass" — "a structure having a suture permanently attached to a retention disk positioned internally within the anchor." Mitek Surgical Products, Inc. v. Arthrex, Inc., 21 F. Supp. 2d 1309 (D. Utah 1998). "There was no error in the district court's construction of 'means for securing' because section 112 P 6 expressly restricts coverage of a means-plus-function claim to the structure disclosed in the specification and the equivalents of that structure. The internal retention disk is the only means for securing structure disclosed in the specification. Mitek argues that alternative embodiments of means for securing are disclosed in the prior art. These embodiments are irrelevant when attempting to outwardly expand claim scope as here. Structure in the prior art may be used to limit, but not broaden the scope of means-plus-function structures." Id., 2000 U.S. App. LEXIS 3146 (Fed. Cir., Feb. 22, 2000) (unpublished).

"means formed on the upwardly extending liner sidewall portions including a plurality of spaced apart, vertically extending ridge members protruding from the liner sidewall portions and forming load locks in gaps separating adjacent ones of the ridge members" — "this court construes this claim without reference to section 112, P 6." York Products, Inc. v. Central Tractor Farm & Family Center, et al., 99 F.3d 1568 (Fed. Cir. 1996).

"measuring ... of the substrate" — "determining and quantifying, by means of interferometers with an integrated mirror block, movement along either the X or Y axis or both, rotation around the Z axis, and tilts about the X and Y axes of the substrate." Nikon Corp., et al. v. ASM Lithography B.V., 308 F. Supp. 2d 1039 (N.D. Cal. 2004).

"sensor with a measurement center line located at a non-zero angle relative to said linear motion" — "the 'measurement center line' is the line between the center of the sensor and the target point." View Engineering, Inc. v. Robotic Vision Systems, Inc., 1997 U.S. App. LEXIS 16458 (Fed. Cir., Jul. 3, 1997).

"a measurement system for measuring the pressure in said at least one chamber" — "the court finds that this claim is properly construed in the means-plus-function format." Automotive Technologies International, Inc. v. Delphi Corp., 2009 U.S. Dist. LEXIS 83187 (E.D. Mich., Sep. 11, 2009).
measuring the temperature of the fluid, wherein the heating step is responsive to the step of measuring the temperature — "determining the temperature of the cleaning fluid, wherein the heating step reacts or is responsive to such temperature determination." ChemFree Corp. v. J. Walter, Inc., et al., 2007 U.S. Dist. LEXIS 51677 (N.D. Ga., July 17, 2007).

second mechanical connection — "the arrangement of the locking element projecting from the strip and the locking groove such that when the locking element is inserted into the locking groove the two panels are locked in the horizontal direction parallel to the principal plane of the panels and at right angles to the joint edges such that a play exists." Alloc, Inc., et al. v. Pergo, LLC, 2009 U.S. Dist. LEXIS 62881 (E.D. Wis., Jul. 2, 2009).

a mechanically embossed portion — "refer[s] to the raised areas of the surface covering (the areas that are not chemically embossed) that are mechanically imprinted with a surface texture to produce the desired effect." Mannington Mills, Inc., et al. v. Armstrong World Industries, Inc., et al., 2002 U.S. Dist. LEXIS 18641 (D. Del., Aug. 20, 2002).

money dispensing mechanism — "the defendant has failed to rebut the presumption that 'mechanism' should not be construed under § 112 P 6." Tidel Engineering L.P. v. Fire King International, Inc., et al., 613 F. Supp. 2d 823 (E.D. Tex. 2009).

a mechanism for moving said finger along a straight line into and out of said locating pin perpendicular to said axis A in response to said rectilinear movement of said locating pin — "the term 'mechanism' discloses a means-plus-function limitation governed by § 112 P 6." Welker Bearing Co. v. PHD, Inc., 528 F. Supp. 2d 683 (E.D. Mich. 2007).

a mechanism in said interior arranged to restrict flow of the fluid from one portion of said interior to another portion of said interior — "The court finds that means-plus-function construction is appropriate for this claim because 'mechanism' is the sort of generic term construed by the Federal Circuit to indicate a means-plus-function limitation." Automotive Technologies International, Inc. v. Delphi Corp., 2009 U.S. Dist. LEXIS 83187 (E.D. Mich., Sep. 11, 2009).

a media writing device ... whereby ... works ... can be written to a removable medium"; a media write unit ... for writing items ... to a removable medium" — "a media writing device for writing works to a medium removable from the media writing device." Premier International Associates v. Apple Computer, Inc., et al., 2007 U.S. Dist. LEXIS 37467 (E.D. Tex., May 23, 2007).

"member" — "as used in the referenced claims means 'blunt-nosed screw,' which may have either a unitary or multi-part structure." Caught Fish Enterprises, LLC, et al. v. Contek, Inc., 509 F. Supp. 2d 954 (D. Colo. 2007).\textsuperscript{2518}

"member" — "I am convinced that the word 'member' would be understood by those skilled in the relevant art to denote structure." Ravo v. Ethicon Endo-Surgery, Inc., 2005 U.S. Dist. LEXIS 28382 (W.D. Pa., Nov. 17, 2005).\textsuperscript{2519}

"member" — "the Federal Circuit has held the common definition of 'member' is 'distinct part of a whole.'" Apex Eyewear, Inc., et al. v. E'Lite Optik, Inc., 2004 U.S. Dist. LEXIS 27493 (D. Nev., May 28, 2004).\textsuperscript{2520}

"member" — "refers to the unit which embodies the patent." Craig v. Foldfast, Inc., et al., 487 F. Supp. 2d 1364 (S.D. Fla. 2007).\textsuperscript{2521}

"member" — "a piece or part of something else, regardless of whether that 'member' is made of one or more components." Engineered Products Co. v. Donaldson Co., Inc., 165 F. Supp. 2d 836 (N.D. Iowa 2001).\textsuperscript{2523}

"shoe attaching member"; "shoe mounting member"; "shoe attachment means"; "mounting member" — "are not means-plus-function terms." Greenkeepers of Delaware, LLC, et al. v. Softspikes, LLC, et al., 2010 U.S. Dist. LEXIS 10670 (E.D. Pa., Feb. 5, 2010).\textsuperscript{2524}

"flexible sealing member" — "is one in a set of sufficiently definite performing structures. The presumption against the term being a means-plus-function limitation, therefore, prevails, and this term carries [its] ordinary meaning." Thermal Technologies, Inc., et al. v. Dade Service Corp., 2004 U.S. Dist. LEXIS 27885 (M.D. Fla., Jun. 14, 2004).\textsuperscript{2525}

"fragmentation member" — "is a means-plus-function term because the claim does not create a sufficiently definite structure." Johns Hopkins University, et al. v. Datascope Corp., 2007 U.S. Dist. LEXIS 38408 (D. Md., May 25, 2007).\textsuperscript{2526}

"peripheral flexible member" — "a flexible structure or element (consisting of one or more components) that extends from the edge of the support structure which includes at least two independently flexible sections." Polyvision Corp. v. Smart Technologies, Inc., et al., 501 F. Supp. 2d 1042 (W.D. Mich. 2007).\textsuperscript{2527}

"flexible member" — "a flexible structure or element (consisting of one or more components) that is attached to the support structure." Polyvision Corp. v. Smart Technologies, Inc., et al., 501 F. Supp. 2d 1042 (W.D. Mich. 2007).\textsuperscript{2528}

"member having a longitudinal component" — "A 'member' is a structural element that has its ends at different longitudinal positions with respect to the stent's longitudinal axis. A member's 'longitudinal component' is the distance between the longitudinal positions of the first and second ends of the member." Scimed Life Systems, Inc., et al. v. Johnson & Johnson, 225 F. Supp. 2d 422 (D. Del. 2002).\textsuperscript{2529}

"membrane" — "a thin sheet or layer of material." Regents of the University of Minnesota v. AGA Medical Corp., 2009 U.S. Dist. LEXIS 90289 (D. Minn., Sep. 29, 2009).\textsuperscript{2530}

"memory selection second switch means being adapted to select a first position ... and ... a second position" — "the district court properly held 'memory selection second switch means' is a means-plus-function element under 35 U.S.C. § 112, P 6." Overhead Door Corp., et al. v. Chamberlain Group, Inc., 194 F.3d 1261 (Fed. Cir. 1999).  

"whereby the meniscus provides a constant flow of said chemical onto said substrate surface" — "The meniscus, i.e., the curved surface of the chemical created by the surface tension of the chemical when the chemical contacts a solid, supplies a constant flow of the chemical onto the substrate. The meniscus exists between the nozzle and the substrate. The meniscus cannot form unless the nozzle is positioned sufficiently close to the spinning coated wafer." OKI America, Inc., et al. v. Advanced Micro Devices, Inc., 2006 U.S. Dist. LEXIS 15254 (N.D. Cal., Feb. 14, 2006).  

"wherein the bottom side merges with at least a substantial portion of the bottom edge of the central portion of the front wall"; "a bottom side being planar as the bottom side extends away from the back wall and tapering upwards to merge with at least a substantial portion of the bottom edge of the central portion" — "we conclude that the limitation in claims 2 and 11 requiring that the bottom side merge with the bottom edge of the central portion of the front wall excludes the possibility that the bottom side also merges with the top edge. The claim term "comprising" cannot restore this excluded subject matter." Spectrum International, Inc. v. Sterilite Corp., 164 F.3d 1372 (Fed. Cir. 1998).  

"wherein, along a 180º meridian, the distance between the inner zone and the peripheral edge is less than 1.3mm"; "a superior distance A being defined along the vertical meridian and within the inner zone from the optic zone to the peripheral zone, and an inferior distance B being defined along the vertical meridian and within the inner zone from the optic zone to the peripheral zone, and wherein .33A ≤ B ≤ A" — "the distance between the outermost edge of the inner zone and the peripheral edge of the contact lens body, measured along the curve of the anterior face of the lens, is less than approximately 1.3mm along the meridian, which is found by starting with zero degrees at the 3:00 position and moving counterclockwise around the circle of the lens"; "where A is defined along the vertical meridian and within the inner zone from the optic zone to the peripheral zone, measured along the curve of the anterior face of the lens, and B is defined along the vertical meridian and within the inner zone from the optic zone to the peripheral zone, measured along the curve of the anterior face of the lens, then .33A ≤ B ≤ A." Coopervision, Inc. v. Ciba Vision Corp., 2007 U.S. Dist. LEXIS 51432 (E.D. Tex., July 16, 2007).  

"metal detector" — "the Court is unable to accept Mars' claim construction argument that 'metal detector' should be interpreted to mean a metal detector that is also capable of recognizing individual coins and other objects and distinguishing one from another." Mars, Inc. v. Coin Acceptors, Inc., 511 F. Supp. 2d 435 (D.N.J. 2007)

"a metal wood-type golf club head" — "refer[s] to a type of golf club that had traditionally been made of wood." Antonious v. Spalding & Evenflo Cos., Inc., et al., 1998 U.S. Dist. LEXIS 10740 (D. Md., Apr. 27, 1998)

"meter" — "a device that transports, feeds, or dispenses particulate matter at a controllable, determinable, or regular rate." Rosen's, Inc., et al. v. Van Diest Supply Co., et al., 2004 U.S. Dist. LEXIS 5435 (D. Minn., Mar. 30, 2004)

"method" — "mean[s] the steps described in claim one must be performed in the order listed in the claim, but that additional steps may be added." Caponey v. ADA Enterprises, Inc., 511 F. Supp. 2d 618 (D.S.C. 2007)

"method for monitoring the percentage of blood alcohol content of a human subject, said method comprising the [step] of ... measuring a percentage of alcohol expelled through the subject's skin into said measurement device and storing a measurement result" — "infringement of Claim 14 can occur only where a device not only measures the amount of alcohol being emitted from an individual's skin, but uses that measurement to calculate a percentage of blood alcohol content." Alcohol Monitoring Systems, Inc. v. Actsoft, Inc., 2009 U.S. Dist. LEXIS 39191 (D. Colo., Apr. 27, 2009)

"microscope station" — "equipment, not including a cell analysis instrument, at which a human operator performs analysis." Cytvc Corp. v. Tripath Imaging, Inc., et al., 2005 U.S. Dist. LEXIS 29850 (D. Mass, Nov. 28, 2005)

"mid-section" — "a portion of the substrate that is between the substrate ends but does not extend to the substrate ends, and includes the middle point of the substrate." Tenneco Automotive Operating Co. Inc. v. Visteon Corp., 2005 U.S. Dist. LEXIS 12738 (D. Del., Jun. 28, 2005)

"minimal felt draw" — "the felt draw is kept to a minimal length, requiring the adjacent rolls to be 'in close proximity.'" *J.M. Voith GmbH, et al. v. Beloit Corp.*, 1995 U.S. Dist. LEXIS 16905 (W.D. Wis., Mar. 23, 1995).\(^{2552}\)

"minimal first ram pressure" — "The word 'minimal' ... means, 'The smallest or least amount [of ram pressure] necessary to accomplish the designated step.'" *Leighton Technologies LLC v. Oberthur Card Systems, S.A.*, 358 F. Supp. 2d 361 (S.D.N.Y. 2005).\(^{2553}\)

"minimally sufficient pressure" — "a summation of the pressure necessary to prevent airway collapse in the absence of respiratory efforts (collapse due to airway structure, muscle tone, and body position) and the pressure necessary to overcome the collapsing and splinting effects of respiratory efforts." *Respironics, Inc., et al. v. Invacare Corp.*, 2006 U.S. Dist. LEXIS 62233 (W.D. Pa., Aug. 30, 2006).\(^{2554}\)

"minimize destruction of the foam" — "to reduce destruction of the foam as much as possible given the circumstances." *United States Gypsum Co. v. LaFarge North America, Inc., et al.*, 2009 U.S. Dist. LEXIS 101603 (N.D. Ill., Nov. 2, 2009).\(^{2555}\)

"a minimum distance outward from the outer spatial volume expandable surface" — "no construction necessary." *Xoft, Inc. v. Cytyc Corp., et al.*, 2007 U.S. Dist. LEXIS 34468 (N.D. Cal., April 27, 2007).\(^{2556}\)

"minimum prescribed absorbed dose" — "the total delivered dose to the target tissue." *Hologic, Inc. v. SenoRx, Inc., et al.*, 2009 U.S. Dist. LEXIS 109841 (N.D. Cal., Nov. 24, 2009).\(^{2558}\)

"mirror image" — "memory chips that are mounted on a circuit board in such a manner that the memory chips on the second side are located directly behind the chips on the first side and the pins or leads of the corresponding memory chips are matched. In other words, the memory chips are mirror images in both location on the board and lead location." *Sun Microsystems, Inc. v. Dataram Corp.*, 1997 U.S. Dist. LEXIS 18363 (N.D. Cal., Aug. 29, 1997).\(^{2559}\)

"mixing chamber" — "a chamber containing a means for agitating its contents." *United States Gypsum Co. v. LaFarge North America, Inc., et al.*, 2009 U.S. Dist. LEXIS 101603 (N.D. Ill., Nov. 2, 2009).\(^{2561}\)

"mixing said delivered blood with said shunt blood flow" — "the combining or putting together of two or more substances or things so that the constituents of each are diffused among those of the other(s)." *Transonic Systems Inc. v. Non-Invasive Medical Technologies Corp.*, 1999 U.S. Dist. LEXIS 22687 (D. Utah, Dec. 13, 1999).\(^{2562}\) "We discern no error in the district court's construction of the 'mixing' and 'changing' limitations." *Id.*, 10 Fed. Appx. 928 (Fed. Cir., May 29, 2001) (unpublished).\(^{2563}\)

"mobile, road-hauled" — "capable of being hauled over long distances on a road, with or without other devices." *Metso Minerals, Inc. v. Powerscreen International Distribution Ltd., et al.*, 2010 U.S. Dist. LEXIS 7099 (E.D.N.Y., Jan. 28, 2010).\(^{2564}\)
"mobile scanner" — "a portable scanner, so lightweight that it can be used in any conditions."  

"mobility ... is facilitated" — "the capacity to make movement easier."  

"a mode selector switch" — "does not require an activation switch that initiates the operation of the recording circuit in the selected mode and is distinct from the mode selector switch."  

"modernized"; "modernizing" — "a more or less complete exchange of components in an elevator installation."  

"modifying the diameter" — "changing the diameter of the plug by means such as by heat, by treating the plug with a solvent, or by mechanical distortion."  

"modular" — "the [district] court ultimately construed `modular' to mean `standardized units that may be conveniently removed and replaced without significant impact to other components.' We think that the district court improperly imported a limitation from the specification into its construction of `modular.'"  

"modular jack" — "the female portion of a modular connector in which wires of a circuit are connected at one end and into which a plug is inserted at the other end."  

"an inner moisture transfer material" — "any material that actively conducts moisture as described in this claim construction, including, but not limited to, those materials listed in column 3, lines 7-61 of the '810 patent specification."  

"molded bucket" — "does not depart from its ordinary meaning and does not require further construction."  

"said second end cap comprising molded polymeric material" — "Finding no support for Baldwin's proposed construction, the Court declines to construe the claim language."  

"molded prism ballast portion" — "a prism ballast portion that is manufactured primarily in a mold."  

"determining the existence of acceptable continuity and well interflow paths for the said region by generating a test flow of a solution of hydrogen peroxide from one of said wells and monitoring pH changes at each other of said wells as a function of time to detect a pH drop of at least 0.2" — "is read to require that pH be monitored for the particular purpose of determining the existence of acceptable continuity and well interflow paths."  
"monitoring the torque conditions during said step of sensing the torque to detect if a satisfactory threaded connection is obtained" — "We conclude that 'monitoring' as used in the '063 patent claims does not require the application of torque or exclude human participation during make-up of a connection." Frank's Casing Crew & Rental Tools, Inc., et al. v. PMR Technologies, Ltd., et al., 292 F.3d 1363 (Fed. Cir. 2002).

"monolithically formed head" — "a single piece of continuous material comprising the uppermost part of a compressor that includes head members that complete the inlet and exhaust chambers and a tube." Thomas Industries, Inc. v. Gast Manufacturing, Inc., 2005 U.S. Dist. LEXIS 11763 (W.D. Wis., Jun. 14, 2005).

"said separable elongate tip portion being more resistant to electrolytic disintegration in fluid than said electrolyzable core wire" — "an elongate tip portion of the invention which has attributes which make that portion more resistant to electrolytic disintegration than the electrolyzable core wire of the invention." Regents of the University of California v. Micro Therapeutics, Inc., et al., 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007).

"motion mechanism" — "a mechanism that is controlled by electronic components located outside of the scanner, and that is responsible for moving the scanning document so as to cause it to pass through the image sensing module at a steady speed." Plustek, Inc. v. Syscan, Inc., et al., 2009 U.S. Dist. LEXIS 122777 (N.D. Cal., Dec. 21, 2009).

"a body ... mountable to the underwater cable" — "a body attached externally to the underwater cable." WesternGeco LLC v. ION Geophysical Corp., 2010 U.S. Dist. LEXIS 71875 (S.D. Tex., Jul. 16, 2010).

"mounted" — "fixedly attached to." Innovation Toys, LLC v. MGA Entertainment, Inc., et al., 2009 U.S. Dist. LEXIS 48386 (E.D. La., May 21, 2009).
"mounted in an open configuration to said vehicle window frame" — "'mounting' does not require 'fastening.' Just as one can 'mount' a horse without being 'fastened' to the horse, so there is no requirement that the sunshade be 'fastened' to the window. There must merely be some means of holding the sunshade against at least a portion of the vehicle window." Huang, et al. v. AutoShade, et al., 950 F. Supp. 1016 (C.D. Cal. 1997). 2591

"mounted on" — "securely attached, affixed, or fastened to." Asyst Technologies, Inc. v. Emtrak, Inc., et al., 402 F.3d 1188 (Fed. Cir. 2005). 2592

"at least some of said clusters are mounted on said base for selective, relative positional adjustment" — "keys or key clusters must be mounted on a base so as to allow for selective adjustment of the keys or key clusters to accommodate different hand sizes." Motionless Keyboard Co. v. Microsoft Corp., et al., 2007 U.S. Dist. LEXIS 43215 (D. Or., May 6, 2007). 2594

"mounted to the frame" — "indicates that the patient support assembly is attached to the hospital bed frame." Safe Bed Technologies Co. v. KCI USA, Inc., et al., 2004 U.S. Dist. LEXIS 17773 (N.D. Ill., Sept. 2, 2004). 2598

"mounting" — "a Morse taper or equivalent structures capable of performing the claimed function of mounting the stem extension to the base." Zimmer Technology, Inc., et al. v. Howmedica Osteonics Corp., 397 F. Supp. 2d 974 (N.D. Ind. 2005). 2600

"mounting ... to" — "requires the exit trough to be affixed to and in contact with the top edge of the lateral trough section." ADC Telecommunications, Inc. v. Panduit Corp., 200 F. Supp. 2d 1022 (D. Minn. 2002). 2601

"mounting member" — "a platform, frame or support on which a video game controller is mounted by the means specified in the claim." JVW Enterprises, Inc. v. Interact Accessories, Inc., et al., 2002 U.S. Dist. LEXIS 27885 (D. Md., Feb. 1, 2002). 2603

"mounting member" — "a structure that is separate and distinct from the table top; a mounting member cannot be an integral part of the table top." Lifetime Products, Inc. v. GSC Technology Corp., et al., 321 F. Supp. 2d 938 (N.D. Ill. 2004). 2604

"mounting surface" — "the flat underside of the table top." Lifetime Products, Inc. v. GSC Technology Corp., et al., 321 F. Supp. 2d 938 (N.D. Ill. 2004). 2605

- 230 -
"mouth feature" — "the part of the face through which food is taken, including, but not limited to, the mouth features shown in Figures 5 through 9 of the '972 patent." Hoodlums Welding Hoods, LLC v. Redtail International, LLC, 2009 U.S. Dist. LEXIS 100356 (E.D. Mo., Oct. 28, 2009).

"mouthpiece" — "that part of the apparatus which is placed in the mouth to introduce air into the housing where it moves over the pen and out the nozzle's outlet orifice." P & M Products, Ltd., et al. v. Rose Art Industries, 2002 U.S. Dist. LEXIS 5008 (E.D. Pa., Mar. 25, 2002).

"movable" — "capable of movement as called for by the rules of the game or game strategy." Innovation Toys, LLC v. MGA Entertainment, Inc., et al., 2009 U.S. Dist. LEXIS 95518 (E.D. La., Oct. 14, 2009).

"movable" — "in the operation of the assembly, the terminals are capable of being displaced relative to the chip by external loads applied to the terminals, to the extent that the displacement appreciably relieves mechanical stresses, such as those caused by differential thermal expansion which would be present in the electrical connections absent such displacement." Samsung Electronics Co., Ltd. v. Tessera Technologies, Inc., 2004 U.S. Dist. LEXIS 31074 (N.D. Cal., Jan. 8, 2004).

"movable bridge" — "at least one moveable arm that is always electrically connected to the first electrical conductor and that has the ability to create a parallel conductive path between the first, second, and third electrical conductors." Leviton Manufacturing Co. v. Zhejiang Dongzheng Electrical Co., et al., 506 F. Supp. 2d 646 (D.N.M. 2007).

"a moveable chassis" — "Any person skilled in the art would recognize that the workstation was meant to be wheeled around by practitioners. It is clear that the moveable chassis is indeed adapted for mobility, and not meant to be capable of being conveyed - by any means - from one place to another." Flo Healthcare Solutions, LLC v. Rioux Vision, Inc., 2007 U.S. Dist. LEXIS 85234 (N.D. Ga., Nov. 16, 2007).

"movable element" — "The 'element' is [] described in terms of what it does, i.e. its function, not in terms of what it is -- its mechanical structure -- thus bringing the claim limitation within § 112 P6." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997).

"movable link element" — "This limitation should be construed as a means-plus-function claim element for the same reasons as 'movable element'; the term 'element' is the equivalent of 'means'. There is no evidence that a 'movable link element' has any commonly understood meaning in the field." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997).

"movable link member" — "should be construed according to § 112 P6." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997).

"movable sealing baffle" — "a structure, operatively connected to the chamber and extending the height of the product, that deflects, checks, or regulates fluid flow by being positioned, as an entire unit, to create a seal between the chamber and the stored product." Thermal Technologies, Inc., et al. v. Dade Service Corp., 2004 U.S. Dist. LEXIS 27885 (M.D. Fla., Jun. 14, 2004).
"a collapsible support frame movably connected to the suspension frame assembly" — "the support frame is movably connected to the suspension assembly, but there is no requirement that the support frame move with respect to each part of the suspension assembly." *Fisher-Price, Inc. v. Safety 1st, Inc., et al.*, 109 Fed. Appx. 387 (Fed. Cir., Aug. 16, 2004) (unpublished). 2617

"moveably mounted"; "moveably suspended" — "the pick-up plate be mounted in a manner that enables it to move relative to the drive plate." *Hysitron Inc. v. MTS Systems Corp.*, 2009 U.S. Dist. LEXIS 36108 (D. Minn., Apr. 28, 2009). 2618

"movement by gravity" — "the court rejects the defendants' proposed construction that 'movement by gravity' means 'movement only by gravity.' The claim language needs no additional construction." *Crane Co., et al. v. Sandvenendo America, Inc., et al.*, 2009 U.S. Dist. LEXIS 47509 (E.D. Tex., Jun. 5, 2009). 2620

"movement of the person"; "movement of the foot of the person" — "The court finds no reason to construe 'movement of the person' in these claims"; "The term is non-technical language, used in its ordinary, everyday sense, and needs no further construction." *Nike, Inc. v. Adidas America, Inc., et al.*, 2006 U.S. Dist. LEXIS 91011 (E.D. Tex., Dec. 18, 2006). 2621

"the track incrementally moves longitudinally relative to the substrate" — "requires the 'track,' or 'bridge,' to move, not the substrate." *Leggett & Platt, Inc., et al. v. Vutek, Inc.*, 2006 U.S. Dist. LEXIS 33383 (E.D. Mo., May 25, 2006). 2623

"moving a pair of spaced apart heating electrodes against another surface of said terminal to form a current path between said electrodes through a portion of said terminal extending there between" — "moving two side-by-side heating electrodes into compression contact with a surface of the terminal (other than a surface in contact with the wire) with sufficient pressure to establish and maintain electrical continuity between the electrodes and the terminal to allow a flow of electrical current through the electrodes and the portion of the terminal between the electrodes." *Joyal Products, Inc. v. Johnson Electric North America, et al.*, 2007 U.S. Dist. LEXIS 79522 (D.N.J., Oct. 25, 2007). 2624

"moving the instrument in response to motor signals" — "the surgical instrument of the robotic surgical system is moved by the robot in response to signals received by drive mechanisms or motors/actuators in the robotic arm." *Intuitive Surgical, Inc., et al. v. Computer Motion, Inc.*, 2002 U.S. Dist. LEXIS 14752 (D. Del., Jul. 12, 2002). 2626

"moving the platform and a liquid dispenser relative to each other" — "moving both the moveable platform and a moveable liquid dispenser relative to each other." *Cytologix Corp. v. Ventana Medical Systems, Inc.*, 2006 U.S. Dist. LEXIS 40973 (D. Mass., June 20, 2006). 2627
"moving the rotating cutting cylinder along the road, and simultaneously, moving said
cylinder alternately up above the road surface and down into said road surface, to thereby
form a plurality of generally parallel grooves" — "mean[s] grooves which are arranged side
by side with their long sides parallel to each other and which are generally oriented transverse to
the travel direction of the road." Dickson Industries, Inc. v. Patent Enforcement Team, L.L.C.,

"mulch flakes" — "irregular platelets with a thickness which is less than the dimensions across the
15, 2009).

"multifocal ophthalmic lens" — "a multifocal ophthalmic lens (1) that has no segment of constant
(i.e., spherical) curvature except (optionally) at the center, and (2) that contains at least 2 cycles
in which vision correction power moves from Far to Near and back to Far (or vice versa from
Near to Far to Near), and (3) that has the same Near power in each cycle and the same Far power
23, 2009).

"multiple embossed pattern" — "sequential embossing patterns." 3M Innovative Properties Co.,
et al. v. Avery Dennison Corp., 185 F. Supp. 2d 1031 (D. Minn. 2002). "The district court
erred when it defined the term 'multiple embossed patterns' to include a limitation that the
patterns be created sequentially." Id., 350 F.3d 1365 (Fed. Cir. 2003).

"capable of being multiply folded upon itself"; "adapted to be multiply folded upon itself" —
"capable of being folded upon itself more than one time"; "adapted to be folded upon itself more
(N.D. Cal., Aug. 21, 2006).

"a multipurpose exercise apparatus adapted for providing an individual with support as a
user moves between an upper first position and a lower second position during performance
of an exercise" — "is not essential to an understanding of the language of the claim, and
therefore does not require construction." Fitness Quest Inc. v. J. Monti, 2007 U.S. Dist. LEXIS
60195 (N.D. Ohio, Aug. 16, 2007).

"narrow beam of light" — "a ray or shaft of light of slender width." One World Technologies,
Ltd., et al. v. Rexon Industrial Corp., et al., 2005 U.S. Dist. LEXIS 11711 (N.D. Ill., Jun. 3,
2005).

"narrowly confined scanning volume" — "a volume that is narrow, yet diverging, from the
transmission window of the scanner, which may take a pyramidal, conical, irregular, or similar
shape." Metrologic Instruments, Inc. v. PSC Inc., 2003 U.S. Dist. LEXIS 26636 (D.N.J., Aug. 26,
2003).
"natural tissue plane" — "the interface between one tissue and another tissue, where tissue may include, but is not limited to, nerves, blood vessels, muscles, tendons and bone." General Surgical Innovations, Inc. v. Origin Medsystems, Inc., 1998 U.S. Dist. LEXIS 22958 (N.D. Cal., May 15, 1998). 2637

"near" — "the Court finds the word 'near' indefinite." Young v. Lumenis, Inc., 2005 U.S. Dist. LEXIS 27792 (S.D. Ohio, Nov. 1, 2005). 2638 "We agree with Young that the district court erred in determining that the term 'near' is indefinite. ... The claim language and the specification make clear that the term 'near' means close to or at the most distal edge of the ungual crest." Id., 492 F.3d 1336 (Fed. Cir. 2007).

"a side nearest the light emission window" — "I will not construe 'a side nearest the light emission window' to be synonymous with 'front side'. I construe the term 'a side nearest the light emission window' to mean any side that is at or near the end of the light emitting end of the reflector body and includes the 'front side' as defined below, as well as the outer circumference of the reflector body at points closest to the light emitting end." U.S. Philips Corp. v. Iwasaki Electric Co., et al., 2006 U.S. Dist. LEXIS 106 (S.D.N.Y., Jan. 3, 2006).

"top surface having a negative slope from left to right" — "the entire top surface slopes downwardly from the left wall to the right wall so that no arch is present when viewed from the rear." Goldtouch Technologies, Inc. v. Microsoft Corp., 2000 U.S. Dist. LEXIS 3370 (W.D. Tex., Jan. 14, 2000). 2644 "After considering the prosecution history, the Court confirms its earlier determination that the term 'negative slope' requires an entirely negative slope." Id., 102 F. Supp. 2d 722 (W.D. Tex. 2000).

"nipple cover" — "an article for covering the nipple that extends beyond the nipple and areola; is unsupported by attached straps around the neck, back, shoulders, or arms; and does not replace or substantially enhance the apparent size of a woman's breast." Black v. Ce Soir Lingerie Co., Inc, et al., 2007 U.S. Dist. LEXIS 90962 (E.D. Tex., Dec. 10, 2007).
"a nominal radial interference between the first and second lips as the lid and main body are engaged" — "The first lip protrudes sufficiently from the inner surface of the groove and the second lip protrudes sufficiently from the outer surface of the rim so that, as the lid and the main body are engaged, the lips contact each other and a portion of at least one of the lips deflects." Learning Curve Brands, Inc. v. Munchkin, Inc., 2010 U.S. Dist. LEXIS 27277 (W.D. Wis., Mar. 22, 2010).

"a vertical barrier of nominal thickness" — "the 'nominal thickness' of the vertical barrier should be read to mean 'thin.'" Suncast Corp. v. Avon Plastics Inc., 1999 U.S. Dist. LEXIS 15222 (N.D. Ill., Sept. 21, 1999).

"non-conical and non-tapered distal end portion" — "mean[s] that 'the distal end portion of the catheter does not taper anywhere along its length' and that 'the distal end portion does not have a conical shape anywhere along its length.'" Mahurkar v. C.R. Bard, Inc., 2003 U.S. Dist. LEXIS 21518 (N.D. Ill., Nov. 26, 2003).

"non-electronic carrier" — "a holder used for electronic devices to protect them from physical damage, which device is not part of a circuit that utilizes a semiconductor device." Leighton Technologies LLC v. Oberthur Card Systems, S.A., 358 F. Supp. 2d 361 (S.D.N.Y. 2005).

[i] "the polymeric material ... is non-flowable and non-adherent at room temperature"; [ii] "the heat bondable material is non-flowable and non-adherent at room temperature" — [i] "the polymeric material cannot flow at room temperature and cannot adhere to the implant if placed on the implant at room temperature"; [ii] "the heat bondable material cannot flow at room temperature and cannot adhere to the tubular member if placed on the tubular member at room temperature." MarcTec, LLC v. Johnson & Johnson, et al., 2009 U.S. Dist. LEXIS 27011 (N.D. Ill., Mar. 31, 2009).

"said second connecting edge being non-parallel to said first connecting edge" — "the second connecting edge is non-parallel to the first connecting edge." Kimberly-Clark Worldwide, Inc. v. First Quality Baby Products, LLC, et al., 2010 U.S. Dist. LEXIS 77063 (M.D. Pa., Jul. 29, 2010).

"non-resilient" — "this term should be interpreted to exclude lever moving elements which are operated resiliently, i.e. by means of spring." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997).

"including a non-semiconductor element of the thin film to be formed" — "including an element that is not a semiconductor and that will be contained in the thin film to be formed." ASM America, Inc. v. Genus, Inc., 2002 U.S. Dist. LEXIS 15348 (N.D. Cal., Aug. 15, 2002).

"non-slip" — "reduces or prevents smooth sliding motion." Microthin.com, Inc. v. SiliconeZone USA, LLC, 615 F. Supp. 2d 754 (N.D. Ill. 2009). "We agree with the district court that the plain and ordinary meaning of 'non-slip' is 'reduces or prevents smooth sliding motion' and does not distinguish between sticky and non-sticky characteristics." Id., 2010 U.S. App. LEXIS 10275 (Fed. Cir., May 20, 2010).
"non-standard bulb socket"; "non-standard twinkle bulb" — "The defendants have not shown that the use of negatives in the definitions in the '909 Patent's specifications creates any ambiguity or otherwise requires a finding of invalidity." Sienna, LLC v. CVS Corp., et al., 2007 U.S. Dist. LEXIS 2 (S.D.N.Y., Jan. 3, 2007).

"non-thrombogenic material which provides long term non-thrombogenicity to the device portion during and after release of the biologically active material" — "a material that does not promote thrombosis for a period of time that extends both during and after release of the biologically active material." Boston Scientific SciMed, Inc., et al. v. Cordis Corp., et al., 2005 U.S. Dist. LEXIS 10735 (D. Del., Jun. 3, 2005). "We thus [] the district court's construction of the 'non-thrombogenic' limitation, including the 'long term' aspect." Id., 554 F.3d 982 (Fed. Cir. 2009).

"a non-volute pump chamber" — "is a pump chamber that is not a volute pump chamber. A volute pump chamber is . . . [a] three dimensional region wherein fluid is subjected to the force of an impeller, with a spiral casing, such that, when viewed circumferentially, the cross-sectional area of the chamber generally increases as the outlet of the pump chamber is approached. 'Viewed circumferentially,' means viewed along the path that the liquid in the chamber follows; i.e., rotating around the chamber, in the direction of the outlet. The 'cross-sectional area,' refers to the area defined that is between the pump chamber wall and the outer edge of the impeller. 'Generally increases,' does not mean that the increase must be constant; however, the 'widest' point must occur at the outlet of the pump, or as the outlet of the pump is approached, and the narrowest point occurs at the cutwater (or the other edge of the outlet)." Molten Metal Equipment Innovations, Inc. v. Metalucics Systems Co., L.P., 56 Fed. Appx. 475 (Fed. Cir., Jan. 30, 2003) (unpublished).

"a non-woven top sheet" — "a sheet, web or batt of fibers or filaments of wood pulp, rayon, cotton, polypropylene, polyester, lycra or a combination thereof that are bonded to each other by any of several means. Papers, wovens, knits and felts are specifically excluded." Baychar, Inc., et al. v. Frisby Technologies, Inc., et al., 230 F. Supp. 2d 75 (D. Me. 2002).

"the lower surface having no projections for connection to the seating surface" — "the lower surface having no parts extending outwardly for attachment or fastening to the seating surface." Robinson v. Advanced Decoy Research, Inc., et al., 519 F. Supp. 2d 1087 (S.D. Cal. 2007).

"a substantially enclosed vessel including a fuel inlet, a fuel outlet leading to the engine, and a fuel return line leading to said storage tank, said vessel including a normally upright tube presenting a substantially open upper margin defining an operating fuel level within said vessel, said vessel further including means in direct fluidic communication with said outlet for detachably mounting a cartridge thereon" — "a substantially enclosed vessel that includes a fuel inlet, a fuel outlet leading to the engine, and a fuel return line leading to the fuel storage tank. The vessel includes a normally upright overflow tube that presents a substantially open upper portion, which defines an operating fuel level with the vessel. The vessel further includes a threaded coupling or equivalents thereof for detachably mounting a cartridge which is in direct fluidic communication with such outlet, allowing fluid to travel directly between the cartridge and such outlet." Ekstam v. Ekstam, 2006 U.S. Dist. LEXIS 12937 (E.D. Mo., March 7, 2006).

"nose"; "nose region" — "region, defined by the blades of the bit, located radially between the cone and flank regions, and includes the leading-most point on the blades, labeled 232 in Fig. 10 of the '249 and '715 Patents." Redhycalog UK, Ltd, et al. v. Baker Hughes Oilfield Operations, Inc., et al., 2007 U.S. Dist. LEXIS 76125 (E.D. Tex., Oct. 12, 2007).

"nose feature" — "the part of the face used for breathing and smelling, including, but not limited to, the nose features shown in Figures 5 through 9 of the '972 patent." Hoodlums Welding Hoods, LLC v. Redtail International, LLC, 2009 U.S. Dist. LEXIS 100356 (E.D. Pa., Feb. 14, 2009).

"each flange itself not being a magnet, including a magnetic material" — "each flange is not a magnet, but it includes a permanent magnet or ferromagnetic material, and at least either the magnetic material in the primary frame or in the auxiliary frame is a permanent magnet." Aspex Eyewear, Inc., et al. v. Miracle Optics, Inc., 2003 U.S. Dist. LEXIS 26355 (C.D. Cal., Feb. 14, 2003).

"not cover said axial peripheral lip" — "mean[s] that the cladding panel cannot cover any portion of the 'axial peripheral lip.'" Lacks Industries, Inc. v. McKechnie Vehicle Components USA, Inc., et al., 55 F. Supp. 2d 702 (E.D. Mich. 1999).

"not directed, non laminar stream" — "a diverging gas stream which need not be specifically aimed at the tissue to be coagulated." Erbe Elektromedizin GmbH, et al. v. Canady Technology, LLC, et al., 512 F. Supp. 2d 297 (W.D. Pa. 2007).

"a number of apertures" — "Use of the plural form of aperture does imply that more than one aperture should be present, or implies a set of apertures, however, there is nothing that specifies that the number of aperture sets need be more than one."  Lawler Manufacturing Co., Inc. v. Bradley Corp., et al., 2000 U.S. Dist. LEXIS 20511 (S.D. Ind., Nov. 30, 2000).

"two woven nylon, hook and loop mating strips" — "I reject ... the argument that 'nylon' ... refers only to the mating strips without the hooks or loops."  Transco Products Inc. v. Performance Contracting, Inc., et al., 1996 U.S. Dist. LEXIS 4027 (N.D. Ill., March 29, 1996).  

"O-ring elements" — "portions having a circular outer surface that is wider at the middle than at the top or bottom."  ICU Medical, Inc. v. RyMed Technologies, Inc., 2009 U.S. Dist. LEXIS 112546 (D. Del., Dec. 3, 2009).

"an object to be magnetically heated including an induction heatable element and an RFID tag" — "a food delivery container to be magnetically heated that includes an induction heatable element and an RFID tag."  Thermal Solutions, Inc. v. Imura International U.S.A., Inc., et al., 2009 U.S. Dist. LEXIS 90513 (D. Kan., Sep. 29, 2009).

"objective lens means disposed on said surgical microscope positioned within said three-dimensional space" — "an objective lens positioned within stereotactic three-dimensional space."  Medical Instrumentation and Diagnostics Corp. v. Elekta AB, et al., 2001 U.S. Dist. LEXIS 25448 (S.D. Cal., Apr. 4, 2001).

"oblique zone" — "a collection zone that differs in polar angle from the central collection zone and that does not collect the same light being collected by the central zone but, instead, collects either forward or backward scattered light but does not collect both simultaneously."  ADE Corp. v. KLA-Tencor Corp., 252 F. Supp. 2d 40 (D. Del. 2003).
"obtaining a physiological specimen from said host" — "the court interprets 'obtain' in this context to mean take physical possession of the physiological specimen." Regents of the University of California, et al. v. Hansen, et al., 1999 U.S. Dist. LEXIS 21833 (E.D. Cal., Nov. 5, 1999).

"obtaining said sample" — "'obtaining' could include receiving a sample from someone else who collected it, and 'sample' need not be limited to blood and urine." PerkinElmer, Inc., et al. v. Intema Ltd., 2010 U.S. Dist. LEXIS 66452 (D. Mass., Jul. 2, 2010).

"an obtuse angle is formed between the strut and the guidewire" — "an angle of more than 90 degrees and less than 180 degrees formed between the strut and the guidewire." Boston Scientific SciMed, Inc., et al. v. ev3 Inc., 502 F. Supp. 2d 931 (D. Minn. 2007).

"occluding" — "blocking or obstructing." Regents of the University of Minnesota v. AGA Medical Corp., 2009 U.S. Dist. LEXIS 90289 (D. Minn., Sep. 29, 2009).

"forming an occlusion within a vascular cavity" — "forming a blockage within a vascular cavity. The vascular cavity does not have to be completely occupied by the blockage to be occluded." Regents of the University of California v. Micro Therapeutics, Inc., et al., 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007).

"case occupies substantially the entire drive bay slot" — "when installed, the case occupies almost entirely the slot leading to a drive bay." Comaper Corp. v. Antec, Inc., 2006 U.S. Dist. LEXIS 67363 (E.D. Pa., Sept. 13, 2006).

"occurrence of contact"; "occurrences of contact" — "the act of causing contact to occur at a location on the work platform." Tinkers & Chance v. Leapfrog Enterprises, Inc., 2007 U.S. Dist. LEXIS 43871 (E.D. Tex., June 18, 2007).

"of size to fit into the grate frame" — "the Court finds that the claimed basin is 'of size to fit into the grate frame' only if it fits reasonably accurately into the grate frame. This construction is admittedly not very precise, but it is as precise as the intrinsic evidence permits, and it serves to exclude from coverage those basins that fit so poorly within grate frames that they fail of their purpose." WIMCO, LLC v. Lange Industries, Inc., 2007 U.S. Dist. LEXIS 92502 (D. Minn., Dec. 14, 2007).

"of the patient" — "derived or coming from the patient; originating at or from the patient." Tehrani v. Hamilton Medical, Inc., et al., 331 F.3d 1355 (Fed. Cir. 2003).

"second trough defining means for defining a substantially vertical trough extending the height of said panel ... said vertical trough disposed offset from said horizontal trough defining means and located proximate said horizontal trough rear portion"; "means for defining a vertical trough ... said vertical trough-defining means lying in a plane parallel to and spaced apart from said horizontal trough-defining means" — "Defendants contend that this language, when read in the context of the patent specification, requires that there be absolutely no overlap between the space occupied by the vertical troughs and the space occupied by the intermediate horizontal troughs. The Court does not agree." ADC Telecommunications, Inc., Plaintiff, v. Thomas & Betts Corp., et al., 170 F. Supp. 2d 879 (D. Minn. 2001).

"on" — "so as to be attached to or unified with."  *Vectra Fitness, Inc. v. Icon Health & Fitness, Inc.*, 246 F. Supp. 2d 1111 (W.D. Wash. 2003). 2705

"depositing a titanium film containing nitrogen atoms on a semiconductor substrate";
"forming a titanium nitride film on the semiconductor substrate" — "The titanium film containing nitrogen atoms must be deposited directly on a semiconductor substrate."; "The titanium nitride film must be directly on the titanium silicide film, which in turn must be directly on the semiconductor substrate."  *OKI Electric Industry Co., Ltd. v. LG Semicon Co., Ltd., et al.*, 1999 U.S. Dist. LEXIS 22625 (N.D. Cal., Jul. 19, 1999). 2706

"provided on an exterior of the housing" — "the on/off switch is located at least in part outside the housing."  *Fellowes, Inc. v. Michilin Prosperity Co., Ltd., et al.*, 2006 U.S. Dist. LEXIS 90648 (E.D. Va., Dec. 15, 2006). 2707

"on at least one of said surfaces" — "on at least a portion of either or both the inside and outside enclosure surfaces."  *Tailored Lighting, Inc. v. Osram Sylvania Products, Inc.*, 514 F. Supp. 2d 417 (W.D.N.Y. 2007). 2708

"a shoulder means on one end of said auxiliary drum means" — "requires the shoulder means to contact the auxiliary drum."  *Somfy, S.A. v. Springs Window Fashions Division, Inc., et al.*, 41 F. Supp. 2d 833 (N.D. Ill. 1999). 2709

"on or in-line" — "is sufficiently clear that it needs no construction."  *WesternGeco LLC v. ION Geophysical Corp.*, 2010 U.S. Dist. LEXIS 71875 (S.D. Tex., Jul. 16, 2010). 2710

"sputter-coated film on said continuous glass sheet" — "The '728 patent claims contain no limitation that the interface between the metal film and the glass sheet be devoid of unintended intermediate material, oxide or otherwise. The presence of an intermediate oxide layer in the PPG products thus does not alone render the accused devices noninfringing."  *Shatterproof Glass Corp. v. PPG Industries, Inc.*, 1995 U.S. App. LEXIS 227 (Fed. Cir., Jan. 6, 1995) (unpublished). 2711

"means on said housing for supporting said blade holder proximate its open end" — "the correct interpretation is that the supporting means on the housing need not be a separate entity from the housing."  *National Presto Industries, Inc. v. Black & Decker (U.S.) Inc.*, 1995 U.S. App. LEXIS 15568 (Fed. Cir., June 20, 1995) (unpublished). 2712

"said labelled reagent is dry on said test strip"; "drying said labelled reagent onto a portion of said test strip" — "the plain meaning of the recitations 'on' and 'onto' must control, whereby disposition of the labelled reagent 'on' or 'onto' the test strip means disposition as a surface layer or within the test strip."  *Inverness Medical Switzerland GmbH, et al. v. Warner Lambert Co.*, 309 F.3d 1373 (Fed. Cir. 2002). 2713
"provided on the exterior of the housing" — "the switch lock's manually engageable portion is located at least in part outside the housing." Fellowes, Inc. v. Michilin Prosperity Co., Ltd., et al., 2006 U.S. Dist. LEXIS 90648 (E.D. Va., Dec. 15, 2006).  

"on the surface of said base material" — "does not exclude articles in which microcapsules are dispersed within the fabric, whether by impregnation or some other process. The limitation simply means that the coating (i.e., the mixture of microcapsules and polymeric binder) is dispersed on at least a portion of the surface of the base material, irrespective of whether the coating is also dispersed within the interstices of the base material." Outlast Technologies, Inc. v. Frisby Technologies, Inc., 128 Fed. Appx. 122 (Fed. Cir., Mar. 30, 2005) (unpublished).  

"printing a design or logo to show on the upper surface of the mat" — "printing a design or logo on the lower surface of the mat such that it can be seen through the mat on the upper surface." Microthin.com, Inc. v. SiliconeZone USA, LLC, 615 F. Supp. 2d 754 (N.D. Ill. 2009).  

"said energy-absorption terminal including one of the cutting section and cutable member" — "requir[es] that the energy-absorption terminal include either the cutting section or the cutable member, and that the terminal may include both the cutting section and the cutable member."  

"wherein a predefined one of the positions on the riser card has both ISA type and PCI type expansion connectors associated therewith" — "mean[s] that the riser card has a single expansion position having a single combi-connector." Tulip Computers, International B.V. v. Dell Computer Corp., 236 F. Supp. 2d 364 (D. Del. 2002).  

"one or more converters" — "one or more such detectors in optical communication and electrically connected to one or more corresponding collectors." ADE Corp. v. KLA-Tencor Corp., 252 F. Supp. 2d 40 (D. Del. 2003).  

"one-piece"; "one-piece holder" — "having no parts that separate from the unit during normal operation and containing no parts that are not integrally formed"; "a holder having no parts that separate from the unit during normal operation and containing no parts that are not integrally formed." Storus Corp. v. Restoration Hardware, Inc., et al., 2007 U.S. Dist. LEXIS 25953 (N.D. Cal., Mar. 22, 2007).  

"a one-piece connector means"; "a one-piece L-shaped connector member" — "requires that the connector, which provides lateral adjustability, be one piece, as distinguished from the two-piece and three-piece connectors disclosed in Frigg." AcroMed Corp. v. Sofamor Danek Group, Inc., et al., 1996 U.S. Dist. LEXIS 22703 (N.D. Ohio, April 16, 1996).2725

"one-way snap lock" — "a fastening device that closes with a catch and that once closed, cannot be opened by applying the reverse of the motion used to close the device." Alloc, Inc., et al. v. Pergo, LLC, 2009 U.S. Dist. LEXIS 62881 (E.D. Wis., Jul. 2, 2009).2726

[supplying a dose of respirating gas] "only for the duration T_1" — "this limitation, in particular, are clear and unambiguous, in view of the claim language itself and other intrinsic evidence." Sunrise Medical HHG, Inc. v. Airsep Corp., 95 F. Supp. 2d 348 (W.D. Pa. 2000).2727

"only four elements" — "to literally infringe ... an accused device must have only four elements." Strattec Security Corp. v. General Automotive Specialty Co., Inc., et al., 126 F.3d 1411 (Fed. Cir. 1997).2728

"for initiating the heating of said object only upon placement of said object proximal to said heater and in a position for RF communication between said tag and said reader" — "this term need not be construed further." Thermal Solutions, Inc. v. Imura International U.S.A., Inc., et al., 2009 U.S. Dist. LEXIS 90513 (D. Kan., Sep. 29, 2009).2729

"only within a zone extending between latitudes 30 degrees-45 degrees" — "The district court erred in its claim construction because it did not accord the claim language its ordinary meaning. ... When given their ordinary meaning, the terms 'only' and 'extending between' unambiguously limit claim 1 to gamma units with radiation sources and beam channels located in a zone stretching exclusively in the space separating the latitudes 30 degrees and 45 degrees." Elekta Instrument S.A. v. O.U.R. Scientific International, Inc., 214 F.3d 1302 (Fed. Cir. 2000).2730

"onto each other" — "projecting mask alignment marks and substrate alignment marks to a substantial degree of overlap." Nikon Corp., et al. v. ASM Lithography B.V., 308 F. Supp. 2d 1039 (N.D. Cal. 2004).2731

"introducing ... onto said fabric" — "is not limited to introducing solution to only the top of the fabric." Whirlpool Corp., et al. v. LG Electronics, Inc., et al., 423 F. Supp. 2d 730 (W.D. Mich. 2004).2732

"so that at least a portion of the fallopian tube is open" — "so that at least a portion of the fallopian tube is not completely occluded." Conceptus, Inc. v. Hologic, Inc., 2010 U.S. Dist. LEXIS 24247 (N.D. Cal., Mar. 16, 2010).2733

"said first end cap being an open airflow inlet" — "the Court declines to adopt Baldwin's proposed constructions and does not construe the phrase." Donaldson Co., Inc. v. Baldwin Filters, Inc., 481 F. Supp. 2d 974 (D. Minn. 2007).2734

"open-pore microporous material" — "material with an average interconnecting pore size comparable to or below the mean free path of air molecules at standard atmospheric pressure in which the intercommunicating open pores represent essentially all pores contained in the microporous material." *ITP, Inc., et al. v. BP Corp. North America, Inc.*, 2005 U.S. Dist. LEXIS 39078 (S.D. Tex., May 2, 2005). 2737

"open space" — "a space for the performance of a surgical procedure, which is not occupied by a bladder or other device, or by tissue." *General Surgical Innovations, Inc. v. Origin Medsystems, Inc.*, 1998 U.S. Dist. LEXIS 22958 (N.D. Cal., May 15, 1998). 2738

"open top portion" — "a portion of the container opposite the closed bottom portion of the container, said portion having an interface by which a cap screws onto the beverage container and an area that is not closed." *Sunbeam Products, Inc. v. Hamilton Beach Brands, Inc., et al.*, 2010 U.S. Dist. LEXIS 85281 (E.D. Va., Aug. 19, 2010). 2739

"opened" — "moved from a closed position such that the door has cleared the cassette so that ejecting the cassette will not interfere with the door." *Funai Electric Co., Ltd. v. Daewoo Electronics Corp., et al.*, 2010 U.S. App. LEXIS 18237 (Fed. Cir., Sep. 1, 2010) 2740

"opening" — "is not correctly construed to eliminate the sealing mechanism provided by the slitted diaphragm." *Hakim v. Cannon Avent Group, PLC, et al.*, 479 F.3d 1313 (Fed. Cir. 2007). 2742

"syringe receiving opening"; "opening" — "a circular width of a size to accommodate the back end of a syringe." *Liebel-Flarsheim Co. v. Medrad Inc.*, 2001 U.S. Dist. LEXIS 23096 (S.D. Ohio, Oct. 18, 2001). 2748 "In common usage, an opening is simply an aperture, and nothing in the '669 and '261 patents indicates that the term 'opening' should be understood to carry with it the requirement that it must always be located in the front of a pressure jacket." *Id.*, 358 F.3d 898 (Fed. Cir. 2004). 2749

"an opening"; "closed base" — "an opening of the battery holder at an end opposite the generally closed base"; "an end of the battery holder that is opposite the opening." *Invisible Fence, Inc. v. Perimeter Technologies, Inc.*, 2006 U.S. Dist. LEXIS 33792 (N.D. Ind., May 25, 2006). 2750
"opening for connecting the interior of the reservoir to the interior of the fuel tank" — "an aperture disposed adjacent to both the interior of the reservoir and the interior of the fuel tank, allowing fuel from the fuel tank to be entrained directly into the reservoir." VDO North America L.L.C. v. TI Group Automotive Systems (North America), Inc., 2001 U.S. Dist. LEXIS 19971 (D. Del., Dec. 3, 2001).2751 "The correct construction of ‘an opening for connecting the interior of the reservoir to the interior of the fuel tank’ requires only that the interior of the reservoir and the interior of the fuel tank be joined or linked by a hole, passage, or aperture." TI Group Automotive Systems (North America), Inc. v. VDO North America, L.L.C., et al., 375 F.3d 1126 (Fed. Cir. 2004).2752

"switch housing formed with an opening therein" — "the term 'opening' in claim 1 will be interpreted to mean the space within the switch housing and not a hole or slot that allows passage to the outside of the switch housing and will be construed as follows: An enclosed structure containing the three elements in subsection (i), (ii), and (iii) and also some vacant, unoccupied space." Ellison Co., Inc., et al. v. Transpec, Inc., 445 F. Supp. 2d 566 (M.D. N.C. 2006).2754

"openings"; "slots" — "openings or slots with widths less than 0.254 mm." Advanced Fiber Technologies Trust v. J&L Fiber Services, Inc., 2010 U.S. Dist. LEXIS 95032 (N.D.N.Y., Sep. 13, 2010).2756

"said coupling operable by fluid pressure so that when a sufficient amount of fluid pressure is applied to the coupling, the fluid pressure a user causes the occlusive implant to separate from the pusher" — "the coupling is a connecting device that can be operated by selectively applying fluid pressure to the coupling to separate the implant from the pusher, and the application of the fluid pressure by the user to the coupling causes the detachment of the implant at the coupling." Boston Scientific Corp. v. Cordis Corp., 422 F. Supp. 2d 1102 (N.D. Cal. 2006).2757

"operable for flexing transversely to said longitudinal axis to relax the dunnage structure when the side walls are moved to a collapsed position such that the relaxed dunnage structure is generally positioned in the reduced size container for return" — "being 'coupled to' the two 'side walls' such that moving the two 'side walls' causes bending or folding relative to said longitudinal axis to relax the 'dunnage structure' and occurs during the time that the two 'side walls' are being moved into a collapsed position such that the relaxed 'dunnage structure' is generally positioned in the reduced size container so that the container can be sent back while in the collapsed position." Bradford Co. v. Afco Manufacturing, et al., 2006 U.S. Dist. LEXIS 88547 (S.D. Ohio, Dec. 5, 2006).2758

"operable in response to" — "the words 'operable in response to' ... do not imply that a specific control means is being claimed. In other words, if the web sensor in [the] label system causes a response in the operation of the adhesive applicator, that adhesive applicator may be found to be operable in response to the web sensor." Instance v. On Serts Systems, Inc., et al., 1997 U.S. App. LEXIS 3080 (Fed. Cir., Feb. 21, 1997) (unpublished).2759
"lock spindle being operable to rotate between a lock position and a release position" — "simply means that it rotates about its axis in such a way that its lock pins are either resting on a catch to prevent movement of the side rails, or the pins are in a release position to allow clearance (and thus movement) of the side rails." Pedicraft, Inc. v. Stryker Corp. of Michigan, et al., 2003 U.S. Dist. LEXIS 27837 (M.D. Fla., May 5, 2003). 2760

"operably connected" — "mean[s] that one component is connected to another component in such a manner that the components may interact with each other." Advanced Respiratory, Inc. v. Electromed, Inc., 2003 U.S. Dist. LEXIS 823 (D. Minn., Jan. 10, 2003). 2762

"air-permeable secondary wall means above said chamber upper wall portion and operably coupled with said chamber-defining means" — "A person of ordinary skill in the art of air bed engineering would read 'operably coupled' to mean that two elements work in concert to create an inflatable chamber, e.g. one which is not air tight but can receive and hold air. Thus, whatever means is used to operably couple must create an inflatable chamber between the top wall and the secondary wall." KCJ Corp. v. Kinetic Concepts, Inc., et. al., 30 F. Supp. 2d 1319 (D. Kan. 1998). 2764

"the actuating mechanism is operated remotely by sending signals from a communication device" — "the actuating mechanism receives signals from a communication device that is not in contact with the actuating mechanism." Graham-White Manufacturing Co. v. Ellcon-National, Inc., 2007 U.S. Dist. LEXIS 89126 (D.S.C., Dec. 4, 2007). 2765

"wherein the spring operates on the blade through a cavity formed in the handle" — "this term is clear on its face and does not require construction." Kai U.S.A., Ltd. v. Buck Knives, Inc., 2006 U.S. Dist. LEXIS 24924 (D. Or., Feb. 9, 2006). 2766

"operative engagement" — "permitting movement (for example pivotability)." Spine Solutions, Inc., et al. v. Medronic Sofamor Danek USA, Inc., et al., 2010 U.S. App. LEXIS 18818 (Fed. Cir., Sep. 9, 2010). 2767

"operative position"; "inoperative position" — "a guard rail is an 'operative' position when it is producing its designed effect of preventing the patient from rolling off the bed; and a guard rail is in an 'inoperative' position when it would be ineffective at preventing a patient from rolling off the bed." Safe Bed Technologies Co. v. KCI USA, Inc., et al., 2004 U.S. Dist. LEXIS 17773 (N.D. Ill., Sept. 2, 2004). 2768

"a spring operatively connected between the handle and the blade to assist in the opening of the blade" — "the spring, handle, and blade are arranged such that the spring operates to assist in opening the blade." Kai U.S.A., Ltd. v. Buck Knives, Inc., 2006 U.S. Dist. LEXIS 24924 (D. Or., Feb. 9, 2006). 2772

"said tube operatively connected to said cap" — "a reading of the claims in view of the specification supports a construction of 'operatively connected' that requires affixing the tube to the cap." Innova/Pure Water, Inc. v. Safari Water Filtration Systems, Inc., 289 F. Supp. 2d 1347 (M.D. Fla. 2003). 2773 

"a travel bar operatively connected to the hinge plates" — "the travel bar and hinge plates are arranged in a manner such that at least one connecting link operates to assist in moving the hinge plates between the closed and opened positions." World Wide Stationery Manufacturing Co., Ltd. v. U.S. Ring Binder, L.P., 2009 U.S. Dist. LEXIS 27873 (E.D. Mo., Mar. 31, 2009). 2775

"a travel bar operatively connected to the lever" — "the travel bar and the lever are arranged such that the intermediate connector operates to assist the pivoting movement of the lever that causes movement of the travel bar in translation relative to the housing from the first position in which the control structure locks the hinge plates in the closed position to the second position in which the hinge plates are free to pivot to the open position." World Wide Stationery Manufacturing Co., Ltd. v. U.S. Ring Binder, L.P., 2009 U.S. Dist. LEXIS 27873 (E.D. Mo., Mar. 31, 2009). 2776

"the lever being operatively connected to the travel bar" — "the lever and travel bar are arranged such that the intermediate connector operates to assist the pivoting motion of the lever to produce movement of the travel bar generally lengthwise of the elongate plate." World Wide Stationery Manufacturing Co., Ltd. v. U.S. Ring Binder, L.P., 2009 U.S. Dist. LEXIS 27873 (E.D. Mo., Mar. 31, 2009). 2777

"impeller assembly operatively coupled to said motor" — "a rotating impeller apparatus coupled directly or indirectly to the pump motor so that they are operable together." Sta-Rite Industries, et al. v. ITT Corp., et al., 2010 U.S. Dist. LEXIS 10790 (E.D. Tex., Jan. 19, 2010). 2778

"the clamp including a camming member which operatively engages the actuation member such that movement of the actuation member pivots the clamp between the open and clamped positions" — "the camming member of the clamp (follower) and the actuation member constitute a camming mechanism to pivot the clamp." Tyco Healthcare Group LP v. Ethicon Endo-Surgery, Inc., 411 F. Supp. 2d 93 (D. Conn. 2006). 2779

"an anchor seat means which has a lower bone interface operatively joined to said bone segment" — "Since the claim language concerns a surgical procedure, ... 'operative joinder' in this claim means to 'connect during a surgical procedure.'" Cross Medical Products, Inc. v. Medtronic Sofamor Danek, Inc., 2004 U.S. Dist. LEXIS 14183 (C.D. Cal., May 18, 2004). 2780
"operatively positioned at the surgeon's operating station" — "positioned at the surgeon's operating station within reach and view of the surgeon to allow control and monitoring of the pieces of surgical equipment." Karl Storz Endoscopy-America, Inc. v. Smith & Nephew, Inc., 2010 U.S. Dist. LEXIS 85036 (W.D. Tenn., Aug. 18, 2010).2781

"operator input to allow an operator to signal a desire to eliminate torque" — "Meritor's invention claims only the operator input to signal torque elimination without use of a clutch. It does not claim the further effecting of gear shift stemming from the initial operator signal. Once the torque is eliminated, the transmission may be shifted into neutral and thereafter, into a new gear. But, this requires further operator input." Meritor Transmission Corp. v. Eaton Corp., 2007 U.S. Dist. LEXIS 13166 (W.D.N.C., Feb. 23, 2007).2782

"side members which include opposing surfaces" — "side members, each having an inner surface that faces or looks toward the corresponding surface of the other side member." IKN, Inc. v. CemProTec GmbH, 2005 U.S. Dist. LEXIS 29134 (E.D. Pa., Nov. 22, 2005).2783

"opposite and directly below the free end of said member" — "on the opposite side of the connecting device from the elongate member, and also directly below the free end of said member." Robinson v. Advanced Decoy Research, Inc., et al., 519 F. Supp. 2d 1087 (S.D. Cal. 2007).2784

"opposite sides" — "the right and left sides of the calculator." Sun Coast Merchandise Corp. v. CCL Products Enterprises, Inc., 2003 U.S. Dist. LEXIS 27316 (N.D. Cal., Apr. 30, 2003).2785

"a deflector plate mounted on the axial shaft opposite the passages for preventing straight line impingement of gas therefrom on the bag" — "the phrase 'opposite the passages' [] mandat[es] that the deflector plate is not part of the element containing the gas passages." HBB Limited Partnership v. Ford Motor Company, et al., 1996 U.S. Dist. LEXIS 4047 (N.D. Ill., March 29, 1996).2786

"optical arrangement" — "a collection comprising two or more mirrors, lens, prisms, or other optical devices, placed in some specified configuration, which reflect, refract, dispense, absorb, polarize, or otherwise act on light. That definition allows for a combination of two or more different optical devices. Also, a mirror whether it is motorized or not, is an optical device." Erchonia Medical Inc., et al. v. Miki Smith, et al., 2006 U.S. Dist. LEXIS 38498 (D. Az., June 8, 2006).2787

"optical bench mounted in said compact housing" — "a rigid structure within the housing of the scanner to which optical components are mounted to prevent movement of the individual optical components relative to each other. There is no requirement that the optical bench be mounted to the compact housing by fasteners or brackets." Metrologic Instruments, Inc. v. PSC Inc., 2003 U.S. Dist. LEXIS 26636 (D.N.J., Aug. 26, 2003).2789

"an optical element collecting light scattered" — "means that one or more optical elements collects light." ADE Corp. v. KLA-Tencor Corp., 220 F. Supp. 2d 303 (D. Del. 2002).2791

"optical elements in a telescope" — "this Court rejects plaintiff's definition limiting the term 'optical elements in a telescope' to 'mirrors,' in favor of a broader definition which includes 'mirrors,' 'lenses,' and 'prisms.'" Lasermax, Inc. v. Glatter, 2005 U.S. Dist. LEXIS 17136 (S.D.N.Y., Aug. 17, 2005).2792

"optical measuring device" — "a device that can measure at least one property of electromagnetic radiation in the wavelength range including only infrared, visible, ultraviolet, and X rays." Precision Automation, Inc., et al. v. Technical Services, Inc., et al., 2009 U.S. Dist. LEXIS 8187 (D. Or., Feb. 2, 2009).2793

"an optically absorptive refractory transition metal" — "Because the dictionary definition of the term 'transition metal' does not indicate that this term refers to alloys, and because nothing in the intrinsic evidence suggests otherwise, the court concludes that the term 'an optically absorptive refractory transition metal' refers only to pure elemental metals, and does not include alloys. ... Since the plain language of the claim suggests no limitation on the degree of absorptivity of the transition metal layer, the court declines to construe the specification's description of the high relative absorptivity of this layer as a claim limitation." EMI Group North America, Inc. v. Cypress Semiconductor Corp., 68 F. Supp. 2d 421 (D. Del. 1999).2794

"optimize the orientation" — "to orient the teeth to achieve the desired design criteria using the information calculated in the previous step." Haliburton Services v. Smith International Inc., 2004 U.S. Dist. LEXIS 2320 (E.D. Tex., Feb. 18, 2004).2796

[enabling the insert to fit within the aperture] "in a first orientation and a second orientation" — "the terms 'first' and 'second' do not require that the orientations be separated by any specific degree of rotation, such as the ninety degree difference argued by Lamson. Rather, such language broadly claims an outlet cover with an aperture large enough to accommodate an insert placed in any two orientations, whether those orientations be separated by one hundred eighty degrees, ninety degrees, or any other degree of rotation." Intermatic Inc. v. Lamson & Sessions Co., 273 F.3d 1355 (Fed. Cir. 2001).2800
"oriented" — "mean[s], with reference to a polymeric material, 'heated and stretched to realign the molecular configuration, this stretching accomplished by a racking or blown bubble process.' Cryovac Inc. v. Pechiney Plastic Packaging, Inc., 2006 U.S. Dist. LEXIS 19144 (D. Del., April 13, 2006).

"each hypotenuse is oriented at least one of towards and away from the centrally positioned long axis" — "either all of the individual hypotenuses are oriented towards the centrally positioned long axis, or all of the individual hypotenuses are oriented away from the centrally positioned long axis." Synvasive Corp. v. Stryker, Corp., 425 F. Supp. 2d 1105 (E.D. Cal. 2006).

"oriented to direct light downwardly to a selected reading area under said body" — "to set or arrange to direct more light in a downward direction than in an upward or outward direction." Kenall Manufacturing Co. v. Genlyte Thomas Group LLC, 413 F. Supp. 2d 937 (N.D. Ill. 2006). 

"oriented toward a back of the shoe" — "directed toward or placed in the direction of a location at or near a back of the shoe." Akva L.L.C. v. Adidas America, Inc., 2005 U.S. Dist. LEXIS 11213 (M.D.N.C., May 17, 2005).

"orifice" — "a hole or opening through which something (axle and sleeve) may pass." Boler Co. v. Arvinmeritor, Inc., 2004 U.S. Dist. LEXIS 13365 (N.D. Ill., Jul. 16, 2004).

"outer bezel disposed over said antenna" — "an exterior structure that covers, at least in part, the antenna." Lutron Electronics Co., Inc. v. Control4 Corp., 2009 U.S. Dist. LEXIS 3562 (D. Utah, Jan. 20, 2009).

"outer covering" — "as an article for receiving and enclosing both the removable bottom cushion and the removable bolster within an interior space such that the two pillows communicate with each other." Flexi-Mat Corp. v. Dallas Manufacturing Co., et al., 2006 U.S. Dist. LEXIS 19528 (D. Mass., April 11, 2006).

"outer spatial volume" — "a region of space defined by an expandable surface element and surrounding an inner spatial volume." Xoft, Inc. v. Cytyc Corp., et al., 2007 U.S. Dist. LEXIS 34468 (N.D. Cal., April 27, 2007).
"having an outer surface defining a drive head that accepts a driving mechanism for rotating and linearly translating said bolt" — "mean[s] the drive collar has a surface outside and separate from the frusto-conical inner surface of the drive collar for defining a drive head capable of accepting a driving mechanism that can rotate and linearly translate the mine roof bolt. The drive head may be of any shape or configuration that accepts such a driving mechanism."

"[W]e do not agree that a person of ordinary mechanical skill would read the specification, the drawings, and the claims to construe 'outer surface' of the drive collar to include a collar whose interior, not exterior, accepts the drive tool."  Id., 501 F.3d 1285 (Fed. Cir. 2007). 2815

"an outer surface of one of said members" — "because its ordinary and customary meaning is clear to one skilled in the art, the Court declines to construe the phrase."  Joyal Products, Inc. v. Johnson Electric North America, et al., 2007 U.S. Dist. LEXIS 79522 (D.N.J., Oct. 25, 2007). 2816

"the outer surface of said sheathing being tapered towards the immersion end of said tube such that a minimum thickness of said sheathing is directly adjacent to and exposing said immersion end of said tube for minimizing trapped gases adjacent to the measuring head when immersed in a metal bath" — "no construction of this claim language is required."  Heraeus Electro-Nite Co. v. Midwest Instrument Co., 2007 U.S. Dist. LEXIS 81685 (E.D. Pa., Nov. 1, 2007). 2817

"a vertical wall surface outwardly adjacent from said body" — "a vertical wall surface next to or near either end of said body."  Kenall Manufacturing Co. v. Genlyte Thomas Group LLC, 413 F. Supp. 2d 937 (N.D. Ill. 2006). 2819

"outwardly angled traction surface"; "outer traction surface having an outward angulation"; "outer traction surface extending from said main body in a direction away from and at an angle to said axis AL" — "a surface facing away from the axis AL that provides traction, having an outward angle relative to the axis AL that is predetermined, such that it does not change significantly in use."  Greenkeepers of Delaware, LLC, et al. v. Softspikes, LLC, et al., 2010 U.S. Dist. LEXIS 10670 (E.D. Pa., Feb. 5, 2010). 2820

"outwardly extending blade disposed on a first side of said barrier"; "a second and third spaced apart outwardly extending blade disposed on a second side of said barrier" — "does not require the blade to extend directly from the barrier."  Suncast Corp. v. Avon Plastics Inc., 1999 U.S. Dist. LEXIS 15222 (N.D. Ill., Sept. 21, 1999). 2821

"over a substantial portion of the height of a pleat leg"; "over substantially the entire height of a pleat leg" — "largely but not necessarily wholly the height of a pleat leg including at least 50% of the leg height." Pall Corp. v. Cuno Inc., 2007 U.S. Dist. LEXIS 59917 (E.D.N.Y., Aug. 14, 2007). 2824

"over-center spring" — "a spring that biases a member toward a first stable position under a first set of mechanical conditions and toward a second stable position under a second set of mechanical conditions, with the member passing through an intermediate meta-stable position." Takata Corp. v. AlliedSignal Inc., et al., 1999 U.S. Dist. LEXIS 15037 (D. Del., Aug. 19, 1999). 2826

"overhang portion" — "a portion of the facer that extends more than a trifling amount beyond an edge of the backer." Great Dane Limited Partnership v. Stoughton Trailers, LLC, et al., 2009 U.S. Dist. LEXIS 119573 (M.D. Ga., Dec. 23, 2009). 2827

"overlapping edges" — "means two edges of a continuous piece of copper foil aligned to completely encircle a layer of dielectric material where there is no discontinuity of copper along the equatorial direction or circumference of the copper, and there is only discontinuity of copper in the axial direction of the cable." Belden Wire & Cable v. Cable Design, 2001 U.S. Dist. LEXIS 25800 (N.D. Ill., Mar. 23, 2001). 2828

"overlying" — "in a layered device formed on a substrate, a relationship between first and second layers wherein the second layer is above or over the first layer." IXYS Corp. v. Advanced Power Technology, Inc., 301 F. Supp. 2d 1065 (N.D. Cal. 2004). 2829

"overmolding" — "forming encapsulating material in a cavity of a defined shape over one or more components on only one side of a substrate." STMicroelectronics, Inc. v. Motorola, Inc., 327 F. Supp. 2d 687 (E.D. Tex. 2004). 2830

"an oversized tang portion of the blade that is sized to extend through the opening in the handle when the blade is stored in the handle so that the oversized tang portion is exposed for manipulation from the back of the handle" — "is clear on its face and does not require construction." Kai U.S.A., Ltd. v. Buck Knives, Inc., 2006 U.S. Dist. LEXIS 24924 (D. Or., Feb. 9, 2006). 2833

"overturned rim extending from the periphery of the side wall" — "The rim of the invention clearly must turn over, i.e. curve downward." James River Corp. of Virginia v. Hallmark Cards, Inc., 915 F. Supp. 968 (E.D. Wis. 1996). 2834

"oxidation index" — "the Court adopts the definition of 'oxidation index' expressed by the specification." Howmedica Osteonics Corp. v. Zimmer, Inc., et al., 2007 U.S. Dist. LEXIS 29991 (D.N.J., April 23, 2007). 2835
"package" — "a covering, wrapper or container capable of holding a product for the purposes of merchandising and display prior to purchase."  

"packaged together in sterile packaging means" — "packaged as a combination in a single sterile package."  

"packaging"; "packaged" — "mean placed or placing in a container."  

"pad assembly" — "one or more pads."  

"painted surface of a vehicle" — "any vehicle surface with paint."  

"a pair of connector legs" — "the two branches at the downstream end of the bifurcated base [graft] structure, each of which has an opening to which an additional graft may be connected."  

"a pair of flanges extending from opposite side edges of said housing in parallel spaced relationship" — "the phrase 'parallel spaced relationship' modifies the 'flanges,' not the 'opposite side edges.'"  

"pair of fuel injectors mounted in a fuel injector and throttle body" — "require[s] that the fuel injectors be mounted in the throttle body."  

"a pair of linear actuators mounted on said frame and connected to said levers for swinging said levers and thus tilting said cradle ... from said first position through a second position ... to a third position" — "The claims provide for no other actuators in the carrier to perform this lifting and dumping function. ... We hold that claim 1 of the '658 patent requires one pair of actuators to perform independently the lifting and dumping function."  

"pair of spaced members" — "because its ordinary and customary meaning is clear to one skilled in the art, the Court declines to construe the phrase."  
"panel" — "a discrete structure capable of being coupled to another discrete structure." *STI Holdings, Inc. v. Great Dane Limited Partnership*, 2010 U.S. Dist. LEXIS 57789 (W.D. Wis., Jun. 11, 2010). 2847

"at least one print receiving layer consisting of a paper, a synthetic paper or a coated film" — "the term 'paper' stands unmodified. It would be improper for this Court to impute a limiting modifier that would exclude coated paper from the scope of the general term 'paper.'" *Process Resources Corp., et al. v. Delta Air Lines, Inc.*, 2000 U.S. Dist. LEXIS 909 (S.D.N.Y., Jan. 29, 2000). 2848

"paper touch switch and disc touch switch" — "Because the claims state two separate switches, the appropriate locations must also be separate." *Michelin Prosperity Co. v. Fellowes Manufacturing Co.*, 450 F. Supp. 2d 35 (D.D.C. 2006). 2849

"parallel to a major surface of said conductive layer" — "requires that the surface of the conductive layer be substantially planar and that the plane of the emission face of the diodes be parallel to that surface." *Laser Diode Array, Inc. v. Paradigm Lasers, Inc., et al.*, 114 F. Supp. 2d 167 (W.D.N.Y. 2000). 2851

"to partially block the extrusion of said molten thermoplastic material from said first side passage" — "means that the plug prevents the extrusion of molten thermoplastic material through the first side passage only at the location on the circumference of the first side passage where the plug is disposed." *Poly-America, Inc. v. Serrot International, Inc.*, 2002 U.S. Dist. LEXIS 23437 (N.D. Tex., Dec. 5, 2002). 2852

"an intake passageway ... at least partially defined by said runner filler" — "In order to "at least partially define" the intake passageway, the runner filler must form only a portion of the intake passageway. It may do so by completely forming a segment of the intake passageway or by partially forming a segment of the intake passageway." *Briggs & Stratton Corp. v. Kohler Co.*, 398 F. Supp. 2d 925 (W.D. Wis. 2005). 2853

"partially overlapping said first gelatinous coating and forming a seam" — "extending over and covering part of, but not all of, the first gelatinous coating in a manner such that there is a transition of color and a transition of thickness." *McNeil-PPC, Inc. v. Bayer Corp.*, 2000 U.S. Dist. LEXIS 16431 (E.D. Pa., Nov. 7, 2000). 2854

"particles" — "means particles in its ordinary sense without limitation based on the size or shape of millet. Specifically, the court finds that the term 'particles' contemplates small specks of matter, including but not limited to, starch particles, microsphere particles, hard plastic or silicon beads and millet." *Sport Squeeze, Inc. v. Pro-Innovative Concepts, Inc. et al.*, 1999 U.S. Dist. LEXIS 16681 (S.D. Cal., Mar. 31, 1999). 2856
"particles that pass through a screen" — "The verb 'pass' describes the closest preceding noun: 'particles.' To paraphrase the meaning of this claim, the additive is made up of particles which are of a size small enough to pass through a screen with four inch square openings." *Harsco Corp. v. North Star Bluescope Steel, LLC*, 2007 U.S. Dist. LEXIS 55335 (N.D. Ohio, July 31, 2007). 2857

"particulate material which is loosely packed such that it is gas permeable" — "particles/particulate-material arranged such that gas may pass through it." *Heraeus Electro-Nite Co. v. Midwest Instrument Co.*, 2007 U.S. Dist. LEXIS 81685 (E.D. Pa., Nov. 1, 2007). 2858

"first and second case halves which are coupled to each other at a parting plane extending to obliquely intersect an axis of said first and second bearing portion" — "two crankcase portions connected together at a separation surface that crosses, at a slant, an axis for the supports for opposite ends of a crankshaft, the axis for the supports being a line coincident with the axis of rotation of the crankshaft." *American Honda Motor Co., Inc. v. Coast Distribution System, Inc.*, 609 F. Supp. 2d 1032 (N.D. Cal. 2009). 2859

"parting surface" — "signifies the faces of the two mold parts that either touch or lie adjacent when the mold parts are brought together in the 'combining' process described in Element (a). In applying the ordinary and customary meaning of 'combining' as the act of bringing into or joining in a close union or whole, the Court finds that not all of the faces of the two mold parts are required to actually touch each other; they need to be only in some proximity to each other." *In re: Turn-Key-Tech Matters*, 2002 U.S. Dist. LEXIS 25583 (C.D. Cal., Jan. 8, 2002). 2860

"a partition disposed in said interior chamber for defining an air plenum on one side of said partition" — "the partition must 'form' an air plenum on one side and a rack-receiving chamber on the other." *Elite Licensing, Inc. v. Thomas Plastics, Inc.*, 250 F. Supp. 2d 372 (S.D.N.Y. 2003). 2861

"passing an amount ... in excess of that necessary to saturate the wash load" — "continuously passing a concentrated detergent solution so that the total amount passed through would be greater than the amount necessary to saturate the wash load." *Whirlpool Corp., et al. v LG Electronics, Inc., et al.*, 2005 U.S. Dist. LEXIS 44479 (W.D. Mich., Nov. 8, 2005). 2866
"a first cable passing over one of said two floating pulleys" — "Pulleys, by virtue of their function, have a certain direction; if the cables are pointed upward, the tension is going up, and the cable is 'over' the pulley even if, from an earth-centered perspective, the cable is 'under' the pulley. In other words, the cable is 'over' the pulley relative to whether the tension is going upward or downward." *Vectra Fitness, Inc. v. Icon Health & Fitness, Inc.*, 246 F. Supp. 2d 1111 (W.D. Wash. 2003). 2867

"passing particulate articles from said microwave field to a temperature maintenance zone" — "the passing of the particulate articles from one area where microwave radiation exists to another area described as 'the temperature maintenance zone.'" *Sanitec Industries v. Micro-Waste Corp.*, 2006 U.S. Dist. LEXIS 86803 (S.D. Tex., Nov. 28, 2006). 2868

"said cord passing through each of said gussets along each of said edges such that said cord holds said edges together" — "said cord extending through each of said gussets along each of said edges such that said cord holds said edges near or in contact with one another." *Laboratories Perouse S.A.S. v. W.L. Gore & Associates, Inc.*, 528 F. Supp. 2d 362 (S.D.N.Y. 2007). 2870

"pattern, design, logo, or other marking" — "needs no further elaboration apart from the clarification that the coating need not be visible or have a decorative effect." *Coating Excellence International, LLC v. Thilmany LLC*, 500 F. Supp. 2d 1123 (E.D. Wis. 2007). 2875

"patterning the continuous layer of transparent conductive material" — "patterning the continuous layer of transparent conductive material on the second substrate. this patterning step may be done before or after the substrates are arranged such that they face each other." *Advanced Technology Incubator, Inc. v. Sharp Corp., et al.*, 2009 U.S. Dist. LEXIS 28456 (E.D. Tex., Mar. 11, 2009). 2876

"payload platform" — "the horizontal plate, piece or surface upon which the device (e.g., a camera) is directly mounted upon or affixed to." *Grober, et al. v. Mako Products, Inc. et al.*, 2009 U.S. Dist. LEXIS 51494 (C.D. Cal., Jun. 4, 2009). 2878

"peaks and valleys" — "the surface outside the point at which two slopes or curves meet is the peak, and the surface inside the point at which two slopes or curves meet is the valley." Medtronic Vascular, Inc., et al. v. Abbott Cardiovascular Systems, Inc., et al., 2007 U.S. Dist. LEXIS 95430 (N.D. Cal., Dec. 21, 2007). 2881

"material peculiarly responsive to a particular form of radiant energy not normally present in ambient light in amounts sufficient to cause said material to discolor" — "a substance which darkens or changes color when exposed to radiant energy (as previously defined by the court) of a type or intensity (or both) that is not ordinarily present in sunlight or normal indoor lighting." Flashmark Technologies, LLC, et al. v. GTECH Corp., et al., 2007 U.S. Dist. LEXIS 65317 (E.D. Tex., Sept. 2, 2007). 2882

"pen-light laser" — "a laser that is about as small and slender as a fountain pen; and the pen-light laser, consistent with the claim, may be part of a larger, portable laser unit." Irwin Industrial Tool Co. v. Orosz, et al., 2004 U.S. Dist. LEXIS 14325 (N.D. Ill., Jul. 26, 2004). 2883

"perforating" — "mean[s] using any device that creates 'channels' in the foam, which channels may be any cross-sectional shape, including rectangular, that allow for the accelerated release of a blowing agent." Dow Chemical Co. v. Astro-Valcour, Inc., 47 F. Supp. 2d 294 (N.D.N.Y. 1999). 2888

"perforation means" — "is not a means-plus-function element under § 112, P 6." Cole v. Kimberly-Clark Corp., 102 F.3d 524 (Fed. Cir. 1996). 2889 "I would honor the presumption and construe this claim under the statutory guidance of section 112." Id. (Rader, J., dissenting). 2890

"perimeter" — "the boundary or outer limit around a piece or product." Jenmar Corp. v. Excel Mining Systems, LLC, 2009 U.S. Dist. LEXIS 60836 (W.D. Pa., Jul. 16, 2009). 2891

"period of time" — "Since the 'desired effect' is a 'random faded effect,' the length of time is such to produce that effect." Levi Strauss & Co. v. Golden Trade, S.r.L., et al., 1995 U.S. Dist. LEXIS 22145 (S.D.N.Y., Nov. 30, 1995). \[2893\]

"a peripheral cover hook"; "a circumferentially extending peripheral cover hook" — "curved portion of the end that is to be formed into a portion of a double seam." Crown Packaging Technology, Inc., et al. v. Rexam Beverage Can Co., 486 F. Supp. 2d 366 (D. Del. 2007). \[2894\]

[i] "peripheral edge"; [ii] "peripheral edge extending theraround" — [i] "any edge of the face plate that is peripheral to the central opening of the face plate"; [ii] "a peripheral edge that extends entirely around the central opening." Hodak v. Jedco Products, Inc., et al., 2009 U.S. Dist. LEXIS 15400 (W.D. Pa., Feb. 25, 2009). \[2895\]

"a base wall including a peripheral portion from which extends an annular sidewall that diverges radially outwardly to a terminal edge" — "a base wall including a perimeter from which extends a sidewall shaped like a ring that continuously increases in radius from the central axis moving from the base wall to the edge of the sidewall at the open end of the washing machine basket." Maytag Corp. v. Electrolux Home Products, Inc., 411 F. Supp. 2d 1008 (N.D. Iowa 2006). \[2896\]

"peripheral region" — "any portion of the region that begins outside 70% of the radius of the third lens." Fujinon Corp. v. Motorola, Inc., 2009 U.S. Dist. LEXIS 83088 (D. Del., Sep. 11, 2009). \[2897\]

"peripheral side edge"; "the side edge" — "Because the court finds that word 'peripheral' is synonymous with the word 'edge' as a reference to the border of the motherboard, the court construes 'peripheral side edge' as having the same meaning as 'side edge,' the border of the motherboard which is not the front or rear of the motherboard." Tulip Computers, International B.V. v. Dell Computer Corp., 236 F. Supp. 2d 364 (D. Del. 2002). \[2898\]

"a peripheral zone being defined adjacent the peripheral edge of the anterior face that is tapered thinner toward the peripheral edge of the lens"; "a peripheral zone being defined adjacent the peripheral edge of the lens that tapers thinner toward the peripheral edge of the lens"; "a peripheral zone adjacent the peripheral edge of the anterior lens" — "a zone or region on the anterior face of the lens located adjacent to the peripheral edge, and thatcircumscribes and is separated from the inner zone by either a curved or rounded transition or by a discrete boundary, discontinuity or corner. The zone has a decreasing thickness toward the peripheral edge of the lens to provide comfort to the wearer." CooperVision, Inc. v. Ciba Vision Corp., 2007 U.S. Dist. LEXIS 51432 (E.D. Tex., July 16, 2007). \[2899\]

"permanently" — "affixed to an 'object' or 'container' such that a placard permanently attached or affixed to the substrate cannot be removed without damaging the placard or the 'object' or 'container.'" MPT, Inc. v. Marathon Labels, Inc., et al., 2006 U.S. Dist. LEXIS 4612 (N.D. Ohio, Feb. 7, 2006). \[2900\]

"permanently affixed" — "requires an unremovable connection between the bootie and the base." K-2 Corp. v. Salomon S.A., et al., 191 F.3d 1356 (Fed. Cir. 1999). \[2901\]

"permanently affixing the resilient structure within the fallopian tube" — "no construction is required for the phrase." Conceptus, Inc. v. Hologic, Inc., 2010 U.S. Dist. LEXIS 24247 (N.D. Cal., Mar. 16, 2010). \[2902\]

"a permeable membrane gas separation system for separating a nitrogen gas component and [a nitrox] component from said compressed air" — "a standard, commercially available, permeable membrane, nitrox and nitrogen gas separation system. The limitation is further narrowed by specifying a function for the element, namely to separate the compressed air into nitrogen and nitrox components." Undersea Breathing Systems, Inc. v. Nitrox Technologies, Inc., 985 F. Supp. 752 (N.D. Ill. 1997).

"permitting compression", "such that compression and rebound of said fork are permitted" — "To the extent that these phrases require construction, they should be read as 'allowing compression' and 'such that compression and expansion of said fork are allowed.'" SRAM Corp. v. Fox Factory, Inc., 2005 U.S. Dist. LEXIS 29164 (N.D. Ill., Nov. 18, 2005).

"personalized physical material" — "physical material bearing or containing information specific to an individual ticket holder." Flash Seats, LLC v. Paciolan, Inc., 2010 U.S. Dist. LEXIS 4181 (D. Del., Jan. 19, 2010).

"color photocopier" — "requires the ability both to print and photocopy subject matter with color." Trintec Industries, Inc. v. Top-U.S.A. Corp., 295 F.3d 1292 (Fed. Cir. 2002).

"photocopy machine" — "Because the patentee provided an explicit definition of 'photocopy machine' in the specification, and because no other intrinsic evidence casts doubt on that definition, the patentee's definition controls. Thus, a photocopy machine is defined to include not only conventional plain paper photocopy machines, but also systems with separate scanner and printing capabilities so long as the two parts function cooperatively with one-button operation to produce the effect of a plain paper photocopy machine." Jack Guttman, Inc. v. Kopykake Enterprises, Inc., 302 F.3d 1352 (Fed. Cir. 2002).

"photographic quality" — "having the qualitative properties -- for example resolution, clarity, and accuracy -- of a photograph." CIes Bisker, LLC v. 3M Co., et al., 2009 U.S. Dist. LEXIS 110055 (E.D. Tex., Nov. 25, 2009).

"extending pin"; "recess" — "the male component of a Morse taper"; "the female component of a Morse taper."  *Zimmer Technology, Inc., et al. v. Howmedica Osteonics Corp.,* 397 F. Supp. 2d 974 (N.D. Ind. 2005).  

"a pin, displaced laterally from said shaft" — "the terms used in this element are readily understandable and that no construction is necessary."  *Acco Brands, Inc. v. American Power Conversion Corp.,* 2003 U.S. Dist. LEXIS 27829 (E.D. Tex., Jul. 16, 2003).  

"pivot" — "According to Minebea, by construing the term 'pivot' to exclude sliding motion, the court did not give the term its ordinary meaning. ... We agree ... that the district court did not err in its construction of the claim term 'pivot.'"  *Minebea Co. v. Think Outside, Inc.,* 159 Fed. Appx. 197 (Fed. Cir., Jan. 25, 2006) (unpublished).  

"pivot axis" — "while technically correct, ... the pivot axis [cannot be] the imaginary line about which each louver member rotates as it closes and opens ..., because the claim expressly states that the longitudinal edge of each louver is supported by the pivot axis."  *Industrias Metalicas Marva, Inc. v. Empresas Lausell,* 1997 U.S. Dist. LEXIS 13773 (D.P.R., Aug. 27, 1997).  

- 259 -
"pivot structure" — "a separate, functional structure located at the lower end of the post of the shift lever between the pivot flanges that pivotally attaches the shift lever to the pivot flanges and operationally couples the shift lever to the shifter." *Grand Haven Stamped Products Co. v. Dura Automotive System, Inc.*, 2004 U.S. Dist. LEXIS 31087 (W.D. Mich., Jun. 28, 2004). 2928

"a lock member pivotably attached to said second pivoting means" — "the claim limitation requires that the locking means be in physical proximity to the second pivoting means and that the 'interface' between the locking means and second pivoting means allow the locking means to pivot relative to the second pivoting means." *Apollo Corp. v. Mastercare Patient Equipment, Inc.*, 2003 U.S. Dist. LEXIS 11627 (D. Minn., Jul. 7, 2003). 2929

"swing arm, which is pivoted attached to the structure" — "a swing arm that is connected to the structure in a manner so that it can rotate about the connection, but cannot move excessively in the vertical direction and cannot oscillate excessively." *Deere & Co. v. Toro Co.*, 57 Fed. Appx. 442 (Fed. Cir., Feb. 4, 2003) (unpublished). 2930

"pivotally connected"; "pivotally connecting" — "attached (attaching) and capable of rotating or turning about the point of direct or indirect attachment." *World Wide Stationery Manufacturing Co., Ltd. v. U.S. Ring Binder, L.P.*, 2009 U.S. Dist. LEXIS 27873 (E.D. Mo., Mar. 31, 2009). 2932

[i] "pivotally connected to"; [ii] "movably connected to"; [iii] "rotatably connected to" — [i] "a connection between two bodies allowing the bodies to change positions relative to one another around or about at least one point"; [ii] "a connection between two bodies allowing the bodies to change positions relative to one another"; [iii] "a connection between two bodies allowing the movement of the bodies relative to one another around or about an axis." *Mass Engineered Design, Inc., et al. v. Ergotron, Inc., et al.*, No. 2:06-cv-00272-LED (E.D. Tex., Mar. 13, 2008). 2933

"without the necessity of pivotally moving said body greater than 90º from its non-dumping position" — "the court holds that the 90º limitation in claim 1 does not include frame twist or lean." *Circle R. Inc. v. Trail King Industries, Inc.*, 1999 U.S. Dist. LEXIS 23531 (D. Neb., Nov. 23, 1999). 2935

"pivoting discharge control member" — "refers to a structure which, in its normal position, covers the hopper car discharge opening to prevent discharge of material and which pivots to release material from the hopper car." *Union Pacific Railroad Co., et al. v. Herzog Contracting Corp.*, 2007 U.S. Dist. LEXIS 76143 (D. Neb., Oct. 4, 2007). 2937

"placing a collapsed soft tissue expander device in the pocket with the cover of the device facing the separated tissue layer" — "placing a collapsed soft tissue expander device in the pocket with the cover of the device facing the separated tissue layer,' where 'collapsed,' at this time and without the knowledge of the 'conventional manner,' means the device is empty of fluid." Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006). 2939

"placing said laser emitting section of said emitting means into intraluminal contact with the blood vessel" — "deliberately putting the uncoated tip of the fiber optic line in physical contact with the wall of the blood vessel, which requires the drainage of blood and compression of the vein." Diomed, Inc. v. AngioDynamics, Inc., 2005 U.S. Dist. LEXIS 6189 (D. Mass., Apr. 12, 2005). 2940

"placing the patient in an operation site having a second coordinate system" — "placing the patient in a location at the operation site relative to a second coordinate system." NOMOS Corp. v. ZMED, Inc., 260 F. Supp. 2d 215 (D. Mass. 2002). 2941

"placing the patient with respect to a second coordinate system" — "placing the patient in a location relative to a second coordinate system." NOMOS Corp. v. ZMED, Inc., 260 F. Supp. 2d 215 (D. Mass. 2002). 2942

"planar" — "a surface that is flat." Old Town Canoe Co. v. Glenwa, Inc., 229 F. Supp. 2d 1151 (D. Or. 2001). 2943

"planar array" — "we agree with the district court's claim construction that the 'planar array' limitation refers to the filament means forming a flat plane before they are woven into the fence and not the overall look of the fence after the artificial greenery is woven into the fence." American Permahedge, Inc. v. Barcana, Inc., et al., 105 F.3d 1441 (Fed. Cir. 1997). 2944

"planar path" — "the Court construes the term 'planar' as 'flat or level.' However, 'planar path' does not mean 'precisely planar path' ... because the term 'precisely planar path' never appeared in any of the communications between the agency and the applicants or in the patent itself." Pregis Corp. v. Doll, et al., 2010 U.S. Dist. LEXIS 25582 (Mar. 16, 2010). 2945

"planar plate member" — "a perfectly flat sheet of a material of uniform thickness throughout." Leoutsakos v. Coll's Hospital Pharmacy, Inc., et al., 2003 DNH 109 (D.N.H., Jul. 8, 2003). 2946

"Because the written description of the '200 patent, the drawings of the '200 patent, and the dictionary definitions of 'planar' and 'plate' support the trial court's construction of 'planar plate member,' this court affirms its claim construction." Id., 98 Fed. Appx. 835 (Fed. Cir., May 4, 2004) (unpublished). 2947

"planar slot" — "a slot located within the guide member that can be used to position a saw used for resecting the bones that form the knee." Depuy Orthopaedics, Inc. v. Androphy, et al., 2000 U.S. Dist. LEXIS 661 (N.D. Ill. 2000). 2948

"top surface planarity deviation" — "the difference between the average height of the entire top surface and the point most removed from the average." STMicroelectronics, Inc. v. Motorola, Inc., 327 F. Supp. 2d 687 (E.D. Tex. 2004). 2949
[i] "the plane of the ridge regions"; [ii] "the plane of the trough regions" — [i] "the plane defined by the areas of the ridges"; [ii] "the plane defined by the areas of the troughs."

"plank" — "includes table tops whose length greatly exceeds their width." Lifetime Products, Inc. v. GSC Technology Corp., et al., 321 F. Supp. 2d 938 (N.D. Ill. 2004) 2955

"a plastic flow temperature above 120 degrees F" — "means that the adhesive must resist flow when exposed for 24 hours to 120 degrees F in both horizontal and vertical orientations." J.T. Eaton & Co., Inc. v. Atlantic Paste & Glue Co., 106 F.3d 1563 (Fed. Cir. 1997) 2953 Eaton submitted the declaration of Kenneth A. Nelson, the chemist who developed the claimed adhesive. Mr. Nelson's declaration disclosed a two-prong test for the claim requirement. That test requires, first, placing a 1/16 inch layer of adhesive upside-down in an oven preheated to 120 degrees F for sixteen hours. Second, the test requires that the adhesive be hung vertically in an oven at 77 degrees F for sixty-three hours. An adhesive meets Eaton's requirement if the glue does not flow from the tray during either of these tests. ... The district court properly used that claim interpretation. This court errs in departing from the full context of the administrative record, and importing a false limitation from the prosecution history." Id. (Rader, J., dissenting) 2954

"plastic foil" — "a self-supporting film or sheet of plastic." Viskase Cos., Inc. v. World Pac International AG, et al., 2010 U.S. Dist. LEXIS 49720 (N.D. Ill., May 18, 2010) 2955

"plastic material" — "To the extent that this construction requires 'plastic material' to be limited to elastomeric plastic, the contention is rejected." Genlyte Thomas Group LLC v. National Service Industries, Inc., et al., 262 F. Supp. 2d 747 (W.D. Ky. 2003) 2956

"rigid plate" — "a rigid, flat, comparatively thin piece of material of more or less uniform thickness and even surface with generally wide breadth." Briggs & Riley Travelware, LLC v. Paragon Luggage, Inc., 2002 U.S. Dist. LEXIS 24048 (S.D.N.Y., Dec. 6, 2002) 2957

"toe plate: "heel plate" — "structural elements that must be separate elements from the skate boot and have an actual and identifiable upper surface that is affixed to the sole surface of the skate boot." V-Formation, Inc. v. Benetton Group SpA, et al., 2002 U.S. Dist. LEXIS 22394 (S.D.N.Y., Nov. 19, 2002) 2958

"top plate" — "a flat member that is separate from the fin structures." ICHL, LLC v. NEC Corp. of America, et al., 2010 U.S. Dist. LEXIS 38942 (E.D. Tex., Apr. 20, 2010) 2959

"moving platform" — "is used in the claim in accordance with its plain and ordinary meaning to one skilled in the art and is not limited to a ground-based platform." Geospan Corp. v. Pictometry International Corp., 2010 U.S. Dist. LEXIS 74105 (D. Minn., Jul. 22, 2010) 2960

"play" — "space between the locking surfaces of interlocking panels such that the locking surfaces can be displaced relative to one another in the direction of their joined edges." Alloc, Inc., et al. v. Pergo, LLC, 2009 U.S. Dist. LEXIS 62881 (E.D. Wis., Jul. 2, 2009) 2961
"pneumatic cylinder" — "encompasses cylinders that do not use pressure activated seals," *Saunders Group, Inc. v. Comfortrac, Inc., et al.*, 492 F.3d 1326 (Fed. Cir. 2007).  

"forced point-bonding" — "means two or more primary particles joined together by an adhesive where the binder has been forced under pressure into some of the primary particle's macropores or exterior voids." *KX Industries, L.P., et al. v. PUR Water Purification Products, Inc.*, 108 F. Supp. 2D 380 (D. Del. 2000).  

"plate" — "a broad, flat piece of material." *Cortland Line Co., Inc. v. Orvis Co., Inc.*, 203 F.3d 1351 (Fed. Cir. 2000).  

"plate" — "a structure that is thinner than it is wide or long and that may be flat, curved or twisted and perforated such as a screen or net but that is not a tube." *Neles-Jamesbury, Inc. v. Fisher Controls International, Inc., et al.*, 989 F. Supp. 393 (D. Mass. 1998).  

"pleat" — "two legs which are joined to one another at a crown and to a leg of an adjacent pleat at a root." *Pall Corp. v. Cuno Inc.*, 2007 U.S. Dist. LEXIS 59917 (E.D.N.Y., Aug. 14, 2007).  

"pliable sheet material" — "a thin, flat bendable material, similar to a medical grade air permeable tissue, porous thin plastic sheet or a plastic mixed or impregnated paper tissue, having one side either coated or permeated with a light absorbing material and having a layer of pressure sensitive adhesive on its opposing side." *Mueller Sports Medicine, Inc. v. Beveridge Marketing, LLC, et al.*, 369 F. Supp. 2D 1028 (W.D. Wis. 2005).  

"pliable tubular body" — "a bendable tube shape structure having a single compartment that is formed by a closed front end and a rear edge that bounds an opening, through which opening an amount of lead shot is inserted prior to closing the opening." *Combined Tactical Systems, Inc. v. Defense Technology Corp. of America, et al.*, 426 F. Supp. 2d 140 (S.D.N.Y., April 4, 2006).  

"plunger" — "a device that can be inserted into a blender." Vita-Mix Corp. v. Basic Holdings, Inc., et al., 514 F. Supp. 2d 990 (N.D. Ohio 2007).

"plurality" — "at least two." York Products, Inc. v. Central Tractor Farm & Family Center, et al., 99 F.3d 1568 (Fed. Cir. 1996).

"plurality" — "connotes an indefinite numerical range. The range is bounded by two ... and ... infinity." Bilstad, et al. v. Wakalopulos, et al., 386 F.3d 1116 (Fed. Cir. 2004).

"a plurality of flexible sheet members enclosing the container" — "require[es] two or more flexible sheet members in the enclosing frame or outside walls, etc." Heil Co. v. McNeilus Truck, et al., 1999 U.S. Dist. LEXIS 23371 (N.D. Ala., Aug. 5, 1999).

"plurality ... of projections" — "we find no reason to give 'plurality ... of projections' any definition other than its ordinary definition of 'two or more.'" Dayco Products, Inc. v. Total Containment, Inc., 258 F.3d 1317 (Fed. Cir. 2001).

"pocket" — "a notch with an opening shaped to mate (i.e. 'to join or fit together') with a rivet, thereby aiding to secure the balance shoe within the U-shaped channel of the inverted window balance." Amesbury Group, Inc., et al. v. Caldwell Manufacturing Co., 2006 U.S. Dist. LEXIS 2175 (D. Mass., Jan. 20, 2006).

"point" — "the position where the scraping edges intersect"; "the position where the scraping edges and rearward edges intersect." Eazypower Corp. v. Alden Corp., 509 F. Supp. 2d 737 (N.D. Ill. 2007).

"touch point"; "approach point" — "a theoretical point at which the clutch plates just begin to touch"; "a point intermediate full disengagement and the touch point, preferably almost to the touch point." Eaton Corp. v. ZF Meritor LLC, et al., 504 F. Supp. 2d 217 (E.D. Mich. 2007).
"point of sale location" — "a location where a consumer goes to purchase material objects embodying predetermined or preselected information. This construction permits a home to be a point of sale location. A point of sale location need not have more than one blank material object and it need not have any material objects separately for sale as blanks." Interactive Gift Express, Inc. v. CompuServe, Inc., et al., 256 F.3d 1323 (Fed. Cir. 2001). 2989

"pointer element"; "point element" — "an indicator that points either unidirectionally or bidirectionally in two opposite directions." Kathrein-Werke KG v. Radiacion y Microondas S.A., et al., 2010 U.S. Dist. LEXIS 50468 (N.D. Ill., May 17, 2010). 2990

"polygon" — "a closed arrowhead shape made up of curved lines, straight lines, or a combination of curved and straight lines." Medtronic Vascular, Inc., et al. v. Abbott Cardiovascular Systems, Inc., et al., 2007 U.S. Dist. LEXIS 95430 (N.D. Cal., Dec. 21, 2007). 2991

"porous material" — "a material having small openings (or pores) that allow gases and liquids to pass through while sediment and other solids are substantially blocked from passing through." Atlantic Construction Fabrics, Inc., et al. v. Dandy Products, Inc., 64 Fed. Appx. 757 (Fed. Cir., Apr. 23, 2003) (unpublished). 2993

"a porous membrane of essentially uniform composition and a porosity gradient from one planar surface thereof to the other" — "We agree with the district court that 'porosity gradient', as used in the claims of the '192 patent, requires 'a gradual change in the porosity from one planar surface [of the membrane] to the other.' ... Claim 11 does not require the membrane to have a porosity gradient prior to chemical conditioning, but instead requires that the membrane of the chemically conditioned reagent system have a porosity gradient. In other words, the proper construction of claim 11 requires the membrane to have a porosity gradient, but does not require the gradient to be present prior to chemical conditioning." Technical Chemicals & Products, Inc., et al. v. Home Diagnostics, Inc., 1998 U.S. App. LEXIS 7163 (Fed. Cir., Apr. 9, 1998) (unpublished). 2994

"portable" — "a structure (upon which the bin, conduit, and meter are mounted) that is capable of being transported with an operationally significant amount of particulate matter in the bin." Rosen's, Inc., et al. v. Van Diest Supply Co., et al., 2004 U.S. Dist. LEXIS 5435 (D. Minn., Mar. 30, 2004). 2999
"portable case" — "a compact case that can be made of light but rigid plastic material and that houses only a color image sensing module and a motion mechanism." Plustek, Inc. v. Syscan, Inc., et al., 2009 U.S. Dist. LEXIS 122777 (N.D. Cal., Dec. 21, 2009).

"portable ultrasound diagnostic instrument" — "an ultrasonic diagnostic instrument used to evaluate a patient's condition or state and that by design is carried or moved about." General Electric Co., et al. v. Sonosite, Inc., 2008 U.S. Dist. LEXIS 33223 (W.D. Wis., Jan. 8, 2008).

"portion" — "we hold that the district court should have construed 'portion' broadly to contemplate parts that are either 'separate' or 'integral.'" Rexnord Corp. v. Laitram Corp., et al., 274 F.3d 1336 (Fed. Cir. 2001).

"non-perforated outside wall portion"; "perforated bottom portion"; "non-perforated inside wall portion" — "that portion of the trough structure which constitutes the inside wall"; "that portion of the trough structure which constitutes the bottom section"; "that portion of the trough structure which constitutes the outside wall." Kristar Enterprises, Inc. v. Revel Environmental Marketing, Inc., et al., 1999 U.S. Dist. LEXIS 1417 (N.D. Cal., Feb. 9, 1999).

"Based on the proper construction of the terms 'bottom portion' and 'inside wall portion' in claim 1, the district court was correct to grant summary judgment to Revel on the issue of literal infringement." Id., 2000 U.S. App. LEXIS 7351 (Fed. Cir., Apr. 24, 2000) (unpublished).

"upper portion"; "lower portion"; "center portion" — "can be either separate parts ... or parts of an integral whole." Spinmaster, Ltd., et al. v. Overbreak LLC, 404 F. Supp. 2d 1097 (N.D. Ill. 2005).

"the portion of open pores in the material forming said plate is 85 to 95% based on total pore volume" — "the above term needs no construction because it means what it says and is clear on its face." ITP Interpipe, Inc., et al. v. Technip Offshore, Inc., 2007 U.S. Dist. LEXIS 7551 (S.D. Ala., Jan. 31, 2007).

"a portion of said clearance is maintained irrespective of variations in the deflection of said panels" — "requires no construction." Wayne-Dalton Corp. v. Amarr Co., 2007 U.S. Dist. LEXIS 65382 (N.D. Ohio, Sept. 5, 2007).

"a first portion of the elements of said pattern are of a first shade and a second portion of the elements of said pattern are of a second shade different from said first shade" — "the specification does not require the complete absence of elements of the first shade from the second." Wesley Jessen Corp. v. Coopervision, Inc., 2002 U.S. Dist. LEXIS 5172 (C.D. Cal., Mar. 14, 2002).

"an implant, at least a portion of which is expandable" — "a portion, but not all of the implant, is expandable." MarcTec, LLC v. Johnson & Johnson, et al., 2009 U.S. Dist. LEXIS 27011 (N.D. Ill., Mar. 31, 2009).
"portion with a substantial longitudinal component" — "a part of a member that has ends at positions a discernable distance from each other with respect to the stent's longitudinal axis." Medinol Ltd. v. Guidant Corp., et al., 2004 U.S. Dist. LEXIS 19705 (S.D.N.Y., Sept. 30, 2004).  

"sensing position" — "We agree with Northfield that claim 1 of the '901 patent and claim 20 of the '280 patent, while not explicitly identifying the position of the coupon sensor, must be understood to have the sensor between the feed rolls and the positioning rolls." Unique Coupons, Inc. v. Northfield Corp., et al., 12 Fed. Appx. 928 (Fed. Cir., Jun. 13, 2001) (unpublished).  

"positionable between" — "able to be switched between." SRAM Corp. v. Fox Factory, Inc., 2005 U.S. Dist. LEXIS 29164 (N.D. Ill., Nov. 18, 2005).  

"base ... positionable on a surface so as to permit a video game player to stabilize said base by placing lower body weight on said base" — "a base that would permit (but would not require) a player to make it more stable by application of the player's lower body weight on the base." JVW Enterprises, Inc. v. Interact Accessories, Inc., et al., 2002 U.S. Dist. LEXIS 27885 (D. Md., Feb. 1, 2002).  

"member positionable within said hole" — "means the blunt-nosed screw, whether a unitary or multi-piece structure, is capable of being placed inside the hole that extends through the clamp to the slot surrounding the standing seam." Caught Fish Enterprises, LLC, et al. v. Contek, Inc., 509 F. Supp. 2d 954 (D. Colo. 2007).  

"positioned" — "[h]aving found 'positioned' does not carry an intent requirement, it is unnecessary to further construe the term." ADC Telecommunications, Inc. v. Switchcraft, Inc., 2005 U.S. Dist. LEXIS 19593 (D. Minn., Sept. 9, 2005).  

"positioned adjacent the jaw member" — "placed so as to be near the jaw member." Tyco Healthcare Group LP v. Ethicon Endo-Surgery, Inc., 411 F. Supp. 2d 93 (D. Conn. 2006).  

"a generally inelastic heel portion and an extendible region positioned between a toe region of the liner and the tongue" — "the only reasonable construction of the claim is that the extendible region of the liner must be positioned entirely between the toe region of the liner and the tongue." Benetton Sportsystem USA, Inc. v. First Team Sports, Inc., 2001 U.S. Dist. LEXIS 24375 (D.N.J., Aug. 9, 2001).  

"[T]he disputed phrase 'extendible region positioned between a toe region of the liner and the tongue' should be construed to cover a liner in which the 'extendible region' overlaps or entirely covers the 'toe region.'" Id., 38 Fed. Appx. 599 (Fed. Cir., Jun. 14, 2002) (unpublished).
"the opening at the distal end of the tube positioned longitudinally from the tube" — "the opening at the distal end of the tube that is perpendicular to the tube." Erbe Elektromedizin Gmbh, et al. v. Canady Technology, LLC, et al., 512 F. Supp. 2d 297 (W.D. Pa. 2007). 3025

"said opening and said source of light being positioned to prevent said beam of light from directly impinging on said side of said vehicle" — "preventing the 'beam of light' from 'directly impinging' means that no light directly from the source strikes the vehicle." Krippelz v. Ford Motor Co., 2003 U.S. Dist. LEXIS 2538 (N.D. Ill., Feb. 24, 2003). 3026

"being positioned to restrict fluid flow through said inner tubular flow path" — "the Court will not construe the term at issue." Davis-Lynch, Inc. v. Weatherford International, Inc., 2009 U.S. Dist. LEXIS 33414 (E.D. Tex., Apr. 20, 2009). 3027

"a manifold positioned within an open end [of an atomizing tank]" — "the atomizing nozzle and atomizing tank (i.e., outlet) tube (65), both of which are part of the manifold, are located in the open end of the atomizing tank. It is not necessary for any other portion of the manifold to occupy the opening, nor is it necessary that the nozzle and outlet tube take up the entire cavity formed by the opening and the open end of the atomizing tank." Sulfur-Tech Water Systems, Inc. v Kohlenberg, et al., 162 F. Supp. 2d 743 (N.D. Ohio 2001). 3028

"positioning a flexible strand in the knee such that the flexible strand extends from outside of the knee, through the transverse hole and into the opening in the femur through the first sidewall of the opening, out through the entrance of the opening and through a tunnel in the tibia, and, after forming a loop outside of the tibial tunnel, extending back into the tibial tunnel and into the opening through the entrance of the opening, and out of the knee through the transverse hole in the opposite sidewall of the opening"; "positioning a flexible strand in the knee such that the flexible strand extends from outside of the knee, through the transverse hole and into the opening in the femur through the first sidewall of the opening, out through the entrance of the opening and through a tunnel in the tibia, and, after forming a loop outside of the tibial tunnel, extending back into the tibial tunnel and into the opening through the entrance of the opening, and into the transverse hole in the opposite sidewall of the opening" — "positioning a flexible strand in the knee such that the flexible strand extends from outside of the knee, through the transverse tunnel on one side of the knee and into the opening in the femur. The flexible strand then extends out through the entrance of the opening and through and out of a tibial tunnel. The flexible strand then extends back into and through the tibial tunnel and into the opening, and into the transverse tunnel on the opposite sidewall of the opening. A loop exists where the flexible strand is at its furthest point outside the tibial tunnel." Arthrex, Inc. v. DePuy Mitek, Inc., 2006 U.S. Dist. LEXIS 95465 (M.D. Fla., Oct. 16, 2006). 3030

"positioning mechanism"; "positioning member" — "To avoid any confusion or inconsistency between the terms, both terms are construed to have the same agreed meaning." Insight Technology Inc. v. SureFire, LLC, 2006 U.S. Dist. LEXIS 11762 (D.N.H., Feb. 28, 2006). 3033

"positioning said protective barrier device in a juxtaposed relation to said frangible portions of said structure" — "the protective barrier device is positioned in front of the frangible portions, and is spaced apart from the frangible portions of the structure at a minimum calculable distance." Armor Screen Corp. v. Storm Catcher, Inc., et al., 2009 U.S. Dist. LEXIS 33407 (S.D. Fla., Mar. 10, 2009). 3034

"positive driving" — "is associated with pushing the lever into the cam wheel." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997). 3035

"means for positively engaging" — "we conclude, as did the district court, that 'positively engaging' requires (1) resisting axial movement by the interaction of a collar with a discontinuity or groove in the wall of a hole; and (2) introduction of an interference so that 'lock-up' is achieved." Koenig, et al. v. Fugro-McClelland (Southwest), Inc., et al., 2000 U.S. App. LEXIS 14607 (Fed. Cir., Jun. 2, 2000) (unpublished). 3038

"power source" — "mean[s] only parts of the patch that generate power, and parts of the patch that merely regulate the provision of power to the patch, but do not individually generate power, are not part of the 'power source'." Travanti Pharma, Inc. v. Iomed, Inc., 2006 U.S. Dist. LEXIS 2636 (D. Minn., Jan. 11, 2006). 3040

"predetermined accurate work position" — "the fixed placement of the tool in the tool holder. This placement is achieved by precisely measuring the distance from the surface of the center axis of the tool to the appropriate surfaces of the tool holder in advance, such that the flat mounting surfaces of the tool directly contact the corresponding surfaces of the tool holder, without any spaces in between, thereby maintaining the cutting tool's original placement until the tool is removed." Utica Enterprises, Inc. v. Federal Broach and Machine Co., 258 F. Supp. 2d 706 (E.D. Mich. 2003).

"predetermined asymmetric isodose curves" — "isodose curves determined before radiation is administered which are not substantially the same shape as the apparatus volume and/or not concentric with the apparatus volume." Hologic, Inc., et al. v. SenoRx, Inc., 2009 U.S. Dist. LEXIS 12274 (N.D. Cal., Feb. 18, 2009).

"predetermined bevelling or grooving path" — "is limited to storage, comparison and selection of a collection of paths that have been determined beforehand, i.e. they actually exist in the memory of the control means of the device and are not calculated from a combination of different values using equations." Essilor International v. Nidek Co., Ltd., et al., 1998 U.S. Dist. LEXIS 22960 (E.D.N.Y., Jul. 27, 1998).

"predetermined condition" — "the occurrence of a current imbalance from an actual or artificially induced ground fault." Leviton Manufacturing Co. v. Zhejiang Dongzheng Electrical Co., et al., 506 F. Supp. 2d 646 (D.N.M. 2007).

"maintaining the predetermined confined shape between the opposed members while changing the confined area thereof during said movement of the opposed members, whereby said movement of the members toward each other constricts the opening to restrict the discharge of material from within the bag and gathers the neck in such a way that the neck may be easily tied, and movement of said members away from each other allows the opening to enlarge such that the material from within the bag is discharged more freely, said engagement of the neck within the predetermined shape minimizing tearing stresses placed on the bag by the opposed members" — "the undersigned again finds that a 'predetermined confined shape' is properly construed in the context of this patent as describing a shape or contour that is preset by the apparatus and is not altered (or changed) by the functioning of the apparatus. In other words, the area of the shape created by the apparatus may enlarge or shrink with its movement, but the shape itself should remain constant." Spiroflow Systems, Inc. v. Flexicon Corp., 2007 U.S. Dist. LEXIS 62715 (W.D.N.C., Aug. 24, 2007).

"predetermined constant spacing"; "predetermined constant spacing between said inner spatial volume and radiation transparent wall" — "no construction necessary"; "spacing predetermined by one skilled in the art between the wall or edge of the inner spatial volume and the radiation transparent wall of the outer, closed, inflatable chamber, when inflated, which is constant in all directions if the outer chamber is spherical, or constant along a radial plane if the outer chamber is not spherical." Xoft, Inc. v. Čtyřc Corp., et al., 2007 U.S. Dist. LEXIS 34468 (N.D. Cal., April 27, 2007).
"the predetermined curvatures of the ends of said contact face displaying radii of curvature smaller than the distance from said center point of the contact surface to the outwardly-most extending ends of said bars" — "The outwardly-most extending ends define a contact face radius which is less than the distance from the wheel center to the outwardly-most extending ends of the contact face. The contact face radius must be the same as the bar radius, defined by the outwardly-most extending ends of the bars. Both the contact face radius and the bar radius must be predetermined (selected or determined prior to the forming operation of the hub). The outwardly-most extending ends of said bars are the points of the bars that are the furthest from the center of the hub."  

"predetermined direction along a predetermined path" — "a 'helical' path is the only interpretation the element 'predetermined path' can bear. The Weber patent teaches against changing the direction of the sheets, and therefore, requires a continuous rotational and axial movement, which results in a helical path. Although the patent does state that a helical path is 'preferable,' there is no other path that could be created by application of the Weber patent."  

"predetermined distance" — "a measurement that is specified or determined beforehand."  

"predetermined general direction" — "the prevalent direction of flow determined before injection of the liquid plastic into the mold."  

"predetermined incubation period" — "a time period determined in advance, which requires presetting the length of time of the incubation period, either directly or by reference to criteria such as glucose concentration. ... [T]his term mandates knowledge of the duration of the incubation period prior to the test."  

"predetermined minimum safety distance" — "the minimum distance to prevent an electrode from coming into contact with the tissue."  

"predetermined number of cardiac cycles" — "unless the specification clearly indicates that 'cardiac cycles' was intended to include the singular, the ordinary meaning will control. ... and the intrinsic evidence supports this ordinary meaning."  

"predetermined operations"; "predetermined expected response" — "reading 'predetermined' to mean 'determined beforehand' and 'expected' to mean 'predicted' is entirely consistent with the purpose of the method and the specification."  

"predetermined plunger performance" — "Predetermined in this context simply means determined beforehand, and may include performance that is normal or subject to correction." *Ferguson Beauregard/Logic Controls, et al. v. Mega Systems, LLC, et al.*, 350 F.3d 1327 (Fed. Cir. 2003).  

"control means for controlling said pressure controller so as to cause said breathing gas to be delivered to such a patient at a first pressure level during at least a portion of said inspiratory phase of said breathing cycle and in accordance with a predetermined pressure profile during said expiratory phase of said breathing cycle" — "predetermined pressure profile ... is not part of the means plus function language." *Respironics, Inc., et al. v. Invacare Corp.*, 2006 U.S. Dist. LEXIS 62233 (W.D. Pa., Aug. 30, 2006).  

"predetermined sequence" — "in independent claims 1, 14 and 25 means: the order in which eggs are released from the egg-carrying conveyor so that each released egg drops into the receiving station for the egg's particular grade, the order being defined before the eggs arrive at the locations from which they are released. ... in dependent claim 30 [ ] mean[s] an order that causes eggs to drop into particular receiving stations and that also effects an equal distribution of released eggs across the width of the receiving station." *Moba, B.V., et al. v. Diamond Automaton, Inc.*, 1999 U.S. Dist. LEXIS 1167 (E.D. Pa., Jan. 27, 1999).  

"predetermined spacing"; "a predetermined spacing is provided between said inner spatial volume and the expandable surface element"; "a predetermined spacing between said inner spatial volume and the expandable surface element" — "no construction necessary"; "the distance between the inner spatial volume and the expandable surface element is determined in advance." *Xoft, Inc. v. Cytyc Corp., et al.*, 2007 U.S. Dist. LEXIS 34468 (N.D. Cal., April 27, 2007).  

"applying a positive direct current to said distal tip for a predetermined time period" — "applying a positive direct current to the distal tip for a time period determined in advance of the initiation of the detachment process." *Regents of the University of California v. Micro Therapeutics, Inc., et al.*, 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007).  

"a preformed endless loop" — "a loop of ligation material, regardless of size, having either a unitary, circular structure, or formed by joining the ends of a linear length of ligation material." *Callicrate v. Wadsworth Manufacturing, Inc., et al.*, 217 F. Supp. 2d 1101 (D. Mont. 2002).
"preliminarily" — "The plain meaning of 'preliminarily' is 'at first' or 'prior to.'" Combined Tactical Systems, Inc. v. Defense Technology Corp. of America, et al., 426 F. Supp. 2d 140 (S.D.N.Y., April 4, 2006).

"a preselected segment of a central portion of each bill" — "a central, approximately two-inch portion of a bill scanned across the central portion of the narrow dimension of the bill." Cummins-Allison Corp. v. Glory Ltd., et al., 2005 U.S. Dist. LEXIS 38857 (E.D. Tex., Dec. 12, 2005).

"to preserve structural integrity" — "include[s] protecting, or keeping from harm or destruction, the parts and arrangement of components of the gas turbine engine." Dow Chemical Co. v. Mee Industries, et al., 264 F. Supp. 2d 1018 (M.D. Fla. 2002).

"preslit orifice"; "being preslit" — "an opening that is cut in the seal before the seal is axially compressed"; "having had an opening cut in the seal before the seal was axially compressed." ICU Medical, Inc. v. Alaris Medical Systems, Inc., 2006 U.S. Dist. LEXIS 96077 (C.D. Cal., July 17, 2006).

"pressed against" — "we conclude that 'hollow spherically-shaped portion' includes the edge of that portion and that the screw head is 'pressed against' the 'hollow spherically-shaped portion' if it presses against all or any part of that portion--including the edge." Depuy Spine, Inc., et al. v. Medtronic Sofamor Danek, Inc., et al., 469 F.3d 1005 (Fed. Cir. 2006).

"pressed meat" — "meat products that are formed from multiple joints of meat, that is, from pieces of meat that are separated from the bone and from one another into numerous small pieces, then reformed into a single conjoined meat product." Logan v. Smithfield Foods, Inc., et al., 2009 U.S. Dist. LEXIS 27635 (S.D. Tex., Mar. 31, 2009).

"pressure being applied to the applicator ... so as to cause the applicator to deform the skin region thereunder" — "pressure being applied to the applicator so as to cause the applicator to compress the area of skin under it." Palomar Medical Technologies, Inc., et al. v. Cutera, Inc., 2005 U.S. Dist. LEXIS 32117 (D. Mass., Dec. 12, 2005).

"pressure controlled valve ... to prevent liquid from exiting the carafe through the liquid passageway" — "a valve, moved between open and closed positions by pressure and/or gas and not by mechanical contact with any part or component by manipulation." Sunbeam Products, Inc. v. Delonghi America, Inc., et al., 2007 U.S. Dist. LEXIS 123 (D.N.J., Jan. 3, 2007). "As used herein, the term 'pressure controlled valve' means that the described valves are moved between opened and closed positions by pressure of liquid and/or gas, and not by moving mechanical contact with any part or component, or by manipulation." Id., 2007 U.S. Dist. LEXIS 33000 (D.N.J., May 2, 2007).

"pressure responsive element" — "an element of a device which can move from a first position where it prevents fluid flow into the device, to a second position, where it allows fluid flow into the device." Aqua-Lung America, Inc. v. American Underwater Products, Inc., et al., 2009 U.S. Dist. LEXIS 18172 (N.D. Cal., Feb. 26, 2009). 3084

"pressure-sensitive variable-conductance analog sensor"; "pressure-sensitive variable-conductance sensor"; "pressure-sensitive analog sensor"; "pressure-sensitive variable-conductance structural arrangement"; "pressure-sensitive variable-conductance structure"; "pressure-sensitive variable sensor"; "pressure-sensitive ... button sensor" — "an electricity manipulating device that uses pressure-sensitive variable conductance material to vary electrical output as varying physical force is applied." Anascape, Ltd. v. Microsoft Corp., et al., 2007 U.S. Dist. LEXIS 88248 (E.D. Tex., Nov. 30, 2007). 3087

"pressure-sensitive variable conductance material" — "a substance that changes in conductivity to allow a greater flow of electric current through it, as pressure is applied to it." Anascape, Ltd. v. Microsoft Corp., et al., 2007 U.S. Dist. LEXIS 88248 (E.D. Tex., Nov. 30, 2007). 3088

"pressure-sensitive variable conductance of one of said buttons" — "the conductivity of a pressure-sensitive variable-conductance sensor associated with one of said buttons." Anascape, Ltd. v. Microsoft Corp., et al., 2007 U.S. Dist. LEXIS 88248 (E.D. Tex., Nov. 30, 2007). 3089

"pressurized fluid generating means mounted on said frame" — "is not a means-plus-function clause. ... Any person of ordinary skill in the art would agree that this element merely refers to an apparatus for providing pressurized fluid, i.e., a pump." Toro Co. v. John Deere & Co., 143 F. Supp. 2d 1122 (D. Minn. 2001). 3090

"pretensioned" — "flexible member is pushed in a direction to impart or store spring tension in that member before the attachment of the membrane to the flexible member." Polyvision Corp. v. Smart Technologies, Inc., et al., 501 F. Supp. 2d 1042 (W.D. Mich. 2007). 3091 "PolyVision contends that reconsideration of the Court's construction of the claim terms 'pretensioned' and 'biased to tension' is required under the Federal Circuit's decision in Andersen ... The Court has read Andersen and, for the reasons set forth below, disagrees with PolyVision that Andersen compels a different result." Id., 2007 U.S. Dist. LEXIS 66492 (W.D. Mich., Sept. 7, 2007). 3092
"prevent airway collapse, wherein said minimally sufficient pressure is a summation of a pressure needed to prevent airway collapse and pressure needed to overcome respiratory effort" — "prevent airway collapse, wherein said minimally sufficient pressure is a summation of a pressure needed to prevent airway collapse and pressure needed to overcome respiratory effort." Respironics, Inc., et al. v. Invacare Corp., 2006 U.S. Dist. LEXIS 62233 (W.D. Pa., Aug. 30, 2006).

"prevent pivoting" — "means to hinder pivoting from the initial position to the ready position, by less than 45 degrees." Penn Fabrication (U.S.A.) Inc. v. El-Com Hardware, Inc., et al., 1999 U.S. Dist. LEXIS 21955 (C.D. Cal., Dec. 27, 1999).

"prevent the passage of solids and liquids" — "means to 'substantially stop the passage of solids and liquids.' ... The specification does not require the term to carry only the most restrictive meaning that the rearward edge of the shield 'not allow' the passage of liquids or solids." Protective Optics, Inc. v. Panoptx, Inc., 458 F. Supp. 2d 1053 (N.D. Cal. 2006).

"wall means ... for preventing passage of atmospheric air"; "mechanical shaft seal means ... for preventing the flow of atmospheric air" — "the court interprets the wall means to call for a virtual elimination of any air from passing through the seal. On the other hand, the shaft seal means requires a disruption of any smooth, continuous air travel, which could include something less than a virtual stoppage." Aqua-Aerobic Systems, Inc. v. Aerators, Inc., et al., 1998 U.S. Dist. LEXIS 8237 (N.D. Ill., Jun. 4, 1998) "The district court correctly rejected Aqua-Aerobic's proposal that the claim should not be limited by the amount of air that passes or flows through the system but instead should be construed to cover any downflow mixer that does not suffer cavitation at the propeller. That is not the invention described and claimed by the patentee." Id., 211 F.3d 1241 (Fed. Cir. 2000).

"preventing the formation of an air pocket" — "preventing the formation of an air pocket [around rotating blades positioned in a pitcher of a blender] but not including a method of stirring to disperse, dislodge, or break-up an air pocket after it has begun to form." Vita-Mix Corp. v. Basic Holdings, Inc., et al., 514 F. Supp. 2d 990 (N.D. Ohio 2007).

"primary metal particles settling area" — "the first and most important settling area, also implying there is more than one settling area." Rattler Tools, Inc. v. Bilco Tools, Inc., et al., 2007 U.S. Dist. LEXIS 49124 (E.D. La., July 6, 2007).

"primary spectacle frame" — "the entirety of the primary eyeglass frame with the exception of the lenses, the plastic nose pieces (which touch the upper sides of the wearers's nose), and the legs, which extend back over the wearers' ears; thus, the primary spectacle frame includes the lens rims (if provided), nose bridge, extensions, projections (if provided), the first magnetic member and conceivably rim-locks." Aspex Eyewear, Inc., et al. v. Miracle Optics, Inc., 2003 U.S. Dist. LEXIS 26355 (C.D. Cal., Feb. 14, 2003).

"printed board" — "a generally flat piece of material typically fabricated from insulating material that provides support and structural integrity for a plurality of electrically interconnected components comprising a circuit, with some or all of the conducting interconnection pattern formed on the board." Murata Manufacturing Co., Ltd. v. Bel Fuse Inc., 445 F. Supp. 2d 938 (N.D. Ill., July 28, 2006).
"printer" — "printer that retains no record of the data printed (including but not limited to a thermal jet printer, a dot matrix printer, an ink-jet printer, a bubble jet printer, a laser printer, and the like)." Avante International Technology Corp. v. Diebold Election Systems, et al., 2007 U.S. Dist. LEXIS 61011 (E.D. Mo., Aug. 20, 2007). 3103

"prior agreement" — "a prior arrangement between the luggage screening entity and another party to process special locks in accordance with the special procedure." Travel Sentry, Inc. v. Tropp, 2009 U.S. Dist. LEXIS 87923 (E.D.N.Y., Sep. 24, 2009). 3105

"prism" — "an optical element, made up of two or more planar or conical surfaces, capable of changing the direction or path of light." Nikon Corp., et al. v. ASM Lithography B.V., 308 F. Supp. 2d 1039 (N.D. Cal. 2004). 3106

"profile" — "radial cross-section or outline of the bit, defined by the blades of the bit, labeled 224 in Fig. 10 of the '715 Patent." Reedhycalog UK, Ltd, et al. v. Baker Hughes Oilfield Operations, Inc., et al., 2007 U.S. Dist. LEXIS 76125 (E.D. Tex., Oct. 12, 2007). 3107

"does not project laterally beyond the chassis" — "does not extend, in any amount, laterally beyond the chassis." Metso Minerals, Inc. v. Powerscreen International Distribution Ltd., et al., 2010 U.S. Dist. LEXIS 7099 (E.D.N.Y., Jan. 28, 2010). 3109

"projecting" — "means that the separate detent is caused to move so as to protrude above the upper surface of the solenoid housing." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997). 3111

"said housing including a plurality of projections projecting from said side walls" — "two or more projections extending from one or both side walls." ADC Telecommunications, Inc. v. Switchcraft, Inc., 2005 U.S. Dist. LEXIS 19593 (D. Minn., Sept. 9, 2005). 3112

"at least one leg projecting laterally from each side of the center flange" — "each side of the longitudinal length of the center flange must include at least one 'laterally projecting leg,' a term referring to a structure providing support for one side of the shifter support and having an attachment rim or rib projection extending outwardly from the side and fitted with a hole for receiving a fastener, such as a screw, to secure the support to the vehicle." Grand Haven Stamped Products Co. v. Dura Automotive System, Inc., 2004 U.S. Dist. LEXIS 31087 (W.D. Mich., Jun. 28, 2004). 3113

"projecting the corner edge portions of the duct section end portions beyond the corner section" — "require[s] an assembler to take some action to cause the offset portion of the corner section to be moved relative to the corner piece front surface." Ductmate Industries, Inc. v. Famous Supply Corp., et al., 55 F. Supp. 2d 777 (N.D. Ohio 1999). 3114

"projection" — "any portion of the auxiliary bridge which extends toward the primary bridge for the purpose of going over and engaging with the primary bridge." Aspex Eyewear, Inc., et al. v. Altair Eyewear, Inc., 386 F. Supp. 2d 526 (S.D.N.Y. 2005). 3116

"projection" — "the entire portion of the elongate member that extends from the base portion of the member up to and including any free end portions." Velcro Industries B.V., et al. v. Taiwan Paiho Ltd. (D.N.H., Oct. 13, 2005). 3117

"projection" — "a part which projects or juts out from the sidewall of the end cap." Innovative Office Products, Inc. v. SpaceCo, Inc., et al., 2007 U.S. Dist. LEXIS 62296 (E.D. Pa., Aug. 23, 2007). 3118

"projection near the terminal end" — "any part that juts out at or near a terminal end of the spring pin." Friedrich Zettl GmbH v. Bloomingdales, Inc., et al., 2000 U.S. Dist. LEXIS 6747 (N.D. Ill., Feb. 24, 2000). 3120

"projection optical system" — "a component or combination of components that transfers or translates a mask pattern onto a substrate." Nikon Corp., et al. v. ASM Lithography B.V., 308 F. Supp. 2d 1039 (N.D. Cal. 2004). 3121

"outwardly directed projections" — "means simply that bumps exist on the outer surface." Dayco Products, Inc. v. Total Containment, Inc., 258 F.3d 1317 (Fed. Cir. 2001). 3122

"the second end of the locking member projects from the second chamber through the opening in the second end of the housing" — "requires that the second end of the locking member protrude from the second chamber through an open place or gap in the second end of the housing." Engineered Products Co. v. Donaldson Co., Inc., 165 F. Supp. 2d 836 (N.D. Iowa 2001). 3123

"processing chamber" — "processing chamber should be interpreted to encompass the entire interior of the processing vessel." Semitool, Inc. v. Dynamic Micro Systems Semiconductor Equip. GmbH, 444 F.3d 1337 (Fed. Cir. 2006). 3124

"product finishing station" — "a station including at least one blending unit, an ice bin, at least one cup dispenser and foot or hand activated rinse sink with integrated or detached drain board." Foodie Partners v. Jamba Juice Co., 2007 U.S. Dist. LEXIS 80345 (E.D. Tex., Oct. 30, 2007). 3125

"projection" — "portion of the mode selector that fits into a slot in the holder." Rutherford Controls Int'l Corp., et al. v. Alarm Controls Corp., et al., 2009 U.S. Dist. LEXIS 69115 (E.D. Va., Aug. 6, 2009). 3128
"a proportional positive airway pressure apparatus" — "the inclusion of the term 'proportional' in the preamble of this claim is found to be in error and not to effect the claimed invention." Respironics, Inc., et al. v. Invacare Corp., 2006 U.S. Dist. LEXIS 62233 (W.D. Pa., Aug. 30, 2006).3129

"protecting a portion of the interior of a structure from the force of the wind and objects carried thereby" — "a protective barrier device configured to be quickly deployed on or within a portion of a structure for protecting an interior portion of the structure from the force of the wind and objects carried thereby." Armor Screen Corp. v. Storm Catcher, Inc., et al., 2009 U.S. Dist. LEXIS 33407 (S.D. Fla., Mar. 10, 2009).3131

"protecting back panel" — "has a special meaning. It refers to a relatively stiff structure that protects the food tray compartments from indentation and damage. It specifically does not include flexible, pressure-sensitive labels which the patent specification consistently distinguishes from back panels." Kraft Foods, Inc. v. International Trading Co., Ltd., 1999 U.S. Dist. LEXIS 21164 (W.D. Wis., Jan. 14, 1999).3132 "Notwithstanding Kraft's contentions, we agree with the district court that the written description and prosecution history overcome any presumption arising from the doctrine of claim differentiation, and thus approve the district court's construction of claim 2's 'protecting back panel' as one that must be relatively stiff. ... We [also] agree with the district court's construction of the word 'protecting,' as used in the phrase 'protecting back panel,' to mean protecting both the structural integrity of the food package and the tray compartment bottoms against indentation and damage." Id., 203 F.3d 1362 (Fed. Cir. 2000) (emphasis in original).3133

"a protective barrier device formed of a flexible mesh material" — "a protective barrier device in the form of one or more panels of a flexible textile material that acts as a barrier against wind and windborne objects." Armor Screen Corp. v. Storm Catcher, Inc., et al., 2009 U.S. Dist. LEXIS 33407 (S.D. Fla., Mar. 10, 2009).3134

"protruding portion"; "peg"; "stepped hole" — "a protuberance that extends away from the flat display panel"; "a small cylindrical or tapered protuberance"; "a countersunk hole." LG Philips Co., Ltd. v. Tatung Co., et al., 2007 U.S. Dist. LEXIS 43557 (D. Del., June 15, 2007).3135

"protruding surface" — "a surface projecting beyond another reference point or surface (e.g. between first and second flat socket surfaces)." MacLean-Fogg Co. v. Eaton Corp., 2009 U.S. Dist. LEXIS 72435 (E.D. Tex., Aug. 14, 2009).3136

"protrusion" — "[the specification] attaches the characteristic of having a central narrowed portion to the term 'protrusion.'" Anchor Wall Systems, Inc. v. Rockwood Retaining Walls, Inc., et al., 252 F. Supp. 2d 838 (D. Minn. 2002).3137 "[W]e hold that the proper construction of 'protrusion' is something that protrudes." Id., 340 F.3d 1298 (Fed. Cir. 2003).3138

"provided with: (a) a curved portion that bends inwardly towards the conveyor, commencing from a first height that is above the level of the conveyor, and terminating at a second, lower height that is also above the level of the conveyor; (b) a terminal region extending to the edge of the conveyor, such terminal region being upwardly angled, proceeding outwardly from the conveyor, at an inclination that is sufficient to cause material to be spread when contained thereon to slide spontaneously to the conveyor, under the agitation arising from vehicular motion" — "a terminal region extending to the edge of the conveyor, such terminal region being upwardly angled, proceeding outwardly from the conveyor, at an inclination that is sufficient to cause material to be spread when contained thereon to slide spontaneously to the conveyor, under the agitation arising from vehicular motion. The terminal region must be inclined to the point where the terminal region meets the curved portion is above the point where the terminal region meets the conveyor (with respect to the ground)." Highway Equip. Co., Inc v. Cives Corp., et al., 476 F. Supp. 2d 1079 (N.D. Iowa 2007). 3142

"providing a foundation support for the foundation at a plurality of positions along the foundation ..." — "There is nothing in the claims or specification which indicates that the metal bracket had to be physically attached to or located next to the foundation before the other steps in the method could proceed." Ruiz, et al v. A.B. Chance Co., 234 F.3d 654 (Fed. Cir. 2000). 3145

"providing a third device having a third coordinate system in the operation site and determining a first position of the third device with respect to the second image of the second imaging device, whereby the third coordinate system of the third device is positioned with respect to the second image of the second imaging device and thereby with respect to the at least one 3D first image from the first imaging device" — "providing a third device (e.g., a radiation transmission apparatus or an imaging device) having its own coordinate system and determining the position of the third device relative to the position of the second rendering and therefore the first rendering (and thus the organ or lesion)." NOMOS Corp. v. ZMED, Inc., 260 F. Supp. 2d 215 (D. Mass. 2002). 3146

"providing in the sleeve a material which increases in rigidity after expansion of said balloon" — "supplying in the sleeve a material that is separate and distinct from the sleeve itself." Rockey v. Cordis Corp., 175 Fed. Appx. 329 (Fed. Cir., March 16, 2006) (unpublished). 3147

"proximal and distal lips" — "portions of the shell which extend about the circumference at or near each end of the shell." Kwitek, et al v. Pilot Corp., et al., 516 F. Supp. 2d 709 (E.D. Tex. 2007). 3148
"proximal cylindrical portion" — "means that the proximal end of the catheter has a cross-section defined by a fixed curved surface, which can be either a circle or an oval shape." Mahurkar v. C.R. Bard, Inc., et al., 2003 U.S. Dist. LEXIS 25924 (N.D. Ill., May 13, 2003).

"proximal portion of a second length longer than the first length" — "no further construction is needed." Medtronic AVE, Inc. v. Cordis Corp., 516 F. Supp. 2d 741 (E.D. Tex. 2007). "After carefully considering the arguments raised by the parties in this case, the court is not persuaded to alter its decision from the Cordis case. Accordingly, the Court concludes that this term does not requires construction." Medtronic Vascular Inc., et al. v. Boston Scientific Corp., et al., 526 F. Supp. 2d 613 (E.D. Tex. 2007).

"pulling the handle portion generally along the handle axis" — "applying force to the handle portion so as to cause or tend to cause motion toward the source of the force generally in the direction of the long axis of the handle." Furminator, Inc. v. Ontel Products Corp., et al., 429 F. Supp. 2d 1153 (E.D. Mo. 2006).

"pumping means" — "While the use of the word 'means' gives rise to a presumption that § 112, paragraph 6 applies, the presumption is overcome by the recitation of the structure needed to perform the recited function." *TI Group Automotive Systems (North America), Inc. v. VDO North America, L.L.C., et al.*, 375 F.3d 1126 (Fed. Cir. 2004).

"pusher" — "any device or structure intended to push another device or structure." *Boston Scientific Corp. v. Cordis Corp.*, 422 F. Supp. 2d 1102 (N.D. Cal. 2006).

"pylon" — "a conical structure; that is, it is a structure having a closed plane base and a surface formed by line segments joining every point of the boundary of the base to a common vertex." *EZ Dock, Inc. v. Schafer Systems, Inc., et al.*, 2003 U.S. Dist. LEXIS 1810 (D. Minn., Jan. 22, 2003).

"pyramid shaped" — "In this case, HHI has assigned a clear meaning to the phrase 'pyramid shaped,' namely, the shape of the midsole in the prior art shoe of Fig. 2. By using the same phrase in the amended claim, HHI invoked the definition it assigned to that phrase in the written description." *Hockerson-Halberstadt, Inc. v. Converse Inc.*, 183 F.3d 1369 (Fed. Cir. 1999).

"quality of result"; "desired quality of result" — "Quality of result refers to any number of features or characteristics of a cut, including but not limited to surface finish, uniformity of cut surface, precision and dimensional accuracy. A user specifies his or her desired quality of result using an associated value." *Omax Corp. v. Flow International Corp.*, 2006 U.S. Dist. LEXIS 81914 (W.D. Wash., Nov. 7, 2006).

"at least one of the halogens Cl, Br or I is present in a quantity" — "I construe 'quantity' to mean a concentration--the amount per unit volume." *U.S. Philips Corp. v. Iwasaki Electric Co., et al.*, 2006 U.S. Dist. LEXIS 106 (S.D.N.Y., Jan. 3, 2006).

"a quantity between 10⁻⁶ and 10⁻⁴ μmol/mm³" — "means that the halogen is present in the envelope or bulb in a quantity between 1 divided by 1,000,000 and 1 divided by 10,000 micromoles per cubic millimeter." *U.S. Philips Corp. v. Iwasaki Electric Co., et al.*, 2006 U.S. Dist. LEXIS 106 (S.D.N.Y., Jan. 3, 2006).

"rack mounting structure supporting said second rack for movement into and out of said washing chamber" — "is governed by Section 112 P6 ... [because] the element is purely functional, with the words 'rack mounting' and 'structure' failing to connote sufficient structure." Maytag Corp. v. Whirlpool Corp., 88 F. Supp. 2d 894 (N.D. Ill. 2000). 3175

"radial" — "describe[s] the quality of radiating to or from, diverging from, or converging to a common point." SRAM Corp. v. Formula S.R.L., et al., 2009 U.S. Dist. LEXIS 29100 (N.D. Ill., Apr. 3, 2009). 3176

"may be inserted therein in a radial direction with respect to said groove" — "does not mean purely or solely perpendicular; but rather, indicates that the bar or pin is to be placed in the structure of the clamp in a generally perpendicular direction." Stryker Trauma S.A., et al. v. Synthes (USA), 2004 U.S. Dist. LEXIS 30810 (D.N.J., Apr. 12, 2004). 3177

"a radial positioning means comprising a compressed spring means biased against said ring segments to forcibly cause said segments to move to said large clearance position, while working fluid which is freely admitted to the annular space between said casing and said ring segments will urge said segments toward said small clearance position, whereby at low speed and small turbine loads the spring forces will predominate, while at high flows and high working fluid pressure the pressure forces will predominate" — "Because the term 'radial positioning means' uses the word 'means,' it is presumptively subject to section 112, paragraph 6. However, the claim recites sufficient structure to overcome that presumption." TurboCare Division of Demag Delaval TurboMachinery Corp. v. General Electric Co., 264 F.3d 1111 (Fed. Cir. 2001). 3178

"and which is radially compressible upon insertion into the defect from a first configuration which is larger than the defect into a second configuration which approximates the shape of the defect" — "the remark by the prosecuting attorney that the kinking buckling limitation 'is an element of each claim, except method claim 21' was an error. Because the erroneous statement was made in the context of an initial request for reexamination, rather than as a response to objections raised by the examiner, the court does not find that the claims, as allowed, should be construed in light of the attorney's statement. The court will adopt the existing language of this claim limitation." C.R. Bard, Inc., et al. v. United States Surgical Corp., 102 F. Supp. 2d 199 (D. Del. 2000). 3179

"radially extending member" — "a member extending in the direction of the radius, which is perpendicular to the longitudinal axis of the tubular body." Venetec International, Inc. v. Medical Device Group, Inc., 2007 U.S. Dist. LEXIS 56770 (S.D. Cal., Aug. 3, 2007). 3180

"a radiation cured adhesive material" — "an adhesive cured by radiation such as ultraviolet radiation." *Avery Dennison Corp. v. Whitlam Label Co., Inc.*, 2003 U.S. Dist. LEXIS 27836 (N.D. Ohio, Sept. 24, 2003). 3185

"rail" — "a bar that serves to direct substantially the motion of a component that slides along the axis of the rail." *Briggs & Stratton Corp. v. Kohler Co.*, 398 F. Supp. 2d 925 (W.D. Wis. 2005). 3189

"[A] bar supported along its length that serves to direct substantially the motion of a component that slides along the axis of the bar." *Id.*, 408 F. Supp. 2d 697 (W.D. Wis. 2006). 3190

"rail portion" — "the top portion of the header that is either a semi-circle or similar to a semi-circle. The top surface of the rail portion must curve." *Nelson A. Taylor Co., Inc., et al. v. Ameritex Technologies, Inc., et al.*, 2006 U.S. Dist. LEXIS 68004 (D.S.C., Sept. 20, 2006). 3192

"raised spine" — "a raised portion of the mounting element that resembles or suggests the spine of the mounting element, shaped to cooperate with the window jamb flanges to inhibit the rotational motion of the mounting means." *Amesbury Group, Inc., et al. v. Caldwell Manufacturing Co.*, 2006 U.S. Dist. LEXIS 2175 (D. Mass., Jan. 20, 2006). 3194

"ramp member" — "a structure that is joined to said deck support member in a cooperative relation that has a length substantially equal to said predetermined length, and includes three structural components: (1) a deck edge protecting surface extending upwardly from said deck support surface and having an upper edge, (2) a lower portion having a longitudinal edge, and (3) a ramp surface disposed between said upper edge and said longitudinal edge at a predetermined angle less than ninety degrees to said deck support surface." Floe International, Inc. v. Newmans' Manufacturing Inc., 2006 U.S. Dist. LEXIS 42114 (D. Minn., June 21, 2006). 3197

"random faded effect" — "fading on fabric or a made-up garment where (a) some areas are more faded than others, (b) some areas may not be faded at all, and (c) the placement of the faded areas is not uniform." Levi Strauss & Co. v. Golden Trade, S.r.l., et al., 1995 U.S. Dist. LEXIS 4899 (S.D.N.Y., April 14, 1995). 3199 Id., 1995 U.S. Dist. LEXIS 22145 (S.D.N.Y., Nov. 30, 1995). 3200

"random orientation" — "means bamboo segments which have random, not uniform lengths, and which are staggered or lapped along the length of the beam." Teragren, LLC v. Smith & Fong Co., 2009 U.S. Dist. LEXIS 62597 (W.D. Wash., May 5, 2009). 3201

"in rapid succession" — "one after another without any intentional delay or pause such as in the pause state." Good Sportsman Marketing LLC, et al. v. Non Typical, Inc., et al., 2009 U.S. Dist. LEXIS 69737 (E.D. Tex., Aug. 10, 2009). 3202

"reaching into the immediate vicinity and directly facing at least one radiator element" — "means that at least one outlet opening must extend into the proximate area of, and must point squarely toward, at least one radiator element." Freni Brembo, S.p.A. v. Alcon Components, Ltd., 2005 U.S. Dist. LEXIS 11714 (N.D. Ill., May 31, 2005). 3206

"reaction frame" — "a physical structure, separate and distinct from the structure supporting the precision components, that transfers reaction forces, caused by the movement of a stage drive, away from the precision components." Nikon Corp., et al. v. ASM Lithography B.V., 308 F. Supp. 2d 1039 (N.D. Cal. 2004). 3207
"reaction space" — "includes the reaction chamber as well as the gas inflow/outflow channels communicating immediately with the reaction chamber, and includes the entire volume to be evacuated between two successive vapor-phase pulses." ASM America, Inc. v. Genus, Inc., 2002 U.S. Dist. LEXIS 15348 (N.D. Cal., Aug. 15, 2002). 3208

"ready for mounting" — "leaving the veneer restoration ready to be fitted to and cemented on a patient's tooth for which it was custom-made." PSN Illinois, LLC v. Ivoclar Vivadent, Inc., 2006 U.S. Dist. LEXIS 88691 (N.D. Ill., Dec. 7, 2006). 3209 "[T]he construction of the phrase 'ready for mounting' ... remains, as it was in the Opinion." Id., 2007 U.S. Dist. LEXIS 38611 (N.D. Ill., May 29, 2007). 3210

"readily disengaged" — "It is difficult to conceive of a more clear way to convey the meaning of this phrase; accordingly, the Court does not construe 'readily disengaged.'" Litepanels, LLC, et al. v. Gekko Technology, Ltd., 2007 U.S. Dist. LEXIS 89756 (E.D. Tex., Dec. 6, 2007). 3211

"rear cavity" — "the cavity within the headphone cup structure that is farther from the user and attached to the rear of the baffle." Bose Corp. v. Lightspeed Aviation, Inc., 2010 U.S. Dist. LEXIS 40500 (D. Mass., Apr. 26, 2010). 3215

"rear edge" — "the edge of the tubular sock-like body [tubular body] in the projectile opposite the closed end that, in the unfilled state, forms the opening into which shot is filled." Combined Tactical Systems, Inc. v. Defense Technology Corp. of America, et al., 426 F. Supp. 2d 140 (S.D.N.Y., April 4, 2006). 3216

"rear edge" — "having a margin of intersection between the top and bottom surfaces of the blade in which at least some part of the surface boundary defined by that margin is at the rearmost point of the blade; there is no limitation on the shape of the surface boundary defined by the margin of intersection." Bausch & Lomb Inc. v. Moria S.A., et al., 222 F. Supp. 2d 616 (E.D. Pa. 2002). 3217

"rear end" — "a reference point defined by the rear edge of the tube." Research Plastics, Inc. v. Federal Packaging Corp., 421 F.3d 1290 (Fed. Cir. 2005). 3218

"rear mountable" — "a flat-panel display device that is capable of being mounted to a housing solely from the back of the first frame and that has no front or side mounting fastening elements." LG Philips LCD Co., Ltd. v. Tatung Co., et al., 2007 U.S. Dist. LEXIS 43557 (D. Del., June 15, 2007). 3219

"rearward area"; "end area" — "the area facing away from the brake disk." Knorr-Bremse Systeme Fuer Nutzfahrzeuge GmbH v. Dana Corp., et al., 133 F. Supp. 2d 833 (E.D. Va. 2001). 3220
"receptacles" — "formations in the raised periphery surrounding the playing surface that contain batteries and wires." Innovention Toys, LLC v. MGA Entertainment, Inc., et al., 2009 U.S. Dist. LEXIS 48386 (E.D. La., May 21, 2009).

"respectively received in said recesses of said inner hose ... whereby the interior of said tubular hose is substantially sealed to the interior of said coupling" — "only require[s] that the insert means projections be received in the hose recesses such that a substantial fluid seal is formed between the interior of the hose and the interior of the coupling. Complete reception is neither explicitly nor implicitly required." Dayco Products, Inc. v. Total Containment, Inc., 258 F.3d 1317 (Fed. Cir. 2001).

"receiving an indication of a speed" — "to acquire a value indicating speed, such as supplied by a computer system." Omax Corp. v. Flow International Corp., 2006 U.S. Dist. LEXIS 81914 (W.D. Wash., Nov. 7, 2006).

"receiving portion" — "the part of the structural interconnection device which takes in the inserted end portion of an elongate member, and which holds or supports the end portion of the elongate member." Safety Rail Source, LLC v. Bilco Co., 2009 U.S. Dist. LEXIS 30969 (D.N.J., Apr. 8, 2009).

"first cable receiving said floating pulley units" — "does not require that both floating pulley units be in direct physical contact with the first cable. Instead, if a force exerted on either one of the floating pulley units responsively tensions the first cable and is resisted by the load, then the floating pulley units are 'received' by the cable." Vectra Fitness, Inc. v. Icon Health & Fitness, Inc., 246 F. Supp. 2d 1111 (W.D. Wash. 2003).

"the handle portion having a recess" — "the handle portion having an indentation." FURminator, Inc. v. Munchkin, Inc., et al., 2009 U.S. Dist. LEXIS 104429 (E.D. Mo., Nov. 9, 2009).

"locking recess" — "an indentation or small hollow that permits engagement by the locking body." OrthoArm, Inc., et al. v. Forestadent USA, Inc., et al., 502 F. Supp. 2d 968 (E.D. Mo. 2007).
"a recess comprising an indentation formed immediately beneath said cutting edge surface"; "a recess formed below said cutting edge surface" — "a cut out formed directly under the cutting edge surface and orientated in a horizontal direction parallel to the cutting edge surface." Izumi Products Co. v. Koninklijke Philips Electronics N.V., et al., 2004 U.S. Dist. LEXIS 7992 (D. Del., Apr. 27, 2004). 3234 "As an initial matter, we conclude that the court erred in construing the limitations 'recess ... formed immediately beneath' and 'recess formed below' to mean 'a cut out formed directly under the cutting edge surface and orientated in a horizontal direction, parallel to the cutting edge surface.' ... We are not, however, prepared to give Izumi the broad interpretation that it currently seeks." Id., 140 Fed. Appx. 236 (Fed. Cir., Jul. 7, 2005) (unpublished). 3235

"a recess located in a lower lip extending to a side edge and defining at least in part a lower side of said groove" — "it is the lower lip that must extend to a side edge and define at least in part a lower side of the groove." Alloc, Inc. v. Unilin Decor N.V., et al., 2007 U.S. Dist. LEXIS 16743 (E.D. Wis., Mar. 6, 2007). 3236

"reciprocating" — "can mean either moving back and forth or just simply returning, and as the embodiments described in the specification and claims contemplate both linear and rotary workpiece carriers, this court construes the term to be broad enough to include carriers that move in a circular rotation." Optical Coating Laboratory, Inc. v. Applied Vision, Ltd., 1996 U.S. Dist. LEXIS 1476 (N.D. Cal., Jan. 29, 1996). 3239

"reciprocating member" — "is not limited to a straight-bar structure comprising a single component only. ... the claim term 'reciprocating member' encompasses a multi-component, curved structure." CCS Fitness, Inc. v. Brunswick Corp., et al., 288 F.3d 1359 (Fed. Cir. 2002). 3240

"reciprocating path of travel" — "any back and forth path of travel which is repetitively traversed." Precor Inc., et al. v. Fitness Quest, Inc., et al., 2006 U.S. Dist. LEXIS 63244 (W.D. Wash., Aug. 23, 2006). 3241

"reciprocating slide plates" — "is not limited to plates that exhibit only linear motion, as opposed to the broader, ordinary meaning of that phrase. Thus, the disputed term literally encompasses rotating motion, such as that exhibited by the MAC mechanism." Virginia Panel Corp. v. MAC Panel Co., 133 F.3d 860 (Fed. Cir. 1997). 3242

"recirculation pipe" — "a tubular fluid pathway for returning a fluid to a starting point, with at least a portion of that pathway downstream from the venturi." Cecil's On-Site Products, Inc. v. Chaffin, 2009 U.S. Dist. LEXIS 10095 (S.D. Tex., Feb. 11, 2009). 3243

"rectangular" — "having four sides, with opposite sides parallel, and four right angles." Craig v. Foldfast, Inc., et al., 487 F. Supp. 2d 1364 (S.D. Fla. 2007). 3244

"applying glue to abutting wooden surfaces to ... reduce air infiltration to less than 0.7/0.5 air changes per hour" — "the Court finds the claim language itself requires that air infiltration be reduced to a level less than about 0.7/0.5 air changes per hour. Implicit within that language is the requirement that the level be greater than 0.7/0.5 air changes per hour before the application of glue." Staples v. Johns Manville, Inc., et al., 2010 U.S. Dist. LEXIS 24040 (E.D. Mo., Mar. 16, 2010). 3246

"reduced air content cleaning fabric" — "a fabric whose air content has been reduced by some method prior to being wound on a roll." Baldwin Graphic Systems, Inc. v. Siebert, Inc., 2007 U.S. Dist. LEXIS 20486 (N.D. Ill., Mar. 21, 2007). 3247

"reduced diameter annular ring" — "the wall of the metal body is radially deformed into a smaller diameter portion that is adjacent to at least one larger diameter portion." Tenneco Automotive Operating Co. Inc. v. Visteon Corp., 2005 U.S. Dist. LEXIS 12738 (D. Del., Jun. 28, 2005). 3248

"a reduced diameter cylindrical central portion" — "the portion of the tubular body that includes the middle point has a smaller diameter than adjacent portions of the tube." Tenneco Automotive Operating Co. Inc. v. Visteon Corp., 2005 U.S. Dist. LEXIS 12738 (D. Del., Jun. 28, 2005). 3249

"reference" — "a position or item relative to which displacement, location, or both can be measured." Nikon Corp., et al. v. ASM Lithography B.V., 308 F. Supp. 2d 1039 (N.D. Cal. 2004). 3250

"reflective inner coating" — "a thin film of highly reflective material spread over a correctly shaped glass surface to produce a mirror contained within the light transmission element." Yanova, Inc., et al. v. Johnson, et al., 2005 U.S. Dist. LEXIS 497 (S.D.N.Y., Jan. 11, 2005). 3251

"interior reflective surface"; "internal reflecting surface" — "a person of ordinary skill in the art would conclude that ... a black matte layer or surface inside the housing does not constitute a 'interior reflective surface' or an 'internal reflecting surface' within the meaning of the Ecolab patent claims." Ecolab Inc. v. Paraclipse, Inc., 1999 U.S. Dist. LEXIS 23136 (D. Neb., Aug. 18, 1999). 3252 "Instruction No. 11 excluding the black matte surface as an 'internal reflecting surface' was not erroneous." Id., 285 F.3d 1362 (Fed. Cir. 2002). 3253

"reflector means" — "encompass[es] either a totally reflective reflector, a partially reflective reflector, as well as a partially light transmissive reflector, with or without apertures or openings in the reflector itself, where the reflector is capable of radiating light through or out of the reflector in all directions, including both laterally and upwardly." Sportlite, Inc. v. Genlyte Thomas Group, LLC, et al., 2006 U.S. Dist. LEXIS 96638 (D. Ariz., Sept. 13, 2006). 3254 "[T]he Court will adopt the Special Masters' construction of 'reflector means.'" Id., 518 F. Supp. 2d 1122 (D. Ariz. 2007). 3255

"wherein during said seaming operation at least a portion of said can end wall first portion is reformed by bending upward by an angle of at least about 26"" — "the can end wall first portion is formed again by turning upward by an angle of at least about 26°." Crown Packaging Technology, Inc., et al. v. Rexam Beverage Can Co., 486 F. Supp. 2d 366 (D. Del. 2007). 3256
"at least three layers reformed into" — "the three layers retain separate identity only in the pleat before reformation; the densified regions cannot have three layers after reformation if the layers no longer have separate identities." James River Corp. of Virginia v. Hallmark Cards, Inc., 915 F. Supp. 968 (E.D. Wis. 1996). 3257

"relatively moved"; "slidably receiving"; "[and their cognates]" — "permit the needle and guard to slide in any manner." MBO Laboratories, Inc. v. Becton, Dickinson & Co., 474 F.3d 1323 (Fed. Cir. 2007). 3259

"a relatively smaller patch of web material" — "a piece of material that is at least somewhat smaller than the backsheet layer." Kimberly-Clark Worldwide, Inc. v. First Quality Baby Products, LLC, et al., 2010 U.S. Dist. LEXIS 104762 (M.D. Pa., Sep. 30, 2010). 3260

"comprising a relatively thick core or base layer" — "[is not] limited to a core composed of a single layer." Avery Dennison Corp. v. UCB Films PLC., 1997 U.S. Dist. LEXIS 13594 (N.D. Ill., Sept. 3, 1997). 3261

"relaxed condition" — "refers to a state in which the spring has no potential energy, i.e., is free from tension." Owen Mumford USA, Inc. v. Surgilance, Inc., et al., 137 Fed. Appx. 342 (Fed. Cir., Jun. 7, 2005) (unpublished). 3262

"releaseably installed by sliding engagement of said retainer member and said inwardly facing surface" — "installed by sliding the retainer member along the inwardly facing surface to engage it with the wall of the syringe, which creates a clamping or frictional force that can be released at a later time." Retractable Technologies, Inc., et al. v. Becton Dickinson & Co., 2009 U.S. Dist. LEXIS 73301 (E.D. Tex., Jan. 20, 2009). 3264

"a first region"; "a second region" — "are two different regions." Merit Industries, Inc. v. JVL Corp., 2007 U.S. Dist. LEXIS 63418 (E.D. Pa., Aug. 24, 2007). 3265

"region of interest" — "the location of a percutaneous procedure to be performed within a patient's vessel." Boston Scientific SciMed, Inc., et al. v. ev3 Inc., 502 F. Supp. 2d 931 (D. Minn. 2007). 3266

"reinforcement support member" — "a member that can be removed from the connector body without destroying the integrity of the connector in general or the contact wires in particular so as to facilitate inspection or repair of the contacts." Helifix Limited v. Blok-Lok, Ltd., et al., 26 F. Supp. 2d 294 (D. Mass. 1998). 3268

"relative movement" — "the Court finds that this term's ordinary and accustomed meaning controls, and no construction is necessary." Konami Corp. v. Roxor Games, Inc., et al., 445 F. Supp. 2d 725 (E.D. Tex. 2006).

"indicative of the relative position between the tool and the workpiece" — "must be construed to include systems that measure the location of the workpiece from some fixed point on the machine tool table." IMS Technology, Inc. v. Haas Automation, Inc., et al., 1998 U.S. Dist. LEXIS 22820 (E.D. Va., Sept. 23, 1998).

"relative sliding movement between the auxiliary device and weapon causes the inclined surface to cause the latching mechanism to overcome the biasing force of the spring-biased mechanism" — "additional construction is not necessary." Insight Technology Inc. v. SureFire, LLC, 2006 U.S. Dist. LEXIS 11762 (D.N.H., Feb. 28, 2006).

"being in relative spaced relation" — "positioned apart from and parallel to each other such that an unoccupied space is formed between the fin structures." ICHL, LLC v. NEC Corp. of America, et al., 2010 U.S. Dist. LEXIS 38942 (E.D. Tex., Apr. 20, 2010).

"identification of a position ... relative to the positional coordinates and other items of interest" — "denote[s] that the 'information transmitted to a user of the system displays the items of interest only relative to the positional coordinates' in an internal grid system, as opposed to absolutely, such as by reference to that item of interest's latitude and longitude." CIVIX-DDI, LLC v. Microsoft Corp., et al., 18 Fed. Appx. 892 (Fed. Cir., Aug. 22, 2001) (unpublished).

"relatively resilient end edge portion which temporarily deflects and subsequently rebounds to snap-secure" — "mean[s] that the end edge portion must be sufficiently resilient that it can temporarily deflect and subsequently rebound when glass is being inserted into the frame." Gemtron Corp. v. Saint-Gobain Corp., 572 F.3d 1371 (Fed. Cir. 2009).

"relatively short length" — "said mooring arm having a minimum length long enough to exert a significantly larger rotational torque on the turntable than if the mooring hawser were directly connected to the turntable and having a maximum length such that when in an essentially upright position from the buoyant body toward sea level, the mooring arm extends no further than to just below or just above sea level." Advanced Production and Loading, Inc. v. Single Buoy Moorings, Inc., et al., 2004 U.S. Dist. LEXIS 31081 (S.D. Tex., Apr. 26, 2004).

"relatively small" — "is not entitled to the range of up to 0.070 inch as sought by Modine. However, the Commission erred in literally restricting the hydraulic diameter range to an upper limit of exactly 0.040 inch, and in barring access to the doctrine of equivalents." Modine Manufacturing Co. v. United States International Trade Commission, et al., 75 F.3d 1545 (Fed. Cir. 1996).

"relatively small incision" — "Although the court finds that this indefiniteness argument is not a frivolous one, it concludes that defendant has not met its burden of showing that it will likely succeed on the merits of this claim at trial, and as such declines at this time to invalidate the 998 patent on the grounds of indefiniteness." Allergan Sales, Inc., et al. v. Pharmacia & Upjohn, Inc., 1996 U.S. Dist. LEXIS 21051 (S.D. Cal., Oct. 22, 1996).
"relatively thick layer" — "although the relatively thick layer can be 'substantially less than one eighth of an inch' and still be the relatively thick layer, it ceases to be so if it falls below 1/16th of an inch." *Solomon v. Kimberly-Clark Corp.*, 1997 U.S. Dist. LEXIS 23312 (D. Ariz., Jul. 17, 1997). Solomon v. Kimberly-Clark Corp., 1997 U.S. Dist. LEXIS 23312 (D. Ariz., Jul. 17, 1997) "The public is entitled to rely on the sole unequivocal statement by the patentee regarding the meaning of 'relatively thick' used throughout the specification. ... [W]hile the specification elsewhere makes clear that the thickness of the 'relatively thick' layer may be 'varied ... as desired,' it may only vary within the enumerated range." *Id.*, 1998 U.S. App. LEXIS 10416 (Fed. Cir., May 26, 1998) (unpublished). 3281

"relaying" — "nothing in the claim language requires or even suggests the use of pneumatically operated valves in performing the relaying step." *Varco, L.P. v. Pason Systems USA Corp.*, 436 F.3d 1368 (Fed. Cir. 2006). 3282

"a plurality of releasable fasteners for attachment of said protective barrier to said structure" — "The Court finds the ordinary and customary meaning of this claim language to be readily apparent such that additional construction is unwarranted." *Armor Screen Corp. v. Storm Catcher, Inc., et al.*, 2009 U.S. Dist. LEXIS 33407 (S.D. Fla., Mar. 10, 2009). 3284

"wherein the continuous retainer member is releasable from the inner head" — "the plunger releases the continuous retainer member from the inner head as the plunger is further depressed in the barrel." *Retractable Technologies, Inc., et al. v. Becton Dickinson & Co.*, 2009 U.S. Dist. LEXIS 73301 (E.D. Tex., Jan. 20, 2009). 3285

"releasable stopper" — "a member that seals or closes one end of the plunger and can be freed such that it no longer seals or closes." *Retractable Technologies v. New Medical Technologies*, 2004 U.S. Dist. LEXIS 3855 (E.D. Tex., Mar. 1, 2004). 3286

"releasably attached" — "means that the fastening element claimed in the Wrike patents must be easily removed and replaced." *V-Formation, Inc. v. Benetton Group SpA, et al.*, 2002 U.S. Dist. LEXIS 22394 (S.D.N.Y., Nov. 19, 2002). 3287 "[T]his court affirms the district court's claim construction defining 'releasably attaching' ... to mean that the fasteners 'must permit the sidewalls to be easily removed and replaced' and determining that 'those skilled in the art would not consider rivets ... to fall within the category of releasable fasteners.'” *Id.*, 401 F.3d 1307 (Fed. Cir. 2005). 3288

"releasably connectable" — "requir[es] each individual plate member to be 'connected directly to the opposing surfaces of the two side members in such a manner that it is capable of being freed from the opposing surfaces of the two side members.'” *IKN, Inc. v. CemProTec GmbH*, 2005 U.S. Dist. LEXIS 29134 (E.D. Pa., Nov. 22, 2005). 3290

"release" — "has the usual meaning of a mechanical arrangement of parts for holding or freeing a device or mechanism as required, or a setting free from restraint."  *Mas-Hamilton Group v. LaGard, Inc.*, 21 F. Supp. 2d 700 (E.D. Ky. 1997).\textsuperscript{3292}

"release coating"; "release coated" — "a covering that permits the easy and complete removal of pressure sensitive adhesive labels"; "a material having a 'release coating.'"  *MPT, Inc. v. Marathon Labels, Inc., et al.*, 2006 U.S. Dist. LEXIS 4612 (N.D. Ohio, Feb. 7, 2006).\textsuperscript{3293}

[i] "release element"; [ii] "retainer member" — [i] "a part that holds and later frees the needle holding member"; [ii] "a separable part that holds the needle holding member."  *Retractable Technologies v. New Medical Technologies*, 2004 U.S. Dist. LEXIS 3855 (E.D. Tex., Mar. 1, 2004).\textsuperscript{3294}

"a release lever" — "a rigid bar mounted at opposite ends of the cover or shield extending longitudinally of and coplanar with cover or shield sized to fit the finger of user and operable by user of ring binder to move leaves to open and close the binder. Each release lever includes a thumb or finger plate and a lever arm."  *U.S. Ring Binder, LP v. Staples the Office Superstore LLC, et al.*, 2009 U.S. Dist. LEXIS 21783 (E.D. Mo., Mar. 18, 2009).\textsuperscript{3295}

"remain at the specific size" — "maintain the predetermined smaller but non-zero diameter for a lasting (i.e., non-temporary) period without external compression."  *Vnus Medical Technologies, Inc. v. Diomed Holdings, Inc.*, 2006 U.S. Dist. LEXIS 88580 (N.D. Cal., Nov. 22, 2006).\textsuperscript{3296}

"remote home base" — "a location remote from the work site where the repair unit is operating."  *Key Energy Services, Inc. vs. C.C. Forbes, LLC, et al.*, 2010 U.S. Dist. LEXIS 67292 (E.D. Tex., Jul. 7, 2010).\textsuperscript{3297}

"remote location beyond a range of direct manual contact" — "a location outside the operating room where the patient undergoing surgery is located."  *Brookhill-Wilk I, L.L.C. v. Intuitive Surgical, Inc.*, 178 F. Supp. 2d 356 (S.D.N.Y. 2001).\textsuperscript{3298} "Brookhill challenges this interpretation, stating that the plain meaning of the claim term, the patent's written description, the prosecution history, and extrinsic evidence all support a broader reading that does not restrict the surgeon to a location outside of the operating room. ... We agree with Brookhill."  *Id.*, 334 F.3d 1294 (Fed. Cir. 2003).\textsuperscript{3299}

"remotely controllable surgical device" — "a device for use during a surgical procedure that can be controlled from a remote location."  *Karl Storz Endoscopy-America, Inc. v. Smith & Nephew, Inc.*, 2010 U.S. Dist. LEXIS 85036 (W.D. Tenn., Aug. 18, 2010).\textsuperscript{3300}

"a remotely located refrigeration unit" — "a structure for storing substances at temperatures below room temperature displaced from the customer service station."  *Foodie Partners v. Jamba Juice Co.*, 2007 U.S. Dist. LEXIS 80345 (E.D. Tex., Oct. 30, 2007).\textsuperscript{3301}

"removable"; "removably mounted"; "removing and replacing"; "replaceable" — "capable of being removed"; "mounted so as to be capable of being removed"; "taking away from a position and placing into a position"; "capable of being replaced."  *Fargo Electronics, Inc. v. Iris Ltd, Inc.*, 2005 U.S. Dist. LEXIS 34493 (D. Minn., Nov. 30, 2005).\textsuperscript{3302}

"removable pressure-sensitive adhesive layer" — "an adhesive that can stick to a layer, yet is removable." Avery Dennison Corp. v. Whitlam Label Co., Inc., 2003 U.S. Dist. LEXIS 27836 (N.D. Ohio, Sept. 24, 2003).3304

"removably" — "means detachable, i.e., detachable from the hamper." Allure Home Creation Co., Inc. v. Lamont Ltd., et al., 12 F. Supp. 2d 287 (S.D.N.Y. 1998).3305

"removably attached"; "removably secured" — "carry with them an implication that the detach mentor unsecuring process not do violence to the seat. The seat must therefore be usable as a seat upon separation from the base. In sum, the district court held that the claims cover a structure that includes a seat and base affixed together in a manner that contemplates that the seat may be removed from the base such that the seat remains functional. ... We thus discern no error in the district court's interpretation of the key claim terms." Dorel Juvenile Group, Inc. v. Graco Children's Products, Inc., 429 F.3d 1043 (Fed. Cir. 2005).3306 "The panel majority's interpretation of 'removably attached' and 'removably secured' as requiring only that the structure be 'capable' of disassembly, however laborious the mechanics, is contrary to the prior art, contrary to usage in the field, and contrary to federal regulation. ... I must, respectfully, dissent." Id. (Newman, C.J., dissenting).3307

"removably attached"; "removably secured" — "affixed together in a manner that contemplates that the seat may be removed from the base such that the seat remains functional." Dorel Juvenile Group, Inc. v. Graco Children's Products, Inc., 2004 U.S. Dist. LEXIS 20501 (S.D. Ind., Sept. 9, 2004).3308

"removably attached to a fluid dispenser" — "is unambiguous and therefore does not require construction." ICU Medical, Inc. v. B. Braun Medical, Inc., 344 F. Supp. 2d 663 (N.D. Cal. 2004).3309

"removably fastened" — "designed so as to be capable of being held secure to something else and designed so as also to be capable of being unsecured and taken away from." Tyco Healthcare Group LP v. Ethicon Endo-Surgery, Inc., 411 F. Supp. 2d 93 (D. Conn. 2006).3311

"removably securing" — "a removable secured cover as described by the '528 patent could take many forms, including hinged covers, tethered covers, covers rotated about a pivot and covers that are completely detachable from the blower housing such as the Toro model." The Toro Co. v. White Consolidated Industries, Inc., et al., 920 F. Supp. 1008 (D. Minn. 1996).3312

"removably supported" — "A component cannot be 'removably supported' if it is attached using fasteners that are meant to be permanent and not removed." Little Giant Pump Co. v. Diversitech Corp., 505 F. Supp. 2d 1107 (W.D. Okla. 2007).3313

"removing [an object]" — "means the purposeful application of motive force to change the location of the object, under circumstances where, without the application of such motive force, the object would tend to stay in its original place." MHB Industries v. Dennis Garberg & Associates, Inc., et al., 1996 U.S. Dist. LEXIS 11638 (D. Mass., July 26, 1996).3314
"removing contaminate vapors from contaminated underground areas" — "does not modify the word 'remove' with terms like 'completely' or 'substantially all.' Accordingly, ... as soon as the process disclosed in the '407 Patent is commenced, one is engaged in practicing the invention. It is not necessary to complete the process before one is said to be practicing the invention." Knopik v. Amoco Corp., et al., 96 F. Supp. 2d 892 (D. Minn. 2000). 3315

"repeating said injecting process until all of the plurality of openings have been filled" — "repeating said injecting process until all of the plurality of openings have been filed." Advanced Technology Incubator, Inc. v. Sharp Corp., et al., 2009 U.S. Dist. LEXIS 28456 (E.D. Tex., Mar. 11, 2009). 3317

"replaceable pliable sheet material patch" — "requires that the product be repositionable for the duration of an average game of football, baseball, basketball, tennis or golf." Mueller Sports Medicine, Inc. v. Beveridge Marketing, LLC, et al., 369 F. Supp. 2d 1028 (W.D. Wis. 2005). 3318

"replacing said specific link" — "is understood by its ordinary meaning alone." Blount Inc., et al. v. Trilink Saw Chain, LLC, et al., 2007 U.S. Dist. LEXIS 42617 (D. Or., June 8, 2007). 3319

"resile" — "to return to or tend to return to a prior or original position in a manner that contributes, at least in part, to the lodging of the member in the hole. Completely returning to a prior or original position, though included, is not required." Smith & Nephew, Inc., et al. v. Arthrex, Inc., 511 F. Supp. 2d 1046 (D. Or. 2007). 3323

"resilient" — "means that 'the information tab is made of material which recoils back to its original shape.'" A&E Products Group, L.P. v. Mainetti USA Inc., et al., 2002 U.S. Dist. LEXIS 24280 (S.D.N.Y., Dec. 28, 2002). 3325

"resilient and compressible material" — "a material that will change shape as force is applied by a foot, and which will return to substantially the same shape when the force is removed." Nike, Inc. v. Adidas America, Inc., et al., 2006 U.S. Dist. LEXIS 91011 (E.D. Tex., Dec. 18, 2006). 3326

"cantilevered resilient arm" — "is elastic enough to be pressed downward toward the rail web and under the rail head during installation, and has a tendency to spring back to its original shape after being pressed into position." RFR Industries, Inc. v. Century Steps, Inc., et al., 1999 U.S. Dist. LEXIS 15212 (N.D. Tex., Sept. 23, 1999). 3327
"means exhibiting resilient characteristics" — "The phrase 'exhibiting resilient characteristics' is not a second function performed by that 'means'; rather, the phrase further defines characteristics of that 'means.' It is therefore, appropriate, indeed mandatory under 35 U.S.C. § 112, P 6, to look to the corresponding structure in the specification to ascertain the meaning of the phrase. As already noted, that corresponding structure, 'a flexible rubber-like diaphragm,' '080 patent, col. 4, ll. 54-55, is 'resilient' in the sense that it tends to return to its original shape, not just its original position. We therefore conclude that the phrase 'exhibiting resilient characteristics' in the '080 patent requires initial shape deformation." Transclean Corp., et al. v. Bridgewood Services, Inc., 290 F.3d 1364 (Fed. Cir. 2002). 3328 "I would hold that the trial court properly adopted the common dictionary definition of 'resilient' as proffered by Transclean." Id. (Clevenger, J., dissenting-in-part). 3329

"resilient member" — "a member capable of returning to its original shape when deformed." JVW Enterprises, Inc. v. Interact Accessories, Inc., et al., 2002 U.S. Dist. LEXIS 27885 (D. Md., Feb. 1, 2002). 3330

"a resilient portion" — "an elastic or springy portion of the hinged money clip." Storus Corp. v. Restoration Hardware, Inc., et al., 2007 U.S. Dist. LEXIS 25953 (N.D. Cal., Mar. 22, 2007). 3331

"a resilient retaining member" — "an elastic or springy holding and securing member." Storus Corp. v. Restoration Hardware, Inc., et al., 2007 U.S. Dist. LEXIS 25953 (N.D. Cal., Mar. 22, 2007). 3332

[i] "resilient seal"; [ii] "resilient seal element" — [i] "wherein, upon compression, the structure changes shape and, upon removal of the compression, the structure returns to its original shape"; [ii] "a sealing structure wherein, upon compression, the structure changes shape and, upon removal of the compression, the structure returns to its original shape." ICU Medical, Inc. v. RyMed Technologies, Inc., 2009 U.S. Dist. LEXIS 112546 (D. Del., Dec. 3, 2009). 3333

"resilient support members" — "a partly elastic and rubber-like substance that returns freely to its previous position, shape or condition, and where the elastic rubber-like portion has the characteristic of a variable change in load per unit deflection." Precor Inc. v. Brunswick Corp., et al., 2001 U.S. Dist. LEXIS 26341 (W.D. Wash., Jul. 31, 2001). 3335

"first and second resiliently biased spring means carried on said coupling and disposed within said first and second pockets, respectively, and directed to urge an element wall against a wall of said coupling upon insertion of said element wall between said outer and inner walls" — "The language in claim 1 recites insufficient structure to rebut the presumption that § 112, P 6 applies." ADC Telecommunications, Inc. v. Panduit Corp., 200 F. Supp. 2d 1022 (D. Minn. 2002). 3336

"resiliently deformable sealing caps removably attached to said tubes" — "a sealing cap that can be compressed by pressure or stress and still bounce or spring back into shape after the pressure is removed." Applera Corp., et al. v. MJ Research Inc., et al., 292 F. Supp. 2d 348 (D. Conn. 2003). 3337
"resiliently lined yoke" — "a yoke or clamp lined with a material that is capable of being elastically or reversibly deformed." Forest Group, Inc. v. Bon Tool Co., et al., 2007 U.S. Dist. LEXIS 10487 (S.D. Tex., Feb. 15, 2007). 3339 "A yoke or clamp lined with a material that is capable of being elastically or reversibly deformed. The lining must be distinct from the yoke or clamp itself, but need not be made of a different material." Warner Manufacturing Co. v. Armstrong, et al., 504 F. Supp. 2d 589 (D. Minn. 2007). 3339

"resin coating" — "the term 'resin coating' is construed to mean that the coating thickness must be at least three times the maximum glitter particle dimension. ... the term 'resin coating' is properly interpreted as meaning a two-part mixture." Nichols, et al. v. Strike King Lure Co., et al., 2000 U.S. Dist. LEXIS 15781 (N.D. Tex., Oct. 25, 2000). 3340

"resistance assembly" — "the weight stack meaning weight stack 124 or weight stack 12 defined in the specification as support frame 34 with vertical support members 36 aligned to support the weight stack plates." Free Motion Fitness, Inc. v. Cybex International, Inc., et al., 311 F. Supp. 2d 1297 (D. Utah 2003). 3341

"said protective barrier device is resistant to ultra violet, biological, and chemical degradation" — "The words themselves are clear and any additional construction by the Court is unnecessary and unsupported by intrinsic evidence." Armor Screen Corp. v. Storm Catcher, Inc., et al., 2009 U.S. Dist. LEXIS 33407 (S.D. Fla., Mar. 10, 2009). 3342

"magnetic members respectively secured in the free ends of said arms" — "horizontally oriented magnetic members connected in the respective end portions of the auxiliary arms, in a manner such that the connection is not likely to fail or give way." Apex Eyewear, Inc., et al. v. E'Lite Optik, Inc., 2007 U.S. Dist. LEXIS 76024 (N.D. Tex., Oct. 12, 2007). 3345

"responsive to exhaust pressure" — "The Court [...] will not read the word 'only' into the claims of the '346 patent. ... A device that has a braking mechanism responsive to exhaust pressure falls within the '346 patent, whether or not such braking mechanism is responsive to something else at the same time." Air Turbine Technology, Inc. v. Atlas Copco AB, et al., 295 F. Supp. 2d 1327 (S.D. Fla. 2003). 3346

"resting on" — "To require a construction that the burner be in contact with the base is unsupported and inconsistent with the disclosure of the patent." Produits Berger S.A., et al. v. Schemenauer, et al., 2007 U.S. Dist. LEXIS 10294 (E.D. Tex., Feb. 14, 2007). 3350

"peripheral portions of the plate being restrained from movement relative to an interior portion of the plate in a direction substantially perpendicular to a major axis of the shoe" — "the peripheral portions of the flexible plate are prevented from changing their place or position as compared to a portion that is close to the center of the plate in any direction that is substantially at a right angle to a heel-to-toe axis of the shoe, including the medial-to-lateral and vertical directions." Akeva L.L.C. v. Adidas America, Inc., 2005 U.S. Dist. LEXIS 11213 (M.D.N.C., May 17, 2005). 3351

"resultant vibratory force" — "vector force in three dimensional space resulting from one or more forces that is applied to a vibratory trough of a conveyor." General Kinematics Corp. v. Carrier Vibrating Equipment, Inc., 2009 U.S. Dist. LEXIS 65081 (N.D. Ill., Jul. 27, 2009). 3353

"retain at least 2.0% and no more than 3.0% phosphorous by weight of fabric" — "The requirement that the fabric retain a certain amount of phosphorous refers solely to the state of the fabric after the wash and boil procedure, without any reference to the level of phosphorous existing before the procedure." Itex, Inc., et al. v. Westex, Inc., et al., 2010 U.S. Dist. LEXIS 72685 (N.D. Ill., Jul. 20, 2010). 3354

"retainably removing" — "removing the container from the container holder into the carriage frame assembly in a controlled manner." Crane Co., et al. v. Sandenvendo America, Inc., et al., 2009 U.S. Dist. LEXIS 47509 (E.D. Tex., Jun. 5, 2009). 3355

"retainer assembly" — "refers to (1) a device that retains all of the bone engaging fasteners and (2) a separate device that attaches the retaining device to the plate." Cross Medical Products, Inc. v. Medtronic Sofamor Danek, Inc. et. al., 2005 U.S. Dist. LEXIS 6566 (C.D. Cal., Apr. 8, 2005). 3359

"retainer means comprising at least one protrusion molded into the surface of the central portion of the lid opposite said access strip" — "recites sufficient structure to overcome the presumption that § 112, P 6 applies." Bailey v. Dart Container Corp., et al., 157 F. Supp. 2d 110 (D. Mass. 2001). 3360

"retainer means comprising at least one protrusion molded into the surface of the central portion of the lid opposite said access strip, said retainer means being shaped and located to capture and releasably maintain said access strip in the open position" — "is not a means plus function clause." Bailey v. Dart Container Corp., 980 F. Supp. 560 (D. Mass. 1996). 3361

"retaining a first portion of the cover in the expanded position and further forcing a second portion of the cover against the overlying portion of the separated tissue layer to further expand such overlying portion only" — "keeping the first portion of the cover in the expanded position and further pushing a second portion of the cover against the portion of the separated tissue that lies over it to further expand only such overlying tissue." Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006).

"retaining assembly including a cross brace member" — "a machine part (or parts) that acts as a whole to retain the table legs, and that may consist of only a cross brace member, or there may be other parts in addition to the cross brace member." Lifetime Products, Inc. v. Correll, Inc., 323 F. Supp. 2d 1129 (D. Utah 2004).

"retaining device" — "a mechanism configured removably to secure the filter and other parts within the passageway." Aqua-Lung America, Inc. v. American Underwater Products, Inc., et al., 2009 U.S. Dist. LEXIS 18172 (N.D. Cal., Feb. 26, 2009).

"retaining member" — "a structural element separate and distinct from the female fastener adapted to come into physical contact with the legs of the female fastener to restrain the position of the head portion on the outer portion of the seat shell." American Seating Co. v. Freedman Seating Co., 450 F. Supp. 2d 765 (W.D. Mich. 2006).

"retaining one edge of the tissue flap connected to surrounding tissue, moving the flap away from the edge so that it overlies an adjacent recipient area and applying the flap to such area" — "keeping in position one line of intersection between the tissue flap and tissue that extends on all sides of and joins to the tissue flap, moving the flap in a direction other than towards the intact border so that it covers a receiving area near to the differentially expanded tissue flap and applying the flap to such area." Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006).

"retaining said stand portions in face-to-face engagement with the underside of said platform and permitting limited displacement of said bearing members in a horizontal direction"; "retaining said bearing means in sliding engagement with the underside of said platform and permitting limited displacement of said bearing members in a horizontal plane" — "These terms do not contain a limitation that the bearing member cannot move in a non-horizontal direction." Sunbeam Products, Inc. v. HoMedics, Inc., 613 F. Supp. 2d 1041 (W.D. Wis. 2009).

"reticle image"; "reticle pattern" — "one of a series of lines, dots or crosshairs, capable of serving as a reference for centering or otherwise adjusting an optical element in a telescope." Lasermax, Inc. v. Glatter, 2005 U.S. Dist. LEXIS 17136 (S.D.N.Y., Aug. 17, 2005).
"retract" — "limit[s] the claims of the '283 patent to a stud that retracts until the tip of the stud is flush with the immediately surrounding surface of the sole or cleat." Chet's Shoes, Inc. v. Kastner, 2010 U.S. Dist. LEXIS 84212 (D. Vt., Aug. 16, 2010).

"retractable backing surface" — "a backing surface transverse to the table top which supports the stack of paper and withdraws, or draws back or in, to transfer the stack to the cart." Roll Systems, Inc. v. Wallace Computer Services, Inc., 901 F. Supp. 389 (D. Mass. 1995).

"retractable filter cover" — "an element of a device which can move from a first position where it prevents fluid flow into the device, to a second position, where it allows fluid flow into the device." Aqua-Lung America, Inc. v. American Underwater Products, Inc., et al., 2009 U.S. Dist. LEXIS 18172 (N.D. Cal., Feb. 26, 2009).

"return duct from said intercooler" — "conduit for conveying air back from the externally mounted intercooler (defined)." Rice v. Honeywell International, Inc., et al., 2006 U.S. Dist. LEXIS 89235 (E.D. Tex., Nov. 21, 2006).

"rib" — "an elongated structural element, running radially along the flange that axially extends to a height sufficient to engage a second flange's annular rim." Vandor Corp. v. Wilson, et al., 149 F. Supp. 2d 633 (S.D. Ind. 2001).

"ribbon stock" — "refers to the material from which the preferred-embodiment 'cutting blade' is constructed." SDS USA, Inc. v. Ken Specialties, Inc., 107 F. Supp. 2D 574 (D.N.J. 2000).

"riding mower" — "a mower on which a person can ride." Toro Co. v. Textron, Inc., et al., 502 F. Supp. 2d 904 (D. Minn. 2007).

"rigid" — "require[s] that the claimed suture be sufficiently rigid to be pushed through meniscus tissue without a pre-cut channel for the suture to follow." Bionx Implants, Inc., et al. v. Linvatec Corp., 299 F.3d 1378 (Fed. Cir. 2002).

"rigid" — "[requires] that the device be as firm as possible while still being sufficiently resilient to allow the device to be removed and replaced around the teeth and gingival." Dunhall Pharmaceuticals, Inc. v. Discus Dental, Inc., et al., 2000 U.S. App. LEXIS 26924 (Fed. Cir., Oct. 26, 2000) (unpublished).
"second rigid elongated member having a jaw end, a handle end, and an intermediate neck portion" — "requires a rigid member having two ends: one end ("the jaw end") that grasps a workpiece and another end ('the handle end') that receives a force to cause the jaw end to move in the manner specified in the claim." Applied Concepts, Inc. v. Olympia Industrial, Inc., 2000 U.S. Dist. LEXIS 22716 (W.D. Pa., Jun. 6, 2000). 

"a deep rigid heel seat to cup the calcaneus" — "a state of stiffness, or substantial inflexibility, that would not include 'semi-rigid.'" Schoenhaus, et al. v. Genesco, Inc., et al., 351 F. Supp. 2d 320 (E.D. Pa. 2005).

"rigid member" — "is unambiguous and therefore no construction is necessary." ICU Medical, Inc. v. B. Braun Medical, Inc., 344 F. Supp. 2d 663 (N.D. Cal. 2004).

"rigid mooring arm" — "is a clear and descriptive term that requires no further definition to one of ordinary skill in the relevant art. Moreover, the Court concludes that the term as used in Claim 1 is not limited to being 'separate' and 'hinged.'" Advanced Production and Loading, Inc. v. Single Buoy Moorings, Inc., et al., 2004 U.S. Dist. LEXIS 31081 (S.D. Tex., Apr. 26, 2004).

"rigid rim" — "requires that each flange be a separately identifiable 'rib or rim' that is used to attach the overall object to a separate object." HBB Limited Partnership v. Ford Motor Company, et al., 1996 U.S. Dist. LEXIS 4047 (N.D. Ill., March 29, 1996).

"rigidly attached" — "connected in a non-flexible, non-resilient manner (not necessarily entailing a continuous 360-degree weld or entire enclosure of the top and bottom portion of the axle)." Boler Co. v. Arvinmeritor, Inc., 2004 U.S. Dist. LEXIS 13365 (N.D. Ill., Jul. 16, 2004).

"rigidly connecting said axle to said beam" — "a) 'rigidly' means inflexibly, not resiliently, and b) 'connecting' is joining or fastening together." Boler Co. v. Arvinmeritor, Inc., 2004 U.S. Dist. LEXIS 13365 (N.D. Ill., Jul. 16, 2004).

"ring means"; "rigid"; "semi-rigid" — "'ring means' is nothing more than a ring, and that the remaining terms should simply be given their ordinary meanings. ... 'rigid' is taken to mean 'stiff' or 'not flexible'. Similarly, 'semi-rigid' is regarded to mean 'partly rigid' or 'somewhat flexible' (not 'substantially rigid')." Berry, et al. v. Sassy, Inc., 2006 U.S. Dist. LEXIS 86646 (M.D. Fla., Nov. 29, 2006).

"said latch being ring-shaped and being slidably received in said channel of said barrel for slidably receiving said tube therein" — "a curved band that encircles the tube." Windbrella Products Corp. v. Taylor Made Golf Co., Inc., 414 F. Supp. 2d 305 (S.D.N.Y. 2006).

"ring shaped support" — "uses plain words and the phrase has an ordinary meaning based on the constituent terms' general usage." ICU Medical, Inc. v. B. Braun Medical, Inc., 344 F. Supp. 2d 663 (N.D. Cal. 2004).

- 300 -
"riser card" — "a printed circuit board extending perpendicularly from, and being electronically connected to, the motherboard and having a plurality of expansion connectors into which expansion boards may be inserted." Tulip Computers, International B.V. v. Dell Computer Corp., 236 F. Supp. 2d 364 (D. Del. 2002).

"rivet" — "a short rod having a head formed on one end and an opposite end formed into a second head to produce a permanent joining of two or more parts." Advanced Fiber Technologies Trust v. J&L Fiber Services, Inc., 2010 U.S. Dist. LEXIS 95032 (N.D.N.Y., Sep. 13, 2010).

"robot"; "robotic manipulator"; "robotic arm" — "the moving parts of a robotic system made of links and joints, where the joints typically have motors that operate through a drive mechanism to move the joints, and the motors are typically actuated by a computer controller." Intuitive Surgical, Inc., et al. v. Computer Motion, Inc., 2002 U.S. Dist. LEXIS 14752 (D. Del., Jul. 12, 2002).

"robotic assembly" — "a machine consisting of a pair of horizontally mounted rail/rack assemblies, a vertically oriented shuttle bar that rides along the horizontal rails in a horizontal direction, a carrier frame that moves in the vertical direction along the shuttle bar, and a transfer mechanism that is mounted to and moves with the carrier frame and operates to retrieve a selected product." Crane Co., et al. v. Sandenvendo America, Inc., et al., 2009 U.S. Dist. LEXIS 47509 (E.D. Tex., Jun. 5, 2009).

"roller" — "an elongated body with a central portion between the sidewalls of the channel and ends which extend outward of the sidewalls of the channel." Innovative Office Products, Inc. v. SpaceCo, Inc., et al., 2007 U.S. Dist. LEXIS 62296 (E.D. Pa., Aug. 23, 2007).

"rotatable joint" — "a place where the D-shaped portion of the handle and central region are joined and are capable of rotation." One World Technologies, Ltd., et al. v. Rexon Industrial Corp., Ltd., et al., 2006 U.S. Dist. LEXIS 25324 (N.D. Ill., May 2, 2006).

"rotatable output member"; "cam assembly" — "a ball and ramp device, comprising two opposing members each having a ramped surface, and at least one ball inserted in between the two ramped ramped surfaces." BorgWarner, Inc., et al. v. New Venture Gear; Inc., 237 F. Supp. 2d 919 (N.D. Ill. 2002).
"wherein the handle is rotatably adjustable between at least 0° and 30° from horizontal measured when the arm is lowered and the rotary spindle is horizontal" — "the handle can be rotated at least 0° to 30°, measured from horizontal." *One World Technologies, Ltd., et al. v. Rexon Industrial Corp., Ltd., et al.*, 2006 U.S. Dist. LEXIS 25324 (N.D. Ill., May 2, 2006). 3410

"rotatably engaging" — "holding the tubular post fast in place, while allowing the tube to rotate." *John Mezzalingua Associates, Inc. v. Arris International, Inc.*, 298 F. Supp. 2d 813 (W.D. Wis. 2003). 3411 "I adhere to the initial construction of 'rotatably engaging' to mean 'holding the tubular post fast in place, while allowing the tube to rotate." *Id.*, 2003 U.S. Dist. LEXIS 24730 (W.D. Wis., Nov. 14, 2003). 3412

"rotatably mounted" — "mounted in a way such that it is capable of being rotated." *Robinson v. Advanced Decoy Research, Inc., et al.*, 519 F. Supp. 2d 1087 (S.D. Cal. 2007). 3413

"rotatably therewith" — "supported by the cam shaft and turns on or with the cam shaft." *American Honda Motor Co., Inc. v. Coast Distribution System, Inc.*, 609 F. Supp. 2d 1032 (N.D. Cal. 2009). 3415

"rotating" — "is to be given its ordinary meaning. ... therefore ... the ITC was correct in interpreting the term 'rotating' to mean merely a phase shift in the desired waveform." *Enercon GmbH, et al. v. International Trade Commission*, 151 F.3d 1376 (Fed. Cir. 1998). 3416

"rotating each sanding member about its longitudinal axis in a preselected first direction during a first portion of each circle of revolution and rotating each sanding member in a second direction, opposite to the first direction, during a second portion of each circle of revolution" — "requires a finishing method whereby a sanding member must change direction twice when it is rotated through a circle of revolution, i.e., 360 degrees." *Development Center Hansen & Hundebol A/S, et al. v. QW, Inc., et al.*, 1995 U.S. Dist. LEXIS 18816 (N.D. Ga., May 23, 1995). 3417

"rotor rotation sensor" — "a device that detects the rotation of the rotor and provides a signal that the controller uses to determine when a desired amount of particulate matter has been released." *Rosen's, Inc., et al. v. Van Diest Supply Co., et al.*, 2004 U.S. Dist. LEXIS 5435 (D. Minn., Mar. 30, 2004). 3419

"contact lens having a rounded edge" — "contact lens whose posterior surface has a substantially smooth, curved outer peripheral edge." Coopervision, Inc. v. Ciba Vision Corp., 2007 U.S. Dist. LEXIS 51432 (E.D. Tex., July 16, 2007).

"runner filler" — "a component that partially fills the intake runner, thereby forming at least a portion of the intake passageway." Briggs & Stratton Corp. v. Kohler Co., 398 F. Supp. 2d 925 (W.D. Wis. 2005).

- S -

"safety edge" — "edge positioned over one of the major surfaces and spaced from the perimeter." Jennmar Corp. v. Excel Mining Systems, LLC, 2009 U.S. Dist. LEXIS 60836 (W.D. Pa., Jul. 16, 2009).

"a safety wheel which is rotatably mounted to a free end of said supporting arm to support a front portion of said scooter body and prevent said scooter from being flipped over" — "a wheel, which is mounted to said supporting arm in a manner that allows the wheel to rotate, to support a front portion of said scooter body and prevent said scooter from being flipped over." PlaSmart, Inc. v. Wincell International, Inc., 2007 U.S. Dist. LEXIS 83707 (S.D.N.Y., Nov. 7, 2007).

"said"; "the" — "Where subsequent uses of a claim term within a claim make reference to the first usage as an antecedent (through the use of introductory definite articles such as 'said' or 'the'), the claim term must be interpreted consistently across all such uses." Microprocessor Enhancement Corp., et al. v. Texas Instruments Inc., 2007 U.S. Dist. LEXIS 23768 (C.D. Cal., Feb. 8, 2007).
"said bottom wall comprising an inner, and an outer bottom plenum below said combustion chamber" — "the limitation requires: a combustion chamber with a plate-like bottom of some sort that forms the boundary between the combustion chamber and the inner plenum, where the bottom plate is a thing separate from and below the burner and logs; an inner bottom plenum below the combustion chamber; and an outer bottom plenum below the combustion chamber." *Fireplace Manufacturers, Inc. v. Hearth Technologies, Inc.*, 1997 U.S. Dist. LEXIS 21966 (D. Minn., Dec. 10, 1997).3433

"said feed wheel" — "clearly is meant to be an inherent component of the 'feed section.'" *Maytag Corp. v. Whirlpool Corp.*, 2004 U.S. Dist. LEXIS 31091 (S.D. Iowa, Nov. 23, 2004).3435

"said first chamber being defined by said partition [containing the groove] and said back wall" — "Nu-Kote asserts that claim 1 cannot read on cartridges that contain more than one ink reservoir chamber, given the claim's precise definition of the first chamber. ... We agree with Canon that the claimed 'first chamber' may be subdivided into multiple ink chambers." *Canon Computer Systems, Inc., et al. v. Nu-Kote International, Inc.*, 134 F.3d 1085 (Fed. Cir. 1998).3436

"said linear hydraulic drive units transmitting downward forces from the transverse drive beams to the mounting frame members" — "requires no more than that the drive unit, taken as a whole, transmit the downward force. English syntax simply does not require that all the components, or even more than one of the specified components, contribute to the transmission of forces. As long as the downward forces flow from the drive units (or any portion of the drive units) downward, the claim language requires nothing more." *Foster v. Hallco Manufacturing Co., Inc., et al.*, 1997 U.S. App. LEXIS 18989 (Fed. Cir., Jul. 14, 1997) (unpublished).3438

"said lower joint member having a configuration to establish a clearance with the configuration of the upper joint member of an adjacent panel during angular articulation of said adjacent panels" — "requires no construction." *Wayne-Dalton Corp. v. Amarr Co.*, 2007 U.S. Dist. LEXIS 65382 (N.D. Ohio, Sept. 5, 2007).3439

"said napkin edges" — "the portion between the embossed channels and the outermost edges of the absorbent, alternatively referred to in the patent as the 'sides of the pad.'" *Kimberly-Clark Corp., et al. v. Tyco Healthcare Retail Group*, 456 F. Supp. 2d 998 (E.D. Wis. 2006).3440
"said operator signal requesting said engine control determine a zero torque parameter value for said engine output shaft that approximates a zero torque load on the connection between said engine and said transmission, and said engine control being operable to control said engine to achieve said zero torque parameter value" — "These phrases mean that the engine control actually determined a zero torque parameter value and also that the engine achieved the determined zero torque parameter value, assuming that there had been an operator signal to begin the process. This claim does not require that the condition of actual zero flywheel torque be achieved, but that the determined zero torque parameter value be reached. That is, a zero torque parameter value was first determined and then the engine was controlled and actually reached the 'determined' zero torque value. The claim specifically requires that the engine control be operable to achieve 'said' zero torque parameter value, which refers back to the determined zero torque parameter value, and not that the engine shall reach the condition of actual zero flywheel torque." Meritor Transmission Corp. v. Eaton Corp., 2007 U.S. Dist. LEXIS 13166 (W.D.N.C., Feb. 23, 2007).3441

"said pins are each comprised of a threaded bolt passing through a hole in said storage structure and a pin member positioned around said bolt such that said pin member is tightly engaged with a portion of the inside surface of said storage structure; said pin member having a generally cylindrical body portion and an inwardly extending tapered nose portion; the diameter of said cylindrical body portion being only slightly less than the diameter of a respective one of said bores to provide a snug fit between said body portion and said respective one of said bores; and the diameter of said bolt being less than the diameter of said hole in said storage structure to help relieve said bolt from shear forces exerted between said storage structure and said cover member" — "does not need construction." GSI Group, Inc. v. Sukup Manufacturing Co., 2006 U.S. Dist. LEXIS 70100 (C.D. Ill., Sept. 27, 2006).3443

"taking a first reflectance reading from a dry first surface of said porous matrix" — "The district court held that the claims can not be literally infringed when the dry reflectance reading is not taken from the same test strip that is used in the test, but is measured in advance at the factory. We conclude that the district court correctly interpreted the claims." Lifescan, Inc. v. Home Diagnostics, Inc., 76 F.3d 358 (Fed. Cir. 1996).3444

"a memory for storing characteristic signal samples produced by scanning said preselected segments of bills of different denominations with said scanning head" — "the characteristic signal samples must be produced and stored by the specific scanning head that is present in the device." Cummins-Allison Corp. v. Glory, Ltd., et al., 457 F. Supp. 2d 843 (N.D. Ill. 2006).3445
"said side walls curving downwardly and inwardly towards said conveyor means such that said dump body defines a substantially semi-circular cross-sectional configuration for guiding and evenly deflecting all of the materials within said body towards said conveyor means" — "This claim element requires that the side walls are curved, and that they curve downwardly and inwardly toward the conveyor of the dump body. The requirement that the 'dump body defines a substantially semi-circular cross-sectional configuration' means that the dump body, viewed from either end, is approximately in the shape of a semi-circle. 'Substantially' is used to mean 'approximately.' Thus, the cross section of the dump body must be approximately in the shape of a semi-circle. 'Deflect,' in its ordinary meaning, means to change course. A semi-circle is 'one half of a geometric shape having every point equidistant from a fixed center.'" Highway Equip. Co., Inc. v. Cives Corp., et al., 476 F. Supp. 2d 1079 (N.D. Iowa 2007).

"whereby a substantially tasteless super-purified smoke is created" and "treating meat having freezing point with said tasteless super-purified smoke" — "The use of 'said' makes it clear that 'said tasteless super-purified smoke' refers to the 'substantially tasteless super-purified smoke' that is a result of the processes previously described in the Kowalski Patent." Tuna Processors, Inc. v. Hawaii International Seafood, Inc., et al., 2007 U.S. Dist. LEXIS 77396 (D. Haw., Oct. 17, 2007).

"said zinc anode" — "Neither the Commission nor the Intervenors argued that they did not understand the intended scope because of the absence of an antecedent. The Commission erred in holding that the need to construe a claim, or the proffer of alternative constructions, renders the claim indefinite." Energizer Holdings, Inc., et al. v. International Trade Commission, et al., 435 F.3d 1366 (Fed. Cir. 2006).

"a drive for rotating the plate cylinder and the blanket cylinder at the same speed" — "we find that the 'same speed' element of the claim requires the use of a conventional, rather than harmonic drive which rotates the cylinders such that the surface speed at the nip is the same and which consequently does not produce any image migration." Heidelberg Harris, Inc. v. Mitsubishi Heavy Industries, Ltd., et al., 1998 U.S. Dist. LEXIS 964 (N.D. Ill., Jan. 27, 1998). "We begin by noting the parties' agreement that the phrase 'same speed' in the 'drive' limitation refers to 'same surface speed.' The critical question is whether 'same surface speed' also requires the absence of image migration, as Heidelberg argues and the magistrate judge held. We conclude that it does not." Id., 2000 U.S. App. LEXIS 23757 (Fed. Cir., Sept. 18, 2000) (unpublished).

"sample-receiving cell" — "the cavity into which the liquid sample enters -- and not including the walls surrounding the cavity." Lifescan, Inc. v. Roche Diagnostics Corp., 2007 U.S. Dist. LEXIS 70283 (N.D. Cal., Sept. 11, 2007).

"sample well" — "a container or reservoir for the sample." Roche Diagnostics Corp., et al. v. Apex Biotechnology Corp., et al., 455 F. Supp. 2d 840 (S.D. Ind. 2005).
"sandwich panel" — "The Defendants argue that the meaning of the term 'sandwich panel' does not include the understanding that such a structure can be formed as one piece, but only formed from the unification of different components. ... The Defendants' objection is denied." Martin Marietta Materials, Inc. v. Bedford Reinforced Plastics, Inc., et al., 2006 U.S. Dist. LEXIS 59219 (W.D. Pa., Aug. 18, 2006). 3455

"sandwiched between" — "mean[s] that the U-shaped structure extends at least partially 'over' (and 'under') the bridge." Aspex Eyewear, Inc., et al. v. Altair Eyewear, Inc., 386 F. Supp. 2d 526 (S.D.N.Y. 2005). 3456

"a set gypsum core sandwiched between two sheets of porous glass fiber mat" — "the district court's interpretation of 'sandwiched' as not precluding the flow through of the gypsum core on one of the fiberglass mats should have been applied to that term in [this] claim 11." Georgia-Pacific Corp. v. United States Gypsum Co., et al., 195 F.3d 1322 (Fed. Cir. 1999). 3457

"edge which is scalloped between projecting apices of the wire member/structure" — "the edge of the material may be scooped out or removed between or underneath each projecting crest of the wire." Edwards Lifesciences, LLC, et al. v. Cook Inc., et al., 2007 U.S. Dist. LEXIS 55634 (N.D. Cal., July 23, 2007). 3458

[i] "scan"; [ii] "scanner"; [iii] "scan a surface of the workpiece" — [i] "deflecting the beam of P-polarized light along a relatively narrow scan path"; [ii] "a component or combination of components employing a deflector such as an acousto-optical deflector for directing the beam of P-polarized light along a relatively narrow scan path"; [iii] "the surface of the workpiece is inspected by deflecting the beam of P-polarized light along a relatively narrow scan path." ADE Corp. v. KLA-Tencor Corp., 252 F. Supp. 2d 40 (D. Del. 2003). 3459

"scanning head" — "an assembly configured to cause the probe and sample to move relative to one another in three dimensions, including a back-and-forth scan in two dimensions." Hysitron Inc. v. MTS Systems Corp., 2009 U.S. Dist. LEXIS 36108 (D. Minn., Apr. 28, 2009). 3460

"scattered from the surface of the workpiece" — "diffused or dispersed from the surface of the workpiece." ADE Corp. v. KLA-Tencor Corp., 252 F. Supp. 2d 40 (D. Del. 2003). 3461

"scraping edges" — "the edges formed at the tip of a bit by the longitudinal scraping surfaces and relief surfaces, which edges dig into and engage the damaged fastener upon rotation." Eazypower Corp. v. Alden Corp., 509 F. Supp. 2d 737 (N.D. Ill. 2007). 3463

"screen printing" — "Because the appellant has not shown that, from the point of view of one of ordinary skill in the art, ink jet printing was a conventional method of printing images on foodstuffs at the time the application for the '394 patent was filed, 'screen printing' may not be construed to cover ink jet printing." Kopykake Enterprises, Inc. v. Lucks Co., 264 F.3d 1377 (Fed. Cir. 2001). 3465

"screw" — "is not limited to a unitary structure." *Caught Fish Enterprises, LLC, et al. v. Contek, Inc.*, 509 F. Supp. 2d 954 (D. Colo. 2007). 3468

"plurality of screw holes" — "is entitled to a broad interpretation, a meaning that encompasses all types of openings through which screws can be passed to attach a plate to the bone." *Synthes (U.S.A.) v. DePuy Ace Medical Co.*, 1999 U.S. Dist. LEXIS 18173 (E.D. Pa., Nov. 29, 1999). 3470

"to seal"; "a seal" — "to make contact with another surface so as to substantially stop the passage of solids and liquids"; "a means for substantially stopping the passage of liquids. ... The specification does not require the term to carry only the most restrictive meaning that the contact between the shield and face 'not allow' the passage of liquids or solids." *Protective Optics, Inc. v. Panoptx, Inc.*, 458 F. Supp. 2d 1053 (N.D. Cal. 2006). 3473

"to engage about and seal off said aperture to exclude entry of foreign matter"; "to seal off the spout and exclude entry of foreign matter" — "only require a 'substantial' seal resulting from the physical contact." *Scholle Corp. v. Packaging Systems, LLC*, 2001 U.S. App. LEXIS 11772 (Fed. Cir., Jun. 6, 2001) (unpublished). 3476

"sealed" — "the requirement in all of the claims ... that the lamp assembly have a 'sealed' lamp cavity or socket enclosure means that the socket enclosure and the lens that together form the lamp assembly must themselves be in sealed engagement." *GTY Industries v. The Genlyte Group, Inc.*, 1995 U.S. Dist. LEXIS 21085 (C.D. Cal., Dec. 18, 1995). 3477
"said second lumen being sealed at a distal end thereof to prevent fluid communication between [chamber 1] and said second lumen" — "The district court correctly concluded that this limitation requires an element that 'completely seals off the area between the chamber holding the amniotic fluid and the second lumen.' Utah Medical Products, Inc. v. Clinical Innovations Associates, Inc., et al., 2000 U.S. App. LEXIS 31756 (Fed. Cir., Dec. 13, 2000) (unpublished). 3478

"located in sealing relation with" — "located tightly or securely against." Parker-Hannifin Corp., et al. v. Baldwin Filters, Inc., et al., 2010 U.S. Dist. LEXIS 68906 (N.D. Ohio, Jul. 9, 2010). 3481

"sealing trough" — "a recess in the outer surface of the second end cap that forms a seal with a housing to inhibit the passage of water and other contaminants." Donaldson Co., Inc. v. Baldwin Filters, Inc., 481 F. Supp. 2d 974 (D. Minn. 2007). 3482

"sealingly bonded" — "held together tightly or securely by bonding." Parker-Hannifin Corp., et al. v. Baldwin Filters, Inc., et al., 2010 U.S. Dist. LEXIS 68906 (N.D. Ohio, Jul. 9, 2010). 3483

"seam" — "the place where at least two pieces of fabric are joined by at least two rows of stitches." Taltech Ltd. v. Esquel Enterprises Ltd., 410 F. Supp. 2d 977 (W.D. Wash. 2006). 3484

"seat" — "the structure intended to be sat in or on." Dorel Juvenile Group, Inc. v. Graco Children's Products, Inc., 2004 U.S. Dist. LEXIS 20501 (S.D. Ind., Sept. 9, 2004). 3487

"to seat" — "We agree with BASC that the district court did not err in construing the term 'to seat' as not requiring an engagement between the feet and the cover." Ball Aerosol and Specialty Container, Inc. v. Limited Brands, Inc., et al., 555 F.3d 984 (Fed. Cir. 2009). 3488

"seat assembly" — "exclude[s] swivel housing 254 and bracket 242." Bruno Independent Living Aids, Inc. v. Acorn Mobility Services Ltd., et al., 301 F. Supp. 2d 914 (W.D. Wis. 2003). 3489

"seated within the cavity" — "situated, positioned or located within the cavity." ICU Medical, Inc. v. Alaris Medical Systems, Inc., 2006 U.S. Dist. LEXIS 96077 (C.D. Cal., July 17, 2006). 3490

"first and second seating discrete surfaces" — "two seats that are distinct from other areas within the cockpit area, with each seat accommodating a paddler or occupant." Old Town Canoe Co. v. Glenwa, Inc., 229 F. Supp. 2d 1151 (D. Or. 2001). 3491 "The word 'discrete' as a modifier is consistent with this court's construction of 'seating surfaces' as a seat structurally distinct from the deck surface." Id., 55 Fed. Appx. 918 (Fed. Cir., Jan. 14, 2003) (unpublished). 3492
"seating surfaces" — "'177 patent: aft, middle and forward locations in the cockpit area that are contoured to provide comfortable seating areas and on which passengers are intended to sit, with the footwells associated with the aft seating surface straddling transversely the middle seating surface, and the footwell portions of the footwell associated with the middle seating surface straddling transversely the forward seating surface'; "'063 patent: locations in the cockpit area on which passengers are intended to sit, and separated longitudinally by a spacing surface, with any seat that is located behind another seat having footwells straddling transversely the forward seating surface." Old Town Canoe Co. v. Glenwa, Inc., 229 F. Supp. 2d 1151 (D. Or. 2001). The references to 'seating surfaces' in all three patents must be construed as clearly delineated areas on which passengers are intended to sit. The delineation must be through shape, material, or other differentiation from the surrounding deck such that the 'seating surfaces' are clearly different from the other surfaces on the top deck of the craft." Id., 55 Fed. Appx. 918 (Fed. Cir., Jan. 14, 2003) (unpublished).

"a second predetermined pressure above saido0 first predetermined pressure" — "a pressure, determined before the second pressurization stage begins, which is above the first predetermined pressure and which conforms the liner substantially precisely to the interior of the host pipe." Pipe Liners, Inc., et al. v. Pipelining Products, Inc., 1999 U.S. Dist. LEXIS 17271 (D. Del., Oct. 22, 1999).

"a second screw receiving opening in said head having its axis within the femoral neck, and a third screw receiving opening in said head having an axis generally transverse to the axis of the femoral neck and crossing the axis of the second opening" — "The nail includes a second opening for a screw in the head of the nail that has an axis, which in use can align with the femoral neck. The nail includes a third opening for a screw in the head of the nail that has an axis that is angled with respect to the axis of the femoral neck, and crosses with the axis of the second screw opening." Smith & Nephew, Inc. v. Zimmer, Inc., 2009 U.S. Dist. LEXIS 16691 (W.D. Tenn., Mar. 2, 2009).

"second transmission" — "a second compact, enclosed unit of gears or the like for the purpose of transference of force between machines or mechanisms, often with changes of torque and speed." Key Energy Services, Inc. vs. C.C. Forbes, LLC, et al., 2010 U.S. Dist. LEXIS 67292 (E.D. Tex., Jul. 7, 2010).

"a second wall disposed outwardly of said first upstanding annular wall and defining therebetween a guide chamber" — "to form a guide chamber 'therebetween,' the outwardly disposed second wall must be 'upstanding' and must surround the annular first wall. ... the second wall does not have to be 'annular.' Instead it may be square, or in the shape of a pentagon, or in any other shape that fulfills the in-all-events requirements that it must be upstanding and must completely surround the first upstanding annular wall." Maytag Corp. v. Whirlpool Corp., 95 F. Supp. 2d 888 (N.D. Ill. 2000).
"secondary display" — "a second display in a multi-display system."  

"central circulation section" — "a central high-pressure plenum."  

"upper section including an interface for receiving and retaining a firearm accessory" — 
"Severability is not implicit in the word 'section,' either as a matter of common English usage or as a matter of internal consistency within the '152 Patent. ... The court will construe 'upper section including an interface for receiving and retaining a firearm accessory' as 'part or portion of the accessory clamp that includes an interface for receiving and retaining a firearm accessory and which is higher in physical position than the lower section of the accessory clamp."  

"secured" — "as used in the '300 patent to mean shoes with rear soles that are secured to the shoe, but not permanently fixed."  

"secured" — "to be made fast or firm, as by attaching."  

"secured" — "encompasses more than a mechanism for holding together, but actually includes a security element. The Court construes the term as meaning 'to make safe.'"  

"secured across" — "The district court correctly construed the term 'secured across' in claim 1. There is nothing in the specification which indicates that the term 'secured across' requires a specific securing structure between the first and the second plate."  
Sandt Technology, Ltd. v. Resco Metal and Plastics Corp., et al., 264 F.3d 1344 (Fed. Cir. 2001).

"a rear side with a first magnetic member secured thereto" — "a first magnetic member with horizontal orientation is connected in a manner such that the connection is not likely to fail or give way to the side of the extension facing inward toward the wearer when the primary spectacle frame is worn."  

"said bottom surface having a filter secured thereto" — "mean[s] that the filter must be firmly attached to the bottom surface in some way, but does not require direct contact between the filter and the bottom surface, nor does it require the elimination of the filter housing."  

"secured to" — "attached using attachment means, such as an adhesive or mechanical type fasteners that might be used with material that is selected for the top cushion and foundation."  

"secured to" — "held fast."  

"secured to" — "held fast."  
"secured to said golf bag" — "means that a strap end is attached to the outer surface of the golf bag by a securing means." Izzo Golf, Inc. v. King Par Golf, Inc., 2006 U.S. Dist. LEXIS 51199 (W.D.N.Y., July 26, 2006). 3514

"secured to said rear side" — "mean[s] that each first magnetic member is connected to the rear side of the corresponding extension or to other portions of the primary spectacle frame in a manner such that the connection is not likely to fail or give away." Aspex Eyewear, Inc., et al. v. Miracle Optics, Inc., 2003 U.S. Dist. LEXIS 26355 (C.D. Cal., Feb. 14, 2003). 3515

"fixed opposite end portions which are secured to the mounting frame members" — "does not require 'secured' to mean a direct connection." Foster v. Hallco Manufacturing Co., Inc., et al., 1997 U.S. App. LEXIS 18989 (Fed. Cir., Jul. 14, 1997) (unpublished). 3516

"securely fastening said ligature material" — "means that the loop must be secured so as to retain the endless loop in a tensive condition." Callicrate v. New Age Industrial Corp., Inc., 2005 U.S. Dist. LEXIS 8934 (D. Kan., Apr. 27, 2005). 3517

"securing member" — "a structure that is separate and distinct from the table top; a securing member cannot be an integral part of the table top." Lifetime Products, Inc. v. GSC Technology Corp., et al., 321 F. Supp. 2d 938 (N.D. Ill. 2004).

"securing said protective barrier to said structure" — "connecting at least one edge of the protective barrier device to the structure." Armor Screen Corp. v. Storm Catcher, Inc., et al., 2009 U.S. Dist. LEXIS 33407 (S.D. Fla., Mar. 10, 2009). 3521

"securing the graft into the opening by advancing an implant transversely into the opening and under the graft" — "mean[s] to secure the graft by impacting and not by rotating a screw-in type implant." Arthrex, Inc. v. DePuy Mitek, Inc., 2006 U.S. Dist. LEXIS 95465 (M.D. Fla., Oct. 16, 2006). 3522

"select" — "the plain language of the claim when read in light of the specification is clear that the term 'select' does not merely require a 'preference' for certain signals. Signals are to be specifically chosen based on whether or not they pass through irregularities in the container." National Recovery Technologies, Inc. v. Magnetic Separation Systems, Inc., et al., 166 F.3d 1190 (Fed. Cir. 1999). 3523

"select starting position" — "the position of a particular component, as chosen by the rider." SRAM Corp. v. Formula S.R.L., et al., 2009 U.S. Dist. LEXIS 29100 (N.D. Ill., Apr. 3, 2009). 3524

"selectable" — "refers to intake passageway positions and inlets that can be altered without disturbing the function of the cylinder head." Briggs & Stratton Corp. v. Kohler Co., 398 F. Supp. 2d 925 (W.D. Wis. 2005). 3525
"selected and combined such that the storage tank is able to withstand an environment of at least 2000 degrees F. for a period of time of at least two hours" — "there is nothing in the '144 patent's specification or prosecution history ... which provides any indication that these terms necessarily entail an intent-to-achieve-fire-resistance limitation. Furthermore, in giving the term 'selected and combined' its ordinary meaning to one of ordinary skill in the art, there is no such intent limitation. Thus, U-Fuel's argument that there is an intent element inherent in the term 'selected and combined' must be rejected."  *U-Fuel, Inc. v. Highland Tank & Manufacturing Co., Inc., et al.*, 228 F. Supp. 2d 597 (E.D. Pa. 2002).3526

"selected articles" — "merely means, as the normal meaning of those words connotes, some articles that can fit into a front-to-rear gap created by placing the shelf laterally inward from the side wall."  *Maytag Corp. v. Whirlpool Corp.*, 88 F. Supp. 2d 894 (N.D. Ill. 2000).3527

"with the rubber selected from the group consisting of natural polymers and synthetic high polymers"; "with said rubber particles having an outer surface designed and dimensioned to look like natural mulch selected from the group consisting of pea gravel, wood chips, and tree bark ..."; "said rubber particles are preferably selected from the group consisting of waste rubber buffings and ground tires" — "Like the patent in Abbott Labs., 'the claims do not clearly embrace more than one member of the Markush group.' Therefore, the plain meaning of the claims ... 'limits them to a single [alternative] selected from the recited Markush group.'"  *Green Edge Enterprises, LLC v. Rubber Mulch Etc., LLC, et al.*, 2007 U.S. Dist. LEXIS 38799 (E.D. Mo., May 29, 2007).3529

"at selected higher and lower pressure magnitudes" — "at a higher pressure magnitude and a lower pressure magnitude that have been chosen prior to operation of the computer circuitry that is used to determine whether the patient is inhaling or exhaling."  *Respironics, Inc., et al. v. Invacare Corp.*, 2006 U.S. Dist. LEXIS 62233 (W.D. Pa., Aug. 30, 2006).3530

"selected ones of the supports" — "more than one of the supports."  *Fargo Electronics, Inc. v. Iris Ltd, Inc.*, 2005 U.S. Dist. LEXIS 34493 (D. Minn., Nov. 30, 2005).3532

"selected shape" — "is any shape selected by a person skilled in the art who is practicing the patent."  *Applied Elastomerics, Inc. v. Z-Man Fishing Products, Inc.*, 521 F. Supp. 2d 1031 (N.D. Cal. 2007).3534

"selecting" — "In sum, claim 14 does not suggest that the selecting step requires a two-part manual process as interpreted by the district court. Moreover, the specification and prosecution history confirm that the two-part manual process relied upon by the district court is distinct from the claimed selecting step. Thus, the district court's interpretation of the selecting step was unduly narrow." Varco, L.P. v. Pason Systems USA Corp., 436 F.3d 1368 (Fed. Cir. 2006).\(^{3536}\)

"selecting" — "the meaning of 'selecting' in claims 40 and 67 is identical to that of 'sorting' in claims 1, 19, 87, and 93." Clintec Nutrition Co., et al. v. Baxa Corp., 988 F. Supp. 1109 (N.D. Ill. 1997).\(^{3537}\)

"selectively adjusted to any horizontal or vertical position within a range of movement as permitted by the pair of arm segments" — "mean[s] a hand crank position adjustable anywhere within a restricted plane and allowing movement either up and down independently, or forward and rearward independently, or both up/down and forward/rearward simultaneously, and excluding a device in which the hand crank position is adjustable only on an axis linearly coincident with the axis of two telescoping sections." Brike International, Ltd. v. Invacare Corp., 2007 U.S. Dist. LEXIS 44003 (D. Or., June 14, 2007).\(^{3538}\)

"steps of ... selectively energizing ... to provide a combination of energized unequal capacity compressors that exceeds in number the preselected number of compressors in the system" — "invokes application of § 112 par. 6." Altech Controls Corp., et al. v. E.I.L. Instruments, Inc., 1997 U.S. Dist. LEXIS 21336 (S.D. Tex., Jun. 5, 1997)\(^{3539}\) "[B]oth the language of the claims and the prosecution history indicate that the claims are limited to a FIFO system. During prosecution of the patent Altech made express representations that the claims were limited to a FIFO system. In addition, Altech repeatedly referred to its invention as utilizing FIFO selection, without any reference to specific claims." Id., 8 Fed. Appx. 941 (Fed. Cir., May 2, 2001) (unpublished).\(^{3540}\)

"a pair of clamp members selectively engaging an end face of each of said opposing ends of said body member, each of said clamp members being adapted for engaging the roll tube of the roll bending machine such that said clamp members are for securing said body member to the roll tube of the roll bending machine" — "two clamps, which are able, at the operator's discretion, to engage an end face of each of the opposing ends of said body member, each of the clamps is designed to engage the roll tube of the roll bending machine, such that the clamp members function to secure the body member to the roll tube of the roll bending machine." Sabasta, et al. v. Buckaroos, Inc., 2009 U.S. Dist. LEXIS 12754 (S.D. Iowa, Feb. 13, 2009).\(^{3541}\)

"a locking reinforcement support member having a mating means for selectively engaging said connector body at said open-end body cavity" — "The term 'selectively' serves to emphasize that ... the support member can be removed from the connector body so as to allow access to the interior of the connector, facilitating inspection or repair of the contacts without destroying the integrity of the connector in general or the contact elements in particular." Helifix Limited v. Blok-Lok, Ltd., et al., 26 F. Supp. 2d 294 (D. Mass. 1998)\(^{3542}\)

"selectively operable coupling" — "a connecting device that connects the implant to the pusher and that can be selectively operated by the user." Boston Scientific Corp. v. Cordis Corp., 422 F. Supp. 2d 1102 (N.D. Cal. 2006).\(^{3543}\)
"selectively operating" — "selective activation or operation of the device regardless of the method used to achieve activation." Optical Coating Laboratory, Inc. v. Applied Vision, Ltd., 1996 U.S. Dist. LEXIS 1476 (N.D. Cal., Jan. 29, 1996). 3544

"selectively positionable" — "requires that the stem be capable of being positioned or arranged in any desired orientation." Zimmer Technology, Inc., et al. v. Howmedica Osteonics Corp., 397 F. Supp. 2d 974 (N.D. Ind. 2005). 3545

"wherein staples within said pocket become self-aligning" — "the claim term 'self aligning' cannot be limited to require that each and every staple "touch" the tapered sides each and every time a staple is loaded." Ethicon Endo-Surgery v. Tyco Healthcare Group LP, 2006 U.S. Dist. LEXIS 51187 (S.D. Ohio, July 26, 2006). 3546

"self-contained apparatus dimensioned to be easily transported" — "During the prosecution of the patent, Lockwood thus differentiated his device from the prior art because of its compact physical dimensions, not because of its ability to 'function on its own.' ... Lockwood cannot now argue for an interpretation inconsistent with this earlier representation." Lockwood v. American Airlines, Inc., 107 F.3d 1565 (Fed. Cir. 1997). 3548

"self-erecting" — "require[s] that the accused blankets 'form a curved or arched structure which stands off the patient.'" Augustine Medical, Inc. v. Gaymar Industries, Inc., et al., 181 F.3d 1291 (Fed. Cir. 1999). 3549

"a self-expanding structure exhibiting a spring-like behavioral component for moving the member between a compressed orientation ... and an expanded orientation" — "[is] a means-plus-function limitation subject to 35 U.S.C. § 112, P 6." Regents of the University of Minnesota v. AGA Medical Corp., 2009 U.S. Dist. LEXIS 90289 (D. Minn., Sep. 29, 2009). 3550

"sensing a torque occurring at a drive shaft of the washer due to an impact from the clothes" — "sensing a torque occurring at a drive shaft of the washer due to a collision from the clothes." LG Electronics U.S.A., Inc., et al. v. Whirlpool Corp., 2007 U.S. Dist. LEXIS 24056 (D.N.J., April 2, 2007). 3553

"sensing a torque occurring at a drive shaft of said washer due to the twist of clothes, to sense the distribution of impact applied to an agitator of the washer by said clothes" — "sensing a torque occurring at a drive shaft of the washer due to clothes that are entwined together, to sense the distribution of collisions between the clothes and the agitator of the washer." LG Electronics U.S.A., Inc., et al. v. Whirlpool Corp., 2007 U.S. Dist. LEXIS 24056 (D.N.J., April 2, 2007). 3554
"sensing an amount of concentrated detergent being released from said tumbling fabric" — "sensing an amount of concentrated detergent solution that is released from the tumbling fabric (i.e., not sensing the level of a pool of detergent solution in the wash chamber as the fabric tumbles)." *Whirlpool Corp., et al. v. LG Electronics, Inc., et al.*, 423 F. Supp. 2d 730 (W.D. Mich. 2004).\(^\text{3555}\)

"sensing system"; "sensor" — "a system that senses the location and/or identification information of objects"; "one or more devices for sensing the location and/or identification information of objects." *Tinkers & Chance v. Leapfrog Enterprises, Inc.*, 2007 U.S. Dist. LEXIS 43871 (E.D. Tex., June 18, 2007).\(^\text{3556}\)

"sensing the weight of an occupying item of a seat of the vehicle" — "sensing or measuring the weight of an item occupying a seat of the vehicle." *Automotive Technologies International, Inc. v. Delphi Corp.*, 2009 U.S. Dist. LEXIS 83187 (E.D. Mich., Sep. 11, 2009).\(^\text{3557}\)

"sensor" — "a device designed to respond to a physical stimulus (as heat or cold, light, a particular motion) and transmit a resulting impulse for interpretation or measurement or for operating a control." *Harmonic Design, Inc. v. Hunter Douglas, Inc.*, 88 F. Supp. 2d 1102 (N.D. Cal. 2000).\(^\text{3558}\)

"sensor means for providing an output signal when said article feeder element is in a predetermined position" — "the Court sustains Goss’s objection and rejects Special Master Harmon’s recommendation that the Court give "sensor means" means-plus-function treatment." *Goss International Americas, Inc. v. Graphic Management Associates, Inc., et al.*, 2010 U.S. Dist. LEXIS 95468 (N.D. Ill., Sep. 14, 2010).\(^\text{3559}\)

"two or more sensors" — "two or more PMT type detectors." *ADE Corp. v. KLA-Tencor Corp.*, 220 F. Supp. 2d 303 (D. Del. 2002).\(^\text{3560}\)

"separate" — "The court construed the term 'separate' to mean capable of independent movement. ... While the claim language and specification may only allow, rather than dictate, the court's construction of the term 'separate,' the prosecution history of the '857 patent confirms that the district court's interpretation is correct." *Springs Window Fashions LP, et al. v. Novo Industries, L.P.*, 323 F.3d 989 (Fed. Cir. 2003).\(^\text{3561}\)

"separate from but adjacent to" — "means that the two visual displays must be near, or not far from, each other." *American Science and Engineering, Inc. v. Autoclear, LLC, et al.*, 2009 U.S. Dist. LEXIS 25954 (E.D. Va., Jan. 30, 2009).\(^\text{3562}\)

"separate switches" — "a plurality of distinct, mechanically actuated device(s) for making, breaking, or changing connections in an electric circuit." *Minerva Industries, Inc. v. Motorola, Inc. et al.*, 2010 U.S. Dist. LEXIS 9329 (E.D. Tex., Feb. 3, 2010).\(^\text{3563}\)

"separated apart and disconnected from each other" — "not joined to one another at their ends by any structural feature." *Johnson Electric Industrial Manufacturing, Ltd., et al. v. Ametek, Inc.*, 2005 U.S. Dist. LEXIS 19300 (D. Conn., Aug. 24, 2005).\(^\text{3564}\)

"said ramp members being separated by a distance of substantially about 3.5 inches from inside to inside" — "refer[s] either to the distal end of the ramps or, at most, to roughly the last inch of the ramps nearer to the distal end before they go below the road surface." *Stimsonite Corp. v. NightLine Markers, Inc., et al.*, 33 F. Supp. 2d 703 (N.D. Ill. 1999).\(^\text{3565}\)
"separated by a wall"; [ii] "interchamber orifice" — [i] "there is at least a wall between the first and second vacuum chambers"; [ii] "an orifice in a wall that is between the first and second vacuum chambers." Applaera Corp., MDS Inc., et al. v. Micromass UK Ltd., et al., 186 F. Supp. 2d 487 (D. Del. 2002).

"information tracks ... separated by intertrack portions" — "since only the discrete surface indicia are described as representing the stored information, the term 'intertrack portion' cannot represent any stored information." DiscoVision Associates v. Disc Manufacturing, Inc., 1997 U.S. Dist. LEXIS 17735 (D. Del., Sept. 16, 1997).

"separating a layer of skin and subcutaneous soft tissue connected to surrounding skin and soft tissue from underlying support tissue to form a pocket" — "spacing apart the skin and loose connective tissue located just beneath the skin connected to surrounding skin and soft tissue from the support tissue lying beneath to create a pocket." Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006).

"sequential" — "The term 'sequential' in the claims is in accordance with this description in the specification; no usage or exemplification of the sequential movement requires eliminating all overlap. It is incorrect to construe the claims as barring all overlap, as urged by M3 Systems. On the correct claim construction, no reasonable jury could have found that the claims are not supported by the description in the specification." C.R. Bard, Inc. v. M3 Systems, Inc., 157 F.3d 1340 (Fed. Cir. 1998).

"the appliances are marked with sequential numbering directly on the appliances" — "assigned with consecutive numbers or a symbol representing a number." Ormco Corp. v. Align Technology, Inc., 2004 U.S. Dist. LEXIS 29994 (C.D. Cal., Jun. 29, 2004).

"series of threads" — "continuous threading with a plurality of turns, as found on an ordinary screw or bolt." Karlin Technology Inc., et al. v. Surgical Dynamics, Inc., 177 F.3d 968 (Fed. Cir. 1999).

"said support mat and central reduced diameter portion serve as the sole support means for the substrate" — "the central reduced diameter portion and the mat are the only structures that hold the substrate in place in the cylindrical body." Tenneco Automotive Operating Co. Inc. v. Visteon Corp., 2005 U.S. Dist. LEXIS 12738 (D. Del., Jun. 28, 2005).

"wherein a shape of said predetermined pressure profile is set independently of any monitored respiratory characteristics of such a patient" — "wherein the magnitude and duration of the predetermined pressure profile are set without reference to or consideration of any monitored breathing characteristics of such a patient." Respironics, Inc., et al. v. Invacare Corp., 2006 U.S. Dist. LEXIS 62233 (W.D. Pa., Aug. 30, 2006).

"reference set of colors" — "a group of two or more hues or tints, the quality or attribute in virtue of which objects present different appearances to the eye, that serves as a basis for comparative measurement or standardization." X-Rite, Inc. v. Accudent Pty Ltd., 2004 U.S. Dist. LEXIS 31069 (D.D.C., Aug. 11, 2004).

"set screw" — "a machine screw designed to be screwed through a metal part (as a collar) and to jam tightly upon another part (as a shaft) so as to prevent relative movement." Innovative Office Products, Inc. v. SpaceCo, Inc., et al., 2007 U.S. Dist. LEXIS 62296 (E.D. Pa., Aug. 23, 2007).

"set stitch" — "a stitch that sets or joins at least a garment component and a bonding element together, or at least two garment components together, to define their relationship in the garment seam, but does not pass through the outer garment component in the finished seam." Taltech Ltd. v. Esquel Enterprises Ltd., 410 F. Supp. 2d 977 (W.D. Wash. 2006).

"settling modulation of servomechanism means dependent upon the optical disk standard data which corresponds with the processed optical signal" — "establishing the regulation of an automatic feedback control system for mechanical motion dependent upon the recognized arrangement of depressions for an optical storage medium which corresponds to the processed optical signal." Kamatani, et al. v. BenQ Corp., et al., 2005 U.S. Dist. LEXIS 42764 (E.D. Tex., Jun. 29, 2005).

"severe impact forces" — "impact forces such as jarring, rolling, dropping, or tipping having a magnitude sufficient to cause immediate effervescence and overflowing of carbonated beverages upon opening, or damage to a container/product such that the container or product is no longer suitable for consumption or sale." Crane Co., et al. v. Sandenvendo America, Inc., et al., 2009 U.S. Dist. LEXIS 47509 (E.D. Tex., Jun. 5, 2009).

"severing edges of the expanded layer from surrounding soft tissue to form a differentially expanded tissue flap" — "separating dividing lines of the expanded layer from the soft tissue along the outer points of the expanded tissue layer to render it capable of being used to cover an area greater than its original area." Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006).

"shaft" — "a vertical or inclined hollow opening, of uniform and limited cross section, from the ground surface to a point in the contaminated area. Finally, the claim language does refer to a single shaft, not multiple shafts. The claim is thus limited to a single shaft." Knopik v. Amoco Corp., et al., 96 F. Supp. 2d 892 (D. Minn. 2000).
"prior to adding a fluid to the liner, has a shape corresponding to, and is a close fit within, the interior of the reservoir" — "the liner has a shape as the interior of the reservoir before fluid is added to the liner so that the liner fits within the reservoir with little space between the exterior of the liner and the interior of the reservoir." 3M Innovative Properties Co. v. Illinois Tool Works, Inc., et al., 2007 U.S. Dist. LEXIS 78695 (D. Minn., Oct. 23, 2007).3587

"shape memory alloy element"; "memory alloy element" — "a device or device component made of an alloy that can be caused to revert, or to attempt to revert, from its unstable deformed shape to its stable, original state." Medtronic, Inc., et al. v. W.L. Gore & Associates, Inc., 2007 U.S. Dist. LEXIS 80038 (N.D. Cal., Oct. 19, 2007).3589

"is shaped by an outer contour of said plurality of cords" — "the term does not require construction." Schindler Elevator Corp. v. Otis Elevator Co., 2010 U.S. Dist. LEXIS 2463 (D.N.J., Jan. 13, 2010).3590

"an inflatable bag shaped for active engagement solely with the human foot and substantially only in the region between the ball and heel of the foot" — "exclude[s] the inflation of additional bags at the same time as the bag(s) directed to the plantar arch, as well as the pressurization of any bag(s) concurrently with the pressurization of bag(s) directed to the plantar arch." Novamedix Distribution Ltd. v. Dickinson, 175 F. Supp. 2d 8 (D.D.C. 2001).3591

"shaped substantially as a right triangle" — "shaped as a triangle in which one of the interior angles is approximately ninety degrees." Synvasive Corp. v. Stryker, Corp., 425 F. Supp. 2d 1105 (E.D. Cal. 2006).3592

"a surface shaped to contact said skin region" — "Defendant seeks to add a parenthetical explaining that 'shaped' means 'not flat.' This is contrary to the patent." Palomar Medical Technologies, Inc., et al. v. TRIA Beauty, Inc., 2010 U.S. Dist. LEXIS 112200 (D. Mass., Oct. 13, 2010).3593

"shaped to fit substantially water-tight within the body" — "the elongate member, when disposed within the body, causes a water-tight seal." Millipore Corp. v. W.L. Gore & Associates, Inc., 2010 U.S. Dist. LEXIS 99704 (D. Mass., Sep. 20, 2010).3594

"shaped to normally assume a substantially straight configuration" — "means the anchor member must be sufficiently straight to be inserted into a needle." Smith & Nephew, Inc., et al. v. Biomet, Inc., et al., 2005 U.S. Dist. LEXIS 31723 (D. Or., Nov. 21, 2005).3595

"shaped throughout the length thereof for ..." — "Tenneco argues that the separator finger does not have to be any particular shape; rather, all the patent requires is that the separator finger is shaped such that it accomplishes its intended purpose. The Court agrees with Tenneco." Tenneco Packaging Specialty and Consumer Products, Inc. v. S.C. Johnson & Son, Inc., et al., 1999 U.S. Dist. LEXIS 17937 (N.D. Ill., Nov. 12, 1999).3596
"sharp cut-on" — "in the context of a dye or filter, having a cut-on slope that at some concentration or dye density rises more than one half percent (0.5%) change in transmission for every one nanometer of increasing wavelength change. The cut-on slope is that portion of the transmission spectra of a cut-on dye that represents the transition between [the] substantially blocking and the substantially transmitting region." Suntiger, Inc. v. Sunglass Products of California, 2006 U.S. Dist. LEXIS 1076 (C.D. Cal., Jan. 10, 2006). 3597

[i] "including a sharp, forward cutting edge"; [iii] "a pair of side edges interconnecting said front portion and said rear trailing portion"; [iii] "including a rear edge" — [i] "having a sharp margin of intersection between the top and bottom surfaces of the blade, in which the surface border defined by that margin also defines the forward most point of the blade"; [ii] "the two surface borders, on each side of the blade, that are defined by the margin of intersection between the top and bottom surfaces of the blade and are adjacent to and/or continuous with the front and rear trailing portions of the blade."; [iii] "having a margin of intersection between the top and bottom surfaces of the blade in which at least some part of the surface border defined by that margin is at the rearmost point of the blade. There is no limitation on the shape of the surface border defined by the margin of intersection." Bausch & Lomb Surgical, Inc. v. Oasis Medical, Inc., 2001 U.S. Dist. LEXIS 25880 (C.D. Cal., Jul. 16, 2001). 3598

"sharp impact forces" — "abrupt and sudden impact forces such as jarring, rolling, dropping, or tipping sufficient to cause immediate effervescence and overflowing of carbonated beverages upon opening, or damage to a container/product such that the container or product is no longer suitable for consumption or sale." Crane Co., et al. v. Sandenvendo America, Inc., et al., 2009 U.S. Dist. LEXIS 47509 (E.D. Tex., Jun. 5, 2009). 3599

"sheath" — "any tubular member of any size that can be used for accessing the vascular system through the skin and through which other devices and elements can be passed." Grayzel v. St. Jude Medical, Inc., 162 Fed. Appx. 954 (Fed. Cir., Dec. 23, 2005) (unpublished). 3600

"a sheathing surrounding a major portion of the length of said tube, said sheathing being made of a fireproof, refractory heat resistant material attached to said tube exterior" — "HEN has not made a clear disavowal of claim coverage regarding whether the sheathing can or cannot be molded onto the conductive tube, or whether it must be a separate unit that is capable of being slid on and off the probe." Heraeus Electro-Nite Co. v. Midwest Instrument Co., 2007 U.S. Dist. LEXIS 81685 (E.D. Pa., Nov. 1, 2007). 3601

"sheet"; "sheet-like" — "A review of the '482 patent and its prosecution history reveals that the terms 'sheet' and 'sheet-like' do not have any special meanings in the art and that the '482 inventors used these terms in their ordinary, everyday sense, i.e., to describe something flat with a fairly broad surface relative to its thickness. The claims thus include within their literal scope only devices with conductive material that comprises a fairly broad surface relative to its thickness." Strattec Security Corp. v. General Automotive Specialty Co., Inc., et al., 126 F.3d 1411 (Fed. Cir. 1997). 3602

"sheet" — "may include material made up of different elements and may even include multiple layers of material that are dimensionally the same. When various layers are pressed together, however, to retain the characteristics of a 'sheet,' the material must have a continuous, flat surface (e.g. a bed sheet, a sheet of wood, a sheet of paper, or a sheet of ice). By placing a dimensionally different (e.g. a smaller) material on top of a sheet of flexible material, it loses its sheet-like characteristics because it loses its continuous, flat shape." Conmed Corp., et al. v. Ludlow Corp., et al., 235 F. Supp. 2d 109 (N.D.N.Y. 2002). 3604

"sheet" — "a piece of paper of a size suitable for printing esp. of books or other matter of which the page is a subdivision of a larger area -- often distinguished from reel or web." Ferag AG, et al. v. Grapa-Holding AG, 905 F. Supp. 1 (D.D.C. 1995). 3606

"sheet material which comprises: a) an electrically nonconducting, synthetic sheet laminate material ...; and b) an electrically conductive layer of a polymeric, film-forming, particulate binder material secured to the bottom surface of the synthetic sheet material ..." — "so long as the accused static-dissipating material has an electrically nonconducting layer that embodies all of the limitations described in subpart (a) and an electrically conductive layer that embodies all of the limitations described in subpart (b), the material literally infringes the claim even if it has additional layers below the conductive layer." Charleswater Products, Inc. v. Nevamar Corp., 1998 U.S. App. LEXIS 31011 (Fed. Cir., Dec. 10, 1998) (unpublished). 3607

"shift actuator" — "Because the intrinsic evidence does not clearly narrow the term 'shift actuator' to a device containing a cam, the district court erred by construing the term in that manner." Sunrace Roots Enterprise Co., Ltd., et al. v. SRAM Corp., 336 F.3d 1298 (Fed. Cir. 2003). 3609

"said at least one protrusion permanently fixed to said first end cap and projecting axially inward from said first end cap a short distance toward second end cap" — "a small distance relative to the overall length of the filter element." Parker-Hannifin Corp., et al. v. Baldwin Filters, Inc., et al., 2010 U.S. Dist. LEXIS 68906 (N.D. Ohio, Jul. 9, 2010). 3610

"shoulder" — "an enlargement or projection for keeping something in place or preventing movement past a projection, located at the ends of the male rib and female recess, consisting of definite breaks or sharp edges, that does not offer a smooth transition when the male rib is pressed into the female recess during latching." Inline Plastics Corp. v. Tenneco Packing Corp., 979 F. Supp. 79 (D. Conn. 1997). 3611

"shoulder region" — "region defined by the blades of the bit, located radially between the nose and gage regions if the shoulder region is incorporated with the flank region, and located radially between the flank and gage regions if the flank region exists separately, labeled 316 in Fig. 16 of the '631 Patent." Reedhycalog UK, Ltd, et al. v. Baker Hughes Oilfield Operations, Inc., et al., 2007 U.S. Dist. LEXIS 76125 (E.D. Tex., Oct. 12, 2007). 3613

"shredder"; "shredder mechanism" — "a well known device used for shredding items, such as documents, CDs, floppy disks and other articles"; "a device that shreds items, such as documents, CDs, floppy disks and other articles." Fellowes, Inc. v. Michelin Prosperity Co., Ltd., et al., 2006 U.S. Dist. LEXIS 90648 (E.D. Va., Dec. 15, 2006). 3615

"shrink-fit" — "a tight interference fit between mating inner and outer parts made by heating the outer member to expand it or cooling the inner part to contract it so that the outer part can fit into the inner part." Advanced Fiber Technologies Trust v. J&L Fiber Services, Inc., 2010 U.S. Dist. LEXIS 95032 (N.D.N.Y., Sep. 13, 2010). 3616

"locking shutter" — "portion of bracket that is capable of shutting, closing, making secure, or preventing displacement of the archwire." OrthoArm, Inc., et al. v. Forestadent USA, Inc., et al., 502 F. Supp. 2d 968 (E.D. Mo. 2007). 3618

"side rail positioning mechanism" — "the combination of (1) a handle mounted to a side rail; (2) a vertical lock spindle which is rotatably attached to the same side rail and has several lock pins spaced vertically along its length; and (3) a specially designed locking component for receiving the lock spindle." Pedicraft, Inc. v. Stryker Corp. of Michigan, et al., 2003 U.S. Dist. LEXIS 27837 (M.D. Fla., May 5, 2003). 3625
"side wall" — "a structure projecting or extending upward, i.e., above the plane of the support surface, from either side of the support tray." Ambrose, et al. v. Steelcase, Inc., et al., 2003 U.S. Dist. LEXIS 26035 (W.D. Mich., Nov. 10, 2003).3626

"side walls" — "opposing vertical constructions resembling an upright continuous surface, and each serving to enclose, divide, or protect the opposing areas of the body and that join a top to a bottom." Bradford Co. v. Afco Manufacturing, et al., 2006 U.S. Dist. LEXIS 88547 (S.D. Ohio, Dec. 5, 2006).3628

"side view" — "the side view image is not limited to crescent shaped; the viewing angle may not be a 90 degree angle, a top view angle, or identical to the angle created by the first camera; and the viewing angle is not limited to a 'low angle.'" Scanner Technologies Corp. v. ICOS Vision Systems Corp., N.V., 2002 U.S. Dist. LEXIS 331 (S.D.N.Y., Jan. 10, 2002).3629

"sidewall" — "a structure projecting or extending upward, i.e., above the plane of the support surface, from either side of the support tray." Flex-Rest, LLC v. Steelecase, Inc., 455 F.3d 1351 (Fed. Cir. 2006).3632

"a second distance that is significantly less than the first distance" — "Defendant urges that the Court conclude that a difference of less than one-quarter inch is not 'significantly less' within the meaning of this claim. It notes that the specification gives an example of 1/4 inch, and that Claim 3 requires a difference of 'more than about 0.64 centimeters (0.25 inch).' Rather than support Defendant's point of view, these references imply a different construction. Under the doctrine of claim differentiation, Claim 3 is necessarily narrower than Claim 1, not identical to it." Minnesota Mining and Manufacturing Co. v. Lake Country Manufacturing, Inc., 918 F. Supp. 1307 (D. Minn. 1996).3635

"wherein the groove about the lid has an inner surface, and the rim of the main body has an outer surface, that each define semi-circular arcs of similar radii" — "The inner surface of the groove and the rim of the main body are curved at respective radii so that the inner surface and the rim remain in nearly continuous contact over the extent of the semi-circular arcs when the lid and body are assembled." Learning Curve Brands, Inc. v. Munchkin, Inc., 2010 U.S. Dist. LEXIS 27277 (W.D. Wis., Mar. 22, 2010).3636
"the improvement comprising a simplified set of instruments, including ..." — "a set of instruments used in resecting the bones that form a patient's knee. The set of instruments comprises: at least one guide member capable of making all the necessary tibia and femur bone resections; and at least one L-shaped guide rod that cooperates with the guide member." Depuy Orthopaedics, Inc. v. Androphy, et al., 2000 U.S. Dist. LEXIS 661 (N.D. Ill. 2000).

"simultaneously" — "at the same time or almost the same time, e.g., the inner tubular holds both flapper valves open at the same time during auto-fill mode, and the flapper valves close at almost the same time during conversion and back pressure mode." Davis-Lynch, Inc. v. Weatherford International, Inc., 2009 U.S. Dist. LEXIS 33414 (E.D. Tex., Apr. 20, 2009).

"said weight member consisting essentially of a single back bar mass" — "The parties agree that the term 'consisting essentially of' as used in the subject phrase means that the back bar mass does not have any elements that would substantially affect the characteristics of the claimed invention in addition to those elements set forth in the claim. ... The term 'back bar mass' ... is not limited to masses having planar surfaces and uniform width." Antonious v. Spalding & Evenflo Cos., Inc., et al., 1998 U.S. Dist. LEXIS 10740 (D. Md., Apr. 27, 1998).

"to define a single flow lumen which transfers substantially all flow between said primary graft flow lumen and said secondary graft flow lumen" — "when the primary graft body is connected to the secondary graft body a single, rather than a bilateral, lumen is formed and substantially all fluid flows from the primary graft body to the secondary graft body through that single flow lumen." Edwards Lifesciences, LLC, et al. v. Cook Inc., et al., 2007 U.S. Dist. LEXIS 55634 (N.D. Cal., July 23, 2007).

"single joint of boneless meat" — "one of the portions into which an animal carcass is divided." Logan v. Smithfield Foods, Inc., et al., 2009 U.S. Dist. LEXIS 27635 (S.D. Tex., Mar. 31, 2009).

"single layer web" — "a single sheet of film consisting of one or more polymer layers." Pliant Corp. v. MSC Marketing and Technology, Inc., 416 F. Supp. 2d 632 (N.D. Ill. 2006).

"a single output receptacle" — "mandates that any device with more than one output pocket would not infringe." Cummins-Allison Corp. v. Glory Ltd., et al., 2005 U.S. Dist. LEXIS 38857 (E.D. Tex., Dec. 12, 2005).

"single package" — "We reject the district court's conclusion that the 'single package' limitation ... merely requires that devices be 'capable of' being provided to the patient in a single package. Here, the claims are written to require that the devices actually be in a single 'package.'" Ormco Corp., et al. v. Align Technology, Inc., 463 F.3d 1299 (Fed. Cir. 2006).

"single piece construction" — "cannot mean pipe which does not require inserts, but instead means pipe which in fact does not have inserts. This is the definition that was presented to the examiners during the patent prosecution and the term cannot now be argued to mean something else." W.E. Hall Co., Inc. v. Atlanta Corrugating, LLC, 2002 U.S. Dist. LEXIS 27444 (N.D. Ga., Sept. 24, 2002).
"wherein each of the components of the health tracker is part of a single, unified portable unit" — "wherein each of the components of the health tracker is a part of a coherent group or whole that is capable of being carried." *PHT Corp. v. Invivodata, Inc.*, 2005 U.S. Dist. LEXIS 9577 (D. Del., May 19, 2005). 3648

"siphoning treated water from the drainage space under gravity into the treated water outlet conduit" — "Whether this 'siphoning effect' requires a siphon valve that allows the drainage space to fill with water before opening does not need to be determined by the court in construing this claim for the purposes of this litigation. The essential finding here is that the '527 patent does not define 'siphoning' to include the ordinary meaning of the term as understood by a person of skill in the art. Quite simply, the '527 patent does not teach a true siphon. To define 'siphoning' in the '527 patent to include the hydraulic process by which water is induced to flow against gravity and over an intermediate elevation would grant the '527 patent an overbroad scope that exceeds the clear intent of the patent's claim language and specification." *Contech Stormwater Solutions, Inc. v. BaySaver Technologies, Inc., et al.*, 2007 U.S. Dist. LEXIS 71659 (D. Md., Sept. 25, 2007). 3654

"sit-on-top kayak" — "a small decked watercraft propelled by a human or by humans using a double-ended paddle or paddles, narrow in shape, with a generally V-shaped hull porton and a deeper draft than a surfboard to allow better tracking, on top of which the passenger or passengers sit horizontally aligned." *Old Town Canoe Co. v. Glenwa, Inc.*, 229 F. Supp. 2d 1151 (D. Or. 2001). 3655 "We [] adopt the district court's construction of 'sit-on-top kayak' and its function as a limitation of the claims with the exception of the clause 'with a generally V-shaped hull portion and a deeper draft than a surfboard to allow better tracking.' That we reject. The proper definition includes crafts with both displacement and planing hulls." Id., 55 Fed. Appx. 918 (Fed. Cir., Jan. 14, 2003) (unpublished). 3656

"lip portion sized larger than the first opening"; "the peripheral lip portion projecting beyond the first opening thereof" — "a portion of the suction cup sized to project beyond the first opening of the housing"; "the peripheral lip portion of the suction cup extending beyond the first opening of the housing." National Products, Inc. v. Palmetto West Trading Co., LLC, 2006 U.S. Dist. LEXIS 28682 (W.D. Wash., May 4, 2006).

"an antenna, sized to fit within an area defined by a faceplate for an outwardly facing opening of said wallbox" — "an antenna developed so it fits within the outer edges of a faceplate that covers the opening of an electrical wallbox." Lutron Electronics Co., Inc. v. Control4 Corp., 2009 U.S. Dist. LEXIS 3562 (D. Utah, Jan. 20, 2009).

"back bar mass being sized to provide a significant mass at its point of location to enhance the energy transfer of a golf ball being struck during the execution of a golf stroke" — "The Court does not find a locational limitation in the subject phrase that would require the mass to be at the center of gravity." Antonious v. Spalding & Evenflo Cos., Inc., et al., 1998 U.S. Dist. LEXIS 10740 (D. Md., Apr. 27, 1998).

"sized to receive a finger of the user" — "of such a size to allow greater leverage for easier opening of the binder when applying the finger of the user." U.S. Ring Binder, LP v. Staples the Office Superstore LLC, et al., 2009 U.S. Dist. LEXIS 21783 (E.D. Mo., Mar. 18, 2009).

"skinless" — "is properly construed as a performance characteristic, and that a surface that does not impede flow is 'skinless' as that term is used in the art of filtration membranes." Pall Corp. v. Micron Separations, Inc., 66 F.3d 1211 (Fed. Cir. 1995).

"skull facial features" — "pertaining to the bones of the face, including, but not limited to, a mouth feature and a nose feature, as shown in Figures 5 through 9 of the '972 patent." Hoodlums Welding Hoods, LLC v. Redtail International, LLC, 2009 U.S. Dist. LEXIS 100356 (E.D. Mo., Oct. 28, 2009).

"sleeve" — "a substantially cylindrical object that is dimensioned to fit into or attach to the roll core of the print ribbon supply roll." Fargo Electronics, Inc. v. Iris Ltd, Inc., 2005 U.S. Dist. LEXIS 34493 (D. Minn., Nov. 30, 2005).

"sleeve" — "a part, such as a grommet or rubber collar, that fits over the non-pointed end of the spike such that (a) both the spike and the sleeve fit into the hole so that (b) the sleeve is capable of reducing the forces between the spike and the frame. This design reduces potential damage to, or distortion of, the frame as the spike pierces a tire and is removed from the frame during deployment." PMG, Inc. v. Stinger Spike Systems, Inc., 2002 U.S. Dist. LEXIS 17162 (N.D. W. Va., Mar. 28, 2002).

"sleeve" — "a cylinder, tube, frustum or sphere insertable into a body vessel and capable of isolating material normally flowing into the vessel from direct contact with the interior surface of the vessel." Arlaine & Gina Rockey, Inc. v. Cordis Corp., 2004 U.S. Dist. LEXIS 30763 (S.D. Fla., Jan. 5, 2004).

"a sleeve surrounding said emissive insert so as to separate said emissive insert from contact with said holder, said sleeve having a radial thickness of at least about 0.01 inches at said front end"; "a sleeve positioned in said cavity coaxially about said emissive insert, said sleeve having a radial thickness of at least about 0.01 inches at said front end" — "The term 'sleeve,' as used in the 425 patent, encompasses both sleeves that separate the emissive insert from the holder by completely encircling it and those that separate the emissive insert from the holder by partially encircling it, so long as the emissive insert is entirely encircled by the sleeve at its front end and has a radial thickness of at least about 0.01 inches." Centricut, LLC v. Esab Group, Inc., 2002 U.S. Dist. LEXIS 4202 (D.N.H., Feb. 7, 2002).3669

"slidably enclosing a sliding assembly comprising a needle and a winged needle hub" — "requires that the guard substantially contain the needle-assembly at all times." DSU Medical Corp., et al. v. JMS Co., Ltd., et al., 471 F.3d 1293 (Fed. Cir. 2006).3670

"the insulated block being adapted to slidably engage the coolant cavity, thereby the coolant and the insulated block together substantially filling the coolant cavity" — "The district court construed this limitation to require that the cover block be inserted into the coolant cavity in order to 'slidably engage' it. ... We agree with the district court." Foremost in Packaging Systems, Inc. v. Cold Chain Technologies, Inc., 485 F.3d 1153 (Fed. Cir. 2007).3671

"slidably receiving"; "relative movement"; "relatively moved" — "'slidably receiving' (as well as the terms 'relative movement' and 'relatively moved' found in other claims) should be construed to refer to a stationary body into which the movable needle retracts." MBO Laboratories, Inc. v. Becton, Dickson & Co., 385 F. Supp. 2d 88 (D. Mass. 2005).3675

"slideably supported on the truck trailer" — "the bows are adapted for smooth and continuous movement along a surface on the truck trailer, which supports the bows." Sundance, Inc. v. De Monte Fabricating, Ltd., 485 F. Supp. 2d 805 (E.D. Mich. 2007).3676

"sliding interface" — "a common boundary between two surfaces that can move along in smooth, continuous contact." Retractable Technologies v. New Medical Technologies, 2004 U.S. Dist. LEXIS 3855 (E.D. Tex., Mar. 1, 2004).3677

"slight misalignment" — "a misalignment resulting from a rotation of the lenslets of the lens array relative to an edge of the LCD panel by just enough number of degrees to eliminate residual moire." Honeywell International Inc. v. Apple Computer, et al., 2009 U.S. Dist. LEXIS 73428 (D. Del., May 4, 2009).3678

"slight misalignment" — "a slight misalignment resulting from a rotation of the lenslets of the lens array, relative to an axis of the LCD panel causing moire, by just enough, and not more, number of degrees to eliminate moire effects due to the structure of the display." Honeywell International, Inc., et al. v. Nikon Corp., et al., 642 F. Supp. 2d 322 (D. Del. 2009).3679

3671
3672
3673
3674
3675
3676
3677
3678
3679
"slightly larger in diameter than said male end" — "the second enlarged interior diameter is slightly larger than the exterior diameter of the male end." CertainTeed Corp. v. Modern Products Industries, Inc. et al., 2005 U.S. Dist. LEXIS 7638 (E.D. Pa., May 2, 2005).3680

"a slit through a planar section of said thin membrane" — "a slit through the section of the thin membrane that has a flat, two-dimensional quality." Freeman, et al. v. Gerber Products Co., 506 F. Supp. 2d 529 (D. Kan. 2007).3681

"sloping upwardly and inwardly" — "Once the adjacent surface is defined, it must slope 'upwardly and inwardly' relative to the trailing edge and the hitting face of the club." Karsten Manufacturing Corp. v. Cleveland Golf Co., 1998 U.S. Dist. LEXIS 23148 (D. Ariz., Dec. 4, 1998).3682 "The district court's claim construction correctly reflected the description in the specification, and is confirmed." Id., 242 F.3d 1376 (Fed. Cir. 2001).3683

"slot" — "the trial court correctly construed 'slot' as not requiring a defined width, as long as it was capable of receiving a wing." DSU Medical Corp., et al. v. JMS Co., Ltd., et al., 471 F.3d 1293 (Fed. Cir. 2006).3685

"slot" — "a groove or opening in the bottom exterior surface of a window operator's bottom support that accommodates a raised surface of a window frame." Ashland Products, Inc. v. Truth Hardware Corp., 2002 U.S. Dist. LEXIS 9822 (N.D. Ill., May 29, 2002).3687

"slot for receiving the camming member of the clamp"; "pair of slots" — "opening or groove (or a pair of openings or grooves) that imparts motion to and guides the motion of the camming member." Tyco Healthcare Group LP v. Ethicon Endo-Surgery, Inc., 411 F. Supp. 2d 93 (D. Conn. 2006).3688

"a housing having [or including] a slot therein for receiving the pedal shaft [therein]" — "require that the device contain a narrow opening, groove, passage, enclosure or space, and that this narrow opening, groove, passage, enclosure or space be located in the housing of the device." Lawman Armor Corp. v. Winner International, Inc., 2002 U.S. Dist. LEXIS 1431 (E.D. Pa., Jan. 22, 2002).3689

"the slots being disposed substantially parallel to the longitudinal axis of the tubular member" — "a 'slot' is a long and narrow opening or groove, an opening whose length is substantially greater than its width. The claim requires slots in the tubular members that run largely or approximately parallel to the longitudinal axis." Cordis Corp. v. Boston Scientific Corp., 2005 U.S. Dist. LEXIS 10750 (D. Del., Jun. 3, 2005).3690

"slots engageable with a pair of camming members" — "openings or grooves that impart motion to and guide the motion of the camming members." Tyco Healthcare Group LP v. Ethicon Endo-Surgery, Inc., 411 F. Supp. 2d 93 (D. Conn. 2006).3691

"slotted head" — "a head containing one or more slots." Rutherford Controls Int'l Corp., et al. v. Alarm Controls Corp., et al., 2009 U.S. Dist. LEXIS 69115 (E.D. Va., Aug. 6, 2009). 3693

"a slotted plate" — "a plate with a slot that is stably attached to a case." Tom Hayden Enterprises, Inc. v. Southern Oregon Hot Bikes, Inc., 2004 U.S. Dist. LEXIS 8195 (D. Or., Apr. 29, 2004). 3694

[i] "slow the rotation of said head during said no-load operational mode"; [ii] "anti-spin apparatus" — [i] "slowing the rotation of the head when no material is being crushed"; [ii] "device that slows the rotation of the head." Metso Minerals Industries, Inc. v. Flsmidth-Excel LLC, et al., 2010 U.S. Dist. LEXIS 47389 (E.D. Wis., May 13, 2010). 3695

"slurry" — "a mixture of additives and carrier is required, not necessarily a uniform or homogeneous mixture." Micro Chemical, Inc. v. Great Plains Chemical Co., Inc., 900 F. Supp. 1386 (D. Colo. 1995). 3696

"small play" — "a relatively little space between the locking surfaces of interlocking panels such that the locking surfaces can be displaced relative to one another in the direction of their joined edges." Alloc, Inc., et al. v. Pergo, LLC, 2009 U.S. Dist. LEXIS 62881 (E.D. Wis., Jul. 2, 2009). 3697

"small volume" — "the term 'small volume' does not limit the dialer to a particular size as long as it performs its function. The claim term 'small volume' does reemphasize, however, that the portable dialer unit does not include a keypad. The specification itself notes that a keypad would inhibit the portability of the hand-held item." Innovad Inc. v. Microsoft Corp., et al., 260 F.3d 1326 (Fed. Cir. 2001). 3698

"snag-resistant means ... for smoothly guiding and positioning the lens across contacted eye tissue" — "[need not] prevent any and all damage to the eye during insertion." Pannu v. Iolab Corp., 155 F.3d 1344 (Fed. Cir. 1998). 3701

"snap" — "When used as a noun, a 'snap' is defined as 'a catch or fastening that closes or locks with a click,' and when used as an adjective, 'snap' is defined as 'shutting, fastening or otherwise coming together with a click or by means of a device that snaps.'" LRC Electronics, Inc. v. John Mezzalingua Associates, Inc., 974 F. Supp. 171 (N.D.N.Y. 1997). 3702

"the lid defining a groove about its edge sized to receive and snap over the rim of the main body and form a seal" — "The groove defined about the edge of the lid fits over the rim of the main body so that as the rim is received in the groove a portion of at least one of the lid and rim deflects to overcome an interference between them and then rebounds toward its position before deflection to form a closure to resist leakage." Learning Curve Brands, Inc. v. Munchkin, Inc., 2010 U.S. Dist. LEXIS 27277 (W.D. Wis., Mar. 22, 2010). 3703
"snap-together coupling" [and] "snap-action shifting them laterally" — "a device that serves to connect the ends of adjacent parts or objects by snap-action, which is characterized by a rapid resilient movement towards a geometry, immediately precipitated by the reduction of a resisting force, when the panels are joined by shifting them laterally in a substantially co-planar fashion." Alloc, Inc. v. Unilin Decor N.V., et al., 2007 U.S. Dist. LEXIS 16743 (E.D. Wis., Mar. 6, 2007).

"snap type elements" — "elements that are capable of exhibiting snap action." Alloc, Inc. v. Unilin Decor N.V., et al., 2007 U.S. Dist. LEXIS 16743 (E.D. Wis., Mar. 6, 2007).

"disposed ... so as to substantially lessen the foreshortening of said stent upon its expansion" — "encompasses an increase in the distance between the longitudinal positions of the ends of the flexible compensating members or flexible links that is caused by expansion of the stent by a balloon or other mechanical means." Scimed Life Systems, Inc., et al. v. Johnson & Johnson, 225 F. Supp. 2d 422 (D. Del. 2002).

"so dimensioned as to be installable within the exit station of the processing machine" — "designed for use in the exit station." Nova Measuring Instruments, Ltd. v. Nanometrics, Inc., 2006 U.S. Dist. LEXIS 90736 (N.D. Cal., Dec. 1, 2006).

"providing an implantable prosthesis including a plug formed of a surgical mesh fabric which is compressible from a first configuration which is larger than the defect into a second configuration which approximates the shape of the defect so that the plug securely fits therein and occludes the defect" — "using a plug formed of surgical mesh that can be compressed from a configuration that is larger than the defect or hole into a second configuration that approximates the shape of the hole, so that the plug fits into and plugs up the hole." C.R. Bard, Inc., et al. v. United States Surgical Corp., 102 F. Supp. 2d 199 (D. Del. 2000).

"soft gas permeable contact lens"; "characterized by ... softness ..." — "a contact lens having a Hardness (Shore D) of less than five"; "having flexibility when hydrated to shape to the contours of the eye." Rembrandt Vision Technologies, L.P. v. Bausch & Lomb, Inc., et al., 2007 U.S. Dist. LEXIS 36919 (E.D. Tex., May 21, 2007).

"softened wear layer" — "means that the claimed surface covering is in a softened condition after being cured and cooled no later than a finite point in time prior to being imprinted with a surface texture by mechanical means." Mannington Mills, Inc., et al. v. Armstrong World Industries, Inc., et al., 2002 U.S. Dist. LEXIS 18641 (D. Del., Aug. 20, 2002).

"solder reflow temperature" — "mean[s] the peak reflow temperature, rather than the liquidus temperature." Vitronics Corp. v. Conceptronic, Inc., 90 F.3d 1576 (Fed. Cir. 1996).
"sole" — "the distinguishable portion of the sole plate designed to contact the ground (i.e., a flat, planar surface) and contacting the ground as the club lies at rest, with the club contacting the ground at the standard lie angle for the club at issue." Despoir, Inc. v. Nike USA, Inc., 2005 U.S. Dist. LEXIS 10845 (N.D. Ill., Feb. 9, 2005).3715

"solenoid" — "a structural element where (1) the solenoid is actuated only as long as power is supplied, then returning automatically to its original position; (2) the motion of the solenoid plunger is linear; and (3) the solenoid housing is movable." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997).3716

"solid radiation source" — "a radionuclide of definite shape and volume; not liquid or gaseous." Xoft, Inc. v. Cytyc Corp., et al., 2007 U.S. Dist. LEXIS 34468 (N.D. Cal., April 27, 2007).3718

"source of light" — "include[s] a device comprised of two or more component parts, such as a bulb and a reflector, producing a beam of light." Krippelz v. Ford Motor Co., 2003 U.S. Dist. LEXIS 2538 (N.D. Ill., Feb. 24, 2003).3719

"source of pressurized fluid" — "the Court will not construe this term." Toro Co. v. Textron, Inc., et al., 502 F. Supp. 2d 904 (D. Minn. 2007).3720

"space" — "a location that can be occupied by one of the game pieces." Innovention Toys, LLC v. MGA Entertainment, Inc., et al., 2009 U.S. Dist. LEXIS 48386 (E.D. La., May 21, 2009).3721

"space" — "the opening bounded by the web and interlinked link ends when the opening is at its maximum." Habasit Belting Inc. v. Rexnord Industries, Inc., et al., 340 F. Supp. 2d 518 (D. Del. 2004).3722

"spaced apart" — "there is a space between two cutting disks." Fellowes, Inc. v. Michilin Prosperity Co., Ltd., et al., 2006 U.S. Dist. LEXIS 90648 (E.D. Va., Dec. 15, 2006).3723

"spaced apart" — "two articles cannot be 'spaced apart' from each other if they are physically touching." Sparks v. Eastman Kodak Co., 1999 U.S. Dist. LEXIS 22169 (S.D. Cal., Aug. 31, 1999).3724

"spaced apart"; "longitudinally spaced from" — "are [] respectively defined as 'separated' and 'separated along the longitudinal axis.'" Medinol Ltd. v. Guidant Corp., et al., 2004 U.S. Dist. LEXIS 19705 (S.D.N.Y., Sept. 30, 2004).3725

"said connectors being spaced apart and each located adjacent a side wall portion of said bag and adjacent the one end of said bag and liner having the discharge openings therethrough" — "the connectors are located so that they do not touch one another and so that they are near both the end of the bag through which the contents of the bag are emptied and the sides of the bag." Scholle Custom Packaging, Inc. v. Grayling Industries, Inc., 2010 U.S. Dist. LEXIS 55414 (W.D. Mich., Jun. 3, 2010).3726

"two spaced-apart-and-parallel implement-support plates" — "two implement support plates that are spaced apart and parallel and do not touch or intersect." Kai U.S.A., Ltd. v. Buck Knives, Inc., 2006 U.S. Dist. LEXIS 24924 (D. Or., Feb. 9, 2006).3727
"said rear wall comprising a vertical baffle spaced apart from the rear of said combustion chamber for directing combustion gases first in a vertically downward direction and then in a vertically upward direction and into said horizontal exhaust pipe" — "Hearth offers several definitions of 'baffle' including 'an object placed in an appliance to change the direction or retard airflow….' The Court will adopt Hearth's definition of baffle for the purposes of construing this limitation. ... Moreover, ... the patentee changed the limitation to read 'a vertical baffle spaced apart from the rear of said combustion chamber.' The clear implication is that there must be some distance between the baffle and the rear of the chamber." **Fireplace Manufacturers, Inc. v. Hearth Technologies, Inc., 1997 U.S. Dist. LEXIS 21966 (D. Minn., Dec. 10, 1997).**

"spaced apart opposing pivot flanges" — "projecting rims or ribs with flat inner surfaces placed a fixed distance from each other on opposite sides of the center flange that support the shift lever pivot structure and attach it to the support via a pivot pin for turnable or rotational motion. These projections are distinct from and supported by pairs of webs that serve to connect opposite ends of each pivot flange to the center flange." **Grand Haven Stamped Products Co. v. Dura Automotive System, Inc., 2004 U.S. Dist. LEXIS 31087 (W.D. Mich., Jun. 28, 2004).**

"spaced axially downwardly"; "spaced axially below"; "spaced apart" — "'spaced axially downwardly' and 'spaced axially below' ... [permit] the flanges [to] be abutting -- that is, touching or bordering -- so long as they remain independently function and not attached -- that is, joined, connected, or bonded -- to one another. Spaced apart, however, requires at least some physical space between the flanges." **Stant Manufacturing, Inc. v. Gerdes, GmbH, 2004 U.S. Dist. LEXIS 27704 (S.D. Ind., Sept. 27, 2004).**

"said shelf spaced laterally inward from said one side wall and forming a front-to-rear gap therebetween" — "the gap need not be either a long single gap or a quite wide single gap (or both) ... Standing alone, the claim language is plain enough: It merely requires the shelf to be laterally inward so as to form the previously described front-to-rear gap. In other words, the spacing between the shelf and the side wall does not have to meet some particular measure, but must merely be located 'laterally inward.'" **Maytag Corp. v. Whirlpool Corp., 88 F. Supp. 2d 894 (N.D. Ill. 2000).**

"spaced parallel axes" — "requires that the axes be 'spaced' by some distance such that they do not touch, but that there is no requirement that the axes be fixed." **Ishida Co., Ltd., et al. v. Taylor, et al., 1998 U.S. Dist. LEXIS 22957 (N.D. Cal., Nov. 23, 1998).**

"spaced relation to the uppermost portion of the first quantity of explosive material"; "first relatively large quantity of explosive material"; "second relatively small quantity of explosive material" — "there is an air-gap in the borehole between the top of the lower-most explosive material and the bag-like device above it"; "the larger quantity of explosive material placed within the borehole"; "the smaller quantity of explosive material placed in the borehole." **Fitzgibbon v. Eico, Inc., et al., 2006 U.S. Dist. LEXIS 57424 (S.D. W.Va., Aug. 10, 2006).**

"spaced separate elements" — "distinct components that do not come in contact with each other, once they are formed in the patented manufacturing process." **McDavid Knee Guard, Inc., et al. v. Nike USA, Inc., 2009 U.S. Dist. LEXIS 84921 (N.D. Ill., Sep. 17, 2009).**
"spacer" — "a device that creates a space between two cutting disks on the cutting cylinder, the space having a width just slightly greater than an interleaving cutting disk from a mating cutting cylinder [that] may be separate from or integral with the cutting disk(s)." Fellowes, Inc. v. Michilin Prosperity Co., Ltd., et al., 2006 U.S. Dist. LEXIS 90648 (E.D. Va., Dec. 15, 2006) 3735

"spacer" — "a device or piece, distinct from the burner body and the burner pan, that holds the burner body a given distance from the burner pan base, but not a gasket." Travis Industries, Inc. v. Hearth & Home Technologies, Inc., et al., 2004 U.S. Dist. LEXIS 31059 (W.D. Wash., Oct. 18, 2004) 3736

"spacer means" — "is thus limited to the structure disclosed in the specification for performing the 'spacing' function and its equivalents." Polyvision Corp. v. Smart Technologies, Inc., et al., 501 F. Supp. 2d 1042 (W.D. Mich. 2007) 3737

"spacing surface" — "a generally planar surface that is distinct from, and located between, the kayak's seating surfaces, providing at least enough separation between seating surfaces to enable a paddler seated on one seating surface to paddle without interfering with a paddler or passenger occupying another seating surface." Old Town Canoe Co. v. Glenwa, Inc., 229 F. Supp. 2d 1151 (D. Or. 2001) 3738

"spacings between the internal surface of the casing and the pen periphery defining one or more passageways for the flow of air blown into the casing" — "open areas bounded by the inner wall of the casing and the outside of the pen through which air can pass." P & M Products, Ltd., et al. v. Rose Art Industries, 2002 U.S. Dist. LEXIS 5008 (E.D. Pa., Mar. 25, 2002) 3739

"spanning between said side walls" — "extending from one of the two 'side walls' to the other one of the two 'side walls'." Bradford Co. v. Afco Manufacturing, et al., 2006 U.S. Dist. LEXIS 88547 (S.D. Ohio, Dec. 5, 2006) 3740

"special procedure" — "a procedure for processing special locks, as recited in the respective claims, in which the screening entity has agreed to act pursuant to a prior agreement, to look for the identification structure while screening luggage, and, upon finding that identification structure on an individual piece of luggage, to, use the master key previously provided to the screening entity to, if necessary, open the luggage." Travel Sentry, Inc. v. Tropp, 2009 U.S. Dist. LEXIS 87923 (E.D.N.Y., Sep. 24, 2009) 3741

"spike" — "an elongated structure having a pointed tip for piercing the seal, which tip may be sharp or slightly rounded." ICU Medical, Inc. v. Alaris Medical Systems, Inc., 2006 U.S. Dist. LEXIS 96077 (C.D. Cal., July 17, 2006) 3744 "[T]he district court correctly construed spike as 'an elongated structure having a pointed tip for piercing the seal, which tip may be sharp or slightly rounded.'" Id., 558 F.3d 1368 (Fed. Cir. 2009)
"spike" — "an elongated, pointed object, one end of which is sharp and strong enough to pierce a tire to allow air to escape and an opposite end of which is small enough to be inserted into the hole of the frame." PMG, Inc. v. Stinger Spike Systems, Inc., 2002 U.S. Dist. LEXIS 17162 (N.D. W. Va., Mar. 28, 2002). 3745

"spindle" — "any shaft, rod or pin that turns around or on which something turns, as an axle, arbor, or mandrel." Acco Brands, Inc. v. American Power Conversion Corp., 2003 U.S. Dist. LEXIS 27829 (E.D. Tex., Jul. 16, 2003). 3746

"spring-biased mechanism" — "a structure that includes a spring which is exerting force on at least one other part of the structure." Insight Technology Inc. v. SureFire, LLC, 2006 U.S. Dist. LEXIS 11762 (D.N.H., Feb. 28, 2006). 3755

"said vertical supports spring-biased so as to maintain said vertical supports and said platforms in a parallelogram configuration" — "a spring biased against the vertical supports that causes the vertical supports and the platforms to be maintained in a parallelogram configuration." Forest Group, Inc. v. Bon Tool Co., et al., 2007 U.S. Dist. LEXIS 10487 (S.D. Tex., Feb. 15, 2007). 3756

"spring means connected to said hinged arm"; "spring means extending between said mounting means and said hinged arm" — "Here, the means-plus-function presumption is rebutted and the claims should not be construed according to § 112, P 6. Therefore, the district court correctly construed the 'spring means' limitation according to its ordinary meaning: '[t]he hinged arm is connected to a spring that moves the guard along the cannula toward the second position.'" Becton, Dickinson and Co. v. Tyco Healthcare Group, LP, 2010 U.S. App. LEXIS 15609 (Fed. Cir., Jul. 29, 2010) (Gajarsa, J., dissenting). 3757

"spring means tending to keep the door closed" — "We agree with the district court that the phrase 'tending to keep the door closed' is functional language modifying 'spring means.' We disagree with the district court, however, that the recitation of 'spring,' which is structural language, takes the limitation out of the ambit of the construction dictate of § 112, P 6." *Unidynamics Corp., et al. v. Automatic Products International, Ltd., et al.*, 157 F.3d 1311 (Fed. Cir. 1998).

"[a] sputter-deposited dielectric" — "cannot be formed by a two-step process in which a metal layer is first sputter-deposited and then oxidized." *Southwall Technologies, Inc. v. Cardinal IG Co.*, 54 F.3d 1570 (Fed. Cir. 1995).

"squeezing extruder throat" — "a passageway or channel that 1) has an inlet opening wider than a W-beam guardrail so that the guardrail fits inside the opening; and 2) flattens a W-beam guardrail by using the energy of an impacting vehicle to force the guardrail through the throat, where the flattening is caused by passing through a width of the throat that is narrower, in at least one dimension, than the width of an unflattened guardrail." *Trinity Industries, Inc., et al. v. Road Systems, Inc., et al.*, 121 F. Supp. 2d 1028 (E.D. Tex. 2000).

"stabilizing supports" — "two or more parts or projecting surfaces at the end of the dispenser from which fluid is dispensed, other than the end of the passageway out of which fluid is dispensed, which: make contact with the target surface; keep said passageway opening from being forced into the target surface; tend to keep the end of the passageway out of which fluid is dispensed in the same position relative to the target surface; and which transfer back to the stopper, the force applied by the user on the container and/or dispenser for the purpose of dispensing fluid." *Helena Laboratories Corp. v. Alpha Scientific Corp.*, 2006 U.S. Dist. LEXIS 84596 (E.D. Tex., Nov. 21, 2006).

"stably positioned upon the staple cartridge and/or anvil components of the stapler instrument"; "adapted to assist in positioning and/or retaining the buttress material"; "adapted to position and/or retain the materials in place" — "are readily understandable and no construction is necessary." *Synovis Life Technologies, Inc. v. W.L. Gore & Associates, Inc.*, 2009 U.S. Dist. LEXIS 4870 (D. Minn., Jan. 23, 2009).

---

- 335 -
"stack" — "nothing in the disclosures of the asserted patents suggests that 'stack' has any meaning in the art that would limit its scope to horizontal stacks." *Agfa Corp. v. Creo Products Inc., et al.*, 451 F.3d 1366 (Fed. Cir. 2006). 3768

"a first stage in which said laser removes ...; a second stage in which said laser continues to deliver energy ...; a third stage in which said laser removes ..." — "is properly construed as describing three progressive physical effects that may be obtained in fewer than three laser passes." *Laser Light Technologies, Inc. v. Brick Markers U.S.A., Inc.*, 200 F. Supp. 2d 1093 (E.D. Mo. 2001). 3769

"staggered" — "the Court finds that the patentee adopted a lexicography of the term 'staggered' that encompasses objects which overlap or 'step' along one side, yet that form a straight or sloping line along a different side." *Typeright Keyboard Corp. v. Microsoft Corp.*, 2002 U.S. Dist. LEXIS 27468 (S.D.N.Y., Mar. 27, 2002). 3770

"stagnation point flow" — "should be construed in accordance with its ordinary meaning: Stagnation point flow is achieved when a flow toward a solid surface in which the gas or fluid approaching the surface divides into streams proceeding away from the point at which the central streamline intersects the surface. This point is called the 'stagnation flow point.' In order to achieve a stagnation point flow, the direction of the flow initially must be perpendicular to the surface." *ASM America, Inc., et al. v. Genus, Inc.*, 260 F. Supp. 2d 827 (N.D. Cal. 2002). 3771

"stainless steel" — "the court declines to construe the term 'stainless steel' in isolation. Instead, the court will pass on to the question of the proper construction of 'stainless steel comprising' specified elements, which is the second term in the '668 patent for which the parties dispute the proper construction." *Ideal Instruments, Inc. v. Rivard Instruments, Inc., et al.*, 498 F. Supp. 2d 1131 (N.D. Iowa 2007). 3772

"a standard insulin needle fitting for removably mounting said needle assembly on a pen-type syringe having a standard mounting" — "this Court cannot determine what '[a] standard insulin needle fitting for removably mounting said needle assembly on a pen-type syringe having a standard mounting,' was at the time of the patent. The Court can and does construe the word standard in accordance with the dictionary definition of standard to mean: 'regularly and widely used, available, or supplied.'" *Novo Nordisk A/S, et al. v. Becton Dickinson and Co.*, 2000 U.S. Dist. LEXIS 3384 (S.D.N.Y. 2000). 3776
"the standard needle cannula" — "the standard needle cannula of the prior art of the same gauge." Ideal Instruments, Inc. v. Rivard Instruments, Inc., et al., 498 F. Supp. 2d 1131 (N.D. Iowa 2007). 3777

"surgeon's operating station" — "the place within the sterile area of the operating environment where the surgeon and the surgical instruments are located during a surgical procedure." Karl Storz Endoscopy-America, Inc. v. Smith & Nephew, Inc., 2010 U.S. Dist. LEXIS 85036 (W.D. Tenn., Aug. 18, 2010). 3781

"statue" — "the positive, substantially entire version of the tooth, having at least portions of three sides of the tooth, formed by the investment material from the impression." PSN Illinois, LLC v. Ivoclar Vivadent, Inc., 2006 U.S. Dist. LEXIS 88691 (N.D. Ill., Dec. 7, 2006). 3783

"steering structure connected between the junction box and the tongue for causing the junction box to swing responsively when the latter is pivoted about said first axis between its various angular positions" — "does not fall within the meaning of section 112(6). ... The court believes the clause ... means 'a steering structure separate from the drive line that operatively interacts with the tongue at one end and operatively interacts with the junction box at the other end and that transmits the swinging motion of the tongue to the junction box during swinging of the tongue.' The steering structure must be 'separate from the drive line' because it is mentioned separately from the drive line clause in claim 1, thus signifying that a person of ordinary skill in the art would consider the drive line and the steering structure to be two separate items. The steering structure must 'operatively interact with the tongue at one end and operatively interact with the junction box at the other end' because the claim reveals that the steering structure must 'connect between the junction box and the tongue.' The steering structure must 'transmit the swinging motion of the tongue to the junction box during swinging of the tongue' because the claim reveals that the steering structure must 'cause[] the junction box to swing responsively ... when the [tongue] is pivoted.'" Hay & Forage Industries, et al. v. New Holland North America, Inc., 25 F. Supp. 2d 1170 (D. Kan. 1998). 3784

"stent" — "a supporting device, without any attached fabric or graft material." Medtronic, Inc., et al. v. W.L. Gore & Associates, Inc., 2007 U.S. Dist. LEXIS 80038 (N.D. Cal., Oct. 19, 2007). The Court cannot say that the term 'stent' should be limited to a bare stent, reconsiders and reverses its previous construction, and concludes that the term 'stent' as used in the Wiktor Patents should be construed to mean 'a supporting device.' Id., 2007 U.S. Dist. LEXIS 91053 (N.D. Cal., Nov. 30, 2007).

"stent" — "a device, made of a body-compatible material, used to widen a blood vessel or other body opening (also called a 'lumen'), and to maintain the resultant size of the blood vessel or lumen." Scimed Life Systems, Inc., et al. v. Johnson & Johnson, 225 F. Supp. 2d 422 (D. Del. 2002).

"stent which is substantially uniformly flexible with respect to its longitudinal axis by the flexibility of its cells with respect to said axis" — "the structural elements of the cells provide longitudinal flexibility such that the flexibility of the stent is substantially uniform as one moves along the longitudinal axis of the stent." Scimed Life Systems, Inc., et al. v. Johnson & Johnson, 225 F. Supp. 2d 422 (D. Del. 2002).

"steps formed in the fins" — "a surface or surfaces cut into the fins against which part of the pen may abut." P & M Products, Ltd., et al. v. Rose Art Industries, 2002 U.S. Dist. LEXIS 5008 (E.D. Pa., Mar. 25, 2002).

"steps of: providing a memory ... determining when the cruise control is engaged; ... retrieving one of the sets [of] data ...; retrieving the other set of ...; and using the retrieved data ..." — "§ 112(6) is not applicable." Caterpillar Inc. v. Detroit Diesel Corp., 961 F. Supp. 1249 (N.D. Ind. 1996).
"a sterilized balloon" — "a balloon sterilized by the sterilization process disclosed at 10:66-11:9 of the '364 patent, which consists of (1) a preconditioning step at a temperature about 35 to about 45 °C and a relative humidity of about 55% for about 15 hours, (2) then an ethylene oxide treatment step at a temperature of about 35 to about 45 °C and a relative humidity of about 55% with ethylene oxide for about 6 hours, and (3) then an aeration step at a temperature of about 35 to about 45 °C for about 22 hours in order to permit the ethylene oxide to dissipate." Medtronic Vascular Inc., et al. v. Boston Scientific Corp., et al., 526 F. Supp. 2d 613 (E.D. Tex. 2007).

"a stop" — "an element with a hole or opening that blocks or limits light." Fujinon Corp. v. Motorola, Inc., 2009 U.S. Dist. LEXIS 83088 (D. Del., Sep. 11, 2009).

"stop means within the casing against which a surface of a pen can abut to position the nib of the pen at least partially within the nozzle orifice" — "is not a means plus function claim, even though the word 'means' is used in the term because the claim element does not recite a function." P & M Products, Ltd., et al. v. Rose Art Industries, 2002 U.S. Dist. LEXIS 5008 (E.D. Pa., Mar. 25, 2002).

"stop member" — "a physical structure, which in combination with other elements, performs the function of limiting the movement of the swing arm." Deere & Co. v. Toro Co., 2001 U.S. Dist. LEXIS 25305 (N.D. Ill., Jul. 11, 2001).

"stopper" — "a part of a substrate that may be used to stop the flow of resin to the center hole." Matsushita Electrical Industrial Co., Ltd. v. Cirram International, Inc., 2004 U.S. Dist. LEXIS 131 (D. Del., Jan. 5, 2004).

"a compressed [nitrox] storage assembly" — "the assembly contains as many conventional storage vessels (such as a nitrox storage cylinder or a scuba tank) as the operator of the system desires, and it contains an identical number of branch lines, one branch line for each storage vessel." Undersea Breathing Systems, Inc. v. Nitrox Technologies, Inc., 985 F. Supp. 752 (N.D. Ill. 1997).

"storm survival kit" — "a protective barrier device configured to be quickly deployed on or within a portion of a structure for protecting an interior portion of the structure from the force of the wind and objects carried thereby." Armor Screen Corp. v. Storm Catcher, Inc., et al., 2009 U.S. Dist. LEXIS 33407 (S.D. Fla., Mar. 10, 2009).
"stowed"; "retracted position substantially within said housing" — "means that the anchoring mechanism is completely stowed within the bulkhead and is completely out of the way of passengers." American Seating Co. v. Transportation Seating, Inc., 2001 U.S. Dist. LEXIS 14720 (W.D. Mich., Sept. 18, 2001). "The natural meaning of this claim language would be that most, but not necessarily all, of the anchor member must be contained within the housing. We therefore conclude that claim 31 requires the bulkhead housing to contain most of the anchor member and to such an extent as to prevent a passenger from tripping over the anchor member." Id., 62 Fed. Appx. 344 (Fed. Cir. 2003) (unpublished).

"strap opening" — "an opening for the arm of a user, formed by a section of strap as it extends from one securing point to another." Izzo Golf, Inc. v. King Par Golf, Inc., 2006 U.S. Dist. LEXIS 51199 (W.D.N.Y., July 26, 2006).

"strata in the earth"; "said strata" — "mean[s] identifiable and distinguishable layers of material (e.g., rock) beneath the surface of the earth." Union Pacific Resources Co. v. Chesapeake Energy Corp., et al., 236 F.3d 684 (Fed. Cir. 2001).

"streamer positioning device" — "a device that controls the position of a streamer as it is towed (e.g. a 'bird')." WesternGeco LLC v. ION Geophysical Corp., 2010 U.S. Dist. LEXIS 71875 (S.D. Tex., Jul. 16, 2010).

"streamer separation mode" — "a control mode that attempts to set and maintain the spacing between adjacent streamers." WesternGeco LLC v. ION Geophysical Corp., 2010 U.S. Dist. LEXIS 71875 (S.D. Tex., Jul. 16, 2010).

"a roll of stretched plastic film" — "a roll of stretched (i.e., mechanically elongated) plastic film." Pliant Corp. v. MSC Marketing and Technology, Inc., 416 F. Supp. 2d 632 (N.D. Ill. 2006).

"strike the periphery ... for visibly outlining" — "nothing in the term's denotation precludes the laser beam from striking inside the energy zone's perimeter. The plain words of the claims merely require that the laser beam strike the periphery of that zone." Omega Engineering, Inc. v. Raytek Corp., et al., 334 F.3d 1314 (Fed. Cir. 2003).

"strip of material" — "in claims 1 and 14 of the '240 patent has a low flexural stiffness but does not have to be substantially water impermeable. The 'strip of material' disclosed in claims 1 and 11 of the '579 patent has a low flexural stiffness and is substantially water impermeable." Procter & Gamble Co. v. McNeil-PPC, Inc., 2009 U.S. Dist. LEXIS 6947 (W.D. Wis., Jan. 26, 2009).

"stud" — "those portions of the two sides of each primary spectacle frame which include a magnetic material and project outwardly and rearwardly of the lenses or lens rims (if provided)." Aspex Eyewear, Inc., et al. v. Miracle Optics, Inc., 2003 U.S. Dist. LEXIS 26355 (C.D. Cal., Feb. 14, 2003).

"studs" — "projections that do not mandatorily have the minimum practicable or less than 5% limitation." Synthes (U.S.A.) v. DePuy Ace Medical Co., 1999 U.S. Dist. LEXIS 18173 (E.D. Pa., Nov. 29, 1999).

"sub-area of an area" — "a distinct portion of a larger portion of a substrate, which is to be imaged with a pattern." Nikon Corp., et al. v. ASM Lithography B.V., 308 F. Supp. 2d 1039 (N.D. Cal. 2004).
"substantial" — "when considered in the light of the entire claimed invention, is as accurate as the subject matter permits and provides sufficient guidance to one skilled in the art of paving stone installations." Pave Tech, Inc., et al. v. Snap Edge Corp., et al., 952 F. Supp. 1284 (N.D. Ill. 1996). 3837

"substantial" — "largely, but not necessarily wholly, that which is specified." Mueller Sports Medicine, Inc. v. Sportstar Athletics, Inc., 385 F. Supp. 2d 775 (W.D. Wis. 2005). 3838

"substantial" — "a portion or amount that is considerable in quantity." ChemFree Corp. v. J. Walter, Inc., et al., 2007 U.S. Dist. LEXIS 51677 (N.D. Ga., July 17, 2007). 3839

"substantial coverage" — "large enough to cover the skin area on the zygomatic arch when applied to said skin area." Mueller Sports Medicine, Inc. v. Sportstar Athletics, Inc., 385 F. Supp. 2d 775 (W.D. Wis. 2005). 3842

"substantial helical flow path" [and] "substantially volume filling" — "all flow patterns that are generally, though not necessarily perfectly, spiral, and that fill much, though not necessarily all, of the tank's volume." Liquid Dynamics Corp. v. Vaughan Co., Inc., 355 F.3d 1361 (Fed. Cir. 2004). 3844

"a substantial part of the entire height thereof" — "requires that the ridges must cover nearly the entire height of the sidewall portion of the invention." York Products, Inc. v. Central Tractor Farm & Family Center, et al., 99 F.3d 1568 (Fed. Cir. 1996). 3845

"a substantial portion" — "could be up to and including 100%." Harsco Corp. v. North Star Bluescope Steel, LLC, 2007 U.S. Dist. LEXIS 55335 (N.D. Ohio, July 31, 2007). 3847

"providing a substantial refractive index match between the applicator and the skin surface" — "I am fully persuaded by the Northern District of California's use of examples from the specification to illustrate the meaning of 'substantial' and decline to follow defendant's suggestion of the term 'approximately equal' because it adds no clarity to the claim language." Palomar Medical Technologies, Inc., et al. v. TRIA Beauty, Inc., 2010 U.S. Dist. LEXIS 112200 (D. Mass., Oct. 13, 2010). 3849
"a substantial surface portion of said food item" — "refers to a positional relationship between the susceptor and the food item in which the susceptor envelops a very large portion of the surface of the food item." General Mills, Inc. v. Hunt-Wesson, Inc., 103 F.3d 978 (Fed. Cir. 1997). 3850

"substantially" — "is commonly understood as meaning 'largely' or 'most'--i.e., at minimum, some figure greater than 50 percent." Fisher-Price, Inc., et al. v. Evenflo Co., Inc., 2006 U.S. Dist. LEXIS 42982 (W.D.N.Y., June 26, 2006). 3851

"substantially" — "to a considerable degree." Epcon Gas Systems, Inc., et al. v. Bauer Compressors, Inc., 134 F. Supp. 2d 838 (E.D. Mich. 2000). 3852 "In this case, the term 'substantially' was used in two contexts with a subtle but significant difference. The phrase 'substantially constant' denotes language of approximation, while the phrase 'substantially below' signifies language of magnitude, i.e., not insubstantial. Because the same term was used in a different manner in these two phrases, the word 'substantially' should not necessarily be interpreted to have the same meaning in both phrases." Id., 279 F.3d 1022 (Fed. Cir. 2002). 3853

"at substantially a lumbar region" — "approximately the portion of the backrest where the lumbar section of a user's back would be supported by the backrest." Herman Miller, Inc. v. Teknion Corp., et al., 504 F. Supp. 2d 360 (N.D. Ill. 2007). 3854

"a graspable arm ... extending ... at substantially a right angle with respect to the longitudinal axis" — "contemplate[s], at the very least, that the 'graspable' portion of the arm be at or near a 90-degree angle to the handle." Oreck Holdings, LLC, et al. v. Dyson, Inc., 434 F. Supp. 2d 385 (E.D. La. 2006). 3855

"substantially above the softening temperature" — "mean[s] sufficiently above the softening temperature of the binder to allow conversion of the binder to a continuous web matrix or forced point-bonds." KX Industries, L.P., et al. v. Culligan Water Technologies, Inc., et al., 90 F. Supp. 2d 461 (D. Del. 1999). 3856

"substantially above the softening temperature of said binder material" — "the court construes the phrase 'substantially above' to mean a temperature which is sufficiently high both to form a composite and to keep the mixture from solidifying in the extruder." KX Industries, L.P., et al. v. Culligan Water Technologies, Inc., et al., 90 F. Supp. 2d 461 (D. Del. 1999). 3857

"substantially all" — "largely, but not wholly, the totality of the bolster." Flexi-Mat Corp. v. Dallas Manufacturing Co., et al., 2006 U.S. Dist. LEXIS 19528 (D. Mass., April 11, 2006). 3858

"substantially all of said panel" — "Substantially all of the said panel' simply means 'largely or essentially all' of the panel. ... the court ... construes 'panel' to mean 'that portion of the surface of the claimed device which functions as both a display and a keyboard.'" NCR Corp. v. Palm, Inc., et al., 217 F. Supp. 2d 491 (D. Del. 2002). 3860
"substantially all of said reactants remaining in said reaction space and adsorbed on inner walls of said reaction space are removed to a level of less than 1% prior to the inflow of a second pulse" — "more than 99% of the combined total amount of the unreacted reactants remaining in the reaction space and those adsorbed on the inner walls of the reaction space are removed before the inflow of a second pulse." ASM America, Inc. v. Genus, Inc., 2002 U.S. Dist. LEXIS 15348 (N.D. Cal., Aug. 15, 2002). 3861

"a substantially axial annular groove" — "There is nothing in the claim or the disclosure of the patent that indicates that the annular groove must be circular." Produits Berger S.A., et al. v. Schemenauer, et al., 2007 U.S. Dist. LEXIS 10294 (E.D. Tex., Feb. 14, 2007). 3862

"substantially block" — "in reference to wavelengths, it is defined as blocking over 99% of the incident radiation at each and every wavelength"; "in reference to polarization, it is defined as blocking 80% or more of the horizontally polarized incident radiation at each and every wavelength." Suntiger, Inc. v. Sunglass Products of California, 2006 U.S. Dist. LEXIS 1076 (C.D. Cal., Jan. 10, 2006). 3863

"substantially bonded" — "requires that the overlapping folds in the sheet of material be gathered or crimped about the upper end of the floral holding material by a band or bonding material." Prima Tek II, L.L.C., et al. v. Polypap, S.A.R.L., 318 F.3d 1143 (Fed. Cir. 2003). 3864

"substantially centered driver circuit" — "the driver circuit is mounted near the center of one side of the memory modules." Sun Microsystems, Inc. v. Dataram Corp., 1997 U.S. Dist. LEXIS 18363 (N.D. Cal., Aug. 29, 1997). 3865

"an elongate hollow liner ... having an original outer diameter substantially comparable to the inside diameter of the pipe to be lined" — "the term 'substantially comparable to' [] encompass[es] pipe liners slightly less than, equal to, or slightly greater than the host pipes into which they are being installed." Pipe Liners, Inc., et al. v. Pipelining Products, Inc., 1999 U.S. Dist. LEXIS 17271 (D. Del., Oct. 22, 1999). 3867

"substantially completely wetted" — "largely, but not necessarily wholly, surrounded by resin. In the context of LFRT pellets, it is surrounding the individual filaments by resin to the extent that in articles injection molded from such pellets, the individual filaments are randomly dispersed and at least 50% by weight of the filaments retain a length of 2 millimeters or greater." LNP Engineering Plastics, Inc., et al. v. Miller Waste Mills, Inc., et al., 77 F. Supp. 2d 514 (D. Del. 1999). 3868 "The district court [ ] correctly concluded that 'substantially completely wetted' means 'largely, but not necessarily wholly, surrounded by resin.' Moreover the district court correctly determined that a flexural modulus test result does not limit claim 1 of both patents." Id., 275 F.3d 1347 (Fed. Cir. 2001). 3869

"substantially conjugated" — "positioned such that the area's points map or image to a significant degree to the corresponding points of another area or plane." Nikon Corp., et al. v. ASM Lithography B.V., 308 F. Supp. 2d 1039 (N.D. Cal. 2004).

"substantially constant wall thickness" — "wall thickness that is to a large or considerable degree constant." Verve, LLC v. Crane Cams, Inc., et al., 395 F. Supp. 2d 558 (E.D. Mich. 2005).

"substantially continuously deformable" — "Although in some contexts the addition of a qualifier like 'substantially' can be important, the court finds that within the context of the real world art of sunshade design and manufacture, there is no 'perfectly continuously deformable' material. Accordingly, Claim 1, sensibly read, never required such an interpretation. A deformable material, within the context of auto sunshades, could be at most 'substantially' deformable." Huang, et al. v. Autoshade, et al., 950 F. Supp. 1016 (C.D. Cal. 1997).

"substantially continuously deformable to a predetermined contour of said vehicle window" — "means that the perimeter of the sunshade is capable of bending ('deformable') so as to fit a predetermined contour of a vehicle window." Huang, et al. v. Autoshade, et al., 950 F. Supp. 1016 (C.D. Cal. 1997).

"substantially coplanar" — "requir[es] an angle of no more than ten degrees between the snag-resistant elements and the supporting elements." Pannu v. Iolab Corp., 155 F.3d 1344 (Fed. Cir. 1998).

"extending substantially coplanar" — "means said finger plate extends substantially in the same plane as said shield allowing sheets of paper to lie flat atop the ring metal assembly." U.S. Ring Binder, LP v. Staples the Office Superstore LLC, et al., 2009 U.S. Dist. LEXIS 21783 (E.D. Mo., Mar. 18, 2009).

"substantially defines" — "means that the channel(s) serve to distinguish between the inner and outer portions, and in order to do so the channel(s) need not connect or constitute a single channel unit." Kimberly-Clark Corp., et al. v. Tyco Healthcare Retail Group, 456 F. Supp. 2d 998 (E.D. Wis. 2006).
"said peripheral rim having an inner region contour being substantially different from the inner surface contour of the annular bead of the container for allowing only a portion of said inner region contour of said peripheral rim to contact the inner surface contour of the annular bead when said mounting cup is disposed upon the container" — "the district court properly determined ... that the claims require a mounting cup that 'exhibits a flattening in the inner region contour, an area depicted as between 12 o'clock and 3 o'clock in Figures 4-11 of the '067 patent,' wherein the 'flattening extends substantially into the semi-circular region defined by the peripheral rim of conventional prior art mounting cups illustrated in Figures 1-3 of the '067 patent.' The district court also concluded that the claimed cup must 'not match the bead in that location before crimping ... [and that the cup] when placed on can beads, does not fully seat on the can bead before crimping, but rather rests on the can bead in a manner resulting in a gap between the apex of the mounting cup and the apex of the can bead.' In sum, the district court interpreted the claim to require a 'flattening' sufficient to prevent the rim from properly seating on the annular bead, and creating a gap between the rim apex and the bead apex." AptarGroup, Inc. v. Summit Packaging Systems, Inc., 1998 U.S. App. LEXIS 28047 (Fed. Cir., Oct. 30, 1998) (unpublished).

"whereby said axle cross-sectional configuration is prevented from assuming a cross-sectional configuration substantially different from an unaltered configuration when said torsional forces are imposed upon said axle" — "a) 'substantially different from an unaltered configuration' means not the same, or largely not the same, and measurably less altered than that achieved by the prior art. b) 'said torsional forces' are the twisting forces causing a portion of an axle to be placed in compression and a portion to be placed in tension." Boler Co. v. Arvinmeritor, Inc., 2004 U.S. Dist. LEXIS 13365 (N.D. Ill., Jul. 16, 2004).

"substantially doughnut shaped" — "The district court concluded that 'substantially doughnut-shaped' means a toroidal object, which is defined as a surface generated by a plane closed curve rotated about a line lying in the same plane as the curve but not intersecting it. ... Although the district court did not need to introduce the term toroidal to define 'substantially doughnut-shaped,' we agree with the district court that the accused Hageman device does not literally meet this claim limitation." Ad-in-the-Hole, International, Inc. v. Hageman, 1997 U.S. App. LEXIS 6213 (Fed. Cir., Apr. 2, 1997) (unpublished).
"a substantially enclosed guide conduit" — "The Court construes 'conduit' in its ordinary and customary sense, thus signifying a tube or channel for carrying or taking materials from one place to another. In addition, the Court construes 'guide' in its ordinary meaning, thus signifying something that helps to direct an object's travel or its progressive motion. The Court consequently construes the 'guide conduit' to be a tube or channel that carries materials from one place to another and that helps to direct the materials' progressive motion. ... The Court construes the phrase 'substantially enclosed' according to its ordinary and customary meaning, thus signifying a conduit that is almost entirely closed in from the outside environment." In re: Turn-Key-Tech Matters, 2002 U.S. Dist. LEXIS 25583 (C.D. Cal., Jan. 8, 2002). A review of the claim language, written description, and prosecution history show that a guide conduit is simply a passageway through which a plastic product is moved. The plain language of the claims describes the guide conduit as an area within the mold. The district court's definition attributes a function to the guide conduit, namely that it direct the material's motion. That is an added limitation not found in the claim language or properly imposed by the intrinsic record." Turn-Key-Tech, LLC v. National Film Laboratory, Inc., et al., 74 Fed. Appx. 58 (Fed. Cir., Sept. 8, 2003) (unpublished).

"substantially enclosed processing space" — "require[s] a 'seal' created by the head and the bowl that is sufficiently closed to permit the effective gas processing of a wafer using the gas phase of a processing fluid." Semitool, Inc. v. Novellus Systems, Inc., 12 Fed. Appx. 918 (Fed. Cir., Jun. 8, 2001) (unpublished). "[T]he district court correctly interpreted the 'substantially enclosed' limitation ... to require a 'seal' created by the head and the bowl that is sufficiently closed to permit the effective gas processing of a wafer using the gas phase of a processing fluid, regardless whether the chemical to be used is in a gas or liquid state." Id., 44 Fed. Appx. 949 (Fed. Cir., Jul. 23, 2002) (unpublished).

"substantially entirely" — "is not indefinite and needs no further construction." Broadcast Innovation, LLC v. Echostar Communications Corp., 240 F. Supp. 2d 1127 (D. Colo. 2003).

"substantially entirely and flushly" — "requir[es] the lid's latch bar to fit within the recess formed across the tongue in a manner that creates an almost completely continuous plane with the outer, front side of the container." Pehr v. Rubbermaid, Inc., 87 F. Supp. 2d 1222 (D. Kan. 2000).

"the thickness is substantially equal on the left side region of the second zone and the right side region of the second zone" — "the second zone includes a series of horizontal cross-sections each having substantially uniform thickness not varying by more than about 30 jam or 20% of the minimum thickness on the left side region and the right side region." Coopervision, Inc. v. Ciba Vision Corp., 2007 U.S. Dist. LEXIS 51432 (E.D. Tex., July 16, 2007).

"wherein the height of said lip is substantially equal to the depth of said recess" — "the Court determines that the claim language creates no ambiguity and has a readily understood meaning. Accordingly, the Court declines to construe the phrase." Allan Block Corp. v. County Materials Corp., et al., 502 F. Supp. 2d 845 (D. Minn. 2007).

"substantially fill the defect" — "A joining segment 'substantially fills a defect' if the perimeter of the joining segment is substantially the same size as the perimeter of the defect." Regents of the University of Minnesota v. AGA Medical Corp., 2009 U.S. Dist. LEXIS 90289 (D. Minn., Sep. 29, 2009). 3894

"substantially flat"; "substantially flush" — "are unambiguous and therefore require no construction." ICU Medical, Inc. v. B. Braun Medical, Inc., 344 F. Supp. 2d 663 (N.D. Cal. 2004). 3896

"an upper surface which is substantially flat across the bottle retaining pockets" — "require a pocket bottom with a relatively smooth or even surface at the bottle contact area without significant curvature or noteworthy deviations from horizontal." Rehrig Pacific Co. v. Norseman Plastics Ltd. Inc., 2003 U.S. Dist. LEXIS 27566 (C.D. Cal., Sept. 29, 2003). 3897

"substantially flat, horizontally disposed bottom wall" — "the court holds that the 'substantially flat' limitation in claim 1 should be construed to mean 'entirely flat.'" Circle R. Inc. v. Trail King Industries, Inc., 1999 U.S. Dist. LEXIS 23531 (D. Neb., Nov. 23, 1999). 3898 "[T]he district court erred when it concluded that the specification required the phrase 'substantially flat' be construed to mean 'entirely flat.'" Id., 21 Fed. Appx. 894 (Fed. Cir., Sept. 28, 2001) (unpublished). 3899

"substantially flat surface" — "the limitation 'substantially flat' inherently excludes the defined cavities of Lee and [] this term needs no further construction." Tinkers & Chance v. Leapfrog Enterprises, Inc., 2007 U.S. Dist. LEXIS 43871 (E.D. Tex., June 18, 2007). 3900

"substantially flattened surfaces" — "surfaces, including flat surfaces, materially flatter than the cylindrical front portion of the applicator." Playtex Products, Inc. v. Procter & Gamble Co., et al., 400 F.3d 901 (Fed. Cir. 2005). 3901

"substantially flush with adjacent portions" — "mean[s] that the cladding closely abuts or conforms to the underlying contours of the entire wheel face outer surface." Lacks Industries, Inc. v. McKeechnie Vehicle Components USA, Inc., et al., 55 F. Supp. 2d 702 (E.D. Mich. 1999). 3902

"density substantially greater than" — "The density of the pleats must be 40 to 100% greater than the rest of the paperboard." James River Corp. of Virginia v. Hallmark Cards, Inc., 915 F. Supp. 968 (E.D. Wis. 1996). 3904

"extending substantially higher than said front, rear and second side walls to define a protective barrier" — "while the term 'substantially higher' is construed according to its plain meaning, the higher wall must act as a protective barrier." Maytag Corp. v. Whirlpool Corp., 88 F. Supp. 2d 894 (N.D. Ill. 2000). 3905
"substantially homogeneous paperboard blank" — "the blank must have not had additional layers of paperboard or other non-uniformly dispersed reinforcing material added to its periphery for the purpose of increasing the plate's strength. This allows for less than perfect homogeneity or uniformity in the paperboard blank." James River Corp. of Virginia v. Hallmark Cards, Inc., 915 F. Supp. 968 (E.D. Wis. 1996).3906

"substantially identical size distribution" — "80% by weight of hard and resilient granules in the bottom course distributed in a range spanning a numerical difference of no more than 40 screen mesh standard." FieldTurf USA, Inc., et al. v. Sports Construction Group LLC, 499 F. Supp. 2d 907 (N.D. Ohio 2007).3908

"substantially identically shaped" — "having a particular form that is approximately exactly alike." Synvasive Corp. v. Stryker, Corp., 478 F. Supp. 2d 1193 (E.D. Cal. 2007).3909

"The written description, as a whole, clearly requires that a portion of the metal insert of the weight penetrate the imaginary plane containing the fulcrum of the beam to minimize the weight of the scale and facilitate portability. There is no disclosure suggesting that a portion of the weight need only be located at or near the plane as Deering suggests. For this reason, we agree in part with the district court's construction of the Zero Position Limitation as requiring at least a portion of the weight to intersect the plane containing the fulcrum. We agree with the district court's claim construction only in part because the district court's construction effectively reads the term 'substantially' out of the claims by construing the claim to read on any slight penetration of the plane." Id., 347 F.3d 1314 (Fed. Cir. 2003).3911

"said binder particles being substantially incapable of fibrillation under normal conditions into microfibers of less than 10 micrometers diameter at room temperature" — "the binder particles are substantially incapable of forming fibers of less than 10 micrometers diameter by shear and pulling alone without heating or substantial compression." KX Industries, L.P., et al. v. Culligan Water Technologies, Inc., et al., 90 F. Supp. 2d 461 (D. Del. 1999).3912

"substantially integrated fibrous structures generally inseparable into their constituent layers" — "In this context, 'substantially' allows for something short of absolute elimination of gaps and voids. It does require that comparison of photomicrographs reveal to one skilled in the art that the gaps and voids are distinctly reduced as compared to the prior art." James River Corp. of Virginia v. Hallmark Cards, Inc., 915 F. Supp. 968 (E.D. Wis. 1996).3914
"a stop ... located forward of the body and above and substantially inward of the peripheral edge" — "Zodiac contends that the district court erred when it found that all of the structure must be 'substantially inward of' the disc's periphery. We disagree. ... It defies common usage to suggest that a stop which is 'substantially inward' of an edge could at the same time extend at least to that same edge." Zodiac Pool Care, Inc. v. Hoffinger Industries, Inc., 206 F.3d 1408 (Fed. Cir. 2000). Because the term 'substantially' can have either meaning, we must look elsewhere to determine which meaning should be adopted in this instance. When we do, we find that the claim language, the written description, and the prosecution history all point the same way: the term 'substantially' should be interpreted, as Zodiac proposes, to mean 'largely,' 'mostly,' or 'in the main,' rather than 'far.' Zodiac Pool Care, Inc. v. Hoffinger Industries, Inc., 206 F.3d 1408 (Fed. Cir. 2000). (Bryson, J., dissenting-in-part).

"substantially larger" — "figure three, which depicts a cross-sectional dimension that is about twenty percent larger than a perpendicular cross-sectional dimension, provides an indication of the scope of the term 'substantially larger.' ... Figure nine also depicts a cross-sectional dimension that is approximately twenty percent larger than a perpendicular cross-sectional dimension. ... In addition, as the Court also previously noted, the specification clearly states that the purpose of reducing the catheter profile, which results in one transverse dimension substantially larger than the perpendicular direction, is to increase flexibility substantially. Thus, the specification makes clear that the difference between the first transverse direction and the perpendicular direction must be such as to result in a substantial increase in flexibility. The Court concludes that this requirement, in connection with figures three and nine, allows a person skilled in the art to ascertain the scope of the Sirhan '275 patent." Advanced Cardiovascular Systems, Inc. v. SciMed Life Systems, 96 F. Supp. 2d 1006 (N.D. Cal. 2000).

"said filter media is a paper filter presenting substantially no openings therethrough having a greater dimension than 25 microns" — "the filter media is a paper filter that has substantially no openings through it with dimensions greater than 25 microns." Ekstam v. Ekstam, 2006 U.S. Dist. LEXIS 12937 (E.D. Mo., March 7, 2006).

"substantially non-resilient lever moving element" — "a 'non-resilient lever moving element' is one which does not utilize a spring." Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997).
"points **substantially on a geometric extension**" — "means that attenuator plates must extend on both ends as close to the surface of the imaginary sphere formed by expanding the curved surface of the closure member as economically efficient, allowing for mechanical clearance to avoid contact between the plates and the valve body either through rotation or thermal expansion." Neles-Jamesbury, Inc. v. Fisher Controls International, Inc., et al., 989 F. Supp. 393 (D. Mass. 1998).

"**substantially only backscattered light**" — "mean[s] that only backscattered light is collected." ADE Corp. v. KLA-Tencor Corp., 252 F. Supp. 2d 40 (D. Del. 2003).

"**substantially parallel**" — "the linear light emitting portion of the at least two compact fluorescent lamps are 'substantially parallel' to an adjacent section of the reflector where that 'substantially parallel' relationship is defined by Tickner's Fig. 3 and Fig. 15 cross sectional views. The utilization of the modifier 'substantially' contemplates meaningful variations from the specific angular relationships illustrated in Tickner's patent drawings as long as the overall 'eyeball' impression is one of 'general parallelism' as articulated by Tickner's Figs. 3 and 15." Sportlite, Inc. v. Genlyte Thomas Group, LLC, et al., 2006 U.S. Dist. LEXIS 96638 (D. Ariz., Sept. 13, 2006).

"**substantially parallel said reflector**" — "the lamps are close enough to parallel or generally parallel to the reflector." Sportlite, Inc. v. Genlyte Thomas Group, LLC, et al., 518 F. Supp. 2d 1122 (D. Ariz. 2007).

"**substantially parallelepiped**" — "a six-sided parallelogram in which the end panels are neither parallel to each other nor perpendicular to the face walls." Phillips v. AWH Corp., et al., 2002 U.S. Dist. LEXIS 27298 (D. Colo., Nov. 20, 2002).

"**substantially perpendicular**" — "means an angle that is 90 degrees or approximately 90 degrees." Christiana Industries v. Empire Electronics, Inc., 443 F. Supp. 2d 870 (E.D. Mich. 2006).

"each said embedded leg being positioned in a plane substantially perpendicular to said faceplate and substantially parallel to said longitudinal axis of the faceplate" — "each embedded leg is positioned in a plane sufficiently perpendicular to the faceplate and parallel to the longitudinal axis of the faceplate to permit significant flexing under vertical shear and tension forces." JVI, Inc. v. Universal Holdings, Inc., et al., 464 F. Supp. 2d 758 (N.D. Ill. 2006).
"side surfaces of said embedded insulator being substantially perpendicular to said semiconductor substrate" — "Although the patent does not provide a numerical limitation for the term 'substantially,' the disclosed embodiments and the ordinary and plain meaning of 'substantially' should be sufficient to guide a jury in performing its duties. If necessary, and if the parties marshal any new intrinsic evidence, the court would consider revisiting this issue at a later date. But for present purposes, the court rejects Hynix's construction and declines to construe this term."  Toshiba Corp. v. Hynix Semiconductor Inc., et al., 2006 U.S. Dist. LEXIS 63313 (N.D. Cal., Aug. 21, 2006).\(^{3938}\)

"wherein the spring is a substantially planar bent wire spring" — "a spring having one or more bends in the same plane, thereby providing a substantially flat shape. The spring may be composed wire that is not flat."  Kai U.S.A., Ltd. v. Buck Knives, Inc., 2006 U.S. Dist. LEXIS 24924 (D. Or., Feb. 9, 2006).\(^{3936}\)

"substantially planar cover portion" — "a cover portion having a substantially flat, two-dimensional quality."  Freeman, et al. v. Gerber Products Co., 357 F. Supp. 2d 1290 (D. Kan. 2005).\(^{3937}\)

"substantially planar ... support structure" — "a structure having substantially flat or flush surfaces."  BOC Health Care, Inc., et al. v. Nellcor Inc., 892 F. Supp. 598 (D. Del. 1995).\(^{3938}\)

"blood is substantially prevented from entering the proximal portion of the guide wire lumen" — "The Court agrees with the defendant that the patent does not limit the term based on where the blood enters the guide wire lumen. The Court, however, agrees with the plaintiff that 'substantially' can be understood according to its plain and ordinary meaning."  Medtronic AVE, Inc. v. Cordis Corp., 516 F. Supp. 2d 741 (E.D. Tex. 2007).\(^{3939}\) "After carefully considering the arguments raised, the court is not persuaded to alter its construction from the Cordis case. Accordingly, the Court concludes that this term does not requires construction."  Medtronic Vascular Inc., et al. v. Boston Scientific Corp., et al., 526 F. Supp. 2d 613 (E.D. Tex. 2007).\(^{3940}\)

"substantially quadrilaterally shaped" — "the enclosure along its major longitudinal axis has an overall quadrilateral shape with four sides which are overall flat or level and are composed of overall straight lines, and the shape's internal angles reach the sum of approximately 360 degrees."  Farrago v. Rawlings Sporting Goods Co., Inc., 2007 U.S. Dist. LEXIS 38036 (E.D. Mo., May 24, 2007).\(^{3941}\)

"substantially semi-elliptical" — "approximately a shape of a semi-ellipse, i.e., one half of a geometric shape where the sum of the distance of each point of the curve from two points remains constant."  Highway Equip. Co., Inc. v. Cives Corp., et al., 476 F. Supp. 2d 1079 (N.D. Iowa 2007).\(^{3943}\)

"substantially similar" — "would require the weights to have shapes and sizes that are alike, but not necessarily identical. In particular, if the weights are not equal, they may, by necessity, be different sizes. In that instance, the weights could still be 'similar' in the geometric sense of the term by sharing the same shape."  Momentus Golf, Inc. v. Concept Sports, Inc., 2002 U.S. Dist. LEXIS 10901 (S.D. Iowa, Jun. 5, 2002).\(^{3944}\)
"three-dimensional isodose profile that is substantially similar in shape to the expandable surface element" — "three-dimensional isodose profile that is substantially the same shape as the outer spatial volume expandable surface and is concentric with the outer spatial volume expandable surface." Hologic, Inc., et al. v. SenoRx, Inc., 2009 U.S. Dist. LEXIS 12274 (N.D. Cal., Feb. 18, 2009).

"said deforming step substantially simultaneously applying uniform inward radial pressure on said mat" — "unvarying inward radial pressure is applied to the mat at essentially the same time the tubular body is deformed." Tenneco Automotive Operating Co. Inc. v. Visteon Corp., 2005 U.S. Dist. LEXIS 12738 (D. Del., Jun. 28, 2005).

"substantially spherical, concave reflective surface ... having a cylindrical component added thereto to increase coincidence of foci in two orthogonal planes" — "defines a set of curved surfaces that includes a toroidal surface." On-Line Technologies, Inc. v. Bodenseewerk Perkin-Elmer GmbH, et al., 386 F.3d 1133 (Fed. Cir. 2004).

"substantially straight segments" — "portions of the stent that are straight or nearly straight and extend the length of the stent." Medtronic Vascular, Inc., et al. v. Advanced Cardiovascular Systems, Inc., et al., 2005 U.S. Dist. LEXIS 822 (D. Del., Jan. 5, 2005).

"substantially straight, non-overlapping segments" — "portions of a stent that are straight or nearly straight and do not extend over or cover part of any other segment." Medtronic Vascular, Inc., et al. v. Advanced Cardiovascular Systems, Inc., et al., 2005 U.S. Dist. LEXIS 822 (D. Del., Jan. 5, 2005).

"substantially surrounds" — "encloses completely or largely, at least sufficiently (in combination with other limitations) to prevent alteration of the cross-sectional configuration of the axle." Boler Co. v. Arvinmeritor, Inc., 2004 U.S. Dist. LEXIS 13365 (N.D. Ill., Jul. 16, 2004).

"being substantially symmetrical with said center of gravity" — "'center of gravity' ... refers to a vertical plane transverse to the longitudinal direction of movement of the machine that divides the machine into halves of equal weight. ... Webster's Dictionary defines 'symmetrical' as 'capable of division by a longitudinal plane into similar halves.' Therefore, each half of the inner chamber on either side of the center of gravity must be of a similar shape." Breuer Electric Mfg. Co. v. Tennant Co., Inc., 1997 U.S. Dist. LEXIS 13222 (N.D. Ill., Aug. 22, 1997).
"said outlet being oriented relative to the liquid passageway so that the liquid being pumped passes through the outlet substantially tangentially relative to the longitudinal axis of the pump housing" — "the outlet is designed and positioned so that liquid passing through the outlet is moving in a direction that is both (i) substantially on one side of the longitudinal axis; and (ii) not directly toward or away from either end region of the pump housing."  

"substantially tapered end" — "an end which essentially, has the principal characteristic of being tapered."  

"substantially the same size and configuration" — "In this case, there is no need to divine the location of the hinge through an interpretation of the phrase 'substantially the same size and configuration' because the claims themselves go on to inform the reader exactly where the hinge must be."  

"cylindrical wall portions radially spaced from the end portions of the substrate projecting beyond said mat for a distance substantially the same as that of the projecting ends of the substrate" — "the distance between the inner wall of the enlarged diameter tubular body and the catalyst substrate is largely, though not exactly, the same distance the substrate extends beyond the mat."  

"the prescribed absorbed dose is delivered to the target tissue in substantially three dimensions" — "the prescribed absorbed dose is delivered to the target tissue such that all points at a given outward distance from the tissue wall will receive the same dose."  

"transferred substantially to the reaction frame" — "the movement or direction of most, but not necessarily all, of the reaction force to a physical structure, separate and distinct from the structure supporting the precision components, that transfers reaction forces caused by the movement of a stage drive away from the precision components."  

"substantially toroidal flow path" — "a flow path defined by a toroidal structure."  
The court reconsidered and revised this claim construction, however, after considering Bard's arguments that the recited 'flow path' was not a structural path, but was the path followed by the fluid. The court tentatively accepted Bard's assertion that a substantially toroidal flow can occur in a non-toroidal housing, and construed the phrase as requiring 'that the housing (although not necessarily toroidal in shape) must determine with precision a fluid flow path having the shape of a substantially closed curve which rotates about, but does not intersect or contain, an axis in its own plane.'  
... [W]e disagree with the district court's determination that the housing itself need not be toroidally shaped."  
"substantially transmit" — "in reference to wavelengths, [it] is defined as transmitting more than 1% of the incident radiation at each and every wavelength"; "in reference to polarization, it is defined as transmitting more than 20% of the horizontally polarized incident radiation at each and every wavelength." Suntiger, Inc. v. Sunglass Products of California, 2006 U.S. Dist. LEXIS 1076 (C.D. Cal., Jan. 10, 2006).3964

"is substantially transparent in the transverse direction so as to allow a user to see completely through ... from one side of the cartridge to the other" — "[is] limited to situations wherein the user may view directly through the central longitudinal axis of the cartridge." Dap Products, Inc. v. Sashco, Inc., 1996 U.S. Dist. LEXIS 22529 (S.D. Ohio, July 17, 1996).3966

"said upper wall portion being constructed for substantially uniform airflow therethrough over substantially the entire plan surface area of said upper wall portion"; "said secondary wall means being constructed for substantially uniform passage of air therethrough over substantially the entire plan surface area of said secondary wall means" — "A person of ordinary skill in the art of air bed engineering would read 'substantially uniform airflow' to mean airflow that does not substantially fluctuate over time. When added to the words 'over substantially the entire plan surface,' the claim requires that air flow at substantially the same rate at substantially all locations on the surface." KCJ Corp. v. Kinetic Concepts, Inc., et. al., 30 F. Supp. 2d 1319 (D. Kan. 1998).3967 "This court [] agrees with the district court that claim 1 requires uniformity in space as well as time." Id., 223 F.3d 1351, 1356 (Fed. Cir. 2000).3968

"substantially uniform cross-section" — "mean[s] less than a 0.010 inch variance in diameter along the length of the die." KX Industries, L.P., et al. v. Culligan Water Technologies, Inc., et al., 90 F. Supp. 2d 461 (D. Del. 1999).3969

"substantially uniform cross-sectional area" — "an intake passageway has a substantially uniform cross-sectional area if it has approximately the same cross-sectional area across its length." Briggs & Stratton Corp. v. Kohler Co., 398 F. Supp. 2d 925 (W.D. Wis. 2005).3970

"substantially uniform structure of flexible cells" — "all of the flexible connected cells have approximately the same structure." Medinol Ltd. v. Guidant Corp., et al., 2004 U.S. Dist. LEXIS 19705 (S.D.N.Y., Sept. 30, 2004).3972

"substantially uniform thickness" — "the district court erred in imposing that numerical restriction on the 'substantially uniform thickness' limitation." Cordis Corp. v. Medtronic AVE, Inc., et al., 339 F.3d 1352 (Fed. Cir. 2003).3973

"substantially uniform thickness" — "the wall of the tubular member must be of largely or approximately uniform thickness. A wall that varies in thickness by as much as 100 percent cannot be said to be of substantially uniform thickness." Cordis Corp. v. Boston Scientific Corp., 2005 U.S. Dist. LEXIS 10750 (D. Del., Jun. 3, 2005).3974
"substantially uniform thickness inside the perimeter wall" — "allows thickness deviations at or near the standard commercial tolerance." Vardon Golf Co., Inc. v. Karsten Manufacturing Corp., 2000 U.S. Dist. LEXIS 13769 (N.D. Ill., Sept. 7, 2000).\textsuperscript{3975}

"substantially uniform wall thickness" — "is properly construed to mean that the wall of the tube is largely or approximately uniform in thickness, but may vary at least as much as the wall thickness varied prior to swaging plus the variation in wall thickness that necessarily results from swaging the tube in accordance with the claimed invention of the '093 and '042 patents." Dana Corp. v. American Axle & Manufacturing, Inc., 110 Fed. Appx. 871 (Fed. Cir., Aug. 27, 2004) (unpublished).\textsuperscript{3976}

"substantially uniformly flexible (with respect to its longitudinal axis)" — "the flexibility of the stent is substantially uniform as one moves along the longitudinal axis of the stent." Medinol Ltd. v. Guidant Corp., et al., 2004 U.S. Dist. LEXIS 19705 (S.D.N.Y., Sept. 30, 2004).\textsuperscript{3977}

"substantially unmagnetized" — "having zero magnetization or as close to zero magnetization as possible." Comair Rotron, Inc. v. Nippon Densan Corp., et al., 154 F. Supp. 2d 326 (D. Conn. 2001).\textsuperscript{3979}

"substantially vertical" — "exclude[s] ones 'inwardly directed,' or sloped." Amhil Enterprises Ltd. v. Wawa, Inc., et al., 1995 U.S. Dist. LEXIS 3689 (D. Md., Feb. 21, 1995).\textsuperscript{3980} "[W]e interpret claim 1 to include only lids wherein the outwardly extending projections have well-defined faces that deviate only slightly, if at all, from the vertical. Any other construction of claim 1 would render it invalid." Id., 81 F.3d 1554 (Fed. Cir. 1996).\textsuperscript{3981}

"disposed substantially vertically in said grooves" — "'vertically' means that the bars are disposed substantially in a vertical direction, i.e., a direction that is perpendicular to the plane of the horizon, or parallel to a plumb line through the center of the earth, when the array is resting on a flat, horizontal surface." Laser Diode Array, Inc. v. Paradigm Lasers, Inc., et al., 114 F. Supp. 2d 167 (W.D.N.Y. 2000).\textsuperscript{3983}

"substantially within it" — "the anchor member [must] be, in all material parts, within the bulkhead housing to prevent tripping." American Seating Co. v. Transportation Seating, Inc., 2001 U.S. Dist. LEXIS 14720 (W.D. Mich., Sept. 18, 2001).\textsuperscript{3985}

"substantially zero overlap": "substantially aligned" — "the same as or very close to zero overlap"; "the same as or very close to perfect alignment." Thorn EMI North America, Inc. v. Intel Corp., 936 F. Supp. 1186 (D. Del. 1996).\textsuperscript{3986}
"substrate" — "a material suitable for receiving a thermal transfer laminate, such as a seatbelt or automotive visor." *Avery Dennison Corp. v. Whitlam Label Co., Inc.*, 2003 U.S. Dist. LEXIS 27836 (N.D. Ohio, Sept. 24, 2003). 3987

"second substrate" — "a material that can be modified to contain discrete individual sites appropriate for the attachment or association of beads and is amenable to at least one detection method." *Illumina, Inc. v. Affymetrix, Inc.*, 2010 U.S. Dist. LEXIS 70549 (W.D. Wis., Jul. 14, 2010). 3989

"each cycle of such continuous variation from one value to the other and then back to the first" — "no construction is necessary." *Vision Advancement, LLC v. Johnson & Johnson Vision Care, Inc.*, 2007 U.S. Dist. LEXIS 5742 (E.D. Tex., Jan. 26, 2007). 3990

"folding ... such that" — "folding, which creates or results in the relationship described following 'such that.'" *Taltech Ltd. v. Esquel Enterprises Ltd.*, 410 F. Supp. 2d 977 (W.D. Wash. 2006). 3991

"such that a user may rest their torso thereupon while performing back extensions" — "no construction of this term is required." *Fitness Quest Inc. v. J. Monti*, 2007 U.S. Dist. LEXIS 60195 (N.D. Ohio, Aug. 16, 2007). 3992

"such that each one of the plurality of expansion boards inserted into a corresponding one of said expansion connectors" — "mean[s] that connectors on the riser card can accommodate expansion boards but there is no requirement that expansion boards be inserted into those connectors." *Tulip Computers, International B.V. v. Dell Computer Corp.*, 236 F. Supp. 2d 364 (D. Del. 2002). 3993

"an elongated hollow support for receiving said shoulder of said sheathing in an abutting relationship such that the end of said tube is inserted into said support and said outer diameter of said sheathing and said support are substantially the same at said shoulder" — "this claim language should be given its plain and ordinary meaning and does not require any construction." *Heraeus Electro-Nite Co. v. Midwest Instrument Co.*, 2007 U.S. Dist. LEXIS 81685 (E.D. Pa., Nov. 1, 2007). 3994

"a flattened surface adjacent to said one or more buttons ... such that the user's ring finger receives support from the flattened surface" — "a surface that is sufficiently flat, wide, and horizontal to support a user's ring finger without the finger touching the mouse button." *Goldtouch Technologies, Inc. v. Microsoft Corp.*, 2000 U.S. Dist. LEXIS 3370 (W.D. Tex., Jan. 14, 2000). 3995

"sufficient clearance for a user's hands to comfortably grasp the handle structure" — "[is] limited to handles that provide the user's hand absolute clearance." *Rehrig Pacific Co. v. Norseman Plastics Ltd. Inc.*, 2003 U.S. Dist. LEXIS 27566 (C.D. Cal., Sept. 29, 2003). 3996

"said deforming step ... radially compressing the mat to substantially reduce its thickness and to apply sufficient radial pressure against the substrate to hold the substrate in the body" — "the deforming step and the mat alone supply enough pressure to hold the substrate in the body for its intended use." *Tenneco Automotive Operating Co. Inc. v. Visteon Corp.*, 2005 U.S. Dist. LEXIS 12738 (D. Del., Jun. 28, 2005). 3997
"sufficient space" — "the amount of space between the locking groove and the locking element is enough to allow for the movement of the joined panels such that the panels can (i) slide relative to one another along their joined edges and (ii) can be disassembled by angular rotation of one panel about the other joined edge." Alloc, Inc., et al. v. Pergo, LLC, 2009 U.S. Dist. LEXIS 62881 (E.D. Wis., Jul. 2, 2009).  

"shell having a hardness sufficient to maintain the shape of the grip" — "a structure that is firm enough to maintain the shape of the grip while the writing implement is used for writing," Kwitek, et al. v. Pilot Corp., et al., 516 F. Supp. 2d 709 (E.D. Tex. 2007).  

"said layer of foam being sufficiently resiliently compressible to [1] allow the layer of foam to be pressed manually against the painted surface to compress the portions of the layer of foam toward the rear surface of the layer of foam and cause the parts of the front surface of the layer of foam defined by both the projecting portions and the recessed portions to generally conform to the painted surface and press the glazing or compounding material into engagement with the painted - surface for efficient removal of imperfections, and [2] subsequently to allow the layer of foam to be manually pressed against the painted surface with a lesser force only sufficient to compress parts of the projecting portions of the layer of foam to complete polishing of the painted surface" — "'Sufficiently resiliently compressible' means that [1] the foam must be soft enough to be able to perform the function of allowing the convolutions (projections) to compress enough so that both the projections and the flat portion will 'generally conform to the painted surface' and cause 'efficient removal of imperfections', and [2] it must be hard enough so that when a lesser force is used, only the projections do the polishing." Minnesota Mining and Manufacturing Co. v. Lake Country Manufacturing, Inc., 918 F. Supp. 1307 (D. Minn. 1996).  

"said sealing portion being sufficiently soft to seal against an air flow tube, to form a radial seal against the air flow tube and cylindrical inner support" — "the Court declines to adopt Baldwin's proposed construction and does not construe the phrase." Donaldson Co., Inc. v. Baldwin Filters, Inc., 481 F. Supp. 2d 974 (D. Minn. 2007).  

"suitable for installation by the average consumer"; "can be installed by the average consumer" — "capable of being installed by an individual that purchases supplies for a home improvement task from a retail outlet and performs the home improvement task himself or herself, regardless of whether the individual has any training in that task"; "capable of being installed by an individual that purchases supplies for a home improvement task from a retail outlet and performs the home improvement task himself or herself, regardless of whether the individual has any training in that task." Romala Stone, Inc. v. Home Depot U.S.A., Inc., 2007 U.S. Dist. LEXIS 73098 (N.D. Ga., Sept. 28, 2007).  

"sunglasses" — "The preamble here limits the scope of the claim. The claims only cover sunglasses as opposed to more general eyewear." Panoptx Inc. v. Protective Optics Inc., 2007 U.S. Dist. LEXIS 83462 (N.D. Cal., Nov. 9, 2007).  

"supply of stored gas is provided" — "means ... that such a supply of stored gas is an integral part of the claimed invention." Epcon Gas Systems, Inc., et al. v. Bauer Compressors, Inc., 134 F. Supp. 2d 838 (E.D. Mich. 2000). "The district court did not err in finding that the 'supply of stored gas' is integral, or a component part of the claimed apparatus and process." Id., 279 F.3d 1022 (Fed. Cir. 2002).

"support" — "aperture, bore, or other apparatus that can be used to support, detain, carry, or accept insertions of another object." Fargo Electronics, Inc. v. Iris Ltd, Inc., 2005 U.S. Dist. LEXIS 34493 (D. Minn., Nov. 30, 2005).

"a support" — "a structurally rigid, molded structure that serves as a prop, base, foundation, brace or stay for a shift lever and related attachments, and pivotally mounts a transmission shift lever, such that the pivot axis is at a low position on the shifter to provide optimal mechanical advantage and movement to actuate a transmission shift cable." Grand Haven Stamped Products Co. v. Dura Automotive System, Inc., 2004 U.S. Dist. LEXIS 31087 (W.D. Mich., Jun. 28, 2004).

"support body means" — "Because the 'support body means' limitation uses the phrase 'means' and also recites function, without reciting any definite structure, it is appropriate to construe the term as a means-plus-function limitation." Medical Device Technologies, Inc. v. C.R. Bard, Inc., 7 Fed. Appx. 945 (Fed. Cir., Mar. 27, 2001) (unpublished).

"a support frame to which the trailer is mounted" — "a skeletal framework or other structure for a towed vehicle." Watson & Chalin Manufacturing, Inc. v. Boler Co., 227 F. Supp. 2d 633 (E.D. Tex. 2002).

"support layer" — "a flexible transparent material upon which the photopolymer material is disposed." MacDermid Printing Solutions, L.L.C. v. E.I. Du Pont De Nemours & Co., 2010 U.S. Dist. LEXIS 23746 (D.N.J., Mar. 15, 2010).
"support member" — "a spit (or pointed rod) that traverses the length of the spiral cut and helps the boneless meat product maintain its shape or integrity during slicing operations." Logan v. Hormel Foods Inc., et al., 2005 U.S. Dist. LEXIS 33861 (S.D. Tex., Sept. 2, 2005). 4017 "We agree with the portion of the district court's claim construction that requires that the support member 'help[] the boneless meat maintain its shape or integrity during slicing operations,' however, the intrinsic record does not require the 'support member' to 'traverse the length of the spiral cut,' so long as it is performing the function of helping 'the boneless meat maintain its shape or integrity during slicing operations.'" Id., 217 Fed. Appx. 942 (Fed. Cir., Jan. 25, 2007). 4018

"support member" — "spring retaining member." SRAM Corp. v. AD-II Engineering, Inc., 155 F. Supp. 2d 826 (N.D. Ill. 2001). 4020

"support member" — "a constituent part that serves as a foundation, prop, brace or stay." ICU Medical, Inc. v. B. Braun Medical, Inc., 344 F. Supp. 2d 663 (N.D. Cal. 2004). 4021

"a plurality of lamp supports mounted on the upper surface of said support member for engaging and supporting said fluorescent lamps adjacent their non-socket ends" — "we construe 'support member' to refer to a member that is mounted to the same surface as the lamp and that supports the lamp at its non-socket end." Lighting World, Inc. v. Birchwood Lighting, Inc., 382 F.3d 1354 (Fed. Cir. 2004). 4022

"support plate" — "must be a physical structure. A 'plate' suggests a more or less flat surface. A 'support' plate is a plate that serves as a 'foundation, prop, brace or stay.' It must be sturdy and large enough to bear up, or prevent from falling free, the object or objects it is designed to 'support.'" MHB Industries v. Dennis Garberg & Associates, Inc., et al., 1996 U.S. Dist. LEXIS 11639 (D. Mass., July 26, 1996). 4023

"support structure" — "structure used to support the membrane and the conductive surface underlying the membrane." Polyvision Corp. v. Smart Technologies, Inc., et al., 501 F. Supp. 2d 1042 (W.D. Mich. 2007). 4024

"support wires" — "require that the wire be a continuous strand of wire which may be formed by butt-welding, end to end, shorter segments of wire." Leggett & Platt Inc. v. Hickory Springs Manufacturing Co., 2000 U.S. Dist. LEXIS 13063 (N.D. Ill., Sept. 5, 2000). 4026 "In sum, the district court correctly construed the term 'support wires' to mean 'a continuous strand of wire' with 'only two ends.'" Id., 285 F.3d 1353 (Fed. Cir. 2002). 4027

"supported along its entire length by the upper edge of the front portion of said band";
"supported upon its entire length" — "does not mandate constant contact. 'Support' does not mean the same thing as 'constant contact.' Therefore, an item made out of an inherently stiff material, such as the hard plastic from which these collars are made, is 'supported along its entire length' without constant contact, and the presence of gaps does not alter that support. Thus, constant contact is not called for by the patent claims." California Medical Products, Inc. v. Tecnol Medical Products, Inc., 921 F. Supp. 1219 (D. Del. 1995).

"supported by" — "held, propped, or with weight borne by." Nikon Corp., et al. v. ASM Lithography B.V., 308 F. Supp. 2d 1039 (N.D. Cal. 2004).

"nib supported by said housing" — "nib held in place by said housing." Chip-Mender, Inc. v. Sherwin-Williams Co., 458 F. Supp. 2d 994 (N.D. Cal. 2006).

"supported by the second end of the housing so as to permit movement of the first end of the locking member between a first position and a second position" — "requires only that the second end of the housing holds the locking member in position, in a manner that allows for the first end of the locking member to move between a first and a second position." Engineered Products Co. v. Donaldson Co., Inc., 165 F. Supp. 2d 836 (N.D. Iowa 2001).

"supported on ... said opposing surfaces" — "the plate members are held up and in position and their weight is borne by the surface of each of the two side members that faces or looks toward the corresponding surface of the other side member." IKN, Inc. v. CemProTec GmbH, 2005 U.S. Dist. LEXIS 29134 (E.D. Pa., Nov. 22, 2005).

"having a fine grain filter media supported on said underdrain laterals" — "The [district] court construed the claim language 'having a fine grain filter media supported on said underdrain laterals' as requiring that the filter media sit directly on the porous cap. Leopold argues that the filter media need only be 'above the porous cap and supported by the porous cap either directly or with the assistance of intermediate elements.' We conclude that the district court properly construed the claim language." F.B. Leopold Co., Inc. v. Roberts Filter Manufacturing Co., Inc., 1997 U.S. App. LEXIS 16233 (Fed. Cir., Jul. 2, 1997) (unpublished).

"supporting portion" — "any structure protruding from the frame (including but not limited to a cylinder or a cuboid) intended to support the optical film." LG Display Co., Ltd. v. AU Optronics Corp., et al., 2010 U.S. Dist. LEXIS 12969 (D. Del., Feb. 16, 2010).

"supporting (respectively auxiliary) primary lenses therein" — "mean[s] that lenses are secured to frames that include rims." Aspex Eyewear, Inc., et al. v. Altair Eyewear, Inc., 386 F. Supp. 2d 526 (S.D.N.Y. 2005).
"said arms and said first and second magnetic members supporting said auxiliary spectacle frame on said primary spectacle frame" — "the arms contacting the upper side of the primary spectacle frame's extensions and the first and second magnetic members being magnetically engaged to support the auxiliary frame."  Aspex Eyewear, Inc., et al. v. E'Lite Optik, Inc., 2007 U.S. Dist. LEXIS 76024 (N.D. Tex., Oct. 12, 2007). 4040

"supporting the housing of the microprocessor in position relative to said docking connection means so that the single connector on the housing is coupled with said additional connection provided in the docking connection means" — "[this] phrase will be construed to mean that the housing is supported and the single connector on the housing couples or mates with the connector on the docking module."  Computer Docking Station Corp. v. Dell Inc., et al., 2006 U.S. Dist. LEXIS 58388 (W.D. Wis., Aug. 16, 2006). 4041

"supports for operatively mounting said trays within said vending machine"; "a reinforcement structure secured to said trays ..." — "are not subject to § 112, P 6."  Crane Co., et al. v. Sandenvendo America, Inc., et al., 2009 U.S. Dist. LEXIS 47509 (E.D. Tex., Jun. 5, 2009). 4042

"surface" — "the exterior face of an object"; "a material layer constituting such an exterior face"; or "the outer face, outside, or exterior boundary of a thing" or "part or all of the boundary of a solid."  Byrne v. Black & Decker Corp., et al., 2006 U.S. Dist. LEXIS 24104 (E.D. Ky., April 27, 2006). 4043

"surface adjacent said trailing edge" — "a back surface"  Karsten Manufacturing Corp. v. Cleveland Golf Co., 1998 U.S. Dist. LEXIS 23148 (D. Ariz., Dec. 4, 1998). 4044 "This construction is in accordance with the description in the specification that the 'back surface' that is adjacent to the indented trailing edge circumscribes but does not include the cavity surfaces."  Id., 242 F.3d 1376 (Fed. Cir. 2001). 4045

"a major surface having a planar surface area and a plurality of spaced-apart, elongated, discrete surface indicia integral with said planar surface area" — "As construed in this court's prior memorandum order, the term 'surface' may refer to the surface of an unfinished plastic disc-shaped substrate. Given this interpretation, the term 'surface indicia' is not limited to any specific type of 'surface indicia' such as 'transparent microgrooves' or surface indicia with a partial metal coating."  DiscoVision Associates v. Disc Manufacturing, Inc., 1997 U.S. Dist. LEXIS 17735 (D. Del., Sept. 16, 1997). 4046

"surface layer" — "a layer beginning from, and including, the outermost surface and moving inward to an arbitrary depth of the lens, and having a different composition from the 'body' portion of the lens."  Rembrandt Vision Technologies, L.P. v. Bausch & Lomb, Inc., et al., 2007 U.S. Dist. LEXIS 36919 (E.D. Tex., May 21, 2007). 4047

"surface modifying layer" — "a layer that alters the surface characteristics of photosensitive element."  E.I. du Pont de Nemours & Co. v. MacDermid, Inc., et al., 2010 U.S. Dist. LEXIS 23750 (D.N.J., Mar. 15, 2010). 4048

"surface mount semiconductor light elements" — "a semiconductor light emitting element where the electrical leads are designed to be soldered to a surface of a circuit board, rather than mounted through a hole in the circuit board."  Litepanels, LLC, et al. v. Gekko Technology, Ltd., 2007 U.S. Dist. LEXIS 89756 (E.D. Tex., Dec. 6, 2007). 4049
"a surgical device"; "an implant" — "a device for use in surgical applications, but not including an expandable intraluminal vascular graft or expandable prosthesis for a body passageway." MarcTec, LLC v. Johnson & Johnson, et al., 2009 U.S. Dist. LEXIS 27011 (N.D. Ill., Mar. 31, 2009). 4050

"a surgical reference device defining a three-dimensional space" — "a device used to define three-dimensional space." Medical Instrumentation and Diagnostics Corp. v. Elekta AB, et al., 2001 U.S. Dist. LEXIS 25448 (S.D. Cal., Apr. 4, 2001). 4053

"sheathing surrounding a major portion of the length of said tube" — "We construe 'surrounding a major portion' to mean 'covering a significant portion.'" Heraeus Electro-Nite Co. v. Midwest Instrument Co., 2007 U.S. Dist. LEXIS 81685 (E.D. Pa., Nov. 1, 2007). 4056

"surrounding said leading end" — "describ[es] an adaptor that significantly borders the circumference of that part of the connector that fits within the junction box." Arlington Industries, Inc. v. Bridgeport Fittings, Inc., 290 F. Supp. 2d 508 (M.D. Pa. 2003). 4057

"a distal portion susceptible to electrolytic disintegration in blood"; "elongate tip portion not being susceptible to electrolytic disintegration in blood" — "a distal portion of the core wire which has attributes which make the segment able to electrolytically disintegrate when submersed in blood"; "an elongate tip portion which has attributes which make the portion resistant to electrolytic disintegration when submersed in blood." Regents of the University of California v. Micro Therapeutics, Inc., et al., 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007). 4058

"suspended between adjacent said corner pylons" — "require[s] that the structure not be supported from below in order to give some meaning to the term 'suspended.'" Rehrig Pacific Co. v. Norseman Plastics Ltd. Inc., 2003 U.S. Dist. LEXIS 27566 (C.D. Cal., Sept. 29, 2003). 4059

"a sweep angle that causes the blade to intercept the shock" — "a rearward sweep angle in the outer region that is constant or decreasing." Rolls-Royce, PLC v. United Technologies Corp., 2010 U.S. App. LEXIS 9201 (Fed. Cir., May 5, 2010). 4060

"switch" — "a device for altering the direction of something, in this case a beam, and selecting the onward path of the entity by choosing between at least two possible paths." Optivus Technology, Inc., et al. v. Ion Beam Applications S.A., 2004 U.S. Dist. LEXIS 30314 (C.D. Cal., Aug. 31, 2004). 4061

- 363 -
"a mode selector switch connected to the circuit controlling and processing means and movable between a RECORD and a PLAY mode" — "does not necessarily require a slide switch, but allows for other types of switches." Howes, et al. v. Zircon Corp., 992 F. Supp. 957 (N.D. Ill. 1998).

"switchyard" — "a series of switches that bend or otherwise divert the proton beam emanating from the accelerator in one of two directions; that is, the beam is either diverted toward a treatment station or sent on to the next switch in the yard." Optivus Technology, Inc., et al. v. Ion Beam Applications S.A., 2004 U.S. Dist. LEXIS 30314 (C.D. Cal., Aug. 31, 2004).

"swivel member" — "a component designed to permit the coupling member to swivel or rotate." Tyco Healthcare Group LP v. Ethicon Endo-Surgery, Inc., 411 F. Supp. 2d 93 (D. Conn. 2006).

"swung forwardly and upwardly about a transverse axis" — "The Court finds that the bending of fixed flexible fingers does not constitute swinging about an axis. Swinging about an axis necessarily requires some pivoting or rotation at the axis." Marquip, Inc. v. Fosher America, Inc., et al., 1997 U.S. Dist. LEXIS 22678 (W.D. Wis., May 21, 1997).

"arranged symmetrically" — "mean[s] 'putting the layers in a desired symmetrical order when the film is viewed in cross-section, so that the layers are in the same order on each side of the core of the film, for example c/d/b/a/b/d/c. This claim phrase limits only the arrangement of the layers, and does not require precise identity in the thickness of the layers or the amounts of recited components or additives that may be included in the layers.'" Cryovac Inc. v. Pechiney Plastic Packaging, Inc., 2006 U.S. Dist. LEXIS 19144 (D. Del., April 13, 2006).

"synthetic mulch" — "a manufactured material for placement on the ground, which is designed, dimensioned and colored to have an appearance enabling it to substitute for hay, wood chips, tree bark, rocks, pea gravel, leaves, and other similar natural plant and mineral materials usable as groundcover." Green Edge Enterprises, LLC v. Rubber Mulch Etc., LLC, et al., 2007 U.S. Dist. LEXIS 38799 (E.D. Mo., May 29, 2007).

"a syringe mounting for attachment to a syringe to position a syringe relative to said injector to permit said plunger drive ram to engage and move a plunger into or out of said syringe" — "A 'mounting' is something that holds an object in place, and a 'syringe mounting' is something that would hold a syringe in place. Because a syringe is tube-shaped, 'syringe mounting' connotes a structure that would hold a tube in place. Syringe mounting is therefore not a means-plus-function term. ... The Court construes the limitation to mean, 'a syringe mounting that attaches to a syringe, so that the syringe is positioned to allow the plunger drive ram to engage and move the plunger toward or away from a discharge tip of the syringe.'" Tyco Healthcare Group LP, et al. v. E-Z-EM, Inc., et al., 2010 U.S. Dist. LEXIS 15664 (E.D. Tex., Feb. 22, 2010).

- T -

"tack modifier" — "shall include antioxidants only when each is used in an amount greater than three percent of the total weight of the product." *Edizone, LC v. Cloud Nine, LLC, et al.*, 2006 U.S. Dist. LEXIS 68069 (D. Utah, Sept. 21, 2006).

"tail" — "the portion of the projectile extending rearward from a constriction/delineation and including the rear opening, which is bounded by the rear edge." *Combined Tactical Systems, Inc. v. Defense Technology Corp. of America, et al.*, 426 F. Supp. 2d 140 (S.D.N.Y., April 4, 2006).

"tail portion" — "the rear end portion of the projectile extending rearward from the lead shot-filled body compartment having a substantially cylindrical shape narrower than the cylindrical shape of the front end portion." *Combined Tactical Systems, Inc. v. Defense Technology Corp. of America, et al.*, 426 F. Supp. 2d 140 (S.D.N.Y., April 4, 2006).

"said expansion profile of the balloon had been tailored whereby said balloon has a maximum inflated size selected from a range of maximum inflated sizes that are a function of balloon processing conditions" — "'tailoring' according to the patent is more than making different balloons for different needs. It involves the use of varying balloon processing conditions to vary a balloon's expansion profile." *Cordis Corp. v. Advanced Cardiovascular Systems, Inc., et al.*, 1999 U.S. Dist. LEXIS 15529 (D. Del., Sept. 10, 1999).

"a pair of spaced guides tapering in an outwardly direction" — "two spaced guides, each tapering in a direction away from the centerline of the U-shaped channel on which it is located." *Douglas Dynamics, LLC v. Buyers Products Co.*, 2010 U.S. Dist. LEXIS 18592 (W.D. Wis., Mar. 2, 2010).

"tautly holding" — "The term 'tautly holding' derives from the phrase 'to hold tautly.' 'To hold something tautly against a septum' means both (1) to hold that thing itself taut, like a drum head, and (2) to hold that thing tightly against a septum." Regents of the University of Minnesota v. AGA Medical Corp., 2009 U.S. Dist. LEXIS 90289 (D. Minn., Sep. 29, 2009).

"tear impressions" — "In distinguishing the Chang reference, Bailey stated that his tear impressions were not continuous faults completely through the plastic material of construction and were only faulted completely through the material of construction at the exterior ends, if at all. Bailey cannot now assert that the claims cover this surrendered material. ... We also conclude that perforations, spaced apart faults completely through the material of construction, from the exterior edge into the central portion of the lid, cannot be 'tear impressions' because Bailey expressly stated during prosecution that the 'tear impressions' were only completely faulted through the material of construction at the exterior ends, if at all." Bailey v. Dunkin Donuts, Inc., et al., 1998 U.S. App. LEXIS 1175 (Fed. Cir., Jan. 8, 1998) (unpublished).

"a pair of spaced apart tear impressions extending inwardly from the edge of the container lid" — "the first impression may have a small space between it and the outer edge of the container lid." Bailey v. Dart Container Corp., 980 F. Supp. 560 (D. Mass. 1996).

"telecentric lens means for peering into the well" — "As a matter of law, this Court construes that the term 'telecentric lens' is a sufficient structure to support the function of 'peering into the well.' The Court does not accept Defendant's argument of construing the telecentric lens as a limitation stemming from construing the phrase in means-plus-function format of 35 U.S.C. § 112 P6." Amersham Biosciences Corp., et al. v. PerkinElmer, Inc., 2006 U.S. Dist. LEXIS 32758 (D. N.J., May 23, 2006).[4094] "[T]he conclusion reached by the Court in its May 24 Opinion remains unchanged, as the Court hereby construes that the term 'telecentric lens' is a sufficient structure to support the function of 'peering into the well,' as well as the function of 'improv[ing] the collection of light therefrom.' As such, upon reconsideration, the Court affirms its May 24, 2006 Opinion and Order." Id., 2006 U.S. Dist. LEXIS 86552 (D.N.J., Nov. 29, 2006).[4095]

"telescope" — "this Court construes the term 'telescope' to include both 'reflecting telescopes,' which use mirrors as optical elements, and 'refracting telescopes,' which use lenses as optical elements." Lasermax, Inc. v. Glatter, 2005 U.S. Dist. LEXIS 17136 (S.D.N.Y., Aug. 17, 2005).[4096]

"temples pivotally secured to the outer edges of respective lenses" — "sidepieces or arms extending along the wearer's temples which are fastened to the lenses by a means or method that allows them to pivot or rotate at a place on the exterior portion of those lenses near the wearer's temples." Gargoyles, Inc. v. Aearo Corp., 1998 U.S. Dist. LEXIS 22294 (D. Mass., May 19, 1998).[4098]

"temporarily" — "used in connection with the elevator installation during modernization, and removed after modernization is complete." Inventio AG v. ThyssenKrupp Elevator Americas Corp., et al., 2010 U.S. Dist. LEXIS 59020 (D. Del., Jun. 14, 2010).[4099]

"temporarily adhering" — "to temporarily hold fast or stick by or as if by gluing, suction, grasping, fusing or otherwise." Stephen Key Design, LLC, et al. v. Lego Systems, Inc., et al., 261 F. Supp. 2d 1196 (N.D. Cal. 2003).[4100]

"temporarily coupled to" — "attached to until detached from." Regents of the University of California v. Micro Therapeutics, Inc., et al., 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007).[4101]

"temporarily coupling" — "to fasten together for a limited time, and, upon uncoupling, allowing the outer label to rotate about the inner label and/or container." Stephen Key Design, LLC, et al. v. Lego Systems, Inc., et al., 261 F. Supp. 2d 1196 (N.D. Cal. 2003).[4102]

"tension" — "Here too no Markman-type construction seems to be required that would add a definition beyond the ordinary English language meaning of the term 'tension.'" Zip Dee, Inc. v. Dometic Corp., 63 F. Supp. 2d 868 (N.D. Ill. 1998).[4103]

"tension member" — "a structure which, during use, is stretched taut." Schindler Elevator Corp. v. Otis Elevator Co., 2010 U.S. Dist. LEXIS 2463 (D.N.J., Jan. 13, 2010).[4104]

"terminal" — "a device attached to the end of an elongated barrier that is anchored to the roadside, or attached to the end of a fixed roadside hazard, that prevents an errant vehicle's movement perpendicular to the roadway and ... absorbs energy when a vehicle hits the terminal itself." Kothmann Enterprises, Inc. v. Trinity Industries, Inc., 394 F. Supp. 2d 923 (S.D. Tex. 2005).[4105]

"a terminal" — "is attached to an elongated barrier that is anchored to prevent the impacting vehicle's perpendicular movement and does not include a truck or work vehicle." Kothmann & Kothmann, Inc. v. Trinity Industries, Inc., 287 F. Supp. 2d 699 (S.D. Tex. 2002). 4107

"terminal portion" — "the part of the appendage at the end, extremity, or boundary of the appendage." Stant Manufacturing, Inc. v. Gerdes, GmbH, 2004 U.S. Dist. LEXIS 27704 (S.D. Ind., Sept. 27, 2004). 4108

"a textile material" — "a woven, knitted, nonwoven or extruded material." Armor Screen Corp. v. Storm Catcher, Inc., et al., 2009 U.S. Dist. LEXIS 33407 (S.D. Fla., Mar. 10, 2009). 4110

"retrieving one of the sets [of] data from the memory representing one of the fuel delivery limit curves when the cruise control is engaged; ... retrieving the other set of data from the memory representing the other fuel delivery limit curve when the cruise control is not engaged" — "require the retrieval of one set of data representing a fuel delivery limit curve if the cruise control is engaged, and the retrieval of a different set of data representing a different fuel delivery limit curve if the cruise control is not engaged." Caterpillar Inc. v. Detroit Diesel Corp., 961 F. Supp. 1249 (N.D. Ind. 1996). 4112

"one or more parts within the plurality of parts" — "In some contexts, 'the plurality of parts' or similar terms may be confusing to a lay jury. Here, the antecedent 'plurality of parts' is identified in the previous step. Given the close proximity of the phrases, it is highly unlikely to be confusing." Orion IP, LLC v. Staples, Inc., et al., 406 F. Supp. 2d 717 (E.D. Tex. 2005). 4113

"the polygon further comprises a first wall having a concave shape and a second wall having a convex shape" — "the polygon having a first wall with an apex directed toward the interior of the polygon and a second wall, also with an apex, directed away from the interior of the polygon." Medtronic Vascular, Inc., et al. v. Abbott Cardiovascular Systems, Inc., et al., 2007 U.S. Dist. LEXIS 95430 (N.D. Cal., Dec. 21, 2007). 4114

"the wall has a thickness of greater than 0.018 inch" — "each and every one of the one or more sidewalls of the needle cannula has a thickness, measured from the inner sidewall (wall of the lumen) to the outer sidewall, of greater than 0.018 inch." Ideal Instruments, Inc. v. Rivard Instruments, Inc., et al., 498 F. Supp. 2d 1131 (N.D. Iowa 2007). 4115

"and then" — "use of the words 'and then' between all steps [] requires the surgeon to have completed Steps (a) and (b) before moving to Step (c)." Young v. Lumenis, Inc., 2005 U.S. Dist. LEXIS 27792 (S.D. Ohio, Nov. 1, 2005). 4116

"and therebetween" — "mean[s] the angle of the grinding stone must be adjustable to vertical and horizontal positions, as well as angles between vertical and horizontal." Matweld, Inc. v. Portaco, Inc., 2006 U.S. Dist. LEXIS 60027 (D. Minn., Aug. 23, 2006). 4117
"thereby" — "the district court explained to both parties that it would not construe the 'thereby' clause because the claim limitation was clear in its meaning. ... [W]e see no error in the district court's instruction." C.R. Bard, Inc. v. Boston Scientific Corp., 2000 U.S. App. LEXIS 16090 (Fed. Cir., Jul. 7, 2000) (unpublished). 4118

"thereby prevent the build-up of electrostatic charge in the fuel and the resultant arcing which causes the breakdown of the polymer material comprising the fuel injection system component" — "preventing the accumulation of charge in the fuel such that arcing and deterioration of the polymer material used to make the housing of the fuel filter are avoided." Honeywell International, Inc., et al. v. ITT Industries, Inc., et al., 330 F. Supp. 2d 865 (E.D. Mich. 2004). 4119

"thereby to lower the temperature at the surface of combustible material at said area" — "in order to lower the temperature at the surface of the combustible material at said area." US Foam, Inc, et al. v. On Site Gas Systems, Inc., 2010 U.S. Dist. LEXIS 79286 (E.D. Tex., Aug. 3, 2010). 4121

"therein" — "mean[s] that a housing must have at least one compartment or chamber within it that has an inlet aperture and an outlet aperture. A housing may have more than one compartment or chamber. A housing must have an inlet aperture and an outlet aperture." Seitz, et al. v. Envirotech Systems Worldwide Inc., et al., 2006 U.S. Dist. LEXIS 53084 (S.D. Tex., July 31, 2006). 4122

[a projection or a recess] "therein" — "for a projection or recess to be located anywhere in the aperture, including at the beginning of the aperture, as long as the projection or recess is a structure that is distinct from the surface of the ornamental component that gives the aperture its shape." Friedrich Zettl GmbH v. Bloomingdales, Inc., et al., 2000 U.S. Dist. LEXIS 6747 (N.D. Ill., Feb. 24, 2000). 4123

"having a pressurizable member of a medical apparatus for interacting with the patient's body resting thereon" — "An inflatable device that turns a mattress from underneath it might be considered to be acting upon that mattress, but would not ordinarily be considered to be acting upon a person lying on that mattress." Safe Bed Technologies Co. v. KCI USA, Inc., et al., 2004 U.S. Dist. LEXIS 17773 (N.D. Ill., Sept. 2, 2004). 4125

"said connection means having adjustment means thereon for infinitely adjusting the tracking of the mower by adjusting the output of one of said right and left hydraulic pumps"; "said connection means including adjustment means thereon for infinitely adjusting the tracking of the mower by adjusting the output of at least one of said right and left hydraulic pumps" — "since the connection means includes the adjustment means, the adjustment means is physically located on the connection means." Toro Co., et al. v. Scag Power Equipment, Inc., et al., 2002 U.S. Dist. LEXIS 14428 (D. Neb., Aug. 5, 2002). 4126

"thermal adhesive net" — "a regular array of thermal adhesive material that is more solid structured than a thermal adhesive web."  *Taltech Ltd. v. Esquel Enterprises Ltd.*, 410 F. Supp. 2d 977 (W.D. Wash. 2006).  

"thermal adhesive web" — "a random array of thermal adhesive material that is less solid structured than a thermal adhesive net."  *Taltech Ltd. v. Esquel Enterprises Ltd.*, 410 F. Supp. 2d 977 (W.D. Wash. 2006).  

"thermal characteristic such that a 950 degrees C. temperature at the working surface results in a temperature of less than 750 degrees C. at the depth" — "is definite. In addition, the claim language is clear and does not require construction."  *Reedhycalog UK, Ltd., et al. v. United Diamond Drilling Services, Inc., et al.*, 2009 U.S. Dist. LEXIS 32959 (E.D. Tex., Apr. 15, 2009).  

"thermally changing the properties of the regions of the layer of composition by exposing the composition to imaging radiation" — "does not support a construction that would ... require homogenization."  *Imagecube LLC v. Boeing Co., et al.*, 2006 U.S. Dist. LEXIS 19911 (N.D. Ill., April 17, 2006).  

"thermostat means ... for switching off the heater when all the liquid in the boiling water reservoir has evaporated therefrom" — "a thermostat that automatically switches off the heater when all of the water in the reservoir has boiled dry."  *Rival Co. v. Sunbeam Corp., et al.*, 987 F. Supp. 1167 (W.D. Mo. 1997).  

"thin" — "a 'thin' layer of 'tooth whitening substance' is a layer that does not impede speech or affect appearance. ... It is not so broad and infinite that the term is indefinite."  *Procter & Gamble Co. v. McNeil-PPC, Inc.*, 2009 U.S. Dist. LEXIS 6947 (W.D. Wis., Jan. 26, 2009).
"thin membrane having attachable means" — "a thin, soft, pliable sheet with a wall around its perimeter. The thin membrane itself may take any of a variety of shapes." Freeman, et al. v. Gerber Products Co., 506 F. Supp. 2d 529 (D. Kan. 2007).\(^{413}\)

"thin-walled" — "the wall of the tubular member must have little extent from one surface to its opposite at both its first and second diameters." Cordis Corp. v. Boston Scientific Corp., 2005 U.S. Dist. LEXIS 10750 (D. Del., Jun. 3, 2005).\(^{410}\)

"wherein the differential expansion portion is thinner than the limited expansion portion" — "wherein the differential expansion portion has comparatively lesser overall thickness than the limited expansion portion." Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006).\(^{412}\)

"thread" — "a yarn or yarns used in forming the stockinette member." Mintz, et al. v. Dietz & Watson, Inc., et al., 2009 U.S. Dist. LEXIS 11186 (S.D. Cal., Feb. 13, 2009).\(^{413}\)

"thread means that includes a plurality of thread flights formed in the anchor distal from said drill means end to turn into the bone mass following the drill means" — "thread means that overlap the drill means so long as a greater number of thread means are distal from the drill means." Mitek Surgical Products, Inc. v. Arthrex, Inc., 21 F. Supp. 2d 1309 (D. Utah 1998).\(^{414}\)

"threaded"; "threads"; "threading" — "require that the 'threaded' parts have a continuous helical or spiral ridge or groove, around the inside of the hole in the base member (i.e., internally), or around the outside of each sight insert (i.e., externally), completing one or more turns around the central axis of the part, like the threading of a nut or bolt, respectively, and parts with complementary threads must be able to 'screw' together." Kudlacek v. DBC, Inc., et al., 115 F. Supp. 2d 996 (N.D. Iowa 2000).\(^{415}\)

"threaded back end" — "mean[s] either a screw with or without a head that has a threaded back part." Arthrex, Inc. v. DePuy Mitek, Inc., 2006 U.S. Dist. LEXIS 95465 (M.D. Fla., Oct. 16, 2006).\(^{416}\)

"three dimensional position" — "the X, Y and Z values for the top of at least one ball of a ball grid array." Scanner Technologies Corp. v. ICOS Vision Systems Corp., N.V., 2002 U.S. Dist. LEXIS 331 (S.D.N.Y., Jan. 10, 2002).\(^{417}\)

"[the first and second openings pass] through [the first and second baffles]" — "The district court properly construed this term to mean that each opening extends from one side of the baffle to the other." Sage Products, Inc. v. Devon Industries, Inc., 126 F.3d 1420 (Fed. Cir. 1997).\(^{415}\)

"extend through" — "mean[s] that the rod passes the entire length of the isthmus of the femur." Dow Corning Wright Corp. v. Osteonics Corp., 939 F. Supp. 65 (D. Mass. 1996).\(^{415}\)
"flow of said paint through said passageway, to said nib" — "flow of said paint through said channel to, not through, said nib."  

"passing through said wash load" — "passing [detergent solution] through the wash load, not merely over or around."  

"forming a fluid flow path through the housing" — "the fluid flow path must be formed from one end of the housing to the other."  

"lateral stability and traction through the plane of a golf swing" — "resisting side and providing adhesive friction as a golfer swings a golf club from the backswing through hitting the ball and the follow-through."  

"through the tubular housing and over the pen to the outlet orifice" — "along the housing and pen to the outlet orifice."  

"throughhole passing through the dielectric layer" — "a space between the first and second conducting layers free of dielectric layer material."  

"throughout the substrate"; "through the substrate"; "throughout the entire substrate" — "throughout every part of the substrate."  

"thumbwheel" — "an input device consisting of a dial or wheel, inset into a surface so that only a portion of its rim protrudes, and that can be rotated either clockwise or counterclockwise around its axis."  

"tie yarns" — "the district court's ruling that tie yarns are 'not visible from the face side of the knit' is erroneous."  

"tight joint" — "means that standing water will not penetrate the joint for several hours."  

"center tilt mount" — "a center mount configured to tilt."  

"tilt valve" — "a valve that can operate at least by tilting."  

"tip" — "requires a separate elongated attachment to be fitted to the connecting body."  

"tip" — "that which serves as the end, cap or point of an object."  
"tip comprising ... a suction tube having a fluid path that channels aspirated irrigation fluid externally of the handpiece and directly to a suction source" — "the language of claims 9 and 30 requiring a 'tip comprising' a 'suction tube having a fluid path that channels aspirated irrigation fluid externally of the handpiece and directly to a suction source' requires that the tip include a bypass path."  C.R. Bard, et al. v. Stryker Corp., 2006 U.S. Dist. LEXIS 16659 (D.R.I., April 4, 2006).  

"tip of the waveguide" — "the distal end portion of the waveguide, including a separate component coupled thereto in a manner that prevents internal reflection at any interface between the components (for example, by fusing or a transparent, index-matched adhesive), but not including a cap or tube enclosing a transmitting surface on the distal end portion of the waveguide or a reflecting surface on the distal end portion of the waveguide."  American Medical Systems, Inc., et al. v. Laser Peripherals, LLC, 2009 U.S. Dist. LEXIS 95387 (D. Minn., Oct. 13, 2009).  

"heating the resulting batter-coated dough to a temperature in the range of about 400 ° F. to 850 ° F." — "As written, the claim unambiguously requires that the dough be heated to a temperature range of 400 ° F. to 850 ° F."  Chef America, Inc. v. Lamb-Weston, Inc., 358 F.3d 1371 (Fed. Cir. 2004).  

"a gas spring ... to assist in stably retaining said tread base" — "gravity creates a stable closed position; the gas spring claimed must only 'assist' in stably retaining the tread base."  In re Icon Health and Fitness, Inc., 496 F.3d 1374 (Fed. Cir. 2007).  

"with a wick to convey a combustible liquid" — "the 'liquid' referenced in claim 1 is itself part of the claimed invention and is, therefore, a required limitation of the claim."  Produits Berger S.A., et al. v. Schemenauer, et al., 2007 U.S. Dist. LEXIS 10294 (E.D. Tex., Feb. 14, 2007).
"fresh water is added to cool said fabric" — "requir[es] that the water be added for the purpose of cooling the fabric. However, the term 'fresh water' does not mean clear water without any additives or wash residue." Whirlpool Corp., et al. v. LG Electronics, Inc., et al., 423 F. Supp. 2d 730 (W.D. Mich. 2004).

"shingling ... to form a group of shingled sheets for stacking" — "requires some basis to distinguish that group from the next." Marquip, Inc. v. Fosber America, Inc., et al., 1997 U.S. Dist. LEXIS 22678 (W.D. Wis., May 21, 1997).

"to provide a maximum tractive effort on the rear wheel for a given pressurized fluid flow regardless of wheel slippage conditions on the front wheels" — "A wheel -- call it Wheel A -- receives the 'maximum tractive effort for a given pressurized fluid flow regardless of wheel slippage conditions' on other wheels if the pressurized fluid flow to Wheel A's motor is not affected by whether those other wheels' slip." Toro Co. v. Textron, Inc., et al., 502 F. Supp. 2d 904 (D. Minn. 2007).

"passing the produced smoke through a filter to remove mainly the tar therefrom" — "the Yamaoka Patent claims a process for filtering smoke to the extent that the smoke produced by the filtration is still able to impart a noticeable and "agreeable" taste and smell to the fish. The Yamaoka Patent does not claim a process specifically intended to filter flavor-giving particles out of the smoke." Tuna Processors, Inc. v. Hawaii International Seafood, Inc., et al., 2007 U.S. Dist. LEXIS 77396 (D. Haw., Oct. 17, 2007).

"to the atria" — "means that the electric shock must be directed toward the destination of the atria, but that the electric shock may pass through the ventricles on its way toward the atria." Medtronic, Inc., et al. v. Guidant Corp., et al., 2004 U.S. Dist. LEXIS 10020 (D. Minn., May 25, 2004).

"pin ... for extending ... to thereby inhibit rotation of said slot engagement member to said unlocked position" — "requires a pin that can be extended into the security slot and thereby inhibit rotation of the slot engagement member between the locked and unlocked positions." Acco Brands, Inc. v. Micro Security Devices, Inc., 346 F.3d 1075 (Fed. Cir. 2003).
"to convert said beam to a line of light on surfaces to which it is projected" — "only requires that the device project the beam as a line on a surface, regardless of whether the surface is a remote surface." Irwin Industrial Tool Co. v. Orosz, et al., 2004 U.S. Dist. LEXIS 14325 (N.D. Ill., Jul. 26, 2004).4182

"tongue section" — "A tongue is a projecting strip that may, but need not, resemble or suggest a human tongue." Bruno Independent Living Aids, Inc. v. Acorn Mobility Services Ltd., et al., 301 F. Supp. 2d 914 (W.D. Wis. 2003).4188

"tooth" — "is a cutting surface." Synvasive Corp. v. Stryker, Corp., 425 F. Supp. 2d 1105 (E.D. Cal. 2006).4191

"table having a top" — "strongly implies that the referenced 'top' is a physical object or structure, not merely a particular point in space." Powell v. Home Depot USA, Inc., 2009 U.S. Dist. LEXIS 45517 (S.D. Fla., May 30, 2009).4192

"top"; "skirt" — "the top is the upper portion of the cap from which the sealing protrusions and skirt depend, and the skirt is the outer portion of the cap which is generally the same diameter as the upper portion of the base." Phoenix Closures, Inc. v. Silgan Plastics Corp., 2005 U.S. Dist. LEXIS 28825 (N.D. Ill., Nov. 15, 2005).4193

"top edge" — "does not include the side surfaces of the lateral trough walls." ADC Telecommunications, Inc. v. Panduit Corp., 200 F. Supp. 2d 1022 (D. Minn. 2002).4194

"top member" — "a distinct part of a whole that extends around the entire periphery of the uppermost end." Bradford Co. v. Afco Manufacturing, et al., 2006 U.S. Dist. LEXIS 88547 (S.D. Ohio, Dec. 5, 2006).4195

"top of the container body" — "mean[s] the 'highest point, level, or part of.'" Sage Products, Inc. v. Devon Industries, Inc., 126 F.3d 1420 (Fed. Cir. 1997).4196

"a top surface of the housing"; "extending upward from a ... side of the housing" — "the directional terms used in the patent have their ordinary meanings. The phrase 'extending upward' means upward from the housing toward the weapon above the housing, with the weapon in its expected position as shown in the drawings. The top of the housing means the top with reference to the housing in its position under the weapon, again, with the weapon in its expected position as shown in the drawings." Insight Technology Inc. v. SureFire, LLC, 2006 U.S. Dist. LEXIS 11762 (D.N.H., Feb. 28, 2006).4198
"toric lens" — "a lens which is curved so that the radii of curvature in the horizontal and vertical meridians are different." Gargoyles, Inc. v. Aearo Corp., 1998 U.S. Dist. LEXIS 22294 (D. Mass., May 19, 1998). 4199

[i] "non-tortuous copy path"; [ii] "tortuous bend" — [i] "a path that, while not necessarily straight, has no curves sharp enough to sacrifice the integrity of the edible substrate sheet" [ii] "a bend sufficiently sharp to sacrifice the integrity of the substrate sheet." Jack Guttman, Inc. v. Kopykake Enterprises, Inc., 302 F.3d 1352 (Fed. Cir. 2002). 4201

"tortuous path" — "five elements of a 'tortuous path' are set forth in the specification, including: (a) a number of bends, some of which may be 90 degrees or more, (b) small vessels, typically with lumen diameters of less than about 3 mm, and (c) a total path length within the target tissue of at least about 5 cm, (d) accessible by a guidewire 18 mil or smaller of the type described above, but being too delicate and or tortuous for accessing by significantly larger guidewire, and (e) the requirement that the path include vessels that branch off the more proximal vessels of the path at greater than a right angle." Target Therapeutics, Inc. v. Cordis Endovascular Systems, Inc., 1997 U.S. App. LEXIS 9718 (Fed. Cir., May 2, 1997) (unpublished). 4202

"touch switch" — "a switch that requires physical contact in order to be activated." Michilin Prosperity Co. v. Fellowes Manufacturing Co., 450 F. Supp. 2d 35 (D.D.C. 2006). 4203

"toward" — "should be construed according to its dictionary definition, which is 'in the direction of.'" Janes v. Bose Corp., 2004 U.S. Dist. LEXIS 8136 (N.D. Ill., May 6, 2004). 4204

"a toy device for the amusement of pet animals" — "a device for the amusement of an animal kept for pleasure or companionship, rather than solely for utility." Robinson v. Advanced Decoy Research, Inc., et al., 519 F. Supp. 2d 1087 (S.D. Cal. 2007). 4205

"tracer" — "Inverness claims that the proper construction of the term 'tracer' ... is 'a tracer that is a separate component from (i.e., is not attached to) the solid support.' ... the court finds that Inverness's suggested interpretation ... is unsupported." Becton, Dickinson and Co. v. Inverness Medical Technology, Inc., 176 F. Supp. 2d 258 (D. Del. 2001). 4206

"track means on said divider comprising a pair of elongated rails" — "two similar or corresponding plastic bars, matched for use together, that run horizontally (in the direction perpendicular to the shelf's edge) with the purpose of guiding a pusher member down a fixed and defined path." RTC Industries, Inc. v. William Merit & Associates, Inc., 2004 U.S. Dist. LEXIS 13288 (N.D. Ill., Jul. 15, 2004). 4207

"a lace trained between the eyelets on the first and second eyelet strips" — "a lace threaded in a way to connect the eyelet or eyelets on the first eyelet strip with the eyelet or eyelets on the second eyelet strip." Mueller Sports Medicine, Inc. v. Core Products International, Inc., 2003 U.S. Dist. LEXIS 24617 (W.D. Wis., Mar. 3, 2003). 4208

"transducer" — "include[s] only various transducers and switches capable of signaling as soon as possible after initial contact between the stylus and an object." Renishaw plc v. Marposs Societa' per Azioni, et al., 974 F. Supp. 1056 (E.D. Mich. 1997). 4209

"transferring electrical energy at a predetermined radio frequency range as arcs in ionized conductive pathways at a predetermined power level within the gas jet in an electrical circuit which includes the tissue" — "transferring electrical energy, at a predetermined radio frequency from the RF drive to a resonant output circuit to the pencil to the needle-like electrode, which extends into the nozzle, to the tissue as arcs in ionized conductive pathways in a gas jet." Erbe Elektromedizin Gmbh, et al. v. Canady Technology, LLC, et al., 512 F. Supp. 2d 297 (W.D. Pa. 2007).

"transferring unit" — "The court finds that the transferring unit connotes structure, not function, to one skilled in the art. Accordingly, means-plus-function treatment is denied. Instead, the transferring unit is interpreted as a mechanism that moves ribbon stock, from a roll at the beginning of the assembly line, through the claimed machine." SDS USA, Inc. v. Ken Specialties, Inc., 107 F. Supp. 2d 574 (D.N.J. 2000).

"said first location on said wall after said seaming operation forming the transition from said double seam to said second wall portion" — "the first location, after seaming, at which the double seam region changes to the second wall portion." Crown Packaging Technology, Inc., et al. v. Rexam Beverage Can Co., 486 F. Supp. 2d 366 (D. Del. 2007).

"transmission lines" — "means an arrangement of conductive elements (wires) capable of conducting electric magnetic energy in a prescribed fashion over the extent of a chessboard which does not require termination of the arrangement in its characteristic matching impedance." Brehn corp. v. TASC BV, et al., 1997 U.S. Dist. LEXIS 14411 (S.D.N.Y., Sept. 19, 1997).

"transmitting a force" — "is not a step-plus-function limitation." Masco Corp. v. United States, et al., 303 F.3d 1316 (Fed. Cir. 2002).

"transparent" — "transmitting light without appreciable scattering in a manner such as ordinary window glass so that objects placed behind the placard are clearly distinguishable." MPT, Inc. v. Marathon Labels, Inc., et al., 2006 U.S. Dist. LEXIS 4612 (N.D. Ohio, Feb. 7, 2006).

"transparent protective coating … defining a barrier to prevent injury to said photographic print from foot traffic and other objects passing over the floor tile" — "a transparent barrier of sufficient thickness to protect the photographic print from injury that would otherwise be caused by foot traffic and other objects passing over it." Cies Bisker, LLC v. 3M Co., et al., 2009 U.S. Dist. LEXIS 110055 (E.D. Tex., Nov. 25, 2009).

"transverse holes" — "holes across the butt portion of the nail." Acumed LLC v. Stryker Corp., et al., 483 F.3d 800 (Fed. Cir. 2007).4223 "The term 'transverse holes' in claim 1 of the '444 patent should be interpreted as 'openings through the butt portion of the nail oriented perpendicularly with respect to the longitudinal axis of the butt portion.'" Id. (Moore, J., dissenting).4224

"transverse sectional dimensions" — "The Court remains convinced that its original determination of indefiniteness is correct." Howmedica Osteonics Corp. v. Tranquil Prospects, Ltd., 2003 U.S. Dist. LEXIS 26345 (N.D. Ind., Nov. 24, 2003).4226 "Because one of ordinary skill would understand these requirements from the patent, the claim language is not indefinite. In sum, this record shows that 'transverse sectional dimensions' refers to two-dimensional measurements, or the cross-sectional area." Id., 401 F.3d 1367 (Fed. Cir. 2005).4227

"transversely oriented support extending across the user support"; "extending substantially across the entire lateral extent of the body pad" — "this Court ... declines to construe either term." Fitness Quest Inc. v. J. Monti, 2007 U.S. Dist. LEXIS 60195 (N.D. Ohio, Aug. 16, 2007).4229

"trap space between each magnet member and a magnet protector of an immediately adjacent magnet member"; "secondary settling area between each magnet member and a magnet protector of an immediately adjacent magnet member" — "a catch space created between the exposed side of a magnet and the protector for the next magnet over." Rattler Tools, Inc. v. Bilco Tools, Inc., et al., 2007 U.S. Dist. LEXIS 49124 (E.D. La., July 6, 2007).4230

"wherein the first layer of foam is treated to have reversible enhanced thermal properties" — "wherein the first layer of foam possesses reversible enhanced thermal properties by means of being coated with PCMs, or having PCMs embedded within it, or by means of some other process that does not involve the physical attachment of a tangible, distinct layer of material, such as a temperature regulating membrane, to the surface of the foam." Baychar, Inc., et al. v. Frisby Technologies, Inc., et al., 230 F. Supp. 2d 75 (D. Me. 2002).4234

- 378 -
"providing a treating flow of said hydrogen peroxide solution from one or more of said wells"
— "the term 'treating flow'... is read to have no pressure limitation associated with it and to be limited to 'chemical remediation.'" Cleanox Environmental Services, Inc. v. Hudson Environmental Services, Inc., et al., 14 F. Supp. 2d 601 (D.N.J. 1998). 4235

"a trigger depression device operative to support said trigger of said saw in a depressed 'on' position" — "Though the term 'device' is a general term, in connection with 'trigger depression' and given the prevalence of triggers in the art of trimming devices, as well as the existence of the term in prior art, this term evinces sufficient structure so as not to invoke § 112." Rogers v. Desa International, Inc., et al., 166 F. Supp. 2d 1202 (E.D. Mich. 2001). 4236

"a troughed portion" — "has a meaning readily understood by one of skill in the art." Donaldson Co., Inc. v. Baldwin Filters, Inc., 481 F. Supp. 2d 974 (D. Minn. 2007). 4237

"truncated wall" — "a wall (planar or non-planar) that truncates, in essence, the typical corner that would otherwise be formed between two side walls." K-TEC, Inc. v. Vita-Mix Corp., 2009 U.S. Dist. LEXIS 98752 (D. Utah, Oct. 23, 2009). 4239

"trunnion" — "although required to contain a projection, is broad enough to include a projection with a recess." Sun Coast Merchandise Corp., et al. v. CCL Products Enterprises, Inc., et al., 179 Fed. Appx. 6 (Fed. Cir., April 21, 2006) (unpublished). 4240

"trunnions" — "pin[s] or pivot[s] usually mounted on bearings for rotating or tilting something." Sun Coast Merchandise Corp. v. CCL Products Enterprises, Inc., 2003 U.S. Dist. LEXIS 27316 (N.D. Cal., Apr. 30, 2003). 4241

"tubular" — "will be given its commonly-understood meaning with the caveat that it is not to be restricted to objects having a circular cross-section." Paczonay v. American Recreation Products, Inc., et al., 2007 U.S. Dist. LEXIS 9773 (N.D. Cal., Jan. 30, 2007). 4242

"tubular member" — "a structure that 'has the form of a tube,' i.e., is hollow and cylindrical in shape." Cordis Corp., et al. v. Advanced Cardiovascular Systems, Inc., et al., 1998 U.S. Dist. LEXIS 11342 (D. Del., Jul. 17, 1998). 4244

"tubular sock-like projectile body" — "a tube shape hollow body, composed of one or more layers of material, having a single inner compartment." Combined Tactical Systems, Inc. v. Defense Technology Corp. of America, et al., 426 F. Supp. 2d 140 (S.D.N.Y., April 4, 2006). 4245

"tufts of fibers" — "clusters of binding fibers which have been intentionally needle-punched on a downstroke and which extend beyond an opposite surface of the batt." Lydall Thermal/Acoustical, Inc., et al. v. Federal-Mogul Corp., et al., 2009 U.S. App. LEXIS 20077 (Fed. Cir., Sep. 8, 2009). 4248

"turf maintenance operation" — "an operation for maintaining grass- or vegetation-covered soil or for maintaining sand. Such operations include mowing, sand grooming, and aeration." Toro Co. v. Textron, Inc., et al., 502 F. Supp. 2d 904 (D. Minn. 2007). 4252

"turn control mode" — "mode wherein streamer positioning device(s) generate a force in the opposition direction of a turn and then directing each streamer positioning device to the position defined in the feather angle mode." WesternGeco LLC v. ION Geophysical Corp., 2010 U.S. Dist. LEXIS 71875 (S.D. Tex., Jul. 16, 2010). 4253

"turnbuckle" — "the applicants defined a turnbuckle as something that is adjustable. Therefore, any influence that the doctrine of claim differentiation may have on claim construction in this case cannot survive the multiple statements indicating that a turnbuckle is an adjustable connector." Springfield Co., Inc. v. Staubli Corp., et al., 1998 U.S. App. LEXIS 7657 (Fed. Cir., Apr. 17, 1998) (unpublished). 4254

"conveyor assembly comprising at least two conveyor means"; "conveyor assembly comprising two vertically positioned conveyors"; "conveyor assembly comprising at least two conveyors positioned adjacent to each other" — "require at least two conveyors which are separate elements and not merely two moving surfaces." Lantech, Inc. v. Keip Machine Co., 32 F.3d 542 (Fed. Cir. 1994). 4256

- U -

"unassisted flow" — "flow without the aid of any additional process or device to draw out more fluid than that which occurs once the flow has been initiated." *Therasense, Inc. v. Becton, Dickinson and Co.*, 2006 U.S. Dist. LEXIS 66437 (N.D. Cal., Aug. 31, 2006).

"rollers each comprising a prong having a first end attached to said lifting means and an unattached free end spaced from said lifting means ... wherein ... said free ends of said rollers may be inserted under said object prior to lifting" — "requires the following: (1) one end of the roller (the tractor end) is spaced closely to and attached to the lifting means so that insertion of the roller at the tractor end would not be possible; and (2) the other end of the roller is spaced from and 'unattached' to the lifting means and free from any other structure so that it may be freely inserted under the bale." *Oiestad v. Ag-Industrial Equipment Co., Inc., et al.*, 1997 U.S. App. LEXIS 18219 (Fed. Cir., Jul. 22, 1997) (unpublished).

"uncompressed position" — "the position of the flexible element when it is not under axial compression from a medical implement and closes the valve." *ICU Medical, Inc. v. B. Braun Medical, Inc.*, 344 F. Supp. 2d 663 (N.D. Cal. 2004).

"underside" — "the surface of the mat that faces or contacts the surface on which the mat or pad rests, the underside or bottom." *Microthin.com, Inc. v. SiliconeZone USA, LLC*, 615 F. Supp. 2d 754 (N.D. Ill. 2009).

"original unidentified mass" — "a mass that does not have a specific preformed size and shape." *All Dental Prods, LLC, et al. v. Advantage Dental Products, Inc.*, 309 F.3d 774 (Fed. Cir. 2002).
undisputed claim limitations — "Although the construction of the claim is independent of the device charged with infringement, it is convenient for the court to concentrate on those aspects of the claim whose relation to the accused device is in dispute." Pall Corp. v. Hemasure, Inc., 181 F.3d 1305, 1308-09 (Fed. Cir. 1999). "[W]e are reviewing only certain disputed terms of the claim construction and lack the power to construe other terms not disputed by the parties." MBO Laboratories, Inc. v. Becton, Dickinson & Co., 474 F.3d 1323 (Fed. Cir. 2007).

"said front portion of said side wall having inner and outer surfaces with undulating contours that define projections at said inner surface and corresponding indentations at said outer surface" — "Because Plaintiffs expressly disclaimed corrugations during the '640 prosecution history, undulating contours cannot be construed to include corrugations. Thus, the court concludes that undulating contours must be construed to mean a wavy curve-like appearance, but not corrugations." Sentry Protection Products, Inc., et al. v. Eagle Manufacturing Co., 2003 U.S. Dist. LEXIS 27435 (N.D. Ohio, Sept. 30, 2003).

uneven" — "sufficently non-smooth as to allow for the influx of air around a suction cup." Techtronic Industries Co., Ltd., et al. v. Chervon Holdings Ltd., et al., 395 F. Supp. 2d 720 (N.D. Ill. 2005).

rendering uniform" — "to make the absorbed dose of radiation more uniform to prevent over-treatment of body tissue at or close to the outer wall of the instrument." Xoft, Inc. v. Cytyc Corp., et al., 2007 U.S. Dist. LEXIS 34468 (N.D. Cal., April 27, 2007).

uniform flexible film" — "means that the material must be of a uniform thickness, and excludes material in which there are any variations in thickness." Middleton, Inc. v. Minnesota Mining and Manufacturing Co., 1998 U.S. Dist. LEXIS 19428 (N.D. Ill., Nov.24, 1998). "We understand the district court's interpretation to mean that the film must have the same thickness throughout, except that normal manufacturing tolerances are allowed." Id., 1999 U.S. App. LEXIS 29872 (Fed. Cir., Nov. 16, 1999) (unpublished). "In sum, the proper construction of 'uniform flexible film' is a flexible film having always the same form. Thus, a uniform flexible film includes, for example, a flexible film having the same thickness throughout, as well as a flexible film having the same textured surface throughout." Id., 311 F.3d 1384 (Fed. Cir. 2002).

cylinder of uniform, second diameter" — "a tube having a consistent circumference throughout the length of its shaft without significant bulges or cavities, such that it can telescope within the first cylinder while maintaining an unvarying distance between the outermost exterior of the inner tube and the innermost interior of the outer tube." Robinson v. Cannondale Corp., et al., 2002 U.S. Dist. LEXIS 6797 (C.D. Cal., Jan. 29, 2002).
"having a uniform thickness"; "by said uniform thickness seals" — "require the gasket means to be the same thickness throughout and to seal the duct connecting flange members and also the corner edge portions of the duct, forming the only seal for the corner edge portions of the duct extending beyond said front surface of said corner means." *Ductmate Industries, Inc. v. Famous Supply Corp., et al.*, 55 F. Supp. 2d 777 (N.D. Ohio 1999). 4282

"said support mat is of uniform thickness between its opposite ends" — "the thickness of the mat does not vary between its ends." *Tenneco Automotive Operating Co. Inc. v. Visteon Corp.*, 2005 U.S. Dist. LEXIS 12738 (D. Del., Jun. 28, 2005). 4283

"uniformity of resulting cut surface" — "any aspect of uniformity for a cut surface, for example consistency of surface finish or of dimensional accuracy or precision from entry to exit of the jet through a work piece for the segment specified by the user." *Omax Corp. v. Flow International Corp.*, 2006 U.S. Dist. LEXIS 81914 (W.D. Wash., Nov. 7, 2006). 4284

"uniformly" — "Grayzel is splitting hairs in arguing that the district court should have selected the definition "without fluctuation or variation; consistent" instead of the definition "always the same; unvarying" for the term "uniformly." The district court's definition is synonymous with Grayzel's proposed definition." *Grayzel v. St. Jude Medical, Inc.*, 162 Fed. Appx. 954 (Fed. Cir., Dec. 23, 2005) (unpublished). 4285

"ablation ... is caused uniformly but only to a predetermined depth" — "Without any other guide for the term, the Court is left with the ordinary and customary meaning of uniform ablation, that is, ablation to an identical depth, or to a depth that does not vary in detail." *Laser Industries, Ltd., et al. v. Reliant Technologies, Inc.*, 1998 U.S. Dist. LEXIS 23494 (N.D. Cal., Sept. 3, 1998). 4287

"containing uniformly dispersed therein a static-reducing amount of electrically conductive particulate material" — "The written description of the '040 patent thus shows that the 'uniformly dispersed' limitation requires the distribution of conductive particles across the length and width of the conductive layer but does not require uniform dispersion of the particles across the thickness of the layer." *Charleswater Products, Inc. v. Nevamar Corp.*, 1998 U.S. App. LEXIS 31011 (Fed. Cir., Dec. 10, 1998) (unpublished). 4288

"allowing the resultant assembly to set and dry such that the calcined gypsum forms set gypsum having voids uniformly dispersed therein" — "The only part of the resultant assembly that need have uniformly dispersed voids is the deposited dispersion described in claim 25." *United States Gypsum Co., et al. v. LaFarge North America, Inc., et al.*, 508 F. Supp. 2d 601 (N.D. Ill. 2007). 4289

- 383 -

"said connectors being unitary" — "an undivided component that extends between the bag and the liner and is connected to the bag and the liner." *Scholle Custom Packaging, Inc. v. Grayling Industries, Inc.*, 2010 U.S. Dist. LEXIS 55414 (W.D. Mich., Jun. 3, 2010).\(^{4293}\)

"unitary central hub member" — "a single device comprising at least two parts pivotably coupled to and centrally located among the lower frame assembly, that enables corner legs, hub legs and side rails to collapse into a substantially parallel compact configuration without the need to disassemble fabric or other components of the structure or to release a latch or lock on the corner legs to permit the corner legs to collapse." *Graco Children's Products, Inc. v. Century Products Co., Inc., et al.*, 1996 U.S. Dist. LEXIS 10356 (E.D. Pa., July 23, 1996).\(^{4294}\) "At oral argument on the instant motions, counsel for Graco cited the above portion of the '437 patent to argue that 'the patentee is using unitary to show that a number of pieces can be put together in an assemblage, so that they act as one.' We adopt this common-sense interpretation, especially in light of the parties agreement that the unitary central hub can have multiple parts that act as one piece." *Graco Children’s Products, Inc. v. Regalo International LLC*, 2000 U.S. Dist. LEXIS 11133 (E.D. Pa., Aug. 8, 2000).\(^{4295}\)

"unitary continuous external gasket means" — "require[s] the gasket means to be a unitary (one-piece), uninterrupted gasket means having a uniform thickness that extends around the periphery of said duct connecting flange members." *Ductmate Industries, Inc. v. Famous Supply Corp., et al.*, 55 F. Supp. 2d 777 (N.D. Ohio 1999).\(^{4296}\)

"unitary tube" — "means the tube and tip are a single unit." *Mahurkar, et al. v. Arrow International, Inc.*, 160 F. Supp. 2d 927 (N.D. Ill. 2001).\(^{4297}\)

"unmagnetized magnetic material" — "material that is capable of being magnetized but in the absence of an applied external magnetic field is not magnetized." *Fargo Electronics, Inc. v. Iris Ltd, Inc.*, 2005 U.S. Dist. LEXIS 34493 (D. Minn., Nov. 30, 2005).\(^{4298}\)

"unstretched original length" — "the length of the stretched plastic film before mechanical elongation." *Pliant Corp. v. MSC Marketing and Technology, Inc.*, 416 F. Supp. 2d 632 (N.D. Ill. 2006).\(^{4300}\)

"upper edge" — "an edge that faces upwardly (e.g., it does not face sidewardly)." *Bradford Co. v. Afco Manufacturing, et al.*, 2006 U.S. Dist. LEXIS 88547 (S.D. Ohio, Dec. 5, 2006).\(^{4304}\)

"first and second upper mounting portions" — "first and second portions of a top of the vertical frames to which an object may be mounted." TBC Consoles, Inc. v. Forecast Consoles, Inc., 2009 U.S. Dist. LEXIS 91653 (S.D.N.Y., Sep. 28, 2009).

[i] "upper portion"; [iii] "lower portion" — [i] "that part of the jamb, which is less than the whole, made up of one or more pieces joined together, and which is higher in physical position in the jamb than the lower portion."; [ii] "the part of the jamb different than the upper portion, which is joined to the lower end of the upper portion." Burns, Morris & Stewart L.P. v. Endura Products, Inc., 2005 U.S. Dist. LEXIS 46839 (E.D. Tex., May 11, 2005).

"upper surface" — "surface of the plastic sheet that is opposite the lower surface and faces away from the surface on which the mat or pad rests." Microthin.com, Inc. v. SiliconeZone USA, LLC, 615 F. Supp. 2d 754 (N.D. Ill. 2009).

"upper surface"; "lower surface" — "Upper surface' and 'lower surface' are designated at the time the first set stitch is applied, and the upper and lower surfaces of a component/element are opposing surfaces through a thickness of the component/element, providing that the 'upper surface' faces upward and the 'lower surface' faces downward at the time of designation along the unfolded portions of the garment components, and providing that the upper surface and lower surface designations of the garment components remain consistent around folds required in the claim." Taltech Ltd. v. Esquel Enterprises Ltd., 410 F. Supp. 2d 977 (W.D. Wash. 2006).

"upright position" [and] "reclined position" — "requir[e] that each seat contain a movable backrest." GFI, Inc. v. Franklin Corp., et al., 142 F. Supp. 2d 780 (N.D. Miss. 1999).

"upright standing manner"; "standing upright manner"; "upright manner" — "having a generally vertical orientation, corresponding to that of a beverage container or other product." Crane Co., et al. v. Sandenvendo America, Inc., et al., 2009 U.S. Dist. LEXIS 47509 (E.D. Tex., Jun. 5, 2009).

"upstanding lip or wall" — "any member provided at the front of the track which either cooperates with the front member in stopping the forward movement of an article or at least does not interfere with the functioning of the front member in this regard. A 'transversely extending' lip or wall would extend at least partially across the track." Display Technologies, Inc. v. Paul Flum Ideas, Inc., 2000 U.S. Dist. LEXIS 14258 (S.D.N.Y., Sept. 27, 2000).

"rotating the receiving means downwardly and away from said first conveyor means to urge the received eggs downwardly" — "Another ordinary meaning of 'to urge' avoids exclusion of the preferred embodiment from the claims. Specifically, 'to urge' may mean 'to cause to move, hasten, or gather speed.' This definition receives support from the patent specification. The specification clarifies that 'to urge' means broadly to move or to carry and that the receiving means may slow the motion of the eggs." Moba, B.V., et al. v. Diamond Automaton, Inc., 325 F.3d 1306 (Fed. Cir. 2003).

"urinary bladder submucosa" — "urinary bladder submucosa delaminated from the abluminal muscle cell layers and at least the luminal portion of the tunica mucosa of the urinary bladder tissue." Cook Biotech, Inc., et al. v. Acell, Inc., et al., 460 F.3d 1365 (Fed. Cir. 2006). 4315

"used in a truck trailer" — "The retractable segmented cover systems is used with a trailer that is designed to be hauled by a truck." Sundance, Inc. v. De Monte Fabricating, Ltd., 485 F. Supp. 2d 805 (E.D. Mich. 2007). 4316

"an electrical utility box for the electrical power system" — "an electrically conductive hollow box enclosure (e.g. for mounting electrical power equipment)." Senior Industries, Inc. v. Thomas & Betts Corp., et al., 2001 U.S. Dist. LEXIS 16901 (N.D. Ill., Sept. 27, 2001). 4317

"utilizing at least one of said instantaneous flow rate and said reference indicia to select one of said higher and said lower pressure magnitudes to be applied in the airway of such a patient" — "using the instantaneous flow rate or the average flow rate, or both, to determine whether to provide the previously selected higher pressure magnitude (for inhalation) or the previously selected lower pressure magnitude (for exhalation) to the patient." Respironics, Inc., et al. v. Invacare Corp., 2006 U.S. Dist. LEXIS 62233 (W.D. Pa., Aug. 30, 2006). 4318

"utilizing said instantaneous flow rate and said reference indicia to select one of said higher and said lower pressure magnitudes for said flow of breathing gas to be applied in the airway of such a patient" — "comparing the instantaneous flow rate signal to the average flow rate signal to determine whether to provide the previously selected higher pressure magnitude (for inhalation) or the previously selected lower pressure magnitude (for exhalation) to the patient." Respironics, Inc., et al. v. Invacare Corp., 2006 U.S. Dist. LEXIS 62233 (W.D. Pa., Aug. 30, 2006). 4319

"utilizing the core pins to aid in ejecting" — "using the core pins to assist in forcing the washing machine basket from the apparatus." Maytag Corp. v. Electrolux Home Products, Inc., 411 F. Supp. 2d 1008 (N.D. Iowa 2006). 4320

-V-

"V-shape" — "An object or sequence of objects has a 'V-shape' if the object or sequence of objects is generally shaped like the letter 'V.' However, an object or sequence of objects may be 'V-shaped' even if the nadir of such object or objects is not acute or 'sharp,' and even if the nadir is not characterized by a physical joining of the two legs of the 'V.'" Typeright Keyboard Corp. v. Microsoft Corp., 2002 U.S. Dist. LEXIS 27468 (S.D.N.Y., Mar. 27, 2002). 4321

"reserve vacuum assembly" — "a means-plus-function analysis does not apply to the construction of the term reserve vacuum assembly. ... I therefore conclude that the proper construction is based on the term's ordinary meaning; 'the structure, including but not limited to a tank, to one of ordinary skill in the art that is a reserve source of vacuum.'" Bausch & Lomb Inc. v. Moria S.A., et al., 222 F. Supp. 2d 616 (E.D. Pa. 2002). 4323

"valve-actuating portion" — "to include the cylindrical portion, the annular base, and the keys, which engage the valve mechanism." Parker-Hannifin Corp., et al. v. Baldwin Filters, Inc., et al., 2010 U.S. Dist. LEXIS 68906 (N.D. Ohio, Jul. 9, 2010).

"valve means" — "the term 'valve' ... provides sufficient structure to preclude application of § 112." Haberman v. Playtex Products, Inc., 403 F. Supp. 2d 708 (W.D. Wis. 2005).

"valve pin assembly" — "part of the valve pin actuator that secures the valve pin to the actuator and includes a first part for holding a top end of a valve pin that is removably secured to the piston, and a second part for receiving the valve pin that is secured to the manifold." Synventive Molding Solutions, Inc. v. Husky Injection Molding Systems, Inc., 2009 U.S. Dist. LEXIS 72474 (D. Vt., Aug. 13, 2009).

"variable gauge thickness" — "the plastic film has thickness variations that help trap air and ease unwinding." Pliant Corp. v. MSC Marketing and Technology, Inc., 416 F. Supp. 2d 632 (N.D. Ill. 2006).

"where [the offset] distance \(d\) varies between minimum distances for the first and last string ends in [the] sequence and a maximum distance for a string end between [the] first and last string ends in [the] sequence" — "require[s] that the offset distance \(d\), take on at least three values, i.e., a minimum, a maximum, and at least one intermediate value." Athletic Alternatives, Inc. v. Prince Manufacturing, Inc., 73 F.3d 1573 (Fed. Cir. 1996).4337

"the volume of chlorine drawn from the chlorine supply canister during a period of continuous sewage effluent recirculation varies with the duration period of continuous sewage effluent recirculation" — "the longer the sewage effluent is recirculated without stopping, the greater the volume of chlorine that is dispensed." Cecil's On-Site Products, Inc. v. Chaffin, 2009 U.S. Dist. LEXIS 10095 (S.D. Tex., Feb. 11, 2009).4338

"vary the position" — "to make or cause a change in place or position." Bradford Co. v. Afco Manufacturing, et al., 2006 U.S. Dist. LEXIS 88547 (S.D. Ohio, Dec. 5, 2006).4339

"vault" — "a durable box-type steel container, that may be locked, and that is of a size capable of housing a video recorder and being placed in the trunk of an automobile." P.A.T., Co., et al. v. Ultrak, Inc., 948 F. Supp. 1506 (D. Kan. 1996).4340

"a vent associated with the upper rim of the at least one chamber" — "a recess that extends completely through the upper rim of the sidewall of the main chamber, and allows for the escape of gas." Merit Medical Systems, Inc. v. Aspen Surgical Products, Inc., 2006 U.S. Dist. LEXIS 64895 (W.D. Mich., Sept. 12, 2006).4345

"ventilation opening" — "an opening in the enclosure to provide for reducing the buildup of heat, fumes, or vapor, within the radio enclosure." Black & Decker Inc., et al. v. Robert Bosch Tool Corp., 389 F. Supp. 2d 1010 (N.D. Ill. 2005).4348

"venturi"; "venturi tube"; "venturi passage" — "a tube or other passageway for exerting suction, which tube or passageway is narrower than the areas at both ends." Performance Aftermarket Parts Group, Inc., et al. v. TI Group Automotive Systems, Inc., 2006 U.S. Dist. LEXIS 92686 (S.D. Tex., Dec. 22, 2006).4349

- 388 -

PUBPAT
"venturi chamber" — "a volume in a tubular fluid pathway in which suction is produced due to a constriction." Cecil's On-Site Products, Inc. v. Chaffin, 2009 U.S. Dist. LEXIS 10095 (S.D. Tex., Feb. 11, 2009). 4350

"vertical channel" — "a structure with a U- or bracket-shaped cross-section that runs vertically down the back of the plow blade, and which generally conforms throughout its length to the shape or curvature of the back of the blade. It does not, then, include a so-called 'boxed gusset,' with a back that does not conform to the blade's shape, but rather slopes at a downward angle away from the top of the blade." Pro-Tech Welding & Fabrication, Inc. v. Lajuett, et al., 367 F. Supp. 2d 398 (W.D.N.Y. 2005). 4352

"vertical lock spindle" — "a long, rotating, vertically-oriented rod that serves as an axis of rotation for the lock pins for locking the side rail." Pedicraft, Inc. v. Stryker Corp. of Michigan, et al., 2003 U.S. Dist. LEXIS 27837 (M.D. Fla., May 5, 2003). 4353

"so that said pair of magnetic members can vertically engage corresponding magnetic members on a primary spectacle frame" — "so that the pair of magnetic members can magnetically engage corresponding magnetic members on the primary spectacle frame along a vertical polar axis, either by contacting the primary spectacle frame's magnetic members or by magnetic attraction without physical contact." Aspex Eyewear, Inc., et al. v. E'Lite Optik, Inc., 2007 U.S. Dist. LEXIS 76024 (N.D. Tex., Oct. 12, 2007). 4354

"vertically movable" — "which can be moved up and down to position the unit prior to operation." Tom Hayden Enterprises, Inc. v. Southern Oregon Hot Bikes, Inc., 2004 U.S. Dist. LEXIS 8195 (D. Or., Apr. 29, 2004). 4355

"vertically-projecting columnar support element" — "a generally cylindrically shaped supporting structure, which may be tapered at either or both ends, and/or grooved or fluted, the non-circular axis of which is oriented generally from the sole to the upper and not between the medial and lateral sides of the foot." Nike, Inc. v. Adidas America, Inc., et al., 2006 U.S. Dist. LEXIS 91011 (E.D. Tex., Dec. 18, 2006). 4356

"vessel" — "a container that must be capable of holding both solid and liquid food." Green v. Conagra Foods, Inc., 2009 U.S. Dist. LEXIS 1342 (D. Neb., Jan. 9, 2009). 4358
"said secondary fuel filter means including a vessel defining a hollow interior chamber in fluidic communication with a return line in fluidic communication with said fuel tank for returning fuel and undesired gas thereto, and a filter media positioned within said chamber for immersion in fuel received therein and a conduit located within said filter media for delivering fuel passing through said filter media to said outlet" — "The secondary fuel filter also includes a vessel defining a hollow interior chamber, which chamber is in fluidic communication with a return line, which is in fluidic communication with the fuel tank, for returning fuel and undesired gas to the fuel tank. The secondary fuel filter also includes a filter media positioned within the chamber of the vessel so that the filter can be immersed in the fuel received in the chamber. The secondary fuel filter also has a conduit located within the filter media for delivering fuel passing through said filter media to the outlet." Ekstam v. Ekstam, 2006 U.S. Dist. LEXIS 12937 (E.D. Mo., March 7, 2006).

"vessel means for supporting said wafers" — "is written using the means-plus-function terminology of 35 U.S.C. § 112 and, therefore, the court will construe the phrase to cover the corresponding structure and equivalents thereof. ... the court finds that the phrase 'vessel means for supporting said wafers' refers to a structure designed to hold wafers being processed and provide for a closed circulation process stream, and any structure that would be considered an equivalent." CFMT, Inc., et al. v. YieldUP International Corp., 92 F. Supp. 2d 359 (D. Del. 2000).

"at least one vibration dampener adjustment member having openings therethrough matching the number and circumferential spacing of said stabilizer rods and a diameter larger than the diameter of said stabilizer rods freely receiving said rods therethrough" — "encompasses a 'vibration dampener adjustment member' comprised of either a single piece or multiple pieces joined together so that the member has 'openings therethrough' that permit the stabilizer rods to pass through the 'adjustment member' and the 'adjustment member' partially or completely encloses the 'openings therethrough.'" Kudlacek v. DBC, Inc., et al., 115 F. Supp. 2d 996 (N.D. Iowa 2000).

"viscoelastic hand surface"; "viscoelastic finger surface" — "the external layer of the grip is soft enough to change shape under the pressure exerted by fingers gripping a writing implement to write and which will tend to return to its original shape when released." Kwitek, et al. v. Pilot Corp., et al., 516 F. Supp. 2d 709 (E.D. Tex. 2007).

"vivid colored appearance" — "require[s] that the maximum differential effect equal or exceed about 5.45%." Oakley, Inc. v. Sunglass Hut International, et al., 316 F.3d 1331 (Fed. Cir. 2003). 4367

"plurality of voids extending between said top and bottom" — "gaps or spaces which extend in the space between the top and bottom ends." Innovative Office Products, Inc. v. SpaceCo, Inc., et al., 2007 U.S. Dist. LEXIS 62296 (E.D. Pa., Aug. 23, 2007). 4368

"method for using vulcanized rubber" — "the process of treating crude or synthetic rubber ... to give it useful properties." Green Edge Enterprises, LLC v. Rubber Mulch Etc., LLC, et al., 2007 U.S. Dist. LEXIS 38799 (E.D. Mo., May 29, 2007). 4369

-W-

"wafer" — "a thin, generally cylindrical, slice of semiconductor material used as a base for an electronic component or circuit." MEMC Electronic Materials, Inc. v. Mitsubishi Materials Silicon Corp., et al., 2006 U.S. Dist. LEXIS 9353 (N.D. Cal., Feb. 24, 2006). 4370

"wafer cassette" — "a wafer carrier that holds one or more wafers and keeps them separate." Nova Measuring Instruments, Ltd. v. Nanometrics, Inc., 2006 U.S. Dist. LEXIS 90736 (N.D. Cal., Dec. 1, 2006). 4371

"wafer support for detachably supporting wafers thereon" — "We conclude that the 'wafer support' limitation conveys sufficient structure to preclude the application of § 112, P 6, and therefore interpret that limitation to mean any device capable of both holding or grasping a semiconductor wafer and releasing it at some later time." Semitool, Inc. v. Novellus Systems, Inc., 12 Fed. Appx. 918 (Fed. Cir., Jun. 8, 2001) (unpublished). 4372 "We conclude that the 'wafer support' limitation conveys sufficient structure to preclude the application of § 112, P 6, and therefore interpret that limitation to mean any device capable of both holding or grasping a semiconductor wafer and releasing it at some later time." Id., 44 Fed. Appx. 949 (Fed. Cir., Jul. 23, 2002) (unpublished). 4373

"waist area"; "waist area of the garment" — "an area of the garment that is above and distinct from the hip area of the garment." Orr v. Patagonia, Inc., et al., 2006 U.S. Dist. LEXIS 73739 (N.D. Tex., Sept. 26, 2006). 4374

"wakeboard traction pad" — "a pad with a friction-enhancing top surface, the bottom surface of which may be attached to the top surface of a wakeboard." Messer v. Ho Sports Co., Inc., et al., 2007 U.S. Dist. LEXIS 50081 (D. Or., July 9, 2007). 4375

"wakeboard traction surface" — "a friction-enhancing finish or surface material that may adhere or be attached to the top surface of a wakeboard." Messer v. Ho Sports Co., Inc., et al., 2007 U.S. Dist. LEXIS 50081 (D. Or., July 9, 2007). 4376

- 391 -
"rear wall" — "need not be a solid rear wall, but can be an outline in which the interior wires of the device are left exposed." _Amphenol, Corp., et al. v. Maxconn, Inc., et al._, 2000 U.S. Dist. LEXIS 20221 (N.D. Cal., Mar. 7, 2000). 4378

"a third wall defining a soil container, said soil container being fluidly connected to said guide chamber by said aperture in said second wall" — "Because the '433 Patent's specification expressly distinguishes between what it labels 'walls' and the 'cover' of the soil container, the third wall does not include the cover." _Maytag Corp. v. Whirlpool Corp._, 95 F. Supp. 2d 888 (N.D. Ill. 2000). 4379

"wall depth" — "a measurement along a radius of the wheel from the outermost edge of the wheel to the outermost surface of the pneumatic tire." _World Sports Products, Inc. v. Jugs Co._, 2009 U.S. Dist. LEXIS 111012 (D. Utah, Nov. 25, 2009). 4380

"a high impact forward wall ... having a ball impacting face wall with a plurality of generally parallel grooves" — "Literally read, the claim would require a wall that has a wall. This construction does not make sense and thus will not be adopted." _Vardon Golf Company, Inc. v. Golfsmith International, Inc., et al._, 2000 U.S. Dist. LEXIS 14259 (N.D. Ill., Jun. 6, 2000). 4381

"The context of this claim specifically and of the patent as a whole suggests that the 'high impact forward wall' simply has a face, not a 'face wall,' with many, roughly-parallel grooves on that face." _Vardon Golf Co., Inc. v. Karsten Manufacturing Corp._, 2000 U.S. Dist. LEXIS 13769 (N.D. Ill., Sept. 7, 2000). 4382

"wall tensile strength" — "a value calculated according to the equation [shown in the '364 patent at 3:55] where the burst pressure is determined at or about normal human body temperature." _Medtronic Vascular Inc., et al. v. Boston Scientific Corp., et al._, 526 F. Supp. 2d 613 (E.D. Tex. 2007). 4383

"waste rubber buffings"; "ground tires" — "a product obtained from a tire re-treading process in which tread is removed from the used tire body by a buffing device"; "the product of a tire recycling process in which the entire body is reduced to pieces by grinding or shredding." _Green Edge Enterprises, LLC v. Rubber Mulch Etc., LLC, et al._, 2007 U.S. Dist. LEXIS 38799 (E.D. Mo., May 29, 2007). 4385

"water-permeable outer surrounding wall of a basket" — "the ... filtration basket must be enclosed by vertical, porous walls that allow storm water to infiltrate the filter material following a horizontal flow." _Contech Stormwater Solutions, Inc. v. BaySaver Technologies, Inc., et al._, 2007 U.S. Dist. LEXIS 71659 (D. Md., Sept. 25, 2007). 4386

"water pump" — "cover[s] both internal and external water pumps." _Aqua Products, Inc. v. Intex Recreation Corp._, 2007 U.S. Dist. LEXIS 41496 (S.D.N.Y., June 5, 2007). 4387
"water vapor impermeable polymer layer" — "a polymer layer that is substantially impermeable to water vapor. Substantially impermeable means that some amount of water vapor may pass through the polymer layer, provided that the polymer/absorbent layer combination constitutes the mechanism for avoiding water vapor caused sogginess in the foodstuff and such passage is minimized so as to reduce resulting heat loss during the holding period." Fort James Corp. v. J.H. McNairn, Ltd., 2006 U.S. Dist. LEXIS 36528 (N.D. Ga., April 4, 2006).4388

"a wear layer on top"; "a wear layer located on top"; "a wear layer located on" — "a 'wear layer' is applied over top of or above the design layer. This claim language is broad enough to permit intervening layers between the design and the 'wear layer.'" Mannington Mills, Inc., et al. v. Armstrong World Industries, Inc., et al., 2002 U.S. Dist. LEXIS 18641 (D. Del., Aug. 20, 2002).4389

"web" — "the Court finds that the 'web' of the rail includes one-half of the curved junction between the web and base of the rail, or 'fillet.'" RFR Industries, Inc. v. Century Steps, Inc., et al., 1999 U.S. Dist. LEXIS 15212 (N.D. Tex., Sept. 23, 1999).4392

"web" — "a thin sheet, plate, or strip." Lifetime Products, Inc. v. GSC Technology Corp., et al., 321 F. Supp. 2d 938 (N.D. Ill. 2004).4393

"webs connecting opposite ends of each of said pivot flanges to said center flange in spaced relationship therefrom" — "flat, narrow and rigid connecting plates that hold the pivot flanges in fixed distance from each other on opposing sides of the support, forming a looped structure defining a generally open, accessible bottom area that facilitates manual manipulation and positioning of the pivot structure on the pivot flanges from above and below, and within which the shift lever can be inserted during assembly. These structures extend from and connect the front and rear ends of each of the pivot flanges to the center flange." Grand Haven Stamped Products Co. v. Dura Automotive System, Inc., 2004 U.S. Dist. LEXIS 31087 (W.D. Mich., Jun. 28, 2004).4394

"heat weld"; "welding" — "require the PVC-coated mesh to melt and thereby form a bond with the guard panel." L.B. Plastics, Inc. v. Amerimax Home Product, Inc., et al., 431 F. Supp. 2d 578 (W.D.N.C. 2006).4395 "[W]e conclude that the district court correctly construed the term 'welding.'" Id., 499 F.3d 1303 (Fed. Cir. 2007).4396

"well" — "a structure used for both monitoring and injecting the groundwater." Cleanox Environmental Services, Inc. v. Hudson Environmental Services, Inc., et al., 14 F. Supp. 2d 601 (D.N.J. 1998). 4398 "[T]he claim term 'well' in the patents in suit is a structure that enables either monitoring or injecting of groundwater, or both. Therefore, the methods practiced by the Defendants could indeed infringe the patents, contrary to the district court's summary judgment." Mantech Environmental Corp. v. Hudson Environmental Services, Inc., et al., 152 F.3d 1368 (Fed. Cir. 1998). 4399

"wheel" — "a circular frame that has a hub at the center for attachment to or suspension from an axle, on which it revolves, and that serves to bear the weight of the screening plant." Metso Minerals, Inc. v. Powerscreen International Distribution Ltd., et al., 2010 U.S. Dist. LEXIS 7099 (E.D.N.Y., Jan. 28, 2010). 4402

"wheel face outer surface" — "the entire area of the wheel's exposed outer face that lies within the circumscribing boundary of the inner shoulder of the axial peripheral lip." Lacks Industries, Inc. v. McKechnie Vehicle Components USA, Inc., et al., 55 F. Supp. 2d 702 (E.D. Mich. 1999). 4404 "The district court's construction is the only reading consistent with the plain language of the claim limitation and we therefore uphold the district court's construction of 'wheel face outer surface.'" Id., 322 F.3d 1335 (Fed. Cir. 2003). 4405 "To my mind, this claim language explicitly defines the wheel face outer surface as extending precisely up to the terminal boundary of the peripheral rim portion--the axial peripheral lip." Id. (Clevenger, J., dissenting-in-part). 4406

"operable for moving into an engagement position when" — "being 'coupled to' the two 'sides' such that the 'dunnage structure' is capable of being moved into an engagement position during the time that the two opposing 'sides' of the container body are being erected to thereby receive a product placed in the container for shipment." Bradford Co. v. Afco Manufacturing, et al., 2006 U.S. Dist. LEXIS 88547 (S.D. Ohio, Dec. 5, 2006). 4407

"when installed" — "the filler is installed when it is placed in its intended position--abutting the web of the rail." RFR Industries, Inc. v. Century Steps, Inc., et al., 1999 U.S. Dist. LEXIS 15212 (N.D. Tex., Sept. 23, 1999). 4408

"the probe generate a trigger signal when said sensing tip contacts an object and said stylus holder is thereby deflected relative to said housing" — "claim 2 covers probes which signal within a nonappreciable period of time after contact such that the delay in signaling is insignificant when compared to the sensitivity and accuracy of the probe." Renishaw plc v. Marposs Societa' per Azioni, et al., 158 F.3d 1243 (Fed. Cir. 1998). 4409
"a pin for extending into said security slot ... when said slot engagement member is in locked position" — "the term 'when' is defined as 'at or during the time that.' The balance of the claim language needs no construction." Acco Brands, Inc. v. American Power Conversion Corp., 2003 U.S. Dist. LEXIS 27829 (E.D. Tex., Jul. 16, 2003). Viewed in light of the specification, the phrase 'for extending' is a functional restriction on the pin. Kensington's argument that 'for extending' describes a 'state of being' that encompasses a pin that extends into the slot before locking is negated by the explanation and argument during prosecution. We conclude, as did the district court, that the participle 'extending' refers to an action occurring when the slot engagement member is rotated to and in the locked position. Acco Brands, Inc. v. Micro Security Devices, Inc., 346 F.3d 1075 (Fed. Cir. 2003).

"providing a signal when said stylus engages said object thereby indicating the position thereof"; "means for providing said signal when said stylus engages the object" — "the term 'when' ... must be construed to have the ordinary meaning of 'at the time that.'" Renishaw plc v. Marposs Societa' per Azioni, et al., 974 F. Supp. 1056 (E.D. Mich. 1997).

"stopping the relative displacement of corresponding contact surfaces when said testing determines said alignment and existence of correct electrical contact" — "mean[s] stopping that occurs as a result of a positive test for correct alignment and electrical contact, and that is instantaneous or nearly instantaneous such that relative displacing is halted before the corresponding contact surfaces are moved from a position of proper alignment and correct electrical contact to a position out of such alignment and contact." Thomson Consumer Electronics, Inc. v. Innovatron, S.A., 43 F. Supp. 2d 26 (D.D.C. 1999).

"when the dough base is cut" — "The ordinary meaning of 'when' in 'when the dough base is cut' is that at some point, the dough base will be cut, not that it may be cut." Angelo Mongiello's Children, LLC v. Pizza Hut, Inc., 70 F. Supp. 2d 196 (E.D.N.Y. 1999).

"whenever" — "has its usual and customary meaning, that is, 'each and every time.'" Semmler v. American Honda Motor Co., Inc., et al., 990 F. Supp. 967 (S.D. Ohio 1997).

"whereby low pressure is maintained throughout said annular space" — "refer[s] to pressure below atmospheric pressure that is preserved within the annular space, which includes both the free passageway and the microporous insulation." ITP, Inc., et al. v. BP Corp. North America, Inc., 2005 U.S. Dist. LEXIS 39078 (S.D. Tex., May 2, 2005).

"whereby rotational movement of the mounting means is inhibited" — "The mounting means is to be secured in the channel means. And the mounting means is to have a raised spine positioned between and in the same plane as said inwardly turned opposed flanges of said channel means whereby rotational motion of said mounting means is inhibited." Amesbury Group, Inc., et al. v. Caldwell Manufacturing Co., 2006 U.S. Dist. LEXIS 2175 (D. Mass., Jan. 20, 2006).

"whereby said substantially uniform particulate mixture is deformed, consolidated into a desired form and solidified in the extrusion die and is extruded from said die cavity as a solid composite porous article" — "means that, as a necessary result of the above steps, the 'substantially uniform particulate mixture' changes form due to softening, is shaped under pressure, and is solidified, all within the extrusion die, and the resulting product is extruded from the die as a solid composite article having pores." KX Industries, L.P., et al. v. Culligan Water Technologies, Inc., et al., 90 F. Supp. 2d 461 (D. Del. 1999).
"whereby said vascular cavity is occluded by said distal tip, and any thrombus formed by use of said tip" — "as a consequence of the method, a vascular cavity is blocked by the detached distal tip and any thrombus formed by use of the distal tip." Regents of the University of California v. Micro Therapeutics, Inc., et al., 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007). \[4419\]

"whereby the processing does not require[] movement or operator handling of said wafers between said steps" — "excludes any cleaning process in which wafers are moved between vessels between steps of the process." CFMT, Inc., et al. v. YieldUP International Corp., 92 F. Supp. 2d 359 (D. Del. 2000). \[4420\]

"wherein each spring element is tensioned so as to be able to independently restrain the door against opening once the door is in a closed position" — "requir[es] two springs that are independently sufficient to counterbalance the door and reduce the force with which the ramp door swings open, although each spring acting alone does not have to restrict the door from any movement whatsoever." M-3 & Associates, Inc. v. Cargo Systems, Inc., et al., 33 Fed. Appx. 513 (Fed. Cir., Apr. 2, 2002) (unpublished). \[4422\]

"wherein said loops disposed on said first meander patterns and said loops disposed on said second meander patterns are disposed and adapted to cooperate so that upon the expansion of said stent said loops change shape to compensate for the tendency of said stent to foreshorten when said stent is expanded" — "the loops disposed on the first meander patterns and the loops disposed on the second meander patterns must be oriented in different directions, one a generally vertical direction and one a generally horizontal or longitudinal direction. This limitation encompasses growth of one of the sets of loops in the longitudinal direction that is caused by expansion of the stent by a balloon or other mechanical means." Scimed Life Systems, Inc., et al. v. Johnson & Johnson, 225 F. Supp. 2d 422 (D. Del. 2002). \[4423\]

"wherein said metal block further comprises a plurality of receptacles for supporting a plurality of containers" — "limits the metal block to one having a plurality of recesses." Applera Corp., et al. v. MJ Research Inc., et al., 292 F. Supp. 2d 348 (D. Conn. 2003). \[4424\]

"wherein the bias element operates on the blade through a cavity formed in the handle, the cavity extending parallel to and spaced outwardly from the plane of travel of the blade" — "is clear on its face." Kai U.S.A., Ltd. v. Buck Knives, Inc., 2006 U.S. Dist. LEXIS 24924 (D. Or., Feb. 9, 2006). \[4425\]

"wherein the circumference of the spacer at at least one point is greater than the circumference of the spacer at at least one other point" — "the spacer's circumference is different at at least two different points, [and] each spacer has at least two different circumferences." Fellowes, Inc. v. Michilin Prosperity Co., Ltd., et al., 2006 U.S. Dist. LEXIS 90648 (E.D. Va., Dec. 15, 2006). \[4426\]

"wherein the circumference of the spacer at its center is less than the circumference of the spacer at at least one of its edges" — "the circumference of the spacer is smaller at its center than at one or both of its edges." Fellowes, Inc. v. Michilin Prosperity Co., Ltd., et al., 2006 U.S. Dist. LEXIS 90648 (E.D. Va., Dec. 15, 2006). \[4427\]
"wherein the differential expansion portion is formed from an elastomer material and is bulbous in shape when such portion is fully expanded" — "wherein the differential expansion portion is formed from a substance having the elastic properties of rubber and resembling a bulb shape when it is fully expanded.‖ Manders v. McGhan Medical Corp., et al., 2006 U.S. Dist. LEXIS 6881 (W.D. Pa., Feb. 23, 2006).4428

"wherein the first length of the distal portion of the guide wire tube and the first diameter for the distal portion of the guide wire tube being selected such that when a guide wire is within the guide wire lumen, blood is substantially prevented from entering the proximal portion of the guide wire lumen and a less viscous anticoagulation in the proximal portion of the guide wire lumen is allowed to coat the surface of the guide wire within the distal portion of the guide wire lumen‖ — "the ‗wherein‘ clause states functional limitations on the structure.‖ Medtronic AVE, Inc. v. Cordis Corp., 516 F. Supp. 2d 741 (E.D. Tex. 2007).4429

"wherein the energy absorption system is positionable along a roadway to cooperate with the upstream portion of a roadside hazard‖; ‖wherein the impact head is in operational connection with the cutter and the cuttable member such that the impact of an errant vehicle with the impact head will cause the cutter to cut at least a portion of the cuttable member to absorb the impact energy of the errant vehicle‖ — "Trinity has failed to rebut the presumption that section 112, P6 does not apply to the ‗wherein‘ clauses of claims 3 and 14 of the '820 Patent." Kothmann & Kothmann, Inc. v. Trinity Industries, Inc., 287 F. Supp. 2d 673 (S.D. Tex. 2003).4430

"wherein the ratio of said hard segments to said soft segments is such as to provide" — "does not need to be construed." Medtronic Vascular Inc., et al. v. Boston Scientific Corp., et al., 526 F. Supp. 2d 613 (E.D. Tex. 2007).4431

"wherein the surface of each spacer has a linear measure greater than the distance between adjacent disk‖ — "the linear measure of the surface of each spacer follows the surface of the spacer and is greater than the linear distance of the space between the two adjacent cutting disks measured parallel to the shaft." Fellowes, Inc. v. Michlin Prosperity Co., Ltd., et al., 2006 U.S. Dist. LEXIS 90648 (E.D. Va., Dec. 15, 2006).4432

"wherein when the primary frame is supporting the auxiliary frame, each magnetic material of the primary frame magnetically engages in a lateral manner with one of the magnetic materials of the auxiliary frame for securing said auxiliary frame to said primary frame‖ — "wherein when the primary frame is maintaining the auxiliary frame in position so as to keep the auxiliary frame from falling, sinking or slipping off the primary frame, each magnetic material of the primary frame magnetically attracts or is attracted by one of the magnetic materials of the auxiliary frame, with the magnetic attraction taking place with or without actual physical contact and in the horizontal plane." Aspex Eyewear, Inc., et al. v. Miracle Optics, Inc., 2003 U.S. Dist. LEXIS 26355 (C.D. Cal., Feb. 14, 2003).4433

"at least one contact vane extending in circumferential direction from the wall of the contact support and at a distance from the wall of the contact support which increases in circumferential direction" — "Neutrik added the language 'which increases in circumferential direction' to the claim ... Neutrik's arguments during prosecution disclaimed contact vanes similar to those disclosed in the Kissling patent. We therefore conclude that claim 1 should be interpreted so as to exclude contact vanes that extend with increasing distance in the axial direction."

"cooling said core while applying a second pressure" — "cooling said core during the time that a second pressure is applied." Leighton Technologies LLC v. Oberthur Card Systems, S.A., 358 F. Supp. 2d 361 (S.D.N.Y. 2005).

"automatically rotating each reagent container of the first set about its respective axis while it is being scanned" — "automatically rotating each reagent container of the first set about its respective axis while it is being passed by a scanning light beam." Bayer Healthcare LLC v. Abbott Laboratories, 2005 U.S. Dist. LEXIS 21042 (D. Del., Sept. 26, 2005).

"while maintaining the plunger free of contact with the pitcher" — "while maintaining the device free of contact with the pitcher." Vita-Mix Corp. v. Basic Holdings, Inc., et al., 514 F. Supp. 2d 990 (N.D. Ohio 2007).

"heated while out of contact with oxygen"; "annealing said material while out of contact with oxygen"; "heating the polyethylene material forming the implant ... while said polyethylene material is prevented from contact with oxygen" — "do[] not require segregation from oxygen 'in an airtight package.'" Howmedica Osteonics Corp. v. Zimmer, Inc., et al., 2007 U.S. Dist. LEXIS 29991 (D.N.J., April 23, 2007).

"oiling wick" — "a portion of the device that contacts the inside of the barrel to spread oil and may be formed from a loop or fold of a fabric sheath." Michaels of Oregon Co. v. Clean Gun, LLC, 2002 U.S. Dist. LEXIS 20371 (D. Or., Jul. 9, 2002).

"wire" — "a part of an apparatus of the invention which is a thin, flexible, continuous length of metal, of circular cross-section which has a detachable tip." Regents of the University of California v. Micro Therapeutics, Inc., et al., 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007).
"wire guide mounted on the distal region" — "a part attached at a fixed position to the distal region of the support wire that has an opening for another wire to pass through so the other wire can lead the support wire to a location."  Boston Scientific SciMed, Inc., et al. v. ev3 Inc., 502 F. Supp. 2d 931 (D. Minn. 2007) 4446

"conductive wire portion of which contacts said gel layer" — "the conductive wire portion of the insulated wire that is in contact with the gel layer."  Cardiac Science, Inc. v. Koninklijke Philips Electronics N.V., et al., 2006 U.S. Dist. LEXIS 22267 (D. Minn., April 20, 2006) 4449

"wires for cutting said housing part into several sections" — "threads that can penetrate and divide said housing part into more than two sections."  Laboratories Perouse S.A.S. v. W.L. Gore & Associates, Inc., 528 F. Supp. 2d 362 (S.D.N.Y. 2007) 4450

"one side of each of said magnet protector with a length greater than a corresponding side of the immediately adjacent magnet member" — "the magnet protector extends farther out from the tool body than the magnet it protects. To put it another way, the magnet protector is "taller" than the magnet it protects, so that during rotation, as described above, the particles hit the casing wall, are pushed upward, and then attach themselves to the magnet surface."  Rattler Tools, Inc. v. Bilco Tools, Inc., et al., 2007 U.S. Dist. LEXIS 49124 (E.D. La., July 6, 2007) 4451

"with a wick to convey a combustible liquid to the burner" — "the Court will not construe the term as requiring the negative limitation ["This term may not be construed to encompass a wick that extends through the cavity to the upper surface of the catalytic combustion burner"] asserted by Defendants."  Produits Berger S.A., et al. v. Schemenauer, et al., 2007 U.S. Dist. LEXIS 10294 (E.D. Tex., Feb. 14, 2007) 4452

"with from approximately 10 to 40 bristles per turn of the helix" — "in determining the number of bristles 'per turn of the helix,' one should count the number of bristles included in each original bundle that is inserted into each 'turn' or 'loop' or 'coil' of the core."  L'Oreal S.A, et al. v. Revlon Consumer Products Corp., et al., 2000 U.S. Dist. LEXIS 3130 (D. Del., Feb. 24, 2000) 4453

"withdrawing said steam from said confined space" — "removing, either by active or passive means, steam from the elongate confined space."  In re: Manchak Patent Litigation, 320 F. Supp. 2d 178 (D. Del. 2002) 4454

"withdrawn position" — "the withdrawn position is the opposite of the engagement position where the detent ball has projected above the surface of the solenoid housing."  Mas-Hamilton Group v. LaGard, Inc., 21 F. Supp. 2d 700 (E.D. Ky. 1997) 4455

"a concavity in said housing at said key-actuation position, and a thumb-associable cluster of keys forming a keyboard within said concavity" — "the concavity must be formed by a depression in the housing of the device, and all keys comprising the keyboard must be contained entirely within the concave area and sunk below the surface of the housing, so that the thumb movement occurs within the concave area." Motionless Keyboard Co. v. Microsoft Corp., et al., 486 F.3d 1376 (Fed. Cir. 2007).

"configured to be exposed to said whole blood sample without an intervening membrane or other whole blood filtering member" — "The ordinary and natural meaning of the phrase 'without an intervening membrane or other whole blood filtering member' is without any type of filter whatsoever -- neither an intervening membrane nor any other whole blood filter." Abbott Laboratories v. LifeScan, Inc., et al., 37 F. Supp. 2d 70 (D. Mass. 1999).

"all of said connectors being constructed, arranged, located and connected to said liner such that said liner is not withdrawn from said bag and can collapse upon itself during discharge of the contents thereof independently of and without being substantially restricted by said bag from collapsing" — "the build of the connectors, their attachment to the liner and the places at which they are attached to the liner allow the liner to remain attached to the bag while the contents of the bag are emptied and also allow the liner to cave in as the contents of the bag are emptied without being strongly held back by the bag, even as the bag itself does not cave in." Scholle Custom Packaging, Inc. v. Grayling Industries, Inc., 2010 U.S. Dist. LEXIS 55414 (W.D. Mich., Jun. 3, 2010).

"without mechanically agitating" — "without using a means for providing agitation to agitate the wash load." Whirlpool Corp., et al. v LG Electronics, Inc., et al., 2005 U.S. Dist. LEXIS 44479 (W.D. Mich., Nov. 8, 2005). "The Court is not convinced that its original construction of the term was erroneous or that any further construction is required." Id., 2006 U.S. Dist. LEXIS 48698 (W.D. Mich., July 18, 2006).

"detachment of said distal tip from said wire without necessarily displacing either said distal tip or said wire during detachment" — "detachment accomplished without necessitating movement of the distal tip to accomplish detachment and without necessitating that force be applied by the distal tip on any surface of the vascular cavity to accomplish detachment." Regents of the University of California v. Micro Therapeutics, Inc., et al., 2007 U.S. Dist. LEXIS 20511 (N.D. Cal., Mar. 2, 2007).
"without significantly damaging said material" — "without causing significant damage to the ligature material." Callicrate v. New Age Industrial Corp., Inc., 2005 U.S. Dist. LEXIS 8934 (D. Kan., Apr. 27, 2005). 4467

"flexible ... without stressing" — "is not so indefinite as to render claim 1 of the '014 patent invalid." BOC Health Care, Inc., et al. v. Nellcor Inc., 892 F. Supp. 598 (D. Del. 1995). 4468

"without the application of independent means for urging said sleeve member toward said trailing end of said bit holder" — "the interference fit between the sleeve and the bit holder is itself sufficient, without the use of any additional device or structure, to prevent rotation or axial movement of the sleeve." Joy MM Delaware, Inc., et al. v. Sandvik Mining and Construction USA LLC, 2007 U.S. Dist. LEXIS 40868 (W.D. Pa., June 4, 2007). 4469

"said portion being in the work-hardened pseudoelastic metallurgical state" — "The words of Claim 1, in the Court's view, in no way specify or limit the method or process by which such a state is reached." CVI/Beta Ventures, Inc., et al. v. Custom Optical Frames, Inc., et al., 893 F. Supp. 508 (D. Md. 1995). 4472

"work machine" — "a device for transferring mechanical energy from a four-cycle engine, the orientation of which varies from when it is in use to when it is not in use." American Honda Motor Co., Inc. v. Coast Distribution System, Inc., 609 F. Supp. 2d 1032 (N.D. Cal. 2009). 4473

"working channel" — "a channel of an endoscope that has an opening at each end through which a device may be inserted." Erbe Elektromedizin Gmbh, et al. v. Canady Technology, LLC, et al., 512 F. Supp. 2d 297 (W.D. Pa. 2007). 4474

"working channel" — "The way to reconcile claim 1 with the specification is thus to construe claim 1 as referring to movable optics. In short, fixed optics do not involve a 'working channel.'" Erbe Elektromedizin Gmbh, et al. v. International Trade Commission, et al., 566 F.3d 1028 (Fed. Cir. 2009). 4475

"working surface" — "any portion of the PCD body which, in operation, may contact the object to be worked." ReedHycalog UK, Ltd., et al. v. Diamond Innovations, Inc., 2009 U.S. Dist. LEXIS 110781 (E.D. Tex., Nov. 30, 2009). 4476

"workpiece" — "a silicon wafer or similar article susceptible to particle and COP defects." ADE Corp. v. KLA-Tencor Corp., 220 F. Supp. 2d 303 (D. Del. 2002). 4477

"workstations" — "individual components of a laboratory automation system, each of which is capable of performing a test." Board of Regents of the University of Nebraska, et al. v. Siemens Healthcare Diagnostics, Inc., 2010 U.S. Dist. LEXIS 97353 (D. Neb., Sep. 16, 2010). 4478

"worm gear" — "a gear having a screw thread (for example, helical or spiral) that may mesh with a toothed wheel, typically used to connect non-parallel, non-intersecting shafts." Molon Motor & Coil Corp. v. Merkle-Korff Industries, Inc., 2006 U.S. Dist. LEXIS 27575 (N.D. Ill., April 26, 2006). 4479

"wound" — "as used in the asserted patents, does not cover the fistulae described in the Chariker-Jeter publications and the 'pus pockets' described in the Davydov references. ... To construe 'wound' to include fistulae and 'pus pockets' would [] expand the scope of the claims far beyond anything described in the specification." Kinetic Concepts, Inc., et al. v. Blue Sky Medical Group, Inc., et al., 554 F.3d 1010 (Fed. Cir. 2009)."The definition of 'wound' provided by Stedman's, an accepted medical dictionary, includes 'trauma to any of the tissues of the body' and 'surgical incision.' In light of the disclosures of the specifications and the additional support of the dictionary, in my view the term 'wound' as used in the claim includes fistulae caused by surgical incision." Id. (Dyk, J., dissenting).

- X -

- Y -

"yaw momentum commands" — "instructions to at least two nonparallel momentum/reaction wheels in a pitch/yaw plane of a spacecraft concerning the wheels' relative rates of speed, the purpose of which is to control the angular momentum in the yaw direction and to control the attitude of the satellite by changing the roll angle." Space Systems/Loral, Inc. v. Lockheed Martin Corp., 1998 U.S. Dist. LEXIS 23046 (N.D. Cal., Aug. 3, 1998).

"a yield strength greater than 30,000 psi" — "clearly makes no reference to a temperature range. Accordingly, it is not proper to look to the patent specifications to determine whether or not claim 5 requires that a component possess this yield strength at any specific temperature." CVI/Beta Ventures, Inc. v. Tura LP, et al., 905 F. Supp. 1171 (E.D.N.Y. 1995).

"zoom optical system" — "a collection of two or more devices, positioned between a light source for emitting an illumination beam and a plurality of prisms, configured to adjust a dimension of an illumination beam." *Nikon Corp., et al. v. ASM Lithography B.V.*, 308 F. Supp. 2d 1039 (N.D. Cal. 2004).
A. "a body"

It is not entirely clear from the record whether there is any dispute over the meaning of the term "a body." The specification provides the following definition:

The term "body" of the lure as used hereinafter refers either to the tear drop shaped body applied to a lure having a leader connected to the shank portion projecting out of one end of the body and a hook or hooks projecting out of the other end of the body, or to any form of blade, spoon or other vibrating element swivelly attached to the lure to further attract the attention of the fish. Thus, the term body includes, without limitation, spinner baits, popping lures, jig-type lures, "buzz baits", crank baits, blades and spoons of any size or shape.

Nichols argues that, according to this definition, the body includes "any solid part of the lure except leader connecting wire or shank and/or the hooks." (PL’s Post Markman Br. at 3.) Defendants do not disagree. Instead, they raise an issue that Nichols has not addressed; namely, that the definition of "a body" in the specification is ambiguous because it is unclear whether the term refers collectively to any number of elements that together comprise a single body, or whether each of the elements enumerated in the definition individually comprises a body. Stated another way, the question is whether a patented lure has only a single body comprised of one or more elements, for example one tear drop-shaped element to which two blade elements are swivelly attached, or whether each element is a separate body so that a patented lure may have several bodies. Under the "several body" construction, a patented lure configured according to this example would have three bodies—one tear drop-shaped body plus two blade bodies.

The Court concludes that the proper construction of the term "body" is that each patented lure has only a single body, which may consist of one or more elements. The Court finds this the most reasonable interpretation based on the predominate use of the term in the patent, despite one or two arguably ambiguous references in the specification.

First, the Court finds particularly convincing that claim 1, as well as other claims that are not at issue here, refers to "a body securable to a fishing line." The implication of this language is that a fishing lure has only one body. Second, throughout the specification, the term "body" is consistently used in the singular. For example, the Abstract refers to the application of a glitter containing coating to the external surfaces of "the lure body." ( '160 Patent, Abstract.) There are numerous other similar examples. ( '160 Patent, col. 2, line 1; col. 2, line 9; col. 2, line 12; col. 2, line 32; col. 3, line 3; col. 4, line 43.)

There is at least one place in the specification where the term "body" is used in the plural form. ( '160 Patent at col. 4, line 55.) This reference describes the method by which the lure bodies are allowed to dry after the coating has been applied to their surfaces. The use of the plural in this context is easily construed as referring to the method for drying on a single rack the bodies for several lures and is not inconsistent with the Court's conclusion that each lure has only one body.

In one place in the specification, "body" is used to refer to the "head" of the lure—commonly tear drop-shaped—which is the part of the lure molded around the shank. ( '160 Patent, col. 1, lines 27-34.) This language arguably implies that only the tear drop-shaped head of the lure is the body and therefore, elements other than the head are not part of the body. However, the definition of "body" in the specification expressly includes other swivelly attached elements; thus, these elements may not be excluded from the term.

In sum, claim 1 is construed to mean that each fishing lure has one body; said body consisting of a tear drop shaped head element and any form of blade, spoon or other vibrating or swivelling elements attached to the lure to further attract the attention of the fish.

2

1. a cable linking
Free Motion further argues that the term "linking" does not preclude an embodiment from having an intervening structure of some kind, namely a second cable. Free Motion defines linking as "serving to connect one part or thing with another." (Pl. Brief I at 8-9 (citing Random House Webster's Unabridged Dictionary, 119 (2nd ed. 2001)).) Cybex denies that the FT 360 fits the definition because while one cable does in fact link both arms, direct contact with the weight stack is accomplished only by way of a second cable. (Cybex Brief at 7-8.) The Court agrees with Cybex that the '061 patent does not contemplate multiple cables as permissible intervening structures that link the arms and resistance assembly. In addition to the expressly singular meaning of the term "a cable linking," throughout the patent, the inventor refers to "the cable." ('061 Patent, col. 2, lines 18-21; col. 3, lines 10-30, 39-55; col. 5, lines 47-67; col. 6, lines 1-14.) The Court must conclude, therefore, that the patent contemplates a single cable that links the arms and resistance assembly.

3

A.

The disputed claim construction on appeal involves limitations of clauses (a), (b), and (d). Clause (a) requires "a ... continuous ... chamber." At the heart of the dispute over this limitation is the meaning of the article "a." Specifically, does the article limit the number of chambers to only one or does it cover one or more chambers?

The district court limited clause (a) to only one non-interrupted inflatable chamber. The district court stated that "the concept of multiple chambers is at fundamental odds with the concept of continuity, and discrete multiple chambers cannot be read into the patent without sacrificing the concept of continuity." KCJ I, 30 F. Supp. 2d at 1325. Thus, the district court "had little hesitation in concluding that [the claim] means exactly what it says: one continuous chamber." Id. Based on that construction, the district court held as a matter of law that clause (a) of claim 1 does not read on Kinetic's accused devices having multiple continuous chambers.

As noted before, the claim language itself governs claim scope. See Vitronics, 90 F.3d at 1582. This court has repeatedly emphasized that an indefinite article "a" or "an" in patent parlance carries the meaning of "one or more" in open-ended claims containing the transitional phrase "comprising." See Elkay Mfg. Co. v. Ebco Mfg. Co., 192 F.3d 973, 977, 52 U.S.P.Q.2D (BNA) 1109, 1112 (Fed. Cir. 1999); AbTox, Inc. v. Exiton Corp., 122 F.3d 1019, 1023, 43 U.S.P.Q.2D (BNA) 1545, 1548 (Fed. Cir. 1997); North Am. Vaccine, Inc. v. American Cyanamid Co., 7 F.3d 1571, 1575-76, 28 U.S.P.Q.2D (BNA) 1333, 1336 (Fed. Cir. 1993); see also Robert C. Faber, Landis on Mechanics of Patent Claim Drafting 531 (3d ed. 1990). Unless the claim is specific as to the number of elements, the article "a" receives a singular interpretation only in rare circumstances when the patentee evinces a clear intent to so limit the article. See AbTox, 122 F.3d at 1023, 43 U.S.P.Q.2D (BNA) at 1548. Under this conventional rule, the claim limitation "a," without more, requires at least one.

This court has encountered "a" or "an" in patent claims on several occasions. This court has uniformly applied the general rule for indefinite articles. For instance, in AbTox, this court applied the rule and amplified: "The written description supplies additional context for understanding whether the claim language limits the patent scope to a single unitary [element] or extends to encompass a device with multiple [elements]." Id. at 1024, 43 U.S.P.Q.2D (BNA) at 1548. Moreover, standing alone, a disclosure of a preferred or exemplary embodiment encompassing a singular element does not disclaim a plural embodiment. "Although the specifications may well indicate that certain embodiments are preferred, particular embodiments appearing in a specification will not be read into the claims when the claim language is broader than such embodiments." Electro Med. Sys., S.A. v. Cooper Life Sciences, Inc., 34 F.3d 1048, 1054, 32 U.S.P.Q.2D (BNA) 1017, 1021 (Fed. Cir. 1994). Thus, as the rule dictates, when the claim language or context calls for further inquiry, this court
consults the written description for a clear intent to limit the invention to a singular embodiment.

Prosecution history also may assist claim interpretation. Indeed, prosecution history "limits the interpretation of claims so as to exclude any interpretation that may have been disclaimed or disavowed during prosecution in order to obtain claim allowance." Standard Oil Co. v. American Cyanamid Co., 774 F.2d 448, 452, 227 U.S.P.Q. (BNA) 293, 296 (Fed. Cir. 1985). Accordingly, an applicant may disclaim before the PTO a plural interpretation and thus lose the benefit of the customary meaning of indefinite articles in patent claims. See Alpex Computer Corp. v. Nintendo Co., 102 F.3d 1214, 1220-21, 40 U.S.P.Q.2d (BNA) 1667, 1671-72 (Fed. Cir. 1996).

Accordingly, when claim language or context suggests an ambiguity in application of the general meaning of an article, this court undertakes an examination of the written description and the prosecution history to ascertain whether to limit the meaning of "a" or "an." For example, in Insituform Technologies, Inc. v. CAT Contracting, Inc., 99 F.3d 1098, 1106, 40 U.S.P.Q.2d (BNA) 1602, 1608 (Fed. Cir. 1996), the claim language itself belied a singular meaning. Thus, this court undertook an examination of the entire context of the language and held: "In light of the language found in the claims, specification and file history, we conclude the only correct and indeed the reasonable interpretation of claim 1 limits the scope of that claim to a process using only one vacuum cup which inherently creates a discontinuous vacuum." Id. In that case, the court restricted the claim to a singular interpretation because "the claim is specific as to the number of elements (one cup) and adding elements eliminates an inherent feature (discontinuous vacuum) of the claim." Id.

In the present case, neither the claim nor its context suggests an exceptional meaning for the article. The intrinsic evidence simply provides no support for departing from the general rule. At the outset, the claim language of clause (a), "a . . . continuous . . . chamber," does not specify the number of elements. Thus, under the general rules of claim construction, this court presumes the customary meaning of "a" - one or more. Furthermore, the written description does not trump that construction. Referring to Figure 3, the written description of the '767 patent discloses that "the bottom, side and top walls 22, 24, and 26 cooperatively define a lower inflatable chamber broadly referred to by the numeral 34." '767 patent, col. 4, ll. 20-22. Chamber 34 is operatively coupled to a secondary uppermost wall 36, which provides even airflow. See id. at col. 4, ll. 32-45. The written description at no point restricts the invention to only one chamber.

Similarly, the prosecution history of the '767 patent does not disclaim multiple chambers. Neither the amendment itself nor the accompanying remarks limits "a . . . continuous . . . chamber" to only a single chamber. Rather, the remarks focus on the details of the airflow, which passes through the entirety of the chamber during all operations of the mattress. Accordingly, in view of the use of an indefinite article "a" in the claim language without numerical qualifiers and the absence of disclaimers in the written description and the prosecution history, this court holds that "a . . . continuous . . . chamber" covers one or more continuous chambers.

Thus, under the proper claim construction, an accused device having one or more continuous chambers would fall within the scope of clause (a). In the present case, undisputed evidence shows that Kinetic's accused devices have three chambers. Accordingly, this court concludes that clause (a) reads on Kinetic's accused devices. The district court's misreading of the article in this claim, however, is harmless error in light of the meaning of the other clauses.

Claim 1, the only claim in suit, is as follows:

1. A method of impregnating with a curable resin an inner layer of resin absorbent material disposed in an elongate flexible tube having an outer layer formed by an impermeable [sic] film, the method comprising the steps of

   (1) introducing into one end of the elongate tube a mass of the curable resin sufficient to impregnate the entire resin absorbent inner layer of the tube,

   (2) forming a window in the impermeable outer layer of the tube at a distance from said one end of the tube,

   (3) drawing through the window a vacuum in the interior of the tube downstream of said one end by disposing over the window a cup connected by a flexible hose to a vacuum source which cup prevents ingress of air into the interior of the tube
while the tube is being evacuated, the outer layer of the tube being substantially impermeable to air,

(4) beginning at or near the end at which the curable resin mass was introduced, passing the tube between squeezing members which force the resin to flow towards the region of vacuum application as the tube progresses through the squeezing members,

(5) when the resin reaches the vicinity of the region of vacuum application, removing the cup and sealing the window,

(6) providing another window in the impermeable layer of the tube downstream of the previously formed window,

(7) drawing through the new window a vacuum in the interior of the tube while progressively moving the tube through the squeezing members to force the resin to flow toward the new region of vacuum application, and

(8) repeating steps 5, 6, and 7, where necessary to impregnate the entire resin absorbent inner layer of the flexible tube.

Col. 6, l. 37 - Col. 7, l. 6.

The Accused Process

Inliner engages in two processes which are at issue here. Both processes result in continuous vacuums.

In "Process 1" or "the Multiple Cup Process," from four to six cups are used to draw a vacuum from a corresponding number of slits in the tube. As a result, when the cup closest to the advancing resin is removed, and the slit beneath it sealed, the remaining downstream cups continue to draw a vacuum in the tube.

In "Process 2" or "the Multiple Needle Process," the multiple cups are replaced by multiple metal tubes. The metal tubes, known as needles, are inserted through the layers of the impregnated tube, rather than merely placed over holes in the wall of the impregnated tube. Inliner did not develop Process 2 until 1991, after the first phase of the case had already been tried to a jury.

ANALYSIS

Literal Infringement

Insituform cross-appeals from the district court's grant of Inliner's motion for JNOV of no literal infringement. According to Insituform, JNOV was improper because "each of defendants' [vacuum] cups 1, 2, 3, etc. is manipulated precisely as called for in the claim, thus constituting multiple infringements."

We review de novo the correctness of a grant of a JNOV by reapplying the JNOV standard. Markman v. Westview Instruments, Inc., 52 F.3d 967, 975, 34 U.S.P.Q.2D (BNA) 1321, 1326 (Fed. Cir. 1995) (in banc), aff'd, 134 L. Ed. 2d 577, 116 S. Ct. 1384 (1996). Thus, as the district court was required to do upon Inliner's motion for JNOV, we must determine whether there exists evidence of record upon which a jury might properly have returned a verdict in [the non-movant's] favor when the correct legal standard is applied. If there is not, [the movant] was entitled to have the question removed from the jury and decided as a matter of law.

Markman, 52 F.3d at 975, 34 U.S.P.Q.2D (BNA) at 1326 (quoting Jamesbury Corp. v. Litton Indus. Prods., Inc., 756 F.2d 1556, 1560, 225 U.S.P.Q. (BNA) 253, 257 (Fed. Cir. 1985)). In so determining, we must uphold factual findings made by the jury unless there is a lack of substantial evidence to support a finding in favor of the nonmovant. Id. On the other hand, we must consider de novo whether the legal standards applied by the jury are correct as a matter of law. Id.

Here, we are asked to determine whether there is substantial evidence to support the jury's finding that Inliner literally infringed Insituform's patent. An infringement analysis consists of two steps: interpreting the claims in a patent to determine their scope and meaning and comparing the properly construed claims to the accused product or process. Id. at 976, 34 U.S.P.Q.2D (BNA) at 1326.
Here, the entire analysis turns on the proper claim construction. That is because the underlying issue of claim construction is whether claim 1 should be construed to be literally limited to a process using one and only one vacuum cup, as asserted by Inliner. If so limited, the claim is also inherently limited to a process where the drawing of the vacuum inside the tube is discontinuous, i.e., interrupted by the moving of the cup from window to window. Such a claim cannot be infringed by Process 1, because that process maintains a continuous vacuum.

Claim construction is a question of law which we review de novo. Id. at 979, 34 U.S.P.Q.2D (BNA) at 1329. In construing claim 1, we look first to the intrinsic evidence of record, namely the language of the claim, the specification and the prosecution history. Vitronics Corp. v. Conceptronic, Inc., 90 F.3d 1576, 1582, 39 U.S.P.Q.2D (BNA) 1573, 1576 (Fed. Cir. 1996). Looking first to the claim language, we note preliminarily that Insituform has conceded that claim 1 contains no terms that have a specialized or technical meaning. Furthermore, nothing in the text of claim 1 suggests the use of more than one cup. Specifically, claim 1 refers to "a cup" and "the cup" repeatedly, suggesting that only one cup is involved. Indeed, rather than describing the process in terms of more than one cup, claim 1 specifically describes using the same cup repeatedly. Also, claim 1 uses the phrase "region of vacuum application" in a manner indicating that only one such region exists at any given time. This use of the phrase "region of vacuum application" is thus inconsistent with the use of more than one cup at any given time, as each cup creates its own associated region of vacuum application. Likewise, it is also inconsistent with the creation of a continuous, rather than discontinuous, vacuum.

Turning to the text of the specification, we note that neither the specification nor the drawings disclose the use of more than one cup. For example, the specification states:

The vacuum may be applied through a window in the film in the wall of the tube by means of a cup applied to said window . . . whereby the cup can move with the tube . . . . As each section of the tube has its resin absorbent material thus impregnated with resin, the cup may be moved and applied to a position spaced downstream from the previous window . . . .

Col. 2, ll. 30-35 (emphasis added).

A vacuum source is provided, and a vacuum cup is connected to the vacuum source by means of a flexible hose. The vacuum cup is applied to the outside of the lining tube downstream of the mass of resin inside the tube . . . .

Col. 5, ll. 61-65 (emphasis added, diagram reference numbers omitted).

When one section of the impregnation of the tube has been completed, the suction cup is removed to a downstream location . . . . The vacuum cup is therefore applied at intervals during the impregnation process, until complete impregnation of the resin absorbent material has been achieved.

Col. 6, l. 14-24 (emphasis added, diagram reference numbers omitted).

Likewise, the drawings of the '012 patent, specifically figures 10 and 11, show only a single vacuum cup. 7

- - - - - - - - - - - - - - Footnotes - - - - - - - - - - - - - -

7 Although Insituform's own witnesses confirmed this interpretation of the claim, we need not give such testimony any weight, as the intrinsic evidence alone is sufficient to resolve any ambiguity in the claim. See Vitronics, 90 F.3d at 1584, 39 U.S.P.Q.2D (BNA) at 1578.

- - - - - - - - - - - - End Footnotes- - - - - - - - - - - -

In light of the language found in the claims, specification and file history, we conclude the only correct and indeed the reasonable interpretation of claim 1 limits the scope of that claim to a process using only one vacuum cup which inherently creates a discontinuous vacuum. Indeed, as Insituform concedes in its brief, "there is no question but that the patent discloses a single vacuum cup which draws a vacuum at one point and then, when the resin front approaches, is removed from its initial position and repositioned to draw vacuum at its new downstream position." Thus, in light of the fact that
Inliner’s processes both create a continuous vacuum, neither can literally infringe.

Insituform argues that such an interpretation places too much weight on the distinction between drawing a vacuum and the evacuated state that exists within the tube, even as a cup is moved from one window to another. According to Insituform, "it is not the continuity of drawing the vacuum which is important but rather the continuity of having an effective vacuum where the resin meets the portion of the felt to be impregnated." However, such attorney argument cannot control in light of the language of the claim. Claim 1, and more specifically steps 3 and 7, is cast in terms of "drawing a vacuum," not merely having a vacuum.

Insituform also argues that claim 1 requires only "manipulating the suction cup (or its equivalent) in a particular fashion," that each of the cups used in Process 1 is manipulated in such a fashion, and that "adding something to an infringement [i.e., more than one cup] does not avoid infringement." However, as discussed above, we believe that claim 1 must be construed as reading only on a one cup, discontinuous vacuum process. While adding elements may, in certain instances, fail to prevent a finding of infringement, it will prevent a finding of literal infringement where, as here, the claim is specific as to the number of elements (one cup) and adding elements eliminates an inherent feature (discontinuous vacuum) of the claim.

In light of our conclusion that claim 1 must be construed to literally cover a process using only one cup, and thereby literally cover only a process using a discontinuous vacuum, and the complete lack of evidence indicating Inliner’s Process 1 uses only a single cup, there was no evidence upon which the jury could have reasonably returned a verdict in Insituform’s favor when applying the correct claim construction, and the district court’s grant of JNOV was proper. We therefore affirm the district court’s JNOV of no literal infringement.

Currency Evaluation Device & Transport Path

The two remaining phrases that we must construe are "a . . . currency evaluation device" and "a transport path." Both phrases appear in all independent claims at issue. (See Nelson Decl., Ex. 1, ‘806 Patent, Claims 1, 16, 21, 30, 40, 49, 76, 82, 91, 101, 112, 125.) Glory says that the intrinsic evidence demonstrates that the phrase "a . . . currency evaluation device" refers to a device with a only one output pocket. (Defs.’ Mem. Supp. Mot. Partial Summ. J. ‘806 Patent at 18). Under Glory's proposed construction, the patented device receives a stack of bills in a single input bin and transports them along a single transport path to a single output pocket. (Id. at 21.)

Again, the Court begins its construction of this phrase not with the specification or prosecution history, but with the language of the claims themselves. See Comark Communications at 1186. Independent claims 1, 66 and 76 specify that bills are delivered to "one and only one" output receptacle after being "evaluated." (Nelson Decl., Ex. 1, ‘806 Patent, Claim 1, Col. 30, ll. 34-44, Claim 66, Col. 35, ll. 54-67, Claim 76, Col. 36, ll. 40-51.) Similarly, independent claims 16, 82 and 91 state that bills are delivered to "one and only one output receptacle" after being "denominated." (Id., Claim 16, Col. 31, ll. 35-45, Claim 82, Col. 37, ll. 11-22, Claim 91, Col. 37, ll. 55-65.)

The rest of the independent claims do not contain the "one and only one" output receptacle limitation. (See id., Claims 21, 30, 40, 49, 101, 112, 125.) Moreover, Cummins argues that the language of dependent claims 103, 113 and 126 establishes that the limitation cannot be imported into the claims on which they depend, independent claims 101, 112 and 125.

The Court agrees. Dependent claims 103, 113 and 126 each contain the limitation of "at least one output receptacle." (See id., Claim 103, Col. 38, ll. 54-55, Claim 113, Col. 39, ll. 34-35, Claim 126, Col. 40, ll. 30-31.) As noted above, dependent claims should be no broader in scope than the independent claims upon which they depend. See 35 U.S.C. § 112 P 4; AK Steel Corp., 344 F.3d at 1242 ("Under the doctrine of claim differentiation, dependent claims are presumed to be of narrower scope than the independent claims from which they depend."). If we were to interpret claims 101, 112 and 125 as requiring only one output pocket, then those independent claims would be narrower in scope than claims 103, 113 and 126, a violation of that basic tenet of claim construction. Thus, the phrase "a currency . . . evaluation device," as it is used in claims 101, 112 and 125, cannot be limited to a device with only one output pocket.

Moreover, because the phrase "a . . . currency evaluation device," as it is used in independent claims 101, 112 and 125,
cannot be interpreted to limit the device to a single output pocket, it should not be interpreted to do so in the remaining independent claims either. See Southwall Techs., 54 F.3d at 1579 (stating that identical phrases should be interpreted consistently among patent claims).

Glory contends that interpreting the claims as contemplating more than one output pocket conflicts with the prosecution histories of the '806 and related patents. Glory says that plaintiff distinguished its invention from the prior art O'Maley and Jones devices, at least in part, on the basis that plaintiff's device has only one output receptacle.

Glory's view, which is echoed in both the Magistrate Judge's and this Court's preliminary claims construction, is an over-simplification of the prosecution history. Plaintiff did not distinguish its invention as whole from those prior art references. Rather, it distinguished various of its proposed claims. For example, plaintiff distinguished proposed claim 238, which recited the "one and only one . . . output receptacle" limitation, (see Nelson Decl., Ex. 7, Prosecution History '806 Patent at GL046686) on the grounds that it contained the limitations of "automatically denominating bills" and "delivering bills which have been evaluated to an output region comprising one and only one . . . output receptacle." (Id. at GL046721.) The fact that plaintiff distinguished a claim that contained the limitation of a single output pocket from the prior art on the grounds that it recited that limitation sheds no light on whether claims that do not recite that limitation should be construed as containing it.

Glory's reading of the prosecution histories of the '067 patent and U.S. Patent No. 6,028,951 ("the '951 patent"), from which the '806 patent descended, is similarly flawed. In the application process for the '067 patent, plaintiff urged the patent examiner to withdraw its rejection of various claims as obvious in view of the O'Maley and other prior art devices because the device plaintiff claimed had only a single output pocket: "Claims 34-45, 86-90, and 97-113 are distinguishable because they contain the limitations of a single output receptacle and a discriminating unit. O'Maley teaches the use of at least two output receptacles . . . ." (Id., Ex. 5, Prosecution History '067 Patent at GL047388; see id. at GL07392 ("The references cited by the examiner (O'Maley and Jones) coexisted since 1979. That is over a decade . . . before the Applicants filed their application disclosing a single output pocket discriminator."); id. ("De La Rue was also offering a multipocket discriminator in 1980.").) Because the '067 patent is related to the '806 patent and they share a common specification, Glory says these admissions by plaintiff apply equally to the claims of the '806 patent.

Once again, however, Glory's argument ignores the context in which plaintiff's comments were made. Plaintiff made those statements to persuade the examiner to withdraw his obviousness rejections to claims 34-45, 86-90, and 97-113 of the application, all of which contain the express limitation of a single output pocket. (See id. at GL047304-07, GL047343-44, GL047349-51.) Thus, plaintiff's comments to the PTO shed no light on the proper scope of the claims of the '806 patent that do not contain that express limitation.

Glory's reliance on the prosecution history of the '951 patent is equally misplaced. Initially, the PTO rejected proposed claims 28-47 of the '951 patent application as unpatentable in view of the Jones and O'Maley prior art devices. (Id., Ex. 6, '951 Patent Prosecution History at GL047028.) Plaintiff took issue with that rejection, saying:

This rejection requires impermissable hindsight. The Applicants' machine is able to determine the denomination of bills, to detect counterfeit bills, and to flag the presence of a counterfeit bill. Jones et al. describes a counting device which contains means for detection of counterfeit bills, but is not able to determine the denomination of the bills which it is counting. It does have the capability of stopping the machine if a suspect note is detected. O'Maley describes a device which can determine the denomination of bills, but instead of flagging suspect bills, it diverts them to a separate output bin. O'Maley does not provide for stopping the machine in order to retrieve a suspect bill. Thus, the Applicants' machine is not a combination of O'Maley and Jones et al., because it does not contain all of their features. The Examiner selected only one feature from O'Maley to combine with Jones et al. A combination of the machines of O'Maley and Jones et al. would detect counterfeit bills and determine their denomination, as the Applicants' machine does. However, it would stop when a suspect bill was detected and also divert it to a separate bin. The Applicants' machine does not do that, and therefore, it is clear that it was necessary to select one feature from O'Maley and ignore others in order to make the rejection.

(Id. at GL047028-29) (emphasis added). Once again, however, each of the claims to which that discussion relates contains the limitation of "a single output receptacle." (See id. at GL046980-84.) Thus, that statement has no relevance to the '806 patent claims that do not contain the single output pocket limitation.
Glory has no more success with its proposed interpretation of the phrase "a transport path." In its view, the use of the article "a" in the phrase "a transport path" refers to a singular path. This interpretation has been repeatedly rejected by the Federal Circuit: "This court has consistently emphasized that the indefinite articles 'a' or 'an,' when used in a patent claim, mean 'one or more' in claims containing open-ended transitional phrases such as 'comprising,' Under this conventional rule, the claim limitation 'a,' without more, requires at least one." Crystal Semiconductor Corp. v. TriTech Microelectronics Int'l. Inc., 246 F.3d 1336, 1347 (Fed. Cir. 2001) (citations omitted) (emphasis in original).

Glory also argues that the "same intrinsic evidence demonstrating that the claimed invention only has one output pocket necessarily also demonstrates that the transport path comprises only one path leading to the single output pocket." (Defs.' Mem. Supp. Mot. Partial Summ. J. '806 Patent at 20.) For the reasons previously discussed, however, the independent claims that do not recite an output receptacle limitation cannot be limited to a single output pocket and, therefore, are not limited by the phrase "a transport path" to a single transport path. In sum, the Court rejects Glory's proposed construction of "a . . . currency evaluation device" and "a transport path" and holds that those phrases do not limit the claims to a device that contains only one output pocket and one transport path.

GO BACK

6

B.

Claims 1-6 of the '943 patent are directed to a method of metering different material ingredients for discharge to a material processing machine, and claims 7-14 are directed to an apparatus for carrying out that method. Claims 1-7, 11, and 13-14 are at issue in this appeal, of which claims 1, 4, 7, and 14 are independent.

The district court determined that all of the claims at issue contained the limitation of determining the material processing rate by adding (1) the sum of the material discharge rates of the individual material ingredients to a common hopper, and (2) the discharge rate of the blended materials from the common hopper to the processing machine. See Order of September 30, 1997, P 5. We agree with that analysis, and therefore our discussion of the limitations at issue in the context of claim 1 applies to all of the claims at issue on appeal.

Claim 1 provides:

1. A method of metering different material ingredients for discharge to a material processing machine, comprising:

[a] delivering to a common hopper a plurality of individual material ingredients at controllable individual material discharge rates,

[b] discharging material from said common hopper to said processing machine at a discharge rate,

[c] determining loss of weight of material in said hopper due to discharge of material therefrom,

[d] determining the material processing rate of the processing machine from the sum of the material discharge rates of the ingredients to the common hopper and the discharge rate of the material from the common hopper to the processing machine, and

[e] controlling the material discharge rates of the ingredients to the common hopper in response to said determined material processing rate as needed to maintain a preset recipe of said blended ingredients at said determined material processing rate.

(emphasis and paragraphing added).

Before the district court, the parties disputed whether "discharge rate" emphasized above in clauses [b] and [d] should be given the same meaning throughout the claim, as urged by Process Control, or whether the second emphasized occurrence means "change in weight of the common hopper," as urged by HydReclaim. Based on the written description, the district court construed the claim in accordance with HydReclaim's assertion, namely that the occurrence of "discharge rate" in
clause [d] means "change in weight of the common hopper." See Order of September 30, 1997, P 32-33. The district court determined that the patentee had specifically defined the second occurrence of "discharge rate" in his written description to mean "change in weight," relying on the following passages from the written description for its claim construction:

A master computer control unit is coupled to the weighing device of the common hopper for determining a discharge rate of the ingredients from the common hopper to the processing machine based on the weight loss of the common hopper over time. '943 Patent, col. 3, ll. 35-39 (emphasis added).

A weighing device 40, such as a precision, offset, cantilever load cell, is operably connected to and solely supports the common hopper 30 at the discharge end 30a. The weighing device 40 detects the change in weight of the blend M therein during the admission and discharge of material to and from the common hopper 30. '943 Patent, col. 5, ll. 44-50 (emphasis added).

A master digital computer control unit 50 (FIG. 4) is coupled via interface 50a (e.g., RS485 serial network interfaces) to the weighing device 40 of the common hopper 30 for receiving weight loss signals therefrom (analog to digital converted signals) over time and determining a blend discharge rate from the common hopper 30 to the extrusion machine 5. '943 Patent, col. 5, ll. 50-57 (emphasis added).

The master computer control unit 50 continually determines minute differential weight changes in the common hopper 30 and calculates the precise differences in the sum of the material discharge rates of the metering units 10 and the extrusion rate. '943 Patent, col. 7, ll. 46-50 (emphasis added).

The district court concluded that "if ‘discharge rate’ is construed as Process Control asserts [i.e., the same as the first occurrence of discharge rate], this specification would be nonsensical." Order of September 30, 1997, P 33.

C.

On appeal, Process Control challenges the district court's claim construction on various theories. First, as in the district court, Process Control asserts that "discharge rate" in clauses [b] and [d] should be given the same meaning throughout the claim, particularly as both occurrences include the language "from said [or the] common hopper to said [or the] processing machine." This construction, notes Process Control, obviates the lack of antecedent basis for the second occurrence of "discharge rate" in clause [d] and a concomitant finding of invalidity under 35 U.S.C. § 112, P 2 which necessarily results from the district court's claim construction.

Second, Process Control argues that "discharge rate" is defined in the claims themselves to mean "discharging [blended] material from said common hopper to said processing machine at a discharge rate." '943 Patent, claim 1, clause [b] (emphasis added). The references in the written description relied upon by the district court to redefine "discharge rate" to mean "change in weight" do not clearly redefine that term and, in any event, would redefine the term contrary to the explicit definition of that term in the claim itself.

Third, Process Control notes that claims 7-14 include the limitation of a "second weighing means … for detecting a change in weight of the ingredients" in the common hopper. According to Process Control, this demonstrates that the subsequent reference to "discharge rate" in clause [d] could not mean "change in weight" as determined by the district court, as use of different terms in a single claim indicates that those terms are not synonymous.

In response, HydReclaim defends the district court's claim construction, urging that the claims are to be construed in a way which will preserve their validity and secure the patentee his actual invention. This can only be done, asserts HydReclaim, by construing the claims in light of the written description, in "the natural manner in which they make sense." Process Control's asserted claim construction, as its own witnesses admitted, would require "determining something from some entity which includes what you are trying to measure," a construction that clearly does not make sense. HydReclaim also refutes Process Control's antecedent basis argument by asserting that "a discharge rate" in clause [b] is different from "the discharge rate" in clause [d], the former being an undetermined flow rate at that stage of the algorithm, the latter being an actually calculated flow rate based on loss of weight of material in the common hopper over time.

D.
We agree with Process Control, although the parties present us with competing canons of claim construction with which to interpret the claims at issue on appeal. It is true, as HydReclaim urges, that we should attempt to construe the claims to preserve their validity, see Smith v. Snow, 294 U.S. 1, 14, 79 L. Ed. 721, 55 S. Ct. 279 (1935) (holding that "if the claim were fairly susceptible to two constructions, that should be adopted which will secure to the patentee his actual invention"); Modine Mfg. Co. v. United States Int'l Trade Comm'n, 75 F.3d 1545, 1556, 37 U.S.P.Q.2D (BNA) 1609, 1617 (Fed. Cir. 1996) ("When claims are amenable to more than one construction, they should when reasonably possible be interpreted so as to preserve their validity."); reading them in light of the specification, see Vitronics, Corp. v. Conceptronic, Inc., 90 F.3d 1576, 1582, 39 U.S.P.Q.2D (BNA) 1573, 1576 (Fed. Cir. 1996).

However, contrary to HydReclaim's assertions, this is not a case where the claim language is reasonably susceptible to two constructions. Rather, the claim as written by the patentee is susceptible to only one meaning. It is clear from the language of the claim itself that the term "a discharge rate" in clause [b] is referring to the same rate as the term "the discharge rate" in clause [d]. This conclusion necessarily results from the identical language associated with the term "discharge rate" in both clauses [b] and [d], namely "from the common hopper to the material processing machine." The presence of that identical language clearly indicates that "a discharge rate" in clause [b] is the same as "the discharge rate" in clause [d], both referring to the rate (in units of weight per unit of time) that material is discharged from the common hopper to the material processing machine. In addition, that conclusion avoids any lack of antecedent basis problem for the occurrence of "the discharge rate" in clause [d].

--- Footnotes ---

1 It should be noted that the lack of antecedent basis problem would not be present in those claims specifically reciting "change in weight" (i.e., claims 7-14). Nevertheless, those claims would suffer from the infirmity of using two different phrases, "change in weight" and "discharge rate," to mean the same thing in the same claim if we were to adopt HydReclaim's and the district court's claim construction.

--- End Footnotes ---

The district court's attempt to use the written description to circumvent the plain language of the claim and the clear definition of the disputed claim language found therein was inappropriate. While we have held many times that a patentee can act as his own lexicographer to specifically define terms of a claim contrary to their ordinary meaning, see, e.g., Digital Biometrics v. Identix, Inc., 149 F.3d 1335, 1344, 47 U.S.P.Q.2D (BNA) 1418, 1424 (Fed. Cir. 1998), the quoted portions from the written description above do not so clearly redefine "the discharge rate" in clause [d] so as to put a reasonable competitor or one reasonably skilled in the art on notice that the patentee intended to so redefine that claim term. See Hoganas AB v. Dresser Indus., Inc., 9 F.3d 948, 951 n.15, 28 U.S.P.Q.2D (BNA) 1936, 1939 n.15 (Fed. Cir. 1993) (reasoning that the reasonable competitor standard is analytically equivalent to the reasonably skilled in the art standard). More importantly, we do not permit courts to redraft claims. See Quantum Corp. v. Rodime, Plc, 65 F.3d 1577, 1584, 36 U.S.P.Q.2D (BNA) 1162, 1168 (Fed. Cir. 1995) ("Although we construe claims, if possible, so as to sustain their validity, … it is well settled that no matter how great the temptations of fairness or policy making, courts do not redraft claims."); Becton Dickinson & Co. v. C.R. Bard Inc., 922 F.2d 792, 799 n.6, 17 U.S.P.Q.2D (BNA) 1097, 1102 n.6 (Fed. Cir. 1990) ("Nothing in any precedent permits judicial redrafting of claims. At most there are admonitions to construe words in claims narrowly, if possible, so as to sustain their validity."). Where, as here, the claim is susceptible to only one reasonable construction, the canons of claim construction cited by HydReclaim are inapposite, and we must construe the claims based on the patentee's version of the claim as he himself drafted it. See Hoganas, 9 F.3d at 951, 28 U.S.P.Q.2D (BNA) at 1939 ("It would not be appropriate for us now to interpret the claim differently just to cure a drafting error …. That would unduly interfere with the function of claims in putting competitors on notice of the scope of the claimed invention.").

E.

Our conclusion that the occurrences of "discharge rate" in clauses [b] and [d] of claim 1 are to be interpreted as referring to the same rate has the following implication for clause [d]. It cannot be disputed that the "material processing rate of the processing machine" is identical to the "discharge rate of the material from the common hopper to the processing machine." The material processing rate of the extruder (the processing machine) is dictated by the rate of the material fed to it, i.e., the discharge rate of the material from the common hopper. As a result of our claim construction, clause [d] does not make
"sense" as HydReclaim itself realizes and concedes. What HydReclaim fails to realize is that such a nonsensical result does not require the court to redraft the claims of the '943 patent. Rather, where as here, claims are susceptible to only one reasonable interpretation and that interpretation results in a nonsensical construction of the claim as a whole, the claim must be invalidated, thus preventing unduly burdening competitors who must determine the scope of the claimed invention based on an erroneously drafted claim.

7

a. "A Line"

Defendant seeks to construe the phrase "a line" with the standard geometric definition: a series of points defined by the intersection of two planes. Plaintiff asks the court to construe the entire phrase "arrayed on a line," and proposes this definition: a mark that is long relative to its width. (Pl.'s Opp'n 12 (citing Hulse Decl. Ex. D (dictionary definition)).) 4 Plaintiff's definition is plainly over-inclusive. Although a line is a mark that is long relative to its width, other objects that are not lines are also included in that definition. For instance, defendant notes that a rectangle is a mark that is long relative to its width. 5 Because this is an instance in which the ordinary meaning of the term is amenable to common-sense interpretation by judges, Phillips, 415 F.3d at 1314, this court will apply defendant's definition: a line is the intersection of two planes.

- - - - - - - - - - - - Footnotes - - - - - - - - - - - -

4 Plaintiff refers to the declaration of Matthew G. Fisher to assist in the construction of this claim; plaintiff also cites this declaration and other expert declarations with regard to other claim terms for the conclusory statements that the definitions provided by plaintiffs are correctly applied to the claim terms. Although dictionary definitions may assist the court in claim construction, "conclusory, unsupported assertions by experts as to the definition of a claim term are not useful to a court." Phillips, 415 F.3d at 1318.

5 Defining "a line" as "a mark that is long relative to its width" could make it possible for plaintiff to claim that a blade with a curved or offset top infringes its invention -- if the line is thick enough, one can imagine an infinite number of configurations of teeth made possible by placing the tips of the teeth at various points within the "line."

- - - - - - - - - - - - End Footnotes- - - - - - - - - - - -

The term "a" is susceptible to the meaning of "one or more" lines, as discussed above. However, the patents at issue clearly evince an intent to restrict the meaning to blade with a flat top, in which the tips would necessarily be aligned along a single straight line. In the specification, both patents distinguish the invention from "prior art cutting blades having curved cutting heads." ('353 Patent, 2:49-50; 253 Patent, 2:51-52.) Because curved lines would also impermissibly encompass the prior art, the definition of "a line" cannot include curved lines. Moreover, plaintiff concedes that its claims cover blades with a flat top. (Pl.'s Opp'n to Mot. for Summ. J. 10.) Accordingly, the court further construes the term "a line" to mean "a single straight line that is the intersection of two planes."

8

Depth of Cut for the Plurality of Cutters

Claims in the '930 and '631 Patents require the step of selecting or limiting a depth of cut, a maximum depth of cut, or a cutter exposure for the plurality of cutters. Baker Hughes contends these terms mean "selecting or choosing a depth for the plurality of cutters to cut into the formation during drill bit rotation." ReedHycalog contends these terms mean "selecting the same depth of cut for all of the plurality of cutters." The dispute centers on whether the claims require selecting the same depth of cut for all cutters.

In patent parlance, the terms "a" and "the" carry the presumptive meaning of "one or more" when used in open-ended claims
that contain the transitional phrase "comprising." Good Sportsman Mktg. LLC v. Testa Assocs., LLC, 440 F. Supp. 2d 570, 578-79 (E.D. Tex. 2006) (Davis, J.) (citing Free Motion Fitness, Inc. v. Cybex Int'l, Inc., 423 F.3d 1343, 1350-51 (Fed. Cir. 2005)). If the claim specifically lists the number of elements or if the patent reveals the patentee's clear intent to limit the article, the presumption no longer applies and the claim term has a singular meaning. Id. (citing Free Motion Fitness, Inc., 423 F.3d at 1350).

The '930 and '631 Patent claims, which contain the transitional phrase "comprising," vary between use of "a" and "the" in the claim terms. '930 Patent col. 19:46-51 ("selecting a depth of cut for the plurality of cutters"); '930 Patent col. 20:24-28 ("selecting a depth of cut for the plurality of superabrasive cutters"); '631 Patent col. 32:54-60 ("limiting the maximum depth-of-cut of a plurality of superabrasive cutters"); id. at col. 33:18-30 ("limiting a maximum depth-of-cut of a plurality of superabrasive cutters"); id. at col. 33:31-37 ("limiting the extent of exposure of each of the plurality of superabrasive cutters"). Thus, the plural meaning presumption applies, and the presumptive construction allows for one or more depths of cut, maximum depths of cut, and cutter exposure for the plurality of cutters.

The '631 and '930 Patents do not rebut the presumption of plurality. The '631 Patent specification specifically states "cutter exposure HC generally differs for each of the cutters." '631 Patent col. 2:4-7. Further, Figs. 15A, 15B, and 15C of the '631 Patent show different cutter exposures for cutters along the blade of the drill bit, labeled Hc in Fig. 15A, which is annotated in Appendix C.

The '631 Patent also supports the presumption of plurality with regard to the maximum depth of cut terms. The specification shows that each cutter may have a different maximum depth of cut, as a cutter's exposed height limits how deep the cutter can cut into the formation. Id. at Figs. 18B, 18C, col. 25:13-19, col. 25:27-37, col. 26:4-12.

Finally, nothing in the '930 or '631 Patents requires all the cutters to cut the formation to the same depth. It appears from Figs. 18B and 18C in the '631 Patent that a cutter's depth of cut is roughly equal to the difference between the cutter exposure and the gap. Id. at Fig. 18B, 18C. The gap, labeled G1 in Fig. 18B, partially depends on the weight applied to the bit and the design weight applied to the bit, which is the weight on bit that would virtually eliminate the gap for a given rate of penetration and compressive strength of the formation. Id. at col. 25:12-23. Nothing in the '930 or '631 Patents suggests the difference between the cutter exposure and the gap is equal for all cutters in the plurality at all times.

Thus, the selecting or limiting a depth of cut, a maximum depth of cut, or a cutter exposure for the plurality of cutters terms do not require a single depth of cut, maximum depth of cut, or cutter exposure for all cutters in the plurality. Accordingly, these terms do not require construction.

--- Footnotes ---

24 Ref. Nos. 28 and 30 of Appendix B contains the disputed terms and their constructions.

--- End Footnotes ---

1. "A Master Game Card."

The meaning of "a master game card" is the first issue. The '737 patent claims "a lottery type system providing multiple levels of play, comprising: a plurality of playing cards . . . and [among other things] a master game card for use in conjunction with said playing cards." Cl. 1, Col. 5, lines 11-13, 24-25. The Court construes the term "a master game card" to literally mean "one card," a construction that is supported by the claim and specification language and that is not contradicted by the prosecution history.

First, the language of the '737 claim indicates that the word "a," as used in the phrase "a master game card," was intended to mean "one" card, and not "two or more." In construing patent claims, the Court must give the ordinary meaning to claim language unless it appears that the inventor intended a different meaning. See Bell Communications v. Vitalink Communications, 55 F.3d 615, 620 (Fed. Cir. 1995). The ordinary meaning of "a" means "one." While a patentee is free to
be his or her own "lexicographer," any "special definition given to a word must be clearly defined in the specification." Markman, 52 F.3d at 980. Here, there is no indication that the inventor of the patent, Debra Feinberg, intended to give the word "a" anything other than its ordinary meaning as it is used in the phrase "a master game card."

To the contrary, here the article "a" here introduces the phrase "master game card" -- in the singular. By contrast, the inventor expressly used words such as "plurality," "cards," and "symbols" when she intended to express plural, rather than singular, meanings for elements of the game such as cards and awards. The use of the term "a master game card" therefore indicates a definite choice--meaning one master game card, and not two.

18 Although the Court is not using extrinsic evidence to construe the claims, it is interesting to note that the inventor admitted as much in her deposition testimony. See Pl.'s Surreply Ex. H (Feinberg Dep. at 47, lines 14-16).

19 Arrow argues for a different construction, stating that the article "a" can mean "one or more" in a claim using the transitional phrase "comprising." Abtox, Inc. v. Exitron Corp., 122 F.3d 1019, 1023 (Fed. Cir. 1997) (Arrow Reply Mem. 12). However, the use of the term "comprising" must be read in context. In this case, the transitional word "comprising" in Claim 1 does not directly introduce the term "a master game card." Rather, it links the term "multiple levels of play" with "a plurality of playing cards," "each of said playing cards," and "a master game card." The word "comprising" does not directly modify only the term "a master game card," and therefore the Court does not construe the use of that word as indicating that the word "a" would mean more than one.

Second, the specification language does not change the Court's reading of the claim. There is no language in the specifications definitively ascribing to the word "a" anything other than its ordinary meaning. In fact, where the inventor seeks to assign a plural, rather than a singular, meaning, she clearly chooses plural forms, e.g., "players," "plurality," "cards," "symbols," "groups," "values," "means," "ones," and "one or more." The specifications, both in their illustrated and preferred forms, do not include two master game cards; they only include one card, upon which both the second and third levels are played. Although the specifications expressly state that they were not "intended to limit the invention to the specific embodiments illustrated[,]" see Specs., Col. 3, lines 15-17, it remains that the ordinary meaning of "a" is singular. There is no reason, either in the claim language or the specifications, to ignore that meaning.

Third, the prosecution history does not establish a different meaning for the word "a" as used in the phrase "a master game card." In that history, the inventor of the '737 patent describes her game as having "a master game card." When she lists the prior art references of which she was aware, she classifies one group of these references as: "game systems including playing cards and associated master cards, with each system arranged to provide two levels of play." (Pl.'s Facts P 3d Motion at 29). The reference to master cards may refer to multiple master cards in one game, or it may refer to multiple games with one or more master game cards in each game. Either way, the statement does not provide conclusive evidence that the term "a master game card" in the '737 patent means anything other than a single card. Nor does the Office's "Reasons for Allowance" indicate a plural meaning for the phrase "a master game card." Id. at 32. Thus, the prosecution history does not require--or even support--giving the word "a" something other than its customary meaning.
Plaintiff counters that Defendant's proposed construction defies the specific disclosure in the claims, the specification, and the prosecution history. As to the "otherwise configured" language, Plaintiff argues that, read in context, that language refers specifically to the internal configuration of the features on the single, integrated master game card and not that the master game card was to be reconstructed as multiple cards.

This Court agrees with Plaintiff and construes "a master game card" to mean one unitary card. While indefinite articles such as "a" or "an" can mean "one or more" in some cases, this Court finds that, in this case, the patentee did not intend a "special" definition for "a master game card," see Bell Comm. Research, Inc. v. Vitalink Comm. Corp., 55 F.3d 615, 620 (Fed. Cir. 1995), and the prosecution history does not suggest "a master game card" means anything other than a single card.

Claim interpretation is the process of giving proper meaning to the claim language. Claim language, after all, defines claim scope. See York Prods., Inc. v. Central Tractor Farm & Family Ctr., 99 F.3d 1568, 1572, 40 U.S.P.Q.2D (BNA) 1619, 1622 (Fed. Cir. 1996); Bell Communications Research, Inc. v. Vitalink Communications Corp., 55 F.3d 615, 619-20, 34 U.S.P.Q.2D (BNA) 1816, 1819 (Fed. Cir. 1995) ("The language of the claim defines the scope of the protected invention."). Therefore, the language of the claim frames and ultimately resolves all issues of claim interpretation. In determining the meaning of disputed claim terms, however, a construing court considers the descriptions in the rest of the patent specification, the prosecution history, and relevant extrinsic evidence. Markman v. Westview Instruments, Inc., 52 F.3d 967, 979, 34 U.S.P.Q.2D (BNA) 1321, 1329 (Fed. Cir. 1995) (en banc), aff'd, 517 U.S. 370, 134 L. Ed. 2d 577, 116 S. Ct. 1384, 38 U.S.P.Q.2D (BNA) 1461 (1996); Whittaker Corp. v. UNR Indus., 911 F.2d 709, 711, 15 U.S.P.Q.2D (BNA) 1742, 1744 (Fed. Cir. 1990). These additional sources provide a context to illuminate the meaning of claim terms. See York Prods., 99 F.3d at 1572. Nonetheless, throughout the interpretation process, the focus remains on the meaning of claim language.

Accordingly, this court begins with the claim language. The language of claim 3 of the '261 patent defines only the microwave embodiment of the invention as illustrated in figure 2. The claim specifies "a metallic gas-confining chamber." Of particular relevance for the claim dispute before this court, the article "a" suggests a single chamber. However, patent claim parlance also recognizes that an article can carry the meaning of "one or more," for example in a claim using the transitional phrase "comprising." See North Am. Vaccine, Inc. v. American Cyanamid Co., 7 F.3d 1571, 1575-76, 28 U.S.P.Q.2D (BNA) 1333, 1336 (Fed. Cir. 1993) (acknowledging that patent parlance construes "a" to connote "one or more," yet holding that "there is no indication in the patent specification that the inventors here intended it to have other than its normal singular meaning"); see Robert C. Faber, Landis on Mechanics of Patent Claim Drafting 531 (3d ed. 1990).

The terms used in claim 3 of the '261 patent to demarcate the regions of the apparatus -- "gas-confining chamber," "microwave cavity," and "field free zone" -- are defined in relation to each other. For example, microwave energy from the "microwave cavity" is brought "into said chamber." Therefore, this language separates the "microwave cavity" from the "gas-confining chamber." The claim continues to describe "a portion of the internal volume of said chamber . . . providing a field free [sterilization] zone." This language places the sterilization zone within the "gas-confining chamber.

Repeatedly the claim refers to "said chamber" as it describes various portions of the apparatus. This term itself, "said chamber," reinforces the singular nature of the chamber. The claim does not place the sterilization zone vaguely within "a chamber," but within "said chamber." This language clarifies that only one chamber is in question. Likewise, claim 1 of the
'586 patent discloses a "field-free zone away from said [microwave] cavity." This language suggests some separation between the sterilization zone and the microwave cavity. Even this language, however, contains no suggestion of separate gas-confining chambers.

While in some instances claim language alone may disclose unambiguously the limits of claim coverage, E.I. Du Pont de Nemours & Co. v. Phillips Petroleum Co., 849 F.2d 1430, 1433, 7 U.S.P.Q.2D (BNA) 1129, 1131 (Fed. Cir. 1988), in this instance, this court seeks the meaning of the claim terms by examining their fuller context. The written description supplies additional context for understanding whether the claim language limits the patent scope to a single unitary chamber or extends to encompass a device with multiple gas-confining chambers. Figure 2, for instance, shows a single chamber. That chamber, as described in the claims, features a sterilizing zone separate and downstream from the plasma-generating zone. These zones denote regions and functions within the same chamber, rather than multiple chambers. Nothing in the written description suggests that the claim language encompasses a device with more than one gas-confining chamber. For example, to distinguish the RF sterilizer from the microwave sterilizer, the specification notes that the microwave plasma generator "cannot be mounted concentric about the long axis" shown in figure 2. Col. 7, ll. 57-58. The specification continues:

The microwave cavity 16 is mounted at one end of chamber 11, and a perforated metallic shield 17 may be placed just beyond it toward the opposite end of the chamber, spanning the entire diameter cross section of the chamber, thus creating a field-free and glowless reactive zone immediately below it and away from the microwave cavity.

Col 7., ll. 59-65. This explanation discloses a non-metallic sterilization zone separate from the metallic plasma-generating zone within the same chamber. While a Faraday shield lies between the zones, both zones are contained within the single chamber 11. MDT argues that these clearly separate zones disclosed in the specification evidence the district court's error in stating that the Jacob patents do not cover plasma generation "in an enclosure that is in any way separate from the enclosure in which the sterilization takes place." To the contrary, although a Faraday shield separates the zones to prevent free passage of particular particles, the zones remain within the same chamber, not in distinct gas-confining chambers.

The record of administrative proceedings at the Patent and Trademark Office (PTO) provides additional context for understanding the claim terms. As briefly discussed above, the '261 and '586 patents have a common parent application which matured into the '427 patent. The '427 patent claimed both microwave and RF embodiments. Claim 2 of the '427 patent, for instance, defines a plasma generator with an RF energy source. During the prosecution of the '427 patent application, the examiner rejected independent application claim 2 and dependent application claim 7 as being unpatentable over prior art. Application claim 2, as amended, read:

A method for sterilization of medical devices and materials comprising the steps of,

placing said devices and materials within a gas-tight confining chamber wherein said chamber is cylindrical, formed from metal, and includes an internal electrode formed as a perforated metallic cylinder positioned within, and generally concentric with, said chamber cavity,

 evacuating said chamber . . . ;

 initiating an electrical discharge in said gas within said chamber by application of RF energy between the metal container wall and said internal electrode creating a gas plasma; and maintaining said gas plasma for a controlled period of time, said chamber cavity creating a field free and glowless volume within the perforated cylinder, said devices and materials being placed within said field free and glowless volume.

Dependent claim 7 read: "A method in accordance with claim 2 wherein said gas is flowed through said chamber during said discharge." Both claim 2 and claim 7 clearly and explicitly specified an RF electric field source.

In the rejection, the examiner noted that claim 7 was obvious in "further view of Fraser et al [U.S. Patent No. 3,851,436]. To flow the plasma gas through the chamber during the sterilization process in order to increase the effect of the sterilizing plasma gas would be obvious as taught by Fraser et al." Fraser, entitled "Sterilizing and Packaging Process Utilizing Gas Plasma," discloses a gas plasma sterilization process using an RF electric field source. As illustrated below, Fraser discloses a sterilizer with an upstream RF generator, wherein the sterilization chamber is separate from the plasma generator:
Fraser discloses neither a concentrically arranged sterilizer nor a sterilizer utilizing a microwave source.

Jacob responded by canceling claims 2 and 7 and adding new claims 50-59. Claims 50-52 and 57-59 specified a method using an RF electric field source. Claims 53-56 claimed a method using microwave sources. For example, independent claim 50, which combined the limitations of 2 and 7, read:

A method for sterilization of medical devices and materials comprising the steps of,

placing said devices and materials within a metallic perforated electrode, generally cylindrical in shape, said electrode being positioned within, and generally concentric with, a gas-tight confining chamber, said chamber being generally cylindrical, formed from metal and connected to a point of potential reference,

 evacuating said chamber . . .,

 initiating an electrical discharge in said gas within said chamber by application of RF voltage between said internal perforated electrode and the metal chamber wall, creating a gas plasma, having a field free and glowless volume within the perforated electrode containing said devices and materials,

 maintaining said gas plasma . . .,

 maintaining a flow of said gas through said chamber during said electrical discharge; and,

 evacuating the gas plasma residual gases from said chamber prior to withdrawing said devices and materials from it.

(Emphasis added.) Independent claim 53 read:

A method for sterilization of medical devices and materials comprising the steps of,

placing said devices and materials within a gas-tight confining chamber, said chamber being generally cylindrical, formed from non-metallic material,

 evacuating said chamber . . .,

 initiating a microwave discharge in said gas within said chamber by application of microwave energy at one end of said chamber remote from said devices and materials creating a gas plasma,

 maintaining said gas plasma . . .,

 maintaining a flow of said gas through said chamber during said electrical discharge; and,

 evacuating the gas plasma residual gases from said chamber prior to withdrawing said devices and materials from it.

(Emphasis added.) Thus, these different claims specified different energy sources.

To clarify his changes to overcome the examiner's rejections, Jacob explained his amendments:

Each of Applicant's independent Claims 50, 51 and 52 are limited to methods including such [a concentric] arrangement and [RF] electrical methodology . . . .

. . . .

The Fraser reference discloses a method which differs sharply from Applicant's method. In essence Fraser generates his plasma in a nonconducting glass reactor capacitively coupled to an RF source, and exposes materials to be sterilized in a separate chamber away from and downstream from the plasma generating device. Applicant performs the sterilization process within the confines of the plasma generating device.
From previous considerations, Fraser's method yields high plasma potentials, coupled with elevated processing temperatures. However, due to this separation, the net concentration of active species reaching the sterilization chamber is substantially reduced by exponential decay processes of these species during their time-of-flight from one place to the other. Fraser's corresponding process' inefficiency manifests itself by its incapability to sterilize material through hermetically sealed enclosing packages . . . in clear contradiction to Applicant's method capability.

(Emphasis added.) Jacob clearly restricted this argument to claims 50-52. These arguments were not relevant at all to the microwave embodiment of Jacob's invention. As to claims 53 and 54, the microwave energy source claims, Jacob argued: "Claim 53 is directed to a method employing a microwave energy source. None of the prior art shows any recognition that the plasma so generated would be suitable for sterilization purposes." As to claim 56, Jacob argued: "None of the art shows or suggests a plasma chamber with a microwave energy source and a perforated shield . . . ."

Following these actions, the examiner determined that the claims to a microwave-generated plasma process were an independent and distinct invention. The examiner, therefore, required Jacob to cancel the claims pertaining to microwave energy sources. Subsequently, the application containing the claims of the RF embodiment matured into the '427 patent, which consequently limits Jacob's RF source claims to only a concentric configuration apparatus. Jacob then claimed the microwave-generated plasma in continuing applications. At all times during the prosecution, Jacob maintained the distinction between the microwave and RF embodiments. Jacob's RF energy claims feature concentric configurations while the microwave energy claims permit separate zones -- but not separate gas-confining chambers -- for plasma generation and sterilization.

In considering the prosecution history, the trial court erred by importing limitations from the disclosures of RF technology into the claims applicable solely to microwave technology. Without acknowledging the distinction between RF and microwave claims, the district court merely referred generically to the parent application to apply a limitation to both kinds of claimed devices:

The prosecution history of the Jacob Patents contains clear and unambiguous statements to the effect that MDT's device is materially different from devices in which the plasma is generated in an enclosure that is in any way separate from the enclosure in which sterilization takes place.

899 F. Supp. 775 at 781. However, upon closer inspection, Jacob's statements about RF technology during the prosecution of the '427 patent application are not relevant to this dispute over microwave-generated sterilization. The district court erred by applying limits applicable only to RF technology to this dispute over microwave technology. Read in context, the prosecution history supplies no express single chamber limitation on microwave sterilizers, though such a limitation clearly applies to RF technology.

The prosecution history relevant to this dispute includes not only the two distinct Jacob patent applications, but also the parent application. See Jonsson v. Stanley Works, 903 F.2d 812, 818, 14 U.S.P.Q.2D (BNA) 1863, 1869 (Fed. Cir. 1990) (prosecution history of parent application is relevant to understanding scope of claims issuing in a continuation-in-part application); Mark I Mktg. Corp. v. R.R. Donnelley & Sons Co., 66 F.3d 285, 291, 36 U.S.P.Q.2D (BNA) 1095, 1100 (Fed. Cir. 1995), cert. denied, 516 U.S. 1115, 133 L. Ed. 2d 847, 116 S. Ct. 917 (1996). However, statements in the parent application must be confined to their proper context and properly acknowledge the distinctions between RF and microwave claims. The prosecution history relied upon by the district court ("Applicant performs the sterilization process within the confines of the plasma generating device."), however, refers only to RF plasma generators, not to the microwave plasma generator in this case. In other words, the arguments made by Jacob to distinguish claims 50-52 over Fraser are drawn to the RF embodiment. As can be seen in figure 3, supra, the sterilization occurs within the cylindrical Faraday shield which itself is within the surrounding wall of the chamber. Thus, for the RF embodiment, the Jacob patent does "perform[] the sterilization process within the confines of the plasma generating device." This single chamber limitation, however, is neither necessary nor applicable to the microwave embodiment.

The district court misread the prosecution history, but nonetheless arrived at a correct single chamber limitation for microwave sterilizers. That reliance on the prosecution history was in error. Nevertheless, because the claim language, as interpreted in light of the specification, limits the microwave devices to a single gas-confining chamber, this court affirms the district court's grant of summary judgment.
Claim Interpretation

First, we will examine the scope of the claims themselves. Here, the patent claims refer to only one set of linear actuators capable of moving the cradle. Although claim three refers to another set of actuators, the claim discusses only the manner in which the actuators support the cradle once it is lifted into the second position. We therefore find that the "ordinary and accustomed meaning" of the claim language does not allow for coverage of secondary linear actuators that move the cradle to the carry position.

--- Footnotes ---

1 The relevant section of claim one describes the activity of the main linear actuators as follows:

[A] pair of linear actuators mounted on [the] frame and connected to [the] levers for swinging said levers and thus tilting [the] cradle about its pivots from the said first position through a second position, wherein the pot is raised from the ground but held substantially level and to a third position where in the pot is tipped by abutting an abutment on the cradle and is at least partially inverted into a dumping position.

Patent 4,063,658 col. 4, lines 8-16.

2 Claim 3 reads as follows:

3. The combination of claim 2 in which said struts are linear actuators which, when fully extended, support said cradle so that the pot is slightly tilted to the rear to minimize spilling to the front and reduce sway.

--- End Footnotes ---

Kress argues that language from the patent's specification should be construed to cover devices that have such structures. Defendants rejoin that the specification language does not support such a finding, and that the prosecution history of the patent similarly limits the patent coverage.

Both sides agree that the patent's specification section discusses the role of the second pair of actuators, mentioned in claim three, in lifting the slag pot to the "carry," or second, position. However, they disagree on the effect of the specification language.

A patent's claims "must be read in view of the specification, of which they are a part." Markman, 52 F.3d at 979, (citing Autogiro Co. of America v. United States, 181 Ct. Cl. 55, 384 F.2d 391, 397 (Ct. Cl. 1967)). "The specification contains a written description of the invention that must enable one of ordinary skill in the art to make and use the invention." Markman, 52 F.3d at 979. For claim construction purposes, "the description may act as a sort of dictionary, which explains the invention and may define terms used in the claims." Id. "The specification acts as a dictionary when it expressly defines terms used in the claims or when it defines terms by implication." Vitronics Corp. v. Conceptronic, Inc., 90 F.3d 1576, 1582 (Fed. Cir. 1996)(citing Markman, 52 F.3d at 979).

The specification section of the '658 patent reads, in pertinent part:

To eliminate the load on the main actuator hydraulic system and its links during travel of the carrier while carrying a loaded pot, as well as to assist the main linear actuators in picking the pot off the ground, a pair of struts in the form of simple two-position linear actuators are mounted on the frame.

Patent '658 at col. 2, lines 56-61 (emphasis added). Kress argues that the words in the specification expand the claims'
meaning by defining the use of the struts. Defendants rejoin that the description of the linear actuators in the specification is not a definition, but describes an alternative system not covered in the claims. We agree.

We find that the specification quoted above cannot reasonably be construed to define the "linear actuators" described in claim three. Rather, it describes a use for the actuators that is not mentioned in the claims. The language of the specification states that the actuators have two uses: (1) eliminating the load on the other systems, and (2) assisting the main linear actuators in lifting the pot. Claim two specifically discusses the first of these abilities; 3 however, neither claim two nor claim three details the ability to move the cradle. Claim three describes only "the combination of claim 2, in which said struts are linear actuators which, when fully extended, support said cradle so that the pot is slightly tilted to the rear to minimize spilling to the front and reduce sway." Patent '658 at col. 2, lines 56-61. The language of the specification, rather, discusses a separate use for these actuators, outside those discussed in the claims.

3 Claim two reads as follows:

2. The combination of claim 1 including a pair of positionable struts on said frame and adapted to be positioned for underlying and supporting said cradle in its second position and thereby removing the forces on said levers, links and actuators.

Patent '658 at col. 2, lines 19-24

Where, as here, a patentee discloses subject matter in the patent specification but fails to include it in the claims, the material is deemed "dedicated to the public." Maxwell v. J. Baker, Inc., 86 F.3d 1098, 1106 (Fed. Cir. 1996)(quoting Unique Concepts, Inc. v. Brown, 939 F.2d 1558, 1562 (Fed. Cir. 1991)). We find that the relevant subject matter here, concerning the use of the secondary linear actuators in lifting the cradle to the second position, is dedicated to the public.

We also note that, in describing the overall invention, the specification states that "it is an object of the invention to provide a carrier . . . that utilizes only two major working linear hydraulic actuators and two small simple holding cylinders." Patent '658 at col. 1, lines 25-28. This statement further strengthens defendants' argument that the use of the actuators mentioned in claim three cannot be expanded to include lifting the pot from the ground. Rather, the actuators are limited to their use as "holding cylinders."

Defendants also argue that the patent should be limited because of various statements made by the inventors during the prosecution history. Where an applicant makes arguments and amendments during the prosecution of a patent, we may examine the statements in determining the meaning of the terms in the claims. Southwall Technologies, Inc. v. Cardinal IG Co., 54 F.3d 1570, 1576 (Fed. Cir. 1995). "Claims may not be construed one way in order to obtain their allowance and in a different way against accused infringers." Id. However, "unless altering claim language to escape an examiner rejection, a patent applicant only limits claims during prosecution by clearly disavowing claim coverage." York Products, Inc. v. Central Tractor, 99 F.3d 1568, 1575 (Fed. Cir. 1996).

Kress originally applied for the patent on August 9, 1976. During the prosecution, the Patent Office rejected the application because of similarities between claim one and a number of existing patents, including a British patent. The British patent described a slag pot carrier that used two separate sets of linear actuators in lifting and dumping the slag pot. See Pl. Reply Br. Exh. A. The linear actuators moved the captured pot in two separate arcing motions while performing the carry and dump processes. Id.

In May 1977, Kress's attorneys contested the Patent Office's rejection. In their statement, they noted that the British patent required "two sets of actuators . . . one to initially lift the pot and a second set to perform the tilting function." See Def. Exh. d-4 in support of their joint motion. Claim one of the plaintiff's device differed, they argued, because it used "only a pair of linear actuators which . . . produced three different positions of the cradle." Id.

The Patent Office subsequently allowed Kress's first claim with an amendment relating to the manner in which the primary
linear actuators move the pot, rather than the number of actuators needed. Pl. Exh. 1C. However, statements made during the prosecution history are relevant in claim construction regardless whether the claim is modified on the basis of that particular argument. Amhil Enterprises, Ltd. v. Wawa, Inc., 81 F.3d 1554, 1560 (Fed. Cir. 1996).

Defendants argue that Kress's statement to the Patent Office limits the coverage of the first claim of plaintiff's patent to carriers with "only one" pair of linear actuators that lift the pot to the second and third positions. We agree.

Kress argues that claim one cannot be limited in this manner because of the wording of claim three. Claim three is dependent on claim one, insofar that it can be applied only in combination with claim one. The scope of an independent claim must be construed to allow for the application of all dependent claims in the patent. Laitram Corp. v. NEC Corp., 62 F.3d 1388, 1393 (Fed. Cir. 1995). Plaintiff argues that because claim three calls for the addition of a secondary pair of linear actuators, claim one cannot be limited to allow for only one pair. We agree. However, as rehearsed, the specification limits the patent as a whole to one pair of actuators that perform the lifting function. Therefore, plaintiff cannot claim that carriers with more than one set of actuators that perform the lifting function infringe its patent.

In sum, based on the language of the claims, specification and the prosecution history, we find that the coverage of the '658 patent is limited to carriers that use "only a pair of linear actuators which produce three different positions of the cradle."
The defendants' witness, Wayne Milestone, testified that a curve has an infinite number of radii or distances between the center of the arc to the outside edge of the arc. However, Mr. Milestone admitted that he was familiar only with the geometric definition of "radius." Id. at 171.

After considering the testimony of both parties' expert witnesses, the magistrate judge accepted that the '493 patent intended to limit the term "radius" to the singular. R&R at 11. The magistrate judge agreed that the claim is intended to describe a single smooth curve to minimize potential stress points, which is supported by the opinion of Mr. Beall, who has extensive experience in the plastics industry. Id.

b. The Defendants' Objections

The defendants argue that the phrase "a relatively large radius" means one or more radii. Defs. Objections at 6. Specifically, the defendants first claim that the magistrate judge erred in failing to follow the rule that the words "a" or "an" in a patent claim carry the meaning of "one or more," and that there was not a clear intent to limit the article to the singular. Id. at 6-7. Second, the defendants claim that the magistrate judge erred by suggesting the '493 patent favors a singular interpretation of the term "a relatively large radius," and the R&R did not include evidence that the use of more than one radius in the transitional area would fail to accomplish these purposes. Id. at 8-9. Finally, the defendants assert that because the plaintiffs' expert, Glenn Beall, did not have evidence to support his testimony, the court should disregard his expert opinion. Id. at 9.

c. This Court's Construction

The Federal Circuit has stated that in open-ended claims containing the transitional phrase "comprising," the use of an indefinite article "a" or "an" in a claim generally carries the meaning of "one or more." KCJ Corp., 223 F.3d at 1356. The subsequent use of the definite articles "the" or "said" in a claim to refer back to the same claim term does not change the general plural rule, but simply reinvokes that non-singular meaning. Baldwin Graphic Sys., Inc. v. Siebert, Inc., 512 F.3d 1338, 1342-43 (Fed. Cir. 2008). Only in circumstances when the patentee evinces a clear intent to limit the number of elements to "one" does the use the article "a" receive a singular interpretation. KCJ Corp., 223 F.3d at 1356. The exception arises where the language of the claims themselves, the specification, or the prosecution history necessitate a departure from the rule. Baldwin, 512 F.3d at 1343. See also TiVo, Inc. v. EchoStar Communns. Corp., 516 F.3d 1290, 1303 (Fed. Cir. 2008) ("[T]he question whether 'a' or 'an' is treated as singular or plural depends heavily on the context of its use. The general rule does not apply when the context clearly evidences that the usage is limited to the singular.") (citations omitted).

Here, contrary to the defendants' position, the court concludes that the term "a relatively large radius" constitutes one of those exceptions. As an initial matter, while not discussed by either party, the court finds the use of the adjective "large" to be compelling. The claim indicates "a relatively large radius." If radius were to mean "one or more," then the use of the adjective "large" would have no purpose because including multiple radii decreases the size of each radius.

In addition, as noted by the magistrate judge, the word comprising does not modify the term "a relatively large radius." Dippin' Dots, Inc. v. Mosey, 476 F.3d 1337, 1343 (Fed. Cir. 2007) (discussing that the word comprising "does not reach into each [element] to render every word and phrase therein open-ended"). Thus, the general rule that the use of the indefinite
The defendants respond that even if "comprising" does not apply to the term "a relatively large radius," the term should still be construed to have a plural meaning because "clear evidence" in support of a singular meaning does not exist. The court disagrees. As noted by the magistrate judge, the use of the term "said", see '493 Patent at Col. 7:4 ("said radius and thickness...") supports a singular meaning because "it may reinforce the singular nature of the relatively large radius when examined within the framework of the claim, the specification, and the expert testimony." R&R at 8 (citation omitted).

Here, Figure 5 reflects only one radius. While it is true that the embodiment in the patent is not the only embodiment, KCJ Corp., 223 F.3d at 1356, this points to a singular construction. Additionally, the patent claims, specification, and prosecution history use the term "radius" instead of "radii." The lack of the plural terminology for this term further supports the intent of the patentee to limit "a relatively large radius" to the singular. Moreover, as the magistrate judge noted, the purpose of the radius is expressly stated in the claim, that "said radius and thickness prevent[ ] stress concentration from weakening the bucket." '493 Patent at Col 7:4-5. In particular, the specification indicates a design which "establish[es] strong stacking strength and avoiding high stress points at sharp corners." R&R at 8.

According to the plaintiffs' expert, Mr. Beall, one radius would be stronger than multiple radii. The defendants challenge the reliance on Mr. Beall's testimony because he did no testing to support this assertion. However, it is permissible for this court in its sound discretion to admit and use expert testimony regarding the field of the invention to determine what a person of ordinary skill in the art would understand claim terms to mean. Phillips, 415 F.3d at 1318-19 ("E)xtrinsic evidence in the form of expert testimony can be useful to a court for a variety of purposes, such as to provide background on the technology at issue, to explain how an invention works, to ensure that the court's understanding of the technical aspects of the patent is consistent with that of a person of skill in the art, or to establish that a particular term in the patent or the prior art has a particular meaning in the pertinent field."). Mr. Beall's testimony simply educates this court as to the meaning of "radius" to one skilled in the art. Multiple radii applied to a plastic bucket, according to Mr. Beall, would mean imposing additional sources of weakness. Moreover, the defendants' expert, Mr. Milestone, admitted that he had no knowledge of the term radius as used in the plastics industry, and that his testimony was based on the use of the term radius as it is used in geometry.

For all these reasons, the court concludes, based on the language of the specification as supplemented by the drawings of the patent and the expert testimony of Mr. Beall, that the term "a relatively large radius" refers to a single radius.
There is no dispute that the term "a tip" is distinct from the term "tooth," and that it refers to the top, or distal end, of the specification describes the final product: "Reams . . . are most commonly packaged for shipping, storage, and retail sale in ream wrappers made of various wrap materials." (Id., col. 1, 16-19.) Thus, it is not surprising that CEI's own witnesses would concede that, in some cases, "a" ream wrapper means the final wrapper that wraps a ream of paper.

CEI does not dispute that a ream wrapper can mean a single, discrete wrapper for a ream of paper. It argues, however, that its patent is not limited to describing a single wrapper with a recurring pattern; it describes, instead, a continuous sheet of film ream wrapper. I agree with CEI's reading and conclude that Thilmany's interpretation improperly limits the claim in a fashion not warranted by the patent itself. Several reasons suggest themselves.

What first stands out is that none of the patent's several illustrations depict a single ream wrapper. Instead, they all portray the wrapping material, either as it is being pressed through nip rollers (essentially a smoothing press), or in what appears to be a sheet form. In other words, there is no picture of a specific final product that could be described as "a" ream wrapper. Although drawings are not to be used to limit or expand a patent beyond its claims, the claims are to be interpreted in light of the entire patent, including the drawings. For instance, in Insituform Technologies, Inc. v. Cat Contracting, Inc., the Federal Circuit construed the terms "a cup" and "the cup" as singular when "neither the specification nor the drawings disclose[d] more than one cup." 99 F.3d 1098, 1105-06 (Fed. Cir. 1996). Here, the opposite inference could be made: because neither the drawings nor specification describe the invention in the singular form pressed by Thilmany, limiting the claims in that fashion would seem unwarranted. Though I do not believe the drawings to be dispositive of the issue, the omission lends support to CEI's argument that the claim is not limited to a single ream wrapper.

More importantly, the language of the patent itself makes clear that what's important is not a single implementation of the wrapper but the material that can be used for wrapping. A court, in construing a term, may look to the "words of the claims themselves, the remainder of the specification, the prosecution history, and extrinsic evidence." Phillips, 415 F.3d at 1312 (quoting Brown v. 3M, 265 F.3d 1349, 1352 (Fed. Cir. 2001)). While in some cases the specification does use the term "wrapper" to describe the single end-use wrapper (in the sense Thilmany proposes), in other places it is clear that "wrapper" means a continuous sheet of wrapping material. For instance, the specification describes the method for making "a solid plastic film ream wrapper," in which the "layers pass through the nip rollers, forming the laminated solid plastic film ream wrapper." (Franzini Aff., Ex. A, col. 6, 17-18; 30-32; 40-41.) What is described here is not a single ream wrapper, but "a . . . wrapper" that is a sheet of continuous material capable of being fed through rollers. Because the patent uses the term to mean both a single wrapper as well as a continuous wrapping material, I find little basis to narrow the claim in the fashion Thilmany suggests.

Finally, Thilmany has not explained why its proposed construction would be a sensible reading of the claim as a whole. In particular, it has not squared its interpretation with the term "recurring." The specification describes the coating as being in a "recurring pattern or design, such as a logo or other marking, rather than flood-coated over the entire surface of the film." (Id. col. 6, 58-61; col. 7, 7-9.) The salient distinction drawn here (as elaborated more fully below) is between some kind of distinct, incomplete, coating versus a completely covered ("flood-coated") surface. That distinction would survive regardless of whether an individual wrapper had a single design or whether it had recurring designs; the point is that the wrapper is not to be completely coated. In short, it is unclear why "recurring" patterns on a single wrapper would add anything meaningful to the invention, or what purpose that distinction would serve. And when one considers that the wrappers are manufactured and sold in continuous rolls, it makes much more sense to consider designs as "recurring" over the course of the continuous roll rather than on an individual ream wrapper.

In sum, the use of "recurring" makes the most sense if we consider the designs as recurring over the course of a continuous wrapper, not a single one. That is how the wrappers are referred to in the specification and how they are manufactured, and Thilmany has not explained what purpose would be served by a requirement that the patterns "recur" on a single wrapper. Accordingly, I will construe the term in the manner CEI suggests, which means Thilmany is not entitled to summary judgment on the basis that its coating is non-recurring.
tooth. (Def.'s Mot. for Summ. J. 14; Pl.'s Opp'n to Mot. for Summ. J. 24.) The Federal Circuit has explained that the indefinite article "a" is amenable to two different meanings: it can mean "one" or "one or more." KCJ Corp. v. Kinetic Concepts, Inc., 223 F.3d 1351, 1355 (Fed. Cir. 2000). Moreover, the default is to presume that the article "a" refers to "one or more." Id. ("Unless the claim is specific as to the number of elements, the article a' receives a singular interpretation only in rare circumstances when the patentee evinces a clear intent to so limit the article" (emphasis added).)

Defendant argues that because the term "tip" is defined as "the area of coalescence" where the sides of the tooth come together, the term "a tip" should be construed to mean a single tip. However, an area of coalescence does not clearly denote one single tip. 3 This evidence is insufficient to demonstrate the patentee's clear intent to limit the article "a" to its singular form. Therefore, the court concludes that the term "a tip" refers to one or more tips at the distal end of a tooth.

3 For instance, a mountaintop might be considered an "area of coalescence," but many mountaintops consist of a few distinct peaks. Similarly, an area of coalescence could encompass more than one distinct tip, and therefore, this phrase does not clearly establish the patentee's intent to restrict the patent to cover only teeth with a single tip.

The parties dispute the meaning of "being ablated only partially," as that phrase appears in Claim 1. Creo contends that the phrase means "a portion, but not all, of the third layer decomposes into gases and volatile fragments in a uniform manner with limited melting or formation of solid decomposition products." Creo bases this construction on the patent's internal definition of "ablate" and its disclosed preference for a third layer that cleanly ablates with only limited melting or formation of solid decomposition products. Presstek argues that the phrase means "a portion, but not all, of the third layer decomposes into gases and volatile fragments."

"It is well-established that the patentee can act as his own lexicographer," and that it may do so either expressly or by implication in the specification. Irdeto Access, Inc. v. Echostar Satellite Corp., 383 F.3d 1295, 1300 (Fed. Cir. 2004). Where a patent defines a term by implication, I must be mindful of "the distinction between using the specification to interpret the meaning of a claim and importing limitations from the specification into the claim." Phillips, 415 F.3d at 1323. The Federal Circuit warns against the latter. Id.

The '705 Patent expressly defines "ablate" to mean "decompose into gases and volatile fragments." '705 Patent col.5 11.16-19. The specification also states a preference for clean ablation of the secondary ablation layer and describes preferred materials that achieve this effect. '705 Patent col. 5 11.44-54; col.6 11.1-16. Although it is true, as Creo points out, that these preferences respond to problems associated with the prior art, they are preferences nonetheless. As such, it would be improper to treat them as limitations on the claims. See, e.g., Phillips, 415 F.3d at 1323; Taskett v. Dentlinger, 344 F.3d 1337, 1340 (Fed. Cir. 2003). Accordingly, I conclude that a person skilled in the art would understand the phrase "being ablated only partially," as used in Claim 1, to mean "a portion, but not all, of the third layer decomposes into gases and volatile fragments."

The "about" terms:

(1) "the ratio, R[3], of the difference between the inlet valve center point and the valve plate inlet center point to R[2] is at least about 0.15;" (2) "R[2] is in a range of 1.25 to about 1.45;" and (3) "R[3] is in a range of about 0.15 to about 0.40"
Claim 10 of the '183 Patent contains the term "the ratio, R[3], of the difference between the inlet valve center point and the valve plate inlet center point to R[2] is at least about 0.15." Claim 11 of the '183 Patent contains the term "R[2] is in a range of 1.25 to 1.45." Claim 12 of the '183 Patent contains the term "R[3] is in a range of about 0.15 to about 0.40." The parties' dispute centers around the meaning of "about" as it is used in these three terms.

SHURflo contends that the scope of the ratios R[2] and R[3] is entitled to reasonable breadth and proposes that the Court construe the term "about" to encompass a full increment or decrement of the least significant digit claimed—here, the digit in the hundredths decimal place. Accordingly, SHURflo contends that "at least about .15" means "at least .14," "range of 1.25 to about 1.45" means "between 1.25 and 1.46," and "range of about 0.15 to about 0.40" means "in a range of at least 0.14 to 0.41." Furthermore, SHURflo argues that its proposed constructions are consistent with the level of precision chosen by the patentee when drafting the claims because the patentee chose to claim the ratios to two decimal places.

Defendants contend that the "about" terms must be construed narrowly because the '183 Patent emphasizes precision and the differences in dimensions set out in a chart on column 7 of the '183 Patent are minor. The column 7 chart compares ratios from the preferred embodiment of the inventive valve plate with ratios from a prior art valve plate using three decimal places. Defendants assert that the narrow construction should include three decimal places instead of two because the patentee chose to use three decimal places in the column 7 chart and the inventor testified that those experienced in this field typically work with three decimal places for dimension measurements and tolerances. Defendants propose that the Court construe the term "about" to encompass all values that, when rounded to the hundredths decimal place, equal the claimed value. Thus, Defendants contend that "at least about .15" means "equal to or greater than 0.145," "range of 1.25 to about 1.45" means "in the range of 1.25 to 1.454," and "range of about 0.15 to about 0.40" means "in the range of 0.145 to 0.404." SHURflo counters that nothing in the intrinsic record of the '183 Patent supports the Defendants' proposed constructions. Further, SHURflo contends that the patentee knew how to express the ratios and underlying measurements to three decimal places as he did in the column 7 chart, but chose to claim the ratios to two decimal places instead.

Because nothing in the specification supports any construction using qualitative boundaries, the Court will construe the "about" terms using quantitative boundaries. In addition, given the specification's attention to numerical detail and the absence of qualitative disclosure regarding the range of the disclosed ratios, the flexibility afforded by the word "about" must be construed narrowly, as Defendants suggest. However, Defendants' proffered constructions offer no flexibility in that they merely offer an extended range that numerically rounds to the claimed quantity. For example, where the claim states "at least about .15," Defendants propose "equal to or greater than 0.145," but if 0.145 is expressed to two decimal places, it is equivalent to 0.15 due to numerical rounding principles. Thus, Defendants' proposals afford no flexibility, thereby giving the word "about" no meaning.

Although the inventor used three decimal places in comparing the ratios of the preferred embodiment of the inventive valve plate to the ratios from a prior art valve plate, the patentee used only two decimal places when discussing the inventive ratios in the specification and claims. The values in the patent comprise actual measured data and the ratios of same. As such, there is inherent approximation based upon the accuracy of the measuring tool. However, that approximation would not normally extend to a full digit in the least significant value of a measurement or a ratio. For example, if a measurement instrument measures to the hundredths decimal and the artisan measures 0.15, the result might reasonably be expressed as "about 0.15" in order to reflect the fact that there is limited or no visibility in the thousandths decimal. In this context, "about 0.15" would mean a number above 0.14 but below 0.16. When the intrinsic record is viewed as a whole, it is apparent from the patentee's use of varying decimal places that the patentee expected a certain range of accuracy. In order for the term "about" to provide complete flexibility commensurate with the specification and claims, it should provide complete flexibility as to the next least significant decimal place. Thus, the "about" terms should be construed to include all values less than a full increment and greater than a full decrement of the least significant digit claimed.

Accordingly, the Court construes the term "the ratio, R[3], of the difference between the inlet valve center point and the valve plate inlet center point to R[2] is at least about 0.15" to mean "the ratio R3 (i.e., the difference between the inlet valve center point and the valve plate inlet center point divided by the ratio R2) is greater than 0.14;" "R[2] is in a range of 1.25 to about 1.45" to mean "the ratio R2 (i.e., the value of the inlet valve radius divided by the value of the valve plate inlet radius) is between 1.25 and 1.459999;" and "R[3] is in a range of about 0.15 to about 0.40" to mean "the ratio R3 (i.e., the difference between the inlet valve center point and the valve plate inlet center point divided by the ratio R2) is in the range of 0.140001 to 0.409999." Further, in construing the "about" terms, the amount of decimal places used is not significant. What is significant is whether the measurement falls within the appropriate ranges.
The parties dispute the meaning of the phrase "about" in the phrase "at a rate in excess of about 800 bills per minute" in claim 1 and subsequent claims. Cummins argues that the phrase "about" should be given its ordinary meaning of "approximately." Glory argues that the phrase "about" is not given a specific definition in the specification, prior art, prosecution history, or any other source, and should therefore be invalid. In the alternative, Glory argues that it should be read as "plus or minus a tolerance."

In some cases, "the ordinary meaning of claim language as understood by a person of skill in the art may be readily apparent even to lay judges, and claim construction in such cases involves little more than the application of the widely accepted meaning of commonly understood words." Phillips, 415 F.3d at 1314. The Court does not see any meaningful distinction between construing the phrase as "approximately" or "plus or minus a tolerance." Either explanation is consistent with a layperson's understanding of the term "about" in the phrase "about 800 bills per minute." The Court determines the phrase "about" to mean "approximately."

The parties have requested that the Court construe the meanings of "approximately" and "about" in claims 8 and 11. These terms are closely related and appear in the same sections of the claims and therefore are addressed together.

Claim 8(b) states: "the heat treating step comprises the steps of heating the blank to approximately 1560 [degrees] F.; quenching the heated blank into a liquid salt bath at approximately 500 [degrees] F. for about 20 seconds; withdrawing the quenched blank from the salt bath and allowing it to air cool to room temperature; and tempering the cooled bank at approximately 300 [degrees] F." (6:17-23.)

Claim 11(b) states "the heat treating step comprises heating the blank to approximately 1560 [degrees] F.; quenching the heated blank into a liquid salt bath at approximately 500 [degrees] F. for about 20 minutes; and withdrawing the quenched blank from the salt bath and allowing it to air cool to room temperature." (6:35-40.)

"The word 'about' does not have a universal meaning in patent claims, and that the meaning depends on the technological facts of the particular case." Pall Corp. v. Micron Separations, Inc., 66 F.3d 1211, 1217 (Fed. Cir. 1995). Furthermore, the word "about," avoids a strict numerical boundary to the specified parameter. Id. Its range must be interpreted in its technological and stylistic context. Id. The court in Pall considered how the term "about 5:1 to about 7:1" was used in the patent specification, the prosecution history, and other claims. Id. It is appropriate to consider the effects of varying that parameter, for the inventor's intended meaning is relevant. Id. Extrinsic evidence of meaning and usage in the art may be helpful in determining the criticality of the parameter, and may be received from the inventor and others skilled in the field of the invention. Id. (citing Markman, 52 F.3d at 980).

Fisher-Barton urges that one of ordinary skill in the art would understand that the terms "approximately" and "about" permit reasonable ranges on either side for the times and temperatures stated and that the steps of the claimed process are not limited to the exact temperatures and time period recited. (Fisher-Barton Mem. 6.) Fisher-Barton relies upon the Turner Declaration as establishing that one with skill in the art would understand the temperatures to include plus or minus 10% of the stated temperature. (Id.) Thus, 500 [degrees] F would mean a range 450 [degrees] F. to 550 [degrees] F., 300 [degrees] F. would mean a range of 270 [degrees] to 330 [degrees] F. and 1560 [degrees] F. could vary between 1404 [degrees] F. and 1716 [degrees] F. (Id.)
Likewise, Fisher-Barton asserts that one skilled in the art of metallurgy would understand "about 20 seconds" in claim 8 as meaning plus or minus five seconds (15 to 25 seconds) and "about 20 minutes" in claim 11 as meaning plus or minus five minutes (15 to 25 minutes). (Id. at 7.) Fisher-Barton states that such ranges are well within the typical tolerances of the heat treating process. (Id.)

The Defendants claim that "approximately" should be construed to mean plus or minus five degrees. (Defs.' Opening Br. 16.) Thus, the 500 [degrees] F. quench temperature would have a range from 495 [degrees] F. to 505 [degrees] F. and the 300 [degrees] F. tempering temperature would have a range from 295 [degrees] F. to 305 [degrees] F. (Id. At 16-17.) The Defendants do not offer any construction of the range for the heating temperature of the metal.

Relying on the Krauss Declaration, the Defendants maintain that "about" with respect to the time in claims 8 and 11 should be construed to mean plus or minus 10%, which would mean a range from 18 to 22 seconds and a range from 18 to 22 minutes. (Id. at 17.) Krauss opines that one skilled in the art of metallurgy would consider a reasonable range for the duration of the quench to be plus or minus 10% of the specified time. (Krauss Decl. P 27.) Krauss indicates that since claim 8:

appears to be aiming at martensite formation . . . it is important to allow the work piece to be in the quench long enough for the surface and interior of the work piece to equalize, but not so long as to allow for the formation of bainite or other non-martensitic structures. To allow the piece to stay in the quench much longer would result in the additional formation of bainite.

(Id.)

With respect to claim 11, Krauss avers that one skilled in the art would consider a reasonable range of plus or minus 10% of the specified time to be reasonable. He avers that to go below that time would create a high risk of preventing the austenite from fully transforming to bainite, and thus would allow the formation of other microstructures, such as martensite. (Id. at P28.) Krauss states that these other microstructures are certainly disfavored in trying to achieve a blade having the characteristics of high hardness and high toughness without tempering the blade once it has been cooled to room temperature. (Id.)

In response, Fisher-Barton asserts that Krauss offers a very narrow range of what "about" and "approximately" would mean to one skilled in the art. Fisher-Barton also relies upon the Declaration of Apolonio Ortiguera ("Ortiguera"). 10

10 Ortiguera is a consulting metallurgist retained by Fisher-Barton. Ortiguera has 35 years of experience in metallurgy. The Court has considered the Ortiguera Declaration but does not find it helpful in resolving the issues presented because it contains unsupported conclusory assertions. See Phillips, 415 F.3d at 1318.

In the Defendants' response, they state that given the accuracy of quench tank controls a skilled heat treater would read the language "approximately 500 [degrees] F" to mean plus or minus 5 [degrees] to 10 [degrees] F. (Defs.' Responsive Claim Construction Br. ("Defs.' Responsive Br.") 11.) They also proffer the Declaration of Glenn True ("True"). 11 The Defendants state that the specification and the claim language indicate that the close tolerances of their definition are the appropriate construction.

11 True is the owner of Superior Metals Treating and Equipment Inc., located in Kansas City, Missouri. (True Decl. P 1.) Since 1964, True has been heat treating lawn mower blades using a variety of metals including 10B38 steel. (Id. at P 2.) Since 1972, True has treated lawn mower blades for defendant Frederick Manufacturing. (Id. at P 1.)
Much of the evidence proffered on the meaning of "approximately" is extrinsic evidence. Having considered the varying opinions regarding "approximately" and what it means in the context of quenching, this Court finds the plus or minus 5 [degrees] F. to 10 [degrees] F. construction to be most persuasive. True is a person skilled in the art of heat treating steel blades and his opinion is consistent with the quenching range in the Handbook. Turner has attested to his reliance upon the Handbook (even though he has not relied upon it in his opinion of "approximately"). While Turner is skilled in the art and the inventor, his opinion as to the temperature range is a mere conclusion and no basis for his conclusion is explained.

Krauss's interpretation of "approximately" as meaning plus or minus 5 [degrees] is rejected as being a narrower temperature range than specified by the Handbook. The Defendants have not offered any evidence regarding the meaning of "approximately" when considering the temperature range in the heating process. But, patent terms are normally used consistently throughout the patent. Phillips, 415 F.3d at 1314. Thus, the Court adopts the 5 [degrees] to 10 [degrees] F range in interpreting the term "approximately" in claims 8 and 11 of the '114 patent.

In determining the meaning of "about" the Court notes that Turner testified at his deposition that attributing the meaning of five seconds to "about" that gives "a relatively small window of opportunity" to pull a rack of parts out of a marquenching tank and that "from a practical standpoint" you need "at least that much time for it to be workable." (Mansfield Decl. Supp. Defs.' Responsive Br. P 3, Ex. A. (Turner Dep.) 55.) Turner's explanation is the most persuasive of those offered and is therefore adopted. Since patent terms are to be construed consistently the Court construes "about" as follows; "about 20 seconds" in claim 8 means plus or minus five seconds (15 to 25 seconds) and "about 20 minutes" in claim 11 means plus or minus five minutes (15 to 25 minutes).

5. The term "about" in claims 8 and 11 of the '114 patent means plus or minus five seconds (15 to 25 seconds) in claim 8 and plus or minus five minutes (15 to 25 minutes) in claim 11.

H. "About"

Claim 12 of the '623 patent, in which the word "about" appears, reads as follows:

The device of claim 10 wherein a first opening of said first set is located about 1.765 inches from a center line of said housing and a first opening of said second set is located about 1.750 inches from said center line.

The dictionary definition of "about" when the word is used to refer to spatial relationship is "reasonably close to." Webster's Collegiate Dictionary (10th Ed. 1995). This is the interpretation advanced by CellNet. Itron, however, says that "about 1.765 inches" should be construed to include the range from 1.7645 to 1.7654 inches and "about 1.750 inches" should include the range from 1.7495 to 1.7504 inches. Itron's argument is based on the holding in Viskase Corp. v. American Nat. Can Co., 947 F. Supp. 1200, 1201 (N.D. Ill. 1996).

The problem with Itron's argument, however, is that the cases cited were decided on their particular facts rather than a universal understanding among those in the scientific or engineering community that "numbers defined with two decimal places encompass any three decimal place number within a .005 range of the two decimal place number." In Viskase, the court specifically commented that the expert witnesses on both sides agreed that "ordinarily numbers defined with two decimal places encompass any three decimal place number within a .005 range of the two decimal place number." Id. In this case, however, Itron has not cited any intrinsic or extrinsic evidence to warrant a departure from the common and ordinary meaning of the term "about." Therefore, the Court construes the term to mean "reasonably close to."
4. "Wherein At Least A Portion Of The Liquid Absorbing Member About Said Immunosorbing Member"

As to this dispute, Dade Behring argues "about" means near or in the immediate neighborhood so that the liquid absorbing member is in a liquid receiving relationship with the immunosorbing member. Biosite contends "about" means that the liquid absorbing member must surround the immunosorbing member.

Again, the ordinary and customary meaning of "about" will be applied as there is no special or unique definition supplied in the specification or the prosecution history. See Vitronics, 90 F.3d at 1582. The dictionary defines "about" as "in the vicinity: NEAR." See Webster's at 5. This definition is supported by the claim construction principle that, "each claim is an entity must be considered as a whole." See General Foods, 972 F.2d at 1274. The "extending transversely" claim language just construed and the "about" claim language are used to describe the exact same spatial relationship between the liquid absorbing member and the immunosorbing member. See Col. 2, lines 3-9. Thus, because "extending transversely" has just been interpreted to mean spanning an interval by lying or passing across, "about" must be interpreted in a consistent manner in order to interpret Claim 25 consistently as a whole. The above dictionary definition is indeed consistent with the definition adopted for "extending transversely." As a result, the Court construes "about" to mean in the vicinity or near.

THE '196 PATENT

Claim Term | Rivard's Proposed Definition
---|---
g. The sidewalls flanking the lumen have a combined thickness of about 0.025 inch. (In claims 4 and 11) | The combined thickness of the sidewalls opposing each other across the lumen have a combined thickness of between 0.0245 and 0.0255 inches.

i. Arguments of the parties. Rivard argues that the specification does not disclose any range associated with the 0.025 inch value, but that the chart of "standardized" needle dimensions provided by the patentee indicates wall thickness tolerances of plus or minus 0.0005 inch. Thus, Rivard argues that its construction of the approximate value is supported by the intrinsic evidence.

Ideal concedes that, owing to the agreed definition of "flanking the lumen," the claim term in question should be construed to mean "the combined thickness of the sidewalls opposing each other across the lumen have a combined thickness of about 0.025 inch." However, Ideal argues that no construction of "about 0.025 inch" is required, because such a term does not need to be construed with numerical exactitude. Ideal asserts, further, that the '196 patent is devoid of language that disclaims tolerances other than those in the range asserted by Rivard.

ii. Analysis. The court agrees with the parties that the proper construction of the "sidewalls flanking the lumen" portion of this claim term is the agreed construction, as modified by the court, "opposing each other across the lumen." The court also agrees with Ideal that nothing in the '196 patent itself suggests limitations on the value "about 0.025 inch." The limits of the approximation indicated by "about" are not explained anywhere in the Detailed Description. On the other hand, the court finds that the exhibit of needle dimensions that the patentee submitted to the examiner, Joint Appendix at 787-88 is intrinsic evidence from the prosecution history of the '196 patent of the "standard" tolerances for wall thickness of hypodermic needles. See Ortho-McNeil Pharm., Inc., 476 F.3d at 1326. As the court explained above, in reference to dimensions of "standard" needles, use of the exhibit in an illustrative manner did not limit the patentee to the dimensions stated therein. See supra, page 125. Nevertheless, Ideal is hardly in a position to dispute the validity of this exhibit as evidence of the understanding of one skilled in the art concerning permissible tolerances for sidewall thicknesses of hypodermic needles, just as Ideal is hardly in a position to dispute the validity of this exhibit as extrinsic evidence of the understanding of one skilled in the art concerning permissible tolerances for inside diameters of hypodermic needles, for purposes of the '668 patent, because the chart was offered essentially for the purpose of illustrating that hypodermic needle dimensions are "standardized," as explained above beginning on page 88.

Rivard contends that this exhibit demonstrates that the understanding of one skilled in the art was that the sidewall thickness
measurements have a tolerance range of plus or minus 0.0005 inch, leading Rivard to assert that "about 0.025 inch" must mean "between 0.0245 and 0.0255 inches." The exhibit, which purports to be "Syringe Needle Dimensions--Technical Notes," does indeed define the tolerances for "nominal wall" thickness as plus or minus 0.0005 inch for gauges 15 through 19. See Joint Appendix 787, Nominal Wall, Tolerance (in), Needle Gauges 15-19. The embodiments of the claimed needle are generally compared to "standard" needles of 16 gauge in the Detailed Description. See the '196 patent, Col. 4, l. 50 to Col. 5, l. 2. Indeed, dependent claims 4 and 11 expressly claim the sidewall thickness that is described in the Detailed Description as a preferred embodiment of the 16 gauge embodiment of the claimed needle. See id., Col. 55-60. The Detailed Description and the claims of the '196 patent, however, refer to "standard needles" or "prior art needles" or "needle cannulas that are useful for medical and veterinarian purposes" as including gauges 14 through 27. See id., Detailed Description, Col. 5, ll. 16-19; claim 1, Col. 9, ll. 3-4; claim 8, Col. 10, ll. 11-12. The chart shows the same tolerance of plus or minus 0.0005 inches for wall thickness for gauges 20 through 27, but tolerances of plus or minus 0.0010 inches for gauges 10 through 14. The competing chart of needle dimensions offered by Rivard, see Defendants' Appendix at 38, which must be considered, at best, extrinsic evidence under Ortho-McNeil Pharm., Inc., 476 F.3d at 1326, likewise shows wall thickness tolerances of plus or minus 0.0010 inches for gauges 6 through 14, plus or minus 0.0005 inches for gauges 15 through 19, and plus 0 and minus 0.0005 for gauges 20 through 27. From the two charts, the court concludes that one of ordinary skill in the art would understand that a thickness for the sidewall of a hypodermic needle of gauges 14 through 27 stated as "about" a certain fraction of an inch would have a tolerance of plus or minus 0.0005 inches.

iii. The court's construction. In light of the foregoing, the court concludes that this claim term in claims 4 and 11 of the '196 patent is properly construed as follows: "The sidewalls opposing each other across the lumen have a combined thickness of about 0.025 inch, encompassing a range of thicknesses no greater than 0.0245 to 0.0255 inches." See Ortho-McNeil Pharm., Inc., 476 F.3d at 1326-27 (in light of the kinds of evidence cited, concluding that the claim term defining a ratio of tramadol to acetaminophen of "about 1:5" should be construed to mean "approximately 1:5, encompassing a range of ratios no greater than 1:3.6 to 1:7.1").

5. "The needle has an inside diameter of about 0.046 inch and an outside diameter of 0.018 inch"

The last claim term of the '668 patent for which the parties dispute the proper construction is "the needle has an inside diameter of about 0.046 inch and an outside diameter of 0.018 inch [sic]" in claims 6 and 12. The parties' competing constructions for this claim term are shown in the chart below:

<table>

<tr>
<td>e.</td>
</tr>
</tbody>
</table>

This claim term presents a paradox, at least for those of us unable to conceptualize objects beyond three or four dimensions, because, as Rivard points out, it defines a needle with an inner diameter that is greater than its outer diameter. Leaving aside for now the question of whether claims 6 and 12 are invalid as impossible and, therefore, not enabling, the court turns to a summary of the parties' arguments for their competing constructions of this claim term.

a. Arguments of the parties

Rivard argues that, to the extent that this obviously impossible and, therefore, invalid claim term is susceptible to construction, the meaning of "about" depends upon the technological facts of the particular case. Here, Rivard contends that,
in prosecution of the '196 patent, Ideal submitted an exhibit that purported to represent standardized dimensions of hypodermic needles showing tolerances for inside diameters of plus or minus 0.0005 inch for a 16 gauge needle. Thus, Rivard contends that the range of the approximate inside diameter claimed should be from 0.0455 to 0.0465 inch.

Apparently not recognizing or simply not acknowledging the impossibility of this claim term, Ideal argues that its meaning is clear and unambiguous and that there is simply no basis for Rivard's limitations on the scope of the "about" measurement, not least because Rivard relies on an exhibit offered in support of the prosecution of the '196 patent, not in support of the prosecution of the '668 patent in which the claim term is found. Ideal also argues that such an approximation term as "about" a certain diameter does not need to be construed with numerical exactitude. Ideal argues, further, that it is clear from the context that the "inside diameter" referred to is the diameter of the lumen. Thus, in the alternative, Ideal asserts that a proper construction, well supported by the intrinsic evidence, is "the needle has a lumen diameter of about 0.046 inch and an outside diameter of 0.018 inch."

b. Analysis

i. Source of the error in the impossible claim. As noted above, this claim term claims an impossibility, at least as this court understands three- and four-dimensional physics, an object with an inside diameter that is greater than its outside diameter. The court believes that it has discovered the source of the error, a none-too-surprising mix up of measurements in millimeters and inches and measurements of different features. For example, the Detailed Description includes the following:

In the case of the 16 gauge embodiment of the needle of the present invention, the sidewall 17 has a thickness greater than 0.46 mm (0.018 inch), preferably a thickness of 0.46 mm (0.025 inch) and the diameter of the lumen 18 is about 1.19 mm (0.047 inch). Thus, the outer diameter of needle 12 is about 1.8 mm (0.072 inch).

The '668 patent, Detailed Description, Col. 4, ll. 54-59. It seems readily apparent that, in the claim term presently at issue, the inside diameter was properly stated in inches, but the outside diameter was misstated as 0.018 inches, when it probably should have been stated as 0.072 inches or 1.8 mm. Moreover, the thickness of the sidewall of the claimed needle, in a 16 gauge embodiment, is described as having "a thickness greater than 0.46 mm (0.018 inch)," see the '668 patent, Col. 4, ll. 55-56, and is likewise claimed to have "a thickness of greater than 0.018 inch" in claims 5 and 11, so that the sidewall thickness in these instances is identical to the "outside diameter" claimed in claims 6 and 12, and one measurement was inadvertently transposed with the other.

The problems with the measurement of the "outside diameter" in the '668 patent do not stop with a mix up of measurements or measurement units, however. In the preceding section, the court construed the term "the wall has a thickness of greater than 0.018 inch," found in claims 5 and 11 of the '668 patent, to mean that "each and every one of the one or more sidewalls of the needle cannula has a thickness, measured from the inner sidewall (wall of the lumen) to the outer sidewall, of greater than 0.018 inch." A consequence of this construction is that the "outside diameter" of 0.072 inch, as described in the Detailed Description of the '668 patent, Col. 4, ll. 54-59, cannot be correct, because it does not include the thickness of the sidewall on opposite sides of the lumen (0.047 inch + 0.25 inch + 0.25 inch = 0.097 inch), just the thickness of the sidewall on one side of the lumen (0.047 inch + 0.25 inch = 0.072 inch).

The court has some reluctance to construe a claim term that obviously claims a physical impossibility, such as an object with an inside diameter that is larger than its outside diameter. The disputed aspect of the claim term, however, is not the clearly erroneous outer diameter, but the construction of the language stating an approximate inside diameter in terms of "about 0.046 inch." Therefore, the court will consider the proper construction of that portion of the claim term.

ii. Construction of the approximation. Claims 6 and 12 of the '668 patent claim a needle with an "inside diameter of about 0.046 inch," which Rivard asserts must be construed to mean "between 0.0455 and 0.0465 inches." 11 Ideal contends that the "about" term does not need to be construed with mathematical exactitude.

- - - - - - - - - - - - - - Footnotes - - - - - - - - - - - - - - -

11 Although the '668 patent claims a needle with an "inside diameter of about 0.046 inch," the Detailed Description explains that an ordinary, prior art 16 gauge needle has "a lumen diameter of about 1.19 mm (0.047 inch)." See the '668 patent, Col. 4, ll. 61-63. Consequently, Rivard's construction of "about 0.046 inch" could mean that any 16 gauge needle that has "a
The lumen diameter of about 1.19 mm (0.047 inch) does not infringe claims 6 and 12 of the '668 patent, because such a needle could fall outside the range of possible diameters defined by "about 0.046 inch."

The Federal Circuit Court of Appeals provides some guidance on the construction of such an approximation:

This court has looked at the meaning of the term "about," and similar qualifying words or phrases, in other cases and has developed an approach to the interpretation of such terms:

[T]he word "about" does not have a universal meaning in patent claims, . . . the meaning depends upon the technological facts of the particular case.

* * *

The use of the word "about," avoids a strict numerical boundary to the specified parameter. Its range must be interpreted in its technological and stylistic context. We thus consider how the term . . . was used in the patent specification, the prosecution history, and other claims. It is appropriate to consider the effects of varying that parameter, for the inventor's intended meaning is relevant. Extrinsic evidence of meaning and usage in the art may be helpful in determining the criticality of the parameter. . . .

Pall Corp. v. Micron Separations, Inc., 66 F.3d 1211, 1217 (Fed. Cir. 1995) (citations omitted). See also Modine Mfg. Co. v. United States Int'l Trade Comm'n, 75 F.3d 1545, 1554 (Fed. Cir. 1996) (stating that "the usage [of the term 'about'] can usually be understood in light of the technology embodied by the invention"); Conopco, Inc. v. May Dep't Stores Co., 46 F.3d 1556 (Fed. Cir. 1994) (discussing the criticality of the claimed ratio to the invention and whether or not one of ordinary skill in the art would have read the modifier "about" expansively in light of the intrinsic evidence).

Ortho-McNeil Pharm., Inc. v. Caraco Pharm. Labs., Inc., 476 F.3d 1321, 1326-27 (Fed. Cir. 2007) (in light of the kinds of evidence identified, concluding that the claim term defining a ratio of tramadol to acetaminophen of "about 1:5" should be construed to mean "approximately 1:5, encompassing a range of ratios no greater than 1:3.6 to 1:7.1").

Rivard's sole authority for its construction of "approximately 0.046 inch" as "between 0.0455 and 0.0465 inches" is an exhibit offered in the prosecution of the '196 patent, which is a different, albeit related, patent. The court has considerable doubt that this evidence is on a par with "how the term . . . was used in the patent specification, the prosecution history, and other claims" of the '668 patent, notwithstanding the relationship between the applications of the '668 patent and the '196 patent. See id. at 1326 (quoting Pall Corp., 66 F.3d at 1217). The exhibit may, however, be extrinsic evidence of the meaning and usage in the art of the criticality of approximations of inside diameters of hypodermic needles. See id. The question is whether the court has any need of recourse to extrinsic evidence to construe the term in question.

Unfortunately, the court finds little in other claims or the specification of the '668 patent that is illuminating, and no party has pointed to anything in the prosecution history of the '668 patent that is on point. The court notes that the specification simply refers to "inside diameter" or "lumen diameter" for a 16 gauge needle, either the claimed invention or a prior art needle, as being "about 1.19 mm (0.047 inch)." See the '668 patent, Col. 4, ll. 58-64. The limits of the approximation indicated by "about" are not explained in the Detailed Description. It is apparent from the same portion of the specification, however, that the goal of claims 6 and 12 was to claim a needle with an inside diameter comparable to the inside diameter of "standard" or "prior art" 16 gauge needles. That being so, the court cannot explain from the intrinsic evidence why the claimed "inside diameter" is not precisely the same approximation as the "inside diameter" described in the Detailed Description, i.e., why what is claimed is an inside diameter of "about 0.046 inch," where what is described is a needle with an inside diameter of "about 0.047 inch."

The court notes that 1.19 mm would "round" to 0.047 inch rather than 0.046 inch, where 1.19 mm, converted to seven decimal places, is 0.0468503 inch.
Thus, as a last resort, the court turns to the evidence of the needle dimensions exhibit in the prosecution history of the '196 patent, cited by Rivard, and found in the Joint Appendix at 787-88, to see what it reveals about how the common inventor of the '668 patent and the '196 patent understood the invention and, in particular, the scope of the approximation of inside diameter of hypodermic needles. See Nystrom, 424 F.3d at 1142 ("In addition to the written description, 'the prosecution history can often inform the meaning of the claim language by demonstrating how the inventor understood the invention and whether the inventor limited the invention in the course of prosecution, making the claim scope narrower than it would otherwise be.") (quoting Phillips, 415 F.3d at 1317). The court explained, above, that it deems this evidence to be, if anything, the sort of "extrinsic" evidence contemplated by the court in Ortho-McNeil Pharm., Inc., 476 F.3d at 1326. Nevertheless, Ideal is hardly in a position to dispute the validity of this exhibit as extrinsic evidence of the understanding of one skilled in the art concerning permissible tolerances for inside diameters of hypodermic needles, because the exhibit was offered essentially for that purpose by the same patentee in the prosecution of the '196 patent.

Rivard contends that this exhibit demonstrates that the understanding of one skilled in the art was that the inside diameter of a 16 gauge hypodermic needle is defined in terms of tolerances of 0.0005 inch, leading Rivard to assert that "about 0.046 inch" must mean "between 0.0455 and 0.0465 inches." Rivard's analysis based on this evidence is flawed, however. The exhibit, purporting to be "Syringe Needle Dimensions--Technical Notes," actually defines the "nominal inside diameter" of a 16 gauge syringe needle as 0.047 inch, 13 and the tolerance, in inches, for the inside diameter of a 16 gauge needle to be plus or minus 0.0015 inch, not plus or minus 0.0005 inch, as Rivard would have it. See Joint Appendix 787, Nominal ID, Tolerance (in), Needle Gauge 16. Thus, the evidence upon which Rivard relies would suggest that "about 0.046 inch" should be construed to mean "between 0.0445 and 0.0475 inches." Therefore, the court construes the phrase "about 0.046 inch" to mean "about 0.046 inch, encompassing a range of diameters no greater than 0.0445 to 0.0475 inch." Cf. Ortho-McNeil Pharm., Inc., 476 F.3d at 1327 (in light of the kinds of evidence cited, concluding that the claim term defining a ratio of tramadol to acetaminophen of "about 1:5" should be construed to mean "approximately 1:5, encompassing a range of ratios no greater than 1:3.6 to 1:7.1").

13 To be precise, the exhibit shows the nominal inside diameter of a 16 gauge syringe needle to be 0.470 inch, but that is clearly a misprint, based on the conversion of the stated nominal inside diameter of a 16 gauge needle from millimeters (stated as 1.194) to inches (0.047 inch), and a comparison to the stated nominal inside diameters for 15 and 17 gauge needles (0.0540 inch and 0.0420 inch, respectively). See Joint Appendix at 787.

14 Moreover, both the "inside diameter" of the claimed needle ("about 0.046 inch"), as claimed in claims 6 and 12 of the '668 patent, and the "inside diameter" of a 16 gauge embodiment of the claimed needle, as described in the Detailed Description of the '668 patent ("about 0.047 inch"), would fall within the permissible tolerance suggested by this evidence, mitigating some of the concerns that the court expressed above, in note 11, that the approximate inside diameters of 16 gauge needles as described and as claimed do not match.

iii. Inside diameter. What the specification does reveal is that "inside diameter" is properly understood to mean the "lumen diameter," as the two phrases are used interchangeably: The claims use "inside diameter" and "outside diameter," while the Detailed Description refers to "lumen diameter" and "outer diameter." Compare the '668 patent, claims 6 and 12, with id., Detailed Description, Col. 4, ll. 58-64. Although Rivard refers to the diameter of the "hole" in its proposed construction, rather than to the diameter of the "lumen," it is apparent that Rivard recognizes that the "inside diameter" means the "lumen diameter."

iv. The court's construction. Upon the foregoing, the court concludes that the proper construction of the term "the needle has an inside diameter of about 0.046 inch and an outside diameter of 0.018 inch [sic]" in claims 6 and 12--recognizing that the stated outside diameter is doubtless an error--is the following: "The needle has a lumen diameter of about 0.046 inch, encompassing a range of diameters no greater than 0.0445 to 0.0475 inch, and an outside diameter of 0.018 inch."
b. "No More Than About 0.6 Square Inches"

Claim 1 of the Pieniak patent recites that the portion of the impact zone of the absorbent panel positionable between the thighs must have "a transverse dimension and a thickness dimension to provide a cross-sectional area for said portion of no more than about 0.6 square inches." [DTX 1, at 17:31-40]. The specification provides no express indication as to the basis for the about 0.6 square inches limitation. The only disclosure in the Pieniak patent that relates to this limitation is the 0.585 square inch measurement disclosed in Table I as the CSB for Sample LBD. Id. at 10:18-40. The 0.585 measurement rounds off to 0.6. The prosecution history confirms that the CSB for Sample LBD was in fact used to obtain the "about 0.6 square inches" limitation. Prior to the inventor's final amendment of the claims, claim 1 included the approximate width and thickness dimensions of Sample LBD and specified that these dimensions provide the basis for the 0.6 square inch limitation. [DTX 2, at 210].

The Court finds that, at best, the "no more than about 0.6 square inches" limitation does not cover any diaper with a CSB that, when rounded off to a single digit, exceeds 0.6 square inches. The parties do not dispute that a diaper which exceeds this measurement, i.e., a diaper having a CSB in excess of 0.64 square inches, does not literally infringe claim 1 of the Pieniak patent. See [Tr. at 2071]. Although P&G asserts that 0.6 square inches represents the maximum permissible CSB for a diaper to infringe the Pieniak patent, the Court need not resolve this issue given the fact that none of the accused diapers have a CSB in the 0.6 to 0.64 square inches range. Thus, the Court concludes that, at the very least, a diaper having a CSB that exceeds 0.6 square inches when rounded off to a single digit does not literally infringe claim 1 of the Pieniak patent.

26

Claim Interpretations

I held a hearing pursuant to Markman v. Westview, U.S., 134 L. Ed. 2d 577, 116 S. Ct. 1384 (1996), at which the parties presented evidence, including the testimony of their experts, on the proper interpretation of terms in the claim language of the various patents in suit, where such terms are disputed. Having heard the evidence, I reach the following conclusions.

The term "about" as used in the phrase "a density below about 0.91 g/cm3" means a number between 0.905 and 0.914. I reach this conclusion for the following reasons: First, the ordinary dictionary definition of "about" means "reasonably close to," "near" or "around." WEBSTER'S NINTH NEW COLLEGIATE DICTIONARY (1983), p.45. Thus, as one of the experts testified, a person skilled in the art of the invention, reading this language, would assume the term included numbers slightly above and slightly below 0.91 g/cm3. Accord, e.g., Eiselstein v. Frank, 52 F.3d 1035, 1039 (Fed. Cir. 1995) ("about" means "approximate"); Conopco, Inc. v. May Dept. Stores Co., 46 F.3d 1556, 1561 and n.2 (Fed. Cir. 1994), cert. denied, 131 L. Ed. 2d 582, 115 S. Ct. 1724 (1995).

Second, as experts on both sides in this case agreed, persons skilled in the art understand that ordinarily numbers defined with two decimal places encompass any three decimal place number within a .005 range of the two decimal place number. That is, 0.91 encompasses 0.905 to 0.914, because either of these numbers would be rounded off to 0.91 if the third decimal place is removed. An exception to this rule lies in cases in which a patentee has itself limited the interpretation ordinarily given a two decimal place number. E.J. DuPont de Nemours & Co. v. Phillips Petroleum Co., 711 F. Supp. 1205, 1222 (D.Del. 1989).

In the present case, Viskase consistently used two digit numbers in its specifications. ANC argues that Viskase is limited to 0.910 as a result of statements made to the patent examiner during the prosecution of U.S. Pat. 4,863,769. I disagree. ANC relies, first, on the fact that the original patent application (Serial No. 745,236) did not have a density limitation. After its rejection in February, 1986, Viskase filed the continuation application that became the '769 patent. In that continuation application, Viskase narrowed its claims by adding language stating "below about 0.91 g/cm3." ANC's patent expert testified that this history precluded a broad range of interpretation. But he ignores the word "about." "Below about 0.91" is,
ANC's second argument is that Viskase's actions with respect to two additional claims in the continuation application which as submitted stated that the copolymer had a density "above 0.91 g/cm3", and which were subsequently changed to "below" rather than "above," limit all of the claims to densities below 0.91 g/cm3. The examiner rejected these claims as originally filed, stating that there was no support in the specification for a VLDPE of above 0.91. But he also noted that "clearly applicant intended to claim below 0.91." (Viskase Trial Ex. 3, p. 253) Furthermore, in the same paragraph the examiner held that the disclosure for other claims, correctly stating the density limitation as below rather than above 0.91 g/cm3, was "enabling for claims limited to the VLDPE having a density of from about 0.86 to about 0.91." As the examiner concluded, the use of "above" was obviously just an error, although a careless one, which was corrected. It carried no meaning that would limit the interpretation of these claims to exactly 0.91. That the examiner understood that the claims encompassed some inexactness that could go beyond 0.910 is shown by his own repetition of the word "about" in the same paragraph in discussing the claims, as well, of course, by his allowance of the claims with the inclusion of the word "about" as modifying 0.91.

ANC next argues that one of the patents relied on by the examiner in initially rejecting the application that became the '769 patent, Nishimoto, U.S. Patent No. 4,456,646 encompassed a density between 0.900 to 0.950 g/cm3. ANC argues that Viskase's argument against this patent was that it described linear low density polyethylene (LLDPE) rather than VLDPE, and thus necessarily agreed that LLDPE densities went as low as 0.900 (or at least stopped at 0.91 g/cm3). But ANC has misconstrued Viskase's argument before the examiner. Viskase did say that Nishimoto described its own copolymer as LLDPE, but the point of that was that LLDPE's are different from VLDPE's. Viskase went on to attach various articles discussing the newly discovered VLDPE's and the differences between them and LLDPE's. Viskase also distinguished Nishimoto on the ground that the 0.90 density lower limit in that patent was hypothetical and that the copolymers disclosed in Nishimoto are made using different catalysts and are incompatible with the VLDPE copolymers. The examiner in response agreed that Nishimoto did not anticipate the claims in the '769 patent.

ANC also argues that a statement made by Viskase in a disclosure made after the notice of allowance limits Viskase's claims to copolymers with a density below 0.910 g/cm3. The notice of allowance was dated November 6, 1988. On November 23, 1988, Viskase notified the Patent Office, pursuant to its duty of disclosure under 37 C.F.R. 1.56, of the existence of Shibata U.S. Patent No. 4,429,079, which issued January 31, 1985, and which Viskase stated that it had recently learned. Viskase described Shibata as describing two ethylene/alpha-olefin copolymers designated as "A" and "B." The "A" copolymer is the one of concern in this suit. Viskase stated that the Shibata "A" copolymer was different from its claimed invention because "the present application … does not have a density below about 0.910 g/cm3 as defined in all pending claims." Shibata describes a copolymer with a density of 0.910 to 0.940 g/cm3. Viskase states that the use of the third decimal point was an obvious error. Whether or not it was intentional, I agree that in no other place in the prosecution history did Viskase use a third decimal point. As Viskase argues also, the same letter distinguished Shibata on the ground that the Viskase patent claims did not have densities below about 0.910 g/cm3 range. I conclude that Intervet America, Inc. v. Kee-Vet Laboratories, Inc., 887 F.2d 1050, 1054 (Fed. Cir. 1989), controls. In that case, the Federal Circuit held that remarks made by an attorney during the prosecution history that claims were restricted to a certain vaccination scheme, although some claims were not so limited, did not alter the claim language, and that the claim language controlled. In this case, the examiner certainly knew that the claims themselves included broader language than the limitation of 0.910. He did not require an amendment. The language, accordingly, is not so limited.

Finally, ANC argues that "about 0.91 g/cm3" cannot include a range of 0.912 g/cm3 because of the further language in the relevant claims stating that the film has "a 1% secant modulus below about 140,000 kPa." ANC says such a film necessarily has a secant modulus in the 165,000 or 170,000 range. In support of this conclusion, ANC introduced the testimony of its expert, Dr. Quirk. Dr. Quirk relied upon a measurement taken from an illustration in an article cited to the Patent Office by Viskase and the Karol patent, which Dr. Quirk testified discussed the relationship between density and secant modulus. On cross examination, however, Dr. Quirk agreed that the secant modulus measurement will vary depending upon the method used to make the film. He did not explain his reference to the Karol patent. ANC has failed to show that the limitation of "a 1% secant modulus below about 140,000 kPa" requires that "about 0.91 g/cm3" be limited to 0.910 g/cm3.
Nylon 46 Membranes

Three years after Pall filed this suit, MSI converted most of its membrane manufacture from nylon 66 to nylon 46. Nylon 46 is made not from hexamethylenediamine and adipic acid, but from tetramethylenediamine and adipic acid. Claim 34, quoted supra, does not name polytetramethylene adipamide (nylon 46). However, claim 116 of the Pall patent describes the polyamide resins in terms of their methylene to amide ratio:

116. A hydrophilic skinless alcohol-insoluble polyamide resin membrane sheet of alcohol-insoluble hydrophobic polyamide resin having a ratio CH2:NHCO of methylene CH2 to amide NHCO groups within the range of about 5:1 to about 7:1; capable when completely immersed in water of being wetted through within no more than one second, and reverting when heated to a temperature just below the softening temperature of the membrane to a hydrophobic material which is no longer wetted by water. [Emphasis added.]

Nylon 66 has a ratio of methylene to amide groups of 5:1. Nylon 46 has a ratio of 4:1. Pall asserts that the term "about 5:1 to about 7:1" is infringed by the ratio of 4:1, either literally or by the doctrine of equivalents.

A. Literal Infringement

The district court, construing the term "about 5:1 to about 7:1," observed that the word "about" does not have a universal meaning in patent claims, and that the meaning depends on the technological facts of the particular case. We have so held. E.g., Andrew Corp. v. Gabriel Electronics, Inc., 847 F.2d 819, 821-22, 6 U.S.P.Q.2D (BNA) 2010, 2013 (Fed. Cir.), cert. denied, 488 U.S. 927, 102 L. Ed. 2d 330, 109 S. Ct. 312 (1988); W.L. Gore & Assoc. Inc. v. Garlock, Inc., 842 F.2d 1275, 1280, 6 U.S.P.Q.2D (BNA) 1277, 1282 (Fed. Cir. 1988).

The determination of whether the literal meaning or scope of "about 5:1 to about 7:1" includes 4:1 is a matter of claim construction, a question of law for decision de novo by this court. The use of the word "about," avoids a strict numerical boundary to the specified parameter. Its range must be interpreted in its technologic and stylistic context. We thus consider how the term "about 5:1 to about 7:1" was used in the patent specification, the prosecution history, and other claims. It is appropriate to consider the effects of varying that parameter, for the inventor's intended meaning is relevant. Extrinsic evidence of meaning and usage in the art may be helpful in determining the criticality of the parameter, and may be received from the inventor and others skilled in the field of the invention. See Markman, 52 F.3d at 980, 34 U.S.P.Q.2D (BNA) at 1330 ("The court may, in its discretion, receive extrinsic evidence in order 'to aid the court in coming to a correct conclusion' as to the 'true meaning of the language employed' in the patent.") (quoting Seymour v. Osborne, 78 U.S. 516, 546, 20 L. Ed. 33, (1871)).

Dr. Pall, the inventor, explained his usage of "about 5:1 to about 7:1" as deriving from his tests of the performance of various nylon resin membranes. He explained that the ratios change in half integers, e.g., 7:1, 6.5:1, 6:1, etc., depending on the total number of methylene groups in the acid and amine components of the polymer. For example, each recurring unit of nylon 66 contains 10 methylene groups and 2 amide groups, for a ratio of 10:2, which reduces to 5:1. Each recurring unit of nylon 46 contains 8 methylene groups and 2 amide groups, for a ratio of 4:1. The Pall patent also illustrated a mixture having the ratio of 5:1.

Dr. Pall testified that he conducted experiments with several commercially available nylon resins. He found that a nylon resin having a methylene:amide ratio higher than 7:1 produced membranes that were less readily wettable, such that use of a wetting agent was required for optimum results. He therefore placed the upper limit of "about 7:1" in the claims. Dr. Pall stated that the only commercially available nylon resin with a ratio lower than 5:1 was a nylon with the ratio of 3:1, and that he made a membrane of the 3:1 nylon and found it to be soluble in alcohol and therefore unacceptable. No experiments were conducted with a nylon between 3:1 and 5:1, he testified, because none was commercially available. He placed the lower limit at "about 5:1." The reasons for these claim limitations also appear in the patent specification.

The district court found that Dr. Pall's use of the word "about" was "appropriate." We agree that the evidence showed that an exact limitation would have been inappropriate. However, the evidence showed that while a ratio of 7:1 was satisfactory, higher ratios were not, suggesting that the upper limit was close to 7:1, and did not extend to, for example, 8:1. At the lower ratios, although Dr. Pall conducted no tests with resins between 3:1 and 5:1, the 3:1 resin was clearly unsatisfactory. Reviewing all the evidence, the district court held that a literal reading of "about 5:1 to about 7:1" did not include the ratio
Since the claim is construed more narrowly than would literally encompass the ratio of 4:1, the district court’s finding that MSI’s nylon 46 membranes do not literally infringe the Pall patent is affirmed.

In determining the meaning of disputed claim language, we look first to the intrinsic evidence of record, examining the claim language itself, the specification, and the prosecution history. Interactive Gift Express, Inc. v. Compuserve, Inc., 256 F.3d 1323, 1331 (Fed. Cir. 2001) (citing Vitronics Corp. v. Conceptronic, Inc., 90 F.3d 1576, 1582 (Fed. Cir. 1996)).

Here, the issue is how to construe the claim terms "about 600 to 700 umm (25-30 mesh)." Janssen encourages us to all but ignore the parenthetical statement "25-30 mesh," arguing that the claim reads on a bead measuring between about 600-700 umm across the center and the presence of the parenthetical should not change that interpretation. Janssen further asserts that measuring the diameter in terms of mesh cut looks beyond the plain meaning of the term "diameter." Eon, whose ANDA calls for cores measuring 20-25 mesh, naturally seeks a claim construction in which the mesh size is a positive limitation in the claim, or at least a product by process limitation. We believe that a claim construction in which "25-30 mesh" is a positive limitation best describes the invention of the '015 patent.

The shortcoming of Janssen’s arguments is that they fail to take into account the patentees’ description of what they invented. Specifically, whenever the written description describes the size of the cores, it always includes the mesh cut, see abstract line 2; col. 1, ll. 52, 53; col. 2, ll. 6, 12, 27; col. 3, line 23; col. 4, line 57; col. 5, line 18, and only rarely (twice) includes the micron size limitation (600-700 umm). Indeed, there are six places in the written description where the size of the cores is referred to only as "25-30 mesh" and nowhere is the micron size limitation referred to alone. Also counseling against adopting Janssen’s proposed claim construction is the fact that we generally interpret claims so that no term is superfluous. See Merck & Co. v. Teva Pharms. USA, Inc., 395 F.3d 1364, 1372 (Fed. Cir. 2005) (“A claim construction that gives meaning to all the terms of the claim is preferred over one that does not do so.”); Power Mosfet Techs., L.L.C. v. Siemens AG, 378 F.3d 1396, 1410 (Fed. Cir. 2004) (stating that interpretations of claims rendering claim terms superfluous is generally disfavored). Were we to conclude that claim 1 simply covers all cores having a diameter 600-700 umm across the center we would be rendering the phrase "25-30 mesh" superfluous. The mere fact that a limitation is placed within parentheses does not mean it is no longer a part of the claim.

Additionally, evidence adduced at trial suggests that a person of ordinary skill in the art reading the claims in conjunction with the written description would understand claim 1 to require cores selected according to the industry standard sieving process and not simply particles having a certain micron diameter. In the pharmaceutical industry, cores are measured and labeled based on the size sieve they fall through. For example, a group of particles that falls through a 25 mesh sieve but stays on top of a 30 mesh sieve will be labeled "25-30 mesh," with the particles generally having diameters in the range of 600-710 umm. Similarly, a group of particles that falls through a 20 mesh sieve but stays on top of a 25 mesh sieve will be labeled "20-25 mesh," with the particles generally having diameters in the range of 710-850 umm. 2 There is no dispute that drug manufacturers identify core size based on mesh cut for pharmaceutical use. In fact, even one of Janssen’s research scientists testified that "mesh" "was an expression of the size of the sugar spheres, based, for example, on the number of sieve openings per surface unit." Thus, one having ordinary skill in this art would interpret "a diameter of from about 600 to 700 umm (25-30 mesh)" to describe cores 1) labeled 25-30 mesh at the time of manufacture and classification, and 2) having a particular diameter, about 600-700 umm.

2 At the time of manufacture and packaging for pharmaceutical use, 100 of the cores in a labeled product have fallen through the sieve with the larger openings and remained on top of the sieve with the smaller openings noted on the label. No manufacturer measures the size of individual cores. For quality control, a manufacturer performs analytical sieving (a second round of sieving) on a sample of the cores it intends to use to verify the sieves have produced a product which conforms to allowable specifications. To be within the standards of the American Society for Testing and Materials...
("ASTM"), the distribution of particles in a given lot may contain up to 10 cores larger than the largest named sieve and up to 10 cores smaller than the smallest named sieve.

3 Janssen also asserts that the district court improperly construed the term "about." Because the meaning of this term has no effect on our infringement and validity analyses, we do not reach the issue of its correct interpretation.

7. Less Than About 1 Liter / Minute

The seventh disputed claim term "less than about 1 liter/minute" is found in Claims 1 and 38 as set forth above.

   Erbe's Proposed Definition: 1 liter/minute or less than 1 liter/minute.

   Canady's Proposed Definition: Less than 1 liter per minute.

(Docket No. 42, p. 9). In viewing the claim language itself, it is clear that the term means less than 1 liter/minute. The prosecution history supports this construction. For example, in viewing the prior art of the '675 patent, the patent examiner noted that Canady fails to specifically disclose a flow rate which is less than 1 liter per minute. (Docket No. 63, Ex. 18, pp. 5-6). In response to this action by the patent officer, Erbe responded that "[a] flow rate of 1 litre per minute leads to a flow velocity of 19 m/h. …Such velocities in Canady would certainly be classified as laminar jets.…." (Docket No. 63, Ex. 19, p. 12). Because the '745 patent is limited to low flow rates that avoid the production of laminar jets and produce only non laminar, inert gas atmospheres (Id.), the term "less than about 1 liter/minute" must be construed as less than 1 liter per minute.

C. About a 75 Degree Arc

Claims 10, 23, and 38 provide, respectively: "light-transmissive material extends through about a 75 arc circumferentially;" "extends through about a 75 degree arc circumferentially of said elongated outer tube wall;" and "light transmissive window extends through about a 75 arc circumferentially of said wall."

Clinical Innovations argues that these claim terms should be construed to mean:

   The light-transmissive material extends only to about, approximately, or in the vicinity of a 75 degree arc around the tube. The material cannot extend to any materially greater amount, such as 100 degrees or all the way around the tube. 48

Utah Medical argues that they should be construed to mean:

   At least one of the windows that is made of light-transmissive material extends through a circumferential 75 degree arc of the outer tube circumferential wall. Any completely transparent device includes an arc of about 75 degrees, such as a totally clear tube. 49
The Court finds that "about" is so commonly understood a term that these claim terms need little or no construction. When used with numbers, "about" means "nearly, approximately; not many more or less." 50 or "reasonably close to." 51 No matter what dictionary is used, "about a 75 degree arc" cannot mean something that includes "a 360 degree arc." The Court finds Utah Medical's arguments to the contrary to be unpersuasive.

The Court construes these claim terms to mean "the light-transmissive material cannot extend to any materially greater amount such as all the way around the tube."

GO BACK

31

2. "About a Center Line"

The parties also disagree as to the definition of "about a center line," another term used by the Court in construing "meander." Guidant asserts that "about a center line" means there must be the same amount of stent elements on either side of the line. By contrast, Medinol argues that "about a center line' means that the meander is oriented in a straight line, with repeating elements on either side of the straight line being the same distance from the line on each cycle." 99 But Medinol's definition cannot be correct because it is simply a long-winded way of saying "periodic." 100 Medinol's expert essentially admitted this at his deposition. 101 For this reason alone, Medinol's proffered definition must be rejected.

100 See Def. Reply at 5 ("By definition, a 'periodic pattern' has 'repeating elements on either side of the line being the same distance from that line').
101 See Snyder Dep. Tr. at 106, Ex. 5 to Shaffer Decl.:

103 Id.

104 See 2004 U.S. Dist. LEXIS 19705, [WL] at *5 n.64 (quotation and citation omitted).

Medinol argues that Guidant's definition would exclude two preferred embodiments of the patents-in-suit, namely Figures 2 and 7. Medinol is wrong as to both. While Medinol points to a center line in Figure 2 that appears to place unequal amounts of stent material on either side of the line, there is no indication in the written description that this was intentional. A court cannot rely on what could simply be a poor drawing. 105 Moreover, Guidant correctly notes that accepting Medinol's argument regarding Figure 2 would mean that Figure 2 does not meet Medinol's own definition of center line, which requires that "repeating elements on either side of the line [be] the same distance from that line." 106

105 See Nystrom, 424 F.3d at 1149 (citation omitted) (a court should not rely purely on drawings to gauge proportions between elements). Indeed, I note that the other center line depicted in Figure 2 does appear to leave equal amounts of stent material on either side of the center line.

106 Def. Reply at 6 n.5 (quoting Pl. Reply at 11).

Regarding Figure 7, Medinol contends that "under Guidant's definition, a longitudinal structure extending over an odd number of cells in a Figure 7-like stent can never be a "meander," because there will always be more loops on one side of the line." 107 But Medinol ignores the fact that Figure 7 is not intended to depict an entire stent, so the fact that there are an unequal number of loops on either side of Figure 7's center line is of no consequence. 108 Even if Figure 7's pattern were used throughout an entire stent, Guidant's definition can be refined to require that the elements of the stent be uniformly distributed on each periodic cycle.

107 Pl. Reply at 10 (citing Medinol PTO Statement at 5, where Medinol stated that the length of a stent "can be changed by removing or adding a row of cells") (emphasis added).

108 See, e.g., '120 Patent, col. 2, ll. 43-44 ("FIG. 7 is an illustration of a third embodiment of the pattern for the stent") (emphasis added).

Finally, Medinol asserts that its definition of "about a center line" is established by a PTO examiner's drawing, during prosecution, of a center line on a putative second meander pattern of the Burmeister application, a prior art stent design. 109 But it is unclear why a drawing made years before my claim construction in this case should override the plain meaning of the patents-in-suit and the intrinsic evidence before this Court.

109 See Pl. Mem. at 14. The Burmeister application, filed in 1994 and then abandoned, was discussed in Medinol III, 2005 U.S. Dist. LEXIS 35866, 2005 WL 3535062, at **2-3, 12. This drawing shows that the PTO examiner's center line leaves a much larger portion of the Burmeister application's putative second meander pattern below the line than above the line. See Pl. Noninfringement P65.

For these reasons, I conclude that "about a center line" means that the stent elements must be uniformly distributed about a center line on each periodic cycle. This is consistent with the plain meaning of "center line." 110

110 "Centerline" is defined as "A real or imaginary line that is equidistant from the surface or sides of something." Merriam-Webster Dictionary. Accord Webster's Ninth New Collegiate Dictionary (1991) (same).

The phrase "about said centerline" further characterizes the "lamp support means" as extending around the reflector center line and supporting the compact fluorescent lamps laterally spaced away from the centerline.
B. FLANGE

The claimed unit calls for a "tank rim engaging flange about its perimeter, said housing is positioned atop the tank with the flange engaged on the rim of the tank." There are two issues of disagreement regarding the flange: 1) whether the term "about" its perimeter is defined as "completely around" its perimeter, and 2) whether the flange must extend outwardly.

Plaintiff argues that the term "about" does not mean "completely around," and that the ordinary and accustomed definition can mean either "partially about" or "completely about." He uses the example of people sitting about a campfire to illustrate that one would ordinarily envision people unevenly dispersed around a campfire, not completely encircling the campfire. Although the drawings and the preferred embodiment illustrate a flange completely around the perimeter of the unit, Plaintiff points out there is no limitation or modifier of the word "about" in the claim language. Accordingly, Plaintiff contends the claim should not be limited to the preferred embodiment. Plaintiff also argues that "about its perimeter" is not a limitation, but simply refers to the location of the flange. Finally, Plaintiff argues that, because Claim 10 refers to a "support flange" and Claim 1 refers only to a "flange," Claim 1 should be interpreted broadly, based on the doctrine of claim differentiation.

On the other hand, Bunn-O-Matic argues that the term "about" means "completely around," reasoning that "completely around" is the ordinary and accustomed meaning, based on at least one dictionary definition. Defendant contends that the illustration of the invention in Figure 4 supports its definition. Defendant suggests that using the word "completely" next to "about" in the claim would be redundant, using the example of the term "completely pregnant" to illustrate its point.

After applying the rules of claim construction, the Court holds that the Plaintiff's interpretation of the "flange" language is correct.

a) Claim Language

The analysis begins, as always, with the language of the claim, which calls for a "tank rim engaging flange about its perimeter." The general term "about" does not contain a modifier, thus, rules of claim construction would suggest that none be added. The terms "completely" or "partially" are not mentioned next to the term "about."

The paragraph just prior to the claim states: "Having illustrated and described only one typical preferred form and embodiment of my invention, I do not wish to be limited to the specific details herein set forth, but wish to reserve to myself any modifications and/or variations that might appear to those skilled in the art and which fall within the scope of the following claims:" (‘664 Patent Col. 14 line 15-21).

1 Unless otherwise noted, all patent reference will be to the ‘664 patent and citations will refer first to column number, then to the first line of the cited language. Thus, Column 14 line 15-21 of the ‘664 patent will be cited as "(Col.14:15)".

Defendant argues that this is simply boilerplate language. Plaintiff contends that the boilerplate language reflects the language of the statute, which only requires that the inventor "set forth the best mode contemplated by the inventor of carrying out his invention." 35 U.S.C. § 112. It is apparent to the Court that the patentee did not want to limit the scope of the claims. It is also apparent that the inventor informed the public that the described invention was only one preferred embodiment, to which the claims should not be limited.

b) Written Description

The Court next looks to the patent specification, that is, the written description. The paragraph immediately preceding the
"DESCRIPTION OF DRAWINGS" states "The foregoing and other objects and features of my invention will be fully understood from the following detailed description of one typical preferred form and application of my invention, throughout which description reference is made to the accompanying drawings." ('664 Patent Col. 4 line 57). Therefore, the inventor intended that the description and drawings were only one preferred embodiment of the invention.

The specification of the preferred embodiment describes "an outwardly projecting horizontal support flange 34 about the upper perimeter of lower said portion defined by the walls 30, 31, and 32." (Col. 7:32). Again, there is no modifier or limitation to the term "about," however, for location purposes, the description denotes that the flange is "about the upper perimeter" of the lower portion of the housing, as opposed to simply "about its perimeter" as in Claim 1. This supports Plaintiff's argument that the terms were used to identify the location of the flange, not to impose a limitation. Although Figure 4 of the preferred embodiment illustrates a flange completely around the perimeter of the housing unit, the law does not limit the claim to the preferred embodiment.

c) Prosecution History

Third, the Court looks to the patent prosecution history. The history provides no specific reference to the flange or the terms "about its perimeter." However, included in the letter from the PTO after the PTO's approval is the following Examiner's Statement of Reason for Allowance: "The primary reason for the allowance of claims 1-18 was the combination of the supply tank and attachment unit, said attachment unit comprising a housing mounted atop said tank and enclosing dry powdered beverage concentrate and water discharge apparatus which operate in response to the level of beverage in the tank. The above was found in all the claims but not in the prior art." (Pl. Ex. 7 p.2).

Thus, the primary reason for allowance was not the specific elements of the invention, but the overall combination into one unit. This factor also weighs in favor of a broad definition of the terms.

d) Dictionary Definition

Finally, the Court looks to a dictionary definition to suggest an ordinary and accustomed meaning to the term. However, the dictionary definition cannot be used if it varies or contradicts the terms of the claim. Vitronics, 90 F.3d at 1584 n.6.

The term "about" is used as a preposition in the phrase "about its perimeter." Looking to the meaning as it refers to a preposition, the following relevant definitions appear: "1. around; on all sides of; 2. here and there in; everywhere in; 3. near to." WEBSTER'S NEW WORLD COLLEGE DICTIONARY 4 (3d ed. 1997). Another dictionary cites the following: "1. on all sides of: surrounding; 2. in the vicinity of: around; 3. almost the same as: close to." WEBSTER'S II NEW RIVERSIDE UNIVERSITY DICTIONARY 67 (1994). It would seem that both Plaintiff's proffered definition and Defendant's proffered definition are plausible. However, the fact that Plaintiff argues that the term not only means here and there, but is also an identifier of the location of the flange weighs in Plaintiff's favor, accounting for two out of a possible three definitions in each dictionary.

e) Extrinsic Evidence

The meaning of the term "about" is made clear from an analysis of the intrinsic evidence and the dictionary, therefore, it is unnecessary to look to extrinsic evidence for claim interpretation.

Based on the foregoing analysis, the Court holds that the term "about" in this context is not limited to "completely around." The term "about" does not contain a limitation or modifier in the claim language and therefore none should be read in to its meaning. Plaintiff's argument that "about the perimeter" identifies the location of the flange, and that the interpretation of the claim should not be limited to the preferred embodiment is in accordance with proper patent construction rules.

34

3. Claim 6, Step (c)

Step (c) reads: "Forming a second circumferential incision in the epidermis about 3 millimeters cranial to the first
circumferential incision, thereby severing at least some of the subcutaneous fascia from the ungual crest …." Defendant argues that Step (c) is invalid for indefiniteness in two ways.

First, Defendant asserts that the phrase "about three millimeters" provides no instruction to those skilled in the art and is thus indefinite. Defendant relies primarily on In re Oetiker, 23 U.S.P.Q.2d 1641 (Bd. Pat. App.1990) (finding indefinite the phrase "length on the order of 5 mm" to describe leg portions of a patent), and Ex parte Brummer, 12 U.S.P.Q.2d 1653, 1989 Pat. App. LEXIS 11 at *4 (Bd. Pat. App. 1989) (holding patent claims to a bicycle seat indefinite because the seat's measurements were based on a percentage of the rider's height and weight, reasoning "the same bicycle might fall within this language … when ridden by a rider or one combination of weight and build, but not when ridden by a rider of another"). Plaintiff, pointing to the specification, argues that this terminology has a clear meaning. The specification explains: "The position of the second incision 3 millimeters cranial of the first incision is based upon the average size of the household cat. For smaller animals the distance will be smaller, and for larger animals the distance will be larger." Id.

As stated above, when a "word of degree" is used in a claim, a court "must determine whether the patent's specification provides some standard for measuring that degree." Datamize, LLC, 417 F.3d at 1349. In In re Oetiker, the court held "have a length of the order of 5 mm" indefinite because "there are no guidelines in appellant's specification to enable one skilled in the art to determine whether or not a given leg portion has a length of the order of 5 mm." 23 U.S.P.Q.2d 1641, 1990 Pat. App. LEXIS 37 at *15. In contrast, the '579 patent's intrinsic evidence provides at least some guidance as to the second incision's location and purpose. The specification, which is accompanied by Figure 2, explains:

The traction in the direction T causes the epithelium to release from its distal attachment and permits a second circumferential incision of the redundant epithelium approximately 3 millimeters cranial from the first incision along the line B-B. This second incision allows slightly deeper subcutaneous fascia to be moved cranially over the ungual crest as well.

The position of the second incision 3 millimeters cranial of the first incision is based upon the average size of the household cat. For smaller animals the distance will be smaller, and for larger animals the distance will be larger.

The Federal Circuit, considering similar allegations of indefiniteness, has permitted approximate measurements if the words used are "as accurate as the subject matter permits." See Orthokinetics v. Safety Travel Chairs, Inc., 806 F.2d 1565, 1576 (Fed. Cir. 1986). In Orthokinetics, the court found valid the term "so dimensioned," which the patent used to describe the measurements of a pediatric wheelchair that helped disabled children in and out of cars:

In a wheel chair having a seat portion, a front leg portion, and a rear wheel assembly, the improvement wherein said front leg portion is so dimensioned as to be insertable through the space between the doorframe of an automobile and one of the seats thereof whereby said front leg is placed in support relation to the automobile and will support the seat portion from the automobile in the course of subsequent movement of the wheel chair into the automobile ….

Id. at 1568 (emphasis added). The court acknowledged that "one desiring to build and use a travel chair must measure the space between the selected automobile's doorframe and its seat and then dimension the front legs of the travel chair so they will fit in that particular space in that particular automobile," but found that "the claims were intended to cover the use of the invention with various types of automobiles" and that the phrase was "as accurate as the subject matter permits, automobiles being of various sizes." Id. at 1576. The court emphasized that "patent law does not require that all possible lengths corresponding to the spaces in hundreds of different automobiles be listed in the patent, let alone that they be listed in the claims." Id; see also Andrew Corp. v. Gabriel Elecs., 847 F.2d 819 (Fed. Cir. 1988) (finding the words "approach each other," "close to," "substantially equal to" and "closely approximate," which described the configuration of a horn reflector microwave antenna used in long distance telephone and data networks, specific enough because "it became very clear during trial … that curves showing RPEs for horn antennas will never be identical."); Rosemount, Inc., 727 F.2d at 1547 (Fed. Cir. 1984) (finding the phrase "close proximity," which described the distance between a mounted transistor and high impedance material, acceptable because the description was "as precise as the subject matter permits").

In light of Orthokinetics, Andrew Corp. and Rosemount, the Court finds that Defendant has not proved by clear and convincing evidence the phrase "about three millimeters" is indefinite. The claim could be more definite, but in light of the specification, Figure 2 and the variation inherent in cat sizes, the Court finds that one skilled in the art would know where to make the second incision.
At oral argument, Defendant presented an exhibit depicting five photographs of post-operative cat claws. Dr. Young testified that he believed the cat claws numbered 3 and 5 were larger-than-average; yet, when defense counsel measured the distance between the striation marks of the first and second incisions, it was less than 3 millimeters. Defendant argues that this in-court exercise demonstrates the indefiniteness of the 3 millimeter estimate and the specification's statement that "for smaller animals the distance will be smaller, and for larger animals the distance will be larger." Although the specification contains the preferred embodiment, which states that the distance between incisions correlates to the size of the cat, the Court will not narrow Claim 6, step (c) accordingly. While the phrase "about three millimeters" is not as precise as possible, the claim avoids indefiniteness because it is not "insolubly ambiguous." Honeywell Int'l, 341 F.3d at 1338; see also Exxon Research & Eng'g Co. v. United States, 265 F.3d 1371, 1375 (Fed. Cir. 2001).

Second, Defendant contends that Step (c)'s use of the word "epidermis" renders it indefinite. Defendant queries how the epidermis, which it defines as "the surface layer of the skin," can be incised in Step (c) if the epidermis has already been incised in Step (a) ("forming a first circumferential incision … in the epidermis …"). 9 noting that the top layer of skin cannot be incised twice. The specification only adds to the confusion, Defendant asserts, because it instructs the surgeon to make a "second circumferential incision of the redundant epithelium approximately 3 millimeters cranial from the first incision." Defendant notes that a medical dictionary defines epithelium as "the covering of internal and external surfaces of the body." See DORLAND'S ILLUSTRATED MEDICAL DICTIONARY 400 (26th ed. 1981). In other words, Defendant argues that the definitions of epidermis and epithelium are mutually exclusive because cutting into the epithelium requires cutting through the epidermis and the underlying layers; thus, both terms cannot be used to describe the skin to be incised in Step (c). Plaintiff counters that "epithelium" and "epidermis" can be used interchangeably when referring to a feline's claw.

Because of its use of the words "and then" between all steps, Claim 6 requires the surgeon to have completed Steps (a) and (b) before moving to Step (c).

A word will not render a claim invalid if it can be given any reasonable meaning: "If the meaning of the claim is discernible, even though the task may be formidable and the conclusion may be one over which reasonable persons will disagree, we have held the claim sufficiently clear to avoid invalidity on indefiniteness grounds." Datamize, LLC v. Plumtree Software, Inc., 417 F.3d 1342, 1347 (Fed. Cir. 2005) (citing Exxon Research & Eng'g, 265 F.3d 1371, 1375 (Fed. Cir. 2001)). In this case, the '579 patent's subject matter, the other steps in Claim 6, the specification's language, and Figure 2, all taken together, adequately instruct a person skilled in the art that the word epidermis, as used throughout Claim 6, simply means "skin," and does not refer only to the skin's top layer. 10 The patent's intrinsic evidence conveys that the second incision must occur after the first incision during which some skin will have already been retracted. The intrinsic evidence also makes clear that the second incision's purpose is to retract more skin for covering the post-operative wound. Although the claim is certainly not an example of clear drafting, a person skilled in the art would be able to discern the meaning of the word "epidermis" as used in Step (c). Thus, the word does not render the claim indefinite.

Indeed, this more general definition has been used in at least one respected medical dictionary. See TABLER'S CYCLOPEDIC MEDICAL DICTIONARY (17th ed. 1993) (defining "epidermis" as "skin").
Whirlpool contends that the term "above" should be construed to mean "on top of." Defendants contend that the term "above" should be construed to mean "over." Both definitions are found in the dictionary. For example, the Oxford English Dictionary Online defines "above" as "Directly over, vertically up from; on or over the upper surface; on the top of, upon, over." Accordingly, the Court must determine which definition best matches the term as it is used in the context of the patent. Home Diag., Inc. v. LifeScan, Inc., 381 F.3d 1352, 1358-59 (Fed. Cir. 2004).

Whirlpool contends that its proposed construction of "above" to mean "on top of" best matches the term as used in the context of the patent because the patent specification repeatedly and consistently refers to cloth items "above" the impeller as being in direct contact and in frictional engagement with the impeller. For example,

"The motion of cloth items within the wash chamber is created by direct contact between an oscillating impeller and the cloth items supported above the impeller."

'722 Patent, col. 2 ll. 43-45 (emphasis added).

This inverse toroidal rollover pattern is created by direct contact between the oscillating impeller and the cloth items supported above the impeller.

'722 Patent, col. 3 ll. 3-5 (emphasis added).

However, when the impeller 40 oscillates, the frictional engagement between the impeller 40 and the cloth items in the lower transfer zone . . .

'722 Patent, col. 5 ll. 60-63 (emphasis added).

Defendants contend "above" should be construed according to its ordinary meaning of "over." Defendants contend that Whirlpool's attempt to narrowly construe "above" to mean "on top of" is an effort to imply contact and frictional engagement between the impeller and the cloth items and is designed to respond to Defendants' prior art defenses. Defendants contend these efforts must fail because the specifications cannot be used to limit the claims. In addition, Defendants contend that the word "above" should not be given two different meanings within the same patent. Claim 3 refers to "free liquid in which the cloth items can be suspended in above the impeller." '722 Patent, Claim 3, col. 12 ll. 16-17. Defendants note that cloth items cannot be suspended "on top of" the impeller, and that this is a further basis for defining "above" as over.

The Court agrees that the reference in Claim 3 to "liquid in which the cloth items can be suspended in above the impeller," indicates a use of "above" that does not necessarily mean on top of or in physical contact with the impeller. Furthermore, Claim 2 recites "a lower transfer zone immediately above the impeller" and Claim 6 recites "less than the quantity of wash liquid at which the cloth items lose frictional engagement with the cloth items directly above the impeller." If "above" were to be construed to mean "on top of" it would render the terms "directly" and "immediately" superfluous.

In contrast to the difficulties met when "above" is construed to mean "on top of," construing "above" as "over" is appropriate in all contexts in the patent. There may be other terms used in the patent that suggest touching between the cloth and the impeller, but the use of the term "above" does not. It appears that the term "above" was used in its broad and most common form to mean "over," and that it is narrowed in the claims through its association with other terms such as dragged, frictional engagement, directly, and immediately. Accordingly, the Court will construe "above" as "over."

"Above" in Element 3

Turning to the term "above" in element 3, 29 W. Mem. 27 echoes Whirlpool's claim 1 contention by asking for the more specific meaning of "directly over' something else." But nothing in the claim language calls for such a narrow definition. If
anything, the earlier analysis as to the use of the word "adjacent" applies here a fortiori. In normal parlance, the spatial relationship indicated by the term "above" far less frequently connotes "immediately above" than "adjacent" suggests "immediately abutting." Importantly, the functionality obtained by placing the stepped portion of the upper rack above the high side wall of the lower rack is not necessarily thwarted if the stepped portion is not directly over the side wall, for oversized items can still fit into the larger space created on that side of the washer. In all events, though, the functionality is not incorporated in the claim language.

30 That functional purpose is not served by stepped portions of the upper rack that are positioned too far inward from the high side wall of the lower rack.

31 If Maytag had wanted to advert to all three stepped portions, it could readily have drafted the element to say (for example) "above said basic rack" rather than "above said one higher side wall of said basic rack" (contrast element 1 with element 3). Indeed, M. Mem. 29 characterizes the term "above" as identical to "adjacent," and the other less elevated steps are certainly not adjacent to the high side wall of the lower rack.

This Court therefore rejects both polar positions offered by the parties. As used in element 3, "above" means neither "directly above" nor simply "at a higher place than." Instead it means "at a place higher than the high side wall such that a sufficient space is formed laterally inward from that side wall and vertically between that wall and the stepped portion of the upper rack to enable the washing of oversized articles."

37 c. "above"

A claim construction that excludes a preferred embodiment is "rarely, if ever, correct." Vitronics Corp. v. Conceptronic, Inc., 90 F.3d 1576, 1583 (Fed. Cir. 1996). The first element of claim 1 recites that the metal interconnect layer is formed "above" the substrate surface. The specification states, as illustrated in Figure 1, that the interconnect layer (16) may be separated from the substrate layer (10) by a dielectric layer (12). Thus, the metal interconnect need not sit directly on top of the substrate layer. As is advocated by EMI, the court finds that the term "above" means higher than, but not necessarily directly in contact with.

38 b. The "above" limitation

Claim 1 requires a "a first semi-spherical reflector mounted above the first LED." 5 Defendants submit that the ordinary and customary meaning of "above" is "in or to a higher place; overhead." 6 Terlep argues that since the dictionary definition of "above" impliedly uses the Earth as a reference point and the Earth is nowhere mentioned in the claims, that the Court must
look to other intrinsic evidence to correctly construe what "above" means. Terlep, however, points to no intrinsic evidence outside the claims themselves the Court should consider. The only evidence Terlep points to is his deposition wherein he testified "The relationship between the reflector and LED is not referenced to the world. It's referenced to each other."

5 Doc. 29, Ex. 1 (The '433 patent), column 6, lines 20-21.

6 Webster's Encyclopedic Unabridged Dictionary of the English Language (1989).

Extrinsic evidence used in construing a patent's claim includes the inventor's testimony. Zodiac Pool Care, Inc. v. Hoffinger Industries, Inc., 206 F.3d 1408 (Fed. Cir. 2000). A court should turn to extrinsic evidence only when the intrinsic evidence is insufficient to establish the clear meaning of the asserted claim. Zodiac, 206 F.3d at 1414. The use of extrinsic evidence when construing a patent's claims is rare. See Bell Atlantic Network Services, Inc. v. Covad Communications Group, Inc., 262 F.3d 1258 (Fed. Cir. 2001); Dow Chemical Co. v. Sumitomo Chemical Co., Ltd., 257 F.3d 1364 (Fed. Cir. 2001). A court acts improperly when it uses extrinsic evidence to contradict claim construction unambiguously apparent from the intrinsic evidence. Pitney Bowles, Inc. v. Hewlett-Packard Co., 182 F.3d 1298 (Fed. Cir. 1999). Litigation induced pronouncements of an inventor have no effect on what the words of a claim do in fact convey. Lear Siegler, Inc. v. Aeroquip Corp., 733 F.2d 881 (Fed. Cir. 1984).

Here, if the Court accepted Terlep's testimony as a correct construction of the "above" limitation, the "above" limitation would effectively be read out of the claim. This would be in clear contradiction to the intrinsic evidence and the ordinary and customary meaning of the word itself. Such an interpretation would also be in contradiction to Figures 2A and 2B 7, which are drawings of the embodiment, and the descriptions of the figures. 8 Figures 2A and 2B show a reflector mounted above, in a higher place than, or overhead of an LED. Therefore, the Court construes the "above" limitation to mean "a first semi-spherical reflector mounted in a higher place than or overhead of the first LED."

2. What is the Proper Construction for the Phrase "heating . . . in the absence of pressure or shear" in the '311 Patent?

Claim 1 and claim 94 of the '311 patent include the phrase: "heating said substantially uniform mixture, in the absence of pressure or shear sufficient to convert the binder particles . . . ." KXI contends the phrase "in the absence of pressure or shear sufficient to convert the binder particles" means that any pressure and shear applied to the "substantially uniform mixture" during heating should not be sufficient to convert the binder particles to a continuous web matrix or forced point-bonds. KXI also contends this phrase does not require that all of the mixture be heated prior to the application of sufficient pressure and shear to convert the binder particles. Culligan contends "in the absence of pressure or shear sufficient to convert the binder particles" means subjecting the mixture to "as little pressure and shear as possible during the entire heating process." Culligan contends at a given location along the extruder, the entire mixture must be fully heated before sufficient pressure and shear are applied to the mixture to convert the binder.

According to KXI, some pressure or shear is permitted while the mixture is being heated, so long as there is not enough pressure or shear to convert the mixture into a continuous web matrix or forced point-bonds. KXI cites passages from the '311 patent specification that disclose the presence of some pressure or shear before the "substantially uniform mixture" has been heated to a temperature above the binder's softening temperature. See U.S. Patent No. 5,019,311, column 19, lines 35-48; column 19, lines 39-42; column 12, lines 61-66.

Culligan argues that the prosecution history of the '722 patent supports its interpretation. The application which led to the '722 patent was originally filed as a subsequent, divisional application of the co-pending application which led to the '311 patent, and was prosecuted after the '311 patent issued. The court will not rely on the prosecution history of the '722 patent here in interpreting the claims of the '311 patent.

Culligan cites passages from the '311 patent's specification stating that no pressure should be applied after heating. Culligan cites column 18, line 67 to column 19, line 2. This states "during heating, no pressure is applied and no effort is made to consolidate the powder. The powder must be at the desired temperature before pressure and shear are applied." The court notes, however, that the statement was made in the context of a discussion of compression molding, one method offered for producing the composite material. Culligan also cites passages from the '311 patent's specification stating that the mixture should be heated "in the absence of any significant pressure or shear." U.S. Patent No. 5,019,311, column 5, lines 3-15; column 12, lines 33-41.

The court agrees with KXI that the '311 patent's specification permits some pressure or shear to occur before the particulate mixture has been heated to a temperature "substantially above the binder's softening temperature." The court construes the contested phrase according to the plain language of the words of the claim. Accordingly, the court construes the phrase "in the absence of pressure or shear sufficient to convert the binder particles" as follows: any pressure and shear applied to the mixture must not be sufficient to convert the mixture to a continuous web matrix or forced point-bonds until the mixture has been heated to a temperature substantially above the softening temperature of the binder.

KXI contends the claims of the '311 patent do not require all the mixture to be heated prior to the application of sufficient pressure and shear to convert the binder. Culligan contends that all of the mixture at a given axial location must be fully heated before pressure and shear are applied to convert the binder. The court finds no reason to read either of these interpretations into the definition of the contested phrase.

2. Claim 2

Both parties have identified one phrase in dependent Claim 2 that requires construction - "absorbable plug." Claim 2 describes a needle assembly as claimed in Claim 1 wherein the means for positioning includes "an absorbable plug." (760 Patent col. 5. ll. 52-53.) The Court has already construed the term plug. Thus, the only issue is the construction of the term
"absorbable." The World Wide Plaintiffs urge the Court to construe this phrase as "which can be broken down and absorbed within the human body, but not necessarily eliminated." AnazaoHealth has defined absorbable as "where such material is taken up by the body especially by capillary, osmotic, solvent, or chemical action, but does not include material comprising solid polymers that can be carried in a volatile organic solvent."

Webster's Third New International Dictionary defines "absorbable" as "capable of being absorbed." Id. at 7. "Absorb" is defined as "to take up by various means," citing as examples by capillary, osmotic, solvent, or chemical means. Id. The Court agrees with the World Wide Plaintiffs that the term should not be limited to examples listed in one particular and general dictionary. See Phillips, 415 F.3d at 1321-22 (discussing the hazards of relying on general dictionary definitions). Perhaps a more meaningful dictionary definition is from Dorland's Illustrated Medical Dictionary, which defines "absorb" as "to take in or assimilate, as to take up substances into or across tissues." Id. at 7 (28th ed. 1994).

The only reference in the specification to an absorbable plug is in the summary of the invention wherein it states that the biocompatible end plug may be made of a variety of materials including absorbable or non-absorbable suture materials. ('760 Patent at 2:36-37.) The Dorland's Medical Dictionary defines absorbable sutures as "a strand of material used for closing wounds which is subsequently either digested by proteolytic enzymes derived from inflammatory cells or hydrolyzed by water." Id. at 1614. American Cyanamid Co. v. U.S. Surgical Corp., 833 F. Supp. 92 (D. Conn. 1992), involved a patent for synthetic absorbable sutures. It described an absorbable suture as one which is designed to hold tissue together for only a few weeks while healing occurs and is then broken down by body moisture into components that the body can metabolize. Id. at 98.

The prosecution history references "absorbable" in distinguishing the Mercereau Patent, stating that Mercereau does not anticipate Claim 2, as amended, because the lubricious material, solid polymers in a volatile organic solvent, would not be absorbable. (W0481-W0482.) The fact that the patentees distinguished the material used by Mercereau, however, as not being absorbable does not mean that this should be incorporated into the construction of the term "absorbable."

The Court also finds no support in the intrinsic record for including the phrase added by Plaintiffs "but not necessarily eliminated." There is nothing in the specification or prosecution history that discusses whether an absorbable plug is eliminated from the body or not. Plaintiffs cite to the deposition of Mr. Lamoureux, who testified that one of ordinary skill in the art would recognize such a restriction. The Federal Circuit has cautioned that the testimony of an inventor concerning claim construction should be given little or no weight as it is often self-serving and an after-the-fact attempt to state what should have been part of the patent application. See Roton Barrier, Inc. v. Stanley Works, 79 F.3d 1112, 1126 (Fed. Cir. 1996); North Am. Vaccine, Inc. v. Am. Cyanamid, Inc., 7 F.3d 1571, 1577 (Fed. Cir. 1993), cert. denied, 511 U.S. 1069, 114 S. Ct. 1645, 128 L. Ed. 2d 365 (1994).

Accordingly, the Court finds that one of ordinary skill in the art would understand "absorbable plug" in the context of the '760 Patent to mean "an object or material used to fill or seal an opening that is capable of being assimilated or broken down by the human body."

42

2. "an absorbent core"

KC contends that the term "an absorbent core" found in Claims 1, 6, 8, and 10 means "a portion of the absorbent article containing a liquid permeable cover, a liquid permeable baffle, and an absorbent layer therebetween, having not more than one transverse fold line." (doc. 150 at 32-33.) First Quality agrees with most of KC's construction except for the phrase "having not more than one transverse fold line." First Quality argues this additional language "impermissibly attempts to read-in additional limitations from the stated 'object' of the invention." (doc. 168 at 84.)

In support of its construction, KC cites to the specification which provides, in relevant part, that the absorbent core "includes a liquid permeable cover, a liquid impermeable baffle, and an absorbent layer positioned therebetween." U.S. Patent No. 6,702,798 B2, col. 4, ll. 38-41. In addition, the specification explains that when the absorbent article is transversely folded along the demarcation line "the absorbent core will contain only one transverse fold line located approximately along transverse centerline Y-Y thereby minimizing the chance of fluid leakage." U.S. Patent No. 6,702,798.
Here, the evidence supports First Quality's construction. The pertinent specification language KC relies on to support its construction only encompasses one embodiment of the invention. The specification clearly states that "[w]hen the absorbent article is folded in this manner, the absorbent core will contain only one transverse fold line." Id. at col. 11, ll. 51-53 (emphasis added). This language indicates that only when the article is folded in this specific fashion will the absorbent core have only one transverse fold line. KC's proposed claim construction also conflicts with the previously cited section of the specification which provides that the purpose of folding the article at the demarcation line was to eliminate transverse folding of the absorbent core. See Id. at col. 1, ll. 40-48. Indeed, the specification readily supports First Quality's construction by clearly providing that the absorbent core "includes a liquid permeable cover, a liquid impermeable baffle, and an absorbent layer positioned therebetween." U.S. Patent No. 6,702,798 B2, col. 4, ll. 38-41. Thus, we conclude that the claim language and the specification supports First Quality's proposed claim construction. Therefore, we will construe the term "an absorbent core" found in Claims 1, 6, 8, and 10 to mean "a portion of the absorbent article containing a liquid permeable cover, a liquid impermeable baffle, and an absorbent layer therebetween."

Based on a review of claim language, the specification, and the prosecution history, the Court concludes that a wicking layer, even if separate from the storage core, forms part of the "absorbent panel," and thus must be included in making the thickness measurements. The patent's definition of "absorbent panel" itself provides little guidance on this issue. The specification of the Pieniak patent defines the 'absorbent panel as "comprising," certainly does not exclude the possibility that a separate wicking layer should be considered part of the absorbent panel. Nevertheless, the Pieniak patent's definition of "absorbent panel," by use of the term "comprising," does not exclude the possibility that a separate wicking layer should be considered part of the absorbent panel. Perhaps the strongest evidence that a wicking layer is a part of the "absorbent panel" comes from the Pieniak's patent description of its preferred embodiment. The preferred absorbent panel expressly includes "an associated wicking layer of densified cellulosic fibers provided on one or both of the expansive surfaces of the fibrous web for enhancing liquid transport within the absorbent matrix." Id. at 4:34-40; see also id. at 9:13-32 (indicating that the absorbent matrix in the preferred embodiment includes at least one wicking layer). In fact, Sample LBD included two wicking layers, both of which were considered part of the absorbent matrix and included in the thickness measurement listed in Table I. Id. at 9:13-39; [Tr. at 2097-98]. The specification thus teaches to one of ordinary skill in the art that if the diaper contains a wicking layer, it forms a part of the absorbent panel and must be taken into account in determining the thickness in the crotch region, and hence the CSB and AEI as well.

Paragon argues that the CS-10 layer in the accused diapers is not analogous to the wicking layers in Sample LBD because the former is separated from the storage core by a tissue layer, whereas the latter were embedded on the top and bottom sides of the fibrous web of the absorbent matrix. It follows from Paragon's argument that only wicking layers which are attached to the storage core fall within the definition of "absorbent panel," while wicking layers that are separate from the storage core do not.
The patent, however, does not teach that such a distinction should be made. The CS-10 layer in the accused diapers serves the same purpose and functions in essentially the same manner as the wicking layers in Sample LBD. The purpose of the CS-10 layer is to enable the diapers to handle high rates of urine discharge by facilitating the transportation of urine to the storage core. [Tr. at 1998-2000, 2014-15, 3180-84]. It performs this function by providing temporary storage capacity for urine, and, over time, permitting the urine to be distributed and absorbed by the storage core. Id. Thus, like the wicking layers in Sample LBD, the CS-10 layer plays an important role in the efficient acquisition and storage of urine by the superabsorbent material in the storage core. This identity of functionality strongly suggests to one of ordinary skill in the art, as matter of claim construction, that the patent's failure to make the distinction between a wicking layer which is embedded in the fibrous web and a wicking layer that sits atop the fibrous web warrants equal treatment for both types for purposes of determining the composition of the absorbent panel. See [Tr. at 3116].

In addition, the inclusion of a wicking layer, assuming the diaper in question contains one, in measuring the thickness of the absorbent panel corresponds with the primary objective of the Pieniak invention. The Pieniak patent is replete with statements and teachings that the "improved fit and comfort" objective of the claimed invention is directly related to reducing the bulk of the diaper in the crotch region. The Pieniak patent accordingly uses the cross-sectional area of the absorbent panel as the yardstick for determining whether a particular diaper is sufficiently thin and narrow that it is covered by the claims of the patent. The presence of a wicking layer in any diaper invariably contributes to the bulk in the crotch region. Because the CSB is the test provided in the patent to gauge the relative bulkiness of the diaper, the inclusion of the thickness and bulk of a wicking layer in making this calculation, regardless of whether it is separate from the storage core, is consistent with the patent's claimed coverage of only relatively low bulk disposable diapers.

The conclusion that a wicking layer, if present, forms part of the absorbent panel, is also consistent with the prosecution history of the Pieniak patent. In their last submission before allowance of the Pieniak patent, the applicants represented that the significance of the Pieniak invention was that it claimed a diaper with less bulk in the crotch region than the prior art. The applicants stated:

It is the Applicants who have discovered and claimed a diaper structure which is of a low bulk. . . . In this regard, claim 1 specifies a disposable diaper having a cross-sectional area in the portion of the diaper between the thighs of the wearer of no more than about 0.6 square inches. . . .

. . . claim 1 should be in condition for allowance as it now requires a diaper with low-bulk in the crotch region. . . .

[DTX 2, at 285, 287 (emphasis added)].

The Court does not mean to suggest that the applicants' representations to the patent examiner override the unambiguous language in claim 1 that only thickness of the absorbent panel should be measured in computing the CSB and AEI. The Court finds only that these remarks lend support to the conclusion that the inventor's definition of absorbent panel includes all the material sandwiched between the topsheet and backsheet that plays a role in the absorbent capabilities of the diaper. See [DTX 1, at 1:19-25].

Paragon asserts that if the Court holds that a separate wicking layer forms part of the absorbent panel, the Court would be construing claim 1 to require the presence of a wicking layer, a limitation not present in that claim. Paragon therefore asserts that such an interpretation would be contrary to the doctrine of claim differentiation, given claim 9's express requirement of the presence of a wicking layer in the absorbent matrix. This argument completely mischaracterizes the issue before the Court. The issue does not involve whether claim 1 requires an infringing diaper to contain a wicking layer. Rather, the issue before the Court is whether a wicking layer forms part of the absorbent panel, if the diaper accused of infringement contains this element. The Court's holding thus in no way adds the limitation of a wicking layer to claim 1 of the Pieniak patent.

Based on the foregoing, the Court finds that a person of ordinary skill in the art at the time of invention would have understood the term "absorbent panel" to include a wicking layer, if one is present, regardless of whether this layer is separate from or attached to the diaper's storage core. It follows that a wicking layer, if present, must be included in the thickness measurements underlying the determination of an accused diaper's CSB and AEI. 38
38 Even the Court did not find, as matter of claim construction, that one of ordinary skill in the art would conclude that a wicking layer, if present, forms a part of the "absorbent panel," the Court would find as a matter of fact that the CS-10 layer in the accused diaper forms a part of the absorbent panel. The evidence establishes that the CS-10 layer makes up the top layer of the absorbent panel, forming part of the absorbent capacity of the diaper itself. [Tr. at 3180-84]. The CS-10 layer absorbs and temporarily stores urine, gushes before distributing most of the urine to the storage core. [Tr. at 1752, 2000, 2014-15, 3180-84]. The CS-10 layer thus constitutes 'absorbent material" because it has the power, tendency, or capacity, to absorb. See Webster's Third New Int'l Dictionary 7 (1981).

I. Claim Construction

Claim construction is a purely legal question appropriate for the Court to decide on summary judgment. See Cybor Corp. v. FAS Techs, Inc., 138 F.3d 1448, 1451 (Fed. Cir. 1998). In conducting its claim construction, the Court considered the plain meaning of the words in Claim 1, the specification and the prosecution history. See Vitronics Corp. v. Conceptronic, Inc., 90 F.3d 1576, 1582 (Fed. Cir. 1996) (finding that the scope and meaning of a claim is determined by the language of the claim, the written description and the prosecution history of the patent). The Court's claim construction focused on the two key aspects of this action: (1) the meaning of the word "abutment" in the path of the latch arm and (2) the meaning of the word "prevent."

First, the Court interprets the word "abutment" under its ordinary and customary meaning. In Webster's Third New International Dictionary, abutment is defined as "the place where touching occurs" and "a fixed point from which resistance is obtained." Because "it is always necessary to review the specification to determine whether the inventor has used any terms in a manner inconsistent with their ordinary meaning," the Court has reviewed the specification as well. Vitronics Corp., 90 F.3d at 1582 (finding that the "specification acts as a dictionary when it expressly defines terms used in the claims or when it defines terms by implication."). The specification teaches the Court that the abutment or dimples must be positioned in the path of the arm and "extend laterally over the arm assembly where they are in position to abut it and restrict its rotation away from the floor." Specification at column 4, 1. 2-4. Thus, the Court construes abutment to mean a dimple that protrudes into the path of the arm a sufficient amount so as to restrict motion, but not necessarily so much so as to extend over the entire arm like a bar or even to protrude out like tabs. Although the specification uses the word "tabs," the claim itself purposefully does not use the word "tab." Most importantly, although the specification describes the abutment as extending over the arm, the claim itself merely defines the abutment as "positioned in the path." 1 If the patentee had intended the abutment to act as a bar or tab that truly extended over the path, he or she would have said so. The Court finds, however, that "in the path," is more specific and permits only a slight protrusion into the path.

1 Moreover, although the Court referred to Dr. Shiflett's report as merely a guide, he describes the purpose of the abutment or detents as the following: "As the arm brushes against the detents, the bracket shoulders flex away from one another causing a force to be exerted against them." (emphasis added). The foregoing language suggests that the abutment need not block the pathway, but, rather, it need only extend into the pathway far enough such that the arm brushes against the dimple. In fact, the word "brushes" implies that the dimple does not extend that far into the pathway.
3 The term "abuts" is contained in claims 48, 53, 54, and 59 of the '329 patent.

Plaintiff's Proposed Construction
makes direct contact with

Defendant's Proposed Construction
to be adjacent to, or to touch or join one
another

Plaintiff argues that the term "abuts" encompasses both objects in direct contact and objects adjacent to one another. OPENING at 3-4. Defendant argues that this term requires direct contact. RESPONSE at 5-6.

The term "abuts" is used in claim 48 of the '329 patent. This claim discloses:

48. A method for manufacturing an assembly that includes a socket body, a leakdown plunger, and a roller follower body, comprising the steps of:

   a) providing the socket body that has, at least in part, been cold formed to include a first socket surface, an outer socket surface, and a second socket surface;

   b) providing the leakdown plunger that has, at least in part, been cold formed to include a first annular plunger surface located at a first end of the leakdown plunger, an inner plunger surface provided with a cylindrical plunger surface that abuts an inner conical plunger surface;

   c) providing the roller follower body that has, at least in part, been cold formed to include:

      i) a plurality of roller walls that are configured to accommodate a roller;

      ii) a second roller cavity that is provided with a second roller surface and a second roller opening wherein a second inner roller surface is provided with a plurality of cylindrical surfaces and configured to accommodate the socket body and the leakdown plunger; and

   d) assembling the socket body and the leakdown plunger within the roller follower body so that the socket body and the leakdown plunger are located at least in part within the second roller cavity and the second socket surface of the socket body faces the a second annular plunger surface.

'329 patent at 44:11-38 (claim 48); see also id. at 45:31-67, 32:1-7 (claim 54). Claim 48 indicates that within the leakdown plunger, a cylindrical plunger surface abuts an inner conical plunger surface. Figure 25 depicts an embodiment of a leakdown plunger. Referring to this figure, the specification indicates:

The rounded plunger surface 251 is located adjacent to a first inner conical plunger surface 252, which is located adjacent to a second inner cylindrical plunger surface 253. The second inner cylindrical surface 253 is located adjacent to a second inner conical plunger surface 254, which is located adjacent to a third inner cylindrical plunger surface 255.

'329 patent at 17:63-18:1-2 (emphasis added). Figure 25 depicts an embodiment of the leakdown plunger disclosed in claim 48, and these disclosures imply that the patentee intended no distinction between the terms "abuts" and "adjacent."

Similarly, claim 53 discloses that a curved surface abuts a wall of the first inner roller surface. '329 patent at 44:65-67, 45:1-30 (claim 53). Figures 8, 9, and 10 depict a roller follower body. Referring to this figure, the specification indicates:

FIG. 10 depicts a first inner roller surface 50 depicted in FIGS. 8 and 9. . . . The second curved roller surface 55 is adjacent to a third angled roller surface 67 and a third roller wall 56.

'329 patent at 7:60-8:11 (emphasis added). As with claim 48, Figures 8, 9, and 10 depict an embodiment of the invention disclosed in claim 53, and these disclosures also imply that the patentee intended no distinction between the two terms.
It is important to note that claim 53 also discloses that a first angled surface is located adjacent to a first wall, a fourth wall, a first angled wall, and a first curved surface. '329 patent at 44:65-67, 45:1-30 (claim 53); see also id. at 46:25-58 (claim 59). Because the patentee uses both of the terms "abuts" and "adjacent to" in each of claims 53 and 59, the Court presumes that the use of both of these different terms in each claim connotes different meanings. CAE Screenplates Inc. v. Heinrich Fiedler GmbH & Co. KG, 224 F.3d 1308, 1317 (Fed. Cir. 2000) (citing Tandon Corp. v. U.S. International Trade Com., 831 F.2d 1017, 1023 (Fed. Cir. 1987)).

Yet, aside from this presumption based on the disclosure in only claims 53 and 59, the patentee uses these terms interchangeably throughout the '329 patent. The patentee makes no further disclosures that indicate an intention to distinguish the use of these two terms. As previously noted, the embodiments disclosed in Figures 8, 9, 10, and 25 correspond to portions of the inventions disclosed in claims 48 and 53, which imply that the patentee intended no difference in using these two terms. Moreover, the specification of the '329 patent uses the term "abuts" in a non-direct contact manner. See '329 patent at 17:35-37 ("the cylindrical plunger surface 281 may abut the undercut plunger surface 282 so that the conical plunger surface 283 is an annular surface"). As a result, these claims and portions of the specification, in conjunction, indicate that the term "abuts" is used interchangeably with the term "adjacent to" in the '329 patent.

Defendant argues that the term "abuts" requires direct contact. RESPONSE at 5-6. Defendant asserts that the embodiments disclosed in the specification show abutting surfaces as surfaces that are in direct contact. Id. However, as previously discussed, the embodiments disclosed in the specification indicate that surfaces that "abut" one another are also "adjacent to" one another and vice versa. Furthermore, Defendant points to nothing in the intrinsic evidence that indicate that these terms are not used interchangeably, nor does Defendant point to other intrinsic evidence that supports its proposed construction requiring direct contact.

Defendant also argues that this construction is supported by a dictionary definition. Id. While dictionaries are "often useful to assist in understanding the commonly understood meaning of words . . . in claim interpretation," Phillips, 415 F.3d at 1322, the "ordinary meaning" of a claim term "is its meaning to the ordinary artisan after reading the entire patent" id. at 1321. Thus, reliance placed on intrinsic evidence--the claims, specification, and prosecution history--should be greater than that placed on extrinsic sources--dictionaries, treatises, and encyclopedias, among other sources. Id. at 1320. Furthermore, extrinsic sources may be considered, but may not be "used to contradict claim meaning that is unambiguous in light of the intrinsic evidence." Id. at 1324. Thus, as set forth above, the term "abuts" is used interchangeably with the term "adjacent to," and the intrinsic evidence fails to indicate that the term requires direct contact. Because there is no ambiguity in the intrinsic record, the Court need not consider the dictionary definition set forth by Defendant in support of its argument. 4 Therefore, the Court rejects Defendant's proposed construction and finds that the proper construction of the term "abuts" is "to be adjacent to, or to touch or join one another."

--- Footnotes ---

4 Moreover, in Phillips, the Federal Circuit noted three main problems with using dictionary definitions to establish the "ordinary" meaning of disputed claim terms. First, dictionaries focus on the abstract meaning of words rather than the meaning of claim terms within the context of the patent. Phillips, 415 F.3d at 1321. Second, dictionaries collect all uses of particular words, and the use of such dictionaries may extend patent protection beyond what should properly be afforded by the inventor's patent. Id. at 1321-22. Finally, the scope of a claim term should not be determined based on "the preferences of a particular dictionary editor, or the court's independent decision, uninformed by the specification to solely rely on one dictionary rather than another." Id. at 1322.

--- End Footnotes ---
lower surface of the bonding element abuts an upper surface of the first garment component." 779 Patent at 6:33-36 (emphasis added). Similarly, steps (d) and (e) require that an upper or lower surface of a garment component "abuts" an upper or lower surface of the bonding element. 779 Patent at 6:40-46. In Claim 20 of the 779 Patent, a product claim, the seam is defined as comprising "a second garment component . . . such that . . . a portion of said upper surface of the second garment component abuts a lower surface of the first garment component . . . " and "a first set stitch . . . traversing through the bonding element . . . the first garment component . . . and . . . the second garment component which abuts said lower surface of the first garment component." 779 Patent at 8:18-30 (emphasis added). The 615 Patent similarly uses the term in Claims 1 and 19, method and product claims, respectively. 615 Patent at 6:48-51, 8:12-22.

Taltech asks the Court to construe "abuts" to mean "to touch, border on, or end at a surface, including being directly bonded to that surface." Taltech relies on the patent specifications, on a dictionary definition of "abut," and on patent publications in the garment industry such as U.S. Russell Patent No. 4,333,980 (Taltech's Markman Ex. 10). Esquel asks the Court to construe "abuts" to mean "touching (i.e., having direct contact) at a border." Esquel relies on the patent specifications, on the prosecution history of Taltech's related U.S. Patent No. 6,079,343 (the "343 Patent"), on the opinion of Esquel's expert, Mr. Haddock, and on the deposition testimony of Taltech's expert, Mr. Nienke.

The point of contention concerning the construction of "abuts" is whether touching, i.e., having direct contact, is required. Esquel argues that touching is required, whereas Taltech argues that "abuts" does not necessarily require direct contact. Taltech argues that "the two surfaces of garment components are deemed abutting where adhesive holds the two abutting surfaces together." In other words, the surfaces of garment components that are separated by a bonding element would "abut" under Taltech's proposed construction.

The Court finds Esquel's proposed construction more persuasive. Although neither party relied on the claims, the Court first looks to them to interpret the disputed term. As outlined above, Claim 20 of the 779 Patent and Claim 19 of the 615 Patent use the term "abuts" to refer to contact between the surfaces of first and second garment components, whereas Claim 1 of the 779 Patent and Claim 1 of the 615 Patent use the term "abuts" to refer to contact between a surface of a garment component and a surface of a bonding element. Given the latter use of "abuts," Taltech's proposed construction makes no sense. The surfaces of garment components cannot "abut" if there is a bonding element in between them. If that were the case, Claim 1 of both patents would not have used the term "abuts" to describe the contact between the surfaces of a garment component and a bonding element. Taltech's proposed construction ignores the existence of a bonding element when using the term "abuts;" however, the claims themselves do not ignore the existence of a bonding element when using the term "abuts."

Furthermore, Taltech's reliance on the following excerpt from the specifications is misplaced:

Preferably, the bonding element 32 comprises an adhesive web which flows during ironing onto the abutting surfaces of the garment components to create a very strong bond between the garment components along the garment seam 12.

779 Patent at 6:1-5; 615 Patent at 6:3-7 (emphasis added). Taltech argues that this excerpt shows that "the abutting surfaces of the garment components' need not necessarily touch -- as the bonding element is between the two abutting surfaces of the garment components." Taltech's argument is not persuasive. Taltech has taken the phrase "abutting surfaces of the garment components" out of context. The surfaces of the first and second garment components are not abutting each other. The subject of the sentence is "the bonding element 32" and the bonding element is the object that is abutting the surfaces of the garment components. This interpretation is supported by the claims, which describe the bonding element as abutting the first and second garment components prior to fusing the seam together. See 779 Patent at 6:33-36, 6:40-46, 8:10-21; 615 Patent at 6:42-43, 6:48-51, 8:4-11. The only time that the claims clearly describe one garment component abutting another is when there is no bonding element between them. See 779 Patent at 8:21-24 (". . . a portion of said upper surface of the second garment component abuts a lower surface of the first garment component along the seam"); 615 Patent at 8:13-16 (". . . a portion of the upper surface of the second garment component abuts at least a portion of the lower surface of the first garment component"); Fig. 3b. Taltech's interpretation of the specifications would be more persuasive if the sentence following the quoted excerpt stated as follows: "This bond prevents the first garment component 20 from separating from the [abutting] garment component 22 during the subsequent laundering of the garment." 779 Patent at 6:5-8. However, the term "abutting" does not appear in that sentence.

Other parts of the specifications also support Esquel's proposed construction that "abuts" does not signify a relationship
between the surfaces of two garment components with a bonding element in between them. See 779 Patent at 4:8-17, 4:59-
63; 615 Patent at 4:10-18, 4:60-64; Fig. 3b. 3 These specification excerpts do not ignore the existence of the bonding
element when using the term "abuts." Under Taltech's proposed construction, the specifications would state that Figure 3b
depicts the upper surface 24 of the first garment component 20 abutting the lower surface 30 of the second garment
component 22. The specifications include no such statement.

3 The patent appears to contain an error in that it should say "36" rather than "26" to refer to the lower surface of
("The bonding element 32 has an upper surface 34 and a lower surface 36.").

The claims further support Esquel's proposed construction because the claims have used the term "abuts" interchangeably
with the term "contacts." Claim 1(b) of the 779 Patent speaks of "placing a bonding element . . . along the seam such that a
lower surface of the bonding element abuts an upper surface of the first garment component." 779 Patent at 6:33-36
(emphasis added). The analogous Claim 1(c) of the 615 Patent speaks of "placing the bonding element along the seam . . .
such that the lower surface of the bonding element contacts at the seam the upper surface of the first garment component." 615 Patent at 6:39-43 (emphasis added). This is direct evidence from the claims themselves that the term "abuts" requires
contact.

The extrinsic evidence supports Esquel's proposed construction requiring contact or touching. First, the prosecution history
of the 343 Patent supports Esquel's proposed construction that the term "abuts" requires direct contact. The term "abuts" was
used in some of the pending claims to describe a relationship of "direct contact" between the thermoplastic adhesive (i.e.,
the bonding element) and the garment components. Docket no. 85, Ex. F (part 2) at 32 ("a single strip of thermoplastic
adhesive is in direct contact with both the first and second garment component [sic] forming the seam") (emphasis added).
Second, the dictionary definition provided by Taltech -- i.e., "abut . . . to touch along a border or with a projecting part . . . to
terminate at a point of contact . . . to lean for support . . . to border on" -- supports Esquel's position that the term requires
touching and contact. See Merriam Webster's Collegiate Dictionary 5 (10th ed. 1993) (docket no. 94, Ex. A at 2). Nothing in
this dictionary definition supports Taltech's proposed construction to expand the definition of "abuts" to include "being
directly bonded to that surface." Third, Taltech's expert, Mr. Nienke, testified in a deposition on September 16, 2005, that
had he not spoken with the attorneys in this case he would have defined "abut" simply to mean "touch." Nienke Dep. at 9:3-
10 (Esquel's Markman Ex. 1).

At the Markman hearing, Taltech argued that Esquel's proposed construction language of "at a border" is ambiguous. The
Court agrees. Taltech suggested replacing the "at a border" language with "along a surface." Rather than adopting Taltech's
suggestion, which may improperly limit the claims, the Court simply omits Esquel's proposed "at a border" language from
the Court's construction.

Accordingly, the Court adopts Esquel's proposed construction, with modification, and construes the term "abuts" to mean
"touching (i.e., having direct contact)."

47

5. Access Cover

The parties dispute the meaning of the following limitation, which is common to all the claims of the '408 patent: "an access
cover, mounted on the top of said riser extension over said upper opening and including an aperture therein, for enabling
access to the interior of said sump apparatus." TCI argues that this limitation is met by a gasket.

Unlike the term "surrounding relationship," both "cover" and "gasket" appear in the specification. "The system . . . is
preferably connected and sealed by rubber gaskets. . . ." '408 Patent, column 3, lines 60-62. "The connections between the
various components of the secondary system . . . employ a rubber compression seal or gasket. . . ." Id. at column 13, lines
35- 42. "Other components and fittings . . . use gaskets or compression seals to connect and seal the secondary system." Id.
at column 14, lines 7-9. Figures 4(a) of the patent (Figure 6) depicts gasket 52 and gasket 56, each fitting between two
stationary parts.

A gasket is generally understood to be "a pressure tight seal made of deformable material, typically rubber, plastic, or paper,
fitting between two stationary parts; used in many applications to prevent the leaking of fluids. . . " Academic Press Dictionary of Science and Technology 906 (Christopher Morris, ed., 1992). The gaskets in the '408 patent, consistent with the ordinary and accustomed meaning of the term, are made of rubber, fit between two stationary parts, and are intended to seal the secondary containment system and prevent leaks.

The term "cover" is used differently in the specification. Figures 1 and 2 depict cover 14a. Figure 31 depicts cover 194. In each of these figures the cover sits on top of the riser; it is not held between two stationary parts. The sump, including the cover, "is preferably rotationally molded from a thick high density polyethylene. . . " Id. at column 8, lines 7-8. This material is used because it provides excellent strength, chemical resistance, and soil burial stability. Id. at column 16, lines 42-45. A sump made of rubber or any other deformable material would be unacceptable because one of the purposes of the sump is to keep excavation backfill away from the submersible pump. Id. at column 8, lines 13-15.

A gasket cannot function as a cover. Unlike a cover, it fits between two stationary parts and is made from a deformable material, such as rubber. A cover sits on top of the riser, rather than between two stationary parts, and cannot be made from a deformable material. It is neither the literal nor functional equivalent of a cover. The court concludes that a gasket does not satisfy the access cover limitation, either literally or under the doctrine of equivalents.

TCI argues that this was the interpretation advanced by defendants in the reexamination requests. First, any arguments that the defendants may have advanced during reexamination are extrinsic evidence. Extrinsic evidence cannot be relied on to change the meaning of a claim when the meaning is clear from the patent. Southwall Technologies, 54 F.3d at 1578. Second, this court is not aware of any doctrine that forever binds a reexamination requestor who is not the patent owner to a position it has taken in a reexamination request. Nor does it find good reason for the existence of such a doctrine.

The arguments and amendments made by the patent owner during prosecution are pertinent to claim interpretation. Id. They also limit the allowable equivalents under the doctrine of equivalents. Exhibit Supply v. Ace Patents Corp., 315 U.S. 126, 86 L. Ed. 736, 62 S. Ct. 513 (1942). This prevents the patent owner from construing the claims narrowly before the PTO and broadly before the courts. Unique Concepts at 1562, Autogiro, 384 F.2d at 399.

These considerations do not apply to a third-party reexamination requestor. Infringement litigation and reexamination are separate proceedings with different objectives carried out before independent tribunals. In reexamination, there is only one issue, validity in the light of newly discovered patents and printed publications. Litigation involves numerous other issues as well.

One of the objectives of reexamination is to "permit efficient resolution of questions about the validity of issued patents without recourse to expensive and lengthy infringement litigation." House Report No. 96-1307, 96th Cong., 2d Sess. (1980). Reexamination not only settles validity questions more cheaply and quickly than litigation, it conserves judicial resources as well. If arguments made in a reexamination request could limit the defenses available in a subsequent patent infringement action, a potential defendant might be reluctant to request reexamination to resolve questions of validity. Rather than limit its defenses, the requestor might decide to bypass reexamination and resolve these questions by litigation. Validity questions that should have been resolved by reexamination would be unnecessarily returned to the courts.

1. Accessory

The word "accessory" is used in the preamble of the Claims to state the intended use of the invention claimed. The term does not, in context, add to the claim elements defining the invention. See Loctite Corp. v. Ultraseal Ltd., 781 F.2d 861, 868 (Fed.Cir. 1985) citing Kropa v. Robie, 187 F.2d 150, 152, 38 C.C.P.A. 858, 1951 Dec. Comm'r Pat. 177 (CCPA 1951).

In particular, the use of the term "accessory" in the preamble does not, in and of itself, prevent the claim from reading on a product that might combine a game controller and the accessory in a self-contained unit. Any such restriction of the invention must be found, if at all, in the claim elements rather than in the preamble.

The term "accessory" is construed as meaning a device which is not necessary to the operation of a video game but which
A. Accuracy

76. A central claim interpretation issue of the present case revolves around the meaning of the term "accuracy" as used in the claims. This term must be construed as it would by one of ordinary skill in the art based on the patent disclosure. Intelllicall, Inc. v. Phonometrics, Inc., 952 F.2d at 1387.

77. At various times, MCI's witnesses expressed different opinions on the meaning of this term. None of the definitions given by MCI's witnesses was entirely satisfactory. It appeared that MCI's patent law expert, Mr. Vilhauer, struggled with the dilemma that if he construed this term as well as the term "isolating means" narrowly enough to provide a basis for urging patent validity, the patent would not be infringed, while if he read them broadly enough to provide a basis for an infringement claim, the teachings of the patent would be obvious.

78. Mr. Vilhauer has limited experience in batch weigh systems. His testimony on the meaning one skilled in the art would ascribe to terms in the patent cannot be totally relied upon. Thus, his opinion as to the meaning of terms in the patent should be afforded limited weight.

79. Claim 64 defines "an accuracy of at least + one gram." The prior art Hough reference which was before the patent examiner defines accuracies within 0.01 pounds (4.5 grams). Although the specification discloses 0.5 gram accuracy, the Court believes it would be error to incorporate this limitation into the claims, particularly where to do so would result in a narrower interpretation of the independent claims of the patent than dependent claim 64. Thus, the Court concludes that the term "accuracy" as used in the independent claims of the '971 Patent refers to accuracies between 1 gram and 4.5 grams. No other definition is consistent with the patent disclosure in view of the prior art of record in the file history of the patent. Moreover, there is no other definition which would apprise one skilled in the art of the metes and bounds of the invention in a sufficiently definite manner to comply with 35 U.S.C. § 112.

B. "Predetermined Accurate Work Position"

Utica next asserts that the district court erred in construing the term "predetermined accurate work position" in claims 1 and 3. While agreeing with the court's definition generally, Utica maintains that the court should not have interpreted the term to require that the planar abutment surfaces of the cutting tool and the tool holder be in direct contact "without any spaces in between." Federal Broach responds that the specification and the prosecution history define the term "predetermined accurate work position" to mean that the planar abutment surfaces of the cutting tool and the tool holder engage without any gap between them.

We agree with Utica that the district court's interpretation of the term "predetermined accurate work position" was unduly narrow. The court construed the term as follows:

The term "predetermined accurate work position" means the fixed placement of the tool in the tool holder. This placement is achieved by precisely measuring the distance from the surface of the cutting tool's center axis to the appropriate surfaces of the tool holder in advance, such that the flat mounting surfaces of the cutting tool directly contact the corresponding surfaces of the tool holder, without any spaces in between, thereby maintaining the cutting tool's original placement until the tool is removed.

Claim Construction Order, slip op. at 18 (emphasis added).

Although the specification states that a goal of the invention is to eliminate clearances between the cutting tool and the tool
holder, the patent does not require that the surfaces of the cutting tool and the tool holder abut with absolute precision. Indeed, it seems that no device—not even those depicted in the disclosed embodiments—could actually achieve zero clearance between the cutting tool and the tool holder. We instead read the specification to mean that the claimed method achieves improved accuracy in positioning the cutting tool by allowing for only minimal clearances between the tool and the holder. Moreover, the prosecution history statements to which Federal Broach adverts explain only that the planar abutment surfaces of the cutting tool and the tool holder are forced against one another to generate an accurate work position; they say nothing about eliminating gaps between the cutting tool and the tool holder. We therefore conclude that the patent does not mandate zero clearance between the cutting tool and the tool holder and, as a result, we modify the district court’s definition of the term “predetermined accurate work position” to omit the language “without any spaces in between.”

51

c. "accurately moving"

With respect to "accurately moving," the surrounding claim language, along with the term's plain meaning, provide adequate context for the claim. In claim 145 of the 930 patent, the relevant limitation reads "said transporter having an X-Y drive apparatus for accurately moving said capture system in two orthogonal directions within said vend selection space." The term "accurately moving" means "moving in accordance with the vend control signal."

52

2. "accurately positioned" and "accurately displacing and positioning"

The parties agree that the words "positioned" (as used in claim 1) and "positioning" (as used in claims 5, 8, 15, 16, and 17) require no court interpretation. The parties also agree that "displacing" (as the word is used in claims 5, 8, 15, 16, and 17) denotes moving or movement. But the parties do not agree regarding the meaning of the adverb "accurately." See id. at 2:14 (discussing "very great positioning accuracy" through "satisfactory" alignment); Abbott Labs. v. Baxter Pharm. Prods., Inc., 334 F.3d 1274, 1279 (Fed. Cir. 2003). In both the claim overall and in this particular claim term, "accurately" is used to imply a minimum standard, a threshold standard of exactness. Terms like "sufficiently accurate" and "satisfactorily aligned" necessarily connote a baseline of required accuracy, and related aspects of the specification—as well as the parties' own constructions—are in accord. In various parts, in fact, specification language discusses both the proper (i.e., accurate) positioning of a substrate sub-area and the proper positioning of the substrate itself. See generally '832 Patent at 2:60-3:9; 13:15-14:17.

The claim language makes clear that proper positioning of a substrate sub-area is the focus of this claim term; that is, a "sub-area" is the entity "accurately positioned with respect to the mask pattern." Id. at 32:55-56. The claim language also makes clear that "accurately positioned" references the exactitude with which that sub-area is oriented. Id. Consistent with this language, the court construes "accurately positioned" to mean "locating and situating an item with adequate exactness relative to the mask pattern." "Accurately displacing and positioning," in turn, means "moving, locating, and situating an item with adequate exactness." 44

44 A like construction is indicated for the word "sufficiently."

43 - 462 -
The parties argue vigorously about whether the limitation "across" is equivalent to "over" (or "across and over," as the step was described in the '409 patent). It is fair to say that, in general usage, "across" connotes "over" commonly, perhaps even usually, though not invariably. See Webster's Third New International Dictionary 20 (G. & C. Merriam Co. 1981) ("across prep la: from one side to the opposite side of: over"). In general human experience, when we think of going "across" something, we normally think of going over it. So, when we talk of going across a street, across a field, across a line, we generally mean to say that we pass over the surface, or above, the thing in question. 

2 It is true that it is sometimes possible to go across a river by riding the subway underneath it, but in normal usage, if one were to speak of going across a body of water, a listener would ordinarily understand it to have been a voyage above the surface, unless the contrary were expressed.

Common usage thus tends to favor Sunflower's position that the limitation "across the header" means "across and over the header." Significantly, so does the patent specification. The method disclosed calls for the transfer to occur by bringing the bag over the header. The patent office examiner interpreted the claim that way. In his Statement of Reasons for Allowance he noted that the claim referred to "transferring the bag over the common wicket header." See Def.'s Ex. 3, Tab U (emphasis added). As Sunflower notes, that interpretation was never challenged or corrected by MHB. Indeed, in the apparatus described as the preferred embodiment, it is not physically possible to transfer the bag across and under the header. Accordingly, this claim must be construed to mean that the individual bag is transferred across and over the header of the wicket.

MHB also argues that the court misconstrued the claimed step of transferring the bags "across" the header from the first station to the second station for sealing by construing "across" to mean "across and over" and improperly reading a requirement into the claim that the transfer take place "over" the header as opposed to "under" the header. While the term across is not defined in the specification, the specification shows the bags being moved from one side of the header to the other side of the header during the transfer step. Consistent with this depiction of the method in the specification, a common definition of "across" is "from one side to the opposite side of: over." Webster's Third New International Dictionary, 20 (1971). The district court also determined that this was the proper meaning of across but went on to state that the claim required that a bag be transferred "across and over" the header, apparently distinguishing the situation in which the bags are transferred under the header. We agree with MHB that the claim does not require a distinction between over, as in above, and under the header. Simply, the claim requires that the bag be transferred across or, in other words, from one side of the header to the other. Given the other differences in the accused method, however, this error is harmless.

The third disputed element requires a "cover means associated with said receptacle across said openings of said cavities." Defendant argues that the term "across" means "adjacent to," thus requiring the cover to be adjacent to the cavity openings. Once again, this definition is too narrow and nonsensical. One purpose of the cover is to close the openings to both cavities so that the pipe and tobacco do not fall out. In this context, the pertinent definition of "across" is "over," requiring the cover to lay over the two openings. This comports with the embodiment described in the '658 patent which features a cover resting directly on top of the two cavities when closed.
Additionally, while certainly not disagreeing with plaintiff's contention that the ridge must also extend "across said tongue," defendant asserts that construction of the phrase "across said tongue" also supports its contention that the ridge must, in fact, be a part of the tongue structure. That phrase is not defined in the patent, and the court therefore concludes that it is to be interpreted in light of its customary meaning.

According to Webster's, "across" is defined as "in a position reaching from one side to the other." Webster's Collegiate Dictionary 11 (10th ed. 1999); accord Webster's Third New Int'l Dictionary 20 (1986) (defining across as "so as to cross transversely: crosswise"). As with the other patent terms construed above, plaintiff does not offer an alternative definition with respect to the word "across." Thus, the court interprets that term, and, consequently, the phrase "across said tongue," as meaning that the ridge must reach from one side of the tongue to the other.

As set forth above, plaintiff does not specifically dispute defendant's interpretation of the terms "having," "extending outwardly," "across said tongue," or "generally parallel to . . . said tooth." In addition to his mere blanket assertion with respect to the three limitations of the term "ridge," plaintiff alternatively attempts to dismiss defendant's contention that claim 4 requires the ridge to be a part of the tongue structure by insisting that such an interpretation is improperly gleaned from the patent illustrations which portray the ridge as a projection of the lower portion of the tongue. Plaintiff is correct in his assertion that the court may not use the patent illustrations or other portions of the specification to limit the scope of the patent claims. See Comark Communications, Inc. v. Harris Corp., 156 F.3d 1182, 1186 (Fed. Cir. 1998). However, and even though the '041 patent drawings do, in fact, depict latch mechanisms with tongues from which both the tooth and the ridge project, the court is not, by its construction, limiting plaintiff's claims to those illustrations. Instead, the court's construction is limited by the language of the patent itself, and the illustrations are simply consistent with that interpretation. See Cortland Line Co., Inc. v. Orvis Co., Inc., 203 F.3d 1351, 2000 U.S. App. LEXIS 1993, 2000 WL 156553, at *3 (Fed. Cir. 2000)(noting that court's construction of patent term was "reinforced by the words and drawings" of the patent).

Accordingly, because the court's construction does not rely upon, but is merely consistent with, the illustrations included as a part of the patent specification, plaintiff's argument on this basis is rejected.

As set forth above, plaintiff does not specifically dispute defendant's interpretation of the terms "having," "extending outwardly," "across said tongue," or "generally parallel to . . . said tooth." In addition to his mere blanket assertion with respect to the three limitations of the term "ridge," plaintiff alternatively attempts to dismiss defendant's contention that claim 4 requires the ridge to be a part of the tongue structure by insisting that such an interpretation is improperly gleaned from the patent illustrations which portray the ridge as a projection of the lower portion of the tongue. Plaintiff is correct in his assertion that the court may not use the patent illustrations or other portions of the specification to limit the scope of the patent claims. See Comark Communications, Inc. v. Harris Corp., 156 F.3d 1182, 1186 (Fed. Cir. 1998). However, and even though the '041 patent drawings do, in fact, depict latch mechanisms with tongues from which both the tooth and the ridge project, the court is not, by its construction, limiting plaintiff's claims to those illustrations. Instead, the court's construction is limited by the language of the patent itself, and the illustrations are simply consistent with that interpretation. See Cortland Line Co., Inc. v. Orvis Co., Inc., 203 F.3d 1351, 2000 U.S. App. LEXIS 1993, 2000 WL 156553, at *3 (Fed. Cir. 2000)(noting that court's construction of patent term was "reinforced by the words and drawings" of the patent).

Accordingly, because the court's construction does not rely upon, but is merely consistent with, the illustrations included as a part of the patent specification, plaintiff's argument on this basis is rejected.
1997). Ambient, then, could refer to a wide array of temperatures and, if applied to the construction of "shape memory activation temperature," it would deprive that claim limitation of any meaning.

Nonetheless, plaintiffs point to the claim language itself for support of this functional interpretation of "shape memory activation temperature." Plaintiffs argue that the term "shape memory activation temperature" is limited "functionally, namely to enable the altered liner to be pulled into the host pipe." (D.I. 128 at 8) The claim language "to enable the liner to be pulled into the pipe," however, does not modify "shape memory activation temperature;" rather, it modifies "having reduced cross-sectional dimensions." (D.I. 17, Ex. 2, col 11, Ins. 2-3) Thus, the claim language itself sheds no light on the scope of the term "shape memory activation temperature." 3

3 For these reasons, the court also declines to accord any weight to the testimony of plaintiffs' expert. Plaintiffs' expert, Stanley Mruk, construed the term "shape memory activation temperature" to mean "any temperature above ambient which enables the liner to be temporarily deformed while retaining a memory of the liner's original shape (reformed) by heating the pipe liner to a temperature at or above the temperature used in the deformation of the pipe liner." (D.I. 67 at 4, P 9) Mruk's construction thus rests on an undefined term (i.e., "ambient") as well as an implausible reading of the claim language.

Plaintiffs also rely heavily on the '365 patent's specification as support for their functional interpretation of shape memory activation temperature. Specifically, plaintiffs point to that patent's description of "a desired deformation temperature of, for example, 160 [degrees] F." (D.I. 65, Tab 1, col. 5, Ins. 15-16) Plaintiffs contend that the '196 patent's incorporation of the '365 patent compels the conclusion that shape memory activation temperature "can vary as circumstances require." (D.I. 65, Tab 1, Ex. C., col. 5, Ins. 21-22) A careful reading of the '365 patent reveals, however, that the term "shape memory activation temperature" never appears therein. Indeed, both the 160 [degrees] F cited by plaintiffs as a shape memory activation temperature and the phrase, "temperatures [that may] vary as circumstances require," relate merely to the "desired deformation temperature" of the preferred embodiment described in the '365 patent's specification. (D.I. 65, Tab 1, Ex. C., col. 5, ln. 15) Other than plaintiffs' conclusory assertion, there is no basis for equating the '365 patent's use of the term "deformation temperature" with the '196 patent's specific use of "shape memory activation temperature" -- a highly technical term capable of precise calculation. (See, e.g., D.I. 17, Ex. 3 at A363 (providing formula for crystallization temperature, which the coinventor equates with shape memory activation temperature at D.I. 17, Ex. 3 at A351)).

Because the meaning of the term "shape memory activation temperature" is not apparent from the patent, the court must turn to the prosecution history to determine the "meaning that it would be given by persons experienced in the field of invention." See Hoechst Celanese Corp., 78 F.3d at 1578. The prosecution history reveals that plaintiffs took pains to convince the Examiner that "shape memory activation temperature" referred to a specific range of temperatures, identifiable by calculation or by reference to the "specification sheet" of particular thermoplastics, which lists the thermoplastic's crystallization point.

2. The Prosecution History

Because the prosecution history plays such a significant role in determining the meaning of "shape memory activation temperature," the court shall review it in considerable detail. Plaintiffs filed their initial patent application in October of 1987. In this initial application, the proposed specification of the patent referred to 160 [degrees] F as the temperature at which deformation of the thermoplastic liner occurred. (D.I. 17, Ex. 3 at A025) Claim 1 of the initial application also disclosed a process for "altering the cross-sectional shape of the liner to reduce the cross-sectional dimension thereof at a shape memory activation temperature of about 160-180 [degrees] F." (D.I. 17, Ex. 3 at A044) In July of 1988, the Examiner denied claims 1 through 18 of the application as obvious in light of the Laurent patent and other prior art. (D.I. 17, Ex. 3 at A082-088)

In response, plaintiffs amended claim 1 to add, "so as to permit the liner to be pulled into the pipe," following that claim's recitation of a shape memory activation temperature "of about 160-180 [degrees] F." (D.I. 17, Ex. 3 at A102) In February of 1989, however, the Examiner again rejected claim 1 for, among other reasons, obviousness. (D.I. 17, Ex. 3 at A112-118)
Plaintiffs again amended their application in June of 1989 and canceled claim 1 along with other claims. Plaintiffs then added several new claims. Of these new claims, claim 31 disclosed a process for installing thermoplastic pipe and

(b) altering the cross-sectional shape of the liner to reduce the cross-sectional dimension thereof at a shape memory activation temperature of about 221-277 [degrees] F so as to permit the liner to be pulled into the pipe . . . .

(D.I. 17, Ex. 3 at A141) Dependent claim 35 of these new amendments also disclosed "[a] process according to Claim 31 wherein said shape memory activation temperature is about 260 [degrees] F." (D.I. 17, Ex. 3 at A142) Similarly, claim 36 and its dependent claim 40 each disclosed shape memory activation temperatures of "about 221-277 [degrees] F" and 260 [degrees] F, respectively. (D.I. 17, Ex. 3 at A143-44)

Plaintiffs also added claim 41, the predecessor of claim 12 of the '196 patent. Initially, claim 41 taught merely "an elongate hollow liner formed of thermoplastic material having a cross-section altered at a shape memory activation temperature . . . ."

Although claim 41 did not provide a specific shape memory activation temperature, its dependent claims 47 and 50 each provided, "[a] process according to Claim 41, wherein said memory activation temperature is within a range of 221-277 [degrees] F." (D.I. 17, Ex. 3 at A146)

Significantly, in their remarks to the preceding amendments, plaintiffs' patent counsel explained that

the reference in the specification and claims to 160 [degrees] F as the melting temperature of the polyethylene liner material is incorrect. . . . Applicants enclose five specification sheets from various companies indicating that the melting temperature of polyethylene was a known parameter at a time prior to the date of this application and specifically known to lie within a range of 221-277 [degrees] F.

(D.I. 17, Ex. 3 at A147) It appears that plaintiffs' patent counsel equated "melting temperature" with "shape memory activation temperature." 4 Each of the specification sheets referred to by plaintiffs' patent counsel pinpoint the melting temperature of the various thermoplastics as above 200 [degrees] F. (D.I. 17, Ex. 3 at A163-67) Plaintiffs' patent counsel also submitted a declaration of one of the coinventors in which the coinventor confirmed that these specification sheets indicated melting points in the range of 221-277 [degrees] F. (D.I. 17, Ex. 3 at A162)

4 Later in the prosecution, however, the '196 patent's coinventor equates shape memory activation temperature with a thermoplastic's "crystallization temperature" and provided the Examiner with a formula for calculating that temperature. (D.I. 17, Ex. 3 at A363; see also A351)

Despite these amendments, the Examiner again rejected the newly added claims in September of 1989. (D.I. 17, Ex. 3 at A296-302) In rejecting the claims for, among other reasons, obviousness, the Examiner noted:

It is submitted that the steps of altering the tube's cross-section at 210 [degrees] F and heating to expand the tube in British Application -695 are inherently at the thermoplastic liner's shape memory activation temperature as recited in the instant claims. This temperature is dependent on particular material used.

(D.I. 17, Ex. 3 at A298) (emphasis added). Following this rejection of their newly added claims, plaintiffs again offered amendments to their application in December of 1989. (D.I. 17, Ex. 3 at A303-12) In their remarks to these amendments, plaintiffs' patent counsel distinguished the aforementioned "British Application -695" by noting that, unlike the British Application, "applicants require the cross-sectional shape of the liner to be reduced by altering such shape at a shape memory activation temperature of about 221-277 [degrees] F." (D.I. 65, Ex. 3 at A310) The British Application disclosed a process of deforming polyvinyl chloride ("PVC") tubing at "approximately 210 [degrees] F." (D.I. 17, Ex. 3 at A173) Plaintiffs' patent counsel argued strenuously that, "PVC does not have shape memory characteristics, and . . . the temperature to which the liner is elevated in [the British Application] is not within the range claimed . . .." (D.I. 17, Ex. 3 at A310) Contrary to plaintiffs' current contention that shape memory activation temperature is a variable, "functional concept," plaintiffs' patent counsel also acknowledged that, "a shape memory activation temperature is a known property,
for example, of polyethylene material, prior to this invention." (D.I. 17, Ex. 3 at A309)

In January of 1990, the Examiner rejected plaintiffs' application on the ground that the recitation of a shape memory activation temperature "of about 221-277 [degrees] F" constituted new matter. Further, the Examiner remarked that this "range would read on any number of polymers dependent on their exact composition." (D.I. 17, Ex. 3 at A325-26) In response to the Examiner's new matter objections, plaintiffs amended their application in April and again in May of 1990. (D.I. 17, Ex. 3 at A331-39; A340-61) In these amendments, plaintiffs deleted reference to 160 [degrees] F in the specification as the deformation temperature and replaced it first with 260 [degrees] F and, in May, with 235 [degrees] F. Plaintiffs' patent counsel explained this change in his remarks to the May 1990 amendments:

It must be recognized that patent specifications are directed to those skilled in the art. A person skilled in this art would recognize 160 [degrees] F as an incorrect shape memory activation temperature simply by reference to the specification sheet for this particular type of material specifically disclosed as the preferred embodiment and available at the time of this filing. The person of ordinary skill in the art would be advised by such specification sheet of the actual shape memory activation temperature.

Also, materials such as nylon, Teflon and ABS are disclosed . . . together with the Union Carbide material. All of those materials have shape memory activation temperatures above 200 [degrees] F as indicated on the additional specification sheets for each of those materials accompanying the Declaration of [the coinventor]. Consequently, a person of ordinary skill in the art would recognize that the temperature of 160 [degrees] F could not be the shape memory activation temperature and would be directed by those specification sheets to the appropriate shape memory activation temperature.

(D.I. 17, Ex. 3 at A351-52)

Also in May, plaintiffs canceled claims 31-35 and claim 47 of the application and amended claims 36 and 41. Plaintiffs removed from claims 36 and 41 any reference to a specific shape memory activation temperature. Thus, in May of 1990, claim 41 disclosed in relevant part:

An elongate hollow liner formed of thermoplastic material having a cross-section altered at a shape memory activation temperature from a generally cylindrical cross-section having an original diameter substantially comparable to the inside diameter of the pipe to be lined to a reduced cross-section having reduced cross-sectional dimensions to enable the liner to be pulled into the pipe, whereby the liner is maintained in its reduced cross-sectional shape with substantially no tendency to return to its cylindrical cross-section and retains a memory of its cylindrical cross-section, said liner in said altered cross-section having a predetermined wall thickness . . . .

(D. I. 17, Ex. 3 at A343)

5 Claims 36 and 41 were renumbered as claims 1 and 12, respectively, upon issuance of the '196 patent. (D.I. 17, Ex. 3 at A442)

In a final supplemental amendment filed in August of 1990, plaintiffs deleted all reference to a specific shape memory activation temperature from the specification and amended claim 41 to read as claim 12 now reads in the '196 patent. (D.I. 17, Ex. 3 at A431-38) In explaining these changes, plaintiffs' patent counsel remarked:

Applicants have attempted to amend the specification to present the proper numerical temperature but without apparent success. Thus, by canceling the numerical temperature for the shape memory activation temperature, the patent issuing from this application will not be misleading and, of course, the actual value is disclosed in the file wrapper. The actual numerical temperature is also not necessary to the claims inasmuch as those claims do not specify the precise numerical shape memory activation temperature.

(D.I. 17, Ex. 3 at A437) (emphasis added).
Thus, the prosecution history reveals (1) that shape memory activation temperature is a specific temperature defined by the particular properties of the thermoplastic at issue, (2) that plaintiffs contemplated shape memory activation temperatures that were well above ambient temperature (assuming "ambient" refers to normal, "room" temperatures), and (3) that the patentee defined shape memory activation temperature first (and, apparently, erroneously) as a given thermoplastic's "melting point" and later as a thermoplastic's crystallization point. In defining shape memory activation temperature as a thermoplastic's crystallization point, the '196 patent's co-inventor declared that:

4. The preferred embodiment's] crystallization point is given as 113 [degrees] C, or about 235 [degrees] F. This is the memory activation temperature for that particular material.

5. The crystallization temperature is a temperature defining the maximum crystallization speed and it may be obtained by the formula T[c] \[\approx\] (T[m] + T[g])/2 where T[c] is the crystallization temperature, T[m] is the melting temperature and T[g] is the glass transition temperature. Each of nylon, Teflon and ABS, as disclosed in this application as an alternative material to the specifically identified and preferred Union Carbide material has a crystallization temperature above 200 [degrees] F. This is evidenced by calculations and specification sheets for those materials . . . .

(D.I. 17, Ex. 3 at A363-64) (emphasis added). The prosecution history thus establishes that shape memory activation temperature is not, as plaintiffs suggest, a "functional" concept that "can vary as circumstances require."

Instead, the prosecution history reveals that the co-inventor himself regarded shape memory activation temperature as a known temperature ascertainable by calculation and dependent upon a given thermoplastic's physical properties. Accordingly, the court shall construe the term, "shape memory activation temperature," as the '196 patent's coinventor understood it -- namely, as the crystallization point of a given thermoplastic, calculated according to the following formula:

\[ T[c] \approx \frac{(T[m] + T[g])}{2} \]

where T[c] is the crystallization temperature, T[m] is the melting temperature and T[g] is the glass transition temperature.

(D.I. 17, Ex. 3 at A363; see also A351 (equating shape memory activation temperature with a material's crystallization temperature)).

Claim 1 states, in relevant part, that the invention is a "combined garment and earphones" in which the earphones are comprised of

a conductive wire assembly passing through the elongate internal passageway and having left and right lengths of wire exiting through the left and right apertures, respectively, wherein at least a portion of the conductive wire assembly is slideable within the passageway, and acts as a drawstring for the hood.[.]

('192 Patent col. 8 ll. 29-34 (filed Sept. 13, 2005) (emphasis added).)

The Plaintiffs contend that the meaning of Claim 1's language is unambiguous so the court need not ascribe any particular meaning to the claim terms. They assert that the court need only compare the claim language "conductive wire assembly"and "acts as a drawstring" as commonly understood and explained in the specification to the Accused Products.

Defendants, on the other hand, interpret the scope of Claim 1 by attempting to impose a limitation that the "conductive wire assembly" is an earphone wire. They also construe the language "acts as a drawstring" as follows: "The wire must be used to tighten or close the hood opening. Moveable wiring within the drawstring passageway is not wiring that acts as a drawstring."

The court disagrees with both parties' constructions of Claim 1. As the Plaintiffs point out, the Defendants' construction would be unworkable (i.e., if the claim were construed as Defendants proffer, it would be impossible to infringe Claim 1). (See Pls.' Reply Mem. at 11.) But relying on the plain language, as Plaintiffs do, is unworkable as well.
Instead, the court provides a preliminary claim construction that is guided in part by two sources: (1) the patent applicants' remarks to the patent examiner in a June 10, 2008 reply to the U.S. Patent & Trademark Office ("USPTO") February 21, 2008 rejection of certain claims in the application ("Amendment A"); and (2) the patent examiner's subsequent Notice of Allowability.

In Amendment A, the applicants asked the USPTO to allow an amendment to the patent application of Logan Haycock et al. The applicants remarked in relevant part as follows:

In the Office Action, claims 1-7 were rejected under 35 U.S.C. § 103(a) as being unpatentable over Eves, U.S. Publication No. 2001/0050991 ("Eves"), in view of Cyr et al., U.S. Publication No. 2006/0182297 ("Cyr"). Applicants respectfully request removal of the rejection under 35 U.S.C. § 103(a) of claims 1-7 because Eves in view of Cyr does not teach or suggest wiring that "acts as a drawstring" as claims in applicants' claim 1.

Eves teaches wiring that is moveable within the internal passageways in the clothing. Moveable wiring within a passageway is not wiring that acts as a drawstring. The moveable wiring disclosed in Eves serves to minimize the amount of loose cable. In one embodiment shown in figures 7 and 8 in Eves this wiring emerges "discretely from the collar close to the user's ears such that there is a minimum of loose cable." Eves does not teach or suggest that this wiring be used to tighten or close an opening in the clothing. The disclosure does not show or explain that the wiring goes around the periphery of the collar so that the wiring could possibly be used as a drawstring. The configuration only allows the ear pieces to emerge discretely from the collar and minimizes the amount of loose wire.

Referring specifically to figures 7 and 8 in Eves, one can observe that the disclosed configuration would not function as a drawstring. If a user were to pull on the wiring in the direction away from the ear piece attempting to tighten the collar, the ear piece would move in the same direction and not provide resistance allowing the collar to be drawn.

("Remarks" in Amendment A to Patent Application at pp. 7-8 (Docket No. 16-1 at pp. 98-99) (emphases added).)

In response to Amendment A, the USPTO issued a Notice of Allowability, with the following explanation:

Claims 1-10 and 13 are allowed. The following is a statement of reasons for the indication of allowable subject matter: As set forth in the previous action, claim 1 discloses the unique feature of having a conductive wire slideable through the passageway, and acting as a drawstring for a hooded garment. The closest prior art fails to teach a slideable conductive wire that acts as a drawstring for a hood.

(USPTO Notice of Allowability, Application/Control Number 11/224,888, Art Unit 2614, at p. 2 (Docket No. 16-1 at p. 123).)

Given the above-quoted language, the court makes the following preliminary construction of Claim 1 in the '192 Patent:

"The wire must be used to tighten or close the hood opening. Moveable wiring within the drawstring passageway is not necessarily wiring that acts as a drawstring."

Under the court's construction, the issues of validity and infringement can now be addressed.
top surface and a centrally positioned aperture formed therethrough, a tubular portion extending from the top surface in coaxial relation to the aperture and in right angle relation to the top surface . . . the shaft of the locking means being positioned in the tubular portion of the actuating means with the actuating means engaged to the locking means and the tubular portion butted against the support.

'871 Patent col. 4 l. 61 - col. 5 l. 19.

More specifically, LaRue Tactical contends that Claim 2 does not comprise sufficient structure to activate the locking means because an essential element to perform this function, the "actuating handle," is missing from the recited structure. While the term "actuating handle" does not appear in Claim 2, I agree with LaRue Tactical that it is mainly the actuating handle that performs the function of actuating the locking means. This is clear from the specification, see, e.g., '871 Patent col. 3 ll. 37-40 ("The tubular portion 84 includes an external surface from which an actuating handle 88 extends in right angle relation to the vertical axis of the tubular portion 84."), id. at col. 3 ll. 65-68 ("This engagement extends the actuating handle 88 of the first actuating means 70 away from the support portion 34a and across the plane of the second edge 72b of the first base portion 72."), id. at col. 4 ll. 14-19 ("Rotation of the lever of the first fastening device 64 in a counterclockwise direction and of the lever of the second fastening device 64 in a clockwise direction causes their respect first or second camming areas to pass, in abutting relation, under the engagement surface 35 of the first rail 36.")., from the drawings of '871 Patent, see, e.g., Figures 8 & 9, as well as from the animation provided by ARMS.

I find that, because of the lack of actuating handle, Claim 2 of the '871 Patent does not provide sufficient structure, materials or acts within the claim itself to show how the recited function, that of actuating, can be accomplished. I therefore conclude that the term "actuating means" used in Claim 2 and by reference in Claim 3 of the '871 Patent should be construed as a means-plus-function claim limitation pursuant to 35 U.S.C. § 112 P 6.

3 Relying on Searfoss v. Pioneer Consol. Corp., 374 F.3d 1142 (Fed. Cir. 2004), ARMS argues that Claim 2 does elaborate sufficient structure to perform the recited function. In Searfoss, the Federal Circuit held that the "actuation means" limitation was not a means-plus-function limitation because the claim specifically recited the structure that performed the claimed function, that of actuating, thus overcoming the presumption resulting from use of the word "means." Id. at 1149. I find ARMS' reliance on Searfoss to be misplaced because, contrary to the claim at issue in Searfoss, Claim 2 of the '871 Patent cannot provide sufficient structure to accomplish the recited function without the "actuating handle."

LaRue Tactical argues that the actuating means should be construed as to include an actuating handle and to require that the
actuating handle be mechanically linked to the shaft of the locking means by the pin and horizontal hole arrangement found in the specification of the '871 Patent. To support this argument, LaRue Tactical relies on the engagement process described in the following part of the specification of '871 Patent:

Association of the subassembly of the locking means 68 and the support 71 with the first actuating means 70, is accomplished by passing the shaft 74 of the locking means 68 through the aperture 82 and then through the tubular portion 84, in a press fit, horizontally aligning the opening 78 of the shaft 74 and the hole 86 of the tubular 84. This engagement extends the actuating handle 88 of the first actuating means 70 away from the support portion 36a and across the plane of the second edge 72b of the first base portion 72. A pin 34 is then passed through the hole 86 of the tubular portion 84 and the aligned opening 78 of the shaft 74.

'871 Patent col. 3 l. 58 - col. 4 l. 2 (emphasis added).

As discussed in Section III.A. supra, I find that the actuating handle is necessary to perform the function of actuating and therefore construe the term "actuating means" to include an "actuating handle." In contrast, I do not find it necessary that the actuating handle be mechanically linked to the shaft of the locking means as described by LaRue Tactical. In this respect, I consider the provision of Claim 2 pursuant to which "the actuating means [is] engaged to the locking means" to be sufficient to perform the function of actuating. Id. at col. 5 l. 18 (emphasis added). Accordingly, I reject LaRue Tactical's effort to limit the language of Claim 2 of the '871 Patent to the preferred embodiment described in the specification.

--- Footnotes ---

4 Because I find the mechanism described by LaRue Tactical to be unnecessary to perform the function of actuating, I adopt the Federal Circuit's cautionary approach with respect to importing limitations into claims. As discussed in Section II.A. supra, "[w]hen consulting the specification to clarify the meaning of claim terms, courts must take care not to import limitations into the claims from the specification." Abbott Labs. v. Sandoz, Inc., 566 F.3d 1282, 1288 (Fed. Cir. 2009) (en banc). For instance, "[a]lthough the specification often describes very specific embodiments of the invention," the Federal Circuit has "repeatedly warned against confining the claims to those embodiments." Kara Tech. Inc. v. Stamps.com Inc., 582 F.3d 1341, 1345 (Fed. Cir. 2009). In particular, the Federal Circuit has "expressly rejected the contention that if a patent describes only a single embodiment, the claims of the patent must be construed as being limited to that embodiment." Id.

--- End Footnotes ---

In sum, I conclude that the term "actuating means" is a means-plus-function claim limitation which is to be construed to include an actuating handle.
of the machine without the presence of a [proper] filter." Motion, Ex. A, Col. 4, lines 58-63. Although both fingers or projections are capable of actuating the switch controlling the motor and disabling it when the filter is removed, only one of the projections engages the switch at any given time since there is only one switch. However, both projections are needed to properly locate the filter and ensure a proper seal. In other words, the projections serve two functions.

The fact that the two functions of the projections are recited separately is not problematic; "double recitation of elements of combination inventions does not necessarily render a claim vague and indefinite, particularly if . . . an element performs more than one function or overlapping functions." Palmer v. United States, 191 Ct. Cl. 346, 423 F.2d 316 (Ct. Cl.), cert. denied, 400 U.S. 951, 27 L. Ed. 2d 258, 91 S. Ct. 242 (1970). As the Court of Customs and Patent Appeals, the predecessor court for the Federal Circuit, stated in In re Kelley, 49 C.C.P.A. 1359, 305 F.2d 909, 916 (CCPA 1962): "The fact that one or more structural elements performing more than one function are common to the mechanisms which are recited separately in the claims does not prevent the claims from being sufficiently supported by the disclosure." Thus, the phrases "actuating member" and "plurality of projections" need not refer to two separate elements, as C-Vac argues, but are properly interpreted to allude to the two functions of the projections.

As a threshold matter, we agree with both parties that the "actuation means" limitation of claim 3 is not a means-plus-function limitation, as the district court found. The claim specifically recites the structure that performs the claimed function ("said actuation means including first and second pivot connections respectively between said first and second tension bail legs and a midpoint on said respective first and second extension bail legs"), thus overcoming the presumption resulting from use of the word "means." Though we find that the district court erred in construing the "actuation means" limitation to be a means-plus-function limitation, the error was harmless. Indeed [**15] both parties agree that it was harmless because they agree the scope of the claim would be identical, whether under the doctrine of equivalents or under the literal scope of the means-plus-function claim.

The third disputed term is "actuator." General Creation argues that "actuator" should be construed as a "switch to activate the toy." (Pls.' Br. at 16.) LeapFrog asks the court to construe "actuator" more specifically as "a pressure switch," because, it asserts, a pressure switch is the only type of "actuator" disclosed by the inventor in the specification. (Def.'s Br. at 32-35).

Again, I begin my analysis with the claim language. Claim 1 provides that the memory storage means produces audio signals "upon actuation of said … actuator." ( '213 patent, col. 5, 11. 4-15.) However, there is no further indication as to the structure of the "actuator." Thus, I must determine the ordinary meaning of "actuator" as defined by a toy inventor or toy manufacturer, experienced in educational toys. Unlike "book," as discussed above, "actuator" is a broad term, capable of many interpretations. An "actuator," as argued by General Creation, can be anything that activates something else, including but not limited to a switch, a lever, or an infrared light reader. (Pls.' Br. at 15.) These types of actuators, as well as many others, are used in toys and are known to toy inventors and toy manufacturers. Thus, the ordinary meaning of "actuator" is "anything that activates something else." As this is the ordinary meaning, I must look to the specification to determine if the inventor intended a different meaning in the context of the '213 patent.

LeapFrog contends that because the specification discloses only pressure switches as actuators, the term "actuator" should be construed as "pressure switch." (Def.'s Br. at 31-37.) However, I find that the specification does not so limit the claim.

First, pressure switches are not the only type of "actuator" referenced by the inventor in the specification. While the preferred embodiment focuses on the use of pressure switches, the summary of the invention portion of the specification uses only the general term "actuator." ( '213 patent, col. 1, 11. 34-62.) Also, both the summary of the invention portion and the preferred embodiment identify a remote control as an example of an actuator that could be used with this toy. ( '213 patent, col. 1, 11.58-59 & col. 4, 11. 8-19.) A remote control is a device that combines both pressure switches and infrared
signals, two different types of "actuators."

Second, even if pressure switches were the only type of actuators disclosed in the preferred embodiment, the inventor "is
not confined to that particular mode of use since the claims of the patent, not its specifications, measure the invention." SRI
Int'l, 775 F.2d at 1122. Instead, the preferred embodiment and the other parts of the specification should be used only to
determine if the inventor intended to deviate from the ordinary meaning given to a claim term. See Vitronics, 90 F.3d at
1582 citing Markman, 52 F.3d at 979.

LeapFrog contends that the rule set forth in Gentry Gallery, Inc. v. Berkline Corp., 134 F.3d 1473 (Fed. Cir. 1998), applies
in this case. Gentry Gallery held that in certain circumstances, "claims may be no broader than the supporting disclosure."
Id. at 1480. However, the Gentry Gallery case is distinguishable. In Gentry Gallery, the specification was "crystal clear that
a particular (i.e., narrow) understanding of a claim term [was] an 'essential element of [the inventor's] invention." Johnson
Worldwide Assocs., 175 F.3d at 993 (quoting Gentry Gallery, 134 F.3d at 1479). Here, the specification, by referring to the
"actuator" as a pressure switch, a remote control or a general actuator, makes it clear that the invention does not require a
particular type of actuator. Because more than one type of actuator is disclosed and because there is no indication that a
pressure switch must be used in this invention, the specification is consistent with the broader, ordinary meaning of actuator.

While the claim language does not specify what type of structure the "actuator" takes, it does specify that the function of the
"actuator" is to activate the memory storage means. The memory storage means "produces audio signals" ('213 patent, col.
5, 11. 2-3) and the audio signals are produced "upon actuation of said … actuator." ( '213 patent, col. 5, 11. 4-5). According
ly, "actuator" will be construed as "a device that activates the memory storage means."

1. The ’685 patent - the preamble

16. The analysis in this section is based entirely on intrinsic evidence consisting of the patent, the prosecution history and
the reexamination history.

17. The first claim element at issue is the meaning of the "adapted . . . for" and "adapted . . . to" clauses of the preamble.

18. "[A] claim preamble has the import that the claim as a whole suggests for it." Bell Communications Research, Inc. v.
Vitalink Communications Corp., 55 F.3d 615, 620 (Fed. Cir.1995). Where a patentee uses the claim preamble to recite
structural limitations of his claimed invention, the PTO and courts give effect to that usage. See id.; Corning Glass Works v.

19. In the reexamination of the ’685 patent, NAB relied on the preamble of claim 1 to demonstrate that the Scharbach patent
was not relevant to the art of dental prostheses. The examiner agreed, stating that it was not relevant "to the art of dental
prosthetics in that it does not address any of the problems encountered in this area." As in Corning Glass Works, the
specification makes it clear that the inventors were working on solving a problem with the art of dental prosthetics, not with
hip replacements. Thus, the preamble of Claim 1 limits claim 1 to the art of dental prosthetics.

20. The preamble recites that one end of the angled spacer element is "adapted . . . for attachment to a fixture [1] defining
therein a threaded aperture [7], said fixture [1] being intended for implantation in the maxillary." Thus, the preamble
describes the fixture as a dental fixture having a threaded aperture. The preamble further recites that the other end of the
spacer element is "adapted at its other end to support a dental prosthesis."

21. 3I has argued that these two "adapted" clauses are "means-plus-function" elements under 35 U.S.C. § 112, P6. 3I argues
that the phrase in the preamble, "adapted at its other end to support a dental prosthesis," is functional language which limits
the upper end of the angled abutment to the exact configuration shown in Fig. 2 of the patent.

22. 3I has cited no case, and the Court has been unable to find a case, holding that an "adapted . . . for" or "adapted . . . to"
clause in a preamble is a means-plus-function element. 3I's argument is without merit, in view of several recent Federal
Circuit authority on means-plus-function clauses.
23. Section 112 P6 of the patent statute provides that

An element in a claim for a combination may be expressed as a means or step for performing a specified function without the recital of structure, material or acts in support thereof, and such claim shall be construed to cover the corresponding structure, material or acts described in the specification and equivalents thereof.

24. "To invoke this statute, the alleged means-plus-function claim element must not recite a definite structure which performs the described function." Cole v. Kimberly-Clark Corp., 102 F.3d 524, 531 (Fed. Cir. 1996). In Cole, the Federal Circuit held that the phrase "perforation means . . . for tearing" fails to satisfy the statute "because it describes the structure supporting the tearing functions (i.e., perforations)." d.; See also York Products, Inc. v. Central Tractor Farm & Family Center, 99 F.3d 1568, 1574 (Fed. Cir. 1996) (the word "means" "protrude from the liner sidewall portions and form[ ] load locks" did not invoke section 112 P6).

25. In Greenberg v. Ethicon Endo-Surgery, Inc., 91 F.3d 1580, 1582 (Fed. Cir. 1996) the Court held that the claim element "a cooperating detent mechanism defining the conjoint rotation of said shafts in predetermined intervals" was not a means-plus-function element. The Federal Circuit pointed out that claim drafters "conventionally use the preface 'means for' (or 'step for') when they intend to invoke section 112(6), and there is seldom any confusion about whether section 112(6) applies to a particular element." After noting that the particular mechanism in question - detent mechanism - was defined in functional terms, the court held that was not sufficient to convert it into a means-plus-function element.

First, the fact that a particular mechanism -- here detent mechanism -- is defined in functional terms is not sufficient to convert a claim element containing that term into a "means for performing a specified function" within the meaning of section 112(6).

91 F.3d at 1583. The Federal Circuit also noted that the claim element there in question did not use means plus function language. Id. at 1584. In that regard, the Court set forth two inter-related rules of claim construction for section 112 P6:

The use of the term means is not always necessary to trigger the application of section 112P6. Because "the use of the term "means" has come to be so closely associated with 'means-plus-function' claiming[,] it is fair to say that the use of the term 'means' (particularly as used in the phrase 'means for') generally invokes section 112(6) and that the use of a different formulation generally does not.

Id. at 1584.

26. The "adapted . . . for" and "adapted . . . to" clauses of the preamble of the '685 patent do not use the phrase "means for." Because the "use of a different formulation [than "means for"] generally does not invoke section 112, P6, this Court presumes that the "adapted" clauses in the preamble do not invoke section 112, P6. Greenberg v. Ethicon Endo-Surgery, Inc., 91 F.3d at 1584.

27. Further, the body of the claim describes the second threaded bore: in claim element [d] it describes the "second portion" that "defines a second threaded bore" and in which both the second threaded bore and the second portion form an acute angle with respect to the through bore in the first portion. The function of the second threaded bore is to accept the screw that supports the dental prosthesis on the abutment -- the same as the function recited in the adapted . . . to clause of the preamble. Because "the alleged means-plus-function claim element must not recite a definite structure which performs the described function." Cole v. Kimberly-Clark Corp., 102 F.3d at 531, this is a further indication that the "adapted. . . to" clause in the preamble is not a means-plus-function element.

28. Finally, the Court looks to the '200 patent, which is related to the '685 patent, since it resulted from a patent application that was a continuation of the patent application for the '685 patent, and it thus has the same drawings and written specification. Clauses [a], [b], and [c] of claim 1 of the '200 patent are identical to the same clauses in claim 1 of the '685 patent. Clause [d], however, is different.
29. Clause [d] of the ‘200 patent includes a means-plus-function clause, "means for supporting and securing to said unitary member said dental prosthesis." That means-plus-function clause uses the classic language "means for" and shows that the inventors were capable of drafting a means-plus-function element when they intended to do so. Moreover, the function of "supporting . . . said dental prosthesis" in the means-plus-function clause of the ‘200 patent is the same as the function of the "adapted . . . to support a dental prosthesis" in the preamble. If the "adapted . . . to" clause in the ‘200 patent were construed to be a means-plus-function element, then the means-plus-function element in clause [d] of the 200 patent would be superfluous. The Court will not construe the meaning of a claim to render an element superfluous. Further, as a matter of common sense, the "adapted . . . for" and "adapted . . . to" clauses in the ‘685 and ‘200 patents must have the same meaning, since the specifications and drawings in the two patents are identical.

30. For the foregoing reasons, the "adapted . . . for" and "adapted . . . to" clauses of the preamble are not means-plus-function elements under section 112, P6.

M. "adapted for"

Touchtunes proposes that the phrase "adapted for" as used in the various claims of the ‘575 Patent and the ‘189 Patent means "physical modification of a structure specifically for the use as further set forth in the claim." This construction is based on the prosecution history of these patents, during which Arachnid amended claims to add the "adapted for" language to certain previously recited structures. (See, e.g., Presta Decl. Ex. 16 at 2 (changing the phrase "a display presenting song selections" to "a display adapted for presenting song selections").) These amendments were intended "to better clarify applicants' contribution to the art." (Id. at 7.) The modification of the claims to include the "adapted for" clause establishes that the clause is a limitation. See Manual of Patent Examining Procedure § 2111.04 (using "adapted for" as an example of claim language that may have a limiting effect and stating that "[t]he determination of whether [this] clause[] is a limitation in a claim depends on the specific facts of the case").

In contrast, Arachnid proposes that the term be construed as "combined and/or applied for use as further set forth in the claim." The phrase "applied for use" would not require any adaptation at all. Indeed, under Arachnid's proposed construction, for example, any unmodified display necessarily would be "adapted for presenting song selection" merely because the display operates in response to signals instructing it to present song selection. This construction removes the difference between the original and amended claims submitted by Arachnid during the prosecution of the patent and effectively reads the term "adapted for" out of the claims.

Touchtunes' proposed construction is consistent with the intrinsic record, including the prosecution history. The term "adapted for" is therefore construed as "physical modification of a structure specifically for the use as further set forth in the claim.

Sub-element 2. The leading edge of the channeling structure being adapted for positioning immediately below the shrimp eggs at the water surface

BAI argues that this "positioning" element of claim 8 requires constant and immediate adjustment of the channeling structure, which its device cannot accomplish because it is heavy, bulky and difficult to adjust. This "constant adjustment" argument also applies to the "height adjustment means" element of claim 8. The specification provides:

Accordingly, the positioning step involves constant adjustment of the leading edge of the funnel to ensure its location just below the egg level. This is accomplished by using a height adjustment device to selectively move the funnel up or down, depending upon the change in layer thickness.

Col. 3, lines 62-67 ('062 patent).
…[The funnel structure's] depth must be adjustable to enable an operator to immediately vary its position as egg layered depth changes across the water surface….

Col. 7, lines 47-49 (‘062 patent). This court disagrees that a constant and immediate adjustment limitation be read into claim 8. 26

26 From oral argument, it is plain to the court that BAI's height adjustment mechanism sometimes gets "stuck" because the working platform is broken and has not been fixed. Working as designed, the working platform would be adjustable through turning the height adjustment wheel. The court is unpersuaded that the operating characteristics of a broken BAI device would transform it from an infringing harvesting device to a non infringing device. "Imperfect practice of an invention does not avoid infringement." Paper Converting Mach. Co. v. Magna-Graphics Corp., 745 F.2d 11, 20, 223 U.S.P.Q. 591, 597 (Fed. Cir. 1984).

First, in claim 8, neither the height adjustment element nor the "positioning" sub element of the channeling structure require "constant" or "immediate" adjustability. Claim 8 only requires the leading edge to be adapted for positioning immediately below the shrimp eggs and the height adjustment means are coupled to the channel structure for providing adjustment of the height. Second, the specification does not define the scope of patent protection. The examples and discussion of constantly and immediately positioning the leading edge of the skimmer are examples of embodiments of the invention found in the specification, not fundamental principles to the invention, and therefore will not be read into the claims. Environmental Designs v. Union Oil Co. of Cal., 713 F.2d 693, 699, 218 U.S.P.Q. 865, 871 (Fed. Cir. 1983). This court declines to read a constant or immediate adjustability limitation from the specification into claim 8.

F. "said separate switches are adapted for simultaneously operating said camera for capturing continuing images and operating said microphone for capturing sounds with the continuing images"

Minerva contends that the term "said separate switches are adapted for simultaneously operating said camera for capturing continuing images and operating said microphone for capturing sounds with the continuing images" means "one of the switches is configured to operate the microphone and camera such that they allow the camera and microphone to operate at the same time." The defendants' proposed construction is "the independent switch for operating the camera and the independent switch for operating the microphone configured such that they can be actuated to allow the camera and microphone to begin operation at exactly the same time." Claim 28 of the '783 patent requires "separate switches for separately operating said microphone for capturing sounds and said camera for capturing said still or continuing images" and "said separate switches are adapted for simultaneously operating said camera . . . and operating said microphone." (emphasis added).

The parties dispute the significance of "simultaneously," although they have agreed upon a definition of the word: "occurring, done, etc. at the same time." Webster's New World Dictionary (3rd ed. 1990). The defendants assert that "simultaneously" means that the switches must be capable of beginning the operation of the camera and the microphone at exactly the same time. On the other hand, the plaintiff contends that the switches need only to allow the camera and microphone to operate at the same time. The dictionary definition of "simultaneously" does not require the operations to commence at exactly the same time. In addition, the claim language reads "simultaneously operating," not "simultaneously commencing."

The proposed constructions also differ on how the switches are used to simultaneously operate the camera and microphone. Minerva contends that one of the switches allows simultaneous operation of both the camera and microphone. The defendants maintain that there is an independent switch for the camera and an independent switch for the microphone. The simultaneous operation of the camera and microphone is controlled by "said separate switches"--this refers back to the
initial disclosure of "separate switches" within the claim. The earlier claim limitation discusses separate switches for "separately operating said microphone" and "separately operating said camera." There is no disclosure of a separate switch that jointly operates both the camera and microphone.

For the foregoing reasons, the court construes the term to mean "the independent switch for operating the camera and the independent switch for operating the microphone configured such that they allow the camera and microphone to operate at the same time."

1. Construction

Element A of claim 1 defines "rings adapted for supporting ornaments." Both parties agree about the meaning of the term "ring," and Wilshire concedes that its Versailles Chandeliers feature them. The dispute thus centers upon the proper construction of the phrase "adapted for supporting ornaments."

Schonbek contends that an ornament whose weight is in any manner borne by a ring is, under the ordinary meaning of the term, "supported" by that ring. That this, if without the ring the ornament would fall to the ground, then that is sufficient to consider the ring as supporting the ornament. Wilshire counters that the ordinary meaning of "support" is more restrictive, such that an ornament is only supported if it is directly attached to the ring.

Neither party has argued that the word "support" has a particular meaning in the field of chandelier design or construction that differs from its ordinary one. Nor is the term precisely defined in the 805 patent's specification. Consequently, I begin my construction, just as the parties suggest, with the ordinary meaning of the term. See DeMarini Sports, Inc. v. Worth, Inc., 239 F.3d 1314, 1324 (Fed.Cir.2001).

Looking to dictionary definitions of the word "support," I note that Webster's Third New International Dictionary (1986) defines "to support" as "to hold up or in position: serve as a foundation or prop for: bear the weight or stress of: keep from sinking or falling," adding in a side note that "support' is applicable to a variety of uses with the general meaning or suggestion of carrying or leaning from or as if from below, of maintaining or holding up the weight or pressure of, and of forestalling sinking or falling back." The formal definition is virtually identical to that found in the earlier edition favored by some purists, Webster's New International Dictionary (2d ed.1950). Cf. Empire Co., Inc. v. OSHA, 136 F.3d 873, 878 n.2 (1st Cir.1998). The American Heritage Dictionary (3d ed. 1992), meanwhile, supplies similar meaning but in different order of priority, assigning the first to "to bear the weight of, especially from below," and the second to "to hold in position so as to keep from falling, sinking, or slipping."

None of these definitions appear to me to place particular emphasis on direct attachment as a crucial part of the meaning of "support." Furthermore, even if there was greater ambiguity in this regard, I note that Schonbek's interpretation of the claim language is strengthened, in the particular context of the 805 patent, by the patent's specification.

As noted, the specification does not precisely define the word "support," but the Federal Circuit has emphasized that the claim language need not be evaluated "in a vacuum." DeMarini Sports, 239 F.3d at 1325. Cf. Duncan v. Walker, 533 U.S. 167, 121 S. Ct. 2120, 2135, 150 L. Ed. 2d 251 (2001) (Breyer, J. dissenting) ("dictionaries . . . unilluminated by purpose, can lead courts into blind alleys"); Samuel A. Thumma & Jeffrey L. Kirchmeier, The Lexicon Remains A Fortress: An Update, 5 Green Bag 2d 51 (2001) (courts "should rely less on bare dictionary definitions and place more emphasis on context, conduct, purpose, history and other relevant sources") (quoting Samuel A. Thumma & Jeffrey L. Kirchmeier, The Lexicon Has Become A Fortress: The United States Supreme Court's Use of Dictionaries, 47 Buff. L. Rev. 227, 298 (1999)). Thus, whatever ordinary meaning is suggested for claim language by dictionary definitions must be put into the context of the specification, and even the prosecution history, of a given patent. DeMarini Sports, 239 F.3d at 1325. Indeed, "such intrinsic evidence is the most significant source of the legally operative meaning of disputed claim language." Vitronics Corporation v. Conceptronics, Inc., 90 F.3d 1576, 1582 (Fed.Cir.1996).

Looking then, to the 805 patent's specification, I find described at columns 5:33-38 and 11:12-37, and depicted at Figures 17 and 18, an embodiment of claim 1 that features an array of scrolled spokes borne by two inner rings (themselves attached by
a central column to the ceiling), the spokes rather than these rings directly "bearing" or "carrying" -- in the language of the specification -- all but (arguably) one of the ornaments. 1 Adopting Wilshire's restrictive definition of "support" thus would require ignoring a portion of the patent specification, insofar as it contains an embodiment in which the rings do not directly, but rather indirectly bear the ornaments. In light of the Federal Circuit's emphasis on the patent specification as "the single best guide to the meaning of a disputed term," Vitronics, 90 F.3d at 1582, and noting that dictionary definitions of "support" in any event do not focus on direct attachment, I decline Wilshire's invitation.

--- Footnotes ---

1 Wilshire seeks to dispose of this embodiment by suggesting that it is associated with claim 25 of the 805 patent, rather than claim 1. Claim 25 specifically concerns the "twist tab" locking mechanism that is disclosed in the patent specification as corresponding structure to the "locking means" of claim 1. The basis for Wilshire's position appears to be the fact that the patent specification describes the embodiment depicted at Figures 17 and 18 as fastened by such twist tabs, rather than one of the other locking mechanisms also disclosed. '851 patent, column 11:29-37. I find Wilshire's argument entirely unpersuasive. Although claim 25 is not drafted with explicit language of dependency, a practical reading cannot fail to perceive its linkage to the core claim of the 805 patent, claim 1. Furthermore, it strains reason to suggest that a full blown chandelier frame merely embodies a particular locking mechanism that is itself generally preferred for the subject matter of the 805 patent's core claim (i.e. chandelier frames).

--- End Footnotes ---

Accordingly, I construe element A of claim 1 of the 805 patent to include circumstances where the rings of a chandelier frame bear the weight of ornaments only indirectly.

--- 70 ---

A. Claim Term in Dispute: "adapted to"

Claim 3 of the '498 Patent provides:

The combination of claim 1 wherein said detachable elongate tip portion is a long and substantially pliable segment adapted to be multiply folded upon itself to substantially pack said body cavity.

('498 Patent, Col. 13:15-18.)

The parties dispute the proper construction of the phrase "adapted to." Similar use of the phrase "adapted to" appears in Claim 9 of the '498 Patent and Claims 8 and 33 of the '385 Patent. For example, Claim 8 provides:

The improvement of claim 7 wherein said elongate distal tip is a long and substantially pliable segment adapted to be multiply folded upon itself to sufficiently occupy said body cavity to impede fluid flow therein.

('385 Patent, Col. 13:40-43.)

B. Principles of Claim Construction

A principle of patent claim construction is that the words of a claim are to be given their ordinary and customary meaning, which is the meaning that the words would have to a person of ordinary skill in the art at the time of the invention. Phillips v. AWH Corp., 415 F.3d 1303, 1312-13 (Fed. Cir. 2005). A person skilled in the art is deemed to have read the claims and written description and to have knowledge of any special meaning and usage of the words used in the claims. Id. at 1313. Thus, in the claim construction process, the Court should start by reviewing these same resources to derive definitions for the words and phrases in the claims. Id.

C. Proposed Definitions
Both parties contend that the phrase "adapted to" is an ordinary and customary phrase and should be given its ordinary and customary meaning. (See Plaintiffs' Brief Regarding Claim Construction of the "Adapted To" Claim Term, "Pls.' Br.," Docket Item No. 930, at 3; Defendant's Brief in Support of Claim Construction of the Phrase "Adapted To," "Def.'s Br.," Docket Item No. 931, at 2.) However, they proffer different meanings for the phrase both based on dictionary definitions.

Plaintiffs Boston Scientific Corp. and Target Therapeutics, Inc. contend that "adapted to" should be construed to mean "configured to" to convey that the elongate tip portion was designed (i.e., configured) to multiply fold upon itself. (Pls.' Br. at 3.) Defendant Cordis Corp. ("Defendant") contends that the term should be construed to mean "suitable for" because that is the plain and ordinary meaning of "adapted to." (Def.'s Br. at 1.)

D. Construction of Phrase

In accordance with the principles of claim construction articulated in Phillips, the Court turns first to the intrinsic evidence to construe the phrase "adapted to."

Claim 7 of the '385 Patent discloses an elongate distal tip "capable of" 1 being multiply folded upon itself:

An apparatus for use in occluding a body cavity comprising: … a detachable elongate distal coupled to said wire, said elongate distal tip being a relaxed coil capable of being multiply folded upon itself.

('385 Patent, Col. 13:33-39.) Claim 8, which depends from Claim 7, claims an elongate distal tip "adapted to" be multiply folded upon itself:

The improvement of claim 7 wherein said elongate distal tip is a long and substantially pliable segment adapted to be multiply folded upon itself to sufficiently occupy said body cavity to impede fluid flow therein.

('385 Patent, Col. 13:40-43.)

Footnotes

1 The term "capable of is also used in Claims 15, 32, and 38 of the '385 Patent.

Under the doctrine of claim differentiation, there is a presumption that when different words or phrases are used in separate claims, they are presumed to have different meanings. See Comark Communications Inc. v. Harris Corp., 156 F.3d 1182, 1187 (Fed. Cir. 1998). There is no dispute between the parties that the phrase "capable of means "having the ability to." (See Stipulation Regarding the Court's August 21, 2006 Order Re: Claim Construction of the "Multiply Folded" Term, Docket Item No. 928.) An object may be "capable of multiply folding upon itself, even if it is not intentionally and specifically made in a way that would cause it to multiply fold. Thus, "capable of is a broader term than "adapted to."

The definition asserted by Defendant Cordis, namely "suitable for" is similar to "capable of." That is, a device could be suitable for multiply folding upon itself, without being intentionally and specifically made in a way that would cause it to multiply fold. Moreover, Defendant's proposed definition of "suitable for" does not follow from a plain dictionary definition of the word "adapt." Widely accepted dictionary definitions of "adapt" are "to make fit (as for a specific new use or situation)," (Merriam-Webster's Collegiate Dictionary 13 (10th ed. 1998)), and "to make suitable to a specific use or situation." American Heritage College Dictionary 15 (3d ed. 1993). No dictionary that Defendant has cited defines "adapt to" to mean "suitable for."

On the other hand, Plaintiffs' proposed definition of "configured to" embraces the concept of a device intentionally and specifically made to act in a certain way. A widely accepted dictionary definition of the word "configure" means "[t]o design, arrange, set up, or shape with a view to specific applications or uses." American Heritage Dictionary 386 (4th ed. 2000). The written description of the '498 patent supports the definition of "configured to" because it discloses embodiments in which specific types of materials and wire dimensions are used to make coils that act in certain ways. ('498 Patent, Col. 9:6-13.)
III. CONCLUSION

The Court construes "adapted to" to mean "configured to."

71

"each of said different sets of elements being adapted to at least assist in holding one of a plurality of differently configured pumps to the housing"

Claim 5 of the '662 Patent and claims 1, 11, and 18 of the '767 Patent contain the term "each of said different sets of elements being adapted to at least assist in holding one of a plurality of differently configured pumps to the housing." SHURflo contends that the term means "each different set of elements having the capacity to at least assist in holding one of the differently configured pumps to the housing." Defendants contend that the term means "each of the different sets of elements is uniquely tailored to assist in holding only one of the differently configured pumps." The parties disagreement centers around two main disputes: (1) whether the term requires exclusivity between the different sets of elements; and (2) the construction of the phrase "adapted to." Because the parties' first dispute was addressed under the previous disputed claim term, there is no need to repeat the parties' arguments or the Court's analysis. For the same reasons discussed above, a requirement of exclusivity between the different sets of elements is not supported by the claim language, the specification, or the prosecution history. The Court will address the parties' second dispute in some detail as it is a source of disagreement among the parties in many of the remaining disputed terms.

SHURflo contends that the term "adapted to" means "having the capacity to," while Defendants contend that the term means "uniquely tailored." Although SHURflo offers no persuasive support for its proposed construction of the term, it argues that Defendants proposed construction lacks support in the intrinsic record. Specifically, SHURflo argues that the prosecution history merely shows that the claimed "different sets of elements" are capable of holding "pumps of different configurations." SHURflo's Reply Brief, at 5. Neither ordinary meaning nor any proper influence of the specification suggests that the phrase "adapted to" should be interpreted to mean "uniquely tailored." Such a construction would be a severe narrowing of the ordinary meaning, which is not appropriate because there is no clear definition or disclaimer in the intrinsic record. On the other hand, Defendants argue that SHURflo's proposed construction is too broad because "[s]omething may have a capacity for a use (e.g., through misuse or incidental use) without being made fit for that use." Defendants' Responsive Brief, at 14. Indeed, in view of the specification, simple capacity does not reflect the intended meaning of "adapted to." Thus, SHURflo's proposed construction of "having the capacity to" is much broader than "adapted to."

Understanding that extrinsic evidence is less significant than the intrinsic record, it is helpful in this instance to look at the dictionary definition of the word "adapted." Merriam--Webster's Online Dictionary defines the term "adapted" to mean "to make fit (as for a specific or new use or situation) often by modification." In addition, the claim language itself is instructive, stating "each of said different sets of elements being adapted to at least assist in holding one of a plurality of differently configured pumps to the housing." The ordinary meaning of the phrase "adapted to" is precisely consistent with the claim in that each "set" of elements is "made fit" to assist in holding a pump. As seen in Figures 1 through 4 of the specification, the "sets" of elements are "made fit" by the placement and section of clips, holes, cavities and other items that contribute to holding the pump. Thus, the "adaptation" of an element set is illustrated by this placement and selection of elements, which is a designed or configured feature of the element set.

Because SHURflo's proposed construction is too broad and Defendants' proposed construction is too narrow, the Court construes the term "adapted to" to mean "designed or configured to." The Court's construction gives the term the appropriate amount of breadth consistent with the specification. Accordingly, the Court construes the term "each of said different sets of elements being adapted to at least assist in holding one of a plurality of differently configured pumps to the housing" to mean "each different set of elements is designed or configured to assist in holding one of the differently configured pumps to the housing."
5. "Graft which is adapted to be anchored within one of the flow lumens" and "Graft structure which is adapted to be anchored within one of the flow lumens" 8

--- Footnotes ---

8 The term "graft which is adapted to be anchored within on of the flow lumens" is found in independent claim 1 of the '458 Patent. The term "graft structure which is adapted to be anchored within one of the flow lumens" is found in independent claim 1 of the '158 Patent.

--- End Footnotes ---

Because the parties requested that the Court construe the term "graft," as used in the preamble of the claims but not the bodies of claims, the Court inquired of the parties whether the crux of the dispute over this phrase, and other similar phrases, was with respect to the "adapted to be anchored within" language. Plaintiffs argued it was. Defendants argued it was not and argued that the Court must construe the entire phrase. Defendants also argued that the phrase, as with their proposed construction of the term "graft," should be construed to be an intraluminal device. The Court concludes this phrase should be construed to require an intraluminal limitation. Although the word "graft" is followed by a "which" clause, that clause does not fully elaborate on the meaning of the word graft. As set forth above in Section B.1, the specification demonstrates how the inventors defined the word "graft."

Although the parties disagree on the intraluminal limitation, they do agree that this phrase should be construed in such a fashion as to make clear that the "graft" contains some structure that permits it to be attached to a flow lumen. Although the claim language is silent, the parties also agree that wires perform this function. (See, e.g., Plaintiffs' Br. at 18:6-7 ("The parties seem to be in agreement that the structure that allows the anchoring to occur is the wires.").) The parties again dispute, however, whether the wires must be malleable. The parties also dispute whether the wires must project beyond the end of the graft body.

For the reasons set forth above in Section B.2, the Court concludes that the wires must be malleable. Although the Court concludes that to serve their function, the wires in question must be located at or near the end of the graft or graft structure, the wire need not project beyond the end of the material forming the graft body. In the specification, the inventors state that the "projection of alternate crests or apices of the end wire or wires beyond at least part of the end or ends of the graft body is an important feature of this invention." ('458 Patent, col. 2, ll. 6-8.) The inventors then elaborate on the importance of this feature as follows:

As the graft is expanded by a balloon, the expansion of the wires, and of the balloon, will be limited by the diameter of the tubular graft body except in the region of the alternate crests or apices of the end wire or wires. The balloon will be able to expand these crests slightly more than the remainder of the wire so that they bell outwardly away from the adjacent end of the graft body. … This belling out of the crests of the wires at one or both ends of the graft body into contact with the inside surface of the vessel wall and then being at least partly embedded in the wall will assist in resisting any tendency for the graft to move longitudinally within the vessel after insertion.

(Id., col. 2, ll. 8-22.) Thus, the importance of the crests of wire is to permit the device to be expanded in such a fashion that it will engage with the vessel wall. With respect to how far the crests of wire might extend, the inventors state the crests of wire normally will extend beyond the end of the graft body. However, they also state that "[i]t would, …, be possible to have flaps of graft material protrud[ing] up the outside of each crest even though intermediate the crests the end of the graft stops well short of the crests. In this latter arrangement the crests are still free to bell outwardly as has been described above even though the crests do not extend absolutely beyond the end of the graft." (Id., col. 2, ll. 29-35 (emphasis added).) It is clear from the specification that if the graft body covers the wire crests, that will not diminish the importance of the wire crests and will not preclude the wire crests from performing their function. As such, the Court concludes that the wires need not always extend beyond the end of the material forming the graft body.

Accordingly, the Court construes the term "graft [structure] which is adapted to be anchored within one of the flow lumens"
to mean: "An intraluminal graft that includes malleable wires located proximal to at least one end of the graft [structure], which enable the intraluminal graft to be secured or attached to one of the flow lumens of the bifurcated base [graft] structure in an overlapping relationship."

8. said first wall portion adapted to be deformed during said seaming operation ('826 patent, claim 13)

Crown's proposed construction is "[a]dapted to have its shape altered during the seaming operation." 43 Rexam's proposed construction is "[s]ome treatment or conditioning, done to the first wall portion of the can end that makes the first wall portion easier to deform than the rest of the of the can end." 44

The court rejects Rexam's proposed construction requiring "some treatment or conditioning" done to part of the can end for the same reasons stated in number 4, above. The court adopts Crown's proposed construction: "adapted to have its shape altered during the seaming operation."

D. "A third periphery surface adapted to be disposed adjacent and spaced from the back of the knee of the person"

The parties agree that the third periphery surface need not touch the back of the knee; they differ as to the shape and orientation of that surface. Plaintiff argues that the phrase requires only that the third periphery surface face, but need not touch, the back of the knee. Plaintiff suggests that the third periphery surface can be curved and need not be perpendicular to the pad's major longitudinal axis. Defendant argues that the phrase means that the third periphery surface faces the back of the knee, is perpendicular to the major longitudinal axis of the pad, and is "truncated" and does not include an apex or point touching the back of the knee.

The original patent application claim 13 (later amended to become what is now claim 12) did not include reference to a third or fourth periphery surface. See Prosecution History, Application at 20. In response to the examiner's comments and rejections, the plaintiff amended the claim to add the language describing the third and fourth periphery surfaces.

The claim language, specification, and prosecution history do not reveal the ordinary and customary meaning of "adjacent," and the Court will consult a dictionary. The dictionary definition of "adjacent" is: "1. near or close; next or contiguous . . . 2. Geom. (of two angles) having a common vertex and one common side." Random House College Dictionary (1973). Thus, the plain language of the claim, "disposed adjacent and spaced from the back of the knee," is silent as to the orientation of the third periphery surface and the measure of the angle at which it intersects the major longitudinal axis.

In the specification, plaintiff's drawings appear to depict the third periphery surface as perpendicular to the major longitudinal axis. The specification discusses angle 72, which is the angle where the third periphery surface (facing the knee) and the second periphery surface (facing the lower leg) meet: "Preferably, angle 72 is a right angle . . . in order to increase the amount of volume of flexible enclosure containing flexible, resilient material acting upon the back of the upper leg." Patent, col. 5, lines 37-40; Patent Figs. 1, 2 (internal references to illustration legends omitted). As the specification's choice of words makes clear, this configuration is a preferred embodiment, and as such, cannot be used to limit the claim. Anchor Wall, 340 F.3d at 1306-7. Further, "when a claim term is expressed in general descriptive words," the court "will not
ordinarily limit the term to a numerical range that may appear in the written description or in other claims." Id. at 1358, quoting Renishaw PLC v. Marposs Societa per Azioni, 158 F.3d 1243, 1249 (Fed. Cir. 1998) (other citations omitted).

The specification also describes a configuration wherein both the third and fourth periphery surfaces "are disposed substantially perpendicular to first periphery surface," which faces the upper leg. Patent, col. 5, lines 35-36; Patent Figs. 1, 2. This description is also a preferred embodiment which cannot operate to limit a claim. Anchor Wall, 340 F.3d at 1306-7.

The third periphery surface is one of the four periphery surfaces that define the substantially quadrilaterally shaped sides of the pad structure. As discussed above, that quadrilateral must have internal angles of approximately 360 degrees, and the sides of the quadrilateral must be straight overall. No requirement that the third periphery surface must be perpendicular to the major longitudinal axis inheres in the definition of a quadrilateral.

The Court finds that claim 12 allows the third periphery surface to be perpendicular, but does not require it to be perpendicular.

Defendant argues that the phrase "spaced from the back of the knee" shows that plaintiff specifically disclaimed a pad structure wherein the third periphery surface forms an apex. Defendant argues that if the third periphery surface extended to an apex, it would no longer be spaced from the back of the knee. Defendant notes that plaintiff's preferred embodiment describes and illustrates the third periphery surface as truncated. Patent Fig. 3; Patent, col. 5, lines 40-49.

Two of the three illustrations in the specification depict the pad structure with a truncated third periphery surface. See Patent Figs. 1, 3. The specification explains:

Although pad structure could be formed having a configuration of each side face surface in the shape of a triangle, as illustrated in FIG. 2, it has been determined that pad structure is more comfortable for the wearer of pad structure if the tip of flexible enclosure is removed, or truncated, whereby the third periphery surface is formed by the removal of portion of the flexible enclosure to leave flexible enclosure in the configuration illustrated in FIGS. 1 and 3.

Patent, col. 5, lines 40-49 (internal references to illustration legend omitted). The Court finds that this language merely expresses a preferred embodiment of the pad structure, but does not in itself operate to limit the claim, which does not describe the third periphery surface as truncated.

The Court also notes that the patent's third illustration, Fig. 2, depicts the pad structure in the shape of a triangle with an apex facing the back of the knee. The depiction of the pad structure in the overall shape of a triangle appears to contradict the claim's requirements of four periphery surfaces and two substantially quadrilaterally shaped sides. The claim's language, however, does not preclude an enclosure in the overall shape of a triangle with the surface of the tip truncated very slightly, resulting in a very narrow third periphery surface. The requirements of four periphery surfaces and two quadrilaterally shaped sides, however, do preclude a pad enclosure shaped like a true triangle with the third periphery surface being a true apex. Whether the third periphery surface of a particular pad enclosure is narrow enough to constitute the apex of a triangle is a question of fact.

The Court construes the claim language to allow, but not require, the third periphery surface to be perpendicular to the major longitudinal axis. The claim language precludes a pad enclosure in the shape of a true triangle with an apex facing the back of the knee, but allows for a pad enclosure with two substantially quadrilaterally shaped sides and four periphery surfaces, where the third periphery surface is very narrow. Finally, the pad enclosure need not touch the knee, as the parties agree.

4. [seaming panel] adapted to be formed into a portion of said double seam during said seaming operation ('826 patent, claim 13)

Crown's proposed construction is "[a]adapted to be formed into a portion of the double seaming during the seaming operation." 36 Rexam's proposed construction is "[s]ome treatment or conditioning, done to the first wall portion of the can
end that makes the first wall portion easier to deform than the rest of the can end." 37

The court adopts Crown's proposed construction.

The claim language does not indicate the limitation Rexam proposes. The preamble of claim 13 of the '826 patent recites, in part, "[a] metal can end for use in packaging beverages under pressure and adapted to be joined to a can body by a seaming process to form a double seam therewith using a rotatable chuck . . . said can end comprising . . . ." 38 The element at issue reads "a peripheral cover hook, said peripheral cover hook comprising a seaming panel adapted to be formed into a portion of said double seam during said seaming operation." 39 The use of "adapted" in the preamble, referring to the entire can end and repetition of that word in the disputed claim element supports Crown's position that the word "adapted" is merely a patent drafter's term describing functionality, i.e., to be formed into a double seam during the seaming operation.

Furthermore, nowhere in the common specification is there any indication that the seaming panel of the claimed can end must be treated or conditioned so that it is easier to deform than the rest of the can end as required by Rexam's proposed construction. Therefore, the court determines this claim term requires no further construction and adopts Crown's proposed construction: "adapted to be formed into a portion of the double seaming during the seaming operation."

2. The "Adapted to be" Limitation

The parties dispute the meaning of the additional words "adapted to be" preceding the previously construed term "in pressure contact with a portion of the skin surface" in claim 27 of the '844 Patent. Candela insists that it limits the invention to applicators which are "fit for (i.e., constructed for)" pressing down on the skin, while Palomar argues that it includes all applicators which are "capable" of pressing down on the skin, even if not specifically designed for that purpose. (Compare Docket # 45, 15-17, with Docket # 35, 17-18.) While this phrase is commonly used in patent claims, guidance from the Federal Circuit on its meaning is rather sparse. 3

Palomar's construction effectively reads the phrase out of the claim as a limitation without first examining it in light of the specification. See Phillips, 415 F.3d at 1312-13; see also Manual of Patent Examining Procedure § 2111.04 (8th ed., rev. 5, Aug. 2006) ("The determination of whether [the clause 'adapted to'] is a limitation in a claim depends on the specific facts
of the case.

Almost any applicator shape is "capable" of being in pressure contact with the skin. The specification, however, describes the applicator in one embodiment as having "a convex surface in contact with the skin surface," while another describes it as "designed to form a fold of the skin." (’844 Patent, col. 2 ll.47-51.) The design of the applicator is important to provide "efficient compression of the skin," "uniform displacement of blood," "allow[] optical radiation to be coupled into and out of the epidermis," and, in an alternative embodiment, to apply pressure "to the skin on both sides." (Id. at col.6 ll.50-51, col.7 ll.1-3, 14-15, col. 15 ll.10-11.) Therefore, the specification supports an interpretation of "adapted for" that requires some deliberate design or construction of the applicator that relates to the function of its being "in pressure contact with the skin." Other courts have come to similar conclusions. See Boston Sci. Corp. v. Cordis Corp., No. C 02-10474 JW, 2006 U.S. Dist. LEXIS 94329, at *7 (N.D. Cal. Dec. 20, 2006) (unpublished) (concluding that "adapted to" requires "the concept of a device intentionally and specifically made to act in a certain way"). Therefore, I conclude that the phrase "adapted to be" requires that the applicator be designed to be in pressure contact with the skin.

1. "wing section adapted to be out of a strain path"

The parties' proposed constructions are as follows:

CTS
wing section is a portion of the substrate contiguous with the center section but does not flex in response to a force transmitted to the center section by the step section

TK
the wing section is configured so that the force of weight applied on the substrate does not cause strain in the wing section

Again, CTS's proposed interpretation carries the day. Figure 2 of the ’361 Patent shows that the wing sections (24) are attached to the center section (102). The specification also explains that the wing sections are "located out of the strain or flexing path that affects [the] center section." ’361 Pat., Abstract; Col. 4, II. 19-25. Thus, when a weight is applied to the strain gage, the wing sections do not flex. Id.

TK's proposed interpretation of a "wing section adapted to be out of a strain path" boil down to a second attempt to limit the claim such that the weight must be applied directly to the substrate. The claim language, however, does not require that weight must be applied directly to the substrate. Rather, the claim states that the wing section is configured such that as the center section is allowed to flex in response to an applied force, but the wing section is not caused "to flex or have strain therein." Id. Col. 4, II. 23-25. There is no requirement that the weight is applied on the substrate. Rather, the claim clearly states that the center section is adapted to flex "in response" to weight applied.

Like the ’013 patent, TK it attempting to read limitations from the specification into the claim and to limit the invention to a single preferred embodiment disclosed in the specification. In addition, in arguing that the disputed phrase should mean that: "the wing section is configured so that the force of weight applied on the substrate does not cause strain in the wing section," TK seeks to limit the location where the weight to be measured is applied. The claim, however, includes no language regarding where the supposed "force of weight" is applied. TK also confuses the issues by using the term "force of weight." Both parties have stipulated that "weight" is "a force by which a body or object is attracted to earth by gravity;" "Force of weight" is redundant and meaningless. While the ’361 patent uses the term "force of the weight," col. 4, II. 17-19); "of the weight" clearly modifies the force that is applied. It is not that the weight itself is applied.

TK also reiterates its position on the force applied to the "step section" and transmitted to the "center section" which was addressed above in interpreting the ’013 patent. In addition to the plain language of the claim requiring the force to act on the "step section" as discussed above, the context of the actual invention cannot require the weight to be applied directly to the substrate. In the context of the actual invention, the weight being measured is that of the passenger in the car seat. It does not follow that the passenger would sit directly on the substrate.

Rather, the ’361 specification teaches otherwise:

This invention relates to a force sensor or strain gage sensor for detecting the presence of a person having a weight in a car seat, and in particular to a strain gage that can detect the presence of an occupant using strain sensitive resistors and
provide an electrical signal to control activation of an airbag.

'361 Pat., Col. 1, ll. 25-30.

Referring to FIG. 2, another embodiment of a strain gage sensor 100 is shown. Sensor 100 has a metal substrate 12 with an upper surface 13 and a bottom surface 14. Metal substrate 12 is preferably formed from stainless steel. Substrate 12 has step sections 104 that extends downwardly generally perpendicularly on both sides of a center section 102. A pair of outer flat sections 106 connect with and extend away from step sections 104. Apertures 108 are located in outer sections 106. Fasteners (not shown) would be used to attach strain gage sensor 100 to a structure that supports a weight or force to be measured. The step sections concentrate the force of the weight to be measured onto the center section causing the center section to slightly flex.

Id., col. 4, ll. 8-20.

Accordingly, CTS' proposed interpretation is supported by the context of the claim language and the actual invention. As such, "wing section adapted to be out of a strain path" means "wing section is a portion of the substrate contiguous with the center section but does not flex in response to a force transmitted to the center section by the step section."

The parties' proposed constructions are as follows:

<table>
<thead>
<tr>
<th>CTS</th>
<th>TK</th>
</tr>
</thead>
<tbody>
<tr>
<td>a portion of the substrate contiguous with the center section, but does not flex in response to stress transmitted to the center section by the step section</td>
<td>the wing section is configured so that the force of weight applied on the substrate does not impact the wing section or cause it to flex</td>
</tr>
</tbody>
</table>

The Court agrees with CTS. In Figure 1, the wing sections (22) are contiguous with the center section (14). The specification only states that the wing sections are configured so they do not flex when force is transmitted to the center section via the step section. '013 Pat., col. 2, ll. 28-32; col. 3, ll. 21-27; and col. 4, ll. 2-16.

TK's proposed interpretation is improper because of the use of the redundant term "force of weight." It is also inconsistent with the context and ordinary claim meaning as a whole, because (a) the specification teaches that the wing section is not affected by the weight the presence of which is to be detected; and (b) the specification does not teach or suggest that a "weight force" pushes down on the sensor substrate. Instead, the specification teaches that the force to which the weight sensor is subjected when the vehicle seat is occupied is first received at the outer flat sections 18 and transmitted to the center section 14 along the path defined by the step sections but without involvement of the wing sections. '013 pat, col. 3, ll. 12-19.

The claim language is clear. The wing section is simply a portion of the substrate that is connected to the center section, yet is positioned such that force experienced by the center portion does not cause the wing section to flex.

TK's proposed interpretation attempts to add limitations that are not in the claim or specification, particularly as to where the weight to be measured is applied. The specification states that in the preferred embodiment the outer sections of the sensor are fastened to a support structure for supporting the weight to be measured, and that the weight applied to the outer sections is transferred through the step sections to the center. However, in the context of the claim and the specification, the weight acting upon the step section does not directly act on the step section. Rather, the wing section is adapted such that it will not flex in normal operation when the force is transmitted by the step section to the center section and causes the center section to flex:

The wing sections 22 are located out of the strain or flexing path that affects center section 14. The weight applied to
Strain gage 10 does not cause the wing sections to flex or have strain therein.

Accordingly, the Court adopts CTS' construction. The phrase "wing section adapted to be out of the path of the weight and not to flex" means "a portion of the substrate contiguous with the center section, but does not flex in response to stress transmitted to the center section by the step section."

Turning to the words of element (c), it claims: "a conductive electrode comprising a surface adapted to be placed in a fixed position in proximity to a surface of said pin." The parties disagree as to the meaning of the terms "conductive electrode" and, specifically, whether the term would include a direct contact probe in addition to a capacitive probe. Hence, the parties also disagree about the meaning of the phrase "in proximity" and whether the phrase would include a surface of a conductive electrode which touches the surface of the pin under test.

The words of element (c) disclose a "conductive electrode" "comprising" of two surfaces. As defined in lexicographic sources, the word "comprising" ordinarily means "to consist of" or "to be composed of" as well as "containing." See, e.g., In Re Paulsen, 30 F.3d at 1479 (recognizing that "lexicographic sources" supported interpretation used by United States Board of Patent Appeals); Miles Laboratories, Inc. v. Shandon, Inc., 997 F.2d 870, 876 (Fed.Cir. 1993) (utilizing Webster's definition to illuminate meaning of word "cabinet" used in claim). Thus, whatever words grammatically modify and follow the word "comprising" serve to define the constituents which form the "conductive electrode." See, e.g., ZMI Corporation v. Cardiac Resuscitator Corporation, 844 F.2d at 1579-1580 (recognizing that from "grammatical point of view" certain phrase modified word electrodes). The words which follow the word "comprising" are two surfaces which lie "in proximity" to each other.

The first surface is "placed in a fixed position." Grammatically, the second surface is the surface of the pin under test. See, e.g., ZMI Corporation v. Cardiac Resuscitator Corporation, 844 F.2d at 1579-1580. It is these two surfaces which comprise the conductive electrode.

The term "in proximity" denotes nearness or, as applied to the location of a conductive electrode, almost touching. Almost or near engenders a meaning of being close to an object without making physical contact. In the event the patentee intended to claim a direct contact probe, element (c) would include such words as "in contact with," "contiguous" or "touching" rather than "in proximity to." The claimed language therefore suggests an arrangement whereby two surfaces lie near each other (i.e., "in proximity") albeit not in direct contact.
It is true that the term "conductive electrode" standing alone might suggest a direct contact probe to one skilled in the art such as probe B in the prior art testers. Indeed, Keirn testified to this effect at his deposition as one skilled in the art. 20 It is also true that in some cases probe B can lie near the pin under test. Therefore, the phrases ("conductive electrode" and "in proximity") taken out of context or by themselves can in certain instances include the characteristics of the prior art testers. But the terms "conductive electrode" and "in proximity" in element (c) do not stand alone. Rather, element (c) discloses a "conductive electrode" which is comprised of two surfaces in proximity to each other. Such a structure suggests a capacitor. Therefore, when interpreted in the context of all of the words of element (c), the term "conductive electrode" suggests a capacitor. Moreover, such an interpretation adheres to the principle that, if possible, claims should be construed to uphold their validity. Lewmar Marine, Inc. v. Barent, Inc., 827 F.2d at 749.

20 See footnote number 18.

The specification corroborates the above interpretation of the disputed term "conductive electrode." The parties agree that the examples describing the conductive electrode in the specification all depict a capacitive probe. (Docket Entry # 103, p. 12; Docket Entry # 126, p. 10). The described capacitive probe forms a capacitor with the pin under test. The specification states that "the conductive electrode is effective if it is near the conductive circuit of the component lead being tested." ( '953 patent, Col. 3, l. 42-43). The "conductive electrode (106) is placed on top of the component package (110)." ( '953 patent, Col. 6, l. 51-52). After applying an oscillator voltage to a trace (114), "the oscillator voltage then appears on the pin (112)" under test. "Through capacitive coupling, a current is then passed to the electrode (106)." ( '953 patent, Col. 6, l. 58-64).

Even more enlightening, the specification explains that:

The conductor (204) forms a metallic plate, which acts as one plate of a capacitor. The other plate of the capacitor is the electrode (106), here illustrated by dashed lines, indicating that the conductor (106) is placed over the top of the integrated circuit package (110). Although the capacitor created in this manner is small, it is sufficient to conduct a signal between the electrode (106) to the pin (112).

This is not a situation in which this court is using the specification and its repeated descriptions of the conductive electrode as forming a capacitance with the pin under test to limit or redefine the terms of element (c). The language of element (c) already suggests that the two surfaces which lie near but not touching each other constitute the "conductive electrode." Such a structure does not include a direct contact probe. Rather, it suggests a capacitor structure which the specification confirms. See, e.g., North American Vaccine, Inc. v. American Cyanamid Company, 7 F.3d at 1576 (specification confirmed that claim referring to "a terminal portion" rather than "any terminal portion" meant a singular polysaccharide linkage inasmuch as all references in specification spoke of "a linkage, not multiple linkages"); Miles Laboratories, Inc. v. Shandon, Inc., 997 F.2d at 876 (term "cabinet" in claim meant single enclosure and specification and drawings all disclosed single cabinet enclosure thus precluding literal infringement by three module enclosure); cf. In Re Paulsen, 30 F.3d at 1480 (specification did not show a definition of "computer" different than the common definition which would include a device capable of carrying out calculations such as a calculator disclosed in an anticipating Japanese application); Specialty Composites v. Cabot Corporation, 845 F.2d at 986-987 (term "plasticizer" generally includes internal as well as external plasticization to those skilled in art and specification did not distinguish between external or internal plasticizer and included examples of internally plasticized polymers).

This court finds little, if anything, in the prosecution history to suggest otherwise. In fact, as explained below, the patent examiner ("the examiner") in the parent application, application '660, recognized that the term "conductive electrode" meant a capacitive probe with the capacitive coupling being the connection between the electrode and the component pin. 21 See, e.g., Salt Lake Brine Shrimp, Inc. v. Sanders Brine Shrimp Company, 1995 U.S. App. LEXIS 14255, 1995 WL 340119 (Fed.Cir. June 7, 1995) (claim language did not suggest cross sectional flatness and nothing in prosecution history of parent
The '660 application as amended claimed, in part, "a plurality of conductive electrodes each connected to one output of said selector means and each having a surface in proximity with a surface of one of the electrical components." (Gentile Declaration, Ex. 1, No Docket Entry No. Assigned). Similar to the specification of the '953 patent, the specification of the '660 application contained language describing the conductor as forming:

a metallic plate, which acts as one plate of a capacitor. The other plate of the capacitor is the electrode (106), here illustrated by dashed lines, indicating the conductor (106) is placed over the top of the integrated circuit package (110). Although the capacitor created in this manner is small, it is sufficient to conduct a signal from the electrode (106) to the pin (112).

(Gentile Declaration, Ex. 1, No Docket Entry No. Assigned).

In allowing the '660 application as amended, the examiner noted that:

A plurality of electrodes are placed in proximity to the surface of the electrical components which have a plurality of connector pins, and a signal is capacitively coupled from the electrode to the components [emphasis added].

Therefore, all of the claims are allowable over the prior art of record since the prior art does not include any of the novel aspects of the independent claims mentioned above.

(Docket Entry # 24, Ex. 1; Gentile Declaration, Ex. 1, No Docket Entry No. Assigned). 22

GenRad, however, points out that the examiner 23 in application number 892,868 ("the '953 application") rejected claim 1 which included the element of "a conductive electrode comprising a surface adapted to be placed in proximity to a surface of said pin" as unpatentable over U.S. Patent No. 4,186,338 to Fitchenbaum ("the Fitchenbaum patent"). Instead of arguing the absence of capacitive probing, HP relied on the fact that the Fitchenbaum patent disclosed a probe being "manually moved from side to side along a short circuit trace." 24 (Gentile Declaration, Ex. 3, No Docket Entry No. Assigned). Contrary to GenRad's argument, the fact that HP relied on an easy and apparent argument to distinguish the Fitchenbaum patent does not indicate that the prosecution history reflects a construction of the term "conductive electrode" as including a direct contact probe.

23 Although different examiners reviewed the '660 and '953 applications at different times, this court refers to the examiners as a group.

24 The Fitchenbaum patent expressly claimed, in part, "deliberately moving a probe held in the hand of a human operator back and forth across and along one of said pair of tracks in the proximity of said path in a zig-zag manner to pick up said
field and produce voltages induced therefrom." (Gentile Declaration, Ex. 3, No Docket Entry No. Assigned).

As construed, element (c) is absent from the prior art testers. The probe in the prior art testers is meant to be in ohmic contact with the trace which, absent an open, contacts the pin under test. Such a probe does not capacitively couple with the pin under test. It contacts a pin via direct electrical contact. Simply stated, it is not a capacitive probe. (Docket Entry # 103, Ex. 5, p. 264).

Having so construed element (c) in light of the prior art testers, this court need not address HP's other arguments concerning the scope of element (c) and the meaning of element (d) inasmuch as such an analysis is unnecessary to resolve the motions for partial summary judgment which seek declarations of validity or invalidity through anticipation by the prior art testers depicted in exhibit 25. Having also considered GenRad's arguments, including that the definitions in the specification do not include a definition of "conductive electrode," this court finds as a matter of law that the prior art testers do not anticipate claims 1, 2, 3 and 6 of the '953 patent.

As Mattox contends, the district court also misconstrued the structure defined by the "heel brace" limitation of the claimed device. The district court construed "adapted to be positioned behind and bear against the rear surface of the heels" to mean that the heel brace must necessarily "restrain[] upward movement of the heels" by touching the heels of each and every user who operates the exercise device. Under the district court's interpretation, if a user could use an accused device by engaging restraining force against the part of the leg above the rear surface of the heels, then this limitation would not be met. This interpretation is incorrect because it fails to respect that the claim language defines a structural element, not a method of use.

The proper interpretation of this limitation flows from the correct understanding of the term "adapted." The term "adapted" plainly means to make fit (as for a specific or new use or situation). Thus, the language, "heel brace adapted to be positioned behind and bear against the rear surface of the heels," defines a structure fit to be positioned "behind and bearing against the rear surface of the heels" and fit for performing the function of "restraining upward movement of the heels." In other words, the structure defined by the claim language must be capable of performing the function in the manner described. If a user can put his or her heels in contact with the heel brace such that the heel brace restrains the upward movement of the user's heels in the course of operating the device, then the limitation is met.

Notwithstanding the fact that Infotopia's marketing materials state that the user's "heels should be secure" under the bracing structure of the accused device, the district court held that the "heel brace" limitation of the '961 patent could not be met by the accused device. After a review of the record, we are convinced that this holding was based on a misapprehension of the claim meaning. Accordingly, it is vacated. As noted, if an accused device is capable of use so as to restrain upward movement of the heels by engaging the rear surface of the heels with the heel brace, that device literally meets the heel brace limitation.

Barton Nelson contends that the Court should interpret this language as meaning that the tape flags are "suitable" to be written on, while 3M maintains that the Court should find that the tape flags are "capable" of being written on. Essentially, Barton Nelson submits that the scope of the claim is limited to tabs without printing or coloration.

The Court agrees with 3M, that "adapted" means "capable." Whether a tape flag can be written on depends on the finish on
the top of the flag, because of the finish's ability to accept or reject ink or graphite. The design or logo on the flag has no bearing on the tape flag's adaptability to be written on, but rather the finish on the top of the tape flag directly controls the adaptability of the tape flag to be written on. Moreover, as 3M points out, claim 1 also requires that the tape flag be "visually distinctive." Thus, advancing Barton Nelson's interpretation runs contrary to the plain language of claim 1. (See also Barton Nelson's Mem. in Supp. of Mot. of Invalidity of '825 Patent at 16 (proposing "capable" construction) ("Claim 1 also requires that both of said end portions be adapted to be written on. In the Edit-Tac, [the] entire the upper surface (i.e. both ends of the sheet) are [sic] made of parchment paper, which clearly can be written on.") (emphasis added)).

82

3. "step section adapted to concentrate the weight applied thereon onto to [sic] 8 the center section"

The parties agree that the additional word "to" should be disregarded as a clear typographical error.

The parties' proposed constructions are as follows:

<table>
<thead>
<tr>
<th>CTS</th>
<th>TK</th>
</tr>
</thead>
<tbody>
<tr>
<td>the step section causes a stress</td>
<td>the step section causes a force of</td>
</tr>
<tr>
<td>concentration in the mid-portion of the substrate contiguous with the step section</td>
<td>weight applied on the step section to be directed onto the center</td>
</tr>
<tr>
<td>and capable of flexing in response to a force transmitted by the step section when the substrate experiences stress</td>
<td>section of the substrate</td>
</tr>
</tbody>
</table>

CTS again has the better view. First, the intrinsic evidence supports CTS' interpretation. The claim language and the specification of the '013 patent describe the functionality of the step section. The claim states that the step section is adapted to concentrate the weight, i.e., force, onto the center section. As explained in the specification, "the step sections concentrate the force of the weight to be measured onto the center section causing the center section to slightly flex." '013 pat., col. 3, II. 17-19. Moreover, Figure 1 teaches that the mid-portion (14) is contiguous with the step section (16). The specification further teaches that when a force is applied to the substrate, such force is concentrated by the step section. Id. at col. 2, II. 22-24. After this occurs, the step section transfers the concentrated force to the mid-portion, thereby causing the mid-portion to flex.

TK's interpretation—that a weight force be directed onto the center section—is misleading. The specification makes clear that a passenger's weight, i.e., the gravitational force on his or her body, is transmitted to the sensor and concentrated by the step section to the center section. TK's proposed interpretation results in a claim that would not describe the preferred embodiment, because the preferred embodiment expressly states that the passenger's weight is not applied directly to the sensor; rather, it is directed to "a structure that supports a weight or force to be measured" and "the step sections concentrate the force of the weight to be measured onto the center section causing the center section to slightly flex." However, the specification does not require the step section to "direct" a weight onto the center. Id. at col. 2, II. 17-32; and col. 3, II. 10-20. Contrary to TK's proposed language, there is no suggestion in the patent specification of weight transfer from the step section to the center section. Common sense tells us that is not what is happening during the operation of the seat weight sensors. Instead, the sensor, such as strain gage 10, is attached to a "structure that supports a weight or force to be measured." Id. col. 3, II. 15-17.

Accordingly, the Court adopts CTS' interpretation. The phrase "step section adapted to concentrate the weight applied thereon onto to [sic] [the] center section" means "the step section causes a stress concentration in the mid-portion of the substrate contiguous with the step section and capable of flexing in response to a force transmitted by the step section when the substrate experiences stress."
Gargoyles contends that the word "conform" used to describe the nose pads in Claim 1 of the '611 Patent should be given its ordinary meaning. According to Gargoyles, in order to "conform" to the nose of the wearer, the nose pads need only correspond to the shape of a nose.

Aearo argues the term "conform" means that the nosepiece and nose pads claimed in the '611 Patent must be flexible, not rigid. In support of that more limited definition, Aearo quotes the Specification which differentiates the disclosed invention from the prior art:

Another problem associated with protective eyeglasses adapted for sports use is the inability of the eyeglasses to absorb shocks imparted to the lenses. Conventional eyeglasses generally utilize a nosepiece which is either integrally formed with the lenses or frame or rigidly secured to the frame. As a result, shocks imparted to the lenses by objects are coupled directly to the nose of the wearer, sometimes causing injury.

In the disclosed invention, by contrast, the nosepiece includes a base portion which tightly surrounds the bridge but is not secured thereto so that the nosepiece is capable of floating to some extent and thus absorbing shocks imparted to the lens. . . . The nose pads are resilient and spaced apart from the lenses so that they are capable of absorbing shock imparted to the lenses.

In addition, Aearo cites the PTO file history for an amendment filed on January 16, 1984 in which the inventor's attorney differentiated the "flexibility" of the pads disclosed in the patent application from the nose pads that "do not loosely surround the bridge" of the DeAngelis prior art.

The word "conform" is not defined within the claims of the '611 Patent. While the description in the Specification and PTO file seem to add to the properties of the "nose pads," neither the Specification nor the prosecution history may be used to vary the terms of the claims themselves. Markman, 52 F.3d at 980; Goodyear Dental Vulcanite Co. v. Davis, 102 U.S. 222, 227, 26 L. Ed. 149 (1880);

Moreover, the doctrine of claim differentiation dictates that the word "conform" in Claim 1 should be given the broader meaning suggested by Gargoyles. Under the doctrine of claim differentiation, the terms of an independent claim must be interpreted so as not to render dependent claims superfluous or redundant. See Tandon Corp. v. United States Int'l Trade Comm'n, 831 F.2d 1017, 1023-24 (Fed. Cir. 1987) (enunciating the principle of claim differentiation); United States v. Teletronics, Inc., 857 F.2d 778, 783-84 (Fed. Cir. 1988) (same); D.M.I., Inc. v. Deere & Co., 755 F.2d 1570, 1574 (Fed. Cir. 1985)("Where some claims are broad and others narrow, the narrow claim limitations cannot be read into the broad . . .").

In the '611 Patent, dependent Claims 2 and 4 disclose:

2. The eyeglasses of Claim 1 wherein said nosepiece includes a base portion tightly surrounding said bridge while remaining free of rigid connection thereto so that said nosepiece is capable of absorbing shocks imparted to said lenses.

4. The eyeglasses of Claim 2 wherein said nose pads project from said nosepiece along respective inner edges of said lenses and are spaced apart therefrom, said nose pads being resilient so that they are capable of absorbing shocks imparted to said lenses.

The word "conform" is not defined within the claims of the '611 Patent. While the description in the Specification and PTO file seem to add to the properties of the "nose pads," neither the Specification nor the prosecution history may be used to vary the terms of the claims themselves. Markman, 52 F.3d at 980; Goodyear Dental Vulcanite Co. v. Davis, 102 U.S. 222, 227, 26 L. Ed. 149 (1880);
Based upon the intrinsic evidence, this Court concludes that the inventor did not vary the ordinary meaning of "conform" and, therefore, interprets "nose pads adapted to . . . conform to the nose of a wearer" to mean simply that the nose pads correspond in shape to the form of a wearer's nose.

Claim 1 of the '936 Patent contains the term "adapted to contact." Defendants contend the term "adapted to contact" is indefinite. After a review of the arguments and relevant evidence, "adapted to contact" meets the definiteness requirements of 35 U.S.C. § 112, P 2.

Claim 1 claims "at least one boss adapted to contact the second protrusion of the pump." '936 Patent, col. 20: 45-46. The specification describes the related functionality of the disclosed "bosses" as follows: "the raised bosses 50 receive a rail or other protrusion of the pump 48." '936 Patent, col. 14: 66-67. Figure 4 of the '936 Patent, produced below, shows the pump 48 and two bosses 50. Defendants assert that the patent does not identify a rail or protrusion of the pump or disclose how the raised bosses receive a rail or other protrusion of the pump. Further, because the back side of the pump is not shown in Figure 4, Defendants argue that "the reader is left to completely guess, right or wrong, as to what the patentee considered to be a second protrusion" of the pump in Claim 1. Defendants' Indefiniteness Brief, at 13. Defendants further assert that the specification lacks any reference to the functional term "adapted to contact" with respect to a boss and a protrusion of the pump and the figures do not show "contact" between the two items. Thus, Defendants argue that a person of ordinary skill in the art could not discern how the bosses described in the specification are "adapted to contact" a protrusion of the pump.

SHURflo argues that a person of ordinary skill in the art would understand from the written specification and figures that the pump "is intended to be symmetric, and that a rail similar to the rail shown on the front of the pump 48 contacts the raised bosses 50 when the pump is engaged in the bracket." SHURflo's Responsive Indefiniteness Brief, at 8. SHURflo further argues that the specification does not have to show the exact point at which the bosses contact the protrusion in order for one of ordinary skill in the art to "understand from Figure 4[,] and the specification describing that Figure[,] that the bracket's raised bosses frictionally engage . . . the protrusion or rail on the pump." Id. at 16.

"When a claim limitation is defined in purely functional terms, the task of determining whether that limitation is sufficiently definite is a difficult one that is highly dependent on context (e.g., the disclosure in the specification and the knowledge of a person of ordinary skill in the relevant art area)." Halliburton, 514 F.3d at 1255. The claim language and specification undermine Defendants' contention that the term "adapted to contact" is indefinite. It is clear that a person of ordinary skill in the art would understand that the pump is symmetrical and that the bosses functionally engage the protrusion on the pump to support the pump. Accordingly, because Defendants have not shown by clear and convincing evidence that the term "adapted to contact" is indefinite, Defendants' Motion for Summary Judgment of Indefiniteness of the '936 Patent (Docket No. 74) is DENIED. Further, while the term is not insolubly ambiguous, because the parties have consistently disagreed as to the proper construction of the term "adapted to," the Court construes "adapted to contact" to mean "designed or configured to functionally engage."

Claim 4 of the '204 patent describes an apparatus with an expandable surface element adapted to contact tissue surrounding a cavity and to conform the tissue to the shape of the expandable surface element. Claim 4 of the '204 patent reads:
The apparatus of claim 3, wherein the expandable surface element is adapted to contact tissue surrounding a resected cavity and adapted to conform the tissue to the desired shape of the expandable surface element.

'204 patent 8:43-46. Claim 8 of the '142 patent requires that an "expandable outer surface is sufficiently rigid to deform the target tissue." Claim 8 states:

The apparatus of claim 1, wherein the expandable outer surface is sufficiently rigid to deform the target tissue into the shape of the expandable outer surface, causing the predetermined asymmetric isodose curves to penetrate into the target tissue to a prescribed depth.

'142 patent 10:13-17.

The parties argue for the following constructions:

SenoRx asserts that Dr. Verhey opines for the first time in his expert report that the "adapted to contact tissue . . . and adapted to conform the tissue" language of Claim 4 of the '204 patent requires that the outer balloon to actually contact and conform the tissue.

At the hearing on claim construction, the court became convinced the parties do not, in fact, have any substantive disagreement. Hologic asserts that "adapted to contact tissue" and "adapted to conform the tissue" needs no interpretation. SenoRx submits that "adapted to" means "capable of" and that the claim does not require that the outer balloon actually contact and conform the tissue. Hologic's concern appeared to be that SenoRx was making a distinction between the meaning of "adapted to" and "capable of" that Hologic did not appreciate and which might later come as a surprise. SenoRx's concern, as mentioned above, was that the outer balloon actually contact and conform the tissue. What became clear at the hearing was that both sides agreed that "[the language] does not require that the expandable outer surface actually contact and conform the tissue." Hearing transcript 138:17-19 (argument of Hologic's counsel).

The prosecution history also supports the conclusion that the outer balloon does not actually have to contact and conform the tissue but it has to be capable of doing so. The "adapted to" wording in Claim 4 resulted from a rejection by the PTO of the exact claim construction plaintiff now asserts is correct. In the prosecution of the '204 patent, the application was rejected for claiming that "the expandable surface element contacts . . . and conforms the tissue." Ex. 20 (June 20, 2000 Office Action, '204 patent Prosecution History) at 2. The examiner explained that the then proposed language could have been construed as reciting "a positive connection to the body" and suggested the claim instead be amended to read "adapted to" to eliminate this problem. Id. As a result, the applicants so amended Claim 4, changing the claim language from "the expandable surface element contacts tissue . . . and conforms the tissue" to "the expandable surface element is adapted to contact tissue . . . and adapted to conform the tissue."

The dispute, to the extent there is one, as to the construction of the language in Claim 8 of the '204 patent--"expandable outer surface is sufficiently rigid to deform the target tissue into the shape of the expandable outer surface"-- is similar to that involving Claim 4 of the '204 patent. The subject language in Claim 8 requires only requires that the expandable outer surface be sufficiently rigid to deform the target tissue into the shape of the expandable outer surface. It does not necessary have to actually deform the tissue as long as it is capable of doing so.

The court adopts the constructions proposed by SenoRx except that the second sentence in each, which although true, seems unnecessary.

** III. ORDER **

For the foregoing reasons, the Court construes the disputed claim language as follows:
"adapted to contact tissue . . . and adapted to conform the tissue" (Claim 4 of '204 Patent)

the expandable surface element is capable of contacting the tissue and capable of conforming the tissue. This does not require that the expandable outer surface actually contact or conform the tissue.

GO BACK

86

(14) "said arms and said pair of magnetic members adapted to extend across respective side portions of a primary spectacle frame so that said pair of magnetic members can engage corresponding magnetic members on a primary spectacle frame" (claim 24)

Plaintiffs construe the phrase "adapted to extend across" to mean "that the pair of auxiliary frame magnetic members are capable of or suitable for reaching from one side to the other of the respective side portions of the primary spectacle frame." JS, Exh. B at 57-58. Plaintiffs further define the term "engage" to mean "that surfaces of the auxiliary spectacle frame magnetic members either contact the corresponding surfaces of the primary spectacle frame magnetic members or magnetically attract those corresponding [sic] 18 without actual contact to attach the auxiliary spectacle frame to the primary spectacle frame." JS, Exh. B at 55.

Conversely, Defendant construes the instant phrase to mean that:

the arms of the auxiliary spectacle frame must contact and be supported on the upper side of the side portion extension of the primary spectacle frame to allow the magnets on the rear side of the extensions of the primary frame, which are positioned directly below although not in contact with the magnets on the arms of the auxiliary frame and to allow the auxiliary spectacle frame to be supported by the primary spectacle frame.

JS, Exh. D at 6-7.

Defendant's construction seeks to read into the phrase in question that the arms must be in contact and be supported on the upper side of the extensions of the primary frame; and that the primary frame magnetic members must be positioned directly below, although not in contact with the auxiliary frame magnetic members. The Court has already rejected this interpretation. See Sections (11) and (12) supra.

Based on the above, the Court construes the phrase in dispute here to mean that the arms and the pair of auxiliary frame magnetic members are capable or suitable for reaching from one side to the other of the respective side portions of the primary spectacle frame so that said pair of magnetic members can either contact the corresponding surfaces of the primary spectacle frame magnetic members or magnetically attract those corresponding surfaces of the primary spectacle frame magnetic members without actual contact to attach the auxiliary spectacle frame to the primary spectacle frame. See Webster's, Nicodema Decl., Exh. 5 at 130, defining "extend" as "to stretch or spread out at full length;" Id. at 123, defining "across" as "from one side to the other;" Id. at 129, defining "engage" as "to interlock or cause to interlock: mesh;" see also, Koo Decl., Exh. B, the '545 Patent at Col. 3, 11. 11-17 (stating that "[i]n one embodiment, as shown in FIG. 7, magnetic members 14 and 22 are engaged with, but not supported on each other. Instead, the arm 21 securing the magnetic member
22 is supported on an upper side portion of the primary spectacle frame 10."

B.

The '493 patent, entitled "Hot Gas Measuring Probe," describes and claims an improved oxygen sensing probe. Blumenthal sued Barber-Colman for infringement of claim 9 of the '493 patent. It was undisputed that the accused Barber-Colman devices met every limitation in claim 9 except the one in clause b. It also was undisputed that the limitation in clause b was not met literally in the accused devices. Thus the sole issue before the district court was whether the accused devices met the limitation of clause b of claim 9 under the doctrine of equivalents.

Clause b of claim 9 recites that: "the second electrode defines a frusto-conical interior surface terminating in a grooved flat adapted to guide the electrolyte and a central opening in said electrode flat." Col. 10, lines 41-44. In construing clause b, the district court stated.

Claim 9 . . . [requires] an electrode with a tapered surface to guide an electrolyte. Neither the frusto-conical nor the guiding limitations of claim 9 can be read as meaningless. The claim specifically calls for a "frusto-conical interior surface terminating in a grooved flat adapted to guide the electrolyte." The specification in the patent also supports this court's construction of claim 9. The specification refers to an electrolyte which is guided by a taper. . . . Each reference to the frusto-conical aspect of the probe in the specification pertains to the structure of the probe and not the operation of the probe.

In short, the district court agreed with Barber-Colman that the term "adapted to guide the electrolyte" means that the tapered shape of the second electrode guides or positions the electrolyte as it is inserted into the electrode during the assembly of the probe.

Blumenthal argues that the specification's description of the "guide the electrolyte" function of the second electrode is directed solely to the second electrode's adaptation to guide the electrolyte in order to obtain ventilation of the zone of contact by the furnace gases during use. Thus, Blumenthal contends, the guiding function of the second electrode (with its tapered sides) refers to "maintaining the contact between the electrolyte and the electrode in the ventilation path during operation of the probe."

We hold that the district court properly construed clause b. The specification compels the conclusion that clause b is directed toward assembly of the probe, rather than its operation. Referring to an embodiment of the invention reflected in claim 9, the "Summary of the Invention" section of the specification states that the second electrode has "projecting converging walls which guide the flat end of a tubular electrolyte to positively position the electrolyte over a central aperture in a flat portion." Col. 4, lines 36-38. Referring to the same embodiment, the "Description of the Invention" section states that "the outer diameter of the electrolyte tube . . . is slightly less than the diameter of the grooved flat surface . . . so as to be centrally guided by the tapered surface." Col. 7, lines 51-53. Referring to another embodiment, the description states that "the flat end of the electrolyte tube . . . is guided into position against the flat area . . . by the taper in the anode converging walls." Col. 8, lines 34-37. This sentence indicates that the function of the tapered walls of the second electrode is to facilitate the act of putting the electrolyte tube into contact with the second electrode ("guided into position against the flat area"). We do not read these statements as referring to facilitating the act of holding the electrolyte tube in place during operation of the probe, as Blumenthal does.

Figures 3 and 4a on sheet 1 of the patent drawings -- which is attached -- weigh heavily against the construction of the term "guide the electrolyte" urged by Blumenthal. Each of the figures shows a gap between the tapered wall of the second electrode (21) and the electrolyte (28). The existence of the gap, as shown in the drawings, indicates that the tapered walls could not play a role in maintaining electrolyte contact during probe operation. The drawings do reveal, though, how the tapered walls could serve the purpose of guiding the electrolyte tube "into position against the flat area" during assembly of the probe. Col. 8, lines 35-36.

Further, the specification does not support Blumenthal's suggestion that the need to obtain ventilation of the zone of contact
by furnace gases during operation of the probe is served by the tapered side walls of the second electrode. Rather, the specification refers generally to gas being exchanged "through the openings in the electrode plate." Col. 4, lines 21-22. In addition, with reference to figures 3, 3a, and 4a, the specification states that "gas can flow or is exchanged, for example, through or from opening 27 and holes 41, along the grooves 39 and electrolyte end 33, through the annular space between the cylindrical surface 25 and outer surface of electrolyte tube 28." Col. 8, lines 3-8.

Finally, in connection with its response to Barber-Colman's motion for summary judgment, Blumenthal stated "Agreed" with respect to the following statement by Barber-Colman in support of the motion: "In the patented probe, a tapered guideway engages the end of the electrolyte and, if that end is off center, guides or translates it toward the center of the sheath as the electrolyte tube is inserted into the sheath to its seated position." This is precisely the kind of guiding function that the district court concluded the tapered walls of the second electrode would provide.

For the foregoing reasons, we conclude that the district court properly construed clause b of claim 9 as relating to assembly, rather than operation, of the probe. The question then becomes whether, in light of that construction, Blumenthal established the existence of a genuine issue of material fact so as to defeat Barber-Colman's motion for summary judgment. We hold that it did not.

88

I. "center section"

The parties' proposed constructions are as follows:

CTS
mid-portion of the substrate contiguous with the step section and capable of flexing in response to force transmitted by the step section when the substrate experiences stress

TK
a flexible central portion of the substrate onto which the force of weight is directed by the step section

CTS has the better view. Figure 1 of the '013 patent, above, shows that center section (14) is the mid-portion of the substrate, which is connected with the step section (16). The specification further explains that the center section may flex in response to force received from the step section by an applied weight. See '013 pat., col. 2, ll. 19-20; and col. 3, ll. 18-22.

TK's proposed interpretation is problematic. First, it introduces the language "force of weight" which departs from the agreed upon meaning for the term "weight." Adopting TK's construction would result in an interpretation of the claim where the step section causes a "force of a force by which a body or object is attracted to earth by gravity" to be applied. Moreover, the word "directed" is not found in the specification. TK's proposed interpretation also appears to require that the weight being sensed must be applied directly to the substrate. While that may be found in the specification in discussing an embodiment, the claim language, however, does not require that the weight being sensed must be applied directly to the substrate. Instead, the claim language states that "the center section is adapted to flex in response to the applied weight." In other words, the claim language states that the bending of the center section is in response to force applied, but does not require that the force is applied directly to the substrate itself.

Accordingly, the Court will adopt CTS' proposed interpretation, namely that the term "center section that is adapted to flex in response to the applied weight" means the "mid-portion of the substrate contiguous with the step section and capable of flexing in response to force transmitted by the step section when the substrate experiences stress."

GO BACK

89

I. "Contact arrays being adapted to interchangeably connect"

Foxconn maintains that the district court correctly interpreted the claim limitation "contact arrays being adapted to
interchangeably connect” as requiring a contact array that was not present in the prior art. Foxconn asserts that the word "adapted" includes the concept of adjustment or modification of the array known to the prior art such that there must be something different from the prior art. The district court opined that a device which uses preexisting contact arrays does not contain "contact arrays being adapted."

We disagree. There is nothing in either patent to indicate that the claims require a novel contact array. Nowhere in the written description does either patent state that the disclosed contact array is novel or has been specifically adapted from prior art contact arrays. Rather, the written description simply describes the contact array as a pin terminal array that can accept either a memory card or a hard disk drive. We decline to find that the claims require a novel contact array when the only contact array that is disclosed in the written description is not novel.

The patentee's use of the claim term "adapted to" does not change our conclusion. The term "adapted to" is often used in claim drafting to indicate "capable of." There is nothing in the claims, written description, or prosecution history to indicate a different meaning. That a claim element is old does not prevent a claim to a combination from being infringed.

Foxconn asserts that when Berg added the "adapted to" language to overcome the Tarver prior art reference, Berg added the additional limitation of a novel contact array. The Tarver device has spaces for accepting submodules such as a central processing unit, a fan, or a hard disk drive and a midplane member comprising connectors. The patent states that one type of connector is a 32-pin contact array.

During prosecution, Berg stated that although "Tarver appears to show upper and lower storage spaces within a single housing, Tarver never suggests that the upper and lower storage spaces be combined to form a single, larger storage space for accommodating larger submodules. . . . None of Tarver's submodules is designed to occupy more than a single sub-space within the housing" while the applicant's connector device is specifically designed to accept either memory cards in either the upper or lower storage space or both or a single hard disk drive package occupying both spaces.

Berg also stated that Tarver does not teach applicant's claimed feature "wherein 'at least one of [the] upper and lower contact arrays [is] adapted to interchangeably connect to both a memory card and a hard disk drive package.' To the contrary, the 'midplane' of Tarver provides a separate connector for each submodule. None of the connectors of Tarver is capable of interchangeably connecting to two different types of submodules."

We do not read the interchangeable capability of the contact array asserted by Berg during prosecution as requiring a new contact array that has never existed in the prior art. Rather, the capability simply requires a contact array that is selected so that it is connectable to both a memory card and a hard disk drive, so that the connector can receive those memory storage devices in the spaces that the structure of the connector defines to receive them. It is both the structure defining those spaces and the contact array selected to receive both of those devices that give the claimed combination the alternative capability that the Examiner found to be nonobvious.

Foxconn further asserts that we cannot adopt the patentee's claim interpretation because under that interpretation, the claims are invalid as anticipated by the Tarver reference. However, validity of the claim is not at issue on appeal and has not been fully briefed before us. The patentee has urged adoption of its claim interpretation and bears the risk that the claim may later be found invalid.

Thus, we conclude that the term "contact arrays adapted to interchangeably connect" requires contact arrays that are able to interchangeably connect to both a memory card and a hard disk drive package. Because the Foxconn device contains a contact array that is able to interchangeably connect to both a memory card and a hard disk drive package, the district court erred in finding the Foxconn device fails to meet this claim limitation.

This conclusion, however, does not end our analysis. Foxconn additionally asserts that the district court's finding of noninfringement should also be affirmed because its device lacks a storage space that is substantially uninterrupted by a guide member, as required by the claims.
b "Sprocket Recess"

The parties dispute whether the "sprocket recesses" as contemplated by the '158 and '518 patents require opposing "transverse elements" each having "driving surfaces," or whether the sprocket recess can be defined as the opening between a single transverse element and a corresponding pivot axis. Stated differently, the issue is whether the "intermediate section," defined in the asserted claims of the '158 and '518 patents as consisting of at least two transverse elements extending at least partially across the width of the module, can consist of only a single bar.

KVP argues that because all of the asserted claims require at least two transverse elements extending at least partially across the width of the module, and because all claims require that the sprocket recesses be "adapted to mate with," "capable of mating with" or "capable of receiving" sprocket teeth, the '158 and '518 patents are limited to modules having sprocket recesses with opposing driving surfaces which are simultaneously contacted by the sprocket teeth while being driven Laitram, however, contends that the claim terms contemplate a module having only one driving surface per sprocket recess, which in turn would limit the belt to a single direction of travel. Laitram relies on the doctrine of "claim differentiation" since only claim 2 of the '518 patent requires "opposing" transverse elements.

7 Claim 10 of the '158 patent only refers to "elements." All other asserted claims in both the '158 and '518 patents refer to "transverse elements."

Laitram's argument lacks merit. Although the doctrine of claim differentiation means that an interpretation of a claim should be avoided if it would make the claim read like another, claim differentiation is a "guide, not a rigid rule." Laitram Corp. v. Rexnord, Inc., 939 F.2d 1533, 1538 (Fed. Cir. 1991) (quoting Autogiro Co. of Am. v. United States, 181 Ct. Cl. 55, 384 F.2d 391, 404 (Fed. Cir. 1967)). Where the specification or prosecution history provide a basis for reading a limitation into a claim, the presumption provided by the doctrine of claim differentiation may be overcome. See Tandon Corp. v. U.S. Int'l Trade Comm'n, 831 F.2d 1017, 1023-24 (Fed. Cir. 1987); Autogiro, 384 F.2d at 404 ("if a claim will bear only one interpretation, similarity will have to be tolerated"). As explained below, the claim terms, specifications and prosecution history collectively show that the claims in the present case will bear only one interpretation that the sprocket recesses consist of opposing transverse elements, each of which have driving surfaces capable of mating with cooperative sprocket teeth.

The term "sprocket recess" is nowhere defined in any of the claim terms. Nor do the claim terms unambiguously indicate whether all the transverse elements, each of which extends "at least partially" across the width of the module, can be assembled side by side so as to collectively form only a single bar. 8 Thus, the court looks to the specifications and prosecution history for guidance Markman, 52 F.3d at 979.

8 Claim 100 of the '518 patent requires "at least one" cross member extending across the width of the module, with at least two transverse elements comprising portions of that cross member. Although this claim language, standing alone, would cover a module having only a single cross-member, the specifications and prosecution history will not bear such an interpretation.

In the specifications to both the '158 and '518 patents, Lapeyre indicates that "the sprocket recesses 50 are in line and can be driven in either direction. The associated sprocket teeth are also symmetrical and in line such that the sprocket wheel can be driven in either direction and installed either way on a driving shaft." Figure 3 of the drawings show the sprocket recess 50 referred to in the specifications as the space defined by opposing angled surfaces 32 and 34 of the intermediate section. In fact, the drawings in both patents show only a sprocket recess with two opposing, angled elements.

Laitram contends that the idea of opposing driving surfaces which allow the belt to be driven bi-directionally 9 by
symmetrical sprocket teeth merely represents the "preferred embodiment" of Lapeyre's invention: but that the overall scope of the invention is not so limited. While Laitram is correct that the preferred embodiment does not generally limit the scope of the claim, see Transmatic, Inc. v. Gulton Indus., Inc., 53 F.3d 1270, 1277 (Fed. Cir. 1995), the prosecution history in this case limits the scope of the '158 and '518 patents to modules having opposing driving surfaces which allow the belt to be driven bi-directionally.

--- Footnotes ---

9 A conveyor belt can be driven "bi-directionally" if it can be driven in opposite directions merely by changing the direction of rotation of the sprocket wheel.

--- End Footnotes ---

As indicated, Lapeyre repeatedly recited to the patent examiner that a "key feature" or the "essence" of his invention was the provision of a "sprocket recess" intermediate the pivot axes and having "angularly disposed sides adapted to mate with a corresponding sprocket tooth." Importantly, Lapeyre referred to a single sprocket recess as having angularly disposed side, not "at least one" angularly disposed side.

Moreover, Lapeyre made several key statements to the examiner in attempting to explain his failure to cite the Lapeyre '527 patent as relevant prior art. The Lapeyre '527 patent contains an intermediate section consisting of a single bar extending across the width of the module. Referring to this particular structure of the Lapeyre '527 patent, Lapeyre stated that it "does not disclose or suggest the presently claimed invention and does not even teach the use of sprocket recesses in conveyor modules. In contrast, the '527 teaches opposite the presently claimed feature." (Delich Decl. Ex. 2 at 096977.) These comments prevent Laitram from now claiming that a sprocket recess exists absent opposing transverse elements.

Finally, in order to distinguish his invention from the Kewley '763 and Lapeyre '14l patents, Lapeyre argued that "any attempt to drive a conveyor belt built according to the Kewley Patent by a sprocket tooth simultaneously contacting both interior parallel surfaces would clearly be technically unfeasible and would render the belt substantially inoperative." (Delich Decl. Ex 2 at 96867.) Laitram admits, as it must, that the term "mate" or "mating" means that whatever configuration the sprocket tooth surface takes, the driving surface must match it. This admission, in light of Laitram's comments to the patent examiner in distinguishing the Lapeyre '141 and Kewley '763 patents, shows that each sprocket recess must have opposing, angled transverse elements, each of which contains a driving surface capable of mating with the corresponding side of a single sprocket tooth. Indeed, this limitation is not only consistent with every drawing or photograph submitted to the patent examiner, but is also necessary to achieve the utility stated in the specifications that the sprocket recesses are capable of being driven bi-directionally.

Laitram points out that the "mating" requirement only applies to the '158 patent since all asserted claims of the '518 patent do not contain such a requirement, but instead contain the language "capable of receiving cooperative sprocket teeth." The specifications and prosecution history, however, show that this language was intended to imply the same "mating" requirement present in claims 1 and 10 of the '158 patent.

The specification of the '518 patent shows that Lapeyre considered the term "capable of receiving" as equivalent to "adapted to mate with." The specification is the "single best guide to the meaning of a disputed term." Vitronics, 90 F.3d at 1582. "Words must be used in the same way in both the claims and the specification." ZMI Corp. v. Cardiac Resuscitator Corp., 844 F.2d 1576, 1580 (Fed. Cir. 1988). Here, the specification of the '518 patent describes sprocket recesses which are "adapted to mate with corresponding sprocket teeth." Nothing in the claim terms themselves or the prosecution history suggest an interpretation other than that the term "capable of receiving" is equivalent to the term "adapted to mate with."

Accordingly, the court finds that all asserted claims of the '158 and '518 patents are limited to modules having sprocket recesses with opposing transverse elements, each of which contains a driving surface capable of mating with the corresponding side of a single sprocket tooth.
A. "a central portion adapted to nest within and below the rim of a container."

The parties agree that the central portion is the section of "relatively flat," plastic material that is bounded by the rim-engaging means, and which nests "below the rim of a container." '015 patent, col 2, l. 50-52. The sole dispute between the parties with respect to this claim element is whether all of the structures found upon the central portion also must nest "within and below" the horizontal plane formed by the rim of the container. Bailey suggests that the central portion is, in effect, the platform for other structures of the claimed container lid. Therefore, the structures that are found on the central portion are not required to be lower in height than the rim of the container. Dart, on the other hand, argues that a person of the ordinary skill in the art would interpret "the central portion" to be an amalgam of the relatively flat portion bounded by the rim engaging means and any structures molded-into or rising from that relatively flat surface. Therefore, Dart claims that all the structures on the central portion, such as a vent cap and any protrusions, must sit below the horizontal plane formed by the rim of the container. As evidence, Dart points to the language of the claim which states that the central portion nests "below the rim of a container." Moreover, Dart suggests that the illustrations in the '015 patent confirm its interpretation. Dart's argument is unavailing.

A person of ordinary skill in the art 3 would not construe the '015 patent to require that all of the structures on the central portion to nest "below the rim of a container." The '015 patent makes clear that the "central portion" is a different structure from the structures found on it, specifically either a "protrusion" or a "vent cap." See CAE Screenplates Inc. v. Heinrich Fiedler GmbH & Co., 224 F.3d 1308, 1317 (Fed. Cir. 2000) ("In the absence of any evidence to the contrary, we must presume that the use of these different terms in the claims connotes different meanings). Thus, the limitations assigned to "the central portion" in the '015 patent do not apply to those structures simply because those structures are attached to or molded-into the central portion.

3 The "art" in this case is the mechanical design, molding and production of plastic lids. Tr. 3, p. 87, l. 10-11; Tr. 2, p. 3, l. 23-25. One skilled in the art is someone with a bachelors degree in mechanical or manufacturing engineering and two years of practical experience or someone with less formal education, such as an associates degree in plastics technology, with five or six years of practical experience. Tr. 3, p. 87, l. 18-25; Tr. 2, p. 4-5, l. 17-25, 1-7.

The point is made obvious when one considers the other limitation in the '015 patent, namely that the central portion be "relatively flat." Dart concedes that the central portion must be "relatively flat." See Defendants' Post Markman Hearing Memorandum of Law Regarding Claim Construction p. 1. However, Dart wisely does not press a construction that would require structures found on the central portion to be "relatively flat." The reason for the inconsistency in Dart's position is obvious. It would simply strain common sense to argue that "protrusions" found on the central portion should also be "relatively flat." Clearly, the '015 patent does not require "protrusions," which by definition jut out from the central portion, to take a "relatively flat" form. In fact, Dart concedes that the magistrate judge correctly defined protrusion as a structure that "jut[s] out from the surrounding surface." See Bailey I, 980 F. Supp. at 575. See also Defendants' Post Markman Hearing Memorandum of Law Regarding Claim Construction p. 20. Thus, it is evident that the '015 patent, as interpreted by one skilled in the art, does not require "protrusions" and "vent caps" to meet the "relatively flat" limitation placed upon the central portion. By the same logic, structures found on the central portion are not required to "nest within and below the rim of a container."

To the extent that there is any doubt, the specification supports the construction that the claim term "a central portion adapted to nest within and below the rim of a container" does not restrict the height of other structures found on the central portion. Figure 2 of the '015 patent shows in cross-section one preferred embodiment of the patented lid. Simply taking a ruler or other straight edge and extending a line from the top of structures comprising the retainer means out across the lid shows that each such protrusion rises above the rim of the container. Accordingly, in this embodiment, the protrusion is not limited in height. It does not need to sit entirely below the rim of the cup. The same can be seen in Figure 4 of the '015 patent, which shows another preferred embodiment. Both protrusions rise slightly above the rim of the cup. As a matter of law, an interpretation of a claim that would exclude a preferred embodiment of the patent, such as the preferred embodiments depicted in the schematic drawings, "is rarely, if ever, correct." Vitronics, 90 F.3d at 1583.
6. "Graft Structure Which is Adapted to Overlap and Be Attached to One of the Flow Lumens"

The parties' proposed constructions for this phrase are substantially similar to their proposed constructions for the previous phrase. The only differences are that Plaintiffs and Cook include a reference to the flow lumens in their proposed constructions, and Gore references a "second graft" in its proposed construction. Indeed, the parties seem to equate the phrases "adapted to be anchored within" and "adapted to overlap and be attached to," with one another. Once again the disputes center on whether the wires must be malleable and whether they must project beyond the ends of the graft.

The Court finds no significant difference between this phrase and the previous phrase and, accordingly, concludes they should be construed in the same manner. Accordingly, the Court construes the term "graft which is adapted to overlap and be attached to one of the flow lumens," to mean: "An intraluminal graft that includes malleable wires located proximal to at least one end of the graft structure, which enable the intraluminal graft to be secured or attached to one of the flow lumens of the bifurcated base graft structure in an overlapping relationship."

2. "In Proper Alignment with Respect to Said Handle"

Osteonics also differentiates its product from the patent claim because the claim requires that the rod handle be "adapted to receive at least one femoral surface modifying instrument in proper alignment with respect to said handle." The question is, to what sort of alignment the claim is referring? Osteonics asserts that this statement implies that the Whiteside system foresees the cutting guides (and the cuts made from the cutting guides) as dependent entirely on their alignment to the handle of the rod. In other words, once the rod has been set in place, nothing else makes a difference; the positioning of the cutting guides has been effectively set as well and no other feature of the femur is really relevant for the Whiteside system at this point. Osteonics contrasts this limitation with its own system, which, as described earlier, uses both the internal and external geometry of the femur to set the proper alignment. With the Osteonics system, according to Osteonics, the surgeon has not limited himself once the rod is in place. At the very least, Osteonics asserts, this is clear from the fact that its system allows for cutting guides to rotate freely around the handle, whereas the DCW system uses a handle with flattened sides that would specifically prevent such rotation.

DCW responds that the alignment described in claim 6 refers to the angle of the handle, which in turn permits the bone cuts to be made at the proper varus/valgus angle, and that nothing more is meant. DCW notes that although the preferred embodiment of handling the Whiteside patent has flat edges that do align the blades, that embodiment is not required in the patent. To read the "proper alignment" as referring also to the rotational alignment of the blades, as Osteonics does, is therefore to limit improperly the scope of the claims by the scope of the preferred embodiment. See SRI International v. Matsushita Elec. Corp. of America, 775 F.2d 1107, 1121-22 (Fed. Cir. 1985) (en banc).

DCW buttresses its argument by noting that claim 9, which depends on claim 6, describes a planar that fits on the guide handle and rotates on the handle to file down the femur. The planar cannot be fixed rotationally; otherwise, it would not work as a planar. Accordingly, claim 6 would not establish a rule of rotational alignment that claim 9 necessarily breaks.

Osteonics replies that claim 9, read properly, proves DCW wrong. Claim 9 indicates that the planar must have "a passage therethrough adapted to cooperatively engage said guide handle and to allow the planar abrading surface to be transversely rotated about the central axis of said guide handle while it is in contact with the distal femoral surface to flatten said distal
femoral surface transversely with respect to the central long axis of the guide handle . . . " 4 Column 14, lines 22-25. Osteonics asserts that this language expressly excludes claim 9 from claim 6's alignment limitation for this one purpose, the implication being that the limitation applies to all the cutting instruments.

4 The language used for the claims describing the cutting guides, claims 7, 8, and 10, each use the following (or almost identical) language: "The article as claimed in claim 6 wherein at least one of the instruments employed in said (B) is a[] . . . cutting guide . . . having a passage passing though said cutting guide and designed to cooperatively engage said guide handle and a means for fixing said cutting guide in proper alignment with respect to said handle . . . " See columns 13 & 14.

Osteonics again has the better of the argument. The Whiteside patent discloses a system that depends entirely on the handle alignment once the handle is in place. Claim 6 makes that point explicitly. The handle's being "adapted to receive" an instrument "in proper alignment with respect to said handle" implies what the preferred embodiment makes clearer--that any rotation alignment is fixed by the handle. Whether such alignment is absolutely necessary as a practical matter to achieve certain results does not change what the patent claim itself contains. Finally, Dr. Whiteside's testimony on the subject at the first trial, in which he seems to have conceded the difference, clearly supports Osteonics' interpretation. See Mentlik Declaration, Ex. C at 381-82. Accordingly, the Court agrees with Osteonics' construction of claim 6 on this point too.

3. "adapted to secure said panel to said structure"

<table>
<thead>

<tr>
<td></td>
<td></td>
<td>barrier device on structure.</td>
</tr>
</tbody>
</table>

Plaintiff asserts in its rebuttal statement that Defendants' proposal "is inconsistent with the ordinary and customary meaning of this claim language, improperly narrows the claim by importing limitations from the specification, and fails to construe consistently identical claim terms relating in related patents." Defendants counter in their rebuttal statement that "[t]he described embodiments of the '852 patent, the peripheral hem is connected to fasteners anchored to the ground or connected to adjacent panels" and that "[n]o direct connecting of the hem to the structure is disclosed." Thus, Defendants maintain that "'adapted to secure' more properly means positioning one or more panels in an at least partially overlying relation to the roof of the structure and anchoring the one or more panels to the ground around the perimeter of the structure via the peripheral hem."

Claim 2 discloses that the barrier device is formed "as at least one panel including a peripheral hem adapted to secure the panel to the structure." For reasons similar to those stated above in the discussion of "securing said protective barrier to said structure" in claim 1, the plain import of the instant claim language makes clear that it is properly construed to mean at least one edge of the panel is secured or connected to the structure. Claim 2 clearly states that the barrier device formed as at least one panel including a peripheral hem, as earlier defined, is "adapted" to secure the panel to the structure. The Court turns to the specification for guidance in constructing the meaning of "adapted." According to the specification, "[t]he panels may be suitably attached to the siding of the building . . . in which the material is wrapped
around a batten … which is in turn fastened to the wall with appropriate screws." Patent '852, Col. 10, Ins. 61-67. This
Court's review of the claim language and specification, including the above specification disclosures, leads it to conclude
that a slightly modified version of Plaintiff's proposal is proper. Specifically, the Court construes this claim term to mean
"one or more edges of the panel includes a hem along its perimeter that incorporates a fastening structure for connecting the
panel to the structure."

B. Claim 1(b) -- "Adapted to Support"

Claim 1(b) requires "wheel means mounted on axle means and adapted to support said base unit on said floor." '315 Patent
at 4:17-18. The parties agree that the described wheel means must support, or hold the weight of, the base unit so that the
base unit can move across a floor to be cleaned. Although Dyson's proposed construction requires that the wheels carry the
entire weight of the base unit and Oreck's proposed construction omits that term, the parties' submissions make it apparent
that their disagreement has less to do with the correct construction of the phrase "adapted to support" than it does with their
competing constructions of the term "base unit," an issue that the Court has already resolved. In any event, Oreck concedes
in its claim construction brief that Dyson's proposed construction is "acceptable as written." Oreck Claim Constr. Mem. at 7.
Accordingly, the Court construes "adapted to support" to mean that the wheel means of the cleaner must support the entire
weight of the base unit on the floor.

1) "adapter"

Plaintiff proposes that "adapter" be defined as "a device that permits the cylinder head's intake position to be altered." Defendant proposes the definition "a device used to connect different pieces of apparatus." I conclude that an "adapter" is a
device used to connect different pieces of apparatus. No specialized definition of "adapter" is provided in either the claim
language or the written description of the '502 patent. Though plaintiff does not propose the following construction in its
brief, I note that plaintiff proposed the fact that "one of ordinary skill in the art reading the ['502] patent would define
'adapter' … to mean a component that is used to effect operative compatibility between different parts of a system." Plt.'s
Reply to PPFOF, dkt. #87, P 179. Defendant did not dispute the proposal. Practically speaking, this construction is identical
to defendant's insofar as it implies that an adapter connects pieces of apparatus so that they can operate compatibly, that is,
together. Defendant's construction gains further support from the ordinary meaning of the term. An adapter is defined as "a
Because the patent specification does not indicate that the term should be given a meaning outside its ordinary definition, I
will construe an "adapter" to be a device used to connect different pieces of apparatus.

"Adapting the expandable surface to contact tissue surrounding the resection cavity to conform the tissue"

Xoft's contention that this phrase is indefinite springs from its argument that "expandable surface element" means "deflated
balloon or cage." As the court has rejected Xoft's interpretation of "expandable surface element," no construction of
"adapting the expandable surface to contact tissue surrounding the resection cavity to conform the tissue" is necessary.
A. Adaptor

The Court construed "adaptor" to mean "[a]n interconnector between the catheter and another fluid line, wherein the adaptor is not integral with the catheter." In the interests of conserving judicial resources, plaintiff does not oppose entry of summary judgment of non-infringement for defendant with respect to all asserted claims in the 676 patent.

MDG's device does not literally infringe plaintiff's device on this element because, in the Foley catheter securement device, the adaptor is integral with the catheter. (See Def. Exhibit 68 (conceding that plaintiff would not pursue literal infringement on "adaptor" claim, following the Court's ruling on claim construction).)

Furthermore, during prosecution of the 676 patent, the applicant argued its claims were patentable because the adaptor was separate from the catheter. (Def. Exhibit 506, at 5-6.) The applicant emphasized the distinction between the catheter and the adaptor in response to a rejection that the claim was obvious. (Id. at 6.) Where "the applicant clearly and unmistakably surrendered during prosecution" some particular subject matter, the applicant "cannot recapture under the doctrine of equivalents the surrendered subject matter." Cortland Line Co., Inc. v. Orvis Co., Inc., 203 F.3d 1351, 1360 (Fed. Cir. 2000). Even if plaintiff could argue for the doctrine of equivalents, the Court finds the doctrine would not apply here. In defendant's device, the adaptor is integral with the catheter. Therefore, defendant's device does not perform its function in substantially the same way as plaintiff's device, wherein the adaptor is not integral with the catheter. Summary judgment on all asserted claims of the 676 patent is appropriate.

In addition, defendant argues for summary judgment on claims 1, 2, and 6 of the 892 patent. These claims reference an "adaptor" but do not require it. The Federal Circuit has explained when a court should construe a limitation in the claim preamble as part of the claim itself:

A claim preamble has the import that the claim as a whole suggests for it. If the claim preamble, when read in the context of the entire claim, recites limitations of the claim, or, if the claim preamble is necessary to give life, meaning and vitality to the claim, then the claim preamble should be construed as if in the balance of the claim. Indeed, when discussing the "claim" in such a circumstance, there is no meaningful distinction to be drawn between the claim preamble and the rest of the claim, for only together do they comprise the "claim". If, however, the body of the claim fully and intrinsically sets forth the complete invention, including all of its limitations, and the preamble offers no distinct definition of any of the claimed invention's limitations, but rather merely states, for example, the purpose or intended use of the invention, then the preamble is of no significance to claim construction because it cannot be said to constitute or explain a claim limitation.

The Court finds that the claim preamble recites claim limitations and is necessary to give "life, meaning and vitality" to claims 1, 2, and 6 of the 892 patent. In these three claims, the patent claims [a]n anchoring system for use with a catheter having an adaptor with a radially extending member projecting therefrom[.]." The components of the anchoring system include a retainer with channel portions "sized to surround at least a portion of the adaptor through an arc of greater than 180[degrees] about said longitudinal axis." (892 patent, at 24:14-18.) Because the channel portions must be sized to fit the adaptor, the claim preamble, which explains the adaptor's design, recites a claim limitation and gives "life, meaning, and vitality" to the claims. Therefore, summary judgment on claims 1, 2, and 6 of the 892 patent is likewise appropriate.

f. "an amount of . . . added" & "adding an amount of" Claims 1, 4, and 8
The terms "added" and "adding" should be given their plain and ordinary meaning in this instance. While Rubber Mulch proffers a definition of "joining or uniting without mixing," the patent specification does not support its argument. The detailed description states, in part, "af[ter] the rubber particles are placed in the mixing means an amount of colorant is added to the rubber particles in the mixing means." (‘514 Patent, col. 4, lns. 31-33) Nothing in the claims, specification or patent history supports the definition that the colorant is added without mixing. Therefore, the undersigned finds that the terms "added" and "adding" mean "to join or unite so as to bring about an increase or improvement." Merriam-Webster Online Dictionary (visited May 15, 2007) <http://www.m-w.com/dictionary/add>.

Increasing amounts

"Increasing amounts" is used in claim 14 of the ‘977 Patent in the context of "adding increasing amounts of liquid water . . . to the working fluid acquired by the compressor . . ." (emphasis added). Defendants contend that the definition of "increasing amounts" is the same as that proposed for "increments," i.e., "an amount of water fog injected into the inlet of a gas turbine for a period of time of sufficient length to allow each component of the turbine to reach thermal equilibrium.

Column 16, lines 27 through 38 of the ‘977 Patent discuss the manner in which the water increments may be increased - either by smooth ramping or in a stepped fashion (or both). Defendants' proposed definition is at odds with the notion of smooth ramping. Moreover, the term "increasing amounts," like the term "increments," does not necessarily carry with it a time element. The Court therefore rejects Defendants' proposed meaning of the term. Instead, the Court construes the term "increasing amounts" as:

Adding water in stepped increments or in a smooth ramping fashion, or by a combination of the two.

B. "Adhere"

The '971 Patent does not give the term "adhere" a special meaning. As Plaintiffs assert; the term should be given its ordinary meaning. Ormco Corp. v. Align Tech., Inc., 463 F.3d 1299, 1306 (Fed. Cir. 2006); Atofina v. Great Lakes Chem. Corp., 441 F.3d 991, 996 (Fed. Cir. 2006). The ordinary meaning of adhere is: "to hold fast or stick by or as if by gluing, suction, grasping, or fusing." (Ex. 54 to Stewart's Decl. [citing Webster's Third New Int'l Dictionary]; see also Ex. 55 [citing Hackh's Chemical dictionary].)

Defendants assert that the term "adhere" requires a particular degree of strength of attachment and requires an adhesive substance that bonds more strongly with the items adhered together than it does with itself. Specifically, Defendants allege that the MF5 grip fails to "adhere" the grip's anti-slip sheet to its rubber sleeve for two reasons: (1) its adhesive does not create a strong enough bond between the panel and the sleeve to satisfy the "adhered to" limitation (Ex. 52, Meirowitz Expert Report, at 10); and (2) "adhesive" must bond to the sleeve and the panel more strongly than it does to itself, so that when the panel is pulled apart from the sleeve, adhesive material remains attached to both components. (Ex. 51, Meirowitz Depo., at 70:10-75:25.)

An examination of the Patent itself demonstrates that there is no basis for limiting the term "adhere" in the ways suggested by Defendants. Defendants fail to provide support for reading the term to include the limitations they advocate. Moreover, none of the definitions provided contain a requirement relating to the strength of the bond or the disposition of the adhesive after the bond is broken. There is also no requirement within the term that an adhesive be used to adhere the panel and sleeve together. To the contrary, the Webster's Third New International Dictionary allows for adhesion by means not only of sticking and gluing, but also of suction, grasping, or fusing. (Ex. 54.) In other words, the term "adhere" does not require any particular adhesive, or any adhesive at all; if the component parts are attached to one another, they are adhered to one another.
The '971 Patent never gives the term "adhere" a special meaning, and it is therefore appropriate to rely on the dictionary to determine the ordinary meaning of the term. Ormco, 463 F.3d at 1306; Atofina, 441 F.3d at 996. Both standard and technical dictionaries indicate that items are adhered if they are held together. (See Exs. 54-55.) Because nothing in the intrinsic evidence or ordinary meaning of the term "adhere" limits the terms in the manner Defendants suggest, their attempt to import these limitations into Claim 1 is improper. See Phillips, 415 F.3d at 1323 (warning against importing limitations without justification); Hoganas AB v. Dresser Indus., 9 F.3d 948, 950 (Fed. Cir. 1993) (disapproving the importation of "extraneous" limitation). Therefore, the Court construes the term "adhered" as meaning "attached."

C. Adhesive

Defendants set forth two arguments with respect to the construction of the final element of Claim 1 (i.e. "with the side edges of the panel abutting one another and being adhered together to define a longitudinal seam extending from the interior surface of the panel to the exterior surface of the polyurethane layer"). First, they allege that the adhesive must extend from the interior surface of the panel to the exterior surface of the polyurethane layer absent any air gaps. Second, Defendants urge that the only permissible adhesive is one composed of polychloroprene and toluene. (Def. Opp., at 13-14; Ex. 2, at 6:18-39.)

Defendants' construction errs in three respects. First, the phrase "extending from the interior surface of the panel to the exterior surface of the polyurethane layer" modifies the word "seam," not "adhered." Thus, the Court adopts Plaintiffs' construction that while the seam in the panel must extend from the panel's inner surface to its outer surface, the claim does not require that the side edges be adhered at all points along the seam. (Pl. MSJ, at 24.) Second, Plaintiffs contend, and Defendants do not dispute, that the specification of the '971 Patent contemplates the presence of air gaps in the panel's seam. (Pl. MSJ, at 24.) Third, the form of adhesive referenced in the preferred embodiment of the '971 Patent is not exclusive to polychloroprene and toluene because it is the claims of the patent, not the specification, that are the measure of the invention. SRI Int'l v. Matsushita Elec. Corp. of America, 775 F. 2d 1107, 1121 (Fed. Cir. 1985).

Defendants' argument that the side panels be adhered without air gaps is, according to Plaintiffs, inconsistent with the specification of the '971 Patent. (Pl. MSJ, at 24.) The preferred embodiment described in the specification of the '971 Patent contemplates the use of an adhesive composed of polychloroprene and toluene. (Ex. 2, at 6:18-39.) Plaintiffs assert that one of skill in the art would understand that this composition is a solvent-based adhesive that, once hardened, typically contains air gaps that correspond to the evaporated solvent. (Pl. MSJ, at 24.) Defendants do not dispute this assertion. Accordingly, the polychloroprene-toluene adhesive expressly included in the patent's embodiment considers and provides for the presence of air gaps in the seam. Because Defendants' construction of Claim 1 would preclude air gaps, it would prevent the claim from covering the patent's preferred embodiment, constituting an inaccurate construction. See MBO Labs, Inc. v. Becton,
Dickinson & Co., 474 F.3d 1323, 1333 (Fed. Cir. 2007) (holding that a claim construction that excludes the preferred embodiment "is rarely, if ever, correct").

Compgrip erroneously asserts that the term "adhered" requires the exclusive use of a polychloroprene-toluene adhesive because that chemical combination is expressly referenced in the preferred embodiment of the '971 Patent's specification. (Def. Opp., at 13-14.) Relying on the ordinary meaning of "adhere," discussed above, two materials are adhered if they "hold fast or stick by as if by gluing, suction, grasping or fusing." (Ex. 54), or if they are "attached to or stick to another substance." (Ex. 55.) The ordinary meaning does not require adhesion solely by way of, a polychloroprene-toluene chemical compound. Defendants assert that Claim 1 should be construed to refer only to this type of adhesive because "no other adhesive is disclosed" in the '971 Patent. (Def. Opp., at 13.) Yet this argument has been expressly disregarded by the Federal Circuit:

Our precedent has emphasized that the disclosure in the written description of a single embodiment does not limit the claimed invention to the features described in the disclosed embodiment.

Gemstar - TV Guide Int'l, Inc. v. ITC, 383 F.3d 1352, 1366 (Fed. Cir. 2004) (citing Liebel-Flarsheim Co. v. Medrad, Inc., 358 F.3d 898, 906 (Fed. Cir. 2004)). The argument has also been disregarded by the United States Supreme Court:

Smith v. Snow, 294 U.S. 1, 11, 55 S. Ct. 279, 79 L. Ed. 721, 1935 Dec. Comm'r Pat. 757 (1935). Accordingly, the term "adhered to" should not be limited in the ways Defendants suggest. A reading of the Patent's specification makes clear that "adhered to" should be construed to include the use of an adhesive that contains air gaps, and should not, as a matter of law, be limited solely to the type of adhesive disclosed in the '971 Patent's embodiment.

The moving party Eaton would like the Court to construe the meaning of the claim terms (1) "handle" and "grip"; and (2) "adhered to and abutting." Eaton argues that although the terms "handle" and "grip" can be used interchangeably the language of the '418 Patent define two distinct elements related to an impact imparting device: "In sum, 'handle means a handle or shaft, bare of a grip. [Whereas a] 'Grip' means something placed over the handle to assist one in gripping the handle." (P.&A., p.11). In other words, the handle is part of the impact imparting device whereas the grip refers to something placed over the handle. (See id.). Eaton interprets the term "adhered to and abutting" as "fastened to and touching." (Id. at 1.23). Defendant Eaton then contrasts this language with the definition of the allegedly infringing Whisper grip: "The Whisper golf club grip is a combination of a rubber underlisting sleeve about which is spirally wrapped a strip." (Id. p.11; citing Ex. 2, Plaintiffs' Int. Response No. 4).

Using its interpretation of the claim terms as a premise, Defendant Eaton argues that the Whisper grip does not literally infringe the '418 Patent because "the strip of the Whisper Grip is 'adhered to and abutting' the rubber sleeve of the grip; it is not 'adhered to and abutting [the] handle' of the golf club, which is required by Claim 1 of the '418 Patent." (P.&A., p.12). Essentially, they are arguing that "the rubber sleeve" of the Whisper grip is different than the claim term "handle" used in the '418 Patent. To bolster this argument, in its Reply, Defendant Eaton argues that Plaintiffs' subsequent patent, the '813 Patent, similarly distinguishes between a "handle" and "sleeve." 5 (Reply, p.5). Furthermore, Eaton contends that the
prosecution history of the '418 Patent distinguishes between the term "handle and sleeve." (Reply, p. 7).

--- Footnotes ---

5 Plaintiffs supply no authority, and the Court is unaware of any authority, suggesting it is appropriate to examine a subsequent patent to determine the meaning of claim terms used in a prior patent. Accordingly, the Court rejects this approach.

--- End Footnotes ---

In its Opposition, Plaintiffs contend that "adhered to" means "to hold fast." (Opp. at p.13). On that point, the parties are in agreement. Compare, Opp. at p.13 and P.&A. at p.11. However, Plaintiffs argue that "adhered to" does not require that elements be directly touching. (Opp. at p.13). Plaintiffs offer the example of floor tile being held fast to a concrete foundation, even though there is a paper underlay between the tile and the foundation. (Id.). As for the term "abutting," Winn proposes the following definition: "to touch or end at one end or side" or alternatively, to "lie adjacent." (Opp. at p.13; citing American Heritage Dictionary of the English Language, 4th Ed.). Plaintiffs contend that there is no requirement for the items to be touching. According to Plaintiffs, "adhered to and abutting" the handle means "held to and adjacent to the handle." (Id.).

To support its argument, Plaintiffs point to the prosecution history of the '418 Patent. (Id. at p.14). During the prosecution of the patent, the examiner rejected the claim specifying that the textile layer be "adhered directly to the handle" in view of several prior art references. (Opp. at p.14).

The Court finds Plaintiffs' argument unpersuasive. Adhered to means to "hold fast." The American Heritage Dictionary of the English Language, Fourth Edition (2000). Abutting is commonly defined as touching, lying adjacent to or bordering upon. See id. Plaintiffs' argument hinges on the contention that abutting might not necessarily require that the device touch the handle. To support that contention, they refer the Court to the prosecution history. (Opp. at p.14). However, before proceeding to the prosecution history, the Court should first look at the claims and then the specification. Markman, 52 F.3d at 979. In the specification, the last sentence provides that the patented device have "an adhesive provided along the inner surface of the textile strip securing the strip to the handle." (Saros Decl., Ex. 3, '418 Patent, Col. 4, Claim 1, ll.54-56.) Further, in the specification the handle is described in print and in the accompanying drawings as "the handle of a tennis racket." (Id., Col. 2, ll.40-45). Accordingly, it seems unambiguous from the specification and figures referenced therein that the patented device was to be touching and attached to the handle, that is the stem extending from the impact imparting device (i.e., club or racket). Between the shock absorbing felt layer, and the joint formed by the adhesive tape and the handle, there is "a conventional layer 30." (Id. at Col 3, ll.4-10). Viewing this language, it is clear that the patent contemplates no sleeve between the handle of the impact imparting device and the strip. Contrary to Plaintiffs' assertions, the handle described in its claims and specifications is not the same as a rubber sleeve. That being said, it requires further analysis to determine whether the Whisper grip infringes Plaintiffs' product. There appears to be no literal infringement because the strip of the Whisper grip is adhered to and abutting a rubber sleeve. It is not adhered to and abutting the handle of the golf club which is required by claim 1 of the '418 Patent. The Court now must turn to perform analysis under the doctrine of equivalents to determine if a triable issue of fact exists.

2

With regard to the district court's construction of the "adhering material" limitation, Airboss persuaded the district court and now maintains before us that "adhering" essentially means "bonding." Although "bonding" indeed was used in the specification, the passage in which it appears could be read so that the term refers to the epoxy resin adhesives that comprised the first of two preferred embodiments of the invention. '046 patent, col. 2, ll. 37-38. The second preferred embodiment contemplates the use of "an HDPE closed cell foam" in lieu of the epoxy resin adhesives. '046 patent, col. 2, ll. 38-39. Furthermore, the dictionary definition of "adhere" indicates that bonding is not the only way to get two objects to "adhere" to one another. 1 For instance, magnets, solder, and Velcro strips can all be used to "adhere" objects together, but in altogether different ways. Even the prosecution history suggests that a broader meaning is appropriate in that the PTO
examiner used the word "adhere" to describe a plate being fastened down by nails or spikes. J. App. at 401. In short, the district court unduly restricted the limitation of "adhering material" to "a layer of adhesive, such as a glue or epoxy, which bonds the plate to the tie." Pandrol I, at 10.

1 "adhere: to hold fast or stick by or as if by gluing, suction, grasping, or fusing." Webster's New Collegiate Dictionary 56 (9th ed. 1985).

The district court's construction is not only unnecessarily narrow, but also violates at least two basic canons of statutory construction. First, the district court's construction is in direct conflict with the plain language of a neighboring claim, namely, claim 3, which specifies "wherein said adhering material is a closed cell foam pad." '046 patent, col. 2, ll. 63-64 (emphasis added). According to our decision in Georgia-Pacific Corp. v. U.S. Gypsum Co., 195 F.3d 1322, 1331, 52 U.S.P.Q.2D (BNA) 1590, 1598 (Fed. Cir. 1999), "a claim term cannot be given a different meaning in the various claims of the same patent." Id. The clear language of claim 3 indicates that a closed cell foam pad is an "adhering material." The district court, however, construed "adhering material" in claim 1 in such a way that would necessarily exclude a closed cell foam pad. Since the patent does not otherwise provide for such inconsistent definitions, the claim construction is in error. Second, the district court's construction effectively reads out one of the preferred embodiments of the claims, namely, the use of HDPE foam as an "adhering material." According to our decision in Vitronics Corp. v. Conceptronic, Inc., 90 F.3d 1576, 39 U.S.P.Q.2D (BNA) 1573 (Fed. Cir. 1996), a construction that would cause a preferred embodiment to fall outside of the scope of the patent claims is strongly disfavored. Id., 90 F.3d at 1583-84, 39 U.S.P.Q.2D (BNA) at 1578 ("Such an interpretation is rarely, if ever, correct and would require highly persuasive evidentiary support."); see also Hoechst Celanese Corp. v. BP Chems. Ltd., 78 F.3d 1575, 1581, 38 U.S.P.Q.2D (BNA) 1126, 1130 (Fed. Cir. 1996) ("It is unlikely that an inventor would define the invention in a way that excluded the preferred embodiment, or that persons of skill in this field would read the specification in such a way."). Given that the district court's definition of "adhering material" would exclude an HDPE closed cell foam, claim 3 of the '046 patent would no longer cover what was disclosed in one of its preferred embodiments. A claim construction that produces such a result cannot stand.

II. Claim Construction.

The only issue the parties raise regarding claim construction concerns the "adhering material" limitation of claim 3. The defendants argue that the district court erroneously concluded that any closed cell foam pad is an "adhering material."

Our earlier decision in this case is dispositive of this issue. In Pandrol I we concluded that "the clear language of claim 3 indicates that a closed cell foam pad is an 'adhering material,'" and that the district court's construction erroneously excluded from claim coverage the "HDPE closed cell foam" that was disclosed in the preferred embodiment. Pandrol I, 10 Fed. Appx. at 841-842.

The defendants essentially argue that our earlier claim construction was incorrect. Even if that claim construction were not binding as the law of the case, it was clearly correct. Both the abstract and the preferred embodiment make clear that a gasket between the rail plate and the rail tie, in and of itself, constitutes an "adhering material" and need not satisfy a separate bonding requirement. I The abstract provides, "the plate may be bonded to the rail tie or a resilient gasket can be interposed between the rail tie and the plate." Abstract of the '046 Patent (emphasis added). This makes clear that bonding is merely an alternative to the separate solution of merely interposing a gasket between the rail tie and the plate. The preferred embodiment similarly provides, "the plate 10 may be bonded by layer 12 of adhesive (epoxy resin adhesives are preferred) to the tie or an HDPE closed cell foam of 1.5 mm thickness of the same size and shape as plate 10 fitted between plate 10 and tie 1." '046 Patent, col. 2, ll. 37-41 (emphasis added). Once again, bonding is merely an alternative embodiment to inserting a closed cell foam, which is "fitted" between the plate and the tie. Hence, while the claims require an "adhering material" between the abrasion resistant plate and the rail tie, this requirement is satisfied by "interposing" or "fitting" the closed cell foam pad between the rail plate and the tie.
The defendants' argument that the patentee disclaimed such an interpretation during prosecution is without merit. During prosecution, the Patent Examiner initially objected to the drawings in the application under 37 C.F.R. § 1.83(a), 2 because the drawings in the application did not include an illustration of the "adhering material." Office Action of Mar. 7, 1990 in the 489,498 Application at 2. The patentee amended the application by including an illustration of the "adhering material" in the drawings and "correcting the informalities noted by the Examiner" in the specification. Am. of Mar. 13, 1991 to Application No. 489,498 at 2. The specification originally contained the following language:

The plate 10 may be bonded by adhesive (epoxy resin adhesives are preferred) to the tie 1 or an HDPE closed cell foam of 1.5 mm thickness of the same size and shape as plate 10 is fitted between plate 10 and tie 1.

See id. at 1. The patentee amended the specification to refer to the new drawings, by adding "layer 12 of" between "by" and "adhesives" and deleting the word "is" between "plate 10" and "fitted." Hence, the amended lines of the specification read:

The plate 10 may be bonded by layer 12 of adhesive (epoxy resin adhesives are preferred) to the tie 1 or an HDPE closed cell foam of 1.5 mm thickness of the same size and shape as plate 10 is fitted between plate 10 and tie 1.

046 patent, col. 2, ll. 37-41 (added language emphasized; deletion indicated by strikethrough). The addition of the phrase "layer 12 of" and the deletion of the word "is" are without significance. The defendant retained the language indicating that a preferred embodiment would include "an HDPE closed cell foam of 1.5 mm thickness of the same size and shape as plate 10 fitted between plate 10 and tie 1." 046 patent, col. 2, ll. 38-41 (emphasis added).

The district court found, "it is undisputed that defendants' product utilizes a foam pad which is a polyethylene pad of one to two millimeters in thickness and of similar shape to the abrasion plate." Opinion at 5. There is thus no dispute that under this construction of claim 3, the district court correctly determined that the claims cover the accused device, and that the plaintiffs were, therefore, entitled to summary judgment of infringement as a matter of law.

------------------- Footnotes -------------------

1 It is well-settled that "claims must be read in view of the specification, of which they are a part." Markman v. Westview Instruments, Inc., 52 F.3d 967, 979, 34 USPQ2d 1321, 1329 (Fed. Cir. 1995) (en banc), aff'd, 517 U.S. 370, 134 L. Ed. 2d 577, 116 S. Ct. 1384 (1996). This includes consulting the preferred embodiment, see, e.g., Watts v. XL Sys., Inc., 232 F.3d 877, 883, 56 USPQ2d 1836, 1840 (Fed. Cir. 2000), and the abstract. See, e.g., SciMed Life Sys., Inc. v. Advanced Cardiovascular Sys., Inc., 242 F.3d 1337, 1342, 58 USPQ2d 1059, 1064 (Fed. Cir. 2001).

------------------- End Footnotes -------------------

A. "Adhesion Promoting Layer"

Both the '486 and the '722 patents include the term "adhesion promoting layer" in the following context: "A thermal transfer laminate, comprising…an adhesion-promoting layer overlying said upper surface of said first layer" (486 Claim 1, '722 Claim 1). The parties have proposed two divergent definitions of the term "adhesion promoting layer." Avery's proposed definition, presented at the claim construction hearing is: "A layer or treated layer, that increases the adhesion of coatings to a film substrate including radiation-curable, solvent-based, or water-based primers as well as a layer treated by corona treatments." In contrast, Whitlam suggests that an adhesion promoting layer should be defined as "a transparent layer of a
radiation-curable, solvent-based, or water-based primer designed to increase the adhesion of coatings to a film substrate."
The parties agree that layers of radiation-curable, solvent-based or water-based primers that act to increase the adhesion of coatings to a film substrate would qualify as an adhesion promoting layer. Therefore, the issue to be decided is whether a layer formed by corona treatment should also qualify as an adhesion promoting layer. This Court finds that it does not.

The Court looks first to the plain meaning of a term to seek its definition. Altiris, Inc. v. Symantec Corp., 318 F.3d 1363 (Fed. Cir. 2003). Unless the patentee has specifically redefined a term, it will be defined according to the ordinary meaning as viewed by one of ordinary skill in the art. Id. In this case, the term has not been specifically redefined by the patentee, and therefore it will be given its ordinary meaning. The plain meaning of adhesion promoting layer, however, is ambiguous. Avery has suggested that corona treatment creates a layer of treated film, which increases adhesion, and therefore meets the criteria of a plain definition of adhesion promoting layer. Viewed in the context of other portions of the patents' claims and specifications, this argument fails.

Although the specifications of a patent are not afforded the same authority as the claim terms, they are helpful in determining the necessary context of the claim language. Eastman Kodak Co. v. Goodyear Tire & Rubber Co., 114 F.3d 1547, 1552 (Fed. Cir. 1997). The specifications of both patents indicate that corona treatment is not what Avery had in mind when he used the term adhesion promoting layer in the patent. The specification relating to the adhesion promoting layer from the '722 patent is as follows:

The adhesion promoting layers 130 and 135 may be made from any radiation-curable, solvent-based or water-based primer designed to increase the adhesion of coatings to a film substrate. The layer 130 is transparent and the layer 135 is preferably transparent. The adhesion promoting layer material is typically comprised of a lacquer and a diluent. The lacquer is typically comprised of one or more polyolefins, polyamides, polyesters, polyester copolymers, polyurethanes, polysulfones, polyvinylidine chloride, styrene-maleic anhydride copolymers, styrene-acrylonitrile copolymers, ionomers based on sodium or zinc salts of ethylene methacrylic acid, polymethyl methacrylates, acrylic polymers and copolymers, polycarbonates, polyacrylonitriles, ethylene-vinyl acetate copolymers, and mixtures of two or more thereof. Examples of the diluents that can be used include ethanol, isopropanol, butanol, ethyl acetate, propyl acetate, butyl acetate, toluene, xylene, acetone, methyl ethyl ketone, heptane, and mixtures thereof. The ratio of lacquer to diluent is dependent on the viscosity required for application of the adhesion-promoting layer, the selection of such viscosity being within the skill of the art. Examples of the adhesion-promoting layers that can be used include CLB04275F-Prokote Primer (a product of Sun Chemical Corporation identified as a solvent based primer useful with inks and coatings). The adhesion promoting layers 130 and 135 typically have thicknesses in the range of about 1 to about 4 microns, and in one embodiment about 2 microns.

Nowhere in this general description of the adhesion promoting layer is the use of corona treatment mentioned. Without interposing any specific limitations on the claims, this language from the specification contemplates a layer deposited on the surface of the substrate of a solvent-born polymer. It would have been possible, if Avery considered corona treating to be an adhesion promoting layer, for the specification to include language to that effect. Regardless of whether corona treating produces a layer of treated material for adhesion purposes, the general description of the invention envisions a separate, chemically different layer applied over the facestock as the adhesion promoting layer.

In addition to the language of the specification, the doctrine of claim differentiation also weighs against a finding that corona treatment should be considered a part of an adhesion promoting layer. The doctrine of claim differentiation creates a presumption that claims should not be construed so similarly as to make a claim superfluous. United States v. Teleelectronics, Inc., 857 F.2d 778, 784 (Fed. Cir. 1988). The adhesion promoting layer is first set forth in independent claim one of both patents. Following this independent claim, there are dependent claims that place limitations on it. In the '722 patent, dependent claim 2 states, "The composite of claim 1 wherein said upper surface of said first layer is corona treated." In the '486 patent, dependent claim six puts the same limitation on independent claim one. If it is accepted that an adhesion promoting layer includes corona treating, then it is superfluous to include the dependent claims that specifically call for corona treating of the facestock. However, if adhesion promoting layer is construed not to include corona treating, then these dependent claims are reasonable limitations on the patent, and still foreclose a competitor from using a corona treatment on the upper surface of the facestock. This case is analogous to RF Delaware Inc. v. Pacific Keystone Technologies, Inc., 326 F.3d 1255 (Fed. Cir. 2003), which held it was error to import limitations from a narrower dependent claim into a broad independent claim. The use of corona treating is given in a dependent claim as a treatment to be applied to the facestock. It is inconsistent and superfluous to say that it should also be included in the definition of an adhesion promoting layer. For the forgoing reasons, the Court adopts the following definition of adhesion promoting layer: "A layer
that increases the adhesion of coatings to a film substrate including radiation-curable, solvent-based, or water-based primers.

**108**

d. An "Adhesive" is a Substance Used to Bond Two or More Solids so that They Act or Can be Used as a Single Piece

The same reasoning used in the Court's construction of "rivet" governs its construction of "adhesive." "Adhesive" is not defined in the intrinsic evidence. AFT draws its construction, "an adhesive substance (as glue or cement)" from Merriam-Webster's Ninth New Collegiate Dictionary, Dkt. No. 60-19, whereas J&L cites to the McGraw Hill Dictionary of Scientific and Technical Terms: "a substance used to bond two or more solids so that they act or can be used as a single piece." As the latter definition comes from a technical dictionary and is likely more indicative of the meaning attributed to the term by those skilled in the art, the Court adopts that construction.

**109**

The parties agree on the meaning of most of the claim language. They disagree strongly, however, on the meaning of one particular aspect of the first claim. According to the express language of the ’916 Patent, it first claims protection for:

A strip to be shaped into spacer stock for maintaining adjacent glass sheets of an insulating unit in a predetermined spaced relationship to one another, the strip comprising:

[A] an elongated flat bendable metal substrate having opposed major surfaces, at least one of the surfaces being fluid impervious; said substrate having a structural stability sufficient to maintain adjacent glass sheets in a fixed relationship when said substrate is shaped into the spacer stock;

[B] an elongated bead of fluid pervious adhesive adhered directly to one of said major surfaces spaced from edges of said substrate; said adhesive having structural stability less than the structural stability of said substrate;

[C] and a desiccant in said bead.

’916 Patent, Col. 6 lns. 32-43 (brackets and lettering added).

This claim covers metal stock that will be formed into multi-pane window spacers. The metal strip must be longer than it is wide, planer, and prevent fluid from passing through it at least one of the flat sides. The strip must also be pliable enough to be shaped into spacer stock, but rigid enough to hold panes of glass apart. A bead of adhesive is stuck to one of the strip's flat surfaces. The adhesive must not simply coat the surface but be three dimensional and be longer than it is either tall or wide. The adhesive must also be set in from the edges of the strip and contain a drying agent. Finally, the adhesive must not be as rigid as the metal strip.

The parties agree on this description of Claim 1. They part company, though, on the meaning of "adhesive." Even with respect to adhesives, though, the parties agree on a great deal more than they disagree. Both of the parties agree on the general concept of adhesives -- namely, that they stick to things or they stick two non-adhesive things to each other. They also both acknowledge that there is a broad range of stickiness for adhesives. Finally, both agree that how sticky a particular substance is does not affect its characterization as an adhesive. 1

--- Footnotes ---

1 PPG submitted testimony at the Markman hearing that unless a substance stuck for more than twenty-four hours, it was not an adhesive. The Court does not credit this limited definition. As counsel for PPG acknowledged in response to one of the Court's concerns, adhesives designed for particular purposes can have specific and limited durations. It is not at all clear that twenty-four hours provides any meaningful distinction between an adhesive and a non-adhesive.
Beyond their agreement on these general principals, though, Lockformer and PPG have different ideas about how sticky a substance must be to fall within the first claim of the ‘916 Patent. On the one hand, Lockformer says that the adhesive must stick to the strip for the life of the window, which is sometime between a handful and a dozen years or so. On the other hand, PPG says that it needs to stick to the strip only long enough for the strip to be shaped into a spacer and glass applied to the spacer. Unfortunately, there is little in either the intrinsic or extrinsic evidence to clarify which of these position, if either, is correct.

In light of this lack of clarity, the Court interprets Claim 1 in a manner no more limiting than its drafters provided. Consequently, the Court construes "adhesive" in Claim 1 to require that the adhesive stick to the strip through the process of shaping it into spacer stock and fixing glass to the spacer. It would be useful to have the adhesive material containing the drying agent stick to the strip through the process of forming it into a window spacer. This seems to be the minimum period that is necessary to have the adhesive be useful to the invention. Any other interpretation would limit the claim where no limits have been set.

While it is true that not-very-sticky material placed on all sides of a spacer would eventually fall into the window where it could be seen, there is nothing in Claim 1 requiring adhesive to be placed on the entire length of the yet-to-be-shaped strip. Conceivably, a strip could have only a portion of its length -- one quarter, for example, with a window that is perfectly square -- covered with adhesive and drying agent. Then, that strip could be formed into a spacer and the part with adhesive could form the bottom of the spacer. In such a case, no material would fall into the viewing area of the window. Such a strip would still meet the requirements of Claim 1.

Since "adhesive" in Claim 1 is not limited by any other language, and to be useful, only requires that the material stick to the metal strip, at a minimum, throughout the process of shaping the strip into spacer stock and fixing glass to the spacer, the Court will not limit it further.

The first term in dispute concerns the word "adhesive," contained numerous times in the patent claims. Moore asserts that an adhesive is a generic term which includes cohesives. The Court agrees. While a cohesive may have the special property of sticking only to itself, 4 there is nothing that precludes a cohesive from being a subset of the term adhesive. An adhesive is "[a] substance . . . that provides or promotes adhesion." The American Heritage Dictionary of the English Language (3d ed. 1996). Certainly this definition applies to a cohesive as well. Finally, Central States has offered no evidence to show that a cohesive is a term of art that is excluded from the definition of adhesives. 5

4 The parties appear to be in agreement as to this interpretation.

5 Though extrinsic and not considered by this Court, Central States even quotes its own technical manual definition of a cohesive which describes it as an "adhesive." Def.'s Response at 13.

Central States contends that the ‘875 patent is meant to protect only products using heat-seal adhesives. As justification for its assertion, Central States asserts that the patent is "drafted in the context of a heat seal adhesive" and because of that, "Moore's construction of the term 'adhesive' . . . renders the claims invalid under 35 U.S.C. § 112, paragraph 1 (lack of enablement) and paragraph 2 (unduly vague)." Def.'s Response at 12. Central States' justification for this is that since the patent only describes the placement of adhesive on one side of a seal strip, and pressure sensitive adhesive requires adhesive on two sides, the patent does not enable a person reasonably skilled in the art to make the claimed invention.

Central States' reliance on section 112 is ill-founded. What paragraph 1 of section 112 requires of the patentee is to state the
"best mode" contemplated of making the invention. 35 U.S.C. § 112, para. 1. The patentee has illustrated a "best mode" using a heat-seal adhesive. The use of a heat-seal adhesive as a preferred embodiment does not mean that the claims can be limited to only a heat-seal adhesive. See Renishaw PLC v. Marposs Societa' Per Azioni, 158 F.3d 1243, 1248 (Fed. Cir. 1998) ("one may not read a limitation into a claim from the written description"). Furthermore, the claims use the terms "adhesive" and "activated" when relating to the method by which the envelope will be sealed. These are adequately specific and comply with paragraph 2 of section 112. The adhesive may be any type of adhesive that can be activated, whether by heat or pressure.

Central States appears to be forwarding the theory that since the patent claims only describe adhesive strips on one side of the seal, then a product with a matching seal using a cohesive would be non-infringing. However, such a product would still infringe upon the adhesive placement in Claim 1 of the '875 patent. One cannot rightfully add elements to a patented invention because the "improved" invention would still contain all of the claims protected in the existing patent. Therefore, Central States' argument fails.

3. Adhesive Coating

Defendants' Proposed Construction: An "adhesive coating" is a substance such as a glue or gum, which is applied by "coating," which is capable of holding materials together by surface attachment. It does not include magnetic materials that affix a label to a metal surface.

Plaintiff's Proposed Construction: Leave undefined.

The Court's Claim Construction: An "adhesive coating" is a covering of a substance such as a glue or gum, which is capable of holding materials together by surface attachment. It does not include magnetic materials that affix a label to a metal surface.

MPT believes that adhesive coating is a term that a jury can understand without further definition. 29 In any event, MPT does not state any disagreement with the portion Defendants' definition which refers to "a substance such as a glue or gum . . . which is capable of holding materials together by surface attachment. It does not include magnetic materials that affix a label to a metal surface." The Court finds that this portion of Defendants' definition is not contrary to the plain meaning and is consistent with industry definitions. 30 For example, one industry reference defines adhesive as follows:

Adhesive (glue, gum) - A substance capable of holding materials together by surface attachment. (American Society for Testing Materials).

(Fasson p. 31).

29 MPT also explains that it was not notified of Defendants' position on "adhesive coating" until right before the deadline for initial Markman briefs. However, MPT has had an opportunity to respond to Defendants' position.

30 Although the Court might otherwise be wary of including examples ("a substance such as a glue or gum") or express disclaimers of claim scope ("It does not include magnetic materials that affix a label to a metal surface") within a claim definition, MPT has provided no argument that the Court should not do so. Moreover, these portions of Defendants' definition do not appear to be contrary to portions of the claims, specification, prosecution history or extrinsic evidence identified for the Court. This is quite different from the definition of a release coating, where the examples and express disclaimers Defendants sought to import into the claim definition were contrary to the intrinsic and extrinsic record.

However, MPT does not agree that the adhesive must be applied by "coating" as that term is defined by Defendants. The same arguments that apply to a release coating apply with equal force here. Simply put, none of the evidence provided by Defendants supports limiting a coating to a material applied by a liquid coating process. As was discussed in detail above, the specification explicitly contemplates that an adhesive coating can be applied to the placard by a lamination process...
involving an adhesive layer.

Defendants nonetheless argue that an adhesive coating cannot be defined as a covering. First, they note that Claim 1 includes "a liner covering said adhesive coating." From this they conclude that the adhesive coating cannot be a covering, since this would mean there is a covering for a covering. The Court has no difficulty with a covering having a covering. The adhesive coating of Claim 1 is defined as the "adhesive coated face" of a placard. There is no reason that the adhesive cannot serve as a covering for a placard while a liner covers the adhesive. 31

31 The same logic applies to the specification's description of "a disposable liner having a release coating on one face for covering the placard's adhesive coating." (709 patent, col. 1, ln. 56-57).

B.

We now address the construction of "adjacent." This limitation explicitly appears only in independent claim 5 of the '317 patent, but it is also required in dependent claims 7 and 8 by dependency from claim 5. The district court construed this limitation as "next to or adjoining." Claim Construction, 2007 U.S. Dist. LEXIS 98875 at *56.

Boss argues that this term should be construed as "close to." Boss contends that the district court inappropriately limited the definition of "adjacent" and, in doing so, excluded certain embodiments in the '317 patent. According to Boss, the proper construction would cover all of the disclosed embodiments. Specifically, Boss points to figures 4 and 10 in the '317 patent, emphasizing that its proposed construction--"close to"--would encompass both disclosed figures, whereas the district court's construction excludes the embodiment shown in figure 4.

Yamaha responds that the intrinsic evidence, the claims, and ordinary meaning support the district court's construction. In particular, Yamaha argues that the '317 patent's specification use of "adjacent" to describe "corners formed by adjacent sides of the base section 240," col.9 l.52, confirms "the concept of next to or adjoining." Yamaha also contends that, contrary to Boss's suggestion, the court's construction "does not exclude any embodiments from the scope of the invention because other claims are available to cover those embodiments."

We agree with the district court that the correct construction of "adjacent" in the '317 patent is "next to or adjoining." Although the term "adjacent" is a commonly understood word, we still look to the intrinsic evidence for the proper construction. See Phillips, 415 F.3d at 1321 ("the specification is 'the single best guide to the meaning of a disputed term'") (quoting Vitronics, 90 F.3d at 1582); id. ("T[he] "ordinary meaning" of a claim term is its meaning to the ordinary artisan after reading the entire patent.").

Turning to the pertinent claim language, claim 5 states "a storage section, disposed adjacent the flexible seat section, having a storage cavity formed therein." '317 patent col.11 ll.3-4. While the language of claim 5 alone does little to clarify the parties' dispute, the figures in the specification support the proposition that the term means "next to or adjoining." As shown by figure 10, the storage section is directly "next to or adjoining"--not merely "close to"--the flexible seat section 260. Id. fig.10. In addition, the specification's use of "adjacent"--"corners formed between adjacent sides of the base section"--supports that "next to or adjoining" is the correct construction. Id. col.9 ll.51-52. Indeed, in order for the sides of the base section to form "corners," the sides would logically have to be "next to or adjoining" each other, rather than merely "close to" each other. See id. fig.9a items 230 and 224. Moreover, this construction, gleaned from the intrinsic evidence, is consistent with the dictionary definition of "adjacent." See, e.g., American Heritage Dictionary of the English Language (4th Ed. 2000); Phillips, 415 F.3d at 1322-23 (acknowledging that a construction "may also rely on dictionary definitions . . . so long as the dictionary definition does not contradict any definition found in or ascertained by a reading of the patent documents." (quoting Vitronics, 90 F.3d at 1584 n.6)).

Moreover, Boss's proposed construction of "close to" and its contentions that the current construction of "next to or adjoining" excludes certain disclosed embodiments are contradicted by the unasserted claims of the '317 patent. See Phillips, 415 F.3d at 1314 ("Other claims of the patent in question, both asserted and unasserted, can also be valuable sources of enlightenment as to the meaning of a claim term."); see also PSN Illinois v. Ivoclar Vivadent, Inc., 525 F.3d 1159,
1166 (Fed. Cir. 2008) ("[U]nasserted or cancelled claims may provide 'probative evidence' that an embodiment is not within the scope of an asserted claim."). Indeed, this case presents a clear example of the situation in which, although alternatively disclosed embodiments are not encompassed by the current claim construction, other unasserted claims cover those alternative embodiments. See, e.g., TIP Sys., LLC v. Phillips & Brooks/Gladwin, Inc., 529 F.3d 1364, 1373 (Fed. Cir. 2008) ("[T]he mere fact that there is an alternative embodiment disclosed in the . . . patent that is not encompassed by [a] district court's claim construction does not outweigh the language of the claim, especially when the court's construction is supported by the intrinsic evidence."); PSN Illinois, 525 F.3d at 1166 ("[C]ourts must recognize that disclosed embodiments may be within the scope of other allowed but unasserted claims.").

Claim 5 reads "a storage section, disposed adjacent the flexible seat section." '317 patent col.11 ll.3-4 (emphasis added). Under the current construction of "next to or adjoining," claim 5 encompasses the embodiment shown in figure 10, which discloses the storage section next to the seat section. Id. fig.10. Importantly, unasserted independent claims 1 and 12, as well as their dependent claims, omit the requirement that the storage section be "adjacent" the seat section. See, e.g., id. col.10 ll.35-36; col.12 ll.25-34. As such, the unasserted claims allow the storage section to be in a variety of locations, including simply "close to" the seat section. The unasserted claims therefore specifically encompass the other disclosed embodiments, which show the storage section "close to" a seat section. See, e.g., id. fig.4 items 60 (seat section) and 44 (utility cavity). Construing the limitation "adjacent" as "close to," as urged by Boss, in this case would render that limitation in claim 5 essentially meaningless in light of the other unasserted claims--a construction we cannot accept based on the entirety of the intrinsic evidence. See, e.g., Ortho-McNeil Pharm., Inc. v. Caraco Pharma. Labs., Ltd., 476 F.3d 1321, 1327-28 (Fed. Cir. 2007) (rejecting a claim construction that would have "render[ed] meaningless another claim's limitation").

8 Also, we note that Boss originally proposed during claim construction in the district court that, if "adjacent" required construction, it should be construed as "next to."

For the foregoing reasons, we hold the district court correctly construed "adjacent" as "next to or adjoining." We have considered Boss's additional arguments on this issue, but find them unpersuasive.

4. "Positioned Adjacent"

The term "positioned adjacent" used in Claim 1 of the '477 Patent designates which end of the elongate member is nearest to the fluid receptacle. See '477 Patent col. 8 ll. 43-46 ("the elongate members having a front and a rear with the front of the elongate members being positioned adjacent a fluid receptacle"). Millipore argues that this claim term should be given its ordinary meaning, which includes "nearby," but should not require that there be contact between the elongate member and the fluid receptacle. Gore counters that the term "positioned adjacent" should be construed as "next to or adjoining, with no intervening structure between the elongate members and the fluid receptacle."

Although the term "adjacent" is a commonly understood word, I consider the intrinsic evidence for the proper construction. See Phillips, 415 F.3d at 1315 (referring to the specification as "the single best guide to the meaning of a disputed term"). I find that Gore's construction of the term "adjacent" to be consistent with the specification, which requires the elongate member to stop the flow of fluid when placed in the closed position. See '477 Patent col. 4 ll. 57-67 ("the elongate members 30 are . . . shaped to fit substantially water-tight within said shaft 26. . . . Each elongate member 30 is movable within said shaft 26 from a closed position Pl to an open position P2 such that the release of fluid out of said fluid receptacle through said port insert 10 is frustrated when the elongate member 30 occupies the closed position Pl."). (emphasis added).

Consequently, I construe the term "adjacent" as "next to or adjoining with no intervening structure between the elongate members and the fluid receptacle." 5 See Boss Indus., Inc. v. Yamaha Motor Corp. U.S.A., Inc., 333 Fed. Appx. 531, 2009 WL 1475036, at **9 (Fed. Cir. 2009) ("the correct construction of 'adjacent' in the [477] patent is 'next to or adjoining.'").
5 In the aftermath of the May 19, 2010 hearing, Millipore now requests me to specify that there can be no intervening structure "other than the cap" between the elongate members and the fluid receptacle. Because I construe the cap as part of the same structure, see Section II.B.2.b. supra, I reject Millipore's argument.

The parties next offer competing constructions for the term "adjacent," which appears in claim 11 to describe the arrangement of LEDs. "[A] first light emitting diode . . . is adjacent a second light emitting diode." ('831 patent, claim 11.) The parties dispute whether the term requires actual physical contact between the LEDs. The dictionary definition does not resolve the dispute, but it does aid the court in distinguishing between the meaning of "adjacent" and contiguous" as used in the patent. "Adjacent may or may not imply contact but always implies the absence of anything of the same kind in between. . . . Contiguous implies having contact on all or most of one side." WEBSTER COLLEGIATE DICTIONARY at 14 (10th ed. 1997). As thoroughly described in Part C, the patent and specification employ the term "contiguous" to indicate objects that adjoin one another in constant contact (i.e. "contiguous beam," "contiguous pool of light"). In light of that fact, claim 11's use of the term "adjacent," which has a lesser connotation of contact, appears to represent a deliberate departure. In context, the term adjacent is best understood as requiring a close proximity, while remaining silent as to contact.

Defendant challenges this conclusion, urging that in light of the meaning of "contiguous beam," as a single, unbroken beam of light, "adjacent" must mean touching. Only adjoining (touching) LEDs, Defendant urges, could form the single light source necessary to project a "contiguous beam." The court agrees that, to create a beam that "appears to be a single unbroken beam of light," LEDs would need to be in very close proximity such that they appeared to form one light source. This requirement does not, however, necessarily require the LEDs be in physical contact with one another. A millimeter could separate two focused LEDs and yet they would still be "adjacent" and project a "contiguous beam." Plaintiff's construction of "adjacent" as "not necessarily touching" is technically accurate, but unnecessary. In the court's view, the ordinary meaning of "adjacent," as "being in close proximity," is the best reading here. Id.

Accordingly, the court adopt the following construction of "adjacent:" "closely proximate."

The parties dispute the meaning of the term "adjacent" (claim 13 of '493 Patent) and the related phrase "to a respective said vertical post between said adjacent liner panels" (claim 21 of '493 Patent). The term is used to specify that two items of the same type (e.g., liner panels) are next to each other, even if they are separated by an item of another type (e.g., a vertical post). (See, e.g., claim 1 of '493 Patent (claiming a trailer where "adjacent" liner panels are attached to a "vertical post disposed between" them).)

Plaintiff contends that "adjacent" means "close to or nearby." Defendants argue that "adjacent" liner panels are "next to" each other-and that no other structure of the same kind comes between them. As to the phrase "to a respective said vertical post between said adjacent liner panels," Plaintiff asserts that no construction is necessary, while Defendants propose a
definition that "the panels are next to each other."

Both sides agree that two liner panels are "adjacent" to each other if they are near each other and have no other liner panels between them or if they are next to each other but have a vertical post between them. Plaintiff's concern with Defendants' proposed definition is that "next to" implies "abutting." The Court agrees that Defendants' proposed construction may cause confusion, so the Court concludes that "adjacent" means "close to or nearby, but not separated by another item of the same type." In light of this construction, the Court concludes that it need not construe the phrase "to a respective said vertical post between said adjacent liner panels."

**D. "Adjacent"**

The parties also disagree on the meaning of the word "adjacent," which appears in several places in the ’484 patent claims. Defendants propose "next to or adjoining something else." Dkt. No. 82 at 12. They argue that the term must mean that if two portions of the apparatus are "adjacent" to one another, no other structure is between them. Plaintiff Aero proposes "close to, next to or lying near," and argues against the requirement that no structure be between the two "adjacent" structures, asserting that "abuts" would be a better word for that narrower meaning. Dkt. No. 84 at 10. Dictionary definitions of "adjacent" encompass both meanings. See Free Motion Fitness, Inc. v. Cybex Intern., Inc., 423 F.3d 1343, 1349 (Fed. Cir. 2005) (explaining that Webster's Third New International Dictionary provided several different definitions of "adjacent,") including "not distant" and "relatively near and having nothing of the same kind intervening"; court held that "not distant" was more consistent with the specification). Defendants have not pointed to indications of the narrower meaning in the specification or prosecution history here. The court agrees with plaintiff Aero that the term "adjacent" in the ’484 patent claims does not require that no other structure be between the two structures described as "adjacent."

**B. "Adjacent"**

Claim 8 describes the configuration of the invention's "work surface" as "a display screen adjacent to the work surface that is tiltable relative to the work surface." (the '178 patent, claim 8). The Plaintiff seeks to broadly define the term "adjacent." The Plaintiff's version would define adjacent as "close to." (Joint Claim Construction Statement at 5). The Defendant seeks a more restrictive version - "contiguous, adjoining, abutting." (Joint Claim Construction Statement at 5).

Both parties suggest that the intrinsic evidence is not useful here. Both urge, then, that it be given its ordinary and customary meaning. Oddly, though not surprisingly, neither party can agree on the ordinary and customary meaning of the term. The parties cite to varying dictionary definitions as well as Court of Federal Claims interpretations of "adjacent" to support their positions. See, e.g., Chemical Separation Technology, Inc. v. United States, 51 Fed. Cl. 771, 63 U.S.P.Q.2d 1114 (Ct. Fed. Cl. 2002). As the Federal Circuit noted, "Dictionaries or comparable sources are often useful to assist in understanding the commonly understood meaning of words and have been used both by our court and the Supreme Court in claim interpretation." Phillips, 415 F.3d at 1322.

Before resorting to dictionary definitions, however, it is necessary to "scrutinize the intrinsic evidence in order to determine the most appropriate definition." Free Motion Fitness, Inc. v. Cybex In'll., Inc., 423 F.3d 1343, 1349 (Fed. Cir. 2005). This is because "any reliance on dictionaries [must accord] with the intrinsic evidence." Id. at 1348.

The intrinsic evidence suggests that the term "adjacent" should be used as "close to" as opposed to abutting. The actual claim in dispute - "A mobile workstation, comprising . . . a display screen adjacent to the work surface that is tiltable relative to the work surface" is vague even after surveying the patent in relation to the claim. (the ’178 patent, claim 8) (emphasis added). However, claim 8 uses the term adjacent in a way that is not in dispute: "A movable workstation, comprising . . . an input device tray supported adjacent to the work surface." (the ’178 patent, claim 8) (emphasis added). The patent figures illustrate that although the input device tray is close to the work surface, it does not touch it. (See the ’178
The input device tray is below the top work surface, as can be seen clearly where the input device tray is pulled out of the tray shelf. Thus, the more appropriate and consistent definition of adjacent for the '178 patent would be "close to."

One could arguably read claim 8 as stating that the input device tray's support is adjacent to the work surface. In that case, the device's support would abut the top work surface. However, a more straightforward and less strained reading would be to compare the input device tray's location with the top work surface. While this claim was a close call (as were other claims in dispute), the intrinsic evidence does in fact support the Plaintiff's definition of "adjacent" as "close to."

1. Claim Construction of the Term "adjacent"

Defendants first contend that the accused chairs do not meet the limitation of "a backrest . . . positioned adjacent said rear of said seat." Defendants assert that "positioned adjacent" means that the bottom of the backrest is at or below the level of the seat. This construction, defendants argue, is mandated by both the specification and the prosecution history of the '741 patent's grandparent patent application, U.S. Patent Application No. 08/347,475 (the "'475 application"). Plaintiff opposes this construction, contending that the plain meaning of "adjacent" should apply, and arguing that defendants have mischaracterized the prosecution history by providing the court with an abridged version of the file wrapper.

It is not uncommon for patent drafters to use--or for courts to have to construe--the term "adjacent." See Free Motion Fitness, Inc. v. Cybex Int'l, Inc., 423 F.3d 1343, 1348-49 (Fed. Cir. 2005); Tyco Healthcare Group LP v. Ethicon Endo-Surgery, Inc., 411 F. Supp. 2d 93, 105 (D. Conn. 2006). In Free Motion, the Federal Circuit held that the term "adjacent" should be construed as "not distant." Free Motion, 423 F.3d at 1349. The court there noted that "adjacent" bears several related dictionary definitions, and that there was nothing within the intrinsic evidence to cause the court to apply anything but the broadest definition of the term.

In the instant case, defendants argue that the intrinsic evidence requires the court to apply a narrower scope to "adjacent." The court notes that the claims themselves provide no insight into the meaning of "adjacent." Defendants direct the court to Figure 4 of the '741 patent, which shows a chair with a bottom of the backrest located at or below the level of, rather than spaced above, the seat. Again, however, it is hornbook patent law that preferred embodiments found in the specification should not be read as limiting the claims. See Phillips, 415 F.3d at 1323. Because the specification fails to expatriate on what "adjacent" to the seat means and, a fortiori, what the term "positioned adjacent" means, the court declines defendants' invitation to limit the claims to the preferred embodiment as illustrated in various drawings within the patent. Therefore, if a limiting definition is to manifest itself in the intrinsic evidence, it will have to come from the prosecution history. Id. at 1317 ("In addition to consulting the specification, we have held that a court should also consider the patent's prosecution history, if it is in evidence.") (quoting Markman v. Westview Instruments, Inc., 52 F.3d 967, 980 (Fed Cir. 1995) (en banc)).

Defendants argue that during the prosecution of the '475 application--a grandparent patent application--plaintiff added the term "adjacent" to distinguish the prior art. See Elkay Mfg. Co. v. Ebco Mfg. Co., 192 F.3d 973, 980 (Fed. Cir. 1999) ("When multiple patents derive from the same initial application, the prosecution history regarding a claim limitation in any patent that has issued applies with equal force to subsequently issued patents that contain the same claim limitation."). Consequently, according to defendants, plaintiff disclaimed a broad construction of the term. As defendants see it, the patent office examiner rejected the pending claims as being anticipated by the chair disclosed in prior art. In response, plaintiff added the limitation "with said back positioned adjacent said rear portion of said seat" to overcome the rejection. Through extrapolation, defendants contend that because the backrest in Diffrient was positioned above the seat, plaintiff limited the term "adjacent" to mean "at or below the level of the rear of the seat."

Plaintiff contends that neither the claims in the grandparent case nor the patent office examiner's rejection contemplated a requirement that precluded the backrest from being spaced above the rear of the seat. According to plaintiff, the patent office examiner requested a definition for the location of the "rear" of the seat, and that is why the claim limitation in question was added.
After reading the office action and the response to that office action, the court finds defendants' argument to be untenable. The court notes that "[w]hile the prosecution history is relevant to claim construction, 'it often lacks the clarity of the specification and thus is less useful for claim construction purposes.'" LG Elecs., Inc. v. Bizcom Elecs., Inc., 453 F.3d 1364, 1373 (Fed. Cir. 2006) (quoting Phillips, 415 F.3d at 1317). The various snippets of language cited by defendants may relate to a back of a chair and its positioning, but they by no means "rise to the level of disclaiming or limiting the scope of the express claim language." Id. Indeed, in rejecting certain claims in the '475 application as being anticipated, the patent office examiner stated:

Diffrient discloses a tiltable chair and methods comprising a seat (11) and back (12) connected to a base (10) through an exposed linkage assembly. The linkage assembly comprising a link member (65) including a pair of links attached pivoted to the base at an axle (5) and extending at the sides of the seat and back. The link member having a first portion pivotally attached (at 84) to a side of the seat at location above the seating surface (see Fig. 3) which would be substantially aligned with a user's hips and extending to be rigidly connected to the back (at 67). The linkage also includes a rear link (92) pivotally connected between the base and a rear portion of the seat to form a four bar linkage with the link member (the claims do not define a rear direction which would preclude the link 92 of Diffrient from being "rear") . . . . [Italics appear in original] (emphasis added)

In response to this, the applicant amended the claims to state in part, "a seat comprising a seating surface, a front portion, a rear portion and a side portion; a back; and a linkage assembly connecting said seat and back to said base member, with said back positioned adjacent said rear portion of said seat, . . . ." Response to Office Action (emphasis added to show amended language). The applicant then stated in his remarks to the office action:

Independent claim 102 recites a seat having a front and rear portion and a linkage assembly connecting a seat and a back to said base member, "with said back positioned adjacent to the rear portion of said seat." In this way, claim 102 now orients the seat relative to the back and clarifies the meaning of various directional recitations. [Emphasis in original]

This language does not indicate a clear disavowal of scope on the part of the applicant. To the contrary, this commentary indicates that the applicant amended the claims to incorporate "directional recitations" into the claims and to "orient the seat relative to the back," i.e., the seat and back are adjacent to each other. It does not show an attempt to limit the backrest to only positions at or below the level of the seat. The court simply cannot read such innocuous language as incorporating a clear, drastic limitation into the word "adjacent." Therefore, this court defines "adjacent" in claim 1 of the '741 patent as meaning "in close proximity to" or "not distant."

D. The Term "Adjacent"

We disagree with the requirement imposed by the district court that the blocking flange be "contiguous or connected" with the front face of the guard body. "[A] claim interpretation that excludes a preferred embodiment from the scope of the claim is rarely, if ever, correct." On-Line Techs., Inc. v. Bodenseewerk Perkin-Elmer GmbH, 386 F.3d 1133, 1138 (Fed. Cir. 2004) (quotation marks omitted). Two different preferred embodiments, depicted by Figure 4 of the '655 patent and Figure 9A of the RE '885 patent, clearly show the blocking flange resting somewhat in front of the front surface and not in any way "contiguous or connected" with it. The proper construction of this term is "next to."

A. Construction of the Claim Terms Relating to "Shoulder"

The parties ask the Court to construe the following phrases related to the "shoulder" portion of a toner container:

... "a shoulder portion forming a circumferential wall adjacent one end of said body" ('662 patent, Claim 1; '631 patent, Claims 1, 5, and 6)
"a shoulder portion forming a wall adjacent to a first end of said hollow body" ('195 patent, Claims 7, 8, 9, 29, 30, and 31)

"a shoulder portion adjoining a first end of said body and forming a wall" ('293 patent, Claims 1 and 22)

The parties disagree over the meaning of the words "shoulder", "adjacent", and "end" in these phrases.

As an illustrative example, Claim 1 of the '662 patent reads:

said developer container having a hollow cylindrical main body comprising:

a shoulder portion forming a circumferential wall adjacent one end of said body;

a mouth portion on said one end, said mouth portion being smaller in diameter than said shoulder portion; and

a guide means provided on said shoulder portion for guiding said developer stored in said developer container to said mouth portion as said main body is rotated.

('662 Patent, Claim 1).

Ricoh argues that the shoulder is "an angle or curve in the outline of an object (as between the body and the neck of a bottle) and the parts adjacent to it." This definition is based on a definition of "shoulder" found in Webster's dictionary, except for the Webster's definition reads "and often also the parts adjacent to it." See Webster's Third New International Dictionary of the English Language, Unabridged (1993) ("Webster's Third"). Ricoh also proposes that "adjacent" be construed as "nearby" and "end" as "the last part lengthwise" but "not limited to the tip."

Katun and Nashua argue that the "shoulder" is the "the wall at the mouth end of the bottle, which is substantially perpendicular to the outer surface of the body." They argue that because the claim also requires that the "shoulder" form a "circumferential wall adjacent" to the body, and because a "wall" is a vertical structure, anything "adjoining" a horizontal body is necessarily perpendicular to that body. Katun and Nashua also argue that because the claims require a comparison between the diameter of the shoulder and the mouth, the shoulder must be a area with a single diameter.

GTI argues that the "shoulder" should be construed to include "an inner surface thereof partly raised to the edge of the mouth portion to form raised portion(s) 85, 86a and 86." These portions form a ramp-shaped protrusion that wraps around approximately half of the top of the toner bottle.

Defendants also argue that "adjacent" should be construed as "relatively near and having nothing of the same kind intervening" and that "end" should be construed as "the last part lengthwise."

As discussed, the Court must start by analyzing the language of the claim itself, construing the terms according to their ordinary and plain meaning. See Johnson Worldwide Assocs., 175 F.2d at 989. In defining a term according to its plain meaning, it is appropriate to rely upon certain extrinsic evidence, such as a regular dictionary. See Vitronics, 90 F.3d at 1584 n. 6. The Court finds that the ordinary meaning of the term "shoulder" is well-represented by the definition found in Webster's dictionary: "an angle or curve in the outline of an object (as between the body and the neck of a bottle)." Webster's Third at 2104. Nothing in the intrinsic evidence contradicts this common definition. The Court is not convinced that "anything" adjoining a wall must be perpendicular to that wall. As Ricoh points out, the claim specifications recognize a wide variety of shoulder shapes with varying slopes, curves and angles. Nothing in the patents' claims or specifications limit the shoulder to a perpendicular surface.

Moreover, the Court does not derive as much significance as Defendants from the claims' requirement that the shoulder have a "diameter." The claim requires only that the "shoulder" diameter be larger than the diameter of the mouth. A conical object with a "mouth" at the narrow end will necessarily have an average diameter larger than that of the mouth, and that object's diameter will be larger than the mouth's diameter at every point up to where the two pieces join. Therefore, it is not necessary to limit the construction of the term "shoulder" to a shape with a single diameter.
The Court does not, however, view the ordinary meaning of "shoulder" to include any parts adjacent to it. Where, as here, various parts of a toner bottle are nearby, abut, or are attached to the shoulder, such a definition would obliterate the precise drafting of the claims. For this reason, the Court rejects defendant GPI's proposed construction of "shoulder," which would include portions 85, 85(a) and 86.

The parties ask the court to construct the term "adjacent" as used in the context of "shoulder." Defendants adopt the definition "relatively near and having nothing of the same kind intervening" Websters Third at 26. Plaintiffs construe "adjacent" to mean "nearby" or "not distant or far off." Websters Third at 26. This Court finds that "adjacent" means relatively near, or nearby. This Court is not convinced by Defendants' argument and does not find any suggestion in the patent that the added definition of "nothing of the same kind intervening" is applicable here. Id.

The parties agree that the term "end" means "the last part lengthwise," but do not agree on whether the last part lengthwise is the bottle's mouth or the bottle's shoulder, upon which the mouth rests. The Court finds that the ordinary meaning of "last" is the part after which there is no other. After the shoulder, there is still a mouth, as well as other "adjacent" pieces. Therefore, the "last part lengthwise" can refer only to the tip or mouth of the bottle. That said, when the term "end" is used with a qualifier, such as the "end of said hollow body," the terms refers to "the last part lengthwise" of that hollow body. In this case, the "end" of the hollow body is where the "shoulder" joins the body.

B. "adjacent"

The Commission determined that "adjacent," the term describing the location of the product information array, means "lying near or next to the primary circuit, but not overlapping with the primary circuit." Supplemental Views at 22. The Commission further used the language "not overlapping with the primary circuit" interchangeably with "not surrounded by the primary circuit". E.g., Supplemental Views at 31-32. This court, however, determines that the term "adjacent" simply means close to, next to, lying near, or adjoining. Webster's II New Riverside University Dictionary 79 (1988). This definition of "adjacent" does not render the claim unclear. Moreover, neither the specification nor prosecution history suggest any special definition for the term.

Claims 1 and 9 state that the product information array is "adjacent" the "primary circuit." Because "primary circuit" encompasses more than the memory array, the limitation "adjacent" does not restrict the product information array to a position immediately next to the memory array, or extending from the memory array, or physically contacting the memory array.

The prosecution history of the '903 patent does not contradict this reading of "adjacent." During prosecution of the '903 patent, Atmel's predecessor specified that the claimed invention "defines a semiconductor information array which is integrally formed with a primary circuit on a semiconductor chip" (emphasis added). This language does not mean that the product information array is integral to the memory array. Once again, the "primary circuit" encompasses more than the memory array alone. Because "primary circuit" includes more components than just the memory array, this statement in the prosecution history has not narrowed the meaning of "adjacent." The word "integral" means "[a] complete unit: whole." Webster's II New Riverside University Dictionary 634 (1988). Thus, the prosecution history simply affirms that the product information array is formed together with the primary circuit.

In sum, this court determines that "adjacent," according to its ordinary definition, can mean adjacent on all sides. The correct interpretation of the term "adjacent," therefore, is simply "close to, next to, or adjoining," without the additional limitation of "not overlapping." This meaning includes embodiments where the primary circuit surrounds the product information array so that the product information array is close to, next to, or adjoining the primary circuit on all sides.
Free Motion proposes that adjacent ought to be construed as lying near or close. (Pl. Opposition II. at 16-17.) Nautilus similarly proposes that adjacent means near to, abutting, adjoining, bordering, or contiguous or coterminous with, but emphasizes "in contact with." (Nautilus Brief at 14, 22.) The Court is persuaded that objects may or may not be in contact, but are not adjacent to each other where there is another object between them. See May v. Carriage, Inc., 688 F. Supp. 408, 414, n. 2 (N.D. Ind. 1988) ("adjacent things may or may not be in contact with each other, but they are not separated by things of the kind" (quoting Webster's New World Dictionary (2d ed. 1976)).

E. Adjacent the Inner Wall of the Annulus

Smith & Nephew proposes that "adjacent the inner wall of the annulus" should be construed to mean "being in close proximity to the inner wall of the annulus." ArthroCare would interpret the term to mean "next to the inner wall of the annulus." The parties' dispute centers on the meaning of the word "adjacent."

The American Heritage Dictionary defines "adjacent" as: "1) close to; lying near; 2) next to; adjoining." THE AMERICAN HERITAGE DICTIONARY OF THE ENGLISH LANGUAGE (4th ed. 2000). The claims, specification, and prosecution history give no reason to depart from using the ordinary meaning of the word adjacent as the term's definition. Thus, the court construes "adjacent the inner wall of the annulus" to mean "close to, lying near, next to, or adjoining the inner wall of the annulus."

F. Adjacent a Wall of the Intervertebral Disc

The parties agree that "wall of the intervertebral disc" used in the '311 patent, and "inner wall of the annulus fibrosus" used in the '504 patent have the same meaning. Thus, the court defines "adjacent a wall of the intervertebral disc" to mean "close to, lying near, next to, or adjoining the inner wall of the annulus."

G. Adjacent an Inner Wall of an Intervertebral Disc

The parties agree that "inner wall of an intervertebral disc" used in the '311 patent, and "inner wall of the annulus fibrosus" used in the '504 patent have the same meaning. Thus, the court defines "adjacent an inner wall of the intervertebral disc" to mean "close to, lying near, next to, or adjoining an inner wall of an annulus."

H. Functional Element Adjacent a Distal End of the Catheter

Smith & Nephew proposes that "functional element adjacent a distal end of the catheter" should be construed to mean "functional element in close proximity to a distal end of the catheter." ArthroCare would interpret the term to mean "the functional element is next to the tip of the catheter, but is not the tip itself." The dispute centers on the definition of the word "adjacent," and the level of clarification needed to demonstrate that the functional element and the tip of the catheter are separate entities.

The court has already construed the word "adjacent" to mean "close to, lying near, next to, or adjoining." Proper claim construction requires that, where possible, the same word be given the same meaning throughout the claims. Nothing in the claims, specification, or prosecution history suggests that the word adjacent in the term "functional element adjacent a distal end of the catheter" should be construed any differently from the word "adjacent" in any of the uses already discussed, such as "adjacent the inner wall of the annulus."

ArthroCare argues at some length that two objects adjacent to each other cannot be the same object. The Court agrees, but sees no need to add the words "but is not the tip itself" to the term's definition. The claim language, specification and
prosecution history all indicate that the distal end and the functional element are different entities. A definition that describes the functional element as "close to, lying near, next to, or adjoining" the distal end clearly indicates that the functional element and the distal end are separate. Thus, the court defines "functional element adjacent a distal end of the catheter" as "functional element close to, lying near, next to, or adjoining the distal end of the catheter."

G. "Adjacent"

Claims 1 and 16 use the term adjacent. Specifically, the claims state:

1. . . . said housing including a waveguide projecting from one of said side walls adjacent to said moveable portion . . .

16. . . . said housing includes a plurality of projections projecting from said side walls adjacent to said moveable portions . . .

'378 patent at 10:32-33, 14:10-12 (emphasis added).

ADC argues the term "adjacent" is clear on its face and does not require interpretation. However, if interpretation is necessary, ADC argues the term should be interpreted to mean "nearby, not distant." See, e.g., Merriam-Webster's Collegiate Dictionary, supra at 16.

Switchcraft claims "adjacent" "if not construed . . . could be used to describe any level of proximity, and thus render the claim indefinite and hence invalid under 35 U.S.C. § 112(2)." Consequently, Switchcraft argues "adjacent" should be interpreted as "next to." In support of this position, Switchcraft cites language in the specification indicating a fin-like waveguide must project from the base of a wall to reach a region where it is adjacent to a movable leaf spring. '378 patent at 8:45-47, 8:59-61, 64-65. Based on this language, Switchcraft argues the '378 patent specification used the word "adjacent" to "denote surfaces which are next to one another in the sense that they share the same lateral space." Def.'s Markman Brief at 20.

The Court finds further construction may reduce any ambiguity in "adjacent" and interprets the term to mean "nearby, not distant." The proposed construction of "next to" is unwieldy, not supported by the specification, and unworkable. Switchcraft cobbles its "lateral space" requirement from several distinct provisions of the patent. Its adoption would create the illogical result of finding that objects which share the same vertical space, but do not overlap horizontally, are not adjacent.

Furthermore, Merriam-Webster's Collegiate Dictionary defines "next to" as "immediately following or adjacent to." (11th ed. 2003) at 836. This definition would impermissibly narrow the meaning of the word "adjacent" beyond its use in the patent's specification and figures. Figure 1 and the text of the specification contain examples where "adjacent" elements are not "immediately adjacent" or "next to" one another, but are merely in close proximity. See '378 patent, 4:36-57, FIG. 1. ADC's proposed construction of "nearby, not distant" reflects the objective meaning of "adjacent" and corresponds to the use of the term in the patent. A claim is not indefinite under 35 U.S.C. § 112 if "those skilled in the art would understand what is claimed when the claim is read in light of the specification." Beachcombers, Int'l v. Wildewood Creative Prods., 31 F.3d 1154, 1158 (Fed. Cir. 1994). A construction of "nearby, not distant" is consistent with the meaning given to "adjacent" by the Federal Circuit in other cases and is not indefinite. See, e.g., General American Trans. Corp. v. Cyrp-Trans. Inc., 93 F.3d 766, 769 (Fed. Cir. 1996) (applying "not far off or not necessarily at but nearby or near" as the definition of "adjacent").
MBO's proposed construction of the term "adjacent" is "flush with," meaning that the protective blocking flange of the spring that seals the needle in the body must be flush with the forward surface of the body. Becton maintains that, with respect to the "adjacent" limitation, MBO acted as its own lexicographer, defining the blocking flange as being "flush" with the forward surface of the body. Becton notes that, unless the flange is "right next to the front surface," it could not immediately block the [needle tip]. Thus, Becton emphasizes that, unless the blocking flange is flush with the front surface of the body, a needle would have to be "withdrawn at least a minimum predetermined distance beyond the exit" from the guard body to permit the flange to cover the needle tip. Becton insists that MBO specifically disclaimed flanges that are not "on," "directly adjacent to," or "flush with" the front surface of the body. Finally, Becton points out that the figures and other embodiments of the 885 patent show the blocking flange immediately next to the front surface of the guard.

The language of the claim is ambiguous. I, therefore, turn to the specification for illumination. The specification of the 885 patent states, in part, that "with the blocking flange face 98 immediately adjacent the forward surface of the body at 84, as soon as the needle passes behind the flange 98, the spring snaps the flange forward surface over the 84 of the body into needle-blocking position and positively precludes reemergence of the contaminated needle point from the body 82 and thus needlestick injury is absolutely avoided." 885 patent, col. 7, ll. 1-2. The specification also contrasts and criticizes safety devices in the prior art, "wherein the needle must be withdrawn at least a minimum predetermined distance beyond the exit from the tubular body," explaining that, in the prior art, "if the needle is not retracted sufficiently inwardly from the exit aperture, it is still able to accidentally projected to cause hazard." 885 patent, col. 7, ll. 2-8. The specification praises this feature as "an outstanding safety feature of the invention." 885 patent, col. 7, ll. 1-2. The specification also contrasts and criticizes safety devices in the prior art, "wherein the needle must be withdrawn at least a minimum predetermined distance beyond the exit from the tubular body," explaining that, in the prior art, "if the needle is not retracted sufficiently inwardly from the exit aperture, it is still able to accidentally projected to cause hazard." 885 patent, col. 7, ll. 15-25.

Furthermore, during the prosecution of the 699 patent, MBO sought to distinguish its invention from Smith by arguing that the invention disclosed in Smith protected only the tip of the needle, leaving the adjoining needle end portion exposed, whereas MBO's invention covered both the needle tip and the needle shank. Becton Exh. 10, pp. 8-9. MBO also sought to distinguish its invention from Bayless by explaining, inter alia, that Bayless disclosed a "separate hollow needle sheath," whereas its invention had a blocking flange "adjacent" to the front surface of the body. Becton Exh. 13, pp. 3-4. See Ekchian, 104 F.3d at 1304 (explaining that, by "distinguishing the claimed invention over the prior art, an applicant is indicating what the claims do not cover"); see also SciMed Life Sys., Inc., 242 F.3d at 1341-42, 1342-43 (noting that it is improper for the court to construe disputed claims "to cover what was expressly disclaimed" during prosecution history). In light of the foregoing, I construe the term "adjacent" to mean contiguous or connected with the front surface of the body.
15 Becton's proposed construction of the term "adjacent" to mean "flush" is not entirely accurate, because "flush" means "even or level with the adjacent surface." See OXFORD ENGLISH DICTIONARY.

Centennial asserts that its tank does not infringe the '785 Patent: 1) "because the tank of Centennial does not have a fill opening formed in the top wall of the tank adjacent one corner;" and 2) because the Centennial tank "does not have a structure wherein the one corner has a bottom portion located above the horizontal plane of the bottom wall to provide a space below the one corner vertically aligned with the liquid fill opening." (Support Brief at 12). On the other hand, Carlson claims that Centennial's product literally infringes claims 1-24 of the '785 Patent because the "fill opening is clearly adjacent to the tank's corner." (Opposition Brief at 8). Carlson further asserts that Centennial's tank literally infringes the '785 Patent because the space in the lower portion of Centennial's tank "is vertically aligned with the tank's fill opening." (Opposition Brief at 10).

In Phillips v. AWH Corp., 415 F.3d 1303, 1312 (Fed. Cir. 2005), the Federal Circuit Court of Appeals stated that claims "are generally given their ordinary and customary meaning." (citing Vitronics Corp. v. Conceptronic, Inc., 90 F.3d 1576, 1582 (Fed. Cir. 1996)). The Federal Circuit further stated that "the ordinary and customary meaning of a claim term is the meaning that the term would have to a person of ordinary skill in the art in question at the time of the invention." (Phillips, 415 F.3d at 1313). In cases where the ordinary meaning of a claim term is readily apparent to lay judges, a court may apply the "widely accepted meaning of commonly understood word," using general purpose dictionaries. (Id. at 1314). Each party concedes that the term "adjacent" is a commonly understood term rather than a technical one, and the parties have provided the Court with various dictionary definitions of the term "adjacent." (Opposition Brief at 9; Filing No. 34, hereafter "Reply Brief" at 4).

The American Heritage Dictionary (2d College ed. 1982) defines "adjacent" as "close to; lying near; near or close to but not necessarily touching." (Opposition Brief at 9). The Merriam-Webster's Collegiate Dictionary defines the term as "immediately proceeding or following" and "may or may not imply contact but always implies absence of anything of the same kind in between." (Filing No. 35-3). Roget's II: The New Thesaurus describes "adjacent" as "sharing a common boundary" or "not far from another in space, time, or relation." (Filing No. 35-4). WordReference.com English Dictionary defines the word "adjacent" as "near or close to but not necessarily touching", "nearest in space or position; immediately adjoining without intervening space", "abutting, adjacent, conterminous, contiguous." (Filing No. 35-5).

Although the definition of "adjacent" is not precise, a comparison of the various dictionary definitions provided to the Court demonstrates that the term "adjacent" does not have as narrow a definition as Centennial suggests. Each definition of "adjacent" makes it clear that two objects, in this case the corner and the fill opening, need not actually touch or come into contact with the other to qualify as adjacent. Instead, to qualify as adjacent, the corner and fill opening need only be close or near to each other. Centennial suggests: "If Plaintiff's fill opening is located approximately midway between the outside edge of the tank's corner and the center of the tank, Plaintiff's fill opening cannot be any more adjacent to the corner than it can be adjacent to the center of the tank." (Reply Brief at 4). The Court does not disagree with Centennial on this point; however, the fact that the fill opening may be adjacent to the center of Centennial's tank does not preclude the fill opening from being adjacent to the corner of the tank as well.

Page four of the brochure for Centennial's tank contains a picture of a man filling Centennial's tank through the fill opening. (Filing No. 30-4 at 4). The fill opening in that picture appears to be "near" and "close" to the corner or "not far from" the corner, which is consistent with the above definitions of "adjacent." It is the Court's duty to construe the scope and meaning of the claim, and based on the dictionary definitions, the Court concludes the term "adjacent" as used in the '785 Patent has its plain and ordinary meaning of "close to; lying near; near or close to but not necessarily touching." The American Heritage Dictionary (2d College ed. 1982).
Centennial again argues that Centennial's tank "does not have a fill opening formed in the top wall of the tank adjacent one corner." (Support Brief at 14). The Court has previously construed the term "adjacent" as used in the '785 Patent to mean "close to; lying near; near or close to but necessarily touching." (Filing No. 39 "Order" at 9). Centennial claims that certain of the comments in the Court's Order dated November 21, 2005, prompted Centennial's renewed motion for summary judgment. (Support Brief at 12). Specifically, Centennial points to the Court's statement that "the fact that the fill opening may be adjacent to the center of Centennial's tank does not preclude the fill opening from being adjacent to the corner of the tank as well." (Order at 9).

Centennial cites General American Transportation Corp. v. Cryo-Trans, Inc., 93 F.3d 766 (Fed. Cir. 1996), where the Federal Circuit Court of Appeals construed the term "adjacent" as it related to a patent for a cryogenic refrigerated railcar. In General American, the Federal Circuit stated: "an opening 'adjacent' to a side wall cannot also be adjacent to an end wall." Id. at 770. The Court also stated: "each opening is 'adjacent' to only one wall, the nearest one to which it directs the downward flow of [carbon dioxide] gas." Id. The Federal Circuit's statements regarding the patent at issue in General American do not contradict this Court's statements in the November 21, 2005 Order, and furthermore, the claim construction in General American was fact-specific to the patent at issue in that case.

Centennial argues that because the fill opening on the Centennial tank is located six inches from the center of the tank and eleven inches from the corner edge of the tank and the width of the tank is thirty-four inches, the fill opening cannot be adjacent to the corner. (Support Brief at 14). Carlson does not concede that physical measurements are determinative of the question of infringement and argues that the term "corner" should be construed to include "the square-shaped piece joining the walls," not just the outermost edge of the tank's corner. (Opposition Brief at 9). Carlson cites to the '785 Patent, which refers to "square upright corners 27, 28, 29 and 30" and states that the "top of the corner 28 has a fill opening . . .," to support his contention that the term "corner" is not limited to the outermost edge. (Filing No. 44-3 ("'785 Patent") at P. 10, Col. 2, Ln. 34-36; P. 11, Col. 3, Ln. 6-7). Under Carlson's proposed claim construction, he claims the distance between the fill opening and the inner edge of the corner on Centennial's tank is approximately five inches.

The Court declines to revise its prior construction of the term "adjacent" and maintains that based on the Court's construction of the term, a jury could find that Centennial's tank literally infringes the challenged claim limitation.

C. Adjacent

The term "adjacent" pertains to the location of the mating connector into which the riser card is inserted: "a mating connector for a riser card, said mating connector situated on the motherboard and adjacent and parallel to a peripheral side edge thereof." 69

1. Parties' positions

Tulip proposes "adjacent" be given its ordinary and accustomed meaning, "lying near or close to," 70 Dell contends that the term should not be given its ordinary and accustomed meaning, "nearby but not touching," 71 because the term is clearly redefined in the written description. Dell asserts that the term requires the mating connector to be located along the side of the motherboard. Dell contends that Figure 2 (reproduced below) shows the mating connector 22 located on the edge of the motherboard 21. Dell contends that Figure 4 also shows the riser card and mating connector along the side of the
motherboard.

--- Footnotes ---

--- End Footnotes ---

Tulip argues that Figure 2 illustrates a preferred embodiment. Tulip contends that reference to a preferred embodiment is insufficient to overcome the presumption that a claim term carries its ordinary and accustomed meaning. Furthermore, Tulip points out that Figure 2 shows the riser card connector 22 is near, but not touching, the outermost side edge of the motherboard. Tulip contends Dell's construction improperly limits the claims, without intrinsic support for that limitation, by suggesting a definition that would preclude traces or other components between the riser card connector and the far edge of the motherboard.

--- Footnotes ---

72 See CCS Fitness, Inc. v. Brunswick Corp. 288 F.3d 1359, 1366 (Fed. Cir. 2002) ("An accused infringer may overcome [the] 'heavy presumption' [that a claim term carries its ordinary and customary meaning] and narrow a claim term's ordinary meaning, but he cannot do so simply by pointing to the preferred embodiment or other structures or steps disclosed in the specification or prosecution history.").
--- End Footnotes ---

[SEE FIG. 2 IN ORIGINAL]

2. Court's construction

The parties' disagreement over the meaning of the term "adjacent" concerns whether the term should be defined with reference to the side edge of the motherboard and whether the connector must be flush with the side edge of the motherboard. The court accepts the dictionary definition cited by Dell, "nearby but not touching," as the ordinary and accustomed meaning of "adjacent" but disagrees with Dell that "adjacent" is clearly redefined in the written description. To the extent Dell suggests that "adjacent" means that the mating connector must be flush with the side edge of the motherboard, there is nothing in the claims or specification supporting that meaning. Notwithstanding the fact that the figures cited by Dell merely represent preferred embodiments of the claimed invention, they do not show the mating connector flush with the side of the motherboard. Figure 2 shows mating connector 22 nearby, but not touching, the edge of motherboard 21. The perspective shown in Figure 4 does not illustrate either the mating connector or side edge of the motherboard where the mating locator is located and, therefore, Figure 4 is of no aid to the court's construction of the disputed term.

To the extent there is any dispute over whether the term "adjacent" must be defined with respect to the side edge of the motherboard, the claims in issue make that requirement clear. Claims 1 and 2 recite that the mating connector is "situated on the motherboard and adjacent … to a peripheral side edge thereof." Consequently, the court construes "adjacent" as meaning that the mating connector is located nearby but not touching the side edge (as defined below) of the motherboard.

--- End Footnotes ---
Maytag and Whirlpool also debate as to whether the use of "adjacent" in element 4 means that a stepped portion of the upper rack "is near to" or, more narrowly, must "abut" the first side wall of the lower rack (see M. Mem. 19-20, W. Mem. 15-16). 25 Functionally, an upwardly stepped portion is above and "adjacent" to the high side wall of the lower rack so that space exists for large items to fit into the lower rack (see M. Mem. App. 5 at 3). But purporting to look at how "adjacent" is used in the specification, W. Mem. 16-17 argues that if any portion of the washer comes between the upper stepped portion of the rack and the lower side wall, they are not "next to" (hence not "adjacent to") each other.

That argument does not convince. While it is appropriate to look at the specification, W. Mem. 15-16 strains to reconstruct from its language the meaning that Whirlpool desires. Significantly, it simply does not follow that because one portion of the specification may use the term "adjacent" to refer to items that are directly next to each other or even attached, "adjacent" then necessarily takes on its narrower definition in all subsequent uses (see W. Mem. 16). After all, the broader and first-listed definition of "adjacent" also encompasses the depiction of items that are right next to each other. In that respect, it is relevant that (quite contrary to Whirlpool's assertion at W. Mem. 28) the functionality of having the stepped portion of the upper rack above the high side wall is not destroyed if the side wall of the lower rack and the stepped portion of the upper rack are not directly next to each other. Sufficient space can exist for the placement of large items on the bottom rack if the extra space created by the upwardly stepped rack is used to accommodate an intervening part. Indeed, the accused device is so configured (see W. Mem. Ex. 2 fig. 11).

In short, despite Whirlpool's efforts this Court finds that the more natural and more appropriate definition of "adjacent" in light of the function involved is Webster's first-listed meaning of "near" or "close." Hence an intervening design element does not prevent two other elements from being "adjacent" to one another.

Crown's proposed construction is "portion of the central panel near the hinge segment." 132 Rexam's proposed construction is the "area of the central panel near the frangible panel." 133

Footnotes:

130
"Adjacent" in Element 4

25 Room certainly exists for such a debate. Webster's Third New Int'l Dictionary 26 (examples omitted) provides these different alternative definitions of "adjacent":

1a: not distant or far off: nearby but not touching

b: relatively near and having nothing of the same kind intervening: having a common border

Thus the second listed definition, but not the first, is synonymous with "abutting."

Footnotes:

132 D.I. 325 at 10.
133 Id.
The court adopts Crown's proposed construction.

Rexam argues that the claim language, "'a second score groove having a tail portion passing from the frangible panel into said adjacent area of the central panel and transecting said hinge segment,'" demonstrates that "the frangible panel and the adjacent area of the central panel lie next to each other." 134 Rexam also cites the summary of the invention section's recitation of "the hinge region of the frangible tear panel" to support its argument that "this portion of the specification clearly suggests that the hinge segment is not mutually exclusive of the frangible panel." 135 The court disagrees.

134 D.I. 294 at 36 (emphasis added by Rexam).

135 D.I. 294 at 36.

Claim 1 of the '230 patent recites: "said hinge segment being non-frangible to integrally connect the frangible panel segment to an adjacent area of the panel; and, a second score groove having a tail portion passing from the frangible panel into said adjacent area of the central panel and transecting said hinge segment." 136

136 '230 patent, claim 1, 8:12-17.

The claim language identifies the hinge segment as "being non-frangible to integrally connect": (1) the frangible panel segment to (2) an adjacent area of the panel. That language also identifies a second score groove having a tail portion which: (1) passes from the frangible panel into (2) said adjacent area of the central panel and (3) transecting said hinge panel. This claim language supports Crown's proposed construction.

The court agreed with Rexam that the proper construction of "hinge segment" is "the segment of metal between the first end and the second end of the primary score that stays attached to the central panel of the can end under normal opening conditions." That "segment of metal," which "stays attached to the central panel," is what "connect[s] the frangible panel segment to an adjacent area of the panel." That "segment of metal" is also what the "tail portion" of the second score groove "cuts across" 137 as it "pass[es] from the frangible panel into said adjacent area of the central panel."

137 The parties agree that the proper construction of "transecting" is "cutting across." See infra at claim term 39.

Moreover, the specification's summary of the invention supports the court's interpretation of the claim language. It states:

The hinge segment is non-frangible to integrally connect the frangible panel segment to an adjacent area of the panel. A second groove is formed in the end, having a tail portion passing from the frangible panel through the hinge segment and extending into the adjacent area of the central panel. 138

138 '230 patent, 3:22-27 (emphasis added).
This claim language and specification support Crown's proposed construction which references "the adjacent area of the central panel" with respect to the hinge segment. Therefore, Rexam's proposed construction must be rejected and the court adopts Crown's proposed construction: "portion of the central panel near the hinge segment."

BACKGROUND

Cryo-Trans is the assignee of U.S. Patent 4,704,876, which concerns a "cryogenic" railcar for transporting frozen foods. Cryogenic railcars use inexpensive carbon dioxide (C\(\text{O}_2\)) as the refrigerant. Conventional refrigerated railcars, on the other hand, employ mechanical refrigeration systems that consume fossil fuels and thus are more expensive to operate.

The cryogenic railcar disclosed in the '876 patent has an insulated compartment (32) extending lengthwise along the top of the car. A system is provided for filling the compartment with solid carbon dioxide "snow" by injecting liquid C\(\text{O}_2\) into the compartment under high pressure. The bottom of the compartment contains openings (66) adjacent to each of the car's side walls (16, 18) and end walls (20, 22). In operation, the compartment is first filled with C\(\text{O}_2\) snow and then the frozen food products are loaded into the cargo area (26). During transit, the C\(\text{O}_2\) snow gradually sublimates as C\(\text{O}_2\) gas, which flows through the compartment's openings (66) and moves downward along the side walls and end walls, enveloping and cooling the load. Each of the four walls has corrugated channels to facilitate the flow of the C\(\text{O}_2\) gas down that particular wall. Figure 1 of the patent illustrates the railcar:

[SEE ILLUSTRATION IN ORIGINAL.]

Claim 1 is representative of the asserted claims. It reads, with emphasis on the language in dispute, as follows:

1. In a container adapted to be maintained in a refrigerated condition from the sublimation of carbon dioxide snow[,] the combination comprising:

   a storage area defined by a floor, a pair of opposed side walls, a pair of opposed end walls, and a ceiling means;

   an insulated roof positioned above said ceiling means and defining therewith a compartment for supporting a supply of carbon dioxide snow, said compartment extending substantially the full length of said storage area;

   means in said compartment for forming carbon dioxide snow and means for connecting said carbon dioxide snow forming means to a supply of liquid carbon dioxide;

   a plurality of openings through said ceiling means adjacent [sic] each of said side walls and end walls for permitting the flow of sublimated carbon dioxide gas from said compartment;

   each of said walls being corrugated to define a plurality of channels therein open-sided toward the interior of the container whereby said carbon dioxide gas may flow from said openings in said ceiling means downwardly through said channels between said walls and a product load disposed in said container toward said floor.

Numerous cryogenic railcars were known before the invention at issue here. The "AFFX 2002" railcar, for example, which was built and publicly used in 1983, embodied all the elements of claim 1 except that its compartment for holding C\(\text{O}_2\) snow had openings adjacent to only one side wall and it had no openings adjacent to the end walls. U.K. Patent 399,678, issued to Kurth in 1933, disclosed a cryogenic railcar in which a compartment for holding solid C\(\text{O}_2\) had openings adjacent to both side walls, but again had no openings adjacent to the end walls. It also had no corrugated walls or system for forming C\(\text{O}_2\) snow using liquid C\(\text{O}_2\).

GATC manufactured a cryogenic railcar that included a compartment for holding C\(\text{O}_2\) snow. The bottom of the
compartment had a row of openings provided lengthwise along its center and two rows of openings adjacent to the car's opposite side walls. The openings adjacent to the side walls were each three inches from the nearest side wall, and the endmost of such openings were three feet from the nearest end wall. The endmost center row openings were six feet from the nearest end wall. The drawing below illustrates the arrangement of openings in GATC's railcar compartment:

[SEE ILLUSTRATION IN ORIGINAL.]

In March 1991, after Cryo-Trans threatened to assert the '876 patent against GATC, GATC sued Cryo-Trans seeking, inter alia, a declaratory judgment that the patent was invalid, unenforceable, and not infringed. GATC argued that it did not infringe because the bottom of the compartment in its railcar lacked openings adjacent to the car's end walls, as required by the claims. Cryo-Trans counterclaimed for infringement of claims 1-3.

The district court conducted a bench trial in May 1995. At the conclusion of the trial, the court, relying on a dictionary definition, construed the term "adjacent" in the claims to mean "not far off" or "not necessarily at but nearby or near." The court then found that the endmost openings adjacent to the side walls in GATC's railcar compartment were "not far" from the car's end walls and functioned as openings adjacent to the end walls. Thus, the court found that GATC had infringed the claims, both literally and under the doctrine of equivalents. It rejected GATC's invalidity and unenforceability claims. The court accordingly awarded Cryo-Trans $8,983,440 in damages and entered a permanent injunction.

GATC appeals, challenging the district court's findings that the '876 patent was infringed and not proved invalid. GATC does not appeal the court's decision rejecting GATC's unenforceability claim.

DISCUSSION
A. Infringement

GATC argues that the district court misconstrued the claim language "openings through said ceiling means adjacent to each of said side walls and end walls," which led to a clearly erroneous finding of infringement. We agree. As explained below, the district court incorrectly held that openings "adjacent" to the side walls could also be considered to be openings "adjacent" to the end walls. That error led to a clearly erroneous finding of infringement.

To ascertain the meaning of the claims, we consider the claim language, the specification, and the prosecution history. Markman, 52 F.3d at 979, 34 U.S.P.Q.2D (BNA) at 1329. Here, the claim language itself distinguishes between the openings that are adjacent to the side walls and those that are adjacent to the end walls. Specifically, the claims require "openings . . . adjacent each of said side walls and end walls," which suggests that the openings adjacent to the side walls are structurally distinct from the openings adjacent to the end walls. The district court's claim construction obliterated that distinction.

In addition, the patent specification distinguishes between the openings that are adjacent to the side walls and those that are adjacent to the end walls. It states, in the "Summary of the Invention" section, that "the bottom of the compartment is provided with openings along each side and end wall of the car through which sublimating carbon dioxide gas may escape." Col. 2, ll. 22-25 (emphasis added). Similarly, the "Detailed Description of the Invention" portion of the specification states:
The bottom wall 40 of the compartment 32 is provided with a plurality of openings 66 along each of the side walls 16, 18 and along each end wall 20, 22 of the car and which openings are preferably slanted toward the adjacent wall. These openings are provided for the flow of carbon dioxide gas sublimating from the snow contained within the compartment 32 and which gas may then flow downwardly along the adjacent wall through the sinusoidal passageways defined thereby. The openings on opposite walls preferably are offset with respect to each other.

Col. 3, ll. 41-51 (emphasis added). This arrangement of openings is said to yield an advantage: "Because the cold carbon dioxide gas is flowing downwardly on each of the opposite sides and on the ends of the car and in direct contact with the bottom of the load, all parts of the load will be maintained at a desirably low temperature." Col. 5, ll. 59-64 (emphasis added). Figure 1, to which the detailed description refers, depicts separate openings (66) adjacent to each of the side and end walls. Carbon dioxide gas is shown exiting each opening and travelling down the nearest wall.

Thus, the specification and drawings teach that the openings are provided along all four walls, and that each opening directs the flow of C\([O\]2 gas down a particular, "adjacent" wall, i.e., the nearest wall. This is not just the preferred embodiment of the invention; it is the only one described. Nothing in the claim language, specification, or drawings suggests that any of the dedicated side or end wall openings may be eliminated, or that an opening may be "adjacent" to more than one wall. The prosecution history is brief and not helpful to resolving the meaning of the disputed claim language.

Under these circumstances, we construe the phrase "openings . . . adjacent each of said side walls and end walls" as referring to structurally distinct openings that are provided adjacent to each of the railcar's four walls. Each opening is "adjacent" to only one wall, the nearest one to which it directs the downward flow of C\([O\]2 gas. Thus, an opening "adjacent" to a side wall cannot also be an opening "adjacent" to an end wall. The patent does not contemplate the openings performing double duty in this manner. We therefore reject the district court's claim construction, which was inconsistent with the specification and drawings and rendered superfluous the claim requirement for openings adjacent to the end walls.

D. "Adjacent" insert track

Defendants propose the following construction for the phrase "adjacent insert track": in a door with two lateral sides, a left and a right side, the screen track and insert track on the same side of the door are "adjacent" to each other and the insert track on the opposite side of the door from a screen track is non-adjacent. The Court finds that the term "adjacent" is in its simplest form and does not require construction.

2. Claim Construction

As did the trial court, we focus on the claim requirement that the bearing means be "disposed in adjacent longitudinal co-extensive lateral recesses." The '008 patent shows in Fig. 3, below, recesses 30 and 32.

The '008 specification states that

the hinge members 14, 16 define longitudinally co-extensive lateral recesses 30 and 32, respectively, along adjacent longitudinal edges thereof. As illustrated, each of the recesses 30, 32 has a stepped profile which is the mirror image of the other.

The specification further sets forth that

the stepped profile of each recess 30, 32 is further defined by providing each hinge member 14, 16 with laterally extending upper and lower shoulder portions 33 and 35 which are aligned with and vertically spaced from each other.
Roton contends that the claim phrase "adjacent longitudinal co-extensive lateral recesses" requires only that the cut-outs have a "common opening" and that therefore they may be offset from one another. However, this interpretation is inconsistent with the quoted language of the '008 patent specification. In setting forth that the recesses are mirror images of each other and that the shoulder portions 33 and 35 are aligned and vertically spaced from each other, the '008 patent speaks explicitly in terms of recesses that are directly across from each other as opposed to being offset.

Roton additionally relies on the following colloquy between its attorney and Mr. Baer, the inventor of the '008 patent.

Q. What do you understand longitudinal co-extensive lateral recesses to mean when you use that term? . . . Do the end points of each of the recesses have to be at the same place for them to be co-extensive?

A. No.

Baer's testimony on this point is unpersuasive. We have previously stated that an inventor's "after-the-fact testimony is of little weight compared to the clear import of the patent disclosure itself." North American Vaccine, Inc. v. American Cyanamid Co., 7 F.3d 1571, 1577, 28 U.S.P.Q.2D (BNA) 1333, 1337 (Fed. Cir. 1993), cert. denied, 128 L. Ed. 2d 365, 114 S. Ct. 1645 (1994).

In light of the clear language of the '008 specification, excerpted above, and Fig. 3, the only figure showing the recesses, we construe the language of claim 1, "adjacent longitudinal co-extensive lateral recesses," to require recesses that are directly across from each other and not offset.

A. Disputed Phrase: "an opening adjacent one end to the exterior of the bag through which contents are discharged"

The disputed language is located in Claims 2 and 10 of the patent and describes the collapsible outer bag. The parties disagree about whether the claim language requires the discharge opening to be placed on the bottom of the bag or one end of the bag. Plaintiff proposes this claim should be interpreted as "an opening to the exterior of the bag through which contents are dischargeable that is near one end of the bag." Defendant proposes this claim should be interpreted as "a discharge opening extending through the bottom of the bag." Plaintiff argues the patent language does not include a directional requirement for the openings. Defendant disagrees. Whether the patent requires the discharge spout be located at the bottom of the bag, a directional requirement, is the central dispute between the two parties. Resolution of this question, whether the patent includes a directional requirement, implicates a number of the disputed claims. Accordingly, the parties' arguments are described in detail.

Plaintiff insists the plain meaning of the phrase places no directional or positioning requirements on the discharge opening. Plaintiff asserts the specification expressly provides that the discharge opening can be at one or both ends. 3 Plaintiff also points out that the specification identifies an embodiment with a single opening where the contents of the bag are inserted and discharged through the same opening. 4 Plaintiff argues that the specification uses the word "bottom" does not require that to be a limitation on the Claim. Plaintiff argues the prosecution history is devoid of any discussion of whether the discharge opening is on the top or the bottom of the bag. In its reply brief, Plaintiff finds significance in the fact that the claim language specifically uses the terms "end" and "other end."

3 The language to which Plaintiff refers is located in the "background" portion of the patent. In the relevant passage, the patentee describes a common problem that bags with liners suffer. The passage cited by Plaintiff is not describing the patented bag. The patent states: "When a liner is used in connection with such large bags to contain particulate or granular material and the bag is formed with an opening or spout at one or both ends for distributing the contents, a common problem is the tendency for the material when discharged to draw the liner out of the bag." (Patent No. '472 Col. 1, lines 43-46.)

4 The language to which Plaintiff refers is located in the "detailed description" portion of the patent. Although Plaintiff cites
column 3, the relevant passage is located in column 2. In this passage, the patentee describes the patent and refers to the accompanying diagrams. The patent states: "However, if desired, the bag can have only one spout with the other end being fully closed. For some applications, the bag may have no spout, but rather one end which is normally open, a side wall and a bottom which is fully closed and connected to the side wall. (Patent '472 Col. 2, lines 37-42.)

Defendant offers several reasons why the discharge opening must be at the bottom of the bag. Defendant argues the prior art, the patent examiner, and the specification all describe the discharge opening as being on the bottom of the bag and the fill opening as being on the top of the bag. First, Defendant argues the bag employs a gravitational discharge, which necessitates the opening be located at the bottom of the bag. Defendant points out the detailed description of the bag in the specification provides that the bag is filled at the top and the contents discharged through the bottom. 5 Defendant argues Figure 2 in the patent is identified as the bottom view of the bag and liner. 6 Defendant argues, in an amendment to the patent application submitted by the patentee to the patent office, the patentee discussed the prior art of a different patent as having directional spouts. 7 Defendant reasons the contents of this sort of bag, which might weigh several thousand pounds, can only be discharged while the bag is upright and the contents pass through the bottom opening. Defendant insists the patent does not anticipate a danger that the liner would be withdrawn through the top opening because the contents of the bag and liner are always described as discharging through the bottom.

5 The language to which Defendant refers is located in the "detailed description" portion of the patent, immediately prior to the single spout embodiment passage referred to by Plaintiff. In this passage, the patentee is describing portions of Figure 1. The patent states: "Preferably, the bag has a first spout [] in the top for filling the bag and a second spout [] in the bottom for discharging the contents of the bag." (Patent No. '472 Col. 2, lines 35-37.)

6 The language to which Defendant refers is located in the "detailed description" portion of the patent. The patentee is describing Figure 2. The patent states: "Preferably, as shown in FIG. 2, the bottom of the liner is connected to the bag in at least two, and preferably four, spaced apart locations [] each adjacent the bottom and the side of the bag. (Patent No. '472 Col. 3, lines 4-7.)

7 Defendant attaches the amendment to its brief at Exhibit D. On pages 7 and 8 of the exhibit, the patentee is discussing the rejection of Claims 1-3 and 13-18 as unpatentable over other patents. The patentee explains those claims define a specific arrangement of connections between the outer bag and the inner liner. In the prior art, the bag and liner are connected so that when emptied, the two collapse together, rather than independently. The patentee then describes the other patents, in order to demonstrate this distinction. In the material referenced by Defendant, the patentee describes the Isbrandtsen patent as "a generally cubical rigid container or box [] with a flexible bag [] inserted therein and the bag is secured to the container by a plurality of straps [] adjacent its stop [sic]. The bag has an inlet spout [], a vent [] in its top, and a discharge spout [] in its bottom." (Def. Ex. D at 7.) As is clear from the quoted material, the patentee is describing a different invention. There is no indication the patentee intends the directional language to describe or limit the patent at issue.

Defendant also asserts the reexamination history provides evidence that the discharge opening must be at the bottom of the bag. Defendant argues the patent examiner initially rejected what is now Claim 2 as being anticipated by prior art. Defendant argues the patent examiner described the invention as having directional spouts. 8

8 Defendant attaches the "Ex Parte Reexamination Communication Transmittal Form" from the Patent Office as Exhibit C to its brief. The patent examiner rejected Claims 1-4, 7-8, 10, 14-17, and 24-25 as being anticipated by the Cuthbertson patent. The patent examiner stated:

However, even when the bag [] of Cuthbertson includes a top wall/end [], it is assertedby the examiner that the liner inherently includes top and bottom openings in the vicinity of the filler spout [] and the discharge spout [], such that one of
ordinary skill in the art, upon reading the Cuthbertson reference, would be in possession of the knowledge that such openings exist, even though the reference does not particularly point out such openings. The top and bottom liner openings are inherent in Cuthbertson because (1) the spouts [] of the bag are identified as being dispensing and filler spouts [], and (2) the liner is described as being filled with the bulk material [] and is shown as contacting the interior surface of the bag. If there were no openings in the liner, the spouts would be unable to function as indicated by their identification as dispensing and filler spouts since no material would be filled through the top spout [] or dispensed through the bottom spout [].

Accordingly, the examiner asserts that the Cuthbertson reference inherently discloses top and bottom liner openings. Accordingly, the opening adjacent the bottom end of the liner would be an opening through which the material would be discharged.

(Def. Exhibit C at 5) (underlining in original).

Defendant argues Plaintiff's own expert supports the conclusion that the discharge opening is located at the bottom of the liner and the bag. Plaintiff's expert is also the inventor of another, similar bag, the Schnaars Patent No. 4,946,291. Defendant argues, in the Schnaars patent, the inventor describes the discharge spout for the invention as being on the bottom of the bag.

9 Defendant attaches the patent as Exhibit E to its brief. In the portion of the patent entitled "Detailed Description of the Preferred Embodiment," the inventor states "As seen in the FIGURES, since in fact the bulk bag [] would be the type of bulk bag that would release its contents from a discharge outlet [] as seen in FIG. 2, again liner [] would have a lower neck portion [] which would extrude out from the bottom spout [] of bulk bag." (Patent No. '291 Col. 4, lines 16-21.) Obviously, the inventor is describing his invention, not the invention at issue.

Finally, Defendant argues the downward collapse of the liner during discharge requires the discharge opening be at the bottom of the bag and liner. Defendant relies on statements of the patent examiner. 10 Defendant insists that the patent examiner's understanding that the liner would collapse downward necessarily means that the discharge opening is at the bottom of the bag. Defendant concludes the patent specification, the prior art, and the patent examiner all describe the discharge opening to be at the bottom of the bag and liner. Defendant further concludes the patent does not include any embodiment of a bag and liner with a single opening because all the drawings include a top and a bottom opening.

10 Defendant refers to the patent examiner's statements in the "Ex Parte Reexamination Communication Transmittal Form." In the portion cited by Defendant, the patent examiner concludes that the Cuthbertson patent anticipates an invention that prevents the liner of the bag from being withdrawn as it empties because of the placement of the connections between the bag and the liner. The examiner describes the Cuthbertson patent as follows: "In this embodiment, downward collapse somewhat of the liner [], as material is discharged from the liner, would not be hindered by a connection with the bag because all connections would be at the bottom of the bag and liner. Therefore, with respect to such an embodiment, the liner can also downwardly collapse in a manner independent of any collapse of the bag." (Def. Exhibit C at 7.)

The claim language does not include a requirement that the discharge spout be located on the bottom. In the specification, the patentee describes, as a preferred embodiment, a bag where the discharge opening is located on the bottom. However, the specification does not employ language requiring the discharge opening to be located on the bottom of the bag. Indeed, the specification expressly states that a bag could have only one spout. Although the predominant description of the bag and liner places the discharge spout on the bottom, the explicit claim that the bag could have only one spout makes clear that a directional discharge is not an essential characterization of the invention. See Andersen Corp., 474 F.3d at 1367. Some portions of the examiner's statements referenced by Defendant do not describe this patent, but other patents. More
importantly, when the patent examiner is talking about the patent at issue, the statements are not evidence of a position taken by the applicant before the patent office. See Schwing GMBH, 305 F.3d at 1325; see also Alwin Mfg. Co. v. Global Plastics, 629 F.Supp.2d 869, 872 (E.D. Wis. 2009)("The utterances of an examiner in such a context cannot limit the patent's own clear terms. Although a patentee's clear disavowal of material during the prosecution history can limit the terms of a claim, the public is not expected to paw through patent file wrappers to divine idiosyncratic word meaning used offhandedly by patent examiners."). This court is mindful to avoid importing limitations from the specification and prosecution history unless the patentee specifically intended those limitations to be part of the invention. The intrinsic evidence cited by Defendant does not indicate that the patentee intended those words to become restrictions or limitations on the patented invention. The best argument in favor of adopting Defendant's interpretation is that the obviousness of a gravitational discharge is so plain that no individual skilled in the art could read the patent and anticipate any other option. That argument is undermined by the express language in the patent allowing for a bag and liner with a single spout. With only one spout, the top and bottom of the bag become relative to whether the bag is being filled or emptied.

The intrinsic evidence provides sufficient clarification of the claim language and eliminates the need to resort to examining extrinsic evidence. Plaintiff's construction of the claim is persuasive and supported by the intrinsic evidence. The claim at issue is interpreted to mean "an opening to the exterior of the bag through which contents are dischargeable that is near one end of the bag."

II. "Bone"

Claim 1 uses the term "bone" several times. DePuy argues that the term should be construed to mean "hip bone" or "femur," while Zimmer argues that the term should not be so limited and should include shoulder and arm bones. Thus, for example, DePuy argues that the claim, which calls for 
[a] kit for the assembly of a modular bone joint prosthesis," should be read as a kit for the assembly of a hip joint prosthesis, and that references in the claim to pieces sized for insertion into or replacement of a portion of the bone should be read as pieces sized for insertion into or replacement of a portion of the patient's femur.

Clearly the ordinary and accustomed meaning of the term "bone" is not limited to hip bones and femurs. DePuy argues, however, that the specification leaves no doubt that the claimed invention is limited to hip replacements. Indeed, the patent is titled "Modular Hip Prosthesis," (1:2), and begins by reciting:

The present invention relates to prosthesis for replacement of a portion of the hip joint. More particularly, the present invention relates to a modular prosthesis for replacement of the upper portion of the femur.

(1:13-16.) The specification goes on to describe the current state of conventional hip prostheses and some of the problems associated with them (1:17-60), and then explains that "[the] object of the present invention is to provide a modular hip prosthesis" that addresses these various problems (2:50-64). It is clear that the specification is describing a hip prosthesis in particular, as opposed to any ball-and-socket-type prosthesis in general. The claim construction inquiry, however, "begins and ends in all cases with the actual words of the claim." Renishaw, 158 F.3d at 1248. And "while it is true that claims are to be interpreted in light of the specification and with a view to ascertaining the invention, it does not follow that limitations from the specification may be read into the claims." Sjolund v. Musland, 847 F.2d 1573, 1581 (Fed. Cir. 1988).

3 Sjolund goes on to explain the justification for this rule:

If everything in the specification were required to be read into the claims, or if structural claims were to be limited to devices operated precisely as a specification-described embodiment is operated, there would be no need for claims. Nor could an applicant, regardless of the prior art, claim more broadly than that embodiment. Nor would a basis remain for the statutory necessity that an applicant conclude his specification with "claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention."
There is, however, a fine line between reading a claim in light of the specification, and reading a limitation into the claim from the specification. See E.I. du Pont de Nemours & Co. v. Phillips Petroleum Co., 849 F.2d 1430, 1433 (Fed. Cir. 1988) ("It is entirely proper to use the specification to interpret what the patentee meant by a word or phrase in the claim … but this is not to be confused with adding an extraneous limitation appearing in the specification, which is improper.") 4 See also Corning Glass Works v. Sumitomo Elec. U.S.A., Inc., 868 F.2d 1251, 1256-57 (Fed. Cir. 1989) (reading a patent claim as limited to having properties set out in the specification because the specification "makes clear that the inventors were working on the particular problem of an effective optical communication system not on general improvements in conventional optical fibers [and thus, to] read the claim in light of the specification indiscriminately to cover all types of optical fibers would be divorced from reality.").

4 The court in du Pont defined "extraneous limitation" as "a limitation read into a claim from the specification wholly apart from any need to interpret what the patentee meant by particular words or phrases in the claim." 849 F.2d at 1433.

Zimmer makes two arguments why the claims should not be limited to hip joint prostheses. First, in claim 18, which is not at issue here, the patent claims "[a] kit for the assembly of a hip prosthesis for replacement of a head, neck, and adjacent portions of a femur." (9:29-31) (emphasis added). Thus, argues Zimmer, when the patentees wished to limit a claim to hip prostheses, they explicitly did so. The doctrine of claim differentiation states:

There is presumed to be a difference in meaning and scope when different words or phrases are used in separate claims. To the extent that the absence of such difference in meaning and scope would make a claim superfluous, the doctrine of claim differentiation states the presumption that the difference between the claims is significant.

Comark Communications, 156 F.3d at 1187. There is thus a presumption that the terms "bone joint prosthesis" and "bone" in claim 1 have a separate meaning and scope from the terms "hip prosthesis" and "femur" in claim 18. However, the doctrine of claim differentiation applies only if giving the terms in claim 1 the same meaning and scope as the terms in claim 18 renders one of the claims superfluous. That is not the case here. Claim 18 describes a kit containing stems with a lower portion and an upper portion and bodies that are placed over the upper portion of the stem. (9:29-41.) Claim 1, on the other hand, describes a kit containing stems and bodies "to be joined in fixed attachment." (8:27-35.) Claim 1 does not describe the stems as containing upper and lower portions and does not describe the bodies as being placed over the upper portion of the stem. Reading "bone joint prosthesis" and "bone" in claim 1 as having the same scope and meaning as "hip prosthesis" and "femur" in claim 18 does not render either claim superfluous, and the doctrine of claim differentiation therefore does not apply to require a broad reading of claim 1 as including shoulder joint prostheses.

Zimmer also argues that the prosecution history indicates that the patentees did not intend to limit claim 1 to hip prostheses. Cf. Vitronics Corp. v. Conceptronic, Inc., 90 F.3d 1576, 1582 (Fed. Cir. 1996) ("The court may [in the course of claim construction] consider the prosecution history of the patent, if in evidence."). Claim of the '706 patent comes from claim 18 of the '706 patent application. (DePuy Ex. 3 at DPY018095-96.) Claim 18 of the '706 patent application came from claim 20 of patent application serial number 07/793,860. (DePuy Ex. 3 at DPY018099.) Patent application serial number 07/793,860 was originally entitled "Modular Humeral Prosthesis," and claim 20 of that application was described as "not being limited to a shoulder prosthesis." (Zimmer Ex. K.) Thus, argues Zimmer, the claim that ultimately became claim 1 of the '706 patent...
The term "adjacent relationship" is found only in the method claims of the '779 Patent. In Claim 1 of the '779 Patent, step (a) of the claim describes a prosthesis designed for the replacement of a head, neck, and parts of the femur next to the head and neck. There is no explicit limitation in the claim as to the size of the portion of the femur to be replaced. Nor is there anything in the specification indicating such a limitation. DePuy points to two figures in the specification showing the device replacing only a small portion of the femur, but it is well established that patent drawings may not be relied upon to show particular sizes if the specification is completely silent on the issue. Hockerson-Halberstadt, Inc. v. Avia Group Int'l Inc., 222 F.3d 951, 956 (Fed. Cir. 2000) (rejecting an argument based on a patent drawing regarding the width of a groove in an athletic shoe heel). Thus, the fact that two drawings in the patent show only a small femur portion being replaced by the device in no way establishes a limitation on the size of the femur portion that can be replaced.

A related dispute between the parties is whether, given that the prosthesis is limited to the hip joint and femur, the prosthesis is limited to use in only certain types of surgeries. DePuy argues that claim 1, which claims a prosthesis to replace a head, neck, "and adjacent portions of a bone" should be read as limiting the use of the prosthesis to surgeries in which only a small portion of the femur adjacent to the head and neck is removed. DePuy contrasts hip replacements typically used in arthritis cases, in which only a small portion of the femur is removed, with hip replacements typically used in oncological applications, in which a much larger portion of the femur is removed. Zimmer, on the other hand, argues that the claim language does not support a limitation to any particular kind of surgery or amount of femur removed.

The plain meaning of the term "adjacent portions" cannot seriously be disputed. "Adjacent" means "next to" and "portion" means "a part of a whole." Thus, claim 1 calls for a prosthesis for the replacement of a head, neck, and parts of the femur next to the head and neck. There is no explicit limitation in the claim as to the size of the portion of the femur to be replaced. Nor is there anything in the specification indicating such a limitation. DePuy points to two figures in the specification showing the device replacing only a small portion of the femur, but it is well established that patent drawings may not be relied upon to show particular sizes if the specification is completely silent on the issue. Hockerson-Halberstadt, Inc. v. Avia Group Int'l Inc., 222 F.3d 951, 956 (Fed. Cir. 2000) (rejecting an argument based on a patent drawing regarding the width of a groove in an athletic shoe heel). Thus, the fact that two drawings in the patent show only a small femur portion being replaced by the device in no way establishes a limitation on the size of the femur portion that can be replaced.

DePuy also points to the patent history to support its argument that there exists a limitation on the size of the femur portion that can be replaced. As part of the application process, the patentees submitted an information disclosure statement discussing prior art. (DePuy Ex. 2 at DPY019130-36.) In the disclosure statement, the patentees described prior art in which "the prosthesis … is designed to replace the entire upper portion of the femur, and not to be implanted within the femur." (Id. at DPY019133.) DePuy argues that this statement distinguished the prostheses claimed in the '706 patent from prior art prostheses that replaced large portions of the femur, and thus limited the '706 patent claims prostheses replacing only small portions of the femur. Statements made in an information disclosure statement can be used to interpret the scope of claims. Ekchian v. Home Depot, Inc., 104 F.3d 1299, 1303-04 (Fed. Cir. 1997). However, "unless altering claim language to escape an examiner rejection, a patent applicant only limits claims during prosecution by clearly disavowing claim coverage." York Prods., Inc. v. Cent. Tractor Farm & Family Ctr., 99 F.3d 1568, 1575 (Fed Cir. 1996). Here, the disclosure statement simply described prior art in which the prosthesis replaces the entire upper portion of the femur and contrasts that to simply implanting the prosthesis within the femur. It does not "clearly disavow[]" claim coverage over prostheses otherwise covered that replace the entire upper portion of the femur.

DePuy points to one other element of the prosecution history to support its argument that there exists a limitation in the claim on the size of the femur portion that may be replaced by the prosthesis. The claim was at one time rejected as clearly anticipated by another patent ("Harder"). In requesting reconsideration of the rejection, the patentees distinguished Harder by arguing, among other things, that unlike the prior patent, the current claim "require[s] selection of a stem from different sized and shaped stems and having a portion for reception into the femur." This language pointed to by DePuy says nothing about how large a portion of the femur may be replaced by the claimed prosthesis and therefore does not "clearly disavow[]" claim coverage over prostheses otherwise covered that replace large portions of the femur. Thus, neither the specification nor the prosecution history presents any reason to limit to small portions of the femur the plain language of the claim covering replacement of "adjacent portions of a bone."

The term "adjacent relationship" is found only in the method claims of the '779 Patent. In Claim 1 of the '779 Patent, step (a) of the claim describes a prosthesis designed for the replacement of a head, neck, and parts of the femur next to the head and neck. There is no explicit limitation in the claim as to the size of the portion of the femur to be replaced. Nor is there anything in the specification indicating such a limitation. DePuy points to two figures in the specification showing the device replacing only a small portion of the femur, but it is well established that patent drawings may not be relied upon to show particular sizes if the specification is completely silent on the issue. Hockerson-Halberstadt, Inc. v. Avia Group Int'l Inc., 222 F.3d 951, 956 (Fed. Cir. 2000) (rejecting an argument based on a patent drawing regarding the width of a groove in an athletic shoe heel). Thus, the fact that two drawings in the patent show only a small femur portion being replaced by the device in no way establishes a limitation on the size of the femur portion that can be replaced.

A related dispute between the parties is whether, given that the prosthesis is limited to the hip joint and femur, the prosthesis is limited to use in only certain types of surgeries. DePuy argues that claim 1, which claims a prosthesis to replace a head, neck, "and adjacent portions of a bone" should be read as limiting the use of the prosthesis to surgeries in which only a small portion of the femur adjacent to the head and neck is removed. DePuy contrasts hip replacements typically used in arthritis cases, in which only a small portion of the femur is removed, with hip replacements typically used in oncological applications, in which a much larger portion of the femur is removed. Zimmer, on the other hand, argues that the claim language does not support a limitation to any particular kind of surgery or amount of femur removed.

The plain meaning of the term "adjacent portions" cannot seriously be disputed. "Adjacent" means "next to" and "portion" means "a part of a whole." Thus, claim 1 calls for a prosthesis for the replacement of a head, neck, and parts of the femur next to the head and neck. There is no explicit limitation in the claim as to the size of the portion of the femur to be replaced. Nor is there anything in the specification indicating such a limitation. DePuy points to two figures in the specification showing the device replacing only a small portion of the femur, but it is well established that patent drawings may not be relied upon to show particular sizes if the specification is completely silent on the issue. Hockerson-Halberstadt, Inc. v. Avia Group Int'l Inc., 222 F.3d 951, 956 (Fed. Cir. 2000) (rejecting an argument based on a patent drawing regarding the width of a groove in an athletic shoe heel). Thus, the fact that two drawings in the patent show only a small femur portion being replaced by the device in no way establishes a limitation on the size of the femur portion that can be replaced.

DePuy also points to the patent history to support its argument that there exists a limitation on the size of the femur portion that can be replaced. As part of the application process, the patentees submitted an information disclosure statement discussing prior art. (DePuy Ex. 2 at DPY019130-36.) In the disclosure statement, the patentees described prior art in which "the prosthesis … is designed to replace the entire upper portion of the femur, and not to be implanted within the femur." (Id. at DPY019133.) DePuy argues that this statement distinguished the prostheses claimed in the '706 patent from prior art prostheses that replaced large portions of the femur, and thus limited the '706 patent claims prostheses replacing only small portions of the femur. Statements made in an information disclosure statement can be used to interpret the scope of claims. Ekchian v. Home Depot, Inc., 104 F.3d 1299, 1303-04 (Fed. Cir. 1997). However, "unless altering claim language to escape an examiner rejection, a patent applicant only limits claims during prosecution by clearly disavowing claim coverage." York Prods., Inc. v. Cent. Tractor Farm & Family Ctr., 99 F.3d 1568, 1575 (Fed Cir. 1996). Here, the disclosure statement simply described prior art in which the prosthesis replaces the entire upper portion of the femur and contrasts that to simply implanting the prosthesis within the femur. It does not "clearly disavow[]" claim coverage over prostheses otherwise covered that replace the entire upper portion of the femur.

DePuy points to one other element of the prosecution history to support its argument that there exists a limitation in the claim on the size of the femur portion that may be replaced by the prosthesis. The claim was at one time rejected as clearly anticipated by another patent ("Harder"). In requesting reconsideration of the rejection, the patentees distinguished Harder by arguing, among other things, that unlike the prior patent, the current claim "require[s] selection of a stem from different sized and shaped stems and having a portion for reception into the femur." This language pointed to by DePuy says nothing about how large a portion of the femur may be replaced by the claimed prosthesis and therefore does not "clearly disavow[]" claim coverage over prostheses otherwise covered that replace large portions of the femur. Thus, neither the specification nor the prosecution history presents any reason to limit to small portions of the femur the plain language of the claim covering replacement of "adjacent portions of a bone."
of the seam manufacturing process requires "placing the first garment component in an adjacent relationship to the second garment component so as to define a seam." 779 Patent at 6:30-32 (emphasis added). The term "juxtaposed relationship" is found only in the method claims of the 615 Patent. In Claim 1 of the 615 Patent, step (b) of the seam manufacturing process requires "providing a second garment component in a juxtaposed relationship with respect to the first garment component to be joined at a seam to the first garment component." 615 Patent at 6:33-36 (emphasis added).

Taltech asks the Court to construe "adjacent relationship" to mean "next to" and "juxtaposed relationship" to mean "placed next to." Taltech also interprets these terms not to require touching, an interpretation that Esquel does not contest. Taltech relies on the claims, on the specifications, and on dictionary definitions of "adjacent" and "juxtaposed." Esquel agrees with Taltech's proposed construction so long as "next to" is given its ordinary meaning, i.e., "immediately following." Esquel relies on the specifications and on a dictionary definition of "next to." The parties' dispute centers on whether any intervening material may exist between two garment components that are placed in an "adjacent" or "juxtaposed" relationship. Taltech interprets "adjacent" and "juxtaposed" to allow intervening material, whereas Esquel's interpretation does not allow any intervening material.

In Free Motion, "the district court construed adjacent' to mean that objects may or may not be in contact, but are not adjacent to each other where there is another object between them." 423 F.3d at 1348 (quoting Free Motion Fitness, Inc. v. Cybex Int'l, Inc., 311 F. Supp. 2d. 1297, 1304 (D. Utah 2003)). On appeal, the Federal Circuit concluded that there were two possible dictionary definitions of "adjacent" to choose from in that case: one definition was "not distant" and the other was "relatively near and having nothing of the same kind intervening." Id. at 1349 (quoting Webster's Third New Int'l Dictionary of the English Language Unabridged 26 (2002)). After noting that "any reliance on dictionaries" must "accord[] with the intrinsic evidence," the Federal Circuit vacated the district court's construction that adopted the second dictionary definition because that definition was inconsistent with the intrinsic evidence. See id. at 1348-49. Nothing in the patent at issue in Free Motion suggested a concern with an object intervening in between the "adjacent" pivot point and resistance assembly, particularly since the adjacent objects were not of the "same kind." Id. at 1349.

In the present case, because the adjacent/juxtaposed objects (i.e., garment components) are of the "same kind," Free Motion counsels that an intervening garment component may be a concern. Nonetheless, the Court is not bound by a dictionary definition discussed in Free Motion. Although it is true that Figures 3a and 4a depict the adjacent/juxtaposed relationship as having no intervening garment component between the two "adjacent" or "juxtaposed" garment components, the Court declines to limit the claims by the preferred embodiments. Nothing in the intrinsic evidence demonstrates an intent to preclude the adjacent/juxtaposed relationship where an object intervenes.

Accordingly, the Court adopts Taltech's proposed construction, with modification, and construes the terms "adjacent relationship" and "juxtaposed relationship" to have identical meanings 5 and to mean "next to but not necessarily touching."

5 At the Markman hearing, the parties agreed that the Court should construe the terms "adjacent relationship" and "juxtaposed relationship" the same.

The term "adjacent said detent plate structure" means positioned near the detent plate structure.

5. Claim 12 ("adjacent the handle assembly")
Claim 12 (and dependent Claim 13) of the '286 Patent uses this disputed claim term in the following context:

An ultrasonic instrument according to claim 11, wherein the coupling member is operably connected to a rotatable knob
positioned adjacent the handle assembly, the rotatable knob being rotatably secured to the handle assembly such that rotation of the rotatable knob in relation to the handle assembly effects corresponding rotation of the coupling member and the clamp member.

'286 Patent, Claim 12 (emphasis added). Plaintiff proposes construing the term as "near the handle assembly," whereas defendant proposes, "directly next to the handle assembly."

As the parties' submissions indicate, standard dictionary definitions result in multiple possible constructions. See Pl. Claim Construction Br. at 20; Def. Claim Construction Br. at 14-15. The defendant acknowledges that where the claim language is not determinative, and the Court is confronted with multiple definitions, the Court should consult the other intrinsic evidence. See Novartis Pharm. Corp. v. Eon Labs Mfg., 363 F.3d 1306, 1309-10 (Fed. Cir. 2004). In this case, the intrinsic evidence does not define the term, nor does it suggest that the term has some specialized meaning in the relevant art. Additionally, plaintiff argues that defendant's proposed construction would in fact exclude the patented instrument itself because such a construction wrongly implies that the knob and the handle assembly "touch" each other, when in fact, while they may touch each other, nothing in the patent requires that they touch each other. See Pl. Reply Br. at 4-5 & n.10; Markman Tr. at 23-25.

The Federal Circuit recently held that where the intrinsic evidence did not define the term "adjacent" or suggest that the term had a specialized meaning in the relevant art, the appropriate construction of the term "adjacent" was "not distant." See Free Motion Fitness, Inc. v. Cybex Int'l, Inc., 423 F.3d 1343, 1348-49 (Fed. Cir. 2005). The Circuit noted that there were multiple possible dictionary definitions and concluded that the intrinsic evidence served to "point away" from the more restrictive definitions where there was nothing in the intrinsic evidence to suggest that such a narrowing definition was appropriate. See id. As was the case in Free Motion, nothing in the intrinsic evidence of the '286 Patent requires the adoption defendant's more restrictive definition, "directly next to," and thus the Court adopts plaintiff's construction, "near," as guided by the decision in Free Motion.

n9 Defendant also argues that use of the word "near" in the construction would allow the "adjacent" parts to be anywhere on the instrument (given that the instrument itself is relatively small). See Def. Claim Construction Br. at 14. This is clearly not the case, however, given that "near" is a relative term to be interpreted in the context of the instrument as a whole, which would take into account the relative size of the instrument.

140

d. "Adjacent the plug receiving opening"

Plaintiffs argue that the "adjacent" limitation requires that the light emitting source be visible in the front wall of the housing of the connector where the plug receiving opening is located, in close proximity to the opening. Maxconn argues that it means "near, close to or within a short distance of the plug receiving opening. This is in contrast to being remote from the plug receiving opening."

i. Claim Language

At least one light emitting source must lie "adjacent the plug receiving opening." '317 patent at 4:62-63. Adjacent means next to, nearby or within a short distance. Black's Law Dictionary defines "adjacent" as "Lying near or close to; sometimes, continuous; neighboring." Adjacent implies that the two objects are not widely separated, though they may not actually touch . . . while adjoining imports that they are so joined or united to each other that no third object intervenes." Black's Law Dictionary 41 (6th ed. 1990). Webster's defines adjacent as "near or close." Webster's New World Dictionary College Edition 16 (3d ed. 1988). "Adjacent things may or may not be in actual contact with each other, but they are not separated by things of the same kind . . . ; that which is adjoining something else touches it at some point or along a line . . . ." Id.

The purpose of the adjacency limitation is set forth within the claim: "to provide visual verification of the status of the electrical connection." '317 patent at 4:63-64.

ii. Specification
One possibility for the relative positions of the light emitting sources and the plug receiving opening is contained in Figures 1 and 2 of the '317 patent. Consistent with the word "adjacent," as opposed to the word "adjoining," the light emitting source does not share a common boundary with the plug receiving opening. The lights are neighboring, near, or close. The LEDs of the preferred embodiment (Figure 1 of the '317 patent) are positioned at some distance, a millimeter or two, from the edge of the plug receiving opening, so that it appears that the lights correspond to electrical activity within the corresponding plug receiving opening.

The specification also indicates that "the connector 10 includes a visual indicator 12 integrated within the connector to provide visual verification of the status of the electrical connection." '317 patent at 2:39-42. In addition, the "Background of the Invention" section states that "The front wall has a plug receiving opening therein, and a light-emitting diode positioned within the front wall such that the light emitting diode provides visual verification of the status of the electrical connection." '317 patent at 2:5-9.

iii. Prosecution History

The prosecution history does not provide any guidance on this point.

iv. Extrinsic Evidence

Expert Lazar stated that adjacent means close to the plug receiving opening to indicate to the viewer that the LED correlates with that particular plug. While the Court found this testimony credible, it is unnecessary to consider it in light of the strength of the intrinsic evidence.

v. Construction

"Adjacent the plug receiving opening" means that the light emitting device is situated close to the plug receiving opening such that (1) both the plug receiving opening and the light emitting device are in close proximity and are easily visible to the observer simultaneously; and (2) the observer could discern a relation between the plug receiving opening and the nearby lights. "Adjacent" was intended to signify not remote. Were a more precise limiting definition desired, the patentee could have used more precise language, such as "bordering on," or "abutting."

4. "adjacent to and above"

Plaintiff's Proposed Construction: "terminating at an elevation sufficient to not interfere with the rotating blades of a blender"

Defendant's Proposed Construction: "at a location just above the rotating blades in the area where an air channel may form in the pitcher of a blender, without interfering with the rotating blades"

The Court's Construction: "adjacent to and above"

Plaintiff contends that its proposed construction embodies the ordinary meaning of "adjacent to and above." Consistent with its arguments made in connection with the "plunger" element, defendant argues that, as a practical matter, the plunger must be in the area where the air channel would otherwise form in order to perform the claimed method of preventing the formation of the air pocket around the mixing blades.

The term "adjacent to and above" appears only in Claim 1 and in the Abstract of the '021 Patent. Claim 1 requires the plunger to be adjacent to and above the rotating blades. The original apparatus claims, on the other hand, required the plunger to be "just above" the blade assembly. The specification similarly indicates that the plunger is "just above" the blade assembly. Several dependent apparatus claims required that the plunger also be "adjacent to" the blade assembly.
First, the Court finds that "above" carries its ordinary and customary meaning. Because the claim requires that the plunger be above the rotating blades, the plunger of necessity cannot interfere with the blades. This is consistent with plaintiff's proposed construction and the intrinsic evidence. The Court also finds that, consistent with plaintiff's argument, "above" does not mean "just above." In submitting the method claim for examination, the inventors chose to eliminate the word "just," which had appeared in their apparatus claims. The examiner allowed the claim without comment on this element. The Court cannot re-insert the word "just" into the claim without unambiguous evidence in the intrinsic record of the patent to support such a construction.

The Court next turns to the meaning of "adjacent to." The plaintiff's proposed construction ignores these two words. Defendant's construction would have "adjacent to" interpreted as "in the area where an air channel may form in the pitcher of a blender, without interfering with the rotating blades." As stated above, some of the apparatus claims did include a limitation that required the plunger to be adjacent to the blade assembly. The method claim at issue, on the other hand, requires the plunger to be adjacent to the rotating blades. This is not a distinction without a difference. The blade assembly is distinct from the blades in that the blade assembly is the element that houses the air channel defining member. The blades extend outward from the blade assembly. Defendant argues that the air channel forms above the blade assembly. So, defendant essentially seeks a construction of the claim that would require the plunger to be located adjacent to and above the blade assembly rather than the blades.

In support of its position, defendant argues that in order to practice the claimed invention and prevent the air pocket from forming, the plunger must be in the area where the air channel would form, i.e. adjacent to the blade assembly. However, the intrinsic evidence does not unequivocally support such a construction. The specification does state that the air channel is defined by the member associated with the blades and that the cross-sectional size of that air channel is defined by the cross-section of the member. However, the inventors chose, in submitting their method claim, to indicate that the plunger was above "the rotating blades" rather than "the blade assembly." And, it is not clear to the Court that the plunger could not close off the air channel and, thus, prevent the formation of the air pocket if it were positioned adjacent to and above the rotating blades. To adopt defendant's proposed construction that the plunger be placed where the air channel would otherwise form might unduly limit the claim.

Accordingly, the Court finds that "adjacent to and above the rotating blades" means just that. Resort to the dictionary definitions provided by defendant is unnecessary.

1. "located adjacent to said battery"

Claim 13 describes an AED with a battery and a temperature sensing circuit that is "located adjacent to said battery." The parties dispute the meaning of the term "adjacent." Philips asserts that "adjacent" should be defined as "adjoining or next to the battery, with nothing of the same kind in between." Cardiac Science contends that "adjacent" means "close," but does not require that the temperature sensing circuit needs to touch the battery. Philips agrees that the temperature sensing circuit does not need to touch the battery, but contends that Cardiac Science's definition is not precise enough. (Tr. at 444.)

The claim itself provides some guidance as to the proximity required between the battery and the temperature sensors, as the claim describes a "temperature sensing circuit designed to sense the temperature inside of said battery." ('576 Patent at c. 8, II: 47-48.) However, nothing in the claim language or the specification requires that the temperature sensors adjoin the battery, as Philips proposes. The Court finds that "located adjacent to" is properly construed as "close to," as in "located close to the battery so that it may sense the temperature of the battery."

4. "adjacent to the base of the user's fingers"

McHugh asserts that this term does not require construction, while H&B asserts that it does. Nevertheless, as there is a
controversy regarding this term, this Court will construe the term "adjacent to the base of the user's fingers." See Markman, 517 U.S. at 374.

Claim 1 further goes on to recite that a "retainer connected to the member ... [retains] the member in the user's hand adjacent to the base of the user's fingers." (5:18-21.) As the Court has already construed "base of the user's fingers" to mean "the location where the palm joins the fingers," it is now up to the Court to determine what it means to be adjacent to "the location where the palm joins the fingers." McHugh contends that it should mean "near the proximal phalanx A2 pulley region of the user's fingers" while H&B contends that it should mean "below the base of the user's fingers."

The claim language indicates that the member is "configured to fit at a base of the user's fingers ... and a retainer [retains] the member in the user's hand adjacent to the base of the user's fingers." (5:15-21.) H&B's proposal that the base of the user's fingers is the location where the palm joins the fingers is adopted by the Court because it allows for the member to sit in the gap formed at the base of the user's fingers. However, if the Court were to adopt H&B's proposed construction for "adjacent to the base of the user's finger," the member would be both at the base of the user's fingers and below the base of the user's fingers. This construction does not make sense.

On the other hand, McHugh's proposed construction is supported by the specification. The specification indicates that "adjacent" should mean "near." The written description states that the "hand grip fits in the user's hand near where the palm joins the fingers." (1:43-44.) Additionally, as stated above the proximal phalanx A2 pulley region encompasses the "location where the palm joins the fingers." Most importantly, if the member is located "near the proximal phalanx A2 pulley region of the user's fingers," this placement specification is broad enough to allow the member to fit in the gap between the base of the user's fingers and the palm of the hand.

Accordingly, the Court adopts McHugh's proposed construction and construes the term "adjacent to the base of the user's fingers" to mean: "near the proximal phalanx A2 pulley region of the user's fingers."

7. An open space "adjacent to the distal end of the cannula" is an open space next to, but not occupied by, the expanded portion of the cannula.

3. "Adjoining"

The final disputed claim limitation is "said wafer including a further region of opposite conductivity type adjoining said lightly doped major body portion," (emphasis added) found in claim 19 of the '699 patent. This claim and three claims dependent therefrom are the four claims asserted against IXYS that do not contain the terms "polygonal" and "annular." The district court construed "adjoining" as follows:

Consistent with Figure 8 [of the '699 patent], the dictionary definitions of "adjoin," "adjoining," and its synonym "adjacent" indicate that two objects need not be in physical contact to be "adjoining." See Webster's Ninth New Collegiate Dictionary, p. 56, which states that "adjoin" can mean "to be close to or in contact with one another," while "adjacent" is a synonym of adjoining and means "not distant; nearby."

Infringement Order '699 Patent.

IXYS argues that the district court erroneously misquoted the cited dictionary, and that the construction thus provided is incorrect. IR counters that IXYS is asserting the most narrow ordinary and customary definition for the term "adjoining," contrary to our precedent. See, e.g., Inverness Med. Switz. GmbH v. Warner Lambert Co., 309 F.3d 1373, 1378-80 (stating that a term is to be given its broadest ordinary meaning consistent with the written description).
The dictionary definition cited by the district court, when examined carefully, not only defines "adjoining," but further, makes an express distinction between "adjoining" and "adjacent." Other dictionaries contemporaneous with the patents contain a similar definition. The definition of "adjoining" is "touching or bounding at some point or on some line: near in space." Webster's, supra, at 27. This definition, in turn, references "adjacent" as synonymous. The dictionary then defines "adjacent" and notes that, as between adjacent and adjoining, "[adjoining] may more strongly indicate existence of common bounding lines or lines or points of junction." Id. at 26. By resorting to the dictionary to determine the ordinary and customary meaning of the claim term, the district court was not free to disregard this usage note. It is true that "if more than one dictionary definition is consistent with the use of the words in the intrinsic record, the claim terms may be construed to encompass all such consistent meanings." Tex. Digital, 308 F.3d at 1203. However, in this case, the district court's adoption of a definition attributed to "adjacent," a synonym of the claim term, disregards entirely the distinction between the two terms set forth in the usage note. Had the inventor meant "adjacent," he could have used that word. However, we must consider the word that the inventor actually chose and use the definitions of that term that are consistent with the written description.

Because there is no express disavowal or limit on the scope of the claim term, we give "adjoining" its ordinary and customary meaning as "touching or bounding at a point or a line."

IR argues that by adopting a claim construction that requires adjoining regions to touch, not only would the construction be inconsistent with the written description, but it would also exclude the preferred embodiment, a conclusion that IR correctly observes is rarely, if ever, correct. See Gentry Gallery, 134 F.3d at 1477. IR argues that the "adjoining" "major body portion" 87 and "further region" 83 depicted in Figure 8 of the '699 patent have an intervening layer (84) between them. IR's argument is not persuasive because it overlooks the fact that "major body portion" 87 and "further region" 83 do touch, at least in part. Therefore, those regions are adjoining in the embodiment shown and described in the patents. IR points to the intervening layer between the two regions, but fails to appreciate that, as depicted in Figure 8, that layer does not extend to the full length of the regions, leaving the ends in direct contact. There is nothing in the language of the claims or in the ordinary and customary meaning of the word "adjoining" to require that adjoining regions touch over any particular expanse, only that they are "touching or bounding at a point or line." The broad definition of the term "adjoining" is entirely consistent with the written description and does not exclude the preferred embodiment.

a. "adjustable"

Plaintiff contends that the court should construe "adjustable" to mean "automatically or passively adjustable," and add as explanation, "In the context of an airbag, 'adjustable' refers to the ability to control inflation and/or deflation of the airbag." (Chart at 8.) Defendant argues that the court should construe "adjustable" to mean "the manner in which the component operates may be adjusted," and also to explain, "In the context of an airbag, 'adjustable' refers to the ability to adjust the manner in which the airbag is deployed by adjusting the direction of the airbag, the flow of gas into the airbag, flow of gas out of the airbag, rate of generation of gas and/or amount of generate[d] gas." (Id.)

Plaintiff emphasizes that it is important that "adjustable" includes the notion that the adjustment is automatic, i.e., does not require the occupant to take any action. Plaintiff also argues that Defendant's construction limits the claim by not specifying that in the context of an airbag, "adjustable" can also refer to the manner in which the airbag is suppressed. As support for its position, Plaintiff cites to the specification, which states:

The component or device an be an airbag system including at least one deployable airbag whereby the deployment of the airbag is suppressed, for example, if the seat is occupied by a rear-facing child seat . . . . The component adjustment system and methods in accordance with the invention can automatically and passively adjust the component based on the morphology of the occupant of the seat.

Defendant, however, maintains that suppression and adjustment constitute two different actions, and that neither includes the other as a sub-type. (Def.'s Br. at 18-19.) Defendant cites from the specification:
Control of the occupant restraint device may entail suppression of deployment of the device. If the occupant restraint device is an airbag, e.g., a frontal airbag or side airbag, control of the airbag deployment may entail not only suppression of the deployment but also depowered deployment, adjustment of the orientation of the airbag, adjustment of the inflation rate or inflation time and/or adjustment of the deflation rate or time.

'029 Patent col. 208 l.16-23. As in Claim 4 of the '945 Patent, the adjustment contemplates variations on deployment: (1) no deployment or suppression, (2) deployment, and (3) deployment at varying rates or varying ways.

The logic of Plaintiff is sound: an airbag can be deployed or not deployed, and if it is deployed, deployed in various ways. These variations are adjustments, and a suppressed airbag is one type of adjustment to the airbag's deployment. The specification includes these options in the following language:

The adjustment system may be a system for adjusting deployment of an occupant restraint device, such as an airbag. In this case, the deployment adjustment system is arranged to control flow of gas into an airbag, flow of gas out of an airbag, rate of generation of gas and/or amount of generated gas.

'029 Patent col. 60 l.24-29. The specification further states: "The component may be an occupant restraint device such as an airbag whereby the control unit could control inflation and/or deflation of the airbag, e.g., the flow of gas into and/or out of the airbag, and/or out of the airbag, and/or the direction of deployment of the airbag." '029 Patent col. 265 l.19-23. The language of the specification begins with "control inflation and/or deflation of the airbag," which includes no inflation, or suppression. If the component is adjusted so that no air can flow into the airbag, then the result is no deployment and a suppressed airbag. However, the court finds that the construction suggested by Defendant incorporates the idea of suppression because it includes the phrase "adjust the manner in which the airbag is deployed," which could include no deployment, or suppression. (Chart at 8.) This is further supported by the language of the specification as cited above. See '029 Patent col. 60 l.24-29; col. 208 l.16-23.

While the language of the specification specifies that certain embodiments include adjustments that are "automatically or passively adjustable," the term "adjustable" does not itself require a rendering of "automatically or passively adjustable"; the specification itself modified "adjustable" with an adjectival phrase to clarify when a component was specifically "automatically or passively adjustable." See '029 Patent col. 204 l.56-59 ("The component adjustment system and methods in accordance with the invention can automatically and passively adjust the component based on the morphology of the occupant of the seat."). The court will therefore decline to incorporate this adjectival phrase into its construction. See Praxair, Inc. v. ATMI, Inc., 543 F.3d 1306, 1324 (Fed. Cir. 2008) ("[T]he specification is always highly relevant to the claim construction analysis. Usually, it is dispositive; it is the single best guide to the meaning of a disputed term.") (internal citations omitted).

Finally, Plaintiff argues that the court must include "e.g." in its construction so that its claim is not impermissibly limited to the functions listed in Defendant's proposed claim construction. The court recognizes Plaintiff's concern. See Praxair, 543 F.3d at 1324. The court will interpret this claim pursuant to the specification, and therefore will construe "adjustable" to be "'adjustable' means that the manner in which the component operates may be adjusted," and, "In the context of an airbag, 'adjustable' refers to the ability to control inflation or deflation of the airbag, and thereby adjust the manner in which the airbag is deployed. For example, this can include adjusting the direction of the airbag, the flow of gas into or out of the airbag, the rate of generation of gas, or the amount of generated gas."

1. Claim Construction

With regard to the first step, claim construction is a question of law although factual determinations may underlie this determination. Id. It is not necessary for a court to construe definitively the patent claims when ruling on a motion for preliminary injunction. Data Race, Inc. v. Lucent Techs., Inc., 73 F.Supp.2d 698, 708 (W.D.Tx. 1999). Claims must be viewed in light of a person of ordinary skill in the art at the time of the invention, and the language of the claim must be given its common and accustomed meaning. To derive the meaning of a claim, courts must first utilize the three parts of the
patent application: the language of the claim, the specification, and the prosecution history (file wrapper). Insituforn Techs., Inc. v. Cat Contracting, Inc., 99 F.3d 1098, 1105 (Fed. Cir. 1996). The claim language will define its scope, and the specification and prosecution history provide the necessary context to the claim language. See Vitronics Corp. v. Conceptronic, Inc., 90 F.3d 1576, 1583 (Fed. Cir. 1996). The claim term's ordinary and accustomed meaning serves as a default meaning. If the patent holder has given a term an unconventional meaning within the patent specification or prosecution history, the Court must apply that meaning. However, if not, the term's ordinary and accustomed meaning controls. Id.; ZMI Corp. v. Cardiac Resuscitator Corp., 844 F.2d 1576, 1580 (Fed. Cir. 1988).

If necessary, in its discretion, the Court may look to extrinsic evidence to assist in understanding the technology or in determining the meaning or scope of technical terms. See Markman, 52 F.3d at 976. This extrinsic evidence, including expert testimony or prior art, may not be interpreted to broaden the scope of the patent or to contradict the claim language, the specification, or the prosecution history. See Vitronics Corp., 90 F.3d at 1583; see also Data Race, Inc., 73 F.Supp.2d at 708.

Velan contends the term "adjustable" as used in the pertinent claims "means the biasing force inherently provided by the biasing elements or coil springs integrated into a dynamic live loaded seat, can be adjusted to increase or decrease the biasing force during use or operation of the de-heading device." The core of Velan's argument is that Claims 14 and 33 incorporate into the definition of "adjustable" the ability to cause adjustment to the load pressure exerted by the dynamic, live loaded seat on the sliding gate while the de-heading device is in operation, or coupled to the coke drum. Velan contends Curtis-Wright's assertion that replacement of the coil springs housed inside the apparatus with springs having a different bias force does not constitute "adjustment" and, in any event, this procedure cannot be performed while its device is in use and attached to the coke drum. Velan further contends the term adjustment provides no additional function than that provided by a live loaded seat, and therefore, the term is redundant. Looking to the specification, Velan argues every reference to patent '714 to adjustability refers to the necessity of having an external adjustment mechanism associated or directed at the dynamic, live loaded seat. Therefore, the term "adjustable" must mean the device must contain an external means of adjusting the biasing force placed upon the sliding gate by the dynamic, live loaded seat while the device is in use.

Curtis-Wright contends the term "adjustable" is a common word that must be given its ordinary and accustomed meaning as it is used in the context of Claims 14 and 33 of the '714 patent. Curtis-Wright contends the accustomed meaning of this term means "capable of making a change or being changed". Claims 14 and 33 do not restrict the term "adjustable" to changing the biasing force during use or operation of the de-heading device. Thus, the ability to adjust the pressure placed upon the sliding gate by the dynamic, live loaded seat while the valve is in operation is not a requirement of the patented invention. Because an external adjustment mechanism is described in the patent specification as a "preferred embodiment" of the device, Curtis-Wright contends the limitations cannot be read into the claims, nor do claims 14 or 33 limit the invention to the existence of an external adjustment mechanism or any particular means, method, or time of adjustment of the load pressure placed on the sliding gate. Instead, Curtis-Wright contends the asserted claims require only that the live loaded seat be adjustable, regardless of how, when, or whether the adjustment is actually performed. Curtis-Wright particularly argues the asserted claims do not require that adjustment must or may be made while the device is in use, only that adjustment may be made to the load pressure placed upon the sliding gate by the live loaded seat.

Viewing the claim language, Curtis-Wright is correct the term "adjustable" as used in Claims 14 and 33 holds a common meaning of normal usage. See plaintiff's motion, Exh. A,Cols. 17,20. This term means, as asserted by Curtis-Wright, "capable of making a change to something" or capable of being changed. The term "adjustable" as used as a modifier to the term "dynamic, live loaded seat" means the dynamic, live loaded seat must have the capability of changing or making a change. In this particular application, the parties do not dispute the change to be made is a change to the load placed upon the blind, or sliding gate, by the dynamic, live loaded seat. This change can either loosen or tighten the seal between the live loaded seat and the sliding gate.

Also, the Court agrees with Curtis-Wright the term "adjustable", as used in Claims 14 and 33, does not contain or imply any requirement regarding the time in which the load placed upon the gate by the dynamic, live loaded seat may be adjusted. See plaintiff's motion, Exh. A,Cols. 17,20. The use of the term "adjustable" as it appears in Claims 14 and 33 does not include or require any adjustment be made while the Delta Valve is in operation or in use. See 'id. Thus, Velan's asserted definition of the term "adjustable" to include the requirement that a change to the biasing force can be made while the device is in use or operation is beyond the accustomed meaning of the term.
A reading of Claims 14 and 33, and those associated with them, in light of the other asserted claims, and those associated with them, gives context to this construction. Claim 1 describes a coke drum de-heading device which comprises several elements, including an external "live loaded seat assembly" which contains "at least one dynamic, live loaded seat and a corresponding live loaded seat adjustment mechanism to control exertable force of said dynamic, live loaded seat". See plaintiff's motion, Exh. A, Cols. 16-17. Claims 2 through 13 consist of further descriptions and elements of the coke drum de-heading device presented in Claim 1. Id. Claims 9 and 10, in particular, depict an external live loaded seat adjustment mechanism. Id. at Col. 17. Thus, Claims 1 through 10 depict a device limited by Velan's assertions: one which possesses an external adjustment mechanism capable of changing the bias force placed upon the sliding gate by the dynamic, live loaded seat while the device is in use or operation. See id.

Claim 14 begins another description of a coke drum de-heading device, this time limited to a "bottom de-heading system" which comprises several elements similar to those depicted in Claim 1; however, the device claimed in Claim 14 does not contain the necessity of a "live loaded seat adjustment mechanism to control exertable force of said dynamic, live loaded seat", as in Claim 1. See plaintiff's motion, Exh. A, Col. 17. Claim 14 asserts only that the claimed device be "adjustable", without reference or limitation to the means, time, or manner in which an adjustment to the exerted force placed upon the sliding gate by the dynamic, live loaded seat must be made. Claim 15, only, further describes the device depicted in Claim 14. Id. Thus, in this instance, any reference to an external live loaded seat adjustment mechanism is intentionally omitted.

Further, Claim 16 depicts a "top de-heading system" and follows the same format as described for Claim 14. See plaintiff's motion, Exh. A, Col. 18. Claim 18 begins another depiction of a coke de-heading system and follows an identical format as Claim 1. Id. Claim 18 also includes the claim of a "live loaded seat assembly coupled to said main body and comprising a dynamic, live loaded seat, a live loaded seat adjustment mechanism coupled to said main body and designed to control and adjust the force and resulting seat load…." Id. Claims 19 through 32 consist of further descriptions and elements of the coke drum de-heading device presented in Claim 18. See plaintiff's motion, Exh. A, Cols. 18-19. Claim 28, in particular, depicts an external live loaded seat adjustment mechanism. Id. at Col. 19.

Finally, Claim 33 claims the method used to de-head a coke drum. This method described includes only the restriction that the coke drum be equipped with an "adjustable dynamic, live loaded seat coupled to said main body." Id. at Col. 20. The method to be used does not require an external seat adjustment mechanism or the requirement that the adjustment be made while the device is in use.

Examination of Claim 14 in light of the remaining claims reveals that the device claimed therein does not restrict the claimed device to the existence of an external live loaded seat adjustment mechanism. Such a device was specified and claimed in Claims 1 and 18 and those claims associated with them. Thus, because Claims 1 and 18 specifically describe an embodiment possessing this external seat adjustment mechanism and Claim 14 does not, the only meaning to be derived from Claim 14 is that it encompasses all devices that are simply "adjustable", or capable of changing the bias force exerted on the sliding gate by the dynamic, live loaded seat, regardless whether these devices possess an adjustment mechanism or not and regardless of the means or time in which this adjustment is made. Therefore, Velan's primary argument must fail.

This Court further finds Velan's argument that all references to any adjustability in the dynamic, live loaded seat further refers to the necessity of having a "live seat adjustment mechanism" fails on the principle of "preferred embodiment". In the specification, which describes the invention, Curtis-Wright always uses the reference that the description is the "preferred embodiment" of the device. See plaintiff's motion, Exh. A, Cols. 4,5,9. A preferred embodiment is the inventor's description of the best mode of use; however, the invention is not limited to the preferred embodiment, nor may the court place any limitation contained in the description of the preferred embodiment into the asserted claims. See Interactive Gift Express, Inc. v. CompuServe, Inc., 256 F.3d 1323, 1341 (Fed. Cir. 2001); TurboCare Div'n of Demag Delaval Turbomachinery Corp. v. Gen'l Elec. Co., 264 F.3d 1111, 1123 (Fed. Cir. 2001)("There is no basis for reading a limitation from the preferred embodiment into the language of the claim," particularly…where another claim restricts the invention in exactly the manner suggested by [a proposed] narrow claim construction.).

Curtis-Wright included the preferred embodiment of its coke drum de-heading device in the specification of patent '714. Such embodiment includes a live seat adjustment mechanism. In the subsequent asserted claims, Curtis-Wright asserted claims restricting the protected device to inclusion of a live seat adjustment mechanism. Curtis-Wright also asserted a claim, Claim 14, which did not include this limitation. Consequently, this Court may not limit Claims 14 and 33 by the description of its preferred embodiment in the patent specification. See Interactive Gift Express, Inc., 256 F.3d at 1341; TurboCare
The Court finds the term "adjustable" has a meaning and concept different than the term "live loaded seat", and therefore, is not just redundant or superlative. As described in the patent claims and specification, the term "live loaded seat" is used in conjunction with its counterpart, a static seat. See plaintiff's motion, Exh. A, Fig. 8, Col. 4, lines 32-42, Col. 13, line 39-Col. 14, line 18. The static seat is mounted to the main body below the sliding gate and does not move. Conversely, the live loaded seat, located above the sliding gate, is flexible, or capable of movement up or down. Id.; see also Col. 14, line 65-Col. 15, line 3. This movement is facilitated by the spring coils located inside the apparatus. As the weight of coke filling the coke drum changes, the live loaded seat is capable of moving to place further pressure on the sliding gate, thus maintaining the seal. Id. Thus, the term live loaded refers to the ability of the seat to move up or down, as opposed to being static, or mounted to the main body. The term adjustable refers to the capability of changing the bias force already exerted on the sliding gate by the live loaded seat. See id. at Col. 15, lines 7-22. Although similar, the two terms do not refer to the same or redundant activity.

Based upon these comparisons, findings and conclusions, this Court construes the term "adjustable" as used in Claims 14 and 33 to mean the protected device is capable of changing the bias force exerted on the sliding gate by the dynamic, live loaded seat. This term is not limited by any time, place, manner, or means of adjustment and does not necessitate any external adjustment mechanism.

The trial court's claim construction followed a logical path. The court first set forth the ordinary meaning of "adjustable": "capable of making a change to something or capable of being changed." Preliminary Injunction Order, slip op. at 10. The court then determined that a narrower construction of "adjustable" would be inconsistent with other claims in the '714 patent, which recite an adjustment mechanism that allows adjustment while the device is in use or operation. Id. at 11-13. In other words, the district court relied on claim differentiation during its claim construction. Finally, the district court explained that any construction of the term "adjustable" that requires the presence of the adjustment mechanism disclosed in the '714 patent would be an impermissible narrowing of that claim term to the structure of the preferred embodiment. While logical, this chain of reasoning errs because it places too much emphasis on the ordinary meaning of "adjustable" without adequate grounding of that term within the context of the specification of the '714 patent. Moreover, to the extent this reasoning relies on claim differentiation, it misapplies that limited tool of claim construction. This court recently reiterated that the specification is the single best guide to the meaning of a claim term. Phillips v. AWH Corp., 415 F.3d 1303, 1315 (Fed. Cir. 2005) (en banc) (citing Vitronics Corp. v. Conceptronic, Inc., 90 F.3d 1576, 1582 (Fed. Cir. 1996)). In this case, the '714 patent's specification describes the deficiencies of the prior art, including the conventional requirement of removing the entire head unit from the coke drum during de-heading:

[The prior art] assemblies or devices require that the head unit be completely removed from the flange portion of the coke drum after each coking cycle and prior to the purging of the coke from the coke drum. This creates an extreme hazard to workers and provides an inefficient and time consuming procedure.

The '714 patent. col. 2, ll. 49-54. The '714 patent specification further extols this invention for overcoming these deficiencies of the prior art:

Another critical aspect of the present invention is the ability to de-head the coke drum without having to remove the head unit, and to do so at a remote location with little or no manual requirements.

Id. at col. 4, ll. 13-17. The '714 patent then associates the adjustability of the live loaded seat with that critical aspect of the invention. In other words, the patent stresses that adjustment occurs during operation and without removal of the head unit: In a normal coking process, extreme temperatures and pressures are present. Any variation in temperature between the upper and lower surfaces of the blind can cause the blind to bow. If the bowing is allowed to progress or continue, there is a danger in breaking the seal created between [the] upper and lower seats and [the] blind, which could cause damage to the system and upset the manufacturing process. However, the ability of the present invention to adjust the load exerted on [the] blind, utilizing the dynamic, live loaded seat and its adjustment mechanism, provides a way to compensate for or modulate any existing bowing that might occur. By increasing the applied load of the dynamic, live loaded seat on [the]
blind, the bowing is substantially eliminated . . . .

Id. at col. 11, ll. 7-20 (reference numbers omitted). With respect to an alternative embodiment with multiple live loaded seats at different points along the blind, the specification explains:

By allowing point to point adjustability, the system is capable of being fine tuned to decrease the chances of unwanted leaks within the system. For example, if the system were leaking at one location, any one of, or multiple, dynamic seats could be adjusted to compensate and seal the leak.

Id. at col. 15, ll. 33-37.

Thus, the specification of the '714 patent consistently, and without exception, describes adjustment that occurs during operation of the de-header system. The district court's construction of "adjustable," which includes a structure that requires dismantling of the valve to perform the adjustment, finds no support in the overall context of the '714 patent specification. Moreover, the district court's construction of "adjustable" renders that limitation nearly meaningless. This court finds it difficult, if not impossible, to imagine any mechanical device that is not "adjustable," under the ordinary meaning of that term adopted by the district court. Almost any mechanical device undergoes change (for instance, when dismantled to replace worn parts) when no consideration is given to the "time, place, manner, or means of adjustment."

This court commends the district court's reluctance to narrow the claims to the preferred embodiment. In this instance, however, that care is admirable but misplaced. This case does not evince a situation where a party is attempting to import a limitation from the specification into the claims. Claim 14 already contains the "adjustable" limitation. Thus, the claim construction task requires this court to discern the meaning of that term in the context of this invention and field of art. The specification provides that context and substantial guidance on the meaning of "adjustable." In light of the specification, the term "adjustable" means that the dynamic, live loaded seat can be adjusted while the de-heading system of claim 14 is in use.

The district court buttressed its broad construction of "adjustable" with a comparison to other independent claims in the '714 patent, specifically claims 1 and 18. Those claims recite an adjustment mechanism. See Preliminary Injunction Order, slip op. at 11-13. As the district court explained:

Because Claims 1 and 18 specifically describe an embodiment possessing [an] external seat adjustment mechanism and Claim 14 does not, the only meaning to be derived from Claim 14 is that it encompasses all devices that are simply "adjustable," or capable of changing the bias force exerted on the sliding gate by the dynamic, live loaded seat, regardless whether these devices possess an adjustment mechanism or not and regardless of the means or time in which this adjustment is made.

Id. Thus, without using the formal label, the district court relied on claim differentiation to reach its broad meaning. The district court's misapplication of that claim construction tool is understandable given the variability of explanations of claim differentiation.

In the most specific sense, "claim differentiation" refers to the presumption that an independent claim should not be construed as requiring a limitation added by a dependent claim. See Nazomi Commc'ns, Inc. v. Arm Holdings, PLC., 403 F.3d 1364, 1370 (Fed. Cir. 2005) ("Claim differentiation 'normally means that limitations stated in dependent claims are not to be read into the independent claim from which they depend.'" (quoting Karlin Tech., Inc. v. Surgical Dynamics, Inc., 177 F.3d 968, 971-72 (Fed. Cir. 1999))); see also "Phillips, 415 F.3d at 1314-15 (explaining the presumption without invoking the "claim differentiation" label). Thus, the claim differentiation tool works best in the relationship between independent and dependent claims. See Liebel-Flarsheim Co. v. Medrad, Inc., 358 F.3d 898, 910 (Fed. Cir. 2004) (citing Sunrace Roots Enter. Co. v. SRAM Corp., 336 F.3d 1298, 1302-03 (Fed. Cir. 2003)). Indeed the statute stresses that a dependent claim must add a limitation to those recited in the independent claim. See 35 U.S.C. § 112, P4 (2000) ("[A] claim in dependent form shall contain a reference to a claim previously set forth and then specify a further limitation of the subject matter claimed.") (emphasis added). Thus, reading an additional limitation from a dependent claim into an independent claim would not only make that additional limitation superfluous, it might render the dependent claim invalid.

Beyond the independent/dependent claim scenario, this court has characterized claim differentiation more generally, i.e., as the "presumption that each claim in a patent has a different scope." Versa Corp. v. Ag-Bag Int'l Ltd., 392 F.3d 1325, 1330
with different words can, of course, define different subject matter within the ambit of the invention. On the other hand, claim drafters can also use different terms to define the exact same subject matter. Indeed this court has acknowledged that two claims with different terminology can define the exact same subject matter. Tandon Corp. v. U.S. Int'l Trade Comm'n, 831 F.2d 1017, 1023 (Fed. Cir. 1987); Hormone Research Found. v. Genentech, Inc., 904 F.2d 1558, 1567 n.15 (Fed. Cir. 1990) ("It is not unusual that separate claims may define the invention using different terminology, especially where (as here) independent claims are involved."). In this context, this court has cautioned that "claim differentiation is a guide, not a rigid rule." Laitram Corp. v. Rexnord, Inc., 939 F.2d 1533, 1538 (Fed. Cir. 1991).

With those precedents in mind, this court observes that two considerations generally govern this claim construction tool when applied to two independent claims: (1) claim differentiation takes on relevance in the context of a claim construction that would render additional, or different, language in another independent claim superfluous; and (2) claim differentiation "can not broaden claims beyond their correct scope." Fantasy Sports Props. v. Sportsline.com, 287 F.3d 1108, 1115-16 (Fed. Cir. 2002) (quoting Kraft Foods, Inc. v. International Trading Co., 203 F.3d 1362 at 1362). In this case, both of those considerations weigh against the district court's construction of "adjustable."

First, reading "adjustable" to mean adjustable "on the fly" during de-heading does not render the recitation of an adjustment mechanism in other claims superfluous. Even if "adjustable" were synonymous with the presence of an adjustment mechanism, this court perceives no redundancy because the claims that recite the presence of such a mechanism do not include the "adjustable" limitation. Compare '714 patent, claims 1 and 18 with '714 patent, claim 14. As noted before, a patentee may define the same subject matter with claims having different terminology. Mycogen Plant Sci. v. Monsanto Co., 243 F.3d 1316, 1329 (Fed. Cir. 2001). Moreover, in-use adjustability does not necessarily mean the same thing as the presence of an adjustment mechanism. After all, an adjustment mechanism might be present but not usable during de-heading. To be clear, this court does not venture to construe the scope of the adjustment mechanism limitation in claims 1 and 18, but merely observes that the language of claim 14, as properly construed, does not appear to be commensurate with the language in claims 1 and 18. Thus, while the district court may have been correct that a device encompassed by claim 14 of the '714 patent need not have an adjustment mechanism, it went too far in completely eliminating any constraints on the "adjustable" limitation. Moreover, the district court's construction actually creates a redundancy: if "adjustable" means adjustable at any time and in any way, it is hard to imagine any meaning for the term because without limitations on time or manner of adjustment, all structures are "adjustable."

Second, relying on the claim differentiation presumption in this case contradicts the correct meaning of claim 14. As discussed above, the specification stresses that the invention is "adjustable" during de-heading. Any construction to the contrary is not consistent with the overall context of this invention and this field of art as described in the specification. Before the district court, the dispute over Curtiss-Wright's showing of a likelihood of infringement centered on the recognition that Velan's valves must be dismantled for adjustment. Velan argued that its de-heading system did not infringe because the only way to adjust their live loaded seat required removal of the seat to replace its internal biasing springs. The district court rejected that argument because its construction of "adjustable" placed no meaningful limits on that term. Because the district court erred in its claim construction, its subsequent infringement analysis in the context of Curtiss-Wright's motion for a preliminary injunction was flawed. Accordingly, the district court's grant of the preliminary injunction was an abuse of discretion.

149

E. Adjustable Straps

Plaintiff proposes that the claim term "adjustable straps" be construed as "strips of suitable flexible material that are capable of being changed so that it [sic] fits." (Pl.'s Br., at 18.) It is unclear to what "it" refers; the court assumes that Plaintiff intends "it" to mean either each adjustable strap, or the chest protector itself. TAG offers "narrow strip[s] or band[s] of leather or other material capable of being lengthened or shortened." (Def.'s Br., at 22.) Both parties rely on dictionary definitions. Plaintiff cites to a definition of "adjustable" as "capable of being adjusted"; "adjust" is in turn defined as "to change (something) so that it fits." WEBSTER'S ENCYCLOPEDIC UNABRIDGED DICTIONARY 25. For "strap," both parties cite to essentially the same definition: Plaintiff's citation describes "a narrow strip of flexible material, esp. leather, as for fastening or holding things together[,]" id. at 1880; and TAG's source describes "a narrow strip or band of leather or
other flexible material . . . for binding or securing things." WEBSTER'S NEW WORLD DICTIONARY 1407 (2d ed. 1984). TAG additionally points out that in their description of the preferred embodiment, the patentees explained that the adjustable straps "may be made of leather or other suitable material." (‘226 Patent, col. 3, ll. 1-2.)

The parties' citations to dictionary definitions are appropriate. Neither the claim nor the specification either explicitly or implicitly defines "adjustable strap"; and the reference in the preferred embodiment to "leather or other suitable material" does not serve to limit the term, as discussed above, and is consistent with both parties' cited dictionary definitions in any event. Considering the two words separately, Plaintiff's proposed construction of "adjustable" is more in keeping with those definitions: the phrase "capable of being changed so that it fits" is supported directly by the definitions of "adjustable" and "adjust," whereas TAG's proposed phrase "capable of being lengthened or shortened" is somewhat narrower, and does not appear in TAG's cited source. The court thus declines to adopt TAG's version of "adjustable."

TAG's interpretation of "strap" is more in keeping with the specification and the dictionary definitions. Plaintiff's proposal--"strips of suitable flexible material"--omits the references to "leather" and "narrow" found in both dictionary definitions quoted above. The court notes, however, that the omission of "leather" is less significant, for even TAG's proposed construction--"leather or other material"--if read literally, means "any material"; and the same is true of the phrase "leather or other suitable material" that appears in the preferred embodiment. The word "narrow" is a more significant limitation, but one that is consistent with the intrinsic evidence, for the straps shown in the patentees' drawings are indeed narrow. (‘226 Patent, figs. 1 & 2.) Given that both parties' cited dictionary definitions use the term "narrow" in defining "strap," and given that this limitation is not inconsistent with the intrinsic evidence, the court does not find the use of the term to be inappropriate. 17

17 The dispute over the meaning of "adjustable straps" is likely much ado about nothing. As TAG points out, both Serewicz and Gallucci testified in their depositions that adjustable straps were used on existing chest protectors, (Serewicz Dep., at 44-45; Gallucci Dep., at 78); and it does not appear that Plaintiff intends to argue that the straps in the ‘226 chest protector were somehow novel, or that the patentees invented any particular kind of adjustable strap.

The court thus construes "adjustable straps" as "narrow strips of leather or other suitable flexible material that are capable of being changed so that the chest protector fits."

C. Claim Construction

Above I have concluded that the undisclosed information was material and that there is at least a genuine issue of fact as to whether Hoffman possessed the requisite intent. These conclusions were founded largely on the fact that the PTO examiner, during the continuation application, rejected the very similar continuation claims on the basis of the 1980 article. Part of Latentier's defense, however, is based on a claim construction argument that is largely unrelated to the issues discussed above.

The central claim construction dispute puts the parties in positions that are initially counterintuitive. IP, the accused infringer, asserts that the patent is very broad, whereas Latentier, the patentee, argues for its narrowness. Essentially, Latentier argues that IP has created a straw man by pressing an "impossibly broad reading" of the '916 patent. Specifically, Latentier argues that IP's reading of the patent fails to account for the special meaning of the term "adjusting." (Dkt. # 40 at 12.) Claim 1 of the patent reads as follows:

1. A method of controlling the operating speed of a papermaking facility comprising the steps of:

Determining a desired operating speed, the desired operating speed dependent on at least one economic variable that varies depending on the operating speed; and adjusting the operating speed in response to the determination.
In IP's view, "adjusting" incorporates any kind of manipulation of the operating speed to achieve the desired speed. For instance, it could involve the manual manipulation of the speed by an employee or by the machine not using (for example) a vacuum pump -- i.e., the kinds of methods that were used at Green Bay Packaging for years, according to the employees IP talked to. (Borowski Aff., P 6.) Any kind of speed "adjustment" is fair game. As such, the use of the slowing-down methods at Green Bay Packaging, as described in the 1980 article, constitutes a prior use that Hoffman should have disclosed to the PTO.

By contrast, Latentier argues that "adjusting" has a more narrow meaning, namely: "adjusting directly by control of the machine drive." Latentier notes that this was the construction it proposed in the claim chart it exchanged with IP during this litigation, and IP did not object to it. More substantively, Latentier argues that the entire purpose of the patent is to create an automated system or program that controls the speed of the machines through the machine drive rather than through the kind of manual and ad hoc alterations employed at Green Bay Packaging. In the first paragraph of the summary of the invention, for example, the specification explains: "According to a first aspect of the invention a method of controlling, and apparatus, which can include a computer program, that controls, the operating speed of a papermaking facility includes determining a desired operating speed . . . [which] is adjusted (if necessary) in response to the determination." ('916 patent, col. 4, ll. 18-26.) This makes it clear that "adjusting" is not simply tweaking by hand or using some other method; the adjusting must be accomplished by an apparatus or computer program that controls the operating speed. This theme is echoed throughout the patent. For example: "The present invention is, in one embodiment, a method and apparatus for an integrated control system in a manufacturing facility . . . that implements an optimal operating speed . . ." (Id., col. 5-6, ll. 66-2.) Finally, Latentier notes, the patent examiner, in allowing the patent, observed that prior art (Keys) discloses that "the process of making paper is controlled on economic factors." But, he found, "the prior art does not teach or suggest in regard to claims 1, 21 & 33, a system which senses a variable of a paper making process . . . determining the desire[d] operating speed based on the sensed variable and adjusting the actual operating speed of the paper making process in response to the sensed variable." (Dkt. # 40 at 14.) Thus, Latentier argues, the examiner agreed with its view that "adjusting" meant "adjusting directly by control of the machine drive."

IP argues that the patent explicitly notes that the operating speed is not limited to being directly controlled by the machine drive: "While operating speed of a paper machine may be adjusted directly by control of the paper machine drive, it is often adjusted by changes to the steam pressure for the paper machine dryers." ('916 patent, col. 2, ll. 4-8.) But this statement is found within the "background" section of the specification. It is not an effort to explain the '916 invention but is instead a reference to the history and then-current methods of adjusting operating speed. As such, it does not support IP's construction of the claim term.

IP further bases its broad construction on the deposition it conducted of Roger Hoffman. When asked if Latentier contends that IP infringed the patent "when it slows output to meet customer demand," Hoffman responded as follows: "Well, again, I don't know that we have defined your definition of demand, but, I think in the classic definition of demand absolutely, because demand is the most fundamental economic variable." (DPFOF P 71.) Thus, Hoffman himself has ostensibly claimed that a company would infringe his patent if all it did was to slow output to meet customer demand. Although IP concedes that such a broad patent would be "remarkable," that is what Hoffman himself claims. (Dkt. # 32 at 1.) And because he used the process taught in the patent long before he applied for the patent (in 1998), this prior use invalidates the patent and renders his failure to disclose the prior use inequitable conduct.

A few snippets from deposition testimony do not bear on the question of what "adjusting" means, however. Hoffman's current beliefs and statements in depositions do not shed light on what he should or should not have disclosed to the PTO a decade earlier, and his own view of the patent's scope is simply not material. 4 Otherwise, the public at-large would not be able to rely on the plain terms of patents but would instead be forced to depose inventors to learn their secret and subjective views of the scope of their inventions. Accordingly, I do not find Hoffman's deposition testimony probative of the meaning of the term "adjusting." (Even so, however, it is noteworthy that the inventor does not appear able to articulate a more narrow embodiment of his invention that would correspond to the narrowing construction his company's lawyers now propose.)

Footnotes

---

554
Presumably Hoffman's statements could be suggestive of intent to deceive, but I do not rely on them in construing the actual claim terms.

Most problematic for Latentier, however, is the glaring fact that the examiner actually rejected the continuation claims on the basis of the 1980 article, as discussed at length above. If the patent examiner actually believed that "adjusting" in the '916 patent had the specific narrow meaning Latentier now attributes to it, then why would the examiner have found the 1980 article -- which describes a much broader notion of "adjusting" -- to be a prior publication of the same invention? That article says nothing (as Latentier itself argues) about "adjusting directly by control of the machine drive" -- it is instead a broad description of a general method of increasing efficiency. If the patent examiner believed that the 1980 article was a prior publication of an invention very similar to the '916 patent, then it is likely an examiner would believe the '916 used the broader, common definition of "adjusting" rather than the more narrow one Latentier now proposes. In fact, the continuation patent was only allowed after Hoffman added the "adjusting directly by control of the machine drive" language to its claims. (Dkt. # 32 at 10.) If it was clear from the specification that "adjusting" already had that meaning, why was it necessary to add that language in the continuation patent? This strongly suggests that "adjusting," as used in the '916 patent, does not carry the narrowing limitations Latentier now proposes.

In addition, I am mindful of the impropriety of importing limitations from the specification into the claims, and of relying on embodiments to redefine or limit claim terms. Phillips v. AWH Corp., 415 F.3d 1303, 1323 (Fed. Cir. 2005) ("[A]lthough the specification often describes very specific embodiments of the invention, we have repeatedly warned against confining the claims to those embodiments.")

Thus, for present purposes I reject Latentier's argument that the non-disclosed information was immaterial because the information did not relate to an invention that adjusted speed "directly by control of the machine drive." Even so, I am mindful of the fact that we have not undertaken explicit claim construction proceedings in this case. Although the parties have placed the inequitable conduct counterclaim on the front burner, Latentier has based part of its inequitable conduct defense on claim construction, which means it would appear that the term "adjusting" must be construed definitively before I could rule on materiality. Thus, it seems necessary to incorporate some kind of claim construction proceeding into the bench trial on inequitable conduct. My preliminary claim construction, as discussed above, is that "adjusting" simply means "adjusting." I will allow Latentier to argue otherwise in the context of a bench trial on inequitable conduct, but because the issue is a discrete one that has already been briefed, I do not expect it to consume a large amount of additional resources.

In this disputed term, the phrase "adjusting the pressure" is part of four phrases appearing in two different patents, as noted above. The parties dispute whether these four phrases are sufficiently related to be construed as one term, or whether they should be construed separately. They also dispute whether "adjusting" should be construed as having its ordinary meaning, or whether the "adjusting" can be done only at a particular step, as part of an ordered sequence of steps.
Plaintiffs argue that the four phrases actually comprise four terms in four distinct claims. Plaintiffs assert that the court should decline to construe these terms, asserting that they are not sufficiently closely related for joint construction as a single term, that they contain many potential claims for construction, and that Fresenius appears to be attempting to get around the court's ten-term limit.

In addition, however, plaintiffs contend that these terms do not require construction because they are plain and unambiguous. Thus, plaintiffs propose that the two terms from the '062 patent be construed as "adjusting the pressure in the control volume in accordance with the measured pressure" and "adjusting the pressure in accordance with the measured pressure;" and that the two terms from the '369 patent be construed as "adjust[ing] the fluid pump pressure in accordance with the relative elevation to obtain a desired pressure at the distal end."

Fresenius, on the other hand, proposes that the two terms from the '062 patent be construed as "adjusting the pressure in the control volume based on (1) the system correction factors obtained during calibration and (2) the measured pressure in the control volume after the liquid is placed in fluid communication with the distal end of the fluid line;" and that the two terms from the '369 patent be construed as "adjusting the pressure in the control volume based on the estimate provided by the controller of the height differential between the pump and the distal end of the fluid line [to obtain a desired pressure at the distal end]."

Both sides proffer proposed constructions that include the words "adjusting the pressure" to explain the meaning of "adjusting the pressure;" and "adjusting the pressure in the control volume" to explain the meaning of "adjusting the pressure in the control volume." Thus, it cannot be that they seek a judicial construction of "adjusting the pressure" or "adjusting the pressure in the control volume."

While plaintiffs argue that the words in the claims themselves are sufficient ("in accordance with the measured pressure" in the '062 patent, and "in accordance with the relative elevation to obtain a desired pressure at the distal end" in the '369 patent), it appears that Fresenius seeks construction of the words that follow "adjusting the pressure" in claims 1 and 16 of the '062 patent; the words that follow "adjust[ing] the fluid pump pressure" in claims 1 and 7 of the '369 patent; 3 and the words that follow "adjusting the pressure in the control volume" in claims 10 and 21 of the '062 patent.

--- Footnotes ---

3 Fresenius proposes construing "adjust[ing] the fluid pump pressure" as "adjusting the pressure in the control volume."

--- End Footnotes ---

In other words, Fresenius proposes a construction of the phrases "in accordance with the measured pressure" ('062 patent) and "in accordance with the relative elevation" ('369 patent). Specifically, Fresenius asserts that "in accordance with the measured pressure" means "based on (1) the system correction factors obtained during calibration and (2) the measured pressure in the control volume after the liquid is placed in fluid communication with the distal end of the fluid line," and that "in accordance with the relative elevation" means "based on the estimate provided by the controller of the height differential between the pump and the distal end of the fluid line."

The court finds that the claims and specifications of the two patents do not suggest a construction other than the plain and ordinary meaning of the words "in accordance with the measured pressure" and "in accordance with the relative elevation." The specification does not support Fresenius' additions to the claim terms, but rather mirrors the claim language itself. Thus, there is no need for the court to construe these terms.

Both the '062 patent and the '369 patent relate to fluid flow control devices, and, more specifically, to regulating pump pressure." '062 patent, 1:6-7; '369 patent, 1:10-11. In claims 1, 10, 16, and 21 of the '062 patent, a "method for regulating pressure in a fluid line or at the distal end of a fluid line comprises "a fluid flow control system" with "means for measuring pressure." Each of these claims also includes the step of "measuring pressure," and the step of "adjusting the pressure in accordance with the measured pressure."

In claims 1 and 7 of the '369 patent, a "system for regulating fluid pump pressures" comprises "a fluid flow control device"
that includes "pressure means for pressurizing . . . at least one liquid volume;" "a transducer . . . for measuring pressure;" and "a controller" used "for controlling the fluid pump pressure," for estimating "a relative elevation between the fluid control device and the distal end" based on information received from the transducer; and for "adjusting the fluid pump pressure in accordance with the relative elevation to obtain a desired pressure at the distal end."

In both the '062 patent and the '369 patent, the "Summary of the Invention" states that the inventions provide a method for "regulating fluid pump pressures based on the relative elevation between a fluid flow control device and a distal end of a fluid line by providing at least one liquid volume in valved communication with the distal end." '062 patent, 1:56-60; '369 patent, 1:60-64. After "[t]he pressure measurement of the liquid volume is calibrated, . . . valving is opened to establish communication between the liquid volume and the distal end of the fluid line." '062 patent, 1:60-63; '369 patent, 1:64-67. "A pressure associated with the one liquid volume is measured, and the fluid pump pressure is adjusted in accordance with the measured pressure." '062 patent, 1:63-65; see also id, 2:5-7 (same); '369 patent, 1:67-2:2 (same); id., 2:9-11 (same).

The "Detailed Description of Specific Embodiments" describes "[a] computer program product" which "may be employed for implementing the methods" of the invention. This computer program product may include "program code for calculating a desired fluid pump pressure" as well as "program code for adjusting the pump pressure in accordance with the desired pump pressure." '062 patent, 6:5-20; '369 patent, 6:9-24 (same); see also '062 patent, 6:21-28 ("The computer program product may be run on a data processing unit, which acts as a controller. Such a unit may be capable of adjusting the flow rate of fluid being pumped to the distal end 208 by adjusting the pump pressure. For example, if the calculation determined that the distal end 208 of the fluid line 204 and the fluid control system were at the same height, the pump pressure might be safely increased above 75 mm Hg resulting in faster flow rate."); '369 patent, 6:25-32 (same).

Both patents also explain that "the pressure in the pumps 300 and 310 may be adjusted in process 517 to accommodate the height differential." '062 patent, 6:2-4; '062 patent, 6:6-8; see also '062 patent, 6:55-7:3; id., 7:9-26; id., 8:52-67, it does not follow that "adjusting the pressure" should be construed as requiring adjustments based on (1) system correction factors obtained through calibration, and (2) measured pressure in the control volume after establishing fluid communication with the fluid line's distal end. The pressure is simply adjusted "in accordance with the measured pressure."

Fresenius' proposed construction of the terms from the '369 patent also reflects an improper attempt to import limitations from the '369 specification into the claims - specifically, the inclusion of "control volume" in their proposed construction. While "control volumes" are claimed in the '062 patent, they do not appear in any claim limitation in the '369 patent.

In addition, Fresenius has chosen to substitute "relative elevation" in the claim with "estimate provided by the controller of the height differential between the pump and the distal end of the fluid line." The words used in the patent are sufficiently concise without the additional words that Fresenius has improperly attempted to import from the specification. See, e.g., '369 patent, 6:4-8 ("Subsequently, the pressure at the distal end 208 of the fluid line 204, P (distal end), due to the elevation differential may be calculated in process 516. Finally, the pressure in the pumps 300 and 310 may be adjusted in process 517 to accommodate the height differential.").

"Adjusting the pressure in the control volume in accordance with the measured pressure" means "adjusting the pressure in the control volume in accordance with the measured pressure."

"Adjusting the pressure in accordance with the measured pressure" means "adjusting the pressure in accordance with the measured pressure."

"Adjust[ing] the fluid pump pressure in accordance with the relative elevation to obtain a desired pressure at the distal end" means "adjust[ing] the fluid pump pressure in accordance with the relative elevation to obtain a desired pressure at the distal end."
c. "an adjustment system arranged to adjust said at least one component"

Plaintiff proposes the construction "a system for adjusting the operation of at least one component." Defendant, however, contends that this phrase requires a means-plus-function limitation. This phrase is similar to that discussed above. "System" is of the same sort of generic term as "means," "mechanism," and "device." See Mass. Inst. of Tech., 462 F.3d at 1354. Likewise, while there is a presumption that means-plus-function limitations do not apply to claims that do not include the word "means," this presumption is rebutted if the claim does not "recite[] sufficiently definite structure." TIP Sys., 529 F.3d at 1374 (citing CCS Fitness, 288 F.3d at 1369). The modifier "adjustment" does not provide the requisite structure. See id. The court construes this claim as a means-plus-function limitation. The parties then disagree as to whether the claim should include an explanation of what "adjusting" means in the context of an airbag. Plaintiff offers no construction, whereas Defendant proposes "adjusting the manner in which an occupant restraint device is deployed." Because Defendant's proposed construction makes the phrase easier to read without altering the meaning of the claim, the court will construe the function as proposed by Defendant. However, the court will use for the language describing the adjustment in the context of an airbag to parallel the language the court has construed above.

The parties also disagree regarding the construction of the structure. Primarily the dispute involves whether the structure includes a processor. Plaintiff argues that the structure includes a processor. Defendant, however, argues that the claim later specifically includes a processor, and therefore should not do so in this phrase. Defendant also argues that the specification does not disclose a structure that includes a control circuit, the corresponding wiring, transmitter, and algorithm, or a seated-state detecting unit. In response, Plaintiff argues that these may but need not be part of the structure, but that the claim covers all possible corresponding structures. (Pl.'s Reply at 11.) The parties do not materially dispute any of the other components of the structure.

The court will substantially construe the structure of the claim according to Plaintiff's proposed construction, see Bell Comm'ns Research, Inc., 55 F.3d at 620 (quoting Envirotech Corp., 730 F.2d at 759); however, the court will not include a processor because, as Defendant correctly identifies, this is the next component listed in the claim as comprising the vehicle of Claim 1. Plaintiff does not provide any indication that it intends to include multiple processors in the claim, and therefore the court will not construe this phrase to include one. As for the control circuit, the corresponding wiring, transmitter, and algorithm, or seated-state detecting unit, the specification, as cited by Defendant states:

'T029 Patent col. 209 l.14-25. The court will not include a control circuit, the corresponding wiring, transmitter, and algorithm, or seated-state detecting unit. While these structures are described in the specification, Plaintiff states in its brief that they need not be associated with the function of adjustment. (Pl.'s Reply at 11.) Accordingly, the court will not include these structures in its construction because they are not necessary structures to the function.

Therefore, the court will construe the "an adjustment system arranged to adjust said at least one component" as follows:

Function:

adjusting the manner in which the one or more components operate. In the context of an airbag, 'adjustable' refers to the ability to control inflation or deflation of the airbag, and thereby adjust the manner in which the airbag is deployed. For example, this can include adjusting the direction of the airbag, the flow of gas into or out of the airbag, the rate of generation of gas, or the amount of generated gas.
According to the document, the following structures are mentioned:

- an orifice between an inner bladder and an outer container;
- seat positioning actuators or motors;
- seat and/or headrest motors;
- adjustable airbag inflators, control valves, exit valves, and/or exit orifices;
- seatbelt pretentioner or force limiter;
- inflation combustion chamber and a pressure control system associated with an airbag.

The chief evil of Fitness Quest's proposed construction is that it looks to the preferred embodiment -- and apparently only the preferred embodiment -- of the invention as represented in Figure 8 to construe this term. Fitness Quest is correct in contending that Figure 8 reflects a telescoping structure, with a male and a female member, that additionally is adjustable as to angle with reference to the user support. That said, there is nothing in Claim 28 tending to support Fitness Quest's contention that the concept of "adjustably coupled" begins and ends with this embodiment. The Federal Circuit has "expressly rejected the contention that if a patent describes only a single embodiment, the claims of the patent must be construed as being limited to that embodiment." Phillips v. AWH Corp., 415 F.3d 1303, 1323 (Fed. Cir. 2005).

Figure 8 of the 749 Patent reflects a drawing of a device on which a person is resting in a supine position on the depicted apparatus. Fitness Quest seeks to limit the adjustability reflected in the language of Claim 28 to the specific adjustability features of this drawing. Such an effort plainly is not permissible. A court construing claim terms may not limit its reading of those terms on the strength of a figure depicting a single preferred embodiment. Acumed LLC v. Stryker Corp., 483 F.3d 800, 807 (Fed. Cir. 2007); see also TI Group Auto. Sys. (N. Am.), Inc., v. VDO N. Am., L.L.C., 375 F.3d 1126, 1136 (Fed. Cir. 2004). Rather, "a patentee is entitled to a definition that encompasses all consistent meanings" of the term. TI Group, 375 F.3d at 1136.

As Monti noted at the Markman hearing, there is no requirement that the adjustability referenced in Claim 28 be accomplished by means of a telescoping construction, or that it provide for an angular adjustment. "All consistent meanings" of the term "adjustably coupled" include embodiments beyond that reflected in Figure 8 and the claim language must not be so limited without the patentee's express consent to the limitation, which Monti plainly has not given here. See Playtex Prods., Inc., v. Procter & Gamble Co., 400 F.3d 901, 908 (Fed. Cir. 2005) (citation omitted). The referenced term does not require construction.

I. Advanced Axially

Claims 1(e) and 2(e) disclose a compression ring that is "advanced axially" over the cylindrical body member. Using definitions from Webster's Third New International Dictionary for "advance" and "axial," defendant proposes a construction
of the term "advanced axially" to mean "moved forward on or along an axis." Plaintiff does not deny that defendant's definition is an accurate reflection of the ordinary meaning of the phrase. However, plaintiff argues that the "'194 specification repeatedly teaches that the compression ring slides over the connector body." Plt.'s Cl. Constr. Reply Br., dkt. # 113, at 16. Thus, plaintiff proposes a definition of "advancement along an axis by sliding."

Plaintiff's proposed construction fails because, again, it attempts to read in limitations from the specification that are not present in the claims. Plaintiff's own definition recognizes that sliding is one way "advancement along an axis can occur." Although the specification does discuss sliding, the patent does not limit the type of movement to sliding. Accordingly, I construe "advanced axially" to mean "moved forward on or along an axis."

II.

"To anticipate a claim, a prior art reference must disclose every limitation of the claimed invention, either explicitly or inherently." In re Schreiber, 128 F.3d at 1477. Anticipation of a patent claim requires a finding that the claim at issue "reads on" a prior art reference. See Titanium Metals Corp. v. Banner, 778 F.2d 775, 781, 227 U.S.P.Q. (BNA) 773, 778 (Fed. Cir. 1985). In other words, if granting patent protection on the disputed claim would allow the patentee to exclude the public from practicing the prior art, then that claim is anticipated, regardless of whether it also covers subject matter not in the prior art. See id. at 781. Specifically, when a patent claims a chemical composition in terms of ranges of elements, any single prior art reference that falls within each of the ranges anticipates the claim. See id. at 780-82 ("It is also an elementary principle of patent law that when, as by a recitation of ranges or otherwise, a claim covers several compositions, the claim is 'anticipated' if one of them is in the prior art.")).

In chemical compounds, a single prior art species within the patent's claimed genus reads on the generic claim and anticipates. See In re Gosteli, 872 F.2d 1008, 1010, 10 U.S.P.Q.2d (BNA) 1614, 1616 (Fed. Cir. 1989).

As noted previously, both Egly and Butterworth disclose blasting compositions with ingredients identical to those of the Clay patent and its reissue in overlapping amounts. The only element which is arguably missing from the prior art is the requirement that "sufficient aeration [be] entrapped to enhance sensitivity to a substantial degree." To decide the issue of anticipation, therefore, the district court examined whether "sufficient aeration . . . to enhance sensitivity" was inherently part of the prior art compositions. That decision, in turn, required the trial court to interpret the claim term "sufficient aeration." By looking at the express language of the claims and the patent's written description, the district court concluded that the claim term "sufficient aeration" included both interstitial air (between oxidizer particles) and porous air (within the pores of oxidizer particles).

The first task of this court on appeal is to construe independently the disputed claim term. This question requires this court to determine whether the claim term "sufficient aeration" includes porous air, as the trial court determined. The claim term "sufficient aeration" does not limit the air content of the composition to interstitial air. Rather, the broad term "aeration" contains no qualitative limits on the kind of air exposure, only the quantitative limit that the air exposure be "sufficient" to enhance sensitivity. If the inventor intended "sufficient aeration" to carry qualitative limits, he also did not express that intention in the patent's written description. The specification gives no explicit definition of the phrase "sufficient aeration . . . to enhance sensitivity," which appears in the patent for the first time in the claims.

It is, of course, possible that the inventor did not include qualitative limits on the term "sufficient aeration" in the specification because those of ordinary skill in the art understand that only interstitial air enhances sensitivity and satisfies the claim's language. See Autogiro Co. of Am. v. U.S., 181 Ct. Cl. 55, 384 F.2d 391, 397, 155 U.S.P.Q. (BNA) 697 (Ct. Cl. 1967) ("Claims cannot be clear and unambiguous on their face."); Markman, 52 F.3d at 986 ("The focus in construing
disputed terms in claim language is . . . on the objective test of what one of ordinary skill in the art at the time of the invention would have understood the term to mean."). The trial record, however, shows that those of ordinary skill in this art at the time the patent application was filed knew that both interstitial and porous air enhance sensitivity. Dr. Clay himself, the inventor of the patents in suit, testified that air from any source would contribute to the explosion of a heavy ANFO composition and, particularly, air trapped within the pores of porous prilled AN. Therefore, this court detects no error in the district court's conclusion that "sufficient aeration . . . to enhance sensitivity" is understood by those of ordinary skill in the art to include both interstitial and porous air. The district court appropriately construed the claims at issue to include aeration from both sources.

156

B. "AFFECTED AREA"

The competing constructions of the phrase "affected area" are overdrawn.

Plaintiffs urges the construction of "affected area" as that part of the skin which comes into contact with urushiol at the point in time that the skin displays an outward manifestation of the contact, arguing that the inventor's goal was the treatment of a manifestation of contact dermatitis. Implicit in this construction is the fact that the solution would not be applied to the skin until a rash develops.

Plaintiffs' attempt to impose a limit on the time of application of the solution to the skin is not tenable. 4 As defendants note, the inventor's statement in the written description supports a finding that there is no temporal element to the phrase, stating:

Solution has historically consisted of attempting to remove the oil as quickly after exposure as possible; applying rubbing alcohol, washing affected areas with water, and showering with soap and water. In many instances, however, people either fail to fully remove the toxin before it has bound to the skin or don't realize they have been exposed until after the rash appears.

(col 2 ll 40-46) (emphasis added). Moreover, there is nothing in the written description that suggests application of the composition begins with a manifestation of the effect of the urushiol on the skin. Rather, application of the solution may begin as soon as there is an awareness of the skin contacting the urushiol. Indeed, as noted above, an object of the invention is to provide a solution to "block" urushiol's "allergic reaction." Defendants are correct in stating that "no dermatitis-like breakout is required in the patent claim or patent specification and the term 'affected area' should not be construed to require such physical manifestation in order to define the area."

4 Indeed, if this was the case, no one would carry the solution with them when they went for a walk in the woods for example to apply at the time of contact, and would instead wait to apply the solution when a rash develops.

"Affected area" is not a term of art and its ordinary meaning is well understood. The American Heritage Dictionary of the English Language defines "affected" as "acted upon" and "area" as "a distinct part."

"Affected area" simply means the area of the skin which comes into contact with urushiol.

157

The Court construed the disputed claim terms as follows:

"affixed" means secured
"adjusting" means its functions are: to
frictionally receive the belt; to
hold the belt to tighten the harness;
and to release the belt to tighten
it; its corresponding structures are:
cam member and bar, or a bottom wall,
cam bar and bar, that are described
in the '889 patent at col. 1, 55-57,
col. 1,ll. 63-68 to col. 2, 1-8,
and at ll. col. 3, 65-68 to col. 4,
1-ll. ll. 58, and Figures 3-5, or
their equivalents
"cam member" means
an eccentrically revolving part
with a radial bearing surface; and
"bar" means
a part that is longer than it is
wide.

A. Asserted Claims

The '585 and '169 patents each describe disposable multifunctional physiological electrodes for cardiac care. These electrodes utilize an electrically conductive plate, preferably constructed of tin. In addition, the electrodes use an electrically conductive medium, such as a saline gel, located between the plate and the patient's skin in order to improve the transfer of electrical energy between the plate and the patient. At issue in this motion is the limitation in each of the asserted claims that a portion of stannous (tin) chloride be "affixed" to the conductive plate. According to the patents and R2's expert, the use of a tin plate and stannous chloride are important to the electrode's multifunctional capabilities, particularly by allowing its "quick recovery" from the electrical bursts of defibrillation to resume accurate monitoring of the patient. In addition, the specifications explain that tin and stannous chloride are able to conduct high energy currents produced by defibrillation without deterioration.

The specifications of each patent provide two alternative locations for the stannous chloride between the tin plate of the electrode and the patient: (1) in the saline gel, or (2) by "forming a layer of chloride directly on the metal." R2 alleges that the accused electrodes infringe claims 1, 2 and 4 of the '585 patent. These claims each describe a "disposable physiological electrode element for use in monitoring or stimulating the heart." The critical limitation of all three claims requires:

a quantity of stannous chloride affixed to at least a portion of said tin between said tin and the skin of a patient.

R2 also alleges that the accused electrodes infringe claims 1 and 2 of patent '169. The critical limitation for each of these claims similarly requires:

a chloride of said electrically conductive metal being affixed to said outer surface of said metal to provide enhanced monitoring capability through the same electrode used for stimulation.

In sum, R2 asserts that the defendants' electrodes infringe the '585 and '169 patents because (1) the electrodes use stannous chloride, and that (2) this stannous chloride is "affixed" to the surface of the tin conductive plate of the electrodes.

R2 does not argue that stannous chloride is sprayed onto the surface of the accused electrodes. Like R2's electrodes, the accused electrodes use a conductive tin surface. During the manufacturing process, Katecho places the tin contact with either a conductive adhesive or a wet gel, both of which contain potassium chloride and/or sodium chloride. Relying on the deductions of their expert witness, R2 argues that these chloride compounds then react with the tin from the surface, breaking apart to form stannous chloride directly "affixed" to the electrode's tin surface.

Defendants move for summary judgment, arguing that, (1) there is no genuine issue showing that stannous chloride is present on the Katecho electrodes, and (2) even if there were an issue, any stannous chloride could not be "affixed" to the
electrodes' conductive plate as required by the patents' claims. Defendants contend that R2 provides no evidence directly revealing the presence of stannous chloride on the tin plate of their electrodes, but only present a speculative theory that it may form from the combination of sodium chloride and tin. Assuming arguendo that stannous chloride is present, defendants argue that it could not have been "affixed" as required by the asserted claims. Defendants propose that the specifications, prosecution history and prior art of the electrode patents all indicate that to have stannous chloride "affixed" to the conductive plate can only mean that it is separately applied and not formed by chemical reaction.

B. Analysis

There are two steps to infringement analysis. First, the court must determine the meaning and scope of the patent claims asserted. Second, the court must compare the construed claims to the accused device. Markman v. Westview Instruments, Inc., 52 F.3d 967, 979 (Fed. Cir. 1995), aff'd, 134 L. Ed. 2d 577, 116 S. Ct. 1384 (1996). The first step, claim construction, is a question of law. Markman v. Westview Instruments, Inc., 134 L. Ed. 2d 577, 116 S. Ct. 1384 (1996). The second step, determining whether the accused device infringes, is a question of fact. Texas Instruments Inc. v. U.S. Int'l Trade Comm'n, 988 F.2d 1165, 1172 (Fed. Cir. 1993).

1. Claim Construction

In the recent Markman decision, the Federal Circuit clarified the proper methodology for construing a patent claim. To interpret a claim, a court must consider the terms of the claims themselves, the specifications, and the prosecution history. Markman, 52 F.3d at 979. Claim construction begins with the language of the claim itself. North American Vaccine, Inc. v. American Cyanamid Co., 7 F.3d 1571, 1575 (Fed. Cir. 1993). These terms are read in light of the specification, which may act as a sort of dictionary providing clues to how specific terms are used. Markman, 52 F.3d at 979-80; see Autogiro Co. of Am. v. U.S., 181 Ct. Cl. 55, 384 F.2d 391, 397 (Ct. Cl. 1967) ("words must be used in the same way in both the claims and the specification"). The prosecution history similarly may present the patentee's understanding of specific claims as well as limit the meaning of the claims' terms to exclude any interpretation that was disavowed by the inventor in his or her effort to obtain the patent. Markman, 52 F.3d at 980. In addition, the court may consider extrinsic evidence to better understand the patent and the embodied art, but not for the purpose of varying or contradicting the terms of the claims. Id. at 980-81.

Defendants' first argument in their motion turns on the legal construction of the claim language requiring "a quantity of stannous chloride affixed to at least a portion of said tin." Defendants propose that the term "affixed" excludes stannous chloride that forms as a result of a chemical reaction between the electrode's surface and an applied substance. Specifically, defendants define "affixed" as requiring that the stannous chloride be directly deposited or sprayed onto the surface of the conductive plate. In support, they point to the distinction in each patent's specification between locating the stannous chloride in the gel and locating it directly on the electrode's conductive plate. 4 Defendants contend that this distinction indicates that the second alternative is limited to the separately placing stannous chloride onto the surface.

--- Footnotes ---

4 Although distinct in some aspects, the specifications of the '585 and '169 present essentially identical descriptions of the electrodes with respect to the stannous chloride.

--- End Footnotes ---

Defendants also argue that the prosecution history requires that "affixed" exclude stannous chloride that is somehow derived from the gel. In response to the patent examiner's ("Examiner") rejection of his application, Heath amended the asserted claims to replace the original limitation, that the stannous chloride be "coated on" the conductive surface, with the limitation that it be "affixed to" that surface. The Examiner had rejected the application in light of the prior art reference of a physiological electrode patented by Kado, et. al ("Kado patent"). The Kado patent disclosed an electrode using a tin wire submerged in a solution of stannous chloride contained in a ceramic container. In his remarks to his amendment, Heath distinguished the Kado electrode by noting that its stannous chloride merely "contacted" the tin surface of the electrode, but was not "affixed" to it. The remarks further explained that:

the affixation of the stannous chloride to the tin, as described and shown in this application, is of more significance than originally anticipated. It was thought that the stannous chloride could be located in the saline gel, but subsequent work has
shown that the stannous chloride rapidly migrates to the skin of the patient, where it causes skin irritation.

Defendants contend that Heath's efforts to distinguish his electrodes by emphasizing that the stannous chloride is not located in the gel indicate that "affixed" cannot refer to stannous chloride that is derived from the gel through a chemical reaction.

Words in patent claims are given their ordinary and accustomed meanings unless the specifications or prosecution history indicate otherwise. In re Paulsen, 30 F.3d 1475, 1480 (Fed. Cir. 1994). In general usage, "affixed" means "to be attached physically." See Webster's New Third International Dictionary (1963). As used in the limitation, "affixed" describes the location and state of the stannous chloride in relation to the remainder of the electrode. The terms of the claims do not indicate that "affixed" refers to a process by which the stannous chloride is bound to the conductive plate, but only that it refers to the result of that process. See CVI/Beta Ventures, Inc. v. Custom Optical Frames, Inc., 893 F. Supp. 508, 519 (D.Md. 1995) (limitation that element be in "work-hardened pseudoelastic metallurgical state" speaks to the structure, not the process, of manufacture). The asserted claims are all product claims, specifically apparatus claims, and not method or process claims. None of the other limitations in any of these claims appear to refer to a process of manufacture. The parties present no evidence revealing a contrary technical definition of "affixed." Therefore, the claims' use of the term "affixed" indicates a structural relationship between the stannous chloride and the electrode's tin plate.

The specifications further confirm that "affixed" is not limited to stannous chloride separately applied to the conductive plate. As defendants argue, the specifications distinguish between two possible locations for the stannous chloride: on the surface of the conductive plate or in the saline gel. However, this distinction does not refer to the manner in which the stannous chloride is located. Neither specification states that the only alternative to locating the stannous chloride in the gel is to spray it onto the surface. Instead, they repeatedly describe the alternative location of the stannous chloride in broad terms such as "forming a layer of the chloride directly on the metal" or refer to stannous chloride as "associated" with the conductive plate. Although they both disclose that the stannous chloride may be "sprayed" onto the surface, this method is clearly suggested as an example:

The stannous chloride may be directly applied to the tin surface, such as by spraying a thin layer thereon. (emphasis added).

A chloride of the conductive metal is located between the conductive metal and the skin of the patient, such as by spraying a layer [] thereof on the metal conductive plate. (emphasis added).

It has been noted that the stannous chloride may be associated with the tin plate 71 by spraying a layer 72 of the stannous chloride on the plate.

Of these three references, two are located in the section revealing the preferred embodiment and the third is contained in an earlier paragraph referring to this preferred embodiment. An applicant is not required to describe every conceivable embodiment of his or her invention, but only the best contemplated mode. See SRI Int'l v. Matsushita Elec. Corp. of America, 775 F.2d 1107, 1121 (Fed. Cir. 1985). Describing this best mode will often require the applicant to include a description of a preferred process for manufacturing the claimed apparatus. But this does not transform a structural limitation into a process limitation. See Constant v. Advanced Micro-Devices, Inc., 848 F.2d 1560, 1571 (Fed. Cir. 1988) ("examples in the specifications will not generally be read into the claims").

The specifications of each patent describe apparatuses--multifunctional electrodes. Outside of their description of the preferred embodiment, there is no reference to the method of manufacture. The patents allude only to the structure of the electrodes as important to their utility: the use of stannous chloride in conjunction with tin within electrodes designed for
both monitoring and defibrillation. They do not imply that the method of production or applying the stannous chloride will have any important impact on the electrode's utility.

The prosecution history is no more helpful to the defendants' proposed construction. In his remarks, Heath explained that the "affixation" of the stannous chloride distinguished the Kado reference because the Kado electrode's tin surface was merely "in contact" with the stannous chloride. These remarks argued that the significance of the bonded state of the stannous chloride, in contrast to placing in the conductive medium between the electrode and the patient, is that unbonded stannous chloride may reach and irritate the patient's skin. This argument does not look to the manner of applying the stannous chloride, but only to its structural relationship with the conductive plate and the importance of that relationship to protecting the patient from injury.

Defendants contend that an electrode produced according to the limitations of the Kado patent must also have stannous chloride attached to the tin surface of the wire. In particular, defendants propose that if the wire in the Kado patent were removed from the solution and dried, some stannous chloride would remain "affixed" to the tin. Therefore, to distinguish the claims from Kado, defendants argue that Heath must have added "affixed" as a process limitation describing stannous chloride that was not derived from the gel. But the Kado patent does not contemplate an electrode where stannous chloride has been dried onto the tin wire. Instead, the Kado patent describes an electrode using a wire immersed in a stannous chloride solution.

In fact, the Examiner raised a similar objection in response to the inventor's use of the term "affixed." He stated that while Kado's stannous chloride may be located in the conductive medium, some stannous chloride was also "affixed by the chamber to at least a portion of the tin surface": The container held some stannous chloride in the solution against the tin. This objection indicates that the Examiner similarly interpreted "affixed" to refer to the structural relationship between the tin and stannous chloride, not to the source of the stannous chloride. The record does not reveal that Heath ever narrowed his interpretation of "affixed" to refer to a method of applying the stannous chloride. Neither does it indicate that the Examiner imposed or argued for a narrower interpretation of "affixed." Consequently, the prosecution history does not indicate that "affixed" is limited to a process by which the stannous chloride becomes attached to the conductive surface.

6 Heath submitted several subsequent amendments to the claims before the electrode patents were granted. Defendants have not identified any subsequent changes to the use of the term "affixed." But Heath subsequently added a limitation that the electrodes must be constructed for monitoring or defibrillation. The record reveals that the Examiner agreed that the prior art did not teach the use of tin and tin chloride for use with defibrillation, and that a publication in fact indicated that tin was not a favored material for that purpose.

Defendants confuse R2's allegation that a chemical reaction derives an element from the gel to form stannous chloride with their own position that the stannous chloride may not be located within the gel. In their briefs, defendants repeatedly refer to deposition testimony and documents distinguishing stannous chloride that is "affixed to the electrode versus that which is placed in a solution or gel in contact with the electrode. R2 does not contend that the stannous chloride allegedly "affixed" to the accused electrodes is applied from stannous chloride in the gel. Rather, it asserts that the gel reacts with the tin surface to create stannous chloride attached to the electrode's tin surface. R2 never asserts that stannous chloride is located within the gel.

In a final argument, defendants contend that "affixed" must be construed to exclude stannous chloride that is formed by an electrochemical reaction in order to avoid rendering the asserted claims invalid in light of the prior art. Assuming arguing the presence of stannous chloride on their accused electrodes, defendants argue that their electrodes are obvious in light of five presented prior art references. In particular, defendants assert that the Muir patent, Ruben patent, Allison patent and Frances patent each reveal physiological electrodes using a tin surface in contact with a sodium chloride solution. If R2's alleged chemical reaction occurs on the accused electrodes, defendants argue that it would also have occurred on electrodes constructed according to these prior references. Thus, these prior references unwittingly taught the use of stannous chloride "affixed" to the conductive tin surface of a physiological electrode. If the asserted claims are read to include stannous chloride formed by this reaction, then defendants conclude that these claims would be obvious in light of the prior art and,
consequently, invalid.

7 Defendants also point to the '345 patent as a prior reference that renders the electrode patents obvious. Although it does not disclose the use of either tin or stannous chloride, the '345 patent discloses a defibrillation system using physiological electrodes.

R2 responds that the defendants' analysis is inappropriate, and that neither the electrode patents nor the accused electrodes are obvious in light of the cited prior art. First, R2 argues that infringement is not determined by whether the accused device adopts the combined teaching of the prior art. See Baxter Healthcare Corp. v. Spectramed, Inc., 49 F.3d 1575, 1583 (Fed. Cir. 1995) (finding no requirement that an accused be obvious in light of the prior art). Rather, such claims go to an affirmative defense of validity that defendants must prove by clear and convincing evidence. Second, R2 argues that the accused electrodes are not obvious in light of the prior art. In particular, R2 notes that none of the cited references describe electrodes used or constructed for defibrillation, let alone multifunctional use of either monitoring or defibrillation. Because the prior art allegedly taught away from using tin for defibrillation, R2 contends that using tin and stannous chloride within an electrode constructed for this purpose was nonobvious.

The Supreme Court has mandated that claim construction is a question of law to be resolved by the court. Markman, 134 L. Ed. 2d 577, 116 S. Ct. 1384. As explained above, claim construction is determined by the terms of the claim, the specifications, the prosecution history and, when appropriate, extrinsic evidence. Markman, 52 F.3d at 979. Arising either in the prosecution history or separately submitted as extrinsic evidence, the prior art may be relevant to interpreting the scope of an asserted claim. As part of the file wrapper, prior art presents a legislative history to help determine the proper scope of a claim. See Autogiro, 181 Ct. Cl. 55, 384 F.2d 391, 399. As extrinsic evidence, it may provide important clues to understanding the definition of technical terms of art. Markman, 52 F.3d at 980.

Where the terms of a claim are susceptible to two reasonable interpretations, a court may look to the prior art in order to adopt the interpretation that preserves the validity of the claim. Texas Instruments, Inc. v. U.S. Int'l Trade Comm'n, 871 F.2d 1054, 1065 (Fed. Cir. 1989); see Whittaker Corp. v. UNR Industries, Inc., 911 F.2d 709, 712 (Fed. Cir. 1990). However, a court may not use evidence extrinsic to the patent and prosecution history in order to change the meaning of a claim when that interpretation is made clear by these documents. Southwall Technologies, Inc. v. Cardinal IG Co., 54 F.3d 1570, 1578 (Fed. Cir. 1995); see also Texas Instruments, 871 F.2d at 1065 (court may not read a limitation disavowed during prosecution history back into claim in order to sustain its validity). Although a court may refer to the prosecution history and prior art in interpreting key terms of a claim, it may not use them to impose a limitation from the specifications or any other source. Minnesota Mining & Mfg. Co. v. Johnson & Johnson Orthopaedics, Inc., 976 F.2d 1559, 1566 (Fed. Cir. 1992). Extrinsic evidence should be used only to assist "the court's understanding of the patent, not for the purpose of varying or contradicting the terms of the claims." Markman, 52 F.3d at 981.

As explained above, the patent and prosecution history demonstrate that "affixed" does not exclude electrodes that have stannous chloride formed on their tin surface through a chemical reaction rather than separately applied to the surface. The '585 and '169 patents each present apparatus claims describing multifunctional physiological electrodes. Accordingly, the adjective "affixed" describes the structural relationship of the stannous chloride to the tin plate, and not the method by which the manufacturer places the compound there. Nothing in the patent or file history indicates that "affixed" was limited to stannous chloride that had been sprayed or separately applied onto the surface. Defendants ask this court to interpret "affixed" as an adjective describing a process of manufacture of the apparatus: bonded onto the surface by any manner other than created by a chemical reaction with the conductive plate. But such an interpretation would vary the meaning of "affixed" by reading in a limitation from the prior art or the specification's preferred embodiment. See Minnesota Mining, 976 F.2d at 1566.

Because the meaning of "affixed" is clear from the patent and prosecution history, neither defendants nor the plaintiffs may use the prior art in order to circumscribe its meaning. See Kears v. Chrysler Corp., 32 F.3d 1541, 1547 (Fed. Cir. 1994) (no error in refusing to consider prior art evidence where plain meaning of terms resolved proper interpretation of patent claim). The court does not doubt that patentees will assert patent claims defined by limitations that the patent and prosecution...
history leave ambiguous. In such circumstances, it may be appropriate to interpret a critical term in a manner that would sustain the validity of the patent. But where the alleged infringer raises an alternative interpretation belied by the document and file history, it cannot avoid the required factual analysis of obviousness by presenting its challenge as one of claim construction. If defendants wish to challenge the validity of the asserted patents, they may do so directly. The court concludes, however, that "affixed" as used in the asserted claims describes stannous chloride that attached or bonded with the tin plate, and does not describe only stannous chloride separably applied onto the tin surface.

B. "a bond affixing the retention structure to the resilient body"

The next disputed phrase, "a bond affixing the retention structure to the resilient body," is found solely in claim 8. Only Hologic seeks a construction of this particular phrase. Conceptus, by contrast, asserts that the phrase does not require construction, and that its plain meaning should apply (Br. 9-10). Hologic's proposed construction is shown below.

**CONCEPTUS'S PROPOSED CONSTRUCTION**

Plain meaning applies. No construction necessary.

**HOLOGIC'S PROPOSED CONSTRUCTION**

"solder or a similar type material for affixing the retention structure to the resilient body"

The term "bond" appears in various portions of the specification (see, e.g., cols. 3:57-62, 4:55-57), as well as in the discussion and drawings of particular embodiments (see, e.g., cols. 14:63-66, 15:3-7, 15:32-35, 15:66-16:2; FIGS. 14, 14A-C). To provide a visual example, FIG. 14A below shows a "bond" (206) affixing a retention structure (204) to the resilient body (202) in a particular embodiment of the present invention.

[SEE FIG. 14A. IN ORIGINAL]

Hologic's proposed construction attempts to limit the "bond" between the retention structure and resilient body of the present invention to a "solder or a similar type material" (Resp. 8-10). Nothing in the intrinsic evidence, however, supports such a limitation. While a "solder bond" is mentioned once in the specification, the context of its use has nothing to do with affixing the retention structure to the resilient body (see col. 3:57-62, using a "solder bond" to describe the attachment of the contraceptive device to an installation apparatus). As such, Hologic's construction improperly imports a limitation into the claim without any support in the specification, and must be rejected. See Abbott Labs. v. Sandoz, Inc., 566 F.3d 1282, 1288 (Fed. Cir. 2009)(explaining that courts must be careful to not improperly import limitations from the specification into the claims); Liebel-Flarsheim, 358 F.3d at 905.

This does not mean, however, that plain meaning should apply (Br. 9-10). As Hologic explained at the claim construction hearing, it's underlying concern with respect to the term "bond" -- reflected in its proposed construction -- was that it could be stretched to encompass bonds on a molecular level (Resp. 8-9). Using such a construction, a unitary device, having no disparate parts that have ever been joined together, could still be argued to the jury as meeting the "bond" limitation. Given this dispute over the appropriate meaning of "bond," construction of the phrase is perhaps necessary. See O2 Micro Intern. Ltd. v. Beyond Innovation Technology Co., Ltd., 521 F.3d 1351, 1361 (Fed. Cir. 2008) ("A determination that a claim term 'needs no construction' or has the 'plain and ordinary meaning' may be inadequate when a term has more than one 'ordinary' meaning or when reliance on a term's 'ordinary' meaning does not resolve the parties' dispute.").

Looking to the language of claim 8, the context of the phrase "a bond affixing the retention structure to the resilient body" plainly contemplates the joining of two disparate components of the claimed device: namely, a retention structure and a resilient body. Adding support to this reading of claim 8 is the fact that it separately lists "a resilient elongate body," "a retention structure," and "a bond affixing the retention structure to the resilient body" as three distinct components of the invention (see col. 20:21-33). Given this language, this order finds that the patentee would not have called out "a bond affixing the retention structure to the resilient body" if the resilient elongate body and retention structure were already one and the same. Stated differently, the "bond" in claim 8 would serve no purpose if the retention structure and resilient body were already affixed to each other.
Since courts must interpret claim terms in the context of the claim as a whole, see Kyocera Wireless Corp. v. International Trade Comm'n, 545 F.3d 1340, 1347 (Fed. Cir. 2008), this order finds that a person of ordinary skill in the relevant art at the time the patent was filed would have construed the phrase "a bond affixing the retention structure to the resilient body" as meaning "a bond affixing the retention structure to the resilient body, where without the bond, the retention structure and resilient body would be unaffixed components."

The Fourth Element of Claim 1 is a "pacing means for pacing the ventricles of the heart at a controlled decreasing rate from a base rate to a final rate lower than said base rate after said cardioverting means applies said cardioverting electrical energy to the atria of the heart." (emphasis added).

Medtronic argues that the ordinary meaning of "after" is "subsequent in time," which is an "unbounded term." It argues that the term must be bounded, otherwise the pacing could begin days after the cardioversion. Thus, the ordinary meaning of the term "after" cannot be used. See Combined Sys., Inc. v. Defense Tech. Corp. of America, 350 F.3d 1207, 1215 (Fed. Cir. 2003) (noting that it is incorrect to rely exclusively on a dictionary definition or to allow a dictionary definition to overcome the clear language of the patent). Instead, Medtronic asserts that "after" means that the pacing must be initiated in time to avoid a sudden reduction in cardiac rate after shocking the atria.

To support its definition, Medtronic relies on the perceived purpose of the patent: preventing a sudden reduction in cardiac rate. It relies on the prosecution history of the '600 Patent in which the patentees explained how the invention differed from the prior art:

None of the cited references describe or suggest in any way the adverse effects of such a sudden reduction in cardiac rate following successful cardioversion of the atria and hence do not show, describe, or even suggest an implantable atrial defibrillator or method having structure or function for overcoming such a circumstance.

'600 Patent Amendment at 10-11, Medtronic Exh. 12.

Guidant argues that nothing in the patent states that the pacing must be initiated in time sufficient to prevent sudden reduction. In fact, the invention has a purpose other than preventing a sudden reduction in cardiac rate following cardioversion: avoiding bradycardia.

Guidant asserts that although the ordinary meaning of "after" is "following in time or place," Webster's Ninth New Collegiate Dictionary 62 (1990), "after" is not an unbounded term as understood by those skilled in the art. It contends in the context of this patent, "after" means that the pacing does not occur until the microprocessor determines that the shock was successful in stopping atrial fibrillation.

The Court agrees with Guidant. The Court cannot rely solely on the ordinary dictionary meaning when that meaning contradicts the patent language. Combined Sys., Inc. v. Defense Tech. Corp. of America, 350 F.3d 1207, 1215 (Fed. Cir. 2003). As Guidant notes, when describing the steps that occur to start the pacing, the preferred embodiment indicates that the pacing occurs when the microprocessor determines that the shock was successful in stopping atrial fibrillation.

When the atrial fibrillation detector 70 determines in step 128 that the cardioversion of the atria was successful in arresting the atrial fibrillation, the microprocessor proceeds to step 134. In step 134, the microprocessor resets and starts timer 64.

At this time, the atrial defibrillator 32 has begun the first post-cardioversion pacing interval which is the aforementioned base interval and the timer is timing the base interval. The next three steps, namely steps 136, 138, and 140 implement a demand mode of pacing of the type well known in the pacing art and more specifically, a VVI pacing mode of the ventricles.
Additionally, in the preferred embodiment, pacing may not occur for eight to fifteen seconds after the cardioverting electrical energy is applied to the atria. The '600 Patent incorporates by reference the algorithms denoted by the Jenkins and Thakor article titles. See '600 Patent at 7:34-38; '837 Patent at 10:45-51; '729 Patent at 10:13-24.

Medtronic's construction of the term "after" would not cover the embodiment found in the '600 Patent, because it would exclude embodiments in which pacing occurs after the microprocessor analyzes fifteen seconds worth of data to determine whether the cardioversion shock was successful. See, e.g., Janice Jenkins, et al., Diagnosis of Atrial Fibrillation Using Electrograms from Chronic Leads: Evaluation of Computer Algorithms, 11 PACE 622, 623-24 (May 1988). Guidant asserts, and Medtronic does not dispute, that if the device waits for fifteen seconds worth of data, it will not begin pacing of the ventricle in time to avoid a sudden reduction in cardiac rate. Medtronic's proposed definition of "after" would exclude the preferred embodiment of the device. "Construing a claim to exclude a preferred embodiment is rarely, if ever, correct and would require highly persuasive evidentiary support." Invitrogen Corp. v. Biocrest Mfg., 327 F.3d 1364, 1369 (Fed. Cir. 2003) (internal quotation omitted). Medtronic does not present such "highly persuasive" evidence. Thus, the Court concludes that "after" means that the pacing occurs when the microprocessor determines that the shock was successful in stopping atrial fibrillation.

</tr>
</tbody>
</table>

The disputed term "against" is used throughout the claims and specification. The parties dispute whether or not actual physical contact is necessary when the claims use the term "against." In the context of this claim, FSI proposes that the term "against" means "directly opposite of" or "faces," such that the first connector face may be in contact with, but is not required to be in contact with, the second forward surface of the second insert cap tower. AOSI proposes that the term "against" means "one thing literally touching and fits in contact with another thing," such that the first connector face must be in physical contact with the second forward surface of the second insert cap tower.

Throughout the specification, usage of the term "against" suggests that the term requires contact. Moreover, in this context, when the term "against" is read naturally and given its ordinary meaning, the term requires contact. There is nothing in the specification to indicate that "against" does not require actual contact. Further, there is nothing in the prosecution history as originally filed to indicate a definition of "against" where contact is not required.

2 FSI seeks to distinguish the usage of the term "fits against" in claim 1, from "pressed against," in claim 20. '849 patent, 20: 11-16. For its part, AOSI points to several quotations from the specification where the term "against" is used to describe two elements that are in contact with and touching one another: e.g. "the annular protuberance 240 extends inward and against the exterior periphery 232 of the pin body." '849 patent, 9:38-43.
FSI asserts that during the reexamination of the '849 patent, in the Supplemental Amendment and Response to Office Action at page 37, filed October 20, 2008, the patentee stated in part that "the word 'against' in this claim limitation clearly has the dictionary definition of 'directly opposite' or 'facing'" and that "there is no requirement that the connector face actually contact the insert cap tower." The court, however, does not adopt this new definition of "against." The reexamination proceedings began after the infringement contentions had already been filed. The court is hesitant to expand the definition of "against" beyond the scope defined in the original specification. The patentee's remarks in reexamination were influenced and clouded by litigation and driven by a competitor's product, not by what was actually invented and described.

Accordingly, the court rejects FSI's proposed construction and adopts AOSI's construction. The court defines "against" in the context of the phrase "said first connector face fits against a second forward surface of the second insert cap tower" as "one thing literally touching and fits in contact with another thing."

E. "Said Wash Load is Agitated"

Dependent Claim 14 provides that "said wash load is agitated." Whirlpool contends that this phrase should be construed as "moving the wash load to and fro." Defendants contend that it should be construed to involve an agitator because this is what Whirlpool represented during the prosecution of the patent.

As noted in Part IV A above, the '666 Patent uses the term "agitate" in its broadest and most generic form. Accordingly, the Court will adopt Whirlpool's construction of "said load is agitated" to mean "moving the wash load to and fro."

5. "Air Boost Device" and "Turbocharger"

The '949 Patent recites claims for methods for manufacturing an "air boost device" (Claim 1) and a "turbocharger" (Claim 10). '949 Patent, Col. 10, lines 38-53; Col. 11, line 10 to Col. 12, line 11. BorgWarner argues that the terms "air boost device" and "turbocharger" should be limited by the requirement that these components are for use solely in an internal combustion engine. [Doc. 57-2 at 23].

The parties agree that a "turbocharger" is an air boost device driven by a turbine which is powered by exhaust gases. The parties further agree that an "air boost device" is an apparatus, such as a turbocharger, used to increase combustion air throughput and density. [Doc. 52 at 4]. Because the Court concludes that the patents do not limit these components to use in internal combustion engines, the Court does not accept the parties' apparent stipulation that an "air boost device" should be construed as an apparatus that is used to increase only combustion air throughput and density.

The specification makes clear that the inventors did not intend to limit the use of the inventive compressor wheel to internal
Although a cast titanium compressor wheel has been described herein with great detail with respect to an embodiment suitable for the automobile or truck industry, it will be readily apparent that the compressor wheel and the process for production thereof are suitable for use in a number of other applications, such as fuel cell powered vehicles.

949 Patent, Col. 10, lines 23-28 (emphasis added). As BorgWarner's expert noted in his deposition, a fuel cell powered vehicle "is a very different device from the internal combustion engine, and it works on completely different principles." [Baines Dep., Doc. 63-6 at 8].

The inventors further state in the specification that the use of the subject compressor wheel within an automotive internal combustion engine is just one embodiment of the invention:

Although this invention has been described in its preferred embodiment with a certain [amount] of particularity with respect to an automotive internal combustion compressor wheel, it is understood that the present disclosure of the preferred form has been made only by way of example and that numerous changes in the details of structures and the composition of the combination may be resorted to without departing from the spirit and scope of the invention.

949 Patent, Col. 10, lines 29-36.

For these reasons, the Court concludes that the term "air boost device" should be construed as an apparatus, such as a turbocharger, used to increase air throughput and density, and that the term "turbocharger" should be construed as an air boost device driven by a turbine which is powered by exhaust gases. Neither of these terms should be limited further by adding a requirement that these components are for use solely in an internal combustion engine.

164

a. Air Chamber

The parties do not dispute that an air chamber is "a space containing air." However, Electromed argues that the Court should construe "air chamber" in Claim 1 of the '662 Patent more narrowly to include the walls and seal that are described in the specification. (See '662, c. 3, ll: 48-50.) The Court will not add limitations to the claim that appear only in the specification. Electro Medical Sys., S.A. v. Cooper Life Sciences, Inc., 34 F.3d 1048, 1054 (Fed. Cir. 1994). Furthermore, the Court notes that in Defendant's brief, Defendant concedes that the common meaning of an air chamber is a space containing air. See Defendant Electromed's Markman Memorandum Regarding Scope and Content of Claims of U.S. Patent No. 4,838,263 and U.S. Patent No. 6,036,662 at 14.

Thus, the Court construes the phrase "air chamber" to mean a space containing air.

165

1) Air Circulating Means

As an initial matter, we agree with the parties that the "air circulation means" limitation should be construed as a means-plus-function limitation under § 112, P 6. In determining whether a claim limitation is a means-plus-function limitation, "the use of the word 'means' creates a presumption that § 112, P 6 applies." Personalized Media, 161 F.3d at 703, 48 U.S.P.Q.2D (BNA) at 1886. However, a limitation that uses the word "means" but does not recite a function that corresponds to the means does not invoke § 112, P 6. Rodime PLC v. Seagate Tech., Inc., 174 F.3d 1294, 1302, 50 U.S.P.Q.2D (BNA) 1429, 1434 (Fed. Cir. 1999). Likewise, even when a limitation does recite a function, if it also recites sufficiently definite structure for performing that function, then § 112, P 6 does not apply. Id. In this case, the "air circulation means" limitation uses the word "means" and therefore is presumed to invoke § 112, P 6. Moreover, the claim language recites the corresponding function of "circulating air through said reel," without reciting any structure for performing that function. Accordingly, the
district court correctly concluded that the "air circulation means" falls under § 112, P 6.

However, we agree with Wenger that the district court erred in interpreting the "air circulation means" limitation as requiring structure capable of recirculating air. In construing a means-plus-function limitation, a court must identify both the claimed function and the corresponding structure in the written description for performing that function. Micro Chem., Inc. v. Great Plains Chem. Co., 194 F.3d 1250, 1258, 52 U.S.P.Q.2D (BNA) 1258, 1263 (Fed. Cir. 1999). Under § 112, P 6, a court may not import functional limitations that are not recited in the claim, or structural limitations from the written description that are unnecessary to perform the claimed function. Id. In this case, the district court correctly identified "circulating air" as the recited function. Wenger II at 4 ("The function recited in the claim and clearly associated with the means language in the claim is the function of circulating air through the apparatus, not the recirculation of air through the apparatus."). However, the court then concluded that "the structure corresponding to the function of circulating air through the apparatus requires the ability to recirculate air." Id. By doing so, the court improperly restricted the "air circulation means" limitation to structure that was disclosed in the preferred embodiment, but was not necessary to perform the recited function of circulating air.

Given its ordinary meaning, the term "circulate" denotes that the "air circulating means" is capable of moving air in a circuit through the reel and dryer housing. See, e.g., Webster's New World Dictionary 254 (3d ed. 1988) (defining "circulate" as "to move in a circle, circuit, or course and return to the same point"). However, the term "circulate" neither connotes nor requires that the "air circulation means" have structure capable of "recirculating," i.e., circulating the air again after it has circulated once before. See id. at 1116 (defining the prefix "re-" as "again, anew, over again" and listing "recirculate" as a word). For example, in common parlance, it is customary to speak of "circulating" something once (e.g., an inter-office memorandum), without "recirculating" it a second time. We therefore do not agree with CMS that the ordinary meaning of the term "circulate" necessarily includes or implies recirculation.

Moreover, while claim 1 recites the function of "circulating" air through the reel, dependent claim 3 expressly recites the additional limitation of "means for exhausting a first portion of said air received in said plenum and recirculating a second portion of said air back into the interior of said reel." '683 patent, col. 8, ll. 9-12 (emphasis added). Under the doctrine of claim differentiation, each claim in a patent is presumptively different in scope. Comark Communications, Inc. v. Harris Corp., 156 F.3d 1182, 1187, 48 U.S.P.Q.2D (BNA) 1001, 1005 (Fed. Cir. 1998). However, claim differentiation is not a "hard and fast rule of construction," and cannot be relied upon to "broaden claims beyond their correct scope." Kraft Foods, Inc. v. Int'l Trading Co., 203 F.3d 1362, 1368, 53 U.S.P.Q.2D (BNA) 1814, 1818 (Fed. Cir. 2000) (citations and quotation marks omitted). Although the judicially created doctrine of claim differentiation cannot override the statutory requirements of § 112, P 6, Laitram Corp. v. Rexnord, Inc., 939 F.2d 1533, 1538, 19 U.S.P.Q.2D (BNA) 1367, 1371 (Fed. Cir. 1991), it does not necessarily follow that means-plus-function limitations must be interpreted without regard to other claims. Claim differentiation, while often argued to be controlling when it does not apply, is clearly applicable when there is a dispute over whether a limitation found in a dependent claim should be read into an independent claim, and that limitation is the only meaningful difference between the two claims.

Citing Laitram, CMS argues that independent claim 1 must be interpreted in accordance with § 112, P 6, without regard to dependent claim 3. In Laitram, the disputed claim limitation was a "means for joining" a plurality of link ends for a conveyor belt. Id. at 1535 n.3, 19 U.S.P.Q.2D (BNA) at 1369 n.3. The corresponding structure in the specification consisted of link elements and cross members. Id. at 1536, 19 U.S.P.Q.2D (BNA) at 1370. This court rejected the argument that the "means for joining" limitation could not include a cross member because that limitation was explicitly recited in a dependent claim. We explained that "[a] means-plus-function limitation is not made open-ended by the presence of another claim specifically claiming the disclosed structure which underlies the means clause or an equivalent of that structure." Id. at 1538, 19 U.S.P.Q.2D (BNA) at 1371. We then held that "one cannot escape [the] mandate [of § 112, P 6] by merely adding a claim or claims specifically reciting structure or structures." Id. Thus, Laitram held that the stringencies of a means-plus-function limitation are not to be avoided by the mere addition of a dependent claim that recites the corresponding structure disclosed in the specification. However, Laitram does not stand for the broader proposition suggested by CMS, viz., that a means-plus-function limitation must be interpreted without regard to other claims.

We agree with Wenger that the examination of other claims in a patent may provide guidance and context for interpreting a disputed means-plus-function limitation, especially if they recite additional functions. Because claim 3 recites a separate and distinct function (i.e., "recirculating"), one that is not recited in claim 1, the doctrine of claim differentiation indicates that these claims are presumptively different in scope. Comark, 156 F.3d at 1187, 48 U.S.P.Q.2D (BNA) at 1005. The
dependency of claim 3 on claim 1 strengthens this presumption. Compare Dow Chem. Co. v. United States, 226 F.3d 1334, 1341-42, 56 U.S.P.Q.2d (BNA) 1014, 1019-20 (Fed. Cir. 2000) (applying the doctrine of claim differentiation and concluding that an independent claim should be given broader scope than a dependent claim to avoid rendering the dependent claim redundant), and Karlin Tech. Inc. v. Surgical Dynamics, Inc., 177 F.3d 968, 971-72, 50 U.S.P.Q.2d (BNA) 1465, 1468 (Fed. Cir. 1999) (explaining that the doctrine of claim differentiation "normally means that limitations stated in dependent claims are not to be read into the independent claim from which they depend"), with Kraft, 203 F.3d at 1368, 53 U.S.P.Q.2d (BNA) at 1818 (holding that the presumption arising from the doctrine of claim differentiation was overcome in a case involving two separate independent claims). Accordingly, the doctrine of claim differentiation supports the conclusion that the "air circulation means" limitation in claim 1 should be limited to structure for performing the recited function of circulating air, and should not be interpreted as requiring structure capable of performing the additional function of recirculation, which is expressly recited in dependent claim 3 and not found in claim 1.

Our conclusion is consistent with the specification, which discloses the function of "circulating" in the context of drawing air through the reel in order to dry the food product, and discloses "recirculating" as a separate function involving the return of a portion of the drying air back into the reel. In the summary of the invention, for example, the specification states that "the reel is rotatable and permits the circulation of drying air therethrough." '683 patent, col. 1, ll. 56-58 (emphasis added). The specification further states that "the product is presented as a tumbling bed which is agitated as it passes through the reel with drying air circulated therearound." Id. at col. 1, l. 67 to col. 2, l. 1 (emphasis added). In the next paragraph, however, the specification then explains that "in preferred forms," the housing is configured "to draw additional air through the openings at each end of the reel whereby both fresh and recirculating air is introduced into the reel." Id. at col. 2, ll. 4, 11-14 (emphasis added). Later, in describing the preferred embodiment, the specification states that the circulating component 22 and exhaust fan 122 create "positive air flow," which causes the air to flow "in a substantially closed circuit through the housing." Id. at col. 5, ll. 30-33. Thus, in the preferred embodiment, after the air is drawn from the interior of the reel into the housing, it may either be exhausted from the housing or returned back to the reel for recirculation. By disclosing recirculation as an additional feature of the preferred embodiment, the specification thus further supports the conclusion that the "air circulation means" should not be limited to structure capable of performing the unrecited function of recirculation.

CMS argues that the prosecution history supports the conclusion that the "air circulation means" in claim 1 should be limited to structure capable of recirculating air. We disagree. Original claim 14, which later became claim 1, was initially rejected as anticipated by the Benson patent. Paper No. 2 at 4. In response to the examiner's rejection, the applicant amended the claim as follows, with additions indicated by underlining:

14. (Amended) An apparatus for coating and drying a food product comprising:

air circulating means associated with said dryer housing for circulating air through said reel, the air circulating means including means for drawing air from the interior of the reel into said housing in order to provide positive air flow through the apparatus;

Paper No. 5 at 2. The applicant also added the following new claim, which later became dependent claim 3:

25. An apparatus for coating and drying a food product as set forth in claim 24 including a means for exhausting a first portion of said air received in said plenum and recirculating a second portion of said air back into the interior of said reel.

Id. at 3 (emphasis added). In the "remarks" section, the applicant stated that the claimed apparatus resulted in numerous advantages, including the ability to "ensure that air is drawn into the housing from the interior of the reel in order that the air drawn from the reel may be recirculated through the reel or exhausted from the housing." Id. at 6 (emphasis added).

--- Footnotes ---

1 In support of its prosecution history arguments, CMS relies heavily on an unsigned draft amendment, which was never entered into the file wrapper. The district court properly refused to consider that draft amendment. Wenger I at 6 n.3; Manual of Patent Examining Procedure §§ 714.19(E), 714.21 (7th ed. rev. 1 2000) (indicating that an unsigned amendment
is ordinarily denied entry and that inadvertently entered amendments have no legal effect).

It is evident from the prosecution history that claim 14 was amended to specify that the "air circulating means" draws air from the interior of the reel into the housing. As emphasized by Wenger, the applicant did not add a "recirculation" limitation to that claim. Instead, the applicant added a new claim, claim 25, which expressly recited the function of recirculation. In view of these amendments, the applicant's statement that the claimed apparatus is capable of recirculating air through the reel or exhausting it from the housing indicates that the function of recirculation is an optional feature that is made possible by the housing, but is not required by claim 14.

While CMS argues that Wenger distinguished the prior art based on its inability to recirculate air, we agree with Wenger that the Benson patent was distinguished based on its lack of a housing. According to the applicant, because the Benson patent disclosed a machine that was "essentially open" and mostly "exposed to atmosphere," nothing in the Benson patent taught or suggested the use of an elongated reel "located substantially within a housing such that the perforations provided in the side wall of the reel are surrounded by the housing." Id. at 7. The applicant explained that:

Because air is drawn from the interior of the reel into the housing, there is less of a likelihood that warm, dust-laden air within the reel will be exhausted from the ends of the reel or will be released through the perforations provided in the sidewall of the reel to atmosphere without first being directed through a housing and any other suitable exhaust treating devices deemed to be appropriate.

Id. at 6. Moreover, the applicant expressly stated that "there is nothing taught by the Benson patent which would have suggested a construction as claimed, wherein it is possible to circulate air through the reel and draw air from the interior of the reel into a housing surrounding the reel." Id. Thus, according to the applicant, the Benson patent did not disclose the claimed housing structure, which enabled the air to be circulated through the reel and exhausted in an appropriate manner.

While CMS argues that the housing alone does not distinguish claim 1 over the prior art, and that absent recirculation, claim 1 would have been obvious in view of French patent 2,502,466, we decline to consider this reference as it was not in evidence before the district court, and is not part of the record on appeal.

2. "Air inlet path"

a. Parties' Positions

The parties propose the following constructions for "air inlet path" which is present in claim 2 of the '631 Patent. Plaintiff objects to Defendants' proposed definition to the extent it requires a specific shape of the air inlet path. Plaintiff further asserts the path does not actively direct the air flow as Defendants suggest. Finally, Plaintiff takes issue with Defendants' proposal that the air flow be strictly perpendicular.

<table>
<thead>
<tr>
<th>Plaintiff</th>
<th>Defendants</th>
</tr>
</thead>
<tbody>
<tr>
<td>An unoccupied space adjacent to an opening in the cover plate</td>
<td>An unoccupied slot directing air inflow from the opening in the cover plate perpendicularly to the second surface of the top plate</td>
</tr>
</tbody>
</table>

b. Court's Construction
In claim 2, the "air inlet path" is the space between the fin structures, formed by their relative position. (‘631 Patent at 4:31-36). According to Plaintiff, there is no requirement to employ any particular shape or design of the air inlet path, including any shape or design described in the preferred embodiments. (‘631 Patent at 7:6-11). Plaintiff further asserts claim 2 states that the "air inlet path" is the space formed by the relative positioning of the fin structures, i.e., akin to the "gap" in claim 3. (‘631 Patent at 7:48-50).

The split feed transverse flow configuration requires that air enter the heat sink at an unoccupied slot before flowing through the fin structures. In addition, claim 2 expressly requires that the air inlet path be "adjacent" to the opening in the cover plate. (‘631 Patent at 8:4-5). According to Defendants, Figure 1 of the ‘631 Patent, which the specification identifies as the "heat sink assembly of the present invention" (id. at 2:12-13; 4:40), shows that air flows through the opening in the cover plate and into the gap perpendicular to the second surface of the top plate. The Court agrees with Plaintiff that nothing in the claim language or specification requires the air flow to be strictly "perpendicular." Even if Figure 1's schematic depiction of air flow is to be taken literally (i.e., perpendicular), Defendants do not satisfy their burden to justify importing this limitation into the plain, intelligible claim language. Phillips, 415 F.3d at 1323. In addition, Defendants have failed to convince the Court that the air flow path is the consequence of air being directed by the relative spacing of the fin structures, top plate, and the opening in the cover plate.

The Court construes "air inlet path" to mean "an unoccupied space receiving air flow from the opening in the cover plate to the second surface of the top plate."
The specification provides further support for Honeywell's proposed construction. The specification describes one of the inventions' preferred embodiments as using a die of twelve "simple" die inserts to define a wheel with six full-length and six splitter blades. '347 Patent at Col. 9, lines 8-18 ("the die preferably has a total of either 12 (simple) or 24 (compound) inserts for making a total of 6 full length and 6 'splitter' blades"); The specification explicitly defines "simple die inserts" as referring to one die insert per air passage. Id. at Col. 5, lines 9-11 ("the blades are designed to permit pulling of simple die inserts (i.e., one die insert per passage)"). Thus, the specification makes clear that the "air passage" refers to the space between each blade in the compressor wheel, whether that blade is a full blade or a splitter blade.

For these reasons, the Court concludes that the phrase "air passages between adjacent blades" should be construed as the space between either a full blade and a splitter blade or two full blades.

The parties disagree on the meaning of the terms "air plenum" and "partition" in Claim 15. Claim 15 calls for:

a partition disposed in said interior chamber for defining an air plenum on one side of said partition and a rack receiving chamber on the opposing side of said partition, said air plenum and said rack-receiving chamber being in fluid communication with each other such that cooled air can be channeled through said air plenum and into said rack-receiving chamber.

See '569 Patent at column 8, lines 6-33.

The words of the claim itself make clear that an "air plenum" refers to an air flow passage through which cooled air travels to an adjacent dispensing rack. Because the patent specification and prosecution history do not give the term "air plenum" any special meaning, it must be given its ordinary meaning. The best place to look for that meaning is a technical dictionary. See Texas Digital Sys., Inc. v. Telegenix, Inc., 308 F.3d 1193, 1203 (Fed. Cir. 2002) (acknowledging that dictionaries "may be the most meaningful sources of information to aid judges in better understanding . . . the terminology used by those skilled in the art"). The ordinary meaning of the word "plenum" used in the heating, ventilating, and air-conditioning ("HVAC") field is an "air flow passage". Home Energy Magazine Online DUCTIONARY, Ex. H to Thompson Dec. (defining "plenum" as an "air flow passage made of duct board, metal, drywall, or wood" that "joins supply and return ducts with HVAC equipment"); see also WordNet 1.6 (1997), available at http://dictionary.reference.com/search?q=plenum (defining "plenum" as "an enclosed space in which the air pressure is higher than outside"). This definition is consistent with the use of the term in Claim 15. However, the claim language includes one limitation -- that cooled air be able to travel through the air plenum to an adjacent rack-receiving chamber. Thus, the definition of the term "air plenum" in Claim 15 of the '569 Patent must include this limitation.

Watson interprets this element as "a number of air cushions/ air actuated elastic or resilient devices lying in a space that separates the axle seats and the primary frame members." Boler asserts that the element should be construed as "a set of air springs reaching across the distance between and attaching to said axle seats and said frame members." Boler argues that Watson's proposed definition is not consistent with the specification because the specification states that the air springs are mounted between the top plate and the axle seat. The court disagrees with Boler. Simply because the specification states that the air spring is mounted between the axle seat the top plate does not necessarily mean, in light of the claim language, that the air spring must be attached to the axle seat and frame members. Laitram Corp., 863 F.2d at 865. However, the court adopts a portion of Boler's interpretation. The court construes this element as "a number of air cushions reaching across the distance between the axle seats and primary frame members."
73. The court construes the first limitation of claim 23, "an air supply for supplying compressed air," as follows: The air supply is either one or more storage vessels of compressed air or an oil-free air compressor. (”845 patent, col. 2, lines 40-48.) The limitation is further narrowed by specifying a function for the element, namely to supply compressed air.

Claim 1 of the 987 patent requires that the gun have "at least one pressurizable air/water storage tank." Ohio Art asserts that since its water storage tank (the backpack) is not pressurizable, it is not violating this limitation of the claim. Larami admits that the water storage tank in the A.R.M. gun is not pressurizable but argues that the bladder is a pressurizable air/water storage tank.

The plain language of the 987 patent indicates that the tank must store water and air. Otherwise, it would read an "air and/or water storage tank." When interpreting patent claims, "all limitations in a claim must be considered meaningful." Lantech, Inc. v. Keip Mach. Co., 32 F.3d 542, 546 (Fed. Cir. 1994). The limitation in the claim that there be a "pressurizable air/water storage tank" is not met by the presence in the A.R.M. gun of a pressurizable water storage tank, in the form of the expandable bladder. The bladder is not designed to store air, only water. It is clear that the 987 patent envisioned a storage tank filled partly with water and partly with pressurized air. 2 The A.R.M. gun does not have such a tank and so therefore this limitation of claim 1 of the 987 patent has not been infringed upon by Ohio Art.

--- Footnotes ---

2 The preferred embodiment of the 987 patent shows a water gun where the effect of air pressure acting on water in a tank would force water out of the open valve. There is no expandable bladder in this design. (See Def.’s Ex. D-4).

--- End Footnotes ---

8. "the longitudinal portions are aligned in a spaced relationship parallel to a stent longitudinal axis"

This phrase is found in claims 13, 34, and 48 of the '037 patent, and in claim 22 of the '255 patent. See Joint Statement, '037 and '255 Patents. Plaintiffs contend that "the longitudinal portions are aligned in a spaced relationship parallel to a stent longitudinal axis" should be construed to mean "the longitudinal portions are spaced from each other along a line parallel to an imaginary straight line running lengthwise in the center of the stent." Defendants contend that the phrase should be construed to mean "the longitudinal portions run substantially along the stent's longitudinal axis and are spaced apart, e.g., as shown in Figure 5." The intervenor contends that the phrase should be construed to mean "the longitudinal portions run substantially along the stent's longitudinal axis and are spaced apart."

The claim language provides the first starting point. Beginning with claims 13 and 14, claim 13 covers a stent "wherein the longitudinal portions are aligned in a spaced relationship parallel to a stent longitudinal axis." Claim 14, by contrast, covers a stent "wherein the longitudinal portions are aligned in an interconnected relationship parallel to a stent longitudinal axis." Both claims cover longitudinal portions aligned in relationships parallel to the stent longitudinal axis. Claim 13 covers spaced relationships, however, while claim 14 covers interconnected relationships.

The figure drawings of the '037 patent shed light on the difference between the two types of relationships -- both of which are parallel to the longitudinal axis. Figure 9, for example, depicts an illustration of the spaced relationship. See Joint Statement, '037 Patent, Figure 9. Looking at this figure, it is apparent that the longitudinal connectors are spaced apart from each other -- with no interconnectors linking them consistently together -- on an axis that runs parallel to the length of the claimed stent design. Id. In Figures 8 and 10, by contrast, the longitudinal connectors are still spaced apart from each other.
along an axis running parallel to the length of the claimed stent design, but they are depicted as linked consistently together by interconnectors. See id. at '037 Patent, Figures 8 and 10. The remaining figures depicted in the patent can also be viewed from this vantage point. Figure 5, for example, depicts an interconnected relationship, as understood in comparison with Figures 8-10. Id. at '037 Patent, Figure 5.

This understanding of the patent's figure drawings supports plaintiffs' construction of the phrase at issue, because it requires -- consistently with the drawings -- that the longitudinal portions of the claimed stent be "spaced from each other along a line parallel to an imaginary straight line running lengthwise in the center of the stent" where the claim language calls for a "spaced relationship."

Defendants' proposed construction, by contrast, construes the phrase in question expressly with reference to Figure 5. Since, as noted above, Figure 5 depicts an interconnected relationship rather than a "spaced relationship" -- as required by the claim language at issue -- it would be improper to limit the claim language to the interconnected relationship depicted in Figure 5. Defendants rely on the prosecution history for their construction. See McCauley Decl., Ex. 36 at AB0732736. However, a review of this evidence does not provide any express support for defendants' construction. Indeed, it does not appear from this citation that the applicants were expressly discussing this phrase of the limitation, or the fact that the applicants intended figure 5 to represent the phrase at issue.

In sum, then, and for the above reasons, the court adopts plaintiffs' proposed construction and construes “the longitudinal portions are aligned in a spaced relationship parallel to a stent longitudinal axis” as: “the longitudinal portions are spaced from each other along a line parallel to an imaginary straight line running lengthwise in the center of the stent.”

3. "A method of aligning an optical element in a telescope"

The next dispute concerns the phrase "[a] method of aligning an optical element in a telescope." The phrase appears in every claim in the '908 patent, either expressly or by reference. It appears twice in claim 1, once in the preamble and once in subpart (b).

The key term in this phrase is the word "aligning." As used in the '908 patent, the term "aligning" is construed to mean moving an optical element toward a collimated position in response to a projected reticle image.

Glatter argues that "aligning" means "moving an optical element in a telescope to its optimal position and angular orientation specified in the telescopes' [sic] design." (Def.'s Opp. Br. at 3.) LaserMax contends that "aligning" meant "moving an optical element in a telescope to a desired position." (Pl.'s Reply at 2.) The difference between the terms "optimal" and "desired" is a difficult one to parse. The language of the claims themselves offer little guidance as to the meaning of "aligning," as used therein. The tautological nature of claim 1 makes it difficult to discern a contextual definition of aligning. It claims a "method of aligning an optical element in a telescope" wherein the second step in the method is "aligning the optical element." '908 Patent at 6:29, 33. Thus, the claim itself offers little guidance in discerning a definition. Other claims, however, demonstrate that the choice of the word "aligning" may have been intended to mean more than simply moving or adjusting an element. Claim 18, for example, has "aligning" in the preamble, but uses the term "adjusting," in subpart (c), when indicating that one following the method would move an optical element. Id. at 7:13, 21-23. Therefore, it is unclear based on the claims alone, whether "aligning" means more than simply "moving to a desired position."

The specification provides some guidance in construing the term. Glatter originally construed "aligning" as "moving an optical element to an optimal position," but changed his asserted definition during the Markman hearing to "moving to an optical element in a telescope to its collimated position." (See Hearing Tr. at 33:6-11.) "Collimated" is a term of art in the field of optical devices that would be understood by a person of ordinary skill in the art. The specification uses variations of the word "align" several times. At one point, the specification uses the terms "properly aligned" and "collimated" as synonyms. First, the specification states that "Newtonian type telescopes are subject to misalignment of the optical elements. . . . A misaligned Newtonian telescope will exhibit an image of a star that looks like a comet with a tail." '908 Patent at 1:36-40. In describing how to determine whether the optical elements are aligned, the specification uses the phrase
"in a properly aligned or collimated telescope." Id. at 1:43-46. According to the specification, the term "collimate" means "properly aligned," as opposed to "misaligned," and in a Newtonian telescope is characterized as an arrangement of the optical elements wherein "a laser beam is projected through an emission aperture to reflect off of the secondary mirror which directs it to the center of the primary mirror. The primary mirror reflects the beam back to the secondary mirror which then reflects it back to the emission aperture of the laser." Id. at 1:43-49. In other words, "the complete return of the emission aperture assures that the telescope is correctly aligned." Id. at 1:49-51. Thus, the specification indicates that "properly aligned" means "collimated." Aligning, therefore, means moving toward a collimated configuration.

Nonetheless, use of the word "collimated" should not be unduly limited to a single appropriate arrangement for the elements in a telescope. First, although the specification's description of "properly aligned" uses the components of a reflecting telescope as an example, refracting telescopes can also be collimated. See id. at 6:19-21. Second, at the Markman hearing, plaintiff and defendant agreed that there can be more than one "collimated position," depending upon the setup of the telescope, for example, collimation for use with a camera may be slightly different from collimation for use with the eye alone. (See Markman Tr. at 43:18-25.) Since the claims pertain to "optical element(s) in a telescope," the meaning of a claim term should not be limited based on potential uses that differ from one another due to a component that lies outside of the telescope, like the viewer's eye or a camera. Therefore, the word "collimated" restricts the term "aligning" to arrangement of the optical elements for use in a telescope (usually centering the elements along a line formed by the beam's center), but does not connote a single, objectively accurate position.

The court agrees with Crane that the defendants' proposed construction is too restrictive in light of the disclosed embodiments and dependent claims. Although unambiguous statements made during reexamination may, in certain circumstances, limit the scope of a claim, the patentee's statement in this case does not rise to that level. See On Demand Machine Corp. v. Ingram Indus., Inc., 442 F.3d 1331, 1338-39 (Fed. Cir. 2006). In this case, in response to a rejection during reexamination of the '930 patent, the patentee distinguishes the lack of precision alignment of a sliding embodiment of a prior art reference to the '930 patent's precision alignment in a comparable embodiment. See, e.g., '930 Patent, cl. 28; see Ex. 4 to SVA's Resp. at 83. Crane's statements do not amount to a clear and unmistakable disclaimer of claim scope to the extent suggested by the defendants. The remarks, for instance, state that "[t]he '930 Patent suggests vertical alignment between the beverage capture assembly 102 and the beverage trays 42 of between 1/32nd and 1/64th of an inch as suitable to ensure transfer without beverage container tipping." Id. (emphasis added). This statement suggests that the alignment necessary is that which would be suitable to prevent container tipping so as to preserve the overall object of the invention. Consequently, the court finds no disclaimer in the reexamination history that would suggest limiting each and every claim and embodiment in the manner requested by the defendants.

Despite the court's disagreement with the defendants' construction, Crane's construction does not account for the "in registration" language of the limitation. The claim language, read in light of the specification and the statements in the prosecution history, suggest that the robotic assembly must be aligned vertically with the product. Accordingly, the court defines "aligning . . . in registration" (as used in claim 1 of the '930 patent) as "moving the robotic assembly in the machine into a position vertically aligned with a customer selected one of said beverage container queues."
During the claim construction proceedings in this case, neither party proposed a construction for the term "alignment mark." However, it appears that post-trial the parties are now disputing the meaning of this term. According to LGD, a person of ordinary skill in the art would understand an "alignment mark" to "be a distinctive identifying feature that is provided solely for positioning of the flexible printed circuit boards during assembly." D.I. 1388 at P 544.

In response, AUO contends that alignment marks can have more than one purpose. For example, they can function for both positioning and bonding. Thus, AUO contends that LGD's definition of alignment marks is too restrictive, and "alignment marks" should be more broadly defined as patterns used for accurate positioning and connection of flexible printed circuit boards. D.I. 1383 at PP 657-663; D.I. 1384 at 46, 50.

Reviewing this claim term in light of the specification of the '506 patent, the Court concludes that AUO's more expansive definition is correct. The '506 patent discloses more than one type of alignment mark. For example, pad electrodes are disclosed on the first and second printed boards in Figure 3a. These pad electrodes serve as both alignment marks for positioning and as contact pads for bonding or electrically joining two flexible printed circuit boards. '506 patent, col. 2, ll. 26-38. Accordingly, the Court concludes that an alignment mark is a pattern used for accurate positioning and connection of flexible printed circuit boards.

It is not clear why Freedman identified this phrase as ambiguous and why ASC did not say the phrase needs no construction and that its meaning is self-evident. This phrase states the purpose of the retaining member, previously described, and its function, previously described, and the manner in which the functions perform. Obviously the female fastener must be held in place to assure fastening and because of possible misalignment some play is possible and that play is kept to a perpendicular movement, previously described. There is no need to construe this phrase.

The next term in dispute involves the folding mechanism of the napkins. Three phrases are at issue. First, claim 1 speaks of the "channels in use being spaced apart from the napkin wearer's body and allowing said napkin edges to fold upward at said embossed channels to form an occlusive volume between said napkin and the wearer's body." (6:14-17.) Second, claim 4 teaches the channels "having their ends spaced inward from the edge of said napkin at least 1/8 inch, and adapted to allow the edges to turn upward." (6:32-34.) Finally, claim 4 also teaches that the channels are "adapted to be activated by the thighs of the wearer to allow the absorbent edges to fold upwards to form said occlusive volume."

The particular bone of contention is the meaning of the verbs used: "allowing" and "adapted to allow." K-C's interpretation is largely synonymous with the claim terms: "allowing" means "permitting" and "adapted to allow" means "formed so as to permit." (At argument K-C indicated no objection to retaining the claim terms as-is.) Tyco, however, believes "allowing the edges to fold upward" means "directing the edges to fold upward." It also claims "adapted to allow" means "suited by design to direct the edges upward in use."

Tyco's effort to transform "allowing" into "directing" is based on the prosecution history and the general purpose of the invention itself. It asserts that the goal of the patent -- and its novelty -- was grounded in the napkin's ability to fold upwards.
to meet the body of the wearer, forming an occlusive volume. Thus, in prosecuting the patent, K-C repeatedly referred to the fact that the hinged areas (i.e., the "edges," as construed above) fold upwards when the wearer's thighs compress against the pad. 3 In Tyco's view, K-C cannot now run away from that important distinction by asserting that the channels merely "allow" or "permit" the flaps to fold upwards. In Tyco's view, any napkin -- whether having channels or not -- would "permit" folding upward under the right circumstances. In Tyco's view, therefore, "allow" must mean something more.

3 Citations from the prosecution history are found, for example, at Tyco's brief at page 21.

I first note that Tyco's concerns are already incorporated into the claims themselves. Claim 4, for instance, teaches that the channels "are adapted to be activated by the thighs of the wearer to allow the absorbent edges to fold upwards to form said occlusive volume." (6:39-41.) This recognizes that the channels' purpose is to facilitate the folding process in the event the wearer activates the design. Because the claim itself sets forth this process, it is not as though the claim differs materially from anything the inventors had set forth in the prosecution history. Along the same lines, there is nothing in the prosecution history that would justify redefining the word "allow" to mean "direct" -- the former implies ability, whereas the latter implies action. It is of course true that the invention, at its most useful, would have the effect of creating the occlusive volume and that this volume would be created by virtue of the channels' hinging properties. That is reflected in the prosecution history as well as in the specification, which states: "Advantageously, these embossed channels are activated during use by the thighs, allowing the sides of the napkin to fold upwards." (2:63-65.) But the fact that these advantageous features may be allowed to occur does not mean that the channels themselves direct them to occur. 4 Instead, everything in the patent indicates that the channels facilitate the folding or allow the edges to fold.

4 This is true even if I considered Tyco's alternative definition of "allow." It asserted at argument that a car's muffler "allows" the car to drive quietly, and in that sense the muffler also "directed" or caused the car to drive quietly. This reading incorporates not just permissiveness but also functionality. Even so, this gloss is several steps removed from the active voice "direct" that Tyco now prefers. That is, no one would say that a muffler "directs" the car the operate quietly - its presence more properly enables the car to do so, which gets us back to the more permissive reading of "allow" we began with. The channels enable the sides of the napkin to fold upwards. Moreover, Tyco's preferred reading does not fit the physical reality of the invention. In short, just as it was unclear how an "edge" could create an occlusive volume, it is difficult to discern how a channel can "direct" the edge to fold upward. By way of analogy, a door's hinge allows it to open, but no one would claim that the hinge is the cause of the door opening, or that the door opens at the hinge's direction -- there is another actor. Similarly, according to the patent it is the wearer of the napkin whose thighs direct the edges to fold upward, and the fact that the channels facilitate that process does not mean that they direct it. Accordingly, I reject Tyco's attempt to redefine the word "allow."

Similarly, I reject Tyco's interpretation of "adapted." It asserts that "adapted to allow" should mean "suited by design to direct," yet this alteration has even less basis in the intrinsic evidence. Tyco merely cites a dictionary for its definition of "adapted" and notes that the invention was specifically designed to function so that the edges of the napkin fold upward. That much is clear from the patent itself -- and indeed could be inferred in almost any invention -- but nowhere does Tyco articulate why "suited by design" should be substituted for the less cumbersome "adapted" language of the claim itself. Instead, the notion of design opens up a number of interpretive problems that can be avoided simply by retaining the language of the claim itself.

Although I have rejected Tyco's preferred claim construction, I am not persuaded that K-C's substitution of the word "permit" for "allow" serves any useful purpose. As noted, K-C acknowledged at argument that leaving "allow" untouched would accomplish the same goal. Moreover, K-C does not explain why the phrase "adapted to allow" should be interpreted as "formed so as to permit" -- these reworkings of the claim terms seem merely to be synonymous surplusage or assume the
obvious (e.g., that the channels were "formed"). As K-C argues with respect to Tyco's proposed construction, "[t]he original terms in the claims, 'adapted to allow' and 'adapted,' are far more easily understood." (K-C Br. at 19.) Accordingly, I will leave the claims as they are without appending synonyms or otherwise redefining them.

3. "Allowing said napkin edges to fold upward" means "allowing said napkin edges to fold upward." "Adapted to allow the edges to turn upward" means "adapted to allow the edges to turn upward." "Adapted to be activated by the thighs of the wearer to allow the absorbent edges to fold upward" means "adapted to be activated by the thighs of the wearer to allow the absorbent edges to fold upward."

In the instant action, the disputed language of claim 1 of the of the '954 patent provides, "allowing the bar or pin to be placed in said passage by pressure in a direction perpendicular..." (Am. Compl., Exh. A, col. 5, 11. 60-61). Plaintiffs maintain that this language is permissive because the structure of the clamp is such that it requires the bar, pin or rod be placed in the clamp by pressure in a perpendicular direction alone. In support, Plaintiffs point to the plain and ordinary meaning of the word "perpendicular," which has been defined to mean "being at right angles to a given line or plane." Webster's Collegiate Dictionary, 876 (9th ed. 1985). Here, there is no apparent dispute with the definition of the word "perpendicular" in and of itself. Rather, the narrow issue before the Court is whether the claim language is interpreted to mean solely perpendicular. On this point, the Court observes that the word perpendicular is preceded, and accordingly modified, by the word "direction." Direction is defined as "the line or course on which something is moving or is aimed to move or along which something is pointing or facing." Id. at 358. Taken together, it appears to this Court that the language of this claim is intended to indicate that the bar or pin is to be placed in the structure of the clamp in a generally perpendicular direction - but not purely or solely perpendicular. Accordingly, this Court concludes that based on the plain language of the claim 1, the disputed language contained therein accords with Defendant's interpretation that the bar, pin or rod may be inserted into the passageway by at least some pressure applied in a perpendicular direction with respect to both the axis of the shaft and the transverse direction.

D. "the first and second legs allowing the hangers to accommodate various sizes"

For the reasons stated below, the court finds the term in claims 1, 2, 6, 7, 10, 12, 14, and 21-24 of the '305 patent to be clear on its face and therefore does not need this court's construction.

Beverly contends that the term "the first and second legs allowing the hangers to accommodate various sizes" suffers from the same defect as the claims from the '543 patent referring to "the first and second leg having a compliant area" in that the specification does not sufficiently teach what structure should be used to accommodate the various sizes of line. According to Beverly, "the '305 specification teaches that it is some structure, either the spring fingers 29 and/or the stops 30 in conjunction with either the compliant section or the extended section that permits the hanger to accommodate a large range of different transmission line diameters," but the specification does not reveal how the "legs themselves" accommodate the various lines. (Def. Mem. at 6.) Beverly suggests the same construction as in subheading C, that the term be construed as "the first and second legs should include structure equivalent to either the spring fingers or the stops in order for the first and second legs to allow the hanger to accommodate different sizes of transmission lines." (Def. Mem. at 6.)

The disputed term in the '305 patent does not raise the same issues discussed above as the disputed "compliant area" term from the '543 patent because the grammar used in the claims in the '305 patent could not suggest that there is a separate compliant area in the hanger legs apart from the teaching in the specification of the location of the compliant area. Hence, there is no possible confusion between the terms used in the claims and those used the specification, and the court may rely on the general principle that preferred embodiments in the specification should not be imported to confine the claims. Phillips, 415 F.3d at 1323. The court rejects Beverly's proposed construction because the proposed construction would improperly limit the claim to one of its preferred embodiments. The court finds the language of the disputed claim to be clear on its face and not in need of construction.
In claims 1 and 6 of the '125 patent, the parties dispute the meaning of two phrases related to the biodegradation process. For example, claim 1 recites:

1. A method of removing hydrocarbons from a part and disposing of the hydrocarbons, the method comprising the steps of:

   suspending, in a biodegradable, non-caustic, non-flammable, oil dispersant, cleaning and degreasing fluid, microorganisms to which the fluid is non-toxic;

   providing a parts washer having at least a basin for receiving the part and a tank below the basin for containing the fluid;

   bringing the part into contact with the fluid containing the microorganisms;

   allowing the fluid to remove the hydrocarbons from the part and flow into the tank; and

   allowing the microorganisms within the fluid to biodegrade the hydrocarbons.

1. "allowing," "retaining"

Plaintiff ChemFree argues that no construction is necessary because the meaning of these disputed phrases is obvious; the first phrase means to "let or permit the microorganisms within the fluid to chemically decompose the hydrocarbons" and the second means that "the hydrocarbons remain in the fluid that is in the tank while the microorganisms chemically decompose them." In contrast, Defendant seeks to impose a limitation on these claims -- as well as every other claim involving biodegradation in the parts washing patents -- that would require biodegradation to take place at or near the top of the fluid in the tank. Thus, Defendant suggests that "allowing the microorganisms within the fluid to biodegrade the hydrocarbons" should mean "placing the bacteria in close proximity to the hydrocarbons floating at the top of the fluid so that the bacteria can break down the hydrocarbons into predominantly environmentally safe by-products." Similarly, they argue that "retaining the hydrocarbons within the fluid in the tank while the microorganisms biodegrade the hydrocarbons" should mean "allowing the bacteria to break down the hydrocarbons into predominantly environmentally safe by-products at a location that is at the top of the fluid in the tank."

J. Walter's position is based primarily upon his theory that Plaintiff ChemFree, during prosecution of the '491 patent, disclaimed biodegradation that takes place anywhere other than the top of the tank. (Def.'s Opening Brief at 59-60 ("The prosecution history . . . mandates that the disputed phrase be construed as ensuring the bioremediation occurs at the top of the cleaning fluid."); id. at 62-63 ([A]ll the patents that claim bioremediation of the grease and oil washed from a part are restricted to an embodiment wherein a substantial amount of the biodegradation takes place proximate to the fluid surface.") (emphasis omitted).)

The Court begins with the language of the claims themselves, which generally "provide[s] substantial guidance as to the meaning of particular claim terms." Phillips, 415 F.3d at 1314. As seen from the text of claims 1 and 6, neither of the claim phrases at issue either explicitly or implicitly require that biodegradation take place at the surface of the fluid. Instead, both claims merely recite that the biodegradation take place "within the fluid [in the tank]." Notably, when the Applicant desired to limit its invention to an embodiment where biodegradation takes place at the surface of the fluid, it knew how to do so. For example, claim 3 of the '110 patent recites a parts washing system "wherein [a] substantial portion of the microorganisms and hydrocarbons accumulate proximate to said fluid surface such that a substantial amount of biodegradation takes place proximate to said fluid surface." The presence of such a limitation there and not in these claims suggests they should not be so-limited.
Defendant also points to language in the specification in support of their position that all embodiments should be limited to biodegradation taking place at or near the surface of the fluid. The portion of the specification cited teaches that:

[T]he fluid 72 and organic contaminants pass through the support grid 58, and drain hole 52 to deposit into the tank cavity 44. . . . Within the tank cavity 44, a large percentage of the microorganisms and organic contaminants will tend to accumulate proximate to the surface of the cleaning fluid 72 such that a large portion of the biodegradation takes place proximate to the surface of the cleaning fluid 72.

'110 patent, col. 6, l. 49 - col. 7, l. 3. The parties do not dispute that, generally speaking, oil and grease, if left undisturbed, will float on top of the cleaning fluid. The specification merely discusses this phenomenon in the context of explaining a preferred embodiment of the invention. Nowhere, however, does the Applicant's disclosure indicate that it intended to limit the invention to embodiments where a substantial amount of the biodegradation takes place at the surface of the fluid. Cf. Phillips, 415 F.3d at 1323 ("Much of the time, upon reading the specification in that context, it will become clear whether the patentee is setting out specific examples of the invention . . ., or whether the patentee intends for the claims and the embodiments to be strictly coextensive."). It would be inappropriate to import the limitation into these claims due to the Applicant's discussion of a natural phenomenon that "tend[s] to" happen.

J. Walter's primary argument with regard to its proposed construction is that ChemFree, during prosecution of the '491 patent, made a representation that serves to limit all embodiments in all patents stemming from the '902 application to an embodiment wherein a substantial amount of the bioremediation takes place at the fluid surface. (Def.'s Opening Brief at 62-63 ("Applicants' characterization of the scope of the invention during prosecution limits the scope of all the patents-in-suit to the same extent -- all the patents that claim bioremediation of the grease and oil washed from a part are restricted to an embodiment wherein a substantial amount of the biodegradation takes place proximate to the fluid surface.").) To be clear, J. Walter seeks to impose a limitation on the claims in the '125 patent based not on representations made during prosecution of that patent, but on representations made during prosecution of its sibling '491 patent.

During prosecution of the '491 patent, the Examiner initially rejected all pending claims as obvious over three prior art references.'491 patent File History, Examiner's First Office Action at 2 (mailed July 19, 1996). In response to the Examiner's rejection, the Applicant cancelled independent claim 23 and amended remaining independent claims 26 and 35. Id., Applicant's Resp. to First Office Action at 1-3 (filed Dec. 22, 1997). With respect to claim 35, which eventually issued as the only independent claim of the '491 patent, the Applicant added two limitations to the claimed method for cleaning parts: "accumulating the microorganisms and the hydrocarbons adjacent a fluid surface defined by the fluid in the tank[] and biodegrading the hydrocarbons proximate to the fluid surface." Id. at 2-3. These limitations appear in the claim as issued. See '491 patent, col. 8, ll. 41-45. In connection with the amendment, the Applicant argued in the "remarks" portion of the response as follows:

The method of cleaning hydrocarbons from a part in the parts washer, as recited in claims 35-41, as now amended, includes exposing the part to a fluid within the basin and providing a flowpath for the fluid between the basin and the tank, wherein microorganisms are disposed within the parts washer, and the improvement thereto comprises heating the fluid, accumulating microorganisms and the hydrocarbons adjacent a fluid surface defined by the fluid in the tank, and then biodegrading hydrocarbons proximate to the fluid surface.

Such an improved construction of a parts washing system and method for cleaning hydrocarbons from a part are not believed to be taught by the cited art of record.

* * * 8

In addition, even if the cited references were modified as stated by the Examiner, Applicant respectfully submits that such a combination still would not make the invention recited by the claims, as now amended, obvious. As recited in claims 23 9 and 35-41, as now amended, the fluid defines a surface in the tank and a substantial portion of the microorganisms and hydrocarbons washed from the part tend to accumulate proximate to the fluid surface so that a substantial amount of the biodegradation takes place proximate to the fluid surface. Such a feature is not taught by the cited references.

In Microsoft v. Multi-Tech Systems, Inc., Multi-Tech sued Net2Phone, Inc. for infringement of several patents related to computer-based systems and methods for simultaneously transmitting voice and/or data to a remote site. Microsoft, 357 F.3d at 1344. In response to Multi-Tech's lawsuit, Microsoft filed suit in the same court seeking a declaratory judgment of noninfringement, invalidity, and unenforceability of seven of Multi-Tech's patents. Id. Multi-Tech filed a counterclaim against Microsoft alleging infringement of five of its patents. Id. The dispute among the parties centered in large part over the construction of three terms: "sending," "transmitting," and "receiving" certain types of data. Microsoft and Net2Phone, the accused infringers, argued that the specification and prosecution history mandated that Multi-Tech's claims be limited to systems using point-to-point telephone lines. Id. at 1346. Multi-Tech argued that the claim language was broad enough to encompass communications over a packet-switched network, such as the Internet. Id.

The Federal Circuit agreed with Microsoft and Net2Phone that the "sending," "transmitting," and "receiving" limitations at issue should be "limited to communications over a telephone line and excluding the use of a packet-switched network." Id. The court first looked to the claims themselves and determined that the language used did not operate to limit the scope of the claims to point-to-point telephone lines because it was broad enough to encompass packet-switched networks. Id. at 1347. Nevertheless, the court concluded that "the specification shared by all three patents leads to the 'inescapable conclusion' that the communications between the local and remote sites of the claimed inventions must occur directly over a telephone line." Id. at 1348. The court's conclusion was based on several important facts. The court noted that the specification common to the three patents "repeatedly and consistently describes the local and remote systems of the claimed inventions as communicating directly over a telephone line." Id.; cf. id. ("[T]he specification refers to data transmission 'over' or 'through' a telephone line roughly two dozen times."). The court also found important that the portion of the specification delineating the "Summary of the Invention" discussed the invention in terms of a standard telephone line. Id. These "clear statements in the specification that the invention . . . is directed to communications 'over a standard telephone line'" led the Federal Circuit to conclude that the "sending," "transmitting," and "receiving" required the communications to occur over a telephone line and not a packet-switched network. Id. at 1347-48.

The Federal Circuit also concluded that placing the telephone line limitation on these claims was required by the prosecution history. During prosecution of one of the patents at issue in that case, in response to an office action rejecting the claims as obvious, the applicant gave a "summary of the invention," which included a representation that the communications system disclosed in the specification "operates over a standard telephone line." Id. at 1349. The court determined that this statement "makes clear that Multi- Tech viewed the local and remote sites of its inventions as communicating directly over a telephone line." Id. Importantly, the court also determined that this limiting statement was applicable to all patents which shared the common specification, even though those patents were not before the examiner when the statement was made, because the general statement directed to the "communications system' disclosed '[i]n the [] specification' . . . was a representation of [the applicant's] understanding of the inventions disclosed in all three patents." Id. at 1349-50.

Defendant's reliance on Microsoft in this case is misplaced. Neither the common specification shared by the parts washing
patents nor the prosecution history of any one of those patents support limiting all embodiments in all patents to biodegradation taking place at or near the fluid surface. As discussed above, the only reference in the specification to the biodegradation occurring at the fluid surface is the disclosure that "a large percentage of the microorganisms and the organic contaminants will tend to accumulate proximate to the surface of the cleaning fluid 72 such that a large portion of the biodegradation takes place proximate to the surface of the cleaning fluid 72." 110 patent, col. 6, l. 49 - col. 7, l. 3. This solitary generalization is a far cry from the "repeated[] and consistent[]" representations in the specification in Microsoft, including the statement in the "Summary of the Invention," which led the Federal Circuit to the "inescapable conclusion' that the communications ... must occur directly over a telephone line." Id. at 1348.

Defendant J. Walter also relies upon the statement made by the Applicant in the prosecution history that "a substantial portion of the microorganisms and hydrocarbons washed from the part tend to accumulate proximate to the fluid surface so that a substantial amount of the biodegradation takes place proximate to the fluid surface. Such a feature is not taught by the cited references." This statement, devoid of context, is surely damning evidence that the invention being discussed must be limited to an embodiment where a substantial portion of biodegradation takes place at the fluid surface. J. Walter does not, however, acknowledge the context in which the statement was made. When the it made this argument to the Examiner, the Applicant specifically referred to the pending claims which explicitly recited those limitations. See '491 Patent File History, Applicant's Resp. to First Office Action at 8 (filed Dec. 22, 1997) ("As recited in claims ... 35-41, as now amended ... "). In essence, the Applicant merely recited the language of the claims and stated that the prior art did not teach such an arrangement. Thus, this is not the situation presented in Microsoft, where the statement made during prosecution broadly described the inventions in general as possessing a certain characteristic. Microsoft, 357 F.3d at 1349 ("That statement, which expressly related to the specification shared by all three patents and the communications system disclosed in all three patents, makes clear that Multi-Tech viewed the local and remote sites of its inventions as communicating directly over a telephone line."); cf. Ventana Med. Sys., Inc. v. BioGenex Labs., Inc., 473 F.3d 1173, 1184 (Fed. Cir. 2006) (noting that "[s]tatements made during the continued prosecution of a sibling application may 'inform the meaning of the claim language by demonstrating how the inventor understood the invention,'" but noting that the utility of such analysis is diminished when the claim language is different).

For these reasons, the Court declines to impose a limitation on these claims whereby biodegradation must occur at or near the top of the tank. The Court construes "allowing the microorganisms within the fluid to biodegrade the hydrocarbons" to mean "let or permit the microorganisms within the cleaning fluid to biodegrade the hydrocarbons." The Court construes "retaining the hydrocarbons within the fluid in the tank while the microorganisms biodegrade the hydrocarbons" to mean "the hydrocarbons remain in the cleaning fluid while the microorganisms biodegrade them."

181
1. Claim Construction

Moore argues that the district court erred in granting summary judgment of non-infringement of the '110 patent due to the accused SRC form's inability to literally satisfy the "devoid of adhesive" limitation of claims 1 and 11 and in view of the prosecution history. According to Moore, the district court failed to evaluate the "devoid of adhesive" limitation in view of the prior art and the prosecution history, as Moore alleges is required by Minnesota Mining & Mfg. Co. v. Johnson & Johnson Orthopaedics, Inc., 976 F.2d 1559, 1566, 24 U.S.P.Q.2D (BNA) 1321, 1327 (Fed. Cir. 1992).

Moore emphasizes that the Conti patent depicts a form with adhesive strips that extend the entire distance between the longitudinal lines of weakness at both end edges. Given this teaching of the Conti patent, Moore theorizes that "devoid of adhesive" must be construed as encompassing a form with "no adhesive extending substantially completely along both the end edges between the lines of weakness as in Conti." (Emphasis added.) Alternatively stated, Moore believes that the "devoid of adhesive" limitation extends to forms with adhesive absent from all but one end edge, along which intermittent adhesive extends. Moore further suggests that the phrase "along said end edges" requires that the adhesive not merely be near the end edges, but that the adhesive actually abut the end edges, as depicted in the Conti patent.

We reject each of Moore's claim construction arguments seriatim. With respect to Moore's belief that the sheet need only be devoid of adhesive that extends "substantially completely" between the longitudinal lines of weakness, we note that the Conti patent discloses an intermittent strip of non-permanent adhesive along the transverse end edge on one face, see Conti
Moore's evidentiary submissions show that the adhesive strip in the Conti patent need not be "substantially complete," but can be intermittent. We are perplexed by Moore's reliance on the prior art as somehow supporting a construction of "adhesive" as limited to a substantially complete strip. We further note the applicant's statement during the prosecution of the '110 patent that "if one were to remove the adhesive from the end edges of Conti, the remaining elements of Conti would not perform the same function as before." The applicant was plainly speaking of the removal of all the adhesive, not merely portions.

While Moore contends that a form that is devoid of adhesive between the longitudinal lines of weakness along all but one end edge would still infringe, the plain language of the claim does not limit the "devoid of adhesive" limitation to only one face or only one edge. Both claims 1 and 11 refer to the sheet as having "opposite end edges" (plural) and first and second faces, and we discern nothing in the plain language of the claims or the written description that would limit the reference to "said end edges" in the "devoid of adhesive" limitation to only some, but not all, of the end edges. In fact, the written description suggests the contrary, since all of its figures depict a form with no adhesive along any of the four end edges between the longitudinal lines of weakness. See '110 patent, Figs. 1-3.

Finally, with respect to Moore's bare contention that "along" requires that the strip abut the end edge and not merely be "near" the end edge, we emphasize that the plain meaning of "along" does not so require. According to Webster's II New Riverside University Dictionary, "along" means "1. Over, through, or by the length of <<roses growing along the fence>>." Webster's II New Riverside University Dictionary 95 (1984) (emphasis added). The definition of "by," in turn, is "1. Next to: close to <<the light by the window>>. Id. at 214 (emphasis added). These definitions clearly demonstrate that "along" does not require that a first item abut a second item, but rather can be "near" the second item.

Defendant contends the court's construction of the claim term "along a line" is erroneous. Patent claims define in words the scope of the invention at issue. Construction of the claims is a matter of law for the court. Cybor Corp. v. FAS Techs., Inc., 138 F.3d 1448, 1456 (Fed. Cir. 1996) (en banc).

In construing claims, the analytical focus must begin and remain centered on the language of the claims themselves, for it is that language that the patentee chose to use to "particularly point[] out and distinctly claim[] the subject matter which the patentee regards as his invention." 35 U.S.C. § 112, P 2.

Interactive Gift Express, Inc. v. Compuserve, Inc., 256 F.3d 1323, 1331 (Fed. Cir. 2001). Likewise, the court must be guided
by the principle that there is a "heavy presumption" that words used in the claims are "given their ordinary and customary meaning," that is "the meaning that the term would have to a person of ordinary skill in the art in question at the time of the invention." Phillips v. AWH Corp., 415 F.3d 1303, 1312-13 (Fed. Cir. 2005)(en banc), cert. denied, 546 U.S. 1170, 126 S. Ct. 1332, 164 L. Ed. 2d 49 (2006)(citation omitted). See also Texas Digital Systems, Inc. v. Telegenix, Inc., 308 F.3d 1193, 1202 (Fed. Cir. 2002)(collecting cases), cert. denied, 538 U.S. 1058, 123 S. Ct. 2230, 155 L. Ed. 2d 1108 (2003). Once the court has determined the ordinary meaning of the disputed terms, the court must examine the written description and prosecution history of the patent to ascertain whether the inventor specifically defined or used any of the terms in a way that is inconsistent with the ordinary or customary meaning. Likewise, if the court cannot fathom the meaning of the words, the specifications and prosecution history must be examined to determine the scope of the claims. The Federal Circuit has cautioned, however, that "[t]he written description part of the specification itself does not delimit the right to exclude. That is the function and purpose of claims." Markman v. Westview Instruments, Inc., 52 F.3d 967, 980 (Fed. Cir. 1995)(en banc), aff'd 517 U.S. 370, 116 S. Ct. 1384, 134 L. Ed. 2d 577 (1996).

With these principles in mind, the court construed "along a line" to mean "[c]ontacting the aorta inner wall with a portion of the tube body such that when the end of the catheter lodges within the opening in the coronary artery, an about 1.5 cm or greater length of the tube body bears upon the wall of the aorta opposite the opening." Order at 2 (W.D. Okla. Sept. 15, 2005)(Doc. No. 153). Defendant argues this construction is in error because it does not require "contiguous contact between the aorta inner wall and a straight section of the catheter". Cordis' JMOL Motion at 7 (emphasis added).

The court once again rejects defendant's proposed construction. The phrase "along a line" was added to Claim 4 of the '213 patent by amendment. Order at 14 (W.D. Okla. May 8, 2006)(Doc. No. 309). Specifically, Claim 4 was amended to describe the shape of the profiled portion and to reflect that the profiled portion engaged the wall of the aorta "along a line." Id. The purpose of the amendment was to distinguish prior art catheters by indicating the length and location of the engagement of the aortic wall. Id. at 15. Defendant's construction asks the court to incorporate a term into the claim that does not exist -- that is, that the engagement is solely along a straight portion of catheter. In addition to violating claim construction rules, defendant's construction fails to recognize that the '213 patent focuses on the catheter as it is used in the human body. The claim requires the catheter body to engage the aortic wall, which by its very nature is not straight. A person of ordinary skill in the art would understand the complex geometry of the aorta and would not expect engagement along a line to indicate a straight line. See Primos, Inc., 451 F.3d at 847-48. Moreover, defendant's construction would render disclosed preferred embodiments outside the scope of the claim. 9 While claim construction should not import limitations from preferred embodiments into the claim, interpretations that exclude a preferred embodiment are also not appropriate. Primos, Inc., 451 F.3d at 848; Burke, Inc. v. Bruno Indep. Living Aids, Inc., 183 F.3d 1334, 1341 (Fed. Cir. 1999).

--- Footnotes ---

8 See Superguide Corp. v. DirecTV Enterps., Inc., 358 F.3d 870, 878 (Fed. Cir. 2004)(error to limit claim to analog signals as "neither 'analog' nor 'digital' appears in any of the asserted claims").

9 The '213 patent teaches "the second straight portion 124 and the proximal portion of the secondary curved portion 130 of the distal end portion together provide a contact portion for resting substantially contiguously against the wall of the ascending aorta 158." PX 2 at 23:51-55 (emphasis added). Likewise, the patent reflects, "to the extent that an aorta varies in size/shape, the secondary curved portion 130 readily accommodates this change so that the contact portion (including the second straight portion 124 and the proximal portion 131 of the secondary curved portion 130) remains in contact with the ascending aortic wall in a substantially contiguous manner." Id. at 23:67 -- 24:6 (emphasis added). See also id. at 19:52-57 ("in this preferred orientation shown in FIG. 8C, a distal end 135 of the contact portion (the contact portion including the second straight portion 124 and a proximal portion 131 of the secondary curved portion 130) rests against the wall of the ascending aorta 158 at a point substantially directly across from the ostium 157 of the left main coronary artery 154. . . . Moreover, this advantageous orientation of the guide catheter 110 within the aortic complex is directly attributable to the shape and configuration (including a particular sequence of straight and curved portions) of the guide catheter 110 in its relaxed state prior to insertion in the cardiovascular system.")(emphasis added).

--- End Footnotes ---
The central issue is whether the Eastman Carbon Venture Blind has a "closable vertical opening," as required by the nine claims of the '338 Patent. Claims 1 and 7 are the independent claims of the patent. Claim 1 reads:

1. A portable and collapsible blind or shelter structure comprising:
   (a) a flexible fabric cover having four side walls and a top; wherein each side wall includes at least one window opening; wherein each said side wall opposite side edges and a top edge; wherein side edges of adjacent side walls are integral with each other; and further including a closable vertical opening along one of said side edges; wherein the perimeter of each side wall and the top is non-stretchable; and
   (b) a framework comprising five support members; wherein each side support member comprises four resilient leg members hingedly connected at one end to a central hub; wherein one said support member engages and supports said top; and wherein said leg members connected to each said hub can be pivoted towards each other to collapse said structure.

('338 Patent, col. 4, 11. 2-21). Claim 7 reads:

7. A portable and collapsible blind or shelter structure comprising:
   (a) a flexible, integral fabric cover having four generally-square side walls and a top; wherein each side wall includes at least one window opening; and further including a closable vertical opening along one vertical corner of said structure; wherein the perimeter of each side wall and the top is non-stretchable; and
   (b) framework comprising five support members; wherein each said support member comprises four resilient leg members hingedly connected at one end to a central hub; wherein one said support member engages and supports a respective side wall in a taut condition; wherein one said support member engages and supports said top; and wherein said leg members connected to each said hub can be pivoted towards each other to collapse said structure.

('338 Patent, col. 4, 11. 36-52). Claims 2-6 depend on claim 1. Consequently, those claims are limited by the term "a closable vertical opening along one of said side edges." Claims 8 and 9 depend on claim 7 and are limited by the term "a closable vertical opening along one vertical corner of said structure."

The plaintiff and defendant dispute the meaning of these claim limitations. The plaintiff contends that these phrases encompass an opening of any shape having a predominately vertical dimension which is positioned along or adjacent to a side edge or vertical corner of the structure. According to the plaintiff's construction, this claim language would cover a triangular flap extending into one side wall, so long as one side of the triangle is positioned along one side edge or vertical corner of the structure. The defendant disputes that interpretation, arguing that the claim language, the specification, and the prosecution history show that a "closable vertical opening" means "a slit-like opening that runs straight up and down or perpendicular to the horizon." Eastman further asserts that the ordinary meaning of "along one of said side edges" is "over the length of or on a line or course parallel and close to one of the side edges of the blind," and that the ordinary meaning of "along one vertical corner of said structure" is "over the length of or on a line or course parallel and close to the vertical line formed where two side walls of the blind meet at an angle."

"It is well-settled that, in interpreting an asserted claim, the court should look first to the intrinsic evidence of record, i.e., the patent itself, including the claims, the specification and, if in evidence, the prosecution history." Vitronics Corp. v. Conceptronic, Inc., 90 F.3d 1576, 1582 (Fed. Cir. 1996); see also Markman v. Westview Instruments, Inc., 52 F.3d 967, 979 (Fed. Cir. 1995) (en banc), aff'd, 517 U.S. 370, 116 S. Ct. 1384, 134 L. Ed. 2d 577 (1996). The words of the claims are of primary importance. Phillips v. AWH Corp., 415 F.3d 1303, 1312 (Fed. Cir. 2005) (en banc); Vitronics, 90 F.3d at 1582 (Fed. Cir. 1996). "[T]he words of a claim 'are generally given their ordinary and customary meaning.' Phillips, 415 F.3d at 1312 (quoting Vitronics, 90 F.3d at 1582). "[T]he ordinary and customary meaning of a claim term is the meaning that the term would have to a person of ordinary skill in the art in question at the time of the invention." Phillips, 415 F.3d at 1313.
Eastman submitted the declaration of Mr. Jeffrey A. Pestrue, its chief engineer. Mr. Pestrue is person with expertise in the design, development and production of hunting blinds, and he stated that the phrase "closable vertical opening" has no special meaning in the hunting blind industry. (Pestrue dec. P 5). There is no other evidence on this point.

Resolution of this claim construction dispute involves the application of commonly understood words. The parties have focused attention on the meaning of the word "vertical." "The common-sense understanding of 'vertical' or 'vertically' is that those words convey a sense of perpendicularity with respect to the surface of the earth." Laser Diode Array, Inc. v. Paradigm Lasers, Inc., 114 F.Supp.2d 167, 172 (W.D.N.Y. 2000). General purpose dictionary definitions, which are a type of extrinsic evidence, may be considered in the context of the intrinsic evidence. See Phillips, 415 F.3d at 1314-19. The plaintiff cites Merriam-Webster's Collegiate Dictionary (10th ed. 1998) which includes the following definitions: "perpendicular to the plane of the horizon or to a primary axis: UPRIGHT … lying in the direction of an axis: LENGTHWISE." That source also states, "Vertical suggests a line or direction rising straight upward toward a zenith."

When construing claims, "the context in which a term is used in the asserted claim can be highly instructive." Phillips, 415 F.3d at 1314. In the disputed phrases, "vertical" modifies "opening." This context means that the opening itself must extend lengthwise, in a direction that is straight up and down or perpendicular to the plane of the horizon.

The claim language also requires that the closable vertical opening be along one of the side edges (claim 1) or along one vertical corner of the structure (claim 7). The position of the opening is described throughout the patent. The abstract states: "One corner of the structure includes a vertical opening to permit ingress and egress from the structure." The following statement appears in the summary of the invention: "An openable doorway is positioned vertically at one corner of the blind or shelter to enable ingress and egress. Closure means such as a zipper is used to close the opening." (‘338 Patent, col. 2, ll. 13-15). The following statement appears in the detailed description of the invention:

> A zipper is incorporated in one corner of the structure where two side walls meet. The zipper is stitched in place with non-stretchable thread. The leg members must flex in order to enable the door opening to expand for ingress and egress. When the zipper is in an open position, the fabric adjacent [to] the opening can be pulled slightly away from the opening (which results in widening of the opening as the pegs flex.)

(Col. 3, ll. 28-35). In Figure 1, a vertical slit-like opening positioned at the corner of the blind is shown as element 5. No other type of opening is mentioned in the patent.

The patent's prosecution history is also informative. The application claims were allowed without amendment. The Notice of Allowability included the following Examiner's Statement of Reasons for Allowance:

> The primary reason for the allowance of the claims is the claimed foldable tent structure having a cover which includes a top wall and 4 side walls and a zippered vertical opening at a cornered side edge, 5 frame members each has four resilient legs hingedly connected at one end to a central hub, each frame member engages and supports a respective side wall and the top wall in a taut condition; each leg is pivotable at the hub toward each other to collapse the tent structure. Said tent structure is not shown or taught by the prior art of record.

(Def's Ex. A-2). This statement demonstrates that the Examiner considered a vertical opening positioned at a cornered side edge to be a distinguishing feature of the invention. Among the prior art patents cited as references in the '338 Patent are U.S. Patent No. 3,810,482 to Beavers (the "482 Patent") and U.S. Patent No. 4,819,680 to Beavers ("the '680 Patent). These patents disclose a cube-shaped collapsible tent structure having a hub-style framework similar to that of the plaintiff's invention. One of the few distinctions between the plaintiff's invention and these prior art patents is that the plaintiff's invention has a vertical opening at a cornered side edge.

The plaintiff has provided the declaration of Rex E. Paulsen, Ph.D., P.E. Mr. Paulsen is a registered professional engineer and has some expertise relating to collapsible tents and patents. Mr. Paulsen's declaration constitutes extrinsic evidence, a category that is less significant than the intrinsic evidence. See Phillips, 415 F.3d at 1317. Mr. Paulsen's declaration suffers from errors and deficiencies and is not useful in ascertaining the meaning of the disputed terms. In his discussion of the prosecution history, Mr. Paulsen dismissed the significance of Examiner's Reasons for Allowance without any review of the prior art. Where he did address the '482 Patent, Mr. Paulsen mistakenly stated that the '482 Patent shows a three-sided tent, whereas the specification of the '482 Patent expressly states that the invention is not limited to a structure having three sides.
and a top. See '482 Patent, col 3, 11. 24-38 ("The frame 12 comprises a minimum of four and a maximum of six nearly identically constructed subframe assemblies … [in the preferred embodiment] the subframe assemblies which could be positioned in the entryway 18 as well as in the floor area are both left out."). Figure 2 of the '482 Patent shows a tent having four side walls and top, with a triangular entryway in one of the side walls. A similar drawing is shown in the '680 Patent.

Mr. Paulsen failed to appreciate the full teachings of the Beavers patents and other references cited in the '338 Patent. The language of the '338 Patent claims, the specification, and the prosecution history support the construction urged by Eastman. The term "a closable vertical opening" means "a slit-like opening that runs straight up and down or perpendicular to the plane of the horizon." "Along one of the side edges" means "over the length of or on a line or course parallel and close to one of the side edges of a wall of the blind." "Along one vertical corner of said structure" means "over the length of or on a line or course parallel and close to the vertical line formed where two side walls of the blind meet at an angle."

The court need only construe the term "alphanumeric keyboard" within claim 1 to decide the preliminary injunction application. n5 Wireless proposes the following construction: "An alphanumeric keyboard" is a regular arrangement of keys. When activated, these keys are used to generate the internal representation of symbols. Alphanumeric' symbols include letters of the alphabet and numbers 0-9. Alphanumeric keyboards' allow the generation of internal representations for this set of symbols." P. Reply Br. 8 (quoting Dr. Deffner Report P 31, P. App. 306). Sony submits the following proposed construction: "An input device having a QWERTY, FITALY, or Dvorak layout or any other alphanumeric layout that includes a substantially full set of alphabetic and numeric keys." D. Br. 8 (emphasis omitted).

n5 Wireless has submitted proposed constructions for ten terms within claim 1. For purposes of Wireless' preliminary injunction application, Sony does not dispute the proposed constructions of seven of the ten terms, but it does challenge the proposed constructions of three -- "hand-held," "body portion," and "alphanumeric keyboard" -- and maintains that a fourth term -- "high resolution" -- needs to be interpreted. Of these, the court need only construe the term "alphanumeric keyboard" to conclude that Wireless is not entitled to injunctive relief.

To support its proposed construction, Wireless relies exclusively on extrinsic evidence -- primarily the report of its expert, Dr. Gerhard Deffner ("Dr. Deffner"). n6 The Federal Circuit generally views extrinsic evidence as "less reliable than the patent and its prosecution history in determining how to read claim terms." Phillips, 415 F.3d at 1318. The language of Wireless' proposed construction comes directly from Dr. Deffner's report. The report states in conclusory terms that the proposed construction is how "[a] person of ordinary skill in the art would understand" the term. P. App. 306. But "conclusory, unsupported assertions by experts as to the definition of a claim term are not useful to [the] court." Phillips, 415 F.3d at 1318.

n6 Wireless also points to various technical dictionaries to support its proposed construction. Under Phillips the court may review technical dictionaries "if the court deems it helpful." Phillips, 415 F.3d at 1318. Because the court is able to construe the disputed claim term based on intrinsic evidence, it need not resort to technical dictionaries. See Vitronics, 90 F.3d at 1583 (If "an analysis of the intrinsic evidence alone will resolve any ambiguity in a disputed claim term . . . , it is improper to rely on extrinsic evidence.").

In addition, Wireless points to allegedly inconsistent positions that Sony and its expert, Dr. Brad A. Myers ("Dr. Myers"), have taken in other patent proceedings. This is also extrinsic evidence because it is external to the 173 patent and its prosecution history. See Phillips, 415 F.3d at 1317.
In contrast to Wireless' reliance on extrinsic evidence, Sony points primarily to the patent specification to support its proposed construction. Indeed, the text of its proposed definition comes directly from the specification. Compare D. Br. 8 with P. App. 20.

Because the meaning of the claim term "alphanumeric keyboard" as understood by persons of skill in the art is not immediately apparent, the court will interpret it by considering the intrinsic evidence. See Vitronics, 90 F.3d at 1582 ("It is well-settled that, in interpreting an asserted claim, the court should look first to the intrinsic evidence of record . . . "). The court turns first to the specification of the 173 patent. The "Background of the Invention" section of the specification summarizes the configurations of several conventional wireless communication devices, including the mobile phone. It describes the mobile phone as typically including, inter alia, "a twelve-digit keypad designed for numeric data entry." P. App. 18. It then details shortcomings with each of the conventional wireless devices. It describes the following fundamental disadvantage with the mobile phone's twelve-digit keypad. Although the twelve-digit keypad usually supports some alphanumeric data entry,

the commonly used method of accessing alphanumeric characters is to switch the device into a text entry mode, then press a key repeatedly to access a particular one of a subset of characters available for each key, this method being extremely slow, awkward, error prone, and not appropriate for a device intended to transfer textual data on a regular basis.

The "Summary of the Invention" section distinguishes between the invention's alphanumeric keyboard' and the mobile phone's keypad. "The alphanumeric keyboard is easier and faster to use and learn than the keypads . . . on most mobile phones . . . ." Id. at 20. It describes the alphanumeric keyboard as follows: "The keyboard may be a keyboard with a layout such as the common QWERTY' layout, but need not be limited to this particular layout. Other layouts may include the FITALY' layout, the Dvorak' layout[,] or any other alphanumeric layout that includes a substantially full set of alphanumeric keys." Id. (emphasis added). The specification explains the primary advantage of the invention's keyboard. In contrast to data entry using the mobile phone's twelve-digit keypad, which is "extremely slow, awkward, [and] error prone," id. at 18, the invention's "full alphanumeric keyboard allows the user to quickly and easily transmit messages and other textual and graphical communications in a complete and intuitive manner," id. at 20, and is "effortless to learn and use," id. n7

n7 Neither party has adduced evidence of the patent's prosecution history. Thus the specification is the only intrinsic evidence that the court will consider.

Based on the intrinsic evidence, the court rejects Wireless' proposed construction of "alphanumeric keyboard." The patent specification unambiguously distinguishes between the invention's keyboard and the mobile phone's standard twelve-digit keypad. Because Wireless' proposed construction -- "a regular arrangement of keys" -- would include the twelve-digit keypad, it is simply too broad. Instead, the court adopts Sony's proposed construction, which is taken directly from the language of the patent specification.

Wireless contends that the court's adoption of Sony's proposed construction would be improper because it would use the patent specification to limit the scope of the claims. The court recognizes that it is prohibited from "limiting the claimed invention to preferred embodiments or specific examples in the specification." Tex. Instruments, Inc. v. U.S. Int'l Trade Comm'n, 805 F.2d 1558, 1563 (Fed. Cir. 1986); see also Phillips, 415 F.3d at 1323 ("Although the specification often describes very specific embodiments of the invention, we have repeatedly warned against confining the claims to those embodiments."). The court also "recognize[s] that the distinction between using the specification to interpret the meaning of a claim and importing limitations from the specification into the claim can be a difficult one to apply in practice." Phillips, 415 F.3d at 1323. But because the court's analysis does not refer to the patent's preferred embodiment or to the numerous
specific examples of other embodiments listed within the patent, the court is satisfied that it is relying on the specification to interpret the claims, not to improperly limit them.

D

The claims of the 173 patent do not read on the accused products. The Sony devices do not have an "alphanumeric keyboard," as the term is properly construed. Rather, they incorporate a typical twelve-digit numeric keypad, a power key, and a Sony operator-defined key. Like standard mobile phone keypads, the keys associated with the numerals 2 through 9 are also capable of inputting alphabetic characters in a text-entry mode. But the specification makes clear that this is the keypad configuration that suffers from the problems that the inventors sought to overcome by incorporating an alphanumeric keyboard that employs a substantially-full set of alphanumeric keys. Thus the court concludes on the present record that Wireless has failed to establish that it will likely prove infringement of claim 1 at trial. The remaining asserted claims are dependent on claim 1. Because dependent claims necessarily include all limitations of the claims on which they depend, Wireless has not demonstrated that it will likely prove infringement of any of the asserted dependent claims at trial.

The intrinsic evidence provides adequate grounds for the court to construe the term "alphanumeric keyboard." Accordingly, the court does not rely on any extrinsic evidence, including expert reports. See Vitronics, 90 F.3d at 1583 (If "an analysis of the intrinsic evidence alone will resolve any ambiguity in a disputed claim term . . ., it is improper to rely on extrinsic evidence.").

C

In their briefing on the summary judgment motion, the parties focus their arguments on the construction of "alphanumeric keyboard" alone, disregarding the remaining claim terms. Thus the court in deciding the motion will construe "alphanumeric keyboard" only. In its summary judgment motion, Sony urges the court to adopt its preliminary construction of "alphanumeric keyboard" as its final construction. Sony relies on the court's analysis of the intrinsic evidence in Wireless I, contending that this evidence dictates that an "alphanumeric keyboard" have a substantially full set of alphabetic and numeric keys and maintaining that Wireless cannot rely on extrinsic evidence to contradict the meaning of "alphanumeric keyboard" that is contained in the specification. Wireless posits that the court improperly construed "alphanumeric keyboard" on an incomplete record at the preliminary injunction stage and impermissibly limited the claims of the '173 patent to the preferred embodiment. n7 Wireless also directs the court to the prosecution history of United States Patent Application No. 10/655,802 ("the '802 application"), which Wireless maintains supports a broader construction for "alphanumeric keyboard" than the one the court adopted in Wireless I. Sony replies that the '802 application's prosecution history does not support Wireless' assertions.

n7 Rather than restate its analysis in its response to Sony's summary judgment motion, Wireless reasserted and incorporated by reference all of the legal and factual assertions it made in its motion for preliminary injunction and motion to reconsider.

Because the parties' arguments are substantially the same ones made at the preliminary injunction stage, the court will address only the new claim construction evidence before issuing its final claim construction for "alphanumeric keyboard." Wireless submitted a November 29, 2005 notice of filing supplemental appendix to its brief in support of its motion to reconsider, which contains the prosecution history of the '802 application. Wireless filed the supplemental appendix even though the court had earlier denied Wireless' motion to reconsider and Wireless had already appelead the denial of the preliminary injunction motion and the motion to reconsider. Sony recognizes the "procedural impropriety" of Wireless' filing a supplemental appendix for a motion that had already been decided by the court and that was the subject of a pending appeal. D. Br. 2 n.6. Nevertheless, Sony does not object to the supplemental appendix; instead, it contends the '802 application's prosecution history does not support Wireless' assertions.
Wireless avers that during the prosecution of the '802 application -- which it maintains has an identical specification to that of the '173 patent -- the Patent and Trademark Office ("PTO") Examiner ruled that an "alphanumeric keyboard" should be construed to include "a qwerty, a Fitaly, a Dvorak or a twelve-key keyboard." P. Br. 3 (emphasis omitted) (quoting P. Supp. App. 32-33). Wireless contends the prosecution histories of related applications are highly relevant and useful evidence in determining a patent's scope, and that the PTO Examiner's conclusion is wholly consistent with Wireless' construction of "alphanumeric keyboard" as specifically including a twelve-digit keypad. Sony argues that Wireless has misrepresented the prosecution history of the '802 application. It maintains that, in response to the PTO's rejection of all claims in the '802 application, Wireless removed the word "alphanumeric" from the claims, and that the PTO Examiner made no conclusions relating to the construction of "alphanumeric keyboard."

The prosecution history of the '802 application is extrinsic evidence. See Phillips, 415 F.3d at 1317 (holding that extrinsic evidence "consists of all evidence external to the patent and prosecution history" (quoting Markman, 52 F.3d at 980)). As such, it is less reliable than the '173 patent's specification in construing that patent's claim terms, and the court should discount it if it is clearly at odds with the claim construction mandated by the intrinsic evidence. See id. at 1317-18. And because, as the court held in Wireless I, "the intrinsic evidence provides adequate grounds for the court to construe the term 'alphanumeric keyboard,'" Wireless I, 390 F. Supp. 2d at 540, it is improper for the court to rely on extrinsic evidence, including the '802 application's prosecution history. See Vitronics, 90 F.3d at 1583 (If "an analysis of the intrinsic evidence alone will resolve any ambiguity in a disputed claim term . . ., it is improper to rely on extrinsic evidence.").

Moreover, even if the court were to afford great weight to the '802 application's prosecution history, it does not support Wireless' assertions. To support its contention that the PTO Examiner "ruled that an 'alphanumeric keyboard' should be construed to include 'a qwerty, a Fitaly, a Dvorak or a twelve-key keyboard,'" P. Br. 3, Wireless cites claims 67, 68, and 69 of the '802 application. Claim 67 depends on claim 1, claim 68 depends on claim 31, and claim 69 depends on claim 56. At one point, claims 1 and 31 required, inter alia, "an alphanumeric keyboard carried by the body portion." P. Supp. App. 16, 25. In response to PTO action, the '802 applicant amended claims 1 and 31 such that the "alphanumeric keyboard" limitation was removed. These claims now include the limitation of "a keyboard carried by the body portion." Id. at 15, 16, 25. Claim 56 also contains the limitation of "a keyboard carried by the body portion." Id. at 30. Claims 67, 68, and 69 each contain the limitation that the "keyboard [be] selected from the group of a qwerty, a Fitaly, a Dvorak or a twelve-key keyboard." Id. at 32-33. Wireless' contention that this language is somehow equivalent to a ruling by the PTO Examiner regarding the construction of "alphanumeric keyboard" is incongruous. To the extent that claims 67, 68, and 69 might enlighten a person of ordinary skill in the art as to whether a claim term includes "a twelve-key keyboard" in its definition, that term is "keyboard," not "alphanumeric keyboard."

Relying only on the intrinsic evidence of the '173 patent as the court explained in Wireless I, the court adopts its tentative construction of "alphanumeric keyboard" at the preliminary injunction stage as its final construction. Thus the court construes "alphanumeric keyboard" as an input device having a QWERTY, FITALY, or Dvorak layout or any other alphanumeric layout that includes a substantially full set of alphabetic and numeric keys.

DISCUSSION

This appeal turns entirely on the correct construction of the term "alphanumeric keyboard." We construe the term "alphanumeric keyboard" without deference to the district court's claim construction. Free Motion Fitness, Inc. v. Cybex Int'l, Inc., 423 F.3d 1343, 1347 (Fed. Cir. 2005).

The scope of the term "alphanumeric keyboard" is not readily apparent from the face of the claim, and there is no common dictionary definition of this term. n2 However, the term "alphanumeric keyboard" "must be read in view of the specification, of which [it is] a part." Phillips, 415 F.3d at 1315 (internal quotation marks and citation omitted). The specification is "the single best guide to the meaning of a disputed term." Id. (internal quotation marks omitted). Here, it is clear to us, as it was to the district court, that an "alphanumeric keyboard" is an input device having a QWERTY, FITALY, or Dvorak layout or any other alphanumeric layout that includes a substantially full set of alphabetic and numeric keys, and that it does not include a twelve-digit keypad.
First, the description of the invention in the "Summary of the Invention" section of the specification states:

The keyboard may be a keyboard with a layout such as the common "QWERTY" layout, but need not be limited to this particular layout. Other layouts may include the "FITALY" layout, the "Dvorak" layout or any other alphanumeric layout that includes a substantially full set of alphanumeric keys.

'173 patent, col. 5, ll. 6-11 (emphasis added). The description clearly depicts the claimed invention as having "the common 'QWERTY' layout" or "any other alphanumeric layout that includes a substantially full set of alphanumeric keys." This description is not merely referring to a preferred embodiment; rather, as part of the "Summary of the Invention," it is "commensurate with the invention as claimed." 37 C.F.R. § 1.73 (2004). Therefore, to allow Wireless to claim a keyboard with less than a substantially full set of keys would injure the public's right "to take the patentee at [his] word." Honeywell Int'l, Inc. v. ITT Indus. Inc., 452 F.3d 1312, 2006 U.S. App. LEXIS 15553, F.3d , No. 05-1407, 2006 WL 1703376, at *6 (Fed. Cir. June 22, 2006).

Wireless argues that the specification cannot be used to define the term "alphanumeric keyboard" because at the end of the specification the '173 patent contains the following boilerplate language:

Although the invention has been described with reference to a particular embodiment, this description is not meant to be construed in a limiting sense. Various modifications of the disclosed embodiments as well as alternative embodiments of the invention will become apparent to persons skilled in the art. . . . It is therefore contemplated that the appended claims will cover any such modifications or embodiments that fall within the scope of the invention.

'173 patent, col. 13, ll. 20-28. We see nothing in this language that contradicts our reading of the specification.

Second, the specification explicitly references the disadvantages of keypads that have only twelve digits, such as the accused device. For example, in describing the disadvantage of the mobile phone twelve-digit keypad, the specification states:

The mobile phone configuration has the following disadvantages . . . the keypad is typically a twelve-digit keypad designed for numeric data entry, although the keyboard usually supports alphanumeric character entry . . . whereby the commonly used method of accessing alphanumeric characters is to switch the device into a text entry mode, then press a key repeatedly to access a particular one of a subset of characters available for each key, this method being extremely slow, awkward, error prone, and not appropriate for a device intended to transfer textual data on a regular basis. . . .

'173 patent, col. 2, ll. 39-58 (emphasis added). Further, the specification distinguishes the "alphanumeric keyboard" from the keypads on most mobile phones by stating "[t]he alphanumeric keyboard is easier and faster to use and learn than the keypads and touch screens on most mobile phones and personal digital assistants." '173 patent, col. 5, ll. 4-6.

We have previously recognized that "[w]here the specification makes clear that the invention does not include a particular feature, that feature is deemed to be outside the reach of the claims of the patent, even though the language of the claims, read without reference to the specification, might be considered broad enough to encompass the feature in question." Scimed Life Sys., Inc. v. Advanced Cardiovascular Sys., Inc., 242 F.3d 1337, 1341 (Fed. Cir. 2001). In Honeywell Int'l, Inc., 2006 U.S. App. LEXIS 15553, F.3d , a case involving similar circumstances, we found that the claim term "electrically conductive fibers" excluded carbon fibers because the specification's "repeated derogatory statements concerning one type of material [(carbon fibers)] [was] the equivalent of disavowal of that subject matter from the scope of the patent's claims." Id., 2006 U.S. App. LEXIS 15553, 2006 WL 1703376 at *7. Here too, the specification's repeated derogatory statements about the twelve-digit keypad convince us that the "alphanumeric keyboard" does not include a twelve-digit keypad.
Wireless also urges that we look to extrinsic evidence, including a statement by its expert witness that "an 'alphanumeric keyboard' is a regular arrangement of keys." J.A. at 407 (emphasis added). Wireless's expert concluded that the accused device "includes a regular arrangement of keys, i.e., a keyboard, which allows users to generate all the letters of the alphabet and the numbers 0 through 9." J.A. at 415. We find that the expert's statement is conclusory and is unsupported by reference to any contemporaneous document and therefore of no value in our claim construction analysis. Phillips, 415 F.3d at 1318.

Wireless also points to the fact that the Patent and Trademark Office allowed certain claims of Wireless's related patent application ("the '802 application") to cover a twelve-digit keyboard. The allowed claims of the '802 application do not include an "alphanumeric keyboard." That allowance has no bearing on the construction of the term "alphanumeric keyboard." Wireless also cites to various patent applications filed by Sony, arguing that Sony's patents describe a twelve-digit keypad as an alphanumeric keyboard. None of the references cited by Wireless contains a definition of alphanumeric keyboard that is contrary to the district court's claim construction here. In any event, the specification here is clear and the expert testimony and other extrinsic evidence cannot be used to contradict it.

For the foregoing reasons, we conclude that the district court's claim construction was correct. The undisputed evidence established that the accused device utilized twelve keys rather than a substantially full set of alphanumeric keys. The preliminary injunction was therefore properly denied. We affirm.

2. Altering (claims 1, 30, 46, 50) 4

4 For purposes of claim construction, the parties appear to use the words "altered," "altering," and "adjusting" interchangeably. The Court will also use them interchangeably.

Plaintiff one or more techniques selected from the group consisting of adding, removing, isolating and shielding a known fraction of said initial amount

Defendant a two-phase manufacturing process in which a lot or test characterization is performed, and the initial amount of an oxidizable or reducible species is altered or adjusted to bring it within a desired or target.

For its proposed construction, defendant relies on the language in claims 30 and 46, which include the terms "initial amount" as the thing to be altered. (Def.'s Mem. in Opp'n, 20.) Based on the claim language, defendant argues that "the plain meaning of claim terms 'initial amount' or 'original amount' is the first or beginning amount of oxidizable and reducible species on each iontophoretic device . . . the plain meaning of the terms 'altering' and 'altered' requires a change or variation from that beginning amount." (Id. at 20.) Defendant also argues that the specification shows that the two-step process was necessary to avoid encompassing prior art. (Def.'s Mem. in Support Summ. J., 19.)

Plaintiff's construction simply quotes the language of the claim itself. (014 Patent, col. 8, lines 44-48.) Under plaintiff's proposed construction, a two-phase process is not required. In addition, plaintiff notes that the prosecution history does not suggest that specifically a two-phase manufacturing process, rather than a one-step "altering" process, was necessary to avoid encompassing prior art.

The Court adopts plaintiff's proposed construction of the term "altering." First, plaintiff's proposed construction relies on the claim language itself. Phillips, 415 F.3d at 1312-13. Second, defendant's construction of "altering" would impermissibly import the two-phase manufacturing process limitation from a dependent claim -- claim 32 -- into an independent claim -- claim 30. See Liebel-Flarsheim Co. v. Medrad, Inc., 358 F.3d 898, 910 (Fed. Cir. 2004) ("the presence of a dependent claim that adds a particular limitation raises a presumption that the limitation in question is not found in the independent claim").
Therefore, the Court construes the claim term "altering" to mean: one or more techniques selected from the group consisting of adding, removing, isolating and shielding a known fraction of said initial amount.

II. MOTION FOR A MARKMAN DETERMINATION.

Plaintiff asks the Court to construe the term "aluminum" as set forth in Claims 1 and 2 of the '050 patent to mean "commercial grade aluminum." Defendants respond that plaintiff's definition is incomplete and that the Court should construe "aluminum" to mean "commercial grade aluminum from 0.010 inches to 0.015 inches in thickness."

A. Legal Standard.

Patent infringement analysis involves two steps: the proper construction of the asserted claim and a determination as to whether the accused method or product infringes the asserted claim as properly construed. See Markman v. Westview Instruments, Inc., 52 F.3d 967, 976 (Fed. Cir. 1995) (en banc), aff'd, 517 U.S. 370, 134 L. Ed. 2d 577, 116 S. Ct. 1384, (1996). Interpretation and construction of patent claims is a matter of law for determination exclusively by the court. 52 F.3d at 979.

"In interpreting an asserted claim, the court should look first to the intrinsic evidence of record, i.e., the patent itself, including the claims, the specification and, if in evidence, the prosecution history." Vitronics Corp. v. Conceptronic, Inc., 90 F.3d 1576, 1582 (Fed. Cir. 1996). In examining the intrinsic evidence, the court should first look at the words of the claims themselves to define the scope of the patented invention. See id. While "words in a claim are generally given their ordinary and customary meaning," a patentee may alter the meaning of any words as long as the special definition is clearly stated in the patent specification or file history." Id.

Second, the court should always review the patent specification "to determine whether the inventor has used any terms in a manner inconsistent with their ordinary meaning." Id. The specification is a written description of the invention which is designed to be clear and complete enough so that a person of ordinary skill in the art could make and use the invention. Drawings included in the patent application have the same impact on and effect on claim language as other portions of the specifications. See Autogiro Co. of America v. United States, 181 Ct. Cl. 55, 384 F.2d 391, 398 (Ct. Cl. 1967). "The specification acts as a dictionary when it expressly defines terms used in the claims or when it defines terms by implication." Vitronics, 90 F.3d at 1582. The Federal Circuit teaches that "the specification is always highly relevant to the claim construction analysis. Usually it is dispositive; it is the single best guide to the meaning of a disputed term." Id.

In most cases, analysis of the intrinsic evidence alone will resolve any ambiguity in a disputed term. "In those cases where the public record unambiguously describes the scope of the patented invention, reliance on any extrinsic evidence is improper." Vitronics, 90 F.3d at 1583.

B. Claim Construction.

Here all parties agree that the Court need only review intrinsic evidence. All parties also agree that, at a minimum, "aluminum" means "commercial grade aluminum." The specification the '050 patent states that the laminated component "comprises substrate A of commercial grade aluminum." '050 patent, col. 4, lines 61-62. The specification goes on the state in the next sentence that "aluminum from about, 0.010 to 0.015 inches in thickness has been found to be satisfactory, although the aluminum may be from about 0.001 inches to 0.125 inches thick depending upon the end use." Id., lines 62-66. It states further that "the CAC component show in FIG. 5 includes a substrate layer of commercial grade aluminum A which is illustrate as from about 0.010 to about 0.015 inches in thickness. Id., col. 5, lines 49-52.

Defendants argue that the specification offers no explanation as to how one skilled in the art of how to practice the invention using the outside measurements of 0.001 inches to 0.125 inches thick, other than stating that thickness depends on "end use." Such vague language, defendants contend, violates the enablement requirements of 35 U.S.C. § 112 and therefore "aluminum" must be construed to mean "commercial grade aluminum from 0.010 inches to 0.015 inches in thickness."
Defendants cite no caselaw for the proposition that a claim must be limited to an inventor's preferred embodiment. Moreover, 35 U.S.C. § 112 paragraph one requires the specification to provide "a reasonable amount of guidance with respect to the direction in which the experimentation should proceed to enable the determination of how to practice a desired embodiment of the invention claimed." PPG Indus., Inc. v. Guardian Indus. Corp., 75 F.3d 1558, 1564 (Fed. Cir. 1996) (quoting Ex Parte Jackson, 217 U.S.P.Q. (BNA) 804, 807 (1982)). The '050 specification does just that. "The fact that some experimentation [such as experimentation to determine the thickness of the sheet] is necessary does not preclude enablement; what is required is that the amount of experimentation must not be unduly extensive." Id. Defendants offer no evidence, and indeed do not argue, that any experimentation to determine the appropriate thickness depending on "end use" would be unduly extensive. Accordingly, the Court will adopt the construction of "aluminum" proposed by plaintiff.

190

3. On December 22, 2000, the court issued its construction of disputed claim terms as follows:

a. "Aluminum alloy sheet product." As understood by one of ordinary skill in the art, an aluminum product with a maximum thickness of 1/4 inches.

191

3. On December 22, 2000, the court issued its construction of disputed claim terms as follows:

a. "Aluminum alloy sheet product." As understood by one of ordinary skill in the art, an aluminum product with a maximum thickness of 1/4 inches.

192

1. The '531 Patent

Claim construction begins with the words of the claim. See Bell Communications Research, Inc. v. Vitalink Communications Corp., 55 F.3d 615, 619-20, 34 U.S.P.Q.2D (BNA) 1816, 1819 (Fed. Cir. 1995). We focus on the limitation "an upstanding feed tube . . . to provide a hygienic flow path for delivering liquid from . . . and for admitting air . . . into said container" in claim 1 for convenience because our analysis does not vary concerning the corresponding limitation in claim 7. 1

- - - - - - - - - - - - - - Footnotes - - - - - - - - - - - - - -

1 Ebco argues that we should construe the following claim language:

an upstanding feed tube . . . to provide a hygienic flow path for delivering liquid from said inverted unpressurized container into said reservoir to said predetermined maximum liquid level and for admitting air from said reservoir above said liquid level into said container to displace the liquid delivered therefrom, . . .

Ebco asserts that the phrases "[delivering liquid from] said inverted unpressurized container into said reservoir to said predetermined maximum liquid level" and "[admitting air from] said reservoir above said liquid level to displace the liquid delivered therefrom" are essential to properly construe the feed tube limitation. We recognize that claim limitations must be construed in context and do so in this case. These phrases, however, do not add context that affects our analysis of whether this limitation is properly interpreted to include more than one feed tube or flow path for liquid and air. Therefore, we do not focus on them.

- 598 -
Ebco asserts that the normal, accepted meaning of the use of the articles "a" and "an" requires that the above-quoted limitation be construed as describing a single feed tube with a single path for both air and water. This contention goes too far. While the article "a" or "an" may suggest "one," our cases emphasize that "a" or "an" can mean "one" or "more than one," depending on the context in which the article is used. See Abtox, Inc. v. Exitron Corp., 122 F.3d 1019, 1023, 43 U.S.P.Q.2D (BNA) 1545, 1548 (Fed. Cir. 1997) ("The article 'a' suggests a single chamber. However, patent claim parlance also recognizes that an article can carry the meaning of 'one or more,' for example in a claim using the transitional phrase 'comprising.") (citing North Am. Vaccine, Inc. v. American Cyanamid Co., 7 F.3d 1571, 1575-76, 28 U.S.P.Q.2D (BNA) 1333, 1336 (Fed. Cir. 1993)).

The use of the articles "an" and "a" when referring to "feed tube" and "flow path," respectively, suggest a single feed tube with a single flow path for liquid and air. Other language in the claim similarly suggests a single flow path for both fluids. See '531 patent, col. 8, ll. 39-51 ("Said feed tube having a length . . . to permit the discharge of liquid from said container into said reservoir . . . and admission of air from said reservoir above said liquid and into said container."). The asserted claims, however, use the open term "comprising" in their transition phrases. We therefore hold that the plain meaning of "an upstanding feed tube . . . to provide a hygienic flow path for delivering liquid from . . . and for admitting air . . . into said container" is not necessarily limited to a single feed tube with a single flow path for both liquid and air. See PPG Indus. v. Guardian Indus. Corp., 156 F.3d 1351, 1354, 48 U.S.P.Q.2D (BNA) 1351, 1353 (Fed. Cir. 1998).

We next turn to the written description of the '531 patent. Ebco asserts that the written description confirms that the feed tube must have a single flow path for air and water. There are numerous references to "a feed tube" and "the feed tube" in the written description, see, e.g., '531 patent at col. 5, ll. 9, 25, and 52-53, and the figures show a single feed tube with a single flow path for liquid and air, see id. at Figs. 1, 2, 4a-4c, 6, 7, and 10. Furthermore, the written description does not describe a no-spill adapter design incorporating separate feed tubes for liquid and air or a single feed tube with separate flow paths for liquid and air.

The written description, however, expressly states that it describes a preferred embodiment of the invention. See id. at col. 2, ll. 48-52 ("These and other features and advantages of the invention will be more readily apparent upon reading the following description of a preferred exemplified embodiment of the invention . . . "). "The general rule, of course, is that the claims of a patent are not limited to the preferred embodiment, unless by their own language." Karlin Tech., Inc. v. Surgical Dynamics, Inc., 177 F.3d 968, 973, 50 U.S.P.Q.2D (BNA) 1465, 1469 (Fed. Cir. 1999). The written description thus does not conclusively establish that the meaning of "an upstanding feed tube . . . to provide a hygienic flow path for delivering liquid from . . . and for admitting air . . . into said container" is limited to a single feed tube with a single flow path for liquid and air.

We turn finally to the prosecution history of the '531 patent. "The prosecution history gives insight into what the applicant originally claimed as the invention, and often what the applicant gave up in order to meet the Examiner's objections." Lemelson v. General Mills, Inc., 968 F.2d 1202, 1206, 23 U.S.P.Q.2D (BNA) 1284, 1288 (Fed. Cir. 1992); see also Standard Oil Co. v. American Cyanamid Co., 774 F.2d 448, 452, 227 U.S.P.Q. (BNA) 293, 296 (Fed. Cir. 1985) ("The prosecution history (or file wrapper) limits the interpretation of claims so as to exclude any interpretation that may have been disclaimed or disavowed during prosecution in order to obtain claim allowance."); J.T. Eaton & Co. v. Atlantic Paste & Glue Co., 106 F.3d 1563, 1565, 41 U.S.P.Q.2D (BNA) 1641, 1642 (Fed. Cir. 1997) ("The correct meaning of [the disputed] term is established by reading the prosecution history of the '584 patent. That is a legal exercise which we are obligated to conduct independently."). Ebco asserts that the prosecution history of the patents shows that Elkay gave up a construction of the feed tube/probe limitation that could include an apparatus with separate flow paths for liquid and air. We agree.

In an office action dated November 18, 1992, the Examiner rejected independent claims 16 and 22 of the '570 application (which correspond to claims 1 and 7, respectively, in the '531 patent) pursuant to 35 U.S.C. § 103, based on U.S. Patent No. 2,057,238 (Krug) in view of U.S. Patent No. Re 32,354 (Savage). Krug describes a beer dispensing apparatus with two separate feed tubes, one for pressurized air and one for beer. 2 Savage describes an apparatus that allows a liquid feed tube to be connected to a collapsible bag so that air is not introduced into the bag as the connection is made.

Jump to: A B C D E F G H I J K L M N O P Q R S T U V W X Y Z

- 599 -
Krug has no reservoir open at its upper end as recited in the preamble of independent claims 16 and 22 and, more importantly therefore, cannot possibly teach or suggest . . . a flow path (claim 16) or "fluid passage means" (claim 22) for delivering liquid from said inverted unpressurized container (claim 16) into said reservoir up to said predetermined maximum liquid level and for admitting air from said reservoir above said liquid level into said container as recited in the body of each of applicants' independent claims 16 and 22.

(internal quotations omitted and emphasis added). Because Krug teaches the use of separate liquid and air feed tubes, when Elkay made this argument it necessarily relinquished a construction of its claim language that could include separate feed tubes. Consequently, Elkay cannot successfully argue now that the feed tube limitation in claims 1 and 7 is properly construed to include separate flow paths for liquid and air.

Elkay's argument that its statement distinguishing Krug on the basis of Krug's use of separate feed tubes was insignificant is particularly unpersuasive in view of the Examiner's response to that statement. In the Examiner's Statement of Reasons for Allowance, dated March 30, 1993, the Examiner wrote that he allowed claim 22 (i.e., claim 7 in the '531 patent) because he understood the claim to describe a single feed tube with a single flow path for both liquid and air:

In regard to claim 22, the prior art of record does not teach a container support with a removable mounting means and feed tube as claimed wherein the feed tube has a passage means which both dispenses liquid from the container into the reservoir and admits air from the reservoir into the container . . . [Beer] feed tube 13 [in Krug] does not provide a means for admitting air. Note that Krug provides a separate conduit for exterior air 27/34 in order to relieve the vacuum in container 6.

Elkay did not respond to this statement.

We conclude that during prosecution Elkay disavowed a potential interpretation of the feed tube limitations in claims 1 and 7 of the '531 patent that would include separate feed tubes or flow paths for liquid and air. Therefore, based on the claim language, the written description and the prosecution history, we hold that "an upstanding feed tube . . . to provide a hygienic flow path for delivering liquid from . . . and admitting air . . . into said container" is properly interpreted to refer to a single feed tube with a single flow path for both liquid and air.
8. An "anatomic space" is an open working space for the performance of a surgical procedure, which is not occupied by a bladder or other device, or by tissue.

2. "An object"

Mars' next claim construction argument is that Claim 1 requires the detection of a single metal object, by positioning it in the field of the circuit element. Mars makes this argument because its accused products only detect a plurality of metal objects, not a single object.

Claim 1, the only independent claim asserted, describes (insofar as relevant to Mars' argument now being addressed) a metal detector comprising a circuit, a means for repetitively impulsing it, a means for positioning an object, differing characteristics when no object is present, and characteristics representative of the object. (Emphasis added). Based on the emphasized references to a singular object in Claim 1, Mars argues that Claim 1 should be construed to refer only to identifying and distinguishing individual objects such as coins, one at a time. 1 The language of claim 1, emphasized above, does support Mars' position. So does the other relevant intrinsic language, quoted above from the prosecution history, where the applicants referred to an output representative of an object (emphasis added) such as a coin, in the course of opposing a rejection by the Examiner. The Court agrees with Mars' claim construction argument in this respect; Claim 1 is interpreted to refer to detection of a single object.

--- Footnotes ---

1 Based on the Court's ruling above construing Claim 1 to refer only to "detecting," Mars' argument is modified accordingly.

--- End Footnotes ---

195

Claim 1 of the '756 patents reads:

1. A three dimensional inspection apparatus for ball array devices having a plurality of balls, wherein the ball array device is positioned in a fixed optical system, the apparatus comprising:

   a) an illumination apparatus positioned for illuminating the ball array device;

   b) a first camera disposed in a fixed focus position relative to the ball array device for taking a first image of the ball array device to obtain a characteristic circular doughnut shape image from at least one ball;

   c) a second camera disposed in a fixed focus position relative to the ball array device for taking a second image of the ball array device to obtain a side view image of the at least one ball; and

   d) a processor, coupled to receive the first image and the second image, that applies triangulation calculations on related measurements of the first image and the second image to calculate a three dimensional position of the at least one ball with reference to a pre-calculated calibration plane.

- 601 -
'756 patent, col. 18, ll. 34-53 (emphases and formatting added). Similarly, claim 1 of the '757 patent reads:

1. A three dimensional inspection process for ball array devices having a plurality of balls, wherein the ball array device is positioned in a fixed optical system, the process comprising the steps of:

   a) illuminating the ball array device;

   b) taking a first image of the ball array device with a first camera disposed in a fixed focus position relative to the ball array device to obtain a characteristic circular doughnut shape image from at least one ball;

   c) taking a second image of the ball array device with a second camera disposed in a fixed focus position relative to the ball array device to obtain a side view image of the at least one ball; and

   d) processing the first image and the second image using a triangulation method to calculate a three dimensional position of the at least one ball with reference to a pre-calculated calibration plane.

'757 patent, col. 18, ll. 34-49 (emphases and formatting added).

In its claim construction decision, the trial court construed "illumination source," a phrase that does not appear in the patent, to be limited to "only one illumination source." Memorandum Decision at 17. With regard to the '757 patent, the district court did not separately construe "illuminating," instead construing "illumination source" and "illuminating" together. Id., at 8, 17. Scanner sought reconsideration of the district court's claim construction decision, noting that the '756 patent does not claim an "illumination source," but rather an "illumination apparatus." Scanner also challenged the district court's construction on the merits. In denying Scanner's motion for reconsideration, the district court clarified that the distinction between "illumination apparatus" and "illumination source" was "not significant" for purposes of the decision, and that the claim language "apparatus" only "underscored the correctness of the decision." Order Denying Motion for Reconsideration at 1.

Prior to trial, the parties stipulated that, during the infringement period, ICOS sold inspection systems containing one or two illumination sources. [A291.] The parties executed a settlement agreement dismissing the single light source products from the case. The trial court entered an order of summary judgment of non-infringement for the two illumination source devices, based upon its claim construction decision. See Order Granting Summary Judgment. With regard to literal infringement, the trial court found that the ICOS products containing two illumination sources did not literally infringe the claims as construed. Id. Moreover, the trial court found that the ICOS products containing two illumination sources did not infringe the patents-in-suit under the doctrine of equivalents because "a product that uses one illumination source is significantly different than a device using two illumination sources." Id. at 3.

Scanner timely appealed. We have jurisdiction pursuant to 28 U.S.C. § 1295(a)(1).

This opinion follows the court's review of the record and consideration of the parties' oral argument, heard on February 6, 2004.

I.

We review de novo a district court's grant of summary judgment. Ethicon Endo-Surgery, Inc. v. United States Surgical Corp., 149 F.3d 1309, 1315 (Fed. Cir. 1998). Summary judgment is appropriate if, drawing all factual inferences in favor of the non-movant, there is no genuine issue of material fact and the movant is entitled to judgment as a matter of law. Fed. R. Civ. P. 56(c); Anderson v. Liberty Lobby, Inc., 477 U.S. 242, 255, 91 L. Ed. 2d 202, 106 S. Ct. 2505 (1986).

Analysis of infringement involves two steps. Johnson Worldwide Assocs., Inc. v. Zebeo Corp., 175 F.3d 985, 988 (Fed. Cir. 1999). First, the trial court determines the scope and meaning of the asserted claims. Markman v. Westview Instruments, Inc., 517 U.S. 370, 372-74, 134 L. Ed. 2d 577, 116 S. Ct. 1384 (1996). The trial court's claim construction is an issue of law reviewed without deference. Cybor Corp. v. FAS Techs., Inc., 138 F.3d 1448, 1456 (Fed. Cir. 1998) (en banc). Second, the claims are construed by the court are compared to the allegedly infringing device. Johnson Worldwide, 175 F.3d at 988. We affirm a district court's grant of summary judgment of non-infringement only if, "after viewing the alleged facts in the light
most favorable to the non-movant, there is no genuine issue whether the accused device is encompassed by the claims.” Pitney Bowes, Inc. v. Hewlett-Packard Co., 182 F.3d 1298, 1304 (Fed. Cir. 1999).

On appeal, Scanner challenges the methodology employed by the district court in construing the terms "an illumination apparatus" and "illuminating," and its substantive constructions of those terms. Scanner further challenges the district court's entry of summary judgment of non-infringement as based upon erroneous claim constructions. We address these challenges below.

II.

We first address Scanner's argument that the district court only construed a term that does not appear in either the '756 or '757 patent, namely "illumination source." It is correct that the district court's claim construction order referred to an "illumination source," a term that does not appear in either patent's claims, and was thus imprecisely worded. Nevertheless, in its claim construction decision, the district court concluded that "because the plain language sufficiently shows that the illumination apparatus is limited to one light source, the Court does not rely on extrinsic evidence in construing this term." Memorandum Decision at 10 (emphasis added). Moreover, in its order denying Scanner's motion for reconsideration, the district court acknowledged that "Scanner correctly points out that the memorandum decision refers to the term 'illumination source' when the reference should be to 'illumination apparatus' in the '756 patent and to the term 'illuminating' in the '757 patent," but went on to state that "the distinction, however, is not significant for purposes of my decision." Order Denying Motion for Reconsideration at 1. The district court also made clear that "if anything, the fact that the actual reference is to 'illumination apparatus' underscores the correctness of the decision." Id.

Though we agree with Scanner that it is improper for a district court to construe terms that do not appear in the patent claims, we do not agree that the trial court in the present case construed only the term "illumination source." Rather, a careful review of the district court's claim construction and reconsideration decisions shows that the court used inconsistent wording in referencing its claim construction. However, because the district court made clear that it did in fact construe the claims terms at issue, namely "an illumination apparatus" and "illuminating," we find any error in the district court's use of the phrase "illumination source" to be harmless. 1

1 The difference between "illumination apparatus" and "illumination source" is surely not so great. Scanner's own Memorandum on Interpretation of the Asserted Claims to be Determined From the Markman Hearing [A326-364] argued that an illumination apparatus is "a source of illumination" and that illuminating "indicates that there is a source of illumination."

2 For purposes of this opinion, we too treat "an illumination apparatus" and "illuminating" together. Thus, to the extent "an illumination apparatus" is construed to include one or more illumination sources, the step of "illuminating" in the '757 patent may be performed by one or more illumination sources. Similarly, if "an illumination apparatus" is found to be limited to a single illumination source, the "illuminating" step may be performed with only one illumination source.
The language of the claim defines the boundary of its scope. Teleflex, Inc. v. Ficosa N. Am. Corp., 299 F.3d 1313, 1324 (Fed. Cir. 2002). Accordingly, "the claim construction inquiry . . . begins and ends in all cases with the actual words of the claim." Id. (quoting Renishaw plc v. Marposs Societ'a per Azioni, 158 F.3d 1243, 1248 (Fed. Cir. 1998)). Claim terms must be construed as they would be understood by a person of ordinary skill in the art to which the invention pertains. Specialty Composites v. Cabot Corp., 845 F.2d 981, 986 (Fed. Cir. 1988). "The words used in the claim[] are interpreted in light of the intrinsic evidence of record, including the written description, the drawings, and the prosecution history, if in evidence." Teleflex, 299 F.3d at 1324.

"This court has repeatedly emphasized that an indefinite article 'a' or 'an' in patent parlance carries the meaning of 'one or more' in open-ended claims containing the transitional phrase 'comprising.' Unless the claim is specific as to the number of elements, the article 'a' receives a singular interpretation only in rare circumstances when the patentee evinces a clear intent to so limit the article." KCJ Corp. v. Kinetic Concepts, Inc., 223 F.3d 1351, 1356 (Fed. Cir. 2000) (citations omitted).

Here, we agree with Scanner that the district court erred in limiting "an illumination apparatus," and thus "illuminating," to an apparatus containing only a single illumination source. We hold that "an illumination apparatus" is properly construed to encompass one or more illumination sources because the patentee has not evinced a clear intent to limit the article "an" to a single illumination source in either the claims or specification of the '756 patent.

To the extent ICOS argues, and the district court found, that Insituform Technologies, Inc. v. Cat Contracting, Inc., 99 F.3d 1098 (Fed. Cir. 1996), and North American Vaccine, Inc. v. American Cyanamid Co., 7 F.3d 1571 (Fed. Cir. 1993), require a construction of the disputed claim term as limited to a single illumination source, we disagree.

Unlike the present case, Insituform dealt with claim language and a specification that strongly suggested that the claim language "a cup" was meant to encompass only one cup. There, the asserted claim repeatedly described a single cup, using the term "the cup" and describing a process in terms of a single cup. Insituform, 99 F.3d at 1105-06. The claim at issue in Insituform also used the phrase "region of vacuum application" in a "manner indicating that only one such region exists at any given time" and was thus "inconsistent with the use of more than one cup at any given time, as each cup creates its own associated region of vacuum application." Id. Moreover, the court in Insituform found that "neither the specification nor the drawings discloses the use of more than one cup," and in fact repeatedly described or depicted "the cup." Id. Thus, the court in Insituform found that the claims were properly limited to a single cup. Id.

Here, we discern no intent on the part of the patentees to limit the term "an illumination apparatus" to a single illumination source in either the claim language or the specification. Though ICOS argues, and we acknowledge, that claim 1 of the '756 patent and the specification call out other limitations with multiple components, e.g., "first camera" to take "a first image" and "second camera" to take "a second image," we do not agree that the failure to specifically refer to a "first illumination apparatus" and a "second illumination apparatus" evinces a clear intent on the part of the patentee that the term be limited to a single illumination source. Indeed, the very use of the article "an" indicates, at least presumptively, that the patentees intended the claim language "an illumination apparatus" to mean one or more illumination sources, and thus to cover implicitly "a first illumination apparatus" and subsequent "illumination apparatuses" where they exist. To limit the claim term "an illumination apparatus" to one illumination source, we require much stronger evidence of the patentees' intent than strained extrapolation from the language employed by the patentees in other claim limitations. Barring some evidence that the patentees intended to limit the claims to a single illumination source, evidence we do not find in the claim language, their use of the term "an" is consistent with multiple illumination sources. 3

We also disagree with ICOS's assertion that dependent claim 11 of the '756 patent requires a narrow reading of "an illumination apparatus." Claim 11 claims, "the three dimensional inspection apparatus of claim 1 wherein the illumination apparatus further comprises a diffuser." '756 patent, col. 19, ll. 17-18 [A69]. Though this claim does suggest that there is one illumination source, "the illumination source," it does not suggest or require that every embodiment of the claimed inventions be limited to a single illumination source. We do not find the language of dependent claim 11 to be sufficient to
"evince a clear intent" that "an illumination apparatus" must in every embodiment be limited to a single illumination source.

Turning to the specification, we find no evidence of a clear intent on the part of the patentees to limit the claim language at issue to a single illumination source. Even where the specification refers to "a light source," there is no indication that the patentee intended to limit the claims to the single light source. At best, the specification is inconclusive on the issue of one versus multiple light sources. ICOS argues that the specification references and depictions of multiple mirrors or prisms for shaping the course of the light, and the failure to depict multiple illumination sources, suggest that only a single illumination source is covered by the claimed invention. We disagree. Though the specification does disclose multiple mirrors and prisms, it does not describe or depict any illumination source. The closest the specification comes to describing or depicting the number of illumination sources is the reference to the "design of the lighting." And although this language is certainly not conclusive, we find that it at least suggests that multiple lighting sources may be arranged in a particular "design."

Where an open "comprising" claim includes the article "a" or "an," and the specification is at best inconclusive on the patentee's intent to limit that article to a single element or step, we do not find a "clear intent" to so limit the claims. Both the specification and claims in this case are far short of those in Insituform.

In addition, the district court relied upon, and ICOS cites, North American Vaccine in support of limiting the claims to a single illumination source. In North American Vaccine, the court acknowledged that "it is generally accepted in patent parlance that 'a' can mean one or more," but found that in that case, there was no indication in the patent specification that the patentees intended "a terminal portion" to include one or more terminal portions and that the specification repeatedly spoke of "a linkage, not multiple linkages." 7 F.3d at 1575-76. Accordingly, the court construed the article "a" in the singular.

We find North American Vaccine to be inapposite. There, unlike the present case, the disputed claim did not include the open transitional phrase "comprising." The use of the transitional phrase "comprising" itself indicates that the elements or steps following the transition may be supplemented by additional elements or steps and still fall within the scope of the claim. See, e.g., AFG Indus. Inc. v. Cardinal IG Co., Inc., 239 F.3d 1239, 1244-45 (Fed. Cir. 2001) ("When a claim uses an 'open' transition phrase, its scope may cover devices that employ additional, unrecited elements. We have consistently held that the word 'comprising' is an open transition phrase." (citations omitted)). Indeed, it the very use of the transition "comprising" in conjunction with the article "a" or "an" that creates the presumption that the article is construed to mean one or more elements or steps, unless there is evidence of a clear intent to limit the claims. Unlike North American Vaccine, the use of "comprising" in claim 1 of the '756 and '757 patents itself establishes a presumption that those claims are "open," and North American Vaccine is not relevant to the present case on that ground alone.

In view of the above, we find that the patentees have not evinced a clear intent to limit the disputed claims to apparatuses or methods with a single illumination source. Unlike the cases relied upon by ICOS and the district court, neither the claims nor the specification in the present instance indicate any such intent on the part of the patentees. Accordingly, we give the article "an" its ordinary meaning of "one or more" and hold that the '756 and '757 patents encompass apparatuses and methods using one or more illumination sources.

We hold that the claim terms "an illumination apparatus" and "illuminating" in the '756 and '757 patents respectively
encompass one or more illumination sources.

The court begins the process of claim construction by looking to the language of the patent claims themselves. North American Vaccine v. American Cyanamid Co., 7 F.3d 1571, 1575 (Fed. Cir. 1993). Unless a patentee indicates any intention to deviate from [the] ordinary meanings of the claim terms, then the patentee's "claim terms take on their ordinary meaning." Sage Prods., Inc. v. Devon Indus., Inc., 126 F.3d 1420, 1423 (Fed. Cir. 1997). The claims in the '963 patent state as follows:

1. A method for dewatering food items comprising the steps of: placing food items in a compartment formed from flexible thinwall sheet material, said compartment having an open top and an opening opposite the open top sized to permit passage of liquid but substantially to prevent passage of the food items therethrough; and twirling the compartment nearby its open top to cause water from the food items to be expelled through the opening by centrifugal force.

2. The method of Claim 1 wherein water expelled through the opening in a second compartment surrounding the opening.

Upon considering the highlighted language, the court finds that Jones' invention comprises a dual compartment bag that is separated by a single throat. The Federal Circuit Court has even noted that the article "an" ordinarily has a singular meaning. North American, 7 F.3d at 1575-76. Additionally, an examination of the '963 patent specifications, especially Figures 1, 3, and 4, clearly depict a dewatering bag with a single opening separating the two compartments. (Def. Exhibit A.)

In determining the claim construction of the '963 patent, the court also examines its prosecution history. Because claims cannot encompass specifications that were surrendered during the prosecution of the patent, an examination of the prosecution history provides limits to the interpretation of the claim terms. See Southwall Tech., Inc. v. Cardinal Ig Co., 54 F.3d 1570, 1576 (Fed. Cir. 1995). The rationale behind this limit is to prevent inventors from "construing claims one way in order to obtain allowance and in a different way against accused infringers." Id. In this case, the prosecution history includes the parent application, which led to the issuance of the divisional '963 patent. See Mark I Mkt. Corp. v. R.R. Donnelley & Sons Co., 66 F.3d 285, 291 (Fed. Cir. 1995).

During prosecution, the PTO rejected Jones' parent application due to obviousness in view of prior art in the field. However, in an effort to amend the parent application, Jones argued that her bag was distinct because it contained a throat which allowed the passage of water but minimized the back flow of the water into the food items. She even pointed out that the Tocker bag, with its multiple openings across the width of the weld, would easily allow back flow of water into the main compartment, which would defeat the purpose of her invention. (Def. Exhibit B, p. 56.) The function of the single throat is even reflected in the '963 patent specification, in which the dewatering bag is described as substantially preventing water from returning to food items. (Def. Exhibit A, Col. 1, Ins. 45-47.) When Jones distinguished her single opening bag from the Tocker bag with multiple openings, she limited her claims to encompass only a two compartment bag separated by a single throat. See Standard Oil Co. v. American Cyanamid Co., 774 F.2d 448, 452 (Fed. Cir. 1985).

Upon properly construing the '963 patent as a two compartment bag with a single throat, the court must determine if a reasonable fact finder could determine that Argee committed infringement. Literal infringement of a claim exists when every element in the claim is found in the accused device or process, i.e., when "the properly construed claim reads on the accused device [or process] exactly." Cole, 102 F.3d at 532. In the instant case, Argee's dewatering bag does not literally meet all of the '963 patent limitations. The court construed the single throat of the '963 patent to be an indisputable element of Jones' invention, whereas the Argee bag, with its multiple openings, does not contain the single throat element. Argee, therefore, did not literally infringe the claims in the '963 patent.

Even if a device or process does not literally infringe a patent claim, it "may nonetheless infringe under the doctrine of equivalents if every element in the claim is literally or equivalently present in the accused device." Sage, 126 F.3d at 1423. The court should grant summary judgment if the evidence is such that no reasonable jury could determine two elements to be substantially equivalent. Id. "The doctrine of equivalents prevents an accused infringer from avoiding infringement by changing only minor or insubstantial details of a claimed invention while retaining their essential functionality." Id. at 1424.
However, the doctrine cannot be used to recapture material that was surrendered during the prosecution of the patent. This rule, called prosecution history estoppel, serves to protect competitors who review the prosecution history of a patent to reasonably determine what elements the inventor relinquished in order to achieve procurement of the patent. See Mark, 66 F.3d at 292.

Jones surrendered multiple openings when she contended that her single throated bag was distinct from the Tocker bag with multiple openings. She deliberately and expressly argued that the single throat feature was essential to the proper functioning of her dewatering bag. Upon reviewing the prosecution history of the '963 patent, Argee was therefore justified in concluding that developing a bag with multiple openings between the two compartments constituted a substantial difference from Jones' bag with a single throat. Specifically, Argee reasonably determined that even though the Argee and Jones' devices achieve substantially the same result, the difference between Argee's multiple openings and Jones' single throat feature caused the bags to function in substantially different ways.

As such, Argee did not infringe the '963 patent under the doctrine of equivalents. "To hold otherwise would be to frustrate the important definitional and functional public-notice requirements of the statutory claiming requirement." Warner-Jenkinson Co. v. Hilton Davis Chem. Co., 520 U.S. 17, 117 S. Ct. 1040, 1049, 137 L. Ed. 2d 146 (1997).

B. "an opening formed therein"

Brita and Recovery also lock horns as to what is meant when the patent requires the sleeve to have "an opening formed therein." Recovery asserts that the sleeve must have a permanent hole or aperture formed in its side wall. In response, Brita argues that the opening does not have to be formed during the molding of a plastic sleeve, as this patent does not claim a manufacturing process. Brita proposes a more amorphous construction, arguing that an "opening" need not be a permanently formed hole, but instead can also be some sort of space or gap that is created between the sleeve and other parts of the water filter.

Though the claim language does not limit how the "opening" can be "formed" in the sleeve, the Court believes that this opening must be a permanent part of the sleeve structure. As Webster's contemplates, an opening is "formed" when the material of an object has been worked on to create a void. An opening is not "formed," however, merely by having a gap between two separate parts of the filter assembly. Of course, the manufacturing process by which the opening is formed - be it during molding, by drilling a hole, or whatever - is not restricted by the claim language. What the claim language does require, however, is that the opening be a permanent part of the sleeve structure.

A final point of contention arises as to whether the claim "an opening" limits the number of openings the sleeve can have. The Federal Circuit has stated that "it is generally accepted in patent parlance that 'a' can mean one or more." North American Vaccine, Inc. v. American Cyanamid Co., 7 F.3d 1571, 1575-76 (Fed. Cir. 1993), cert. denied 511 U.S. 1069, 128 L. Ed. 2d 365, 114 S. Ct. 1645 (1994) (citing Robert C. Faber, Landis on Mechanics of Patent Claim Drafting 531 (3d ed. 1990). However, the court in North American Vaccine also made clear that the articles "a" or "an" are ordinarily given a singular construction, and that a plural construction is only appropriate if the specification indicates that this was intended. Id. at 1576. In this case, the specification provides no embodiment which has more than a single opening in the sleeve. Thus, when the patent claims "an" opening in the sleeve, the Court reads this to disclose a single opening in the sleeve and no more.

6. "[L]owering said body into the well bore and imparting rotation to said tool body, thereby creating a magnetic field"

This phrase is contained in an independent claim in the 787 patent, 111 the 781 patent, 112 and the 117 patent. 113 In each case, the patent specifies a method including the steps of lowering and rotating the tool.
As to this phrase, the Court construes the following meaning: both steps are required, that is lowering the tool into the well bore, and subsequently rotating the tool, to create the magnetic field described in the language of the claim. In each case, the language of the claim calls for lowering and rotating; the use of the conjunctive "and" does not provide the option of not rotating the tool. The Abstracts of the 787, 781, 386, and 539 patents all explicitly call for rotation, and while the 117 Abstract does not mention rotation, the specifications of all five patents describe what happens "during rotation of the tool."

The parties dispute the proper construction of the phrase "detaching said distal tip from said guidewire to leave said distal tip within said vascular cavity and said occlusion being formed within said vascular cavity," as disclosed in Claim 1.

Before turning to the specifics of the dispute with respect to this phrase, the Court's attention is drawn to the fact that the subject phrase includes the words "guidewire" and "distal tip." Supplemental materials and oral arguments from the parties in connection with the September 2006 hearing has led the Court to conclude that it should modify the definitions of the words "guidewire," and "distal tip."

Previously, the Court construed "guidewire and "wire" as having the same meaning for all claims. Based on additional consideration in light of the September 2006 proceedings, the Court now finds that each of these words should be defined in each claim in accordance with how it is used in that particular claim. 5

4 "A thin, flexible, continuous length of metal, usually of circular cross-section that collectively includes both guidewires and tips and simply wires without distinct tip structures." (See August 2005 Markman Order.)

5 In the written description of the '578 Patent, the inventors expressly define "wire" and guidewire:

The invention is a method for forming an occlusion within a vascular cavity having blood disposed therein comprising the steps of endovascularly disposing a wire and/or tip near an endovascular opening into the vascular cavity. The wire may include a distinguishable structure at its distal end, which is termed a tip, in which case the remaining portion of the wire may be termed a guidewire. The term "wire" should be understood to collectively include both guidewires and tips and
simply wires without distinct tip structures. However, the tip may also simply be the extension of the wire itself without substantial distinction in its nature.

(’578 Patent, Col. 4:3-13.)

The Court construes "guidewire" as it is used in Claim 1 of the ’136 Patent to mean:

Part of an apparatus of the invention which is a thin, flexible, continuous length of metal, of circular cross-section which has a detachable tip.

The Court construes "distal tip" as it is used in Claim 1 of the ’136 Patent to mean:

a detachable portion or segment of the guidewire furthest away from the physician.

The Court now returns to the disputed phrase, "detaching said distal tip from said guidewire to leave said distal tip within said vascular cavity and said occlusion being formed within said vascular cavity." Specifically, there is a dispute over whether the "detaching" step is performed after the occlusion is completely formed, or whether "detaching" takes place after the formation of the occlusion has been initiated but before it is completely formed. The plain language of the Claim discloses that the "detaching" step takes place while the occlusion is "being formed," i.e., after formation has been initiated but before it has been completed. If formation of an occlusion is actually finished at the time of detachment, the "being formed" limitation would be unnecessary.

In the written description, the inventors describe an embodiment in which the thrombus continues to form after detachment:

It has further been discovered that thrombus 74 continue to form even after detachment from guidewire 42. It is believed that a positive charge is retained on or near coil 56 which wherefore continues to attract platelets, white blood cells, red blood cells and fibrinogen with aneurysm 64.

(’136 Patent, Col. 8:42-47.) There are other embodiments in which the inventors state that detachment takes place after the vascular cavity is completely occluded:

After the thrombus has been formed and the aneurysm completely occluded, tip 58 and coil 56 are detached from guidewire 42 by electrolytic disintegration of at least one portion of stainless steel coil 46.

* * *

After separation by electrolytic disintegration, guidewire 42, microcatheter 44 and the remaining portion of coil 46 still attached to guidewire 42 are removed from vessel 66, leaving aneurysm 64 completely occluded as diagrammatically depicted in FIG. 5 by thrombus 74.

(’136 Patent, Col. 8:16-19, 26-30.)

It is apparent that the inventors distinguished between detachment after an aneurysm is "completely occluded" and detaching "to leave" "said occlusion being formed." The latter is claimed in Claim 1. Therefore, in the following element of Claim 1 of the ’136 Patent: "detaching said distal tip from said guidewire to leave said distal tip within said vascular cavity and said occlusion being formed within said vascular cavity," the Court construes the phrase, "being formed" to mean:

- detaching the distal tip after the formation of an occlusion has started under circumstances where continuation of formation of the occlusion can take place after detachment.
As for the meaning of "anchoring," I turn to the claims of the 691 patent not in suit that describe a device used solely for "anchoring" tissue. These claims all identify devices that provide for permanent placement of the anchor member in the tissue or bone, presumably for healing purposes. One device requires a hole to be drilled into the bone, another calls for insertion of the apparatus into the bone, while another prevents a "suture from being withdrawn" from the tissue. Ex. A, col. 11, l. 33-35, col. 14, l. 15-20, and col.13, l. 15-18. Therefore, I find that anchoring means holding permanently.

With respect to the claim construction, Angres argues that the limitation "anesthetizing the portion of the eye lid . . ." does not encompass "freezing" or application of "cold water." The district court, following what it perceived as the "ordinary meaning" of the term, held that it did. We review the district court's claim construction de novo. Markman, 52 F.3d at 975, 34 U.S.P.Q.2D (BNA) at 1326. Angres argues both that the written description replaces the meaning of the words in the claims from their ordinary usage and that the district court improperly relied on extrinsic evidence (Angres's own testimony and that of Pavlik) when the meaning of the disputed term in the claims is clear when read in light of the specification and file history. For the proposition that the intrinsic evidence limits the claim to not cover use of cold water or ice, Angres cites to the "Description of the Preferred Embodiment" at col. 3, ll. 41-43, which states, "Any intradermal anesthetic can be used, such as solutions of novocaine, xylocaine, or the like." Following that sentence, the written description states that in the preferred embodiment, "an anesthetic solution is used comprising 2cc 2% xylocaine, epinephrine, and hyaluronidase." The preferred embodiment section also discloses the use of a needle and massage of the skin after injection. The preferred anesthetic solution is specifically recited in claim 4.

Angres argues that one skilled in the art would read claim 1 to mean "anesthetizing" by use of a "medical" (i.e., prescription) anesthetic, not ice water or cold water. We disagree. While a patentee may be his own lexicographer, in order to vary the ordinary meaning of the words of a claim a patentee must clearly define the term as used in the claim in the specification. Markman, 52 F.3d at 980, 34 U.S.P.Q.2D (BNA) at 1330; Hoechst Celanese Corp. v. BP Chems. Ltd., 78 F.3d 1575, 1578, 38 U.S.P.Q.2D (BNA) 1126, 1129 (Fed. Cir. 1996) ("A technical term used in a patent document is interpreted as having the meaning that it would be given by persons experienced in the field of the invention, unless it is apparent from the patent and the prosecution history that the inventor used the term with a different meaning.") (citations omitted). Here, Angres's written description merely indicates that in the known best mode of practicing the invention, an injected liquid "medical" anesthetic like xylocaine is used. Angres is not entitled to have his claims limited to the best mode disclosed in the written description unless he specifically defined "anesthetized" to mean injected with the solution in his written description. We hold that he did not.

A skilled artisan (see infra) reading the patent document would not conclude that "anesthetizing" was specifically defined in the written description. Rather, the district court correctly held that, as used here, "anesthetizing" means "to render physically insensible" to pain and other sensations. While it is true, as Angres asserts, that only Dorland's Illustrated Medical Dictionary, 26th ed., specifically mentions refrigeration as a method of anesthesia (cryoanaesthesia), none of the other sources define anesthesia in functional terms, as is done in the patent. The purpose of anesthetic is to reduce pain; in the patent, the eyelid is anesthetized so that the person desiring tattooed eyeliner will not suffer undue discomfort or move excessively while the procedure is taking place. Since claim 1 is drafted in broad terms, and "anesthetizing" is not clearly limited by the specification, any method which achieves those goals meets the limitation of the claim. Moreover, claim 4 (which was not asserted) requires anesthetization by injection with a specified prescription solution; this lends support to the construction that claim 1, which has no such "injection," formula or prescription limitations, has a broader scope. See D.M.I., Inc. v. Deere & Co., 755 F.2d 1570, 1574, 225 U.S.P.Q. (BNA) 236, 239 (Fed. Cir. 1985) (claim differentiation).

-- Footnotes --

2 As noted in Vitronics Corp. v. Conceptronic, Inc., 90 F.3d 1576, 1584 n.6, 39 U.S.P.Q.2D (BNA) 1573, 1578 n.3 [sic - 6],
"Although technical treatises and dictionaries fall within the category of extrinsic evidence, . . . judges are free to consult such resources at any time in order to better understand the underlying technology and may also rely on dictionary definitions when construing claims terms, as long as the dictionary definition does not contradict any definition found in or ascertained by a reading of the patent documents."

Angres next cites Vitronics, 90 F.3d at 1582, 39 U.S.P.Q.2D (BNA) at 1576, for the proposition that even if the written description does not clearly define "anesthetizing," one skilled in the relevant art would recognize that use of ice or cold water would not fall within the meaning of the claim. 3 Further, Angres claims that the artisan is a doctor, and not a tattooist, although Angres argues that even a tattooist would not consider use of cold "anesthetizing."

3 To support this, Angres cites the declaration of Dr. Stephen VanCampen, M.D., an anesthesiologist, who stated "It is my [expert] opinion that the application of ice or ice water is insufficient to cause anesthesia to do [the] procedure [in the patent] . . . the temperature of the skin must be lowered enough to block nerve conduction, which in turn would cause permanent damage . . . ." The VanCampen declaration was properly rejected because it is inconsistent with the plain language of the claims and the specification. It further conflicts with the testimony of Pavlik, who testified in her affidavit that she performed the procedure without medical anesthetic.

Although the district court only addressed the relevant skill in the art with respect to obviousness, not claim construction, by implication the district court correctly determined no genuine issues of material fact existed as to the relevant skill in the art and that the relevant artisans are both tattooists and doctors. While a tattooist could not perform the best mode without the assistance of a doctor to administer injected, prescription anesthetic, tattooing was an old art and Angres does not dispute that permanent make-up had been tattooed prior to the issuance of the '106 patent without medical assistance. There is nothing "surgical" about the procedure: the needles used to inject the pigment are similar or identical to the needles used by tattooists to mark other parts of the body. If the relevant artisans include tattooists, then use of cold to reduce pain is clearly within the scope of the patent. 4 Even if the relevant artisans were limited to doctors, however, the medical dictionaries cited by Angres do not exclude freezing and define "anesthesia" broadly; depending on the situation, a doctor could reasonably select from a number of methods for reducing pain, some of which require an injection of prescription medication, and some of which, like ice, do not.

4 Angres cites Pavlik's testimony in which Angres claims she (Pavlik) equated "anesthetic" with "medication." However, Pavlik merely answered that she did not use any "medication" in response to a question about whether she used "topical anesthetic." Immediately after that statement, she stated she used cold water. Pavlik's statements do not lead to the conclusion that she equated anesthetic with medication only. Further, under Vitronics Pavlik's testimony may not be relied upon to vary the plain meaning of the claim. Vitronics, 90 F.3d at 1584, 39 U.S.P.Q.2D (BNA) at 1578.

Angres's arguments that tattooing frozen flesh is impossible (since either the needle would bend and the lid could not be properly stretched as described in the preferred embodiment) or that freezing must necessarily kill the flesh are similarly unavailing. No evidence was submitted to show that skin which is cooled sufficiently to reduce pain cannot be punctured; in fact, the only testimony on that issue was Dr. Angres's statement in deposition that the anesthetizing step can be performed "any number of ways" including freezing, "hypothermia or cryo." Angres's testimony may not be relied upon to vary the intrinsic plain meaning of the patent, but may be to confirm that the plain meaning of the claims includes use of cold. See Vitronics, 90 F.3d at 1584, 39 U.S.P.Q.2D (BNA) at 1518. Accordingly, the district court correctly construed the claims under Markman.
This appeal depends on whether the claim phrase "balloon angioplasty catheter," which appears only in the claim preamble, is or is not an affirmative limitation of the claim. The Board interpreted the claim as "drawn to the subject matter of a balloon catheter of general utility" and gave no meaning to the word "angioplasty." On this basis, the Board concluded that the Lemelson patent, which admittedly discloses only a general purpose catheter, anticipated Rowe's claims. Rowe urges that the Board erred in failing to limit the claims at issue to angioplasty catheters.

"[A] claim preamble has the import that the claim as a whole suggests for it." Bell Communications Research, Inc. v. Vitalink Communications Corp., 55 F.3d 615, 620, 34 U.S.P.Q.2D (BNA) 1816, 1820 (Fed. Cir. 1995). Where a patentee uses the claim preamble to recite structural limitations of his claimed invention, the PTO and courts give effect to that usage. See id.; Corning Glass Works v. Sumitomo Elec. U.S.A., Inc., 868 F.2d 1251, 1257, 9 U.S.P.Q.2D (BNA) 1962, 1966 (Fed. Cir. 1989). Conversely, where a patentee defines a structurally complete invention in the claim body and uses the preamble only to state a purpose or intended use for the invention, the preamble is not a claim limitation. See Bell Communications, 55 F.3d at 620; Kropa v. Robie, 38 C.C.P.A. 858, 187 F.2d 150, 152, 88 U.S.P.Q. (BNA) 478, 481 (CCPA 1951).

The determination of whether preamble recitations are structural limitations or mere statements of purpose or use "can be resolved only on review of the entirety of the patent to gain an understanding of what the inventors actually invented and intended to encompass by the claim." Corning Glass Works, 868 F.2d at 1257. The inquiry involves examination of the entire patent record to determine what invention the patentee intended to define and protect. See Bell Communications, 55 F.3d at 621 (looking to patent specification to determine whether claimed invention includes preamble recitations); In re Paulsen, 30 F.3d 1475, 1479, 31 U.S.P.Q.2D (BNA) 1671, 1674 (Fed. Cir. 1994) (examining "patent as a whole"); Vaupel Textilmaschinen KG v. Meccanica Euro Italia SPA, 944 F.2d 870, 880, 20 U.S.P.Q.2D (BNA) 1045, 1053 (Fed. Cir. 1991) (looking to claims, specification, and drawings); Gerber Garment Tech., Inc. v. Lectra Sys., Inc., 916 F.2d 683, 689, 16 U.S.P.Q.2D (BNA) 1436, 1441 (Fed. Cir. 1990) (noting that preamble recitations provided antecedent basis for terms used in body of claim); Corning Glass Works, 868 F.2d at 1257 (considering the specification's statement of the problem with the prior art); Kropa, 187 F.2d at 152 (noting that preamble sets out distinct relationship among remaining claim elements).

Inspection of the entire record in this case reveals that "angioplasty" is, in fact, a structural limitation of Rowe's claims. To begin with, the form of the claim itself, the so-called "Jepson" form, suggests the structural importance of the recitations found in the preamble. The Jepson form allows a patentee to use the preamble to recite "elements or steps of the claimed invention which are conventional or known." 37 C.F.R. 1.75(e) (1996). When this form is employed, the claim preamble defines not only the context of the claimed invention, but also its scope. See Pentec, Inc. v. Graphic Controls, Corp., 776 F.2d 309, 315, 227 U.S.P.Q. (BNA) 766, 770 (Fed. Cir. 1985) ("Although a preamble is impliedly admitted to be prior art when a Jepson claim is used, . . . the claimed invention consists of the preamble in combination with the improvement.") (citations omitted); United States Patent and Trademark Office, Manual of Patent Examining Procedure § 608.01(m) (6th ed. rev. Sept. 1995) ("[T]he Jepson form of claim is to be considered a combination claim. The preamble of this form is considered to positively and clearly include all the elements or steps recited therein as a part of the claimed combination."). Thus, the form of the claim itself indicates Rowe's intention to use the preamble to define, in part, the structural elements of his claimed invention. The device for which the patent claims "an improvement" is a "balloon angioplasty catheter."

The court looks next to the specification and drawings to determine whether those sources convey a clear structural meaning for the phrase "balloon angioplasty catheter." The parties argue over whether this court should interpret the claim with reference to the Dror patent, in which it originated, or the Rowe application, into which it was copied. The nature of this inquiry provides the answer. At this juncture, this court and the PTO examine claims to determine their patentability over the prior art. In effect, section 1.633(a) allows the PTO to consider the novelty or non-obviousness of each application's claims as if the application stood alone. In this posture, the PTO properly interprets the claim in light of its host disclosure, just as it would during ex parte prosecution. Thus, this court looks to the Rowe application to determine the meaning of the phrase at issue.

Notwithstanding Dror's arguments, this court's holding in In re Spina, 975 F.2d 854, 24 U.S.P.Q.2D (BNA) 1142 (Fed. Cir. 1992), does not apply to the present case. In Spina, this court considered whether an applicant was eligible to copy a
examining the entire patent disclosure to discern the meaning of claim words and phrases. See, e.g., Paulsen, 30 F.3d at 321, 13 U.S.P.Q.2D (BNA) 1320, 1322 (Fed. Cir. 1989). However, this does not relieve the PTO of its essential task of

During the patent examination process, claims receive their broadest reasonable meaning. See In re Zletz, 893 F.2d 319, 321, 13 U.S.P.Q.2D (BNA) 1320, 1322 (Fed. Cir. 1989). However, this does not relieve the PTO of its essential task of examining the entire patent disclosure to discern the meaning of claim words and phrases. See, e.g., Paulsen, 30 F.3d at

patentee's claim and thereby challenge priority of invention, a question that turned on whether the copying party's specification adequately supported the subject matter claimed by the other party. Id. at 856. This court held, in that context, that a copied claim is interpreted in light of its originating disclosure. 2 Id. This Spina rule sought to ensure that the PTO would only declare an interference if both parties had a right to claim the same subject matter. However, that rule does not apply in cases, such as this one, where the issue is whether the claim is patentable to one or the other party in light of prior art. In this posture, the PTO and this court must interpret the claim in light of the specification in which it appears.

Without question, the Rowe specification evinces a particular and distinct structural meaning for "balloon angioplasty catheter" that distinguishes it from "balloon catheters" generally. In particular, an angioplasty catheter must be capable of "expanding a stenosis in a coronary artery." The specification repeatedly refers to "dilation of coronary arteries," "expanding the coronary artery," and other unique functions of "PCTA [percutaneous transluminal coronary angioplasty] catheters." Figures 2 through 4 illustrate the radial expansion of an area of stenosis by the forceful inflation of a balloon catheter. The specification also indicates that the pressure exerted against the vessel walls upon balloon inflation forces the medication into the stenosis. These and similar phrases limit the claimed "balloon angioplasty catheters" to catheters that can be inflated radially outward to dilate a narrowed region in a blood vessel.

Dror argues that Rowe's claim broadly includes all balloon catheters because Rowe's specification indicates that "the invention of this application can be used in a wide variety of medical procedures above and beyond dilation of stenoses in coronary arteries." Rowe's specification also teaches the use of "catheters and flexible probes which do not carry a balloon" in non-angioplasty procedures as an alternative embodiment of Rowe's invention. Quite to the contrary of Dror's argument, these passages indicate that Rowe recognized a difference between angioplasty catheters and other types of catheters. Thus, when he uses the phrase "balloon angioplasty catheter" in his claim, it is that device, not some other, that he defines.

In concluding that "angioplasty" was not a structural limitation of the claim, the Board relied on claim language requiring that the microcapsules contain "a drug or combination of drugs for treatment or diagnosis within a body lumen" (emphasis added). According to the Board:

Since a diagnostic procedure is completely different from expanding a stenosis, [Rowe's] argued narrow interpretation of the preamble directly conflicts with the broader literal language of the claim. Interpreting the invention as a whole, we agree with the APJ that the claim language should be interpreted as drawn to the subject matter of a balloon catheter of general utility.

Contrary to the Board's reasoning, the claim term "diagnosis" is consistent with limiting the claim to angioplasty apparatus. Indeed, Rowe's specification provides an example of an angioplasty procedure being performed contemporaneously with a diagnostic procedure. Specifically, the specification expressly teaches the use of diagnostic agents, such as radiopaque dyes, in angioplasty procedures to "allow the vessel to be visualized."

During the patent examination process, claims receive their broadest reasonable meaning. See In re Zletz, 893 F.2d 319, 321, 13 U.S.P.Q.2D (BNA) 1320, 1322 (Fed. Cir. 1989). However, this does not relieve the PTO of its essential task of examining the entire patent disclosure to discern the meaning of claim words and phrases. See, e.g., Paulsen, 30 F.3d at

- 613 -
Thus, when properly interpreted, Rowe's claims require a balloon angioplasty catheter capable of expanding radially and exerting pressure on the plaque-encrusted walls of a surrounding blood vessel. The Lemelson patent does not show such a catheter, but instead describes a general purpose balloon catheter. Lemelson describes a medicated swab that extends out the end or side of the catheter to allow contact with the internal surface in need of medication. Although the Lemelson patent does describe substitution of a balloon for the medicated swab, it does not illustrate this balloon embodiment. Thus, even an artisan of ordinary skill must guess about how exactly the balloon would substitute for the medicated swab and whether the resulting balloon catheter would be capable of radial, as well as axial, expansion. In fact, Lemelson makes no suggestion of any kind about its structural suitability for angioplasty procedures. About the most that can be said for the Lemelson patent is that it does not explicitly describe anything inconsistent with angioplasty procedures. However, this negative pregnant is not enough to show anticipation. See In re Spada, 911 F.2d 705, 708, 15 U.S.P.Q.2D (BNA) 1655, 1657 (Fed. Cir. 1990) (in order to anticipate, "the [prior art] reference must describe the applicant's claimed invention sufficiently to have placed a person of ordinary skill in the field of the invention in possession of it").

Although anticipation is a question of fact, see In re Bond, 910 F.2d 831, 833, 15 U.S.P.Q.2D (BNA) 1566, 1567 (Fed. Cir. 1990), this court can conclude from this record that the Lemelson patent does not anticipate Rowe's properly interpreted claim. Neither the administrative patent judge nor the Board indicated that the Lemelson patent disclosed a "balloon angioplasty catheter." In fact, the Board would not have likely paid so much attention to whether Rowe's claim was limited to balloon angioplasty catheters if it had believed that the Lemelson patent showed such a catheter anyway. Further, the record does not show that Dror argued, either before the PTO or before this court, that the Lemelson patent discloses a "balloon angioplasty catheter." Dror's failure to deny Rowe's clear and forcible allegations is tantamount to an admission.

9. "angle"

Floe contends that, consistent with its proposed construction of the phrase "angle less than ninety degrees" in Claim 1, "angle" should be construed as "a geometric figure or arithmetic quantity defined by two rays emanating from a common point or by two planes emanating from a common line." Newmans, on the other hand, consistent with its arguments above, contends that "angle" should be construed as "slope." Consistent with the Court's reasoning above, the Court construes "angle" as "a geometric figure or arithmetic quantity defined by two rays emanating from a common point or by two planes emanating from a common line."

10. "angle less than ninety degrees"

Floe asserts that this phrase should be construed as "a geometric figure or arithmetic quantity defined by two rays emanating from a common point or by two planes emanating from a common line, where the measured angle between the two rays or two planes is less than ninety degrees." Newmans, on the other hand, contends that this phrase should be construed as "slope less than ninety degrees." Floe asserts that its proposed construction is consistent with the ordinary and accustomed meaning of "angle" as defined by dictionaries. Floe also asserts that Newmans' proposed construction is not mathematically precise because, in some cases, "angle" and "slope" measure different things. Newmans, on the other hand, contends that the prosecution history supports its construction. Specifically, Newmans points to a statement that the Examiner made in rejecting Claims 1, 6, and 11 as anticipated by Pittman. The Examiner stated, "Pittman shows . . . a ramp surface 21a disposed at an angle less than 90 [degrees] to the support member (claim 1; note, 0 [degree] is an angle less than 90 [degrees] ) . . . ." (Frederick Decl. at P 3, Ex. B at FL00170.)

Here, Claim 1 requires that the ramp member have "a ramp surface disposed between said upper edge and said longitudinal edge at a predetermined angle less than ninety degrees to said deck support surface and arranged to protect an edge of a
deck to be supported by said deck support surface." ('379 Patent, c. 6, l: 65-c. 7, l: 3.) The Court finds that this phrase should
be construed in accordance with its ordinary and accustomed meaning. Thus, the Court construes this phrase as "a geometric
figure or arithmetic quantity defined by two rays emanating from a common point or by two planes emanating from a
common line, where the measured angle between the two rays or two planes is less than ninety degrees." The Court
recognizes, however, that the prosecution history does not foreclose the possibility that a zero degrees angle could fall
within the confines of the claim language.

19. Angle of the Common Plane of the Coupled Panels

Alloc requests that the Court interpret "angle of the common plane of the coupled panels" in claims 1 and 65 of the '486
patent. Alloc states that "angle of the common plane of the coupled panels" in the '486 patent refers to the angle between
the coupled contact surfaces and the surface of the panel. (Alloc Initial Mem. 17-18.) Alloc states that the angle made by the
two planes must be other than 90 [degree], in claim 1 of the '486 patent, and in claim 65 of the '486 patent, the angle is "30
[degree] to 70 [degree]." (Id.) In so contending, Alloc relies upon its interpretation of the file history involving the British
patent. (Id. at 17.)

Unilin states that it is unclear to what element Alloc refers since such language is not in the '486 patent claims, and it is
nonsensical for a single plane to have an angle. (Unilin Opp'n 14.) Unilin states that Alloc appears to be referring to the
angle that is formed between the "common plane of tangency" and the "common plane of the coupled panels" as recited in
claims 1 and 65 of the '486 patent. (Id.) Unilin states that because the claim language is clear, it does not believe claim
construction is necessary. (Id.) But, to extent a construction is needed, Unilin states that for claim 1, the angle between the
common plane of tangency and the common plane formed by the connected panels, is other than 90 [degree], and for claim
65, the angle formed is 30 [degree] to 70 [degree]. (Id.)

In its response memorandum, Alloc states that as to claim 1, the reference requires that "the panels have contact surfaces
that, when the panels are locked together, meet in a common plane that is at an angle other than 90 [degree] with respect to
the plane of the joined panels." (Alloc Reply 10.) Further, as to claim 65, Alloc states that the term requires that the panels
must have contact surfaces that, when the panels are locked together, meet in a common plane that is at an angle of 30
[degree] to 70 [degree] with respect to the plane of the joined panels. (Id. at 13.)

Unilin states Alloc's construction ignores the plain language of the claim 1 which explicitly states that it is the common
plane of tangency, and not the plane of the contact surfaces, that is inclined at an angle other than 90 [degree]. (Unilin Reply
4.)

The question presented does not involve a "term" explicitly stated in a patent claim; rather, it is a geometric relationship
described in claims, upon which the parties disagree. The disputed "relationship" appears in claim 1 of the '486 patent as
follows: "configured, when engaged in a cooperative relationship upon coupling in a common plane of two identical ones of
said panel, to meet each other at a common plane of tangency that with respect to the lower lip is inclined at an angle other
than 90 [degree] relative to the common plane of the coupled panels, said angle extending inwardly and downward from a
distally outer location to a proximal inner location." ('486 patent, 14:19-26)(emphasis added.) The "relationship" appears in
claim 65 as follows: "configured, when engaged in a cooperative relationship upon coupling in a common plane of two
identical ones of said panel, to meet each other at a common plane that, with respect to the lower lip, is inclined at an angle
of 30 [degree] to 70 [degree] relative to the common plane of the coupled panels, said angle extending inwardly and
downward from a distally outer location to a proximal inner location" ('486 patent, 20:9-17)(emphasis added.)

The language in claims 1 and 65 is similar, but not identical. Claim 1 refers to "a common plane of tangency." Therefore, a
plain reading of the claim, supports Unilin's proposed construction of geometric relationship as referring to the angle other
than 90 [degree] between the common plane of tangency and the common plane formed by the connected panels.

Unlike claim 1, claim 65 contains no mention of a common plane of tangency. 14 Claim 65 simply refers to a common
plane. Unlike claim 1, claim 65 also contains commas setting off the clause, "with respect to the lower lip." Thus, the Court
construes claim 65 as refers to the common plane of the coupled panels, that with respect to the lower lip, is inclined at the
angle of 30 \([\text{degree}]\) to 70 \([\text{degree}]\) relative to the coupled panels.

-------- Footnotes --------

14 These distinctions between claims 1 and 65 were not pointed out by either party.

-------- End Footnotes --------

Therefore, the Court concludes that "angle of the common plane of the coupled panels" in claim 1 of the '486 patent refers to the angle of the common plane of the coupled panels with the common plane of tangency which is other than 90 \([\text{degree}]\). The Court further concludes that with respect to claim 65 of the '486 patent the "angle of the common plane of the coupled panels," refers to the angle of the coupled panels that, with respect to the lower lip, is inclined at the angle of 30 \([\text{degree}]\) to 70 \([\text{degree}]\) relative to the coupled panels.

206

1. The Issue of the Angled Cutter

Trinity argues that the Gertz 484 Patent discloses the limitations of claims 3, 4, 11, and 14 of the 820 Patent. The primary dispute is whether the Gertz reference discloses an "angled cutter." This court construed "angled cutter" to mean:

An angled structure that cuts, in which "angled" means that at least one edge of the angled structure is oriented other than perpendicularly to the material to be cut.

(Docket Entry No. 90, p. 73).

Trinity argues that the "angled" limitation applies only to one edge of a structure that cuts; KEI argues that the limitation applies to the cutter itself. KEI argues that the "cutter" in the Gertz reference -- the honeycomb structure -- and the "cuttable member" -- the foam -- are oriented perpendicularly to one another. Trinity asserts that the "other than perpendicular" limitation is met because the cell walls that make up the grids themselves intersect at angles that are other than perpendicular. Trinity argues that the honeycomb sheets in Figures 4 and 5 show an angled cutter because the intersecting walls of the grids approach the foam at a zero degree angle, which is less than ninety degrees. Trinity's expert witness, Dr. Malcolm Ray, states in his report that "since the edges of the cutting surface of the lattice wall are in the same plane of the surface of the foam they are oriented parallel to the material to be cut (i.e. the foam)" and the angle is zero. According to Trinity, KEI does not take into consideration that the "angled cutter" limitation of the 003 Patent requires only one edge of the angled structure to be other than perpendicular. See In re Simpson, No. 03-1530, 102 Fed. Appx. 675, 679 (Fed. Cir. 2004) (claims calling for cutting die with "at least one scrap cutting blade" precluded the patentee's argument that the claims were not anticipated unless the prior art disclosed two blades).

KEI argues that Figure 4 shows that the honeycomb sheets are stacked vertically on top of each other, and that "in operation, an impact force causes the upper honeycomb sheet and the lower honeycomb sheet to shear into one another." (Docket Entry No. 162, Ex. 5, Gertz 484 Patent, col. 5, ll. 34-36). KEI points out that a cutting edge approaching a cuttable member at a zero degree angle would not reach the cuttable member. Instead, a cutter that approaches a cuttable member at a zero degree angle moves in a parallel plane with respect to the cuttable member.

Trinity argues that KEI impermissibly adds limitations to the claims of the 820 Patent with respect to the angle at which the cutter moves, to require the cutter itself to approach the cuttable member "along an acute vector." See Liebel-Flarsheim Co. v. Medrad, Inc., 358 F.3d 898, 904-05 (Fed. Cir. 2004); In re Paulsen, 30 F.3d 1475, 1480 (Fed. Cir. 1994) (improper for patentee to import "extraneous" limitation to avoid anticipation apart from the meaning of particular words or phrases in the claim). In this case, KEI's construction does not impermissibly import "extraneous" limitations but reflects this court's construction of the asserted claims of the 820 Patent. Trinity's argument assumes that if any part of a structure that contains a cutter is oriented "other than perpendicular to the material to be cut," the "angled cutter" limitation is met. This argument, however, means that a structure with many edges that do not cut but are oriented other than perpendicularly to the material to be cut would meet the limitations of an "angled cutter." This argument proves too much; under this interpretation,
virtually any structure that has a cutting edge would meet the limitations of the 820 Patent.

The 820 Patent discloses two embodiments of the angled cutter, the dual plate cutter in Figure 7 and the wedge-shaped cutters of Figures 9 and 15. The dual-plate cutter consists of two metal plates positioned in parallel planes and welded together. "The first and second steel sections 70 and 72 are each abrasion resistant steel plates dimensioned to be stronger than the W-beam so as to be able to sever it." (Docket Entry No. 65, Ex. 5, 820 Patent, col. 6, ll. 32-34). Where the two plates meet "at a point . . . an acute angle is formed" and the "location of the point . . . is positioned to engage" the cuttable member. At the point, "the force of the impact of the vehicle causes cutting." (Id., col. 6, ll. 53-57, ll. 65-66). The wedge-shaped cutter consists of two joining faces that form a "forward pointed edge." (Id., col. 7, ll. 24-25). In both embodiments, the two parts meet at a point and both parts approach the material to be cut at an angle other than perpendicular. It is the intersection of the two cutting edges that contacts the material to be cut.

"The dispositive question regarding anticipation is whether one skilled in the art would reasonably understand or infer from the prior art reference's teaching that every claim [limitation] was disclosed in that single reference." Dayco Prods., Inc. v. Total Containment, Inc., 329 F.3d 1358, 1368 (Fed. Cir. 2003) (internal quotation marks and alterations omitted). The Gertz 484 Patent does not claim an angled cutter that meets all the limitations of the 820 Patent claims.

The motion for summary judgment on anticipation is denied.

207

a. "Angled" or "Extending Downwardly"

Claim 1 of the '158 patent requires that the conveyor belt modules each have "driving surfaces having an upper edge and a lower edge and being angled from said upper edge downward toward said lower edge and in said selected direction of travel." Claim 10 of the '158 patent does not contain the word "angled," but requires that the claimed modules each have driving surfaces "having an upper edge and a lower edge and extending downward from said upper edge toward said lower edge and in said selected direction of travel." All asserted claims in the '518 patent have language similar to that of Claim 10 of the '158 patent, requiring that "at least a portion" of the driving surfaces "extend downwardly toward the bottom surface and in the direction of intended travel."

KVP argues that all asserted claims of both the '158 and '518 patents are limited to modules having sprocket recesses with angled, planar driving surfaces. Laitram, however, maintains that curved driving surfaces are within the scope of the asserted claims.

Neither the specifications nor the claim terms specifically define the terms "angled" or "extending downwardly." But throughout the prosecution history, Lapeyre repeatedly stated that the driving surfaces were "angularly disposed." In fact, the prosecution history of the '158 patent shows that Lapeyre substituted the claim term "extending downwardly" for the former term "angularly disposed" after the patent examiner rejected the claim as "indefinite as to how the extending elements are 'angularly disposed.'" (Delich Decl. Ex. 2, at 096955.) Moreover, Lapeyre repeatedly recited to the PTO that a "key feature" or the "essence" of his invention was the provision of sprocket recesses intermediate the pivot axes and having "angularly disposed" sides adapted to mate with corresponding sprocket teeth. (See Delich Decl. Ex. 1 at 097169, 097174, and 097176; Ex. 2 at 096975-76.)

Because Lapeyre made these arguments in an attempt to avoid the Kewley '763 patent, the Lapeyre '141 patent, and the Lapeyre '527 patent, the claim term "extending downwardly" can only be interpreted as a further limitation on the original claim term "angularly disposed." The prosecution history therefore limits the asserted claims to modules having "angled" or "angularly disposed" driving surfaces extending downward from the upper edge to the lower edge in the selected direction of travel.

The court must therefore determine whether "angled" or "angularly disposed" driving surfaces include curved surfaces. The specifications do not define the terms "angled" or "angularly disposed." The drawings, however, show the driving surfaces as flat, planar surfaces. (See Figure 3 to '158 and '518 patents, elements 32 and 34.) The drawings are consistent with the ordinary and customary meaning of "angle" or "angled," which is defined as "the figure formed by two lines diverging from
the same point or by two surfaces diverging from the same line." Webster's Third New International Dictionary, at 83 (1986). The ordinary and customary meaning of "angle," at least in geometric terms, does not contemplate a curved surface.

This interpretation is fully supported by the prosecution history. In response to the patent examiner's rejection of the claims in continuation Application No. 52,845, and to distinguish his invention over the prior art Kewley '763 and Palmaer '831 patents, Lapeyre argued that "the cylindrically shaped wall of the drive link of the chain of Palmaer . . . does not and could not provide the module of the instant invention having . . . a driving surface within the sprocket recess that extends downwardly toward the bottom surface and in the direction of travel." (Delich Decl. Ex. 3 at 097388-89.) Lapeyre therefore distinguished a cylindrically shaped driving surface from one that "extends downwardly toward the bottom surface in the direction of travel."

On another occasion, Lapeyre referred to two photographs in exhibit as illustrative of "angularly disposed" elements which provide sprocket recesses that are adapted to mate with corresponding teeth. Both photographs show a working model identical to Figure 3 of the '158 and '518 patents -- sprocket recesses with angled, planar sides being driven by sprocket teeth adapted to mate with such sprocket recesses (See Delich Decl. Ex. 1 at 097167, 097188, and 097191.)

Based on these representations, the patent examiner understood the claimed "angularly disposed" driving surfaces to exclude curved surfaces. Indeed, he expressly stated that "the curved surfaces 31, 32 of Palmaer '831 or '150 do not qualify as an 'angled' surface from the upper edge to the lower edge." (Delich Decl. Ex. 4 at 097824.)

Laitram nevertheless argues that because some of the statements were made in the prosecution chain resulting in the '158 patent, and some were made in the prosecution chain leading to the '518 patent, the above statements in the prosecution history are not relevant in interpreting all claims at issue. Laitram is mistaken. Where, as here, two patents using the same or similar claim terms both stem from the same original patent application, the prosecution history of both patents is relevant to an understanding of those terms. Jonsson v. Stanley Works, 903 F.2d 812, 818 (Fed. Cir. 1990).

Laitram further relies on KVP's alleged admission during reexamination that the asserted claims of the '158 and '518 patents are broad enough to cover curved driving surfaces. KVP, however, made no such admission. Instead, KVP merely argued that if the asserted claims were as broad as Laitram was urging in the present litigation, then the patents would read on prior art. These arguments were entirely proper during reexamination, where claims are to be construed broadly, see In re Yamamoto, 740 F.2d 1569, 1571 (Fed. Cir. 1984), and do not operate to bar the narrow claim construction KVP now advocates See DeGeorge v. Bernier, 768 F.2d 1318, 1322 n.2 (Fed. Cir. 1985) (the approach during reexamination does not apply "during litigation of the issued claims, where the specification and file history should be resorted to in ascertaining the claims' true meaning").

Thus, in light of the specifications, drawings, prosecution history, and the ordinary and customary meaning of "angle" or "angled," the court finds that the '158 and '518 patents are limited to modules having angled, planar driving surfaces.

1. The "Driving Surface" Limitation

Laitram argues that the district court erred by construing the phrase "each of said driving surfaces extending downwardly . . . and in the direction of intended travel" to include only "angled, planar" driving surfaces. Instead, Laitram argues that this phrase should be construed to include curved driving surfaces like those of the accused devices. In support of its interpretation, and by way of attacking the district court's interpretation, Laitram asserts the following: (1) the court's interpretation erroneously reads the limitations of the disclosed embodiments into the claims, which are not expressly limited to planar driving surfaces; (2) the applicant's statement during prosecution that "the cylindrically shaped wall of the drive link of the chain of Palmaer . . . does not and could not provide the module of the instant invention having . . . a driving surface . . . that extends downwardly toward the bottom surface and in the direction of travel" should not have been relied upon by the district court because this statement was not relied upon by the examiner in allowing the claims and thus was of no consequence to patentability; (3) because Palmaer was cited during the prosecution of the '158 patent, the claims must necessarily encompass curved surfaces; (4) KVP, when requesting reexamination of the '158 patent, "admitted" that the claims encompassed curved surfaces; and (5) the doctrine of claim differentiation supports its construction because
None of Laitram's arguments is persuasive, and we address each in turn before construing the "driving surface" limitation. First, we do not agree that the court's observation that the patents' written description discloses only flat driving surfaces erroneously reads that structure into the claims. Rather, the court's observation was merely a starting point for construing the disputed language "extending downwardly . . . in the direction of intended travel." It is entirely proper to "use the specification in order to determine what the inventor meant by terms and phrases in the claims." Minnesota Mining & Mfg. Co. v. Johnson & Johnson Orthopaedics, Inc., 976 F.2d 1559, 1566, 24 U.S.P.Q.2D (BNA) 1321, 1327 (Fed. Cir. 1992).

Laitram's second argument, that applicant's statement which attempted to distinguish his invention over prior art disclosing curved driving surfaces was not relied upon by the examiner and is therefore irrelevant to claim construction, is not sustainable under our case law. "Regardless of the examiner's motives, arguments made during prosecution shed light on what the applicant meant by its various terms." E.I. du Pont de Nemours & Co. v. Phillips Petroleum Co., 849 F.2d 1430, 1438, 7 U.S.P.Q.2D (BNA) 1129, 1136 (Fed. Cir. 1988). The fact that an examiner placed no reliance on an applicant's statement distinguishing prior art does not mean that the statement is inconsequential for purposes of claim construction. See id., 7 U.S.P.Q.2D (BNA) at 1136.

Laitram's third argument, that the fact that Palmaer was cited as prior art during the prosecution of the '158 patent mandates the conclusion that curved driving surfaces are within the claims, is unavailing. When this snap-shot of the prosecution history is scrutinized in context, it becomes clear that nothing transpired which is helpful in construing the disputed claim language. When Palmaer was cited as a ground for rejection of the claims, the examiner suggested to the applicant that his claims would be allowed if they were limited to multiple driving surfaces across the width of the module, a feature not taught by Palmaer. The applicant acted on this suggestion and his claims were allowed. Thus, the only conclusion that can be drawn from this portion of the prosecution history is that the claims are limited to modules having multiple recesses, a conclusion irrelevant to the claim construction issue on appeal. 6

Laitram's fourth argument, that KVP "admitted" during reexamination that the claims were broad enough to encompass curved driving surfaces, is irrelevant to the construction of the claims. It is the applicant's representations during prosecution that potentially shed light on the construction of the claims, see, e.g., Vitronics, 90 F.3d at 1582, not the representations of a reexamination requester.

Laitram's fifth and final argument, that claim differentiation warrants the conclusion that the asserted claims are not (unlike claim 85 of the '518 patent) limited to flat driving surfaces, is not persuasive. As the district court properly noted, although different claims should be presumed to cover different inventions, "if a claim will bear only one interpretation, similarity [with another claim] will have to be tolerated." Laitram Corp. v. Rexnord, Inc., 939 F.2d 1533, 1538, 19 U.S.P.Q.2D (BNA) 1367, 1371 (Fed. Cir. 1991) (quoting Autogiro Co. of Am. v. United States, 181 Ct. Cl. 55, 384 F.2d 391, 404, 155 U.S.P.Q. (BNA) 697, 708 (Ct. Cl. 1967)). Here, the asserted claims will bear only one interpretation: that the "driving surface" limitation is limited to flat driving surfaces. While claims are not necessarily limited by the written description, it is relevant that nothing in the written description suggests that the driving surfaces can be anything but flat. Indeed, the benefits of having flat driving surfaces are stated in the "Summary of the Invention" portion of the written description. 7 These observations warrant a conclusion that the "driving surface" limitation, "extending downwardly . . . in the direction of intended travel," requires flat driving surfaces. See North Am. Vaccine, Inc. v. American Cyanamid Co., 7 F.3d 1571, 1576-77, 28 U.S.P.Q.2D (BNA) 1333, 1337 (Fed. Cir. 1993) (noting that the written description requirement of 35 U.S.C. § 112, P 1, warranted a claim construction that encompassed only the disclosed embodiments).
The intermediate section also includes angled surfaces which define sprocket recesses... These intermediate sprocket recesses provide the benefit of minimizing chordal action and scrubbing between the mating surface of the module and the sprocket." 158 patent, col. 1, l. 67 to col. 2, l. 6. "The angled surfaces... of the intermediate section also serve to present greater surface area to water and/or steam jets which can be located above and below the modules for cleaning of the belt. The angled sections also facilitate visual inspection of the belt." Id., col. 3, l. 67 to col. 4, l. 3.

The prosecution history confirms this conclusion. That history makes clear that the applicant distinguished the cylindrical walls of Palmaer from his invention because it did not disclose a "driving surface within the sprocket recess that extends downwardly toward the bottom surface and in the direction of travel." Accordingly, this limitation cannot be construed to cover the cylindrically shaped driving surfaces of the accused devices. See Advance Transformer Co. v. Levinson, 837 F.2d 1081, 1083, 5 U.S.P.Q.2D (BNA) 1600, 1602 (Fed. Cir. 1988) (a patentee's statements to the PTO distinguishing his pending application's invention from that of another person's issued patent may be relied on for purposes of construing the patentee's claims).

The district court's interpretation of the "driving surface" limitation was not erroneous, and it did not err in granting summary judgment that the accused devices did not literally infringe the asserted claims.

3. "Angularly offset"

As noted above, the district court interpreted the claim requirement that the hole axes be "angularly offset" to mean that "the axes of the three holes are spaced apart from each other, an angle is formed by the axes of any two such holes when viewed in two dimensions from the butt end or from the side, and the axes are not aligned in a parallel orientation." Neither party challenges this definition on appeal, but Stryker argues that its accused product does not fall within the definition.

Stryker's argument is geometrical in nature. A "hole axis" under the district court's definition is the imaginary line that passes through the center of one of the transverse holes. Stryker correctly points out that the axes thus defined by the accused product form "skew lines" which are neither parallel nor intersecting in three-dimensional space. Since those lines neither form angles nor run parallel with each other, Stryker suggests that its product falls outside the district court's definition. However, this argument ignores an essential part of that definition, which states that "an angle is formed... when [the hole axes are] viewed in two dimensions." The district court's meaning here is clear: the hole axes need not actually intersect. It suffices that the axes appear to intersect in two dimensions. As an example, if the hole axes are sketched on a piece of paper (a two-dimensional view of the nail) and the lines of that drawing intersect, the product drawn meets the district court's definition of "angularly offset." It is totally clear that the hole axes of Stryker's product intersect when drawn on paper, a point well illustrated by Stryker's own diagram in support of its argument on this point:

[SEE DIAGRAM IN ORIGINAL]

This diagram, which represents the accused product, shows intersecting hole axes when viewed in two dimensions. The jury's finding that Stryker's product embodies the "angularly offset" claim limitation is therefore supported by substantial evidence.

E. "Angularly Offset from the Tip Longitudinal Center Axis"

The phrase "angularly offset from the tip longitudinal center axis," is used only in one dependent claim of the patent: "[S]aid tip fluid passageway is angularly offset from the tip longitudinal center axis such that said fluid discharge orifice is formed in a lateral surface of said tip." (Doc. 29, Ex. A). Dentsply argues that this claim refers to a "fluid passageway displaced from the longitudinal center axis such that an angle is formed with the longitudinal center axis." (Docs. 34, 55). Hu-Friedy
proposes a more restrictive definition, construing the phrase to mean a "fluid passageway beginning at the center axis of the fluid inlet end and then proceeding towards the discharge orifice at an angle therefrom." (Docs. 51, 55).

The claims support the broader construction advanced by Dentsply.

The independent claims indicate that the fluid passageway is "linear" and runs substantially parallel to the center axis of the tip body. It ends at a discharge orifice formed at the bend of the tip, on the "discharge side." The disputed phrase appears in a dependent claim and provides an additional limitation. It instructs that the passageway may be skewed to run at a slight angle from the center axis of the tip body. (Doc. 29, Ex. A). The discharge orifice of this passage is formed in a "lateral surface," at a point prior to the bend in the tip.

Nothing in this claim requires that the passageway begin at the center axis point or "proceed[] towards the discharge orifice." The claim does not indicate where the passageway must begin or end, but requires only that the discharge point be on a "lateral side." Although several figures in the specifications are consistent with Hu-Friedy's interpretation, nothing in the patent indicates that other methods also encompassed within the claims are excluded. (Doc. 29, Ex. A). Absent a clear indication that the inventor intended to restrict the scope of the patent, the court will not import these limitations into the claims. Arlington Indus., 290 F. Supp. 2d at 526 ("[T]hat the inventor chose to illustrate the embodiment of certain claims but not others does not alter the scope of the unillustrated claims.").

Nor do reference sources require the more limited definition proposed by Hu-Friedy. Dictionaries define an "offset" as a "linear or angular displacement." E.g., AMERICAN HERITAGE COLLEGE DICTIONARY 805 (4th ed. 2002). None of these definitions require that, to be "offset," two lines must commence at a common point. The court will construe "angularly offset from the tip longitudinal center axis" as "displaced from the longitudinal center axis such that an angle is formed with the longitudinal center axis."

Eisenmann's claims 1, 10, 11, and 12 clearly state that the incoming gas distribution surface is "angularly positioned relative to the axis of rotation." (Dft. Ex. A). In the REECO RTO system, the gas distribution system is parallel to the rotary axis (labeled "Z" on Dft. Ex. E) and is connected to the rotary axis by a perpendicular surface (labeled "Y" on Dft. Ex. E). (Dft's 12(M) Stmt. PP 18, 19). Therefore, the main question is the meaning of the word "angular."

Eisenmann attempts to argue that the court should look to the "normal usage" of the word "angular," and states that the meaning of the word includes ninety degree angles as well as straight lines in the definition. (Pl's Resp., p. 4, citing Webster's English Dictionary). However, as the defendant correctly points out, Eisenmann surrendered the use of the ordinary meaning of the word "angular," for the prosecution history of the Eisenmann patent limits the use of the word. Gentry Gallery, Inc. v. Berkline Corp., 134 F.3d 1473, 1477 (Fed.Cir. 1998). In fact, the prosecution history of the Eisenmann patent excludes a vertical surface which is parallel to the axis of the rotation valve, for this limitation was necessary to overcome the original claim rejection by the Patent Examiner. (See Dft's 12(M) Stmt. PP12, 14, 15). If the court allowed the Eisenmann patent to be read as broadly as the plaintiff suggests, then the Eisenmann patent would also include the Thomason patent, the prior art. A claim cannot be construed so broadly as to cover the prior art and remain valid. Harris Corp. v. IXYS Corp., 114 F.3d 1149, 1153 (Fed.Cir. 1997); Amhil Enterprises Ltd. v. Wawa, Inc., 81 F.3d 1554, 1562 (Fed.Cir. 1996). Therefore, the word "angular" does not include parallel and perpendicular surfaces, and the defendant does not literally infringe Eisenmann's claims 1, 10, 11, and 12.

Both parties dispute which portions of the invention have to be angularly spaced from each other. The Plaintiff claims that there is only one angular relationship -- that the conduit is angularly disposed from the collection elements. The Defendant argues that the patent calls for two angular relationships -- the angle between the conduit and collection elements and the angle between the collection elements.
The Court begins its analysis with the claim language. The claim provides that "... the collection elements and conduit being angularly spaced from each other..." 407 Patent, Column 4, Lines 59-61. This claim language can be read as providing for only one angular relationship between the collection elements and the conduit.

However, the specification contradicts such a reading. In the summary of the invention portion of the specification - as opposed to the description of the preferred embodiment- Plaintiff writes:

The number, length and location with respect to each other of the elongate perforated collection elements is an important aspect of the invention. There should be at least two collection elements to provide effective recovery of contaminant vapors from the contaminated area. ... The collection elements should be angularly disposed with respect to one another for effective vapor recovery. That is, they should not be substantially parallel but should be spaced apart at an angle, preferably of at least 20 [degrees] and most preferably of at least 30 [degrees]. The preferred embodiment is in a radial array, although other configurations e.g. fan or wing shapes may be equally useful and may actually be required to avoid ground obstructions.

407 Patent, Column 1, Lines 61-66 and Column 2, Lines 8-16 (emphasis added). Thus, the specification informs the reader that the placement of the collection elements is an important aspect of the invention, and to that end, the collection elements are not to be parallel, that they should be angularly spaced from each other. Although Plaintiff used the word "should" rather than "must", the language of the specification nonetheless instructs the reader that the collection elements are arranged at an angle from one another. Because of the ambiguity between the claim language and the specification language, the Court will consider the file history.

The Defendants argue that the prosecution history of the '407 Patent is pertinent both as intrinsic evidence in construing the claim and in the context of prosecution history estoppel. "Prosecution history estoppel serves as a limit on the scope of claims by excluding any interpretation of the claim language that would permit the patentee to assert a meaning for the claim that was disclaimed or disavowed during prosecution in order to obtain claim allowance." Zenith Labs, Inc. v. Bristol-Myers Squibb Co., 19 F.3d 1418, 1421 (Fed. Cir.), cert. denied, 513 U.S. 995, 130 L. Ed. 2d 409, 115 S. Ct. 500 (1994). Arguments made during prosecution must be viewed in context, however. Read Corp. v. Portec, Inc., 970 F.2d 816, 824 (Fed. Cir. 1992); See also, Southwall Technologies, Inc. v. Cardinal IG Co., 54 F.3d 1570, 1580 (Fed. Cir.) cert. denied, 516 U.S. 987, 133 L. Ed. 2d 424, 116 S. Ct. 515 (1995)(When a court applies the doctrine of prosecution history estoppel to limit the scope of equivalents, a close examination must be made as to, not only what was surrendered, but also the reason for such a surrender). It is the position of the Defendants that the prosecution history of the '407 Patent supports its interpretation of Element 3.

Originally, Plaintiff filed a total of five claims. Claim 1 was an apparatus claim, Claim 5 was a method claim and Claims 2-4 were dependent claims from Claim 1. Kane Declaration, Ex. A. The original claims refer to the orientation of the collection elements three times. For example, Application Claim 1 required that the collection elements be angularly disposed from the conduit and from each other. Application Claim 4 required that the collection elements be disposed in a radial array. Application Claim 5 required that the collection elements and the conduit be angularly spaced from each other. Plaintiff argues that as illustrated in Application Claims 1 and 4, he knew what language was necessary to require that the collections elements themselves be angularly disposed from each other. Since Application Claim 5, which eventually became Claim 1 of the '407 Patent, uses different language, the claim language that "the collection elements and conduit [be] angularly spaced from each other" cannot be interpreted to require an angular relationship between the collection elements.

The doctrine of "claim differentiation" cannot be used to broaden claims beyond the scope that is supported by the specification. ATD Corp. v. Lydall, Inc., 159 F.3d 534, 541 (Fed. Cir. 1998)(citations omitted). Because the specification supports a narrower interpretation, resort to the language of the canceled claim is inappropriate. Id.

Claim 5 of the Application claims was rejected by the Patent Office under 35 U.S.C. § 103 as unpatentable over U.S. Patent No. 4,026,355 issued to Johnson, et al. ("Johnson reference") in view of U.S. Patent No. 166,357 issue to Gray (the "Gray reference"). Kane Decl. Ex. A, KN 010655. The Johnson reference discloses the use of a number of vertically placed, parallel pipes to remove methane gas from landfills. The Gray reference discloses a fire hydrant in which multiple groundwater collection elements are arranged in a radial array about a common collection point. In light of the Johnson reference and the Gray reference, the patent examiner found:
All the claimed features of Applicant's invention as set forth in the above claims are disclosed by Johnson et al except a manifold and angularly perforated collection elements. Gray shows a manifold D and perforated collection elements angularly extending therefrom. As both references are directed to the removal of underground fluids, it would be obvious to one skilled in the art to modify Johnson et al to include a manifold and collection elements extending therefrom in a radial array as shown by Gray.

Id.

Plaintiff argues that during the prosecution history of the '407 Patent, he did not distinguish his invention over the Johnson reference because his invention required a radial array. Instead, he distinguished his invention from Johnson by asserting that the Johnson invention required the removal of methane for commercial purposes and that air should not be drawn into the underground area, while his invention provides for the replacement of vapors with air. Kane Decl., Ex. A, KN 010645. He then distinguished Gray by noting that the Gray invention teaches the removal of water, but does not teach the removal of vapors. Id. at KN 010646. Plaintiff also argued that it would be improper to combine the Gray and Johnson references by stating:

There is no indication in either reference of the desirability of making such a combination of references. In fact, it would appear by Johnson et al's disclosure that such a combination would be unwarranted since the modification of Johnson et al's equipment to include a radial array would drastically alter his equipment and process.

Id.

However, as in the summary of invention included in the '407 Patent specification, Plaintiff described his invention as "… a plurality of perforated collection elements angularly disposed from the conduit and each other…." Sankaran Decl., Exh. D (Amendment After Final Action, dated February 6, 1979) at pages 2-4. He further stated that the method involves "… positioning the collection elements within the contaminated area in a radial display…." Id. In reading the prosecution history of the '407 Patent, it is clear that the patent examiner also understood the invention to include a radial array. See, Kane Decl. Ex. A, KN 010655.

The Court also notes that while Plaintiff did not assert the argument that his invention requires a radial array, he also did not assert that his invention could include a configuration that involves parallel collection elements. Rather, the entire prosecution history involves discussion, on the part of the examiner and Plaintiff, of an invention with collection elements that are angularly disposed from each other. Because the file history is consistent with the specification language requiring the collection elements be angularly spaced from each other, the Court interprets Element 3 of Claim 1 as requiring two angles—an angle between the conduit and collection elements and an angle between each of the collection elements.

Taking into account the term "annular," "gap" takes on a meaning different from the trial court's construction. Specifically, the modifiers to "gap," such as "annular," produce significant differences in the geometries in each defining claim. These modifiers inform the nature of the gap in each claim and define differently the cross-section of the claimed insert. ACTV, Inc. v. Walt Disney Co., 346 F.3d 1363, 1372-73 (Fed. Cir. 2003) ("The context of the surrounding words of the claim also must be considered in determining the ordinary and customary meaning of those terms.").

This court notes that the adjective "annular" appears only within the claims, not in the patent specification. Nothing in the specification, including the claims, indicates explicitly or implicitly, that the inventor intended to impart a novel meaning to "annular." The record also contains no evidence that "annular" has a peculiar meaning in the field of art encompassed by the '398 patent. This court concludes, therefore, that the ordinary and customary meaning attributed to this term by those of ordinary skill in this art at the time of invention "involves little more than the application of [its] widely accepted meaning." Phillips, 415 F.3d at 1314.

This court has previously recognized that the ordinary and customary meaning of "annular" is "of or relating to an area formed by two concentric circular or curved regions." Int'l Rectifier Corp. v. IXYS Corp., 361 F.3d 1363, 1372-73 (Fed. Cir. 2004).
2004) (citing Webster's Third New International Dictionary 88 (1966)). Giving "annular" its proper place in the construction of the claims informs the interpretation of "gap." In claim 1, both the frame and the insert unequivocally have "a circular cross-section," but the gap between them need only form "at least part of an annular shape along a central portion between" the ends. The claim language thus permits non-annularity somewhere along the central portion. Annularity also requires "roughly parallel sides." An embodiment without the annular requirement, therefore, need not have even "roughly" parallel sides. Thus, a claim without the "annular" requirement or with only a partial "annular" requirement could have a gap characterized by intersection of part of the cross-section between insert and frame. In other words, claims 1 and 18 do not require concentricity of the circular insert and frame. Moreover, those claims do not foreclose some contact between the insert and frame.

4. Annular

The term "annular" is found in Claims 5, 10(a), 14(b), 22, 32, 35, 38 and 44 of the '461 patent; Claims 1, 2, 8 and 9 of the '108 patent; Claims 4, 5, 9, 11, 14, 15 and 18 of the '839 patent; Claims 4, 5, 9, 13, 14 and 17 of the '625 patent; Claim 1 of the '744 patent; Claims 4, 9 and 15 of the '389 patent; 1, 2, 4, 9 and 10 of the '711 patent; and Claims 1, 3, 5, 10 and 11 of the '340 patent.

Vision Advancement argues that "annular" should be construed as "ring-shaped," while Vistakon argues for a construction of "forming a ring." Vision Advancement, in the alternative, agrees to the same dictionary definition that Vistakon relies on with an exception. Vision Advancement disagrees with Vistakon's construction to the extent that it does not include the complete dictionary definition, i.e., "of relating to, or forming a ring." Merriam-Webster's Medical Desk Dictionary Revised Edition at 41.

The Court agrees with the parties and finds that "annular" has not been given a special definition in the patent and, therefore, looks to the dictionary definition proffered by the parties to supply the necessary construction. See Phillips, 415 F.3d at 1322 (finding dictionaries or comparable sources useful and appropriate when used to assist in understanding the commonly understood meaning of words). Thus, the Court construes "annular" to mean "of, relating to, or forming a ring."
I.

An accused device outside the literal meaning of the claims may still infringe by equivalents so long as each claimed element or its equivalent is found in the accused device. See Warner-Jenkinson Co. v. Hilton Davis Chem. Co., U.S. , 117 S. Ct. 1040, 1049, 137 L. Ed. 2d 146 (1997). A patentee may prove equivalence by showing that the substituted element in the accused device performs substantially the same function, in substantially the same way, to produce substantially the same result as the claimed element. See id. at , 117 S. Ct. at 1054; Graver Tank & Mfg. Co. v. Linde Air Prods. Co., 339 U.S. 605, 608, 94 L. Ed. 1097, 70 S. Ct. 854 (1950). "It is important to ensure that application of the doctrine, even as to an individual element, is not allowed such broad play as to effectively eliminate that element in its entirety." Warner-Jenkinson, U.S. at , 117 S. Ct. at 1049; see also Dolly, Inc. v. Spalding & Evenflo Cos., 16 F.3d 394, 398, 29 U.S.P.Q.2D (BNA) 1767, 1771 (Fed. Cir. 1994) ("The doctrine of equivalents is not a license to ignore claim limitations."). This is particularly so for claims drawn to specific structures.

Winco moved for summary judgment of non-infringement during the course of discovery. A Markman hearing was held, and the district court construed the crucial claim terms "annular" and "uniformly." After considering the specification and the prosecution history, but relying primarily on the ordinary meaning of the term "annular," the district court construed the term as requiring the coupling element to be "circular or ring-like in shape, but not necessarily a perfect circle." Also relying primarily on the ordinary meaning, the district court construed "arranged uniformly" as requiring that "no significant portion of the outer periphery should be lacking or treated differently or in a different manner for the placement of the projecting elements." The court noted specifically that uniform arrangement does not require that the anchoring elements (projections) be equidistantly spaced.

We have reviewed independently the claim language, specification, and prosecution history. Although Winco would have us construe "annular" and "uniformly arranged" as "circular" and "equidistantly spaced," the terms are not that narrow. We discern no error, however, in the district court's constructions, and adopt them in their entireties. We therefore turn to the application of the claim as so construed to the two accused devices.

216

Turning to the next claims at issue, Claim 29 and Claim 31 as dependent upon 29, the court must construe the phrase "...an annular channel formed in said first end bounded in part by an annular lip." Specifically, the parties dispute the meaning of "annular channel" and "annular lip." The court concludes that "annular channel" should be construed to mean a ring-like gutter, groove or furrow which is large enough to receive displaced septum material, and "annular lip" should be construed to mean a septum-supporting ridge which also serves as one wall of the annular channel.

There is little discussion as to the meaning of these terms in the specification, and no discussion of them at all in the prosecution history. Therefore, the court must construe these phrases in light of the ordinary, literal sense of the words in light of what the specification teaches about the functions of these elements. As mentioned in the ruling on the '554 patent, "annular" means ring-like or cylindrical. Thus, both the lip and the channel in this claim must be in the shape of a ring.

A "channel" is best defined, in the context of this claim, as a gutter, groove or furrow. The gutter, groove or furrow, as the specification teaches and as Sheehan and Vaillancourt testified, exists to give displaced rubber septum a place to go. (See column 2, lines 49-53, and column 7, lines 18-21). Rubber displaces into this channel both during swaging and once the blunt cannula is inserted. Therefore, in order to be an annular channel, it must be large enough to receive the displaced rubber.

Defendant urges the court to construe the channel as being an uninterrupted groove. The court does not read such a limitation into the use of the word channel. What is necessary is that the channel be able to receive displaced rubber septum material during the processes mentioned. It is for the jury to decide whether any interruption in the channel prevents it from receiving the displaced septum, and thus rendering it outside the definition of an "annular channel" in this claim.

The annular lip, as mentioned by Sheehan, is a fulcrum or support for the septum, to keep it from sliding into either the annular channels or the flow path. As the specification puts it, the annular lip is a "septum supporting ridge." (Column 6,
A. Claim Construction

The construction of claims is simply a way of elaborating the normally terse claim language in order to understand and explain, but not to change, the scope of the claims." Embrex, Inc., v. Serv. Eng’g Corp., 216 F.3d 1343, 1347, 55 U.S.P.Q.2D (BNA) 1161, 1163 (Fed. Cir. 2000) (internal quotations and citation omitted). Interpreting the asserted claims begins with a review of the intrinsic evidence, which consists of the claim language, the written description, and the prosecution history. Interactive Gift Express, Inc. v. Compserv Inc., 231 F.3d 859; 865, 56 U.S.P.Q.2D (BNA) 1647, 1652 (Fed. Cir. 2000); Embrex, 216 F.3d at 1347, 55 U.S.P.Q.2D (BNA) at 1163; Vitronics Corp. v. Conceptronic, Inc., 90 F.3d 1576, 1582, 39 U.S.P.Q.2D (BNA) 1573, 1576 (Fed. Cir. 1996) (noting that the claims, specification, and prosecution history are "the most significant sources of the legally operative meaning of disputed claim language.") Extrinsic evidence may be accepted by the court to enhance its understanding of the technology. EMI Group N. Am., Inc. v. Intel Corp., 157 F.3d 887, 892, 48 U.S.P.Q.2D (BNA) 1181, 1184 (Fed. Cir. 1998). However, extrinsic evidence cannot be used to contradict the established meaning of the claim language. Mantech Envtl. Corp. v. Hudson Envtl. Servs., Inc., 152 F.3d 1368, 1373, 47 U.S.P.Q.2D (BNA) 1732, 1736 (Fed. Cir. 1998).

The district court construed the phrase "an angular medial surface for supporting the three remaining ulnar fingers in a wrapped configuration with flexion of the distal, middle, and proximal phalanges of said ulnar fingers" to require that the mouse housing have "an angular ledge for supporting the three remaining fingers [i.e., the middle, ring, and small fingers] in an enclosed or folded position." Gart I, slip op. at 5. The district court then compared each of the accused products to the claim as construed and summarily concluded that each product lacked the claimed angular medial surface either literally or equivalently. Gart I, slip op. at 6; Gart II, slip op. at 4.

Both parties suggest that the district court understood the term "angular ledge" to include a concave depression or curved undercut. We note, however, that the district court stated that "even if [it] were persuaded that . . . infringement of Claim 7 does not require a surface area called a 'curved undercut' or 'concave depression' beneath the angular medial surface, [it] finds that the . . . plain language of Claim 7 . . . requires that the angular medial surface support the middle, ring, and small fingers in an enclosed or folded configuration." Gart II, slip op. at 5. Thus, it is not at all clear that the district court construed the "angular ledge" to include a curved undercut or concave depression. On the other hand, what is clear from Gart I and Gart II is that the district court construed the "angular medial surface" of claim 7 to require a "ledge" and that some surface over that ledge supports the middle, ring, and small fingers in an enclosed or folded position. For the reasons we will discuss below, we conclude that it was erroneous to construe the plain language of claim 7 to require a "ledge." Moreover, in view of that erroneous determination, it would also be erroneous to require that ledge to include a concave depression or curved undercut area.

In support of the district court's construction, Logitech asserts that to properly interpret the structure defined by the claim, which it concludes is the critical feature of the invention, the court should look to the drawings. Logitech notes that all of the drawings show that the support structure for keeping the three remaining ulnar fingers in a wrapped configuration has a ledge with an undercut area.

In addition, Logitech asserts that the written description particularly describes the invention as having a "medial ledge undercut" to support the three remaining ulnar fingers, and that this reference is not related to a preferred embodiment. Moreover, Logitech notes that Gart distinguished his invention in the '165 patent specification from three prior art references and in so doing stated that those references fail to set forth an undercut area for the middle, ring, and small fingers. Logitech also contends that this distinction over the prior art was critical to the United States Patent and Trademark Office's decision that claim 7 was patentable. In this regard, Logitech notes that the examiner's reasons for allowance state: "the prior art fails to teach the details on the shape and surfaces of the hand controller taught by the instant claims."

None of Logitech's arguments persuades us that the district court's claim construction was correct. Logitech is certainly
correct that claims do not have meaning removed from the context from which they arose, i.e., "the claims are directed to the invention that is described in the specification." Netword, LLC v. Centraal Corp., 242 F.3d 1347, 1352, 58 U.S.P.Q.2D (BNA) 1076, 1079 (Fed. Cir. 2001). In addition, it is certainly correct that the specification and the prosecution history should be consulted to construe the language of the claims. However, we perform this consultation to determine if the patentee has chosen to be his or her own lexicographer, In re Paulsen, 30 F.3d 1475, 1480, 31 U.S.P.Q.2D (BNA) 1671, 1674 (Fed. Cir. 1994) (noting that claim terms may be defined by the patentee in the specification as long as such defining is done with reasonable clarity, deliberateness, and precision), Watts v. XL Sys., Inc., 232 F.3d 877, 882, 56 U.S.P.Q.2D (BNA) 1836, 1839 (Fed. Cir. 2000) (noting that distinguishing remarks contained in both the specification and in the prosecution history contributed to finding that the patentee had narrowed the construction of the sealingly connected limitation); Southwall Techs., Inc. v. Cardinal IG, Co., 54 F.3d 1570, 1576, 34 U.S.P.Q.2D (BNA) 1673, 1676 (Fed. Cir. 1995) (noting that arguments and amendments made during the prosecution of a patent application and other aspects of the prosecution history, must be examined to determine the meaning of terms in the claims because claims may not be construed one way in order to obtain their allowance and in a different way against accused infringers), or when the language itself lacks sufficient clarity such that there is no means by which the scope of the claim may be ascertained from the language used, Eastman Kodak Co. v. Goodyear Tire & Rubber Co., 114 F.3d 1547, 1554, 42 U.S.P.Q.2D (BNA) 1737, 1741 (Fed. Cir. 1997), overruled on other grounds by Cybor, 138 F.3d 1448, 46 U.S.P.Q.2D (BNA) 1169. However, when the foregoing circumstances are not present, we follow the general rule that terms in the claim are to be given their ordinary and accustomed meaning. Johnson Worldwide Assocs. v. Zebco Corp., 175 F.3d 985, 989, 50 U.S.P.Q.2D (BNA) 1607, 1610 (Fed. Cir. 1999). 1 "In short, a court must presume that the terms in the claim mean what they say, and, unless otherwise compelled, give full effect to the ordinary and accustomed meaning of claim terms." Id.

- - - - - - - - - - - - Footnotes - - - - - - - - - - - -

1 Of course, "[a] common meaning, such as one expressed in a relevant dictionary, that flies in the face of the patent disclosure is undeserving of fealty." See Renishaw PLC v. Marposs Societa' per Azioni, 158 F.3d 1243, 1250, 48 U.S.P.Q.2D (BNA) 1117 (Fed. Cir. 1998).

- - - - - - - - - - - - - - Footnotes - - - - - - - - - - - - - -

Contrary to Logitech's assertion, the '165 patent specification does not describe "the invention" as having a "medial ledge undercut to support the middle, ring and small fingers of the hand." '165 patent, col. 3, ll. 29-36. This portion of the specification merely exemplifies one embodiment of the invention that would provide "a great deal of comfort." Id. The specification clearly states that the provision of "an angular medial surface" for supporting the remaining three ulnar fingers in a wrapped configuration will achieve the object of the invention, i.e., an ergonomic design of a hand controller apparatus that minimizes hand fatigue. Id. at col. 3, l. 60-col. 4, l. 13. Furthermore, the description at column 5, lines 29-34, to which the district court referred in construing claim 7 to include a ledge, is merely a description of the preferred ergonomic design that minimizes hand fatigue.

Admittedly, the drawings show a controller housing having an angular ledge with a concave or flat undercut area over which the three remaining ulnar fingers must be wrapped. However, the '165 patent presents these drawings only to depict the preferred embodiment. Id. at col. 4, l. 15-col. 6, l. 46. These drawings are not meant to represent "the" invention or to limit the scope of coverage defined by the words used in the claims themselves. In view of the foregoing, we conclude that the entirety of the specification describes several embodiments of an ergonomic hand controller, including a controller with an angular medial ledge, a controller with an angular medial ledge having an undercut area, and a controller with an angular medial surface. The written description does not explicitly limit the subject matter of the patent to the ledge configuration set forth in the drawings.

We acknowledge that Gart made statements at column 2, lines 28-63 of the specification distinguishing the prior art, noting in particular that at least three of the references did not include the "undercut curved areas." However, Gart also notes in the specification that the "prior art [that has attempted to provide specially shaped hand engaging surfaces] either [does] not provide the full ergonomic surface design of the present invention or [is] simply incompatible with the surface shapes needed in a hand controller as opposed to other hand-related applications." Id. at col. 2, ll. 18-26.

Moreover, we also note that Gart indicates in the specification that this undercut feature that the prior art does not have is a feature of the preferred embodiment. Id. at col. 5, ll. 34-43. From the foregoing, we conclude that Gart distinguished his
preferred embodiment from particular prior art references on the basis of its undercut feature: but, Gart also noted that those
same references did not contain all of the ergonomic surface features of the invention or were incompatible with the surface
shapes needed in a hand controller. In other words, Gart did not in any way limit all of his claims to a controller with an
angular medial ledge by the remarks distinguishing the prior art.

Finally, we do not agree with Logitech that the examiner expressly allowed the claims because "an undercut area" was novel
and non-obvious. It is undisputed that the examiner remarked that "claims 1 and 7 recite a hand controller . . . apparatus
having various surfaces and shaped in order to provide support to various parts of a user's hand operating the device to
minimize hand fatigue." Moreover, the examiner asserted that "the details on the shape and surfaces . . . taught by the
claims" were not taught by the prior art. However, the examiner never stated that the patentable difference over the prior art
was "the concave undercut area" of the claimed device. We note that drawing inferences of the meaning of claim terms from
an examiner's silence is not a proper basis on which to construe a patent claim. DeMarini Sports, Inc., v. Worth, Inc., 239

We conclude that the '165 patent does not attribute a special meaning to the phrase "angular medial surface," and there were
no express representations made in obtaining the patent regarding the scope and meaning of the claim terms. Moreover, the
scope of claim 7 may be ascertained from the plain language of that claim. Thus, we cannot sustain the district court's
interpretation of the claim language "angular medial surface" as requiring "an angular medial ledge." Such a construction
would improperly add a limitation appearing in the specification and the drawings, but not appearing in the unambiguous
language of the claim. See Intervet Am., Inc. v. Kee-Vet Labs., Inc., 887 F.2d 1050, 1053, 12 U.S.P.Q.2D (BNA) 1474, 1476
(Fed. Cir. 1989) (noting that "courts cannot alter what the patentee has chosen to claim as his invention"); Southwall, 54
F.3d at 1576, 34 U.S.P.Q.2D (BNA) at 1676; Wang Labs., Inc. v. Am. Online, Inc., 197 F.3d 1377, 1383, 53 U.S.P.Q.2D
(BNA) 1161, 1165 (Fed. Cir. 1999); Modine Mfg. Co. v. United States Int'l Trade Comm'n, 75 F.3d 1545, 1551, 37
U.S.P.Q.2D (BNA) 1609, 1612 (Fed. Cir. 1996). Moreover, it is well established that broad claims supported by the written
description should not be limited in their interpretation to a preferred embodiment, e.g., Laitram Corp. v. Cambridge Wire
Cloth Co., 863 F.2d 855, 865, 9 U.S.P.Q.2D (BNA) 1289, 1299 (Fed. Cir. 1988) ("References to a preferred embodiment,
such as those often present in a specification, are not claim limitations."). which we deem to be the case here. Rather, the
terms of the phrase "angular medial surface for supporting . . . in a wrapped configuration with flexion" must be given their
ordinary meaning.

We adopt the ordinary definitions of the terms "wrapped" and "flexion," i.e., "to enclose . . . or to surround" and "partially
bent," respectively, proffered by Gart because they are standard dictionary definitions that Logitech does not dispute. The
parties do not dispute that "the three remaining ulnar fingers" refers to the middle, ring, and small fingers. The parties do not
proffer an ordinary definition of the remaining terms. The ordinary definition of the term "angular" and "surface" means
"having one or more angles," and "the exterior or upper boundary of an object or body," respectively. Webster's New
Collegiate Dictionary 45, 1172 (1975). Moreover, as for the phrase "distal, middle, and proximal phalanges," we take
judicial notice that this refers to the bones of the fingers from the tip down to, but not including, the palm.

Therefore, we conclude that "an angular medial surface for supporting the three remaining ulnar fingers in a wrapped
configuration with flexion of the distal, middle, and proximal phalanges of said ulnar fingers" merely requires an angled
surface that supports the middle, ring, and small fingers in a folded position such that the distal, middle and proximal bones
of the fingers are partially bent over that angled surface. We note that the foregoing definition does not require that the
middle, ring, and small fingers be supported on the surface such that they are folded under.

On appeal, Schwing challenges only the second of the district court's two summary judgment orders. Schwing argues that
the district court erred in its construction of the phrase "annular extension," and that under the correct claim construction
there is a genuine dispute of material fact as to literal infringement by the modified Bastardring II so as to preclude the entry
of summary judgment on that issue. Schwing also argues that the district court erred as a matter of law in concluding that
prosecution history estoppel barred Schwing's claims of infringement under the doctrine of equivalents.

- 628 -
Schwing's argument focuses on the district court's construction of the "annular extension" limitations in the '657 patent claims. The district court examined the prosecution history of the original '441 patent and concluded that the applicant had distinguished his invention from the prior art on the ground that the claimed annular extensions prevented or limited radial expansion of the elastic sealing ring so as to increase the axial force exerted by the sealing ring on the cutting ring. In light of the prosecution history, the district court interpreted the claims of the '657 patent to require that the annular extensions inhibit radial expansion of the sealing ring.

That interpretation, however, is not supported by the language of the claim. Claim 1 defines the "annular extensions" in purely structural terms. The annular extensions on the cutting ring and the shutter mechanism are described as "partly overlapping the second side of the spring means from opposite ends thereof so that a part of the second side surface of the spring means is left free between the annular extension." Where a claim uses clear structural language, it is generally improper to interpret it as having functional requirements. See Toro Co. v. White Consol. Indus., Inc., 266 F.3d 1367, 1371, 60 U.S.P.Q.2D (BNA) 1437, 1439 (Fed. Cir. 2001) ("An invention claimed in purely structural terms generally resists functional limitation."). We find nothing in the claim language itself that requires the annular extensions to perform the function of inhibiting radial expansion of the sealing ring.

Putzmeister defends the district court's claim construction on the ground that the "annular extensions" are part of the claimed "seatings," and that they must share the function of ensuring that the spring means pushes the cutting ring against the face plate. Putzmeister relies on the written description of the '657 patent to argue that the annular extensions must inhibit radial expansion of the spring means in order to provide the axial force required to push the cutting ring against the face plate. Although it is true that some annular extensions, including embodiments disclosed in the written description, inhibit radial expansion of the sealing ring, we find nothing in the '657 patent that suggests that the function of "inhibiting radial expansion of the sealing ring" is a necessary limitation of the annular extensions recited in claim 1.

The prosecution history was the main focus of the district court's claim construction analysis. During the prosecution of the original '441 patent, the examiner rejected the claims as obvious over German Patent 28 29 181 ("Korthaus") in light of U.S. Patent No. 4,382,752 ("Schlecht"). The applicant responded to the examiner's rejection by amending claim 1 to require that the sealing ring be axially elongated and that there be a support surface on either the shutter mechanism or the cutting ring for engaging essentially the entire length of one side of the flexible ring. In remarks accompanying that amendment, the applicant characterized Schlecht as follows: "One disadvantage of the Schlecht device is that a mechanical compression of the elastic ring creates very small axial forces, since the seatings allow the flexible ring of Schlecht to deflect along the whole axial length of its inner surface." The district court interpreted that statement as indicating that the applicant relinquished any claim to a device in which the means for retaining the sealing ring does not also inhibit radial expansion of that ring.

Although prosecution history can be a useful tool for interpreting claim terms, it cannot be used to limit the scope of a claim unless the applicant took a position before the PTO that would lead a competitor to believe that the applicant had disavowed coverage of the relevant subject matter. See, e.g., N. Telecom Ltd. v. Samsung Elecs. Co., 215 F.3d 1281, 1294, 55 U.S.P.Q.2D (BNA) 1065, 1075 (Fed. Cir. 2000) (holding that prosecution history statements did not provide a narrowing definition "with reasonable clarity and deliberateness"); IMS Tech., Inc. v. Haas Automation, Inc., 206 F.3d 1422, 1439, 54 U.S.P.Q.2D (BNA) 1129, 1141 (Fed. Cir. 2000) (holding that a patentee's statements during prosecution and reexamination did not constitute clear disavowal of claim scope). Immediately after identifying the disadvantages of the Schlecht reference, the applicant explained the structure and operation of his invention:

With the present invention, the resilient force applied to the cutting ring to urge the contact surface of the cutting ring into contact with the face plate is provided by a long stroke spring in the form of a flexible rubber ring having a rectangular cross-section which is longer in the axial direction than in the radial direction. The shutter mechanism and the cutting ring combine to provide first and second seatings for the first and second ends of the flexible ring, and a support surface which engages the first side of the flexible ring along essentially its entire length. The second side of the flexible ring is only partly covered by a pair of annular extensions, one from the shutter mechanism and one from the cutting ring. Finally, the stops on the cutting ring and shutter mechanism limit the extent of movement of the cutting ring in the axial direction so that the flexible rubber ring cannot be squeezed out and lifted from its seating.

In the next sentence, the applicant distinguished his invention from the Schlecht reference as follows: "At the same time, unlike the Schlecht patent, the present invention provides substantial axial resilient forces which urge the cutting ring
toward the face plate because both the first and second ends and the first side are engaged by solid surfaces."

Viewed as a whole, the prosecution history does not support the district court's adoption of the functional limitation of "inhibiting radial expansion of the sealing ring." The applicant's remarks describe the annular extensions in purely structural terms, and do not suggest that the annular extensions are needed to achieve substantial axial forces. Furthermore, the final sentence distinguishing Schlecht does not mention the annular extensions or their role in inhibiting the radial expansion of the sealing ring. Instead, the applicant argued that "unlike the Schlecht patent, the present invention provides substantial axial resilient forces which urge the cutting ring toward the face plate because both the first and second ends and the first side are engaged by solid surfaces." None of those solid surfaces include the claimed annular extensions, which engage the second side of the spring means. We therefore do not consider the applicant's remarks as sufficient to overcome the general rule that functional limitations should not be read into purely structural claims.

B. "Annular Inner Surface Having At Least A First Portion Extending Inwardly and Upwardly"

Claim 1 recites an impact pad with an outer wall including an "annular inner surface having at least a first portion extending inwardly and upwardly" toward the opening at the top of the impact pad. D.I. 36 at Exh. A, col. 7, ll. 51-53. There are two subsidiary disagreements regarding this phrase. First, the parties differ over the meaning of an "annular inner surface," despite an explicit definition provided for "annular" in the specification. Second, API and CCPI diverge on whether the "first portion" of the impact pad must itself be annular.

1. "Annular Inner Surface"

Both sides agree on what an "inner surface" is for purposes of the '551 patent; their dispute centers on the meaning of "annular." Fortunately, the specification provides some guidance. Annular, as used in the '551 patent, is "not meant to denote any particular shape but is meant to indicate a fully enclosing, endless boundary structure." D.I. 36 at Exh. A, col. 3, ll. 7-10 (emphasis added). API contends the word "endless," as used to define "annular," is ambiguous and this vagary, by implication, clouds the meaning of "annular." "Endless" should be defined, urges API, just as the inventor of the '551 patent, Karl J. Saylor, coined it; that is, "endless" means "without a definite beginning or ending." D.I. 37 at Exh. 4, p. 375.

4 "Annular" is ordinarily defined as "of or relating to a ring: forming a ring: shaped like a ring." WEBSTER'S THIRD NEW INTERNATIONAL DICTIONARY 88 (1971). The Court is not bound by this definition, of course, as "a patentee may choose to be his own lexicographer and use terms in a manner other than their ordinary meaning, as long as the special definition of the term is clearly stated in the file history." Vitronics, 90 F.3d at 1582.

5 The Court recognizes this is extrinsic evidence; given the disposition of this issue, however, the nature of this evidence is trivial.

Extrapolating from its definition of "endless," API suggests "annular" should be redefined to signify "a fully enclosing, endless boundary structure without a definite beginning or ending." D.I. 37 at 1. While this may seem mere semantic quibbling, API's true motivation is revealed in the inference it draws from its proposed definition. According to API, a structure without a definite beginning or ending is "without surface discontinuities." D.I. 48 at 2. In other words, API interprets "endless" to limit the meaning of an "annular inner surface" to an inner surface that is "continuous" and is "not interrupted by intermediate structures." Id. CCPI, on the other hand, does not cavil about "endless"; it simply argues an "annular inner surface" can be any shape, so long as, when viewed from above, it surrounds an inner space or cavity.

API's most powerful argument in support of its interpretation is that CCPI's reading elides the word "endless" from the definition of "annular." To reiterate, "annular" indicates "a fully enclosing, endless boundary structure." D.I. 36 at col. 3, ll. 7-10. Requiring an annular structure merely to surround an interior space when viewed from above, API contends, ascribes
to "endless" the same meaning as the phrase that immediately precedes it---"fully enclosing." 6 API points to the specification statement "any geometric shape which fully encloses or defines an[] endless boundary" will suffice under the '551 patent. Id. at col. 7, ll. 34-39. According to API, this disparate use of "fully enclose" and "endless" illustrates "fully enclosing" and "endless" cannot have the same meaning. API's proposal, it submits, does not make "endless" surplusage; as API puts it, its interpretation "breathes life and meaning into the term 'endless.'" D.I. 48 at 2.

6 Of course, "fully enclosing" does not mean the impact pad has no ingress or egress for the stream of molten metal; otherwise, the impact pad would be useless. Rather, the specification and patent makes clear that a "fully enclosing" structure is one which, when viewed from above, surrounds an interior space or cavity. See, e.g., D.I. 36 at Exh. A, col. 5, ll. 1-6; col. 7, ll. 2-7.

The short answer to this is API wants to resuscitate a term that already has too much animation and too many uses; "endless," as strewn haphazardly throughout the '551 patent and its prosecution history, seems to mean many things, yet nothing, and certainly not the limiting effect API gives it. For example, in the summary of the invention, the specification describes an "endless annular side wall" of the impact pad. D.I. 36 at Exh. A, col. 2, ll. 53, 57. The use of "endless" there is tautological, of course, since an annular wall is, by the specification definition, "endless." The pad is later described as including "an endless annular . . . outer side wall having an annular . . . inner wall surface . . . ." Id. at col. 6, ll. 2-4. Again, for the same reason, "endless" becomes so much wasted typeface. Finally, in the file wrapper, CCPI stated, "While the impact pad of the present invention may be formed with different shapes when viewed from above, in each case there is an endless side wall, or, in other words, a sidewall which surrounds an interior space or volume of the pad." D.I. 36 at Exh. C., p. 56 (emphasis added). According to CCPI, this statement shows "endless" was employed as a synonym for "fully enclosing."

This indiscriminate use of "endless" 7 only serves to highlight the principal flaw in API's position: API attributes limitations to the claims from a word found nowhere in the claim itself, but only as subsumed in "annular." When the claims are examined in conjunction with the specification and prosecution history, the limitations API would impose--no discontinuities or intermediate structures on the inner surface--cannot be found; they cannot be discerned in "endless" as it hopsscotch throughout the specification and they cannot be imputed to the broader definition of "annular inner surface." As noted earlier, the specification repeatedly disavows the notion "annular" is meant to denote a particular shape. See D.I. 36 at col. 3, ll. 7-10. Indeed:

While the impact pad of the present invention is preferably circularly shaped and while one alternative shape has also been shown and described [a rectangle], many shapes for the side walls of the impact pad are possible and fall within the scope of the present invention. Any geometric shape which fully encloses or defines an[] endless boundary for an interior space of the pad and redirects the incoming molten metal flow back into itself and creates a flow pattern away from the ladle shroud will perform similarly to the illustrated embodiments.

D.I. 36 at col. 7, ll. 29-39 (emphasis added). API's definition would run contrary to these teachings; it would limit the shape of the walls of the impact pad. Accordingly, it is unnecessary to define "endless"; it does not disturb the meaning of "annular."

- - - - - - - - - - - - - - Footnotes - - - - - - - - - - - - - -

7 "Endless" appears nine times in the specification; five times in connection with the "annular side wall" (which can be the outer or inner wall of the impact pad), see D.I. 36 at Exh. A, col. 2, ll. 49, 53, 56-57, col. 3, l. 6, col. 5, l. 66; twice as a description of the outer side wall (once in connection with the "annular" outer side wall), id. at col. 5, ll. 1-2, col. 6, ll. 2-3; once, of course, in the definition of "annular" itself, id. at col. 3, l. 9; and once to describe a "boundary for an interior space of the pad[,]" id. at col. 7, ll. 35-36.
